Budget Code:	HBHC	**Program Area Code:**	06

Activity ID: 12333.08 **Planned Funds:** $150,000

Activity System ID: 13362

Activity Narrative: SUMMARY:

As an Umbrella Grants Management (UGM) partner, Academy for Education Development (AED) supports institutional capacity building, technical assistance and grants administration for indigenous organizations that implement PEPFAR programs. These partners and sub-partners consist of indigenous NGOs, FBOs, and CBOs that were selected through the Inter-Agency PEPFAR Annual Program Statement (APS) and have met the criteria for full and open competition. The main functions of the UGM program are: 1) to facilitate further scale-up of HIV and AIDS care services and (2) to develop indigenous capability, thus creating a more sustainable program. The emphasis area is local organization capacity development and the primary target population is indigenous organizations.

BACKGROUND:

AED has extensive experience managing grants programs on behalf of USAID with PEPFAR funds. Prior to award of the UGM under the South Africa APS, AED was already managing grant programs funded with PEFPAR dollars in Ghana and Honduras, and providing TA and capacity building to PEPFAR partners on palliative care and OVC work in Mozambique and Kenya. In addition, AED has been sourced as USAID's exclusive partner for capacity building to the 23 NGOs funded under the PEPFAR Round One New Partners Initiative. As such, AED is well experienced in providing TA and capacity building on the broad array of technical areas related to PEPFAR programs, monitoring and evaluation, organizational development and finance management. In addition, AED has also been a key PEPFAR implementing partner in South Africa and is thoroughly familiar with working on HIV/AIDS program within that context. As a UGM partner, AED will not directly implement program activities, but rather act as a grants administrator, technical assistance provider, and mentor for sub-recipients, chosen by USAID, who in turn carry out the assistance programs. USAID closely collaborates and coordinates with the South African Government (SAG) in supporting PEPFAR partners through the umbrella grant mechanism. Although some of the partners work closely with various SAG Departments, AED's primary interface with the SAG is through the Senior Management Team (SMT), which includes key staff from USAID, National Departments of Health and Social Development, and representatives from the provincial departments. Under AED, between 6 and 11 indigenous partners will be supported via sup-grants and technical assistance. Priority will be given to harmonize approaches and policies of these indigenous partners and preclude overlap of services. Grants to palliative care partners support government clinics and hospitals with human resources including doctors, nurses, pharmacists, and counselors. These partners also work closely with new and established hospices to ensure hospice accreditation in accordance with national and global standards of palliative care. Palliative care services supported by partners include holistic; family-centered; clinical, psychological, spiritual and social care services for PLHIV and their families, supported by multidisciplinary teams at facility and community levels. During their partnership with PEPFAR, these providers will increase their reach while also building sustainability of their own programs and organizations. This scale-up and support for sustainability requires strong financial, monitoring and evaluation, and management systems to accommodate growth in reach and maximize sustainability.

ACTIVITIES AND EXPECTED RESULTS:

Funds budgeted under this narrative will support costs for administering, managing and facilitating technical support for the palliative care partners. Separate COP entries describe the palliative activities implemented by each partner. Institutional capacity building of indigenous organizations is a key feature of the umbrella grant mechanism and is designed to promote the sustainability of care programs and organizations.

ACTIVITY 1: Grant Management

AED will award and administer care grants to partners selected through a USAID/PEPFAR APS competitive process to implement HIV and AIDS activities. This involves an array of related activities including award and administration of grants, monitoring of grant progress, meeting reporting requirements, financial oversight, ensuring compliance with USG regulations, and grant closeout. AED will develop and monitor palliative care program implementation and adherence to financial regulations. This involves provision of extensive technical assistance to partners on palliative care project development and implementation, financial management, monitoring and evaluation, and reporting. A key result includes the development and monitoring of palliative care implementation plans which track critical program achievements in palliative care related areas such as service delivery, training, policy development, technical assistance, planning and evaluation.

ACTIVITY 2: Capacity Building

The umbrella mechanisms will support institutional and technical capacity building of indigenous organizations. (Capacity building activities are defined as activities that strengthen the skills of indigenous organizations to implement HIV and AIDS programs efficiently, with diminishing reliance on external technical assistance and support and increased potential for sustainability.) AED will support activities to improve the financial management, program management, quality assurance, strategic information (M&E) and reporting, and leadership and coordination of partner organizations implementing palliative care activities. AED will also assess and facilitate critical palliative care technical support for partners such as technical trainings, program reviews, technical planning and sharing of lessons learned. Emphasis will be placed on partner implementation of evidence-based preventive care interventions which include OI screening and prophylaxis (including cotrimoxazole, TB screening/management), counseling and testing for clients and family members, safe water and personal hygiene strategies to reduce diarrheal disease, HIV prevention counseling, provision of condoms, referral for family planning services for HIV-infected women, appropriate child survival interventions for HIV-infected children and nutrition counseling as well as pain and symptom management and support for adherence to OI medications and antiretroviral therapy (ART).

ACTIVITY 3: Monitoring and Evaluation and Reporting

AED will provide support to palliative care partners in monitoring and evaluation, in order to strengthen measurement of the implementation and impact of palliative care program activities, an eventual achievement of PEPFAR goals. M&E support of palliative care partners includes: measurement of program progress; provision of feedback for accountability and quality; surveillance; and implementation of

Activity Narrative: information management systems. In addition, AED will provide supportive supervision to provide guidance, monitoring, mentoring and oversight through site visits, technical assistance, and performance evaluation.

The management of service delivery programs under this project will contribute to the PEPFAR goals to provide treatment to 2 million HIV-infected people; prevent 7 million HIV infections; and provide care to 10 million people infected by HIV and AIDS, including orphans and vulnerable children.

Table 3.3.06: Activities by Funding Mechansim

Mechanism ID: 5191.08
Mechanism: N/A
Prime Partner: Reproductive Health Research Unit, South Africa
USG Agency: U.S. Agency for International Development
Funding Source: GHCS (State)
Program Area: Palliative Care: Basic Health Care and Support
Budget Code: HBHC
Program Area Code: 06
Activity ID: 9448.08
Planned Funds: $500,000
Activity System ID: 13789

Activity Narrative: SUMMARY:

The Reproductive Health and HIV Research Unit's (RHRU) Basic Care and Support activities for FY 2008 will be part of an integrated program and will specifically include: (1) palliative care arising from clinical (both ARV and non-ARV) services rendered by RHRU staff through the activities described under the ARV Services program area; (2) the provision of psychosocial support to commercial sex workers, (3) the provision of support, home-based care and referral; and (4) the implementation of health provider training in all aspects of palliative care. The major emphasis area for these activities is quality assurance and supportive supervision, with additional focus on human resources, development of referral systems, and training. Populations targeted for these interventions include PLHIV (children, youth and adults), HIV-affected families, commercial sex workers, refugees, and public sector doctors, nurses, pharmacists, traditional healers and other health care workers

BACKGROUND:

RHRU, a unit of the University of the Witwatersrand in Johannesburg, currently provides technical support to the Operational Plan for Comprehensive HIV and AIDS Care, Management and Treatment for South Africa, which includes the national ARV rollout. Under PEPFAR funding since FY 2004, RHRU has provided regular on-site support, direct treatment, training and quality improvement to DOH sites in 3 provinces. The RHRU will continue these activities, which include inner city, district wide and rural programs focusing on providing support to complete up and down treatment referral networks. In addition, RHRU will continue the provision of counseling and testing (CT), palliative care, and prevention services. RHRU continues to develop models of service delivery that can be replicated and expanded, and produces findings from lessons learned and targeted evaluations to disseminate and share with others. It should be noted that the success of ARV treatment scale-up depends on the comprehensive approach detailed in other program areas. In particular, the strengthening of referral from other primary healthcare programs such as TB, family planning, antenatal/postnatal and STI treatment is critical. Basic Health Care and Support is an integral part of this system, and the RHRU will focus this part of its program on PLHIV, in impoverished areas such as the Hillbrow neighborhood in Johannesburg, and at PHC clinics in Durban, and rural areas of the North West Province by delivering high quality palliative care, psychosocial support, and intensive training of doctors, nurses, and other health care professionals. Furthermore, RHRU will continue to develop strategies to address underserved communities affected by HIV, such as couples, high risk groups such as adolescents, and gender-based interventions with women at risk, including pregnant women, commercial sex workers, and men.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Provision of Palliative Care

Through comprehensive support and quality improvement programs to the Johannesburg inner city, eThekwini District in Durban, and through Mobile Clinical Support Teams operating in North West, KwaZulu-Natal (KZN) and Gauteng provinces, RHRU will continue to provide the preventive care package and opportunistic infection prevention and treatment, identification and treatment of syndromic STIs, provision of regular CD4 counts, and pain and symptom management in conjunction with ARV treatment to adults and children in partnership with the DOH. In addition, STI treatment will be provided to HIV-infected patients at a network of local health authority sites in the inner city of Johannesburg. This includes the Women At Risk Project that reaches commercial sex workers through a clinical and support outreach service that moves between the inner city brothels, and a special service run from the clinic every weekday morning (see the Other Prevention section for more details). Integrated reproductive health/HIV services will be provided to HIV infected clients at a large family planning clinic in the Durban CBD and via the gender-related projects described in the Other Prevention program area. Furthermore, health care and support will be provided to in -patients at an HIV step-down and palliative care facility in KwaZulu-Natal. Lastly, as described in the Other Prevention section, RHRU will provide home-based care in the deprived inner city suburb of Hillbrow through its new program of community outreach.

ACTIVITY 2: Psychosocial Support

RHRU or its sub-partners will provide psychosocial support through counseling, wellness programs and befriending. RHRU will assist with income generation, material support programs, and support group facilitation. RHRU will be key in the strengthening of adherence initiatives through their work in HIV treatment sites and within the community. RHRU will also assist the DOH in providing technical resources, continuity and support to the up and down referral processes that must take place to enable ARV program scale-up. Currently men are under-represented in seeking ARV treatment, and a family-based approach to care ensures all family members are provided with treatment and prevention initiatives where appropriate. Therefore, RHRU will also address gender issues by developing and providing specialized services such as family clinic days 3 days per week, male clinic 5 days per week for CT and ART, and male only support groups for families and men in order to improve access for these two key groups. In addition working with antenatal and postnatal clinics, RHRU will provide psychosocial support and specialized adherence counseling for HIV-infected pregnant women and new mothers, and will work with pediatric treatment sites to provide specialized adolescent counseling and psycho social support. Through the Women At Risk project, commercial sex workers are provided with support and information on appropriate topics at outreach sites by community health workers, and referred into other psychosocial services as required, including support groups, workshops on CSW-relevant issues (such as gender violence and gender norms and behaviors), prevention with positives interventions, and income generation projects to provide peer support and encourage the exiting of sex work. Refugee populations, often a neglected, overlooked group, will also be targeted with services provided by RHRU. A special program for the care of refugees will be expanded to include more systematic identification of refugees seeking assistance through public facilities. These individuals will be counseled and provided full referral and follow up services to the NGO and private sectors to receive care, treatment and support if they are ineligible to receive services through the public sector programs.

ACTIVITY 3: Human Capacity Development

The objective of the training is to increase skills in the delivery of quality palliative care services including

Activity Narrative: elements of the preventive care package. RHRU will provide on-site and didactic training to DOH and NGO doctors, nurses and counselors, and will specifically target ARV and non-ARV sites that need to be able to care for, manage and appropriately refer HIV-infected clients. RHRU will also provide mentoring to DOH staff via bedside teaching, case reviews, the sharing of quality improvement approaches, and support during consultations. RHRU's Primary Health Care Project will provide tools, training and on-site guidance to DOH staff in primary healthcare sites relating to quality improvement of primary healthcare services, including palliative care. This project will also provide support to ARV treatment and is described in the ARV Services section. In FY 2007-2008, RHRU will continue to undertake M&E activities to inform and develop quality HIV care. RHRU will be in a position to conduct Public Health Evaluations (PHE) of some of its palliative care related projects in FY 2008-2009. For each PHE, a detailed proposal will be developed and submitted to PEPFAR for review and funding approval.

These activities contribute significantly to both the vision outlined in the USG Five-Year Strategy for South Africa and to the 2-7-10 objectives by ensuring that HIV-infected individuals and their families are able to access comprehensive care, and by expanding access to these services in both the public and private sector.

Activity ID: 13753.08

Activity System ID: 13753

Program Area: Palliative Care: Basic Health Care and Support

Program Area Code: 06

Planned Funds: $970,000

Activity Narrative: SUMMARY:

The Foundation for Professional Development (FPD) supports the expansion of access to comprehensive HIV and AIDS palliative care by focusing on human capacity development with a view to increasing the detection and treatment of patients with TB and HIV co-infection. The emphasis areas for these activities are local organization capacity building and HCD. Target populations for these activities include people living with HIV and AIDS (PLHIV) and most at risk populations.

BACKGROUND:

FPD is a South African Private Institution of Higher Education working exclusively in the health sector in Southern Africa. With PEPFAR funding, FPD supports the public sector expansion of access to comprehensive HIV and AIDS care by focusing on provision of antiretroviral therapy (ART) and increasingly basic health care (wellness programs) for people living with HIV (PLHIV) who do not yet require ART. Due to the acknowledged drop-off of patients who test positive for HIV between testing and actually entering ART the basic care program attempts to provide a continuum of basic care at places of testing to ensure retention of patients.

This approach allows patients to be enrolled in a care support program that allows regular contact with health care providers, monitoring of CD4 counts and early referral of patients into ART programs. Activities include supporting the establishment of such programs in public sector, NGO and FBO CT sites, through the provision of staff, training, equipment purchase, technical assistance, mentoring, and refurbishment of facilities. Care programs offer psychosocial support through support groups and individual counseling and treatment of opportunistic infections. The program also includes dedicated staff (tracers) who follow-up on any patients who drop out of the program to determine the reason and where possible attempt to convince such patients to return to the program. The emphasis areas for this activity are human capacity development, gender, local organization capacity development and construction and renovation. Coordination with provincial Departments of Health (DOH) takes place through Memorandums of Understanding (MOUs). FPD provides substantial assistance initially to public sector facilities and works towards a diminished role over time, working towards sustainability at the sites. Sub-agreements are used to partner with NGOs and FBOs to provide care support services where public sector facilities are either overcrowded or not accessible. Gender issues are embedded in all aspects of the project and include collecting gender-specific data in treatment programs, linkages with NGOs working in the gender field, CT services that specifically focus on couple counseling, domestic violence and abuse detection. Other issues addressed by this project are: 1) Male norms and behaviors that are addressed in the counseling provided at basic care sites. All staff actively work towards reducing violence and coercion by identifying victims of violence.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Support to Government ART, CT and PHC clinics

PEPFAR funds are used to respond to requests from provincial DOH to support South African Government (SAG) ART, CT and Primary Health Care Clinics (PHC) through temporarily seconding clinical and administrative staff, providing equipment, refurbishment and technical assistance. The FPD-supported staff will play a critical role in introducing the provision of basic care programs at these sites as they will supplement to government staff. Patients enrolled in such programs will be linked into the electronic patient record system currently supporting patients on ARVs to allow patient tracking, mentoring by FPD specialists and early referral to treatment facilities.

ACTIVITY 2: Support to NGOs and FBOs

Numerous NGOs and FBOs in the areas where FPD supports ART services are involved with CT activities but seldom provide basic care, FPD will partner with these organizations to expand their services to include a basic care component, including regular monitoring of CD4 counts at six month intervals, diagnosis and treatment of opportunistic infections and psychosocial support. Patients enrolled in such programs will be linked into the electronic patient record system currently supporting patients on ARVs to allow patient tracking, mentoring by FPD specialists and early referral to government treatment facilities. It is anticipated that this activity will also leverage existing resources in these organizations in support of basic care programs and to expand the services provided to patients enrolled in the basic care program especially for psychosocial support and income generation. FPD will also provide additional support through its Compass Project, an organizational development project funded by the Dutch Government. This project provides technical assistance to help develop and strengthen these local organizations in the areas of governance, management, and M&E.

ACTIVITY 3: Referral and linkages

FPD will continue to strengthen and expand the referral networks and linkages of its partner NGOs and CBOs with care and treatment services for clients identified to be HIV-infected. Linkages with community mobilization and outreach activities will be initiated to promote the uptake of both HIV CT and basic care services, including the regular monitoring of CD4 counts, treatment of opportunistic infections including the provision of cotrimoxazole, and psychosocial support.

FY 2008 COP Activities: Although FPD has not in past years been funded for basic care activities such activities were conducted at the ART sites that FPD supports. New activities will include expanding care support activities to where CT takes place in both public and civil society facilities. This will help to ensure that those who are HIV-infected but not yet eligible for treatment are enrolled in a care program. Where feasible such programs will also be introduced at Primary Care facilities. A critical component will be integrating patient data from basic care programs into the electronic record system that currently supports patients on ART; this will allow better patient tracking and referral and allow the FPD clinical mentoring team to also support patients on basic care.

FPD will contribute to the PEPFAR goals of 2-7-10 by developing the capacity of organizations to expand access to ART services for adults and children, building capacity for monitoring ART service delivery and

Activity Narrative: reaching thousands of individuals with care and ART.

Activity ID: 7989.08

Activity System ID: 13770

Program Area: Palliative Care: Basic Health Care and Support

Program Area Code: 06

Planned Funds: $582,000

Activity Narrative: SUMMARY:

HIVCare will use FY 2008 funds to work with the Free State Department of Health (FSDOH) to provide antiretroviral treatment and care in private health facilities to patients who do not have medical insurance, either through referrals from the public sector, or self-referrals. The Free State has mainly a rural population, with only two major metropolitan areas (Bloemfontein and Welkom). In addition, the government rollout of HIV care and treatment has been geographically limited, with only one treatment initiating site in each of the five districts. The major emphasis area for this program will be the development of networks, linkages and referral systems, with minor emphasis given to quality assurance & supportive supervision, food and nutrition support as well as commodity procurement. The target population includes men and women; families (including infants and children) of those infected and affected factory workers and other employed persons, and government employees – specifically teachers, nurses and other health workers (without medical insurance). The most significant target group is those persons in the economically active age group of the population that cannot access services in the public health system due to the high demand for services. Additional attention is to be given to the screening and treatment of TB among the patients attending the program. The linkage with the youth centre will ensure that the program will have a larger proportion of younger persons being attended to specifically adolescents aged 10-14 and 15-24. This focus on the youth should further encourage some involvement with the street youth and it is anticipated that the program will be marketed among those NGOs working with the street youth as a testing & treatment site.

BACKGROUND:

Since 2005, the main thrust of the activity was to match the FSDOH with partners from the private sector (in this case Netcare, the largest private sector health provider in South Africa, through their primary health centers) in order to build private sector capacity and absorb some of the burden from state facilities. Many FSDOH centers have waiting lists of people waiting to go on ARV treatment. Patients from these waiting lists who meet the eligibility criteria for this program are referred from those public sector clinics to one of the primary health centers throughout the Free State Province for treatment. The FSDOH is a collaborating partner in this public-private partnership.

The Medicross Medical Centre in Bloemfontein, a well-equipped private primary health center, provides the main resource base and in conjunction with three other sites in Bloemfontein and another two in Welkom, will provide an effective means of distributing antiretroviral treatment (ART) to patients who are either referred from state facilities or who access the sites by word of mouth. In addition patients will be able to access a private doctor from the Netcare network in a number of rural towns across the Free State Province. These network doctors that will be enrolling patients onto the program are based in the following communities: Botshabelo; Kroonstad; Harrismith; Phuthithaba; Frankfort; Winberg; Warden and Viljoenskroon.

ACTIVITIES AND EXPECTED RESULTS:

The HIVCare treatment sites will provide comprehensive palliative care to those patients mostly referred by state clinics in immediate need of ART. The program is able to focus its attention on actual ART patients as a result of its linkages with the Department of Health facilities in the area.

ACTIVITY 1: Clinical Care

The clinic staff comprises a full-time HIV trained doctor, nurses (with training in HIV, TB and pain management) and counselors. Clinical activities include the usual onsite activities of any HIV clinic: ART education and readiness assessment, drugs and pathology testing as required for proper follow-up, adherence education and follow-up, prophylaxis of opportunistic infections, treatment of minor out-of-hospital opportunistic infections, management of disease and or drug-related associated symptoms such as pain and diagnosis and treatment of TB through DOT. Nutritional supplementation is provided until nutritional status has recovered to within normal range (BMI >16). The same activities, including family planning, are to be provided at the Youth Clinic. Prevention with positives interventions will be emphasized.

ACTIVITY 2: Psychosocial Support

Psychosocial support is provided for those patients who are in need of it through a support group which meets weekly. Where the clinic is far from the patient's home, the patient will be referred to a support group with a more accessible venue. For patients who are bedridden, HIVCare has strong links with the local Red Cross home-based care organization. Patients in this instance are visited in the home with deliveries of medication and supplements as required. Counselors regularly contact patients in need of psychosocial support where referred by the doctor or nurses and in addition provide an important support service to the families of patients. Consultations with a trained psychologist are also available where appropriate to patient wellbeing. Spiritual care is not directly provided at the clinic. Those patients requiring spiritual services are usually referred to a religious support group near their home. A priest frequently attends the support group sessions and HIVCare has further links with both the Protestant Church and the Catholic Relief Services (a PEPFAR partner).

ACTIVITY 3: Social Care

HIVCare clinics place emphasis on social care in the context of the family. The testing of partners is actively promoted as is disclosure to a spouse/partner. Child testing days over weekends are regularly organized for the children of patients. Patients are educated on their rights and on the access to social grants. A social worker is available on call.

Patients attend the clinic monthly to collect their medication. Those that do not attend on schedule are phoned by counselors or visited at home by a Red Cross home-based carer.

ACTIVITY 4: Integrated Prevention Services

Apart from the family members of patients, the adult clinic does not promote extensive CT sessions. This role is fulfilled through the Youth Centre, which serves to screen and provide HIV education for

Activity Narrative: children/adolescents. The Youth Clinic is situated in close proximity to provide clinical support and treatment. This public-private partnership has been ongoing for a number of years and includes the greater Netcare Group in the Free State.

By providing HIV care services to a significant population of people without private insurance and school age children, HIVCare is contributing to the PEPFAR goals of providing care for 10 million others who are infected with HIV. These activities also support care and treatment objectives outlined in the USG Five-Year Strategy for South Africa by expanding public-private partnerships and expanding care to an underserved population.

Table 3.3.06: Activities by Funding Mechansim

Mechanism ID:	335.08	**Mechanism:**	N/A
Prime Partner:	Salvation Army	**USG Agency:**	U.S. Agency for International Development
Funding Source:	GHCS (State)	**Program Area:**	Palliative Care: Basic Health Care and Support
Budget Code:	HBHC	**Program Area Code:**	06
Activity ID:	2993.08	**Planned Funds:**	$400,000
Activity System ID:	13804		

Activity Narrative: SUMMARY:

A trained cadre of Salvation Army volunteers will provide home-based palliative care (HBC) to people living with HIV and AIDS in order to contribute to their quality of life, provide spiritual and psychological support to the client and their family, monitor the client's health, and facilitate access to clinical care. This activity will focus on training, in addition to community mobilization/participation and the development of linkages and referral systems.

BACKGROUND:

The Salvation Army is an international Christian denomination that addresses all aspects of HIV and AIDS through community-based care and prevention programming: home-based care, provision of OVC psychosocial support, individualized pre- and post-test counseling, clinical care of opportunistic infection, community counseling, and youth mobilization. Matsoho A Thuso is a care and prevention model begun in November 2004 with PEPFAR funding. Palliative care activities focus on capacitating members of Salvation Army churches to provide psychological, social, spiritual and limited clinical support as well as prevention services to people living with HIV and AIDS in their communities. The project currently operates in 50 sites in eight of South Africa's nine provinces, many of which are in rural and underserved areas. In FY 2008 Salvation Army will expand and enhance care activities through retraining of caregivers as well as providing a comprehensive range of services to the HBC clients.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Training of Caregivers

The main objective of the training is to increase skills in delivery of quality palliative care services including elements of the preventive care package. Utilizing the Salvation Army's extensive volunteer base, the Salvation Army will train and equip community members to carry out basic home-based care services. The training will be conducted by an accredited service provider with South Africa's Health and Welfare Sector Education and Training Authority. Each home-based caregiver will also receive a basic home-based care kit containing equipment such as gloves, disinfectant and bandages to ensure that they are able to provide an acceptable quality of care to people living with HIV and AIDS throughout the country while maintaining adequate precautions. In the first year of the project, a total of 101 caregivers have been trained to provide services. In order to intensify and improve the quality of services in FY 2008, additional caregivers will be trained. On-going mentoring and supervision will be provided by health facility staff and Salvation Army trainers to promote the retention of volunteers and to minimize burn-out. Increased participation by men will be encouraged in service delivery.

ACTIVITY 2: HBC Services

Trained caregivers will identify clients in consultation with the community. Home visits will be conducted four times a month to provide clinical as well as social, psychological or spiritual services. Services provided will include elements of the preventive care package, assistance with bathing the client when s/he is unable to do so, tending to household duties when needed, providing spiritual and psychological support to the client and their family, and monitoring the client's status over time which will assist qualified health care providers in the management of opportunistic infections. A checklist with comprehensive palliative care services will be used to track the services rendered. Thus far Salvation Army has provided care and support to 538 HIV-infected individuals. In FY 2008 Salvation Army intends to intensify and expand services provided to HIV-infected individuals and their families. This activity will also contribute towards reducing stigma and discrimination against people living with HIV. The project aims to foster a culture of support and acceptance for people living with HIV and AIDS and their families by involving community members in care and support activities. Home-based care volunteers also make use of the opportunities given to address any misconceptions the family or the community may have about HIV and AIDS as well as applying the preventive care package. Family members of the HIV-infected individuals will also receive at least two support services (psychosocial, spiritual, etc) from the checklist of the services. Any OVC identified during HBC visits will be referred to the OVC program.

ACTIVITY 3: Strengthen Referrals Networks

In order to ensure that HIV-infected individuals and their families receive appropriate care and support, Salvation Army will improve their linkages with other organizations, particularly in terms of increasing access to clinical care. Salvation Army will regularly map services available in each site and develop a formal referral system to other community health structures. This will ensure that beneficiaries are able to access services that are not provided by the Salvation Army (such as provision of ARVs). The patients will be referred and a proper follow-up will be made by home-based caregivers so that the program can track their progress and address any problems identified with the relevant authorities. The program will focus on strengthening relationships between caregivers and public clinics and hospitals in order to facilitate effective referrals and to provide additional support for volunteers from clinically trained professionals. In addition, Salvation Army will also explore partnerships with other private organizations and institutions in order to provide additional support for the program and to move towards ensuring the sustainability of activities. Monitoring and Evaluation (M&E) is an important component of this program and a comprehensive M&E structure has been set up to help track number of services provided by the caregivers as well as the progress made by patients.

ACTIVITY 4: Support Program for Caregivers

The Salvation Army has identified the need to provide care and support services to caregivers to ensure that caregivers avoid burnout, receive care for medical conditions and are able to provide services to clients effectively. TSA will partner with local health facilities to offer on-going counseling and testing and health screening (for TB, diabetes etc.) to all caregivers. These screening services will be an entry point for further services from a specialized cadre of senior HBC service providers who will be trained to provide on-going HIV prevention education and counseling, debriefing services, run support groups for caregivers, provide support for clinic visits and adherence, counseling and referral for services related to gender-based violence and to assist with linking caregivers to income generation projects and with further educational

Activity Narrative: opportunities. These interventions will assist in improving the health and well-being of caregivers and increase the sustainability of the program.

These activities contribute towards PEPFAR's goal of providing 10 million people with care including people living with HIV and AIDS and their families by increasing access and quality of care.

Activity Narrative: SUMMARY:

Right to Care's PEPFAR program was recompeted through an Annual Program Statement (APS) in 2007 and was a successful applicant. RTC will continue to use PEPFAR funds to strengthen the capacity of healthcare providers to deliver Care and Support (C&S) services to HIV-infected individuals, and to improve the overall quality of clinical and community-based health care services in five provinces.

BACKGROUND:

RTC's C&S services will expand from the current levels achieved using PEPFAR funds. The integrated program of education, counseling and testing, care and ARV treatment has been implemented in five focus areas: (1) The employed sector, where RTC is currently providing HIV services to >130,000 employees in >32 companies; (2) FBO/NGO clinics which target underserved populations in rural areas, industrial areas, and informal housing sectors as well as targeted gender-specific support groups and family-centered approaches; (3) Thusong, a private practitioner program for indigent patients; (4) Small, Medium, and Micro-Enterprise, including farm employees, with mobile treatment units; and (5) In partnership with the National Department of Health (NDOH), capacity support for national comprehensive HIV and AIDS care, management and treatment sites. RTC provides mentorship and technical assistance to over 15 sub-recipients and manages their sub-agreements. These are ongoing programs expanded with NDOH coordination and private sector support. By providing training and support to these sites RTC leverages NDOH resources to reach an increasing number of patients. RTC has supported these sites with infrastructure, staff, training, equipment and data management. In addition, the NDOH has recognized the successes of RTC NGO/FBO sites and has been accrediting these sites to enable the provision of ARV drugs and laboratory monitoring.

ACTIVITIES AND EXPECTED RESULTS:

RTC will build on past successes by consolidating and expanding its support for government sites, NGO and FBO clinics/organizations and private sector programs. FY 2008 PEPFAR funds will be used for human capacity development and salaries at all C&S providers; (1) NGO and FBO clinics/organizations receive sub -awards earmarked for doctors, nurses, counselors and other healthcare workers; (2) RTC will not provide salary support to SAG staff, but rather the salaries of health care providers seconded to DOH facilities including support for doctors, nurses, data managers, and counselors; and (3) a capitation fee-for-service arrangement exists with a network of private sector service providers for the Thusong and Direct AIDS Intervention (DAI) programs.

PEPFAR funds will also be used to maintain RTC's mobile clinics. NGO and FBO clinics also use PEPFAR funds for laboratory monitoring of HIV patients and for the procurement of health commodities such as medical equipment, ARVs, drugs for opportunistic infections including cotrimoxazole, counseling and testing kits, and home-based care kits.

RTC supports all the C&S providers by disseminating policies and guidelines and providing quality assurance through sharing best practices. With FY 2008 funding RTC will provide ongoing training and continued medical education to assure that staff is aware of the latest treatment norms.

RTC will ensure that each HIV patient at RTC-supported facilities receives a comprehensive minimum package of C&S services and preventive care, including clinic, community and home-based services. This minimum package includes clinical and pathology monitoring, management and treatment of opportunistic infections, psychosocial counseling, healthy living education, prevention with positives services, nutritional counseling, assessment, monitoring and referral, home-based care, advice and assistance on welfare issues and applications for welfare grants, and hospice and end-of-life care for terminally-ill patients.

Emphasis will be placed on increasing the number of HIV-infected children and pregnant women in care. A number of NGO sites are doing nutritional counseling at community level and refer for nutritional assessment and monitoring. Examples of non USG-funded community activities include food gardens and income generating programs in order to support patients that are on ART. In addition, sites supported by the NDOH have dieticians for ARV-treated patients.

PEPFAR funds facilitate partner linkages and a referral system between treatment sites-based care, and other non-medical C&S services. At each site RTC will identify a community-based care organization to add to the counseling capacity of the site. Peer counselors complement the NDOH appointed clinic staff. The Thusong program is linked with a national network of care organizations. The expansion of the strategic mix of clinic, home and community-based C&S will bring more C&S services to the doorstep of impoverished populations such as farm workers, rural communities and residents of informal settlements.

Public-private partnerships (PPPs) have also been formed to ensure longer term sustainability. These include, for example, those with the provincial DOH, where value is seen by the government in accrediting specific clinics in order to provide ARVs and pathology monitoring thereby reducing the overall cost on one donor. In addition PPPs are being explored with a number of organizations to provide holistic and comprehensive care and treatment services to HIV-infected patients.

NGO clinics also receive cooperative funding from donors and patient fees. Knowledge sharing between treatment sites and networks is being facilitated by Value Based. Referral mechanisms linking primary sites to tertiary sites for complicated patients have been integrated into the RTC network of sites.

A number of NGO clinics also have gender-specific C&S programs. For example, the ACTS (Aids Care Training and Support) clinic has a series of comprehensive monthly support groups aimed at young men or young women who are HIV-infected. Support group members meet to discuss challenges and problems and provide each other with support and guidance. These programs include family-centered approaches. Expansion of gender-specific activities with FY 2008 PEPFAR funding is planned.

Right to Care will continue to use PEPFAR funds to strengthen capacity of healthcare providers to deliver C&S services to HIV-infected individuals and to improve quality of clinical and community-based health care services in five provinces. RTC will strengthen links between counseling and testing and care. For those

Activity Narrative: testing positive a tracer system will reduce loss to treatment registration. Those who test positive will be tracked so that they benefit from wellness services and are tested every six months for their CD4 counts to ensure that they commence ART as soon as they become eligible.

By reaching patients with care and support services at various outlets, RTC will contribute to the PEPFAR goal of providing services to 10 million HIV-infected and affected individuals. In addition, RTC activities will support the USG Five-Year Strategy for South Africa by training health care workers in care and support services, significantly expanding access to and quality of palliative care services.

Planned Funds: $300,000

Activity Narrative: SUMMARY:

Project Support Association of Southern Africa (PSASA), a community-based HIV and AIDS prevention and care organization, is expanding its home-based care (HBC) activities by increasing the number of services, increasing the scope of services (integrating OVC care and adult palliative care, provision of community-based HIV counseling and testing) and improving the quality of these programs through training. Emphasis areas are community mobilization/participation, training, information, education and communication, and development of linkages and referral systems. Target groups are people living with HIV and AIDS (PLHIV) and their families as well as healthcare workers. With FY 2007 PEPFAR funding, the number of HBC programs was expanded providing integrated palliative care, OVC care and HIV testing. The new projects targeted poorer rural communities of Mpumalanga province where health services are limited or non-existent. Through FY 2008 PEPFAR funding, the HIV and AIDS care programs will be expanded to provide prevention with positives elements among those who are HIV-infected. These interventions will target poorer rural communities of Mpumalanga where health services are limited or non existent and focus mainly on PLHIV and support groups.

BACKGROUND:

PSASA is a non-profit organization, which was established in 1998 in HIV care and support, prevention and mitigation. Its mission is to create community partnerships that enhance their ability to prevent, mitigate and alleviate the impact of HIV and AIDS. Home-based care programs are an integral component of the PSASA mission and are a strategy within the South African Government Strategic Plan. PSASA has established and continues to support over 60 home care programs. Many of these were established in partnership with the Mpumalanga Department of Health. Since 2004, 127,614 clients received direct support from a PSASA project and over 32,000 household members received training from community caregivers. These activities will be expanded under PEPFAR as part of PSASA's ongoing core program. PSASA has worked closely with government structures, especially Departments of Health, Welfare Social services and Population Development. In recent years closer relationships have been formed with the provincial Department of Home Affairs, Agriculture Development, Premiers Office (Gender), Department of Education and Department of Labor (income generation activities). From 2004-2007, the Mpumalanga provincial Department of Health & Social Services (DOH&SS) has financed PSASA for over $100,000 to conduct life skills training in HIV and AIDS. The DOH&SS also provides PSASA with HIV test kits and home-based care kits as well as assistance with establishing referral networks for family planning, antiretroviral (ARV) and tuberculosis (TB) programs. Social grants, food packages, child assessments and drop in centers are undertaken closely with Department of Social Development (DOSD) with funding from Dutch donors. Each of the projects are encouraged to work closely with and to participate in local AIDS Councils, churches, government departments and municipalities, schools with many businesses providing "in kind" support.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Human Capacity Development

The aim of training is to build capacity at the community level for the provision of quality and holistic care. The majority of people living with AIDS in the care programs are women. PSASA will strive to increase with the number of males within the care program. In many cases, the care workers may also be recognized as traditional healers. PSASA will also work to increase the involvement of men in caregiving. As part of the HBC trainings, care workers will engage men by focusing on such topics as family violence, anger management, fathering and parenting skills being emphasized. To support this human capacity development of care workers and volunteers, a stipend provided through the HBC program is an important source of household income. Regular financial training seeks to improve the capacity and economic advancement of care workers in the program. From other donor funding, short-term loans or small grants are also provided to supplement this meager stipend. In addition to a 5-day annual training, one-day trainings are held weekly covering topics of sex and sexuality relationships negotiating safer sex abstinence and truthfulness and other key topics include: evidence-based preventive care interventions focusing on people living with AIDS, TB screening/management), counseling and testing for clients and family members, safe water and personal hygiene strategies to reduce diarrheal disease, HIV prevention counseling, provision of condoms, referral for family planning services for HIV-infected women, appropriate child survival interventions for HIV-infected children and nutrition counseling, clinical measurement, nutrition monitoring and targeted support based on WHO criteria for severely malnourished PLHIV.

ACTIVITY 2: Home-Based Care

Trained care workers provide a minimum standard of care focusing on clinical/physical, psychological, spiritual, social and prevention interventions. In addition to sharing integrated HIV-related palliative care messages with HIV-infected individuals and their families, the care workers use a family-centered approach to client assessments. The package of services includes basic pain and symptom management, support for adherence to OI medications (including cotrimoxazole prophylaxis and TB treatment) and antiretroviral therapy (ART), and referral for family planning. Community and home-based psychological support, stigma reduction strategies and adherence support for OI medications and ART will be provided. Attention will be given to increasing the gender equity in the HIV and AIDS programs, increasing male involvement in the program, addressing stigma and discrimination, and partnerships with local NGOs, FBOs and CBOs. Clients are also counseled on prevention with positives and family member are referred for counseling and testing (CT). Outreach to the community and referral to the FHI-sponsored Mobile Support Units for CT Family Planning referrals is part of the HBC activity. An additional key activity of care workers is monitoring of adherence to TB and HIV treatment. Elements of the preventive care package for adults and children are also included during interaction between the care worker and the client. The HBC project link closely with community and church groups who regularly supply "in kind" support (approximately 10% of project budget). Certain components of the home care program have become fully sustainable. For example, income generation activities for care workers such as food gardens have become sustainable with care workers receiving approximately $150 per annum through the sale of vegetables and fruit.

By providing basic care and support to HIV-affected individuals and their families, these activities contribute substantially to the PEPFAR goal of providing care services to 10 million. The activities also support the USG Five-Year Strategy for South Africa by collaborating closely with SAG to improve access to and quality

Activity Narrative: of basic care and support.

Budget Code:	HBHC	**Program Area Code:**	06
Activity ID:	3019.08	**Planned Funds:**	$7,667,500
Activity System ID:	13798		

Activity Narrative: SUMMARY:

The Hospice and Palliative Care Association of South Africa (HPCA) currently has 75 member hospices and 73 development sites throughout South Africa (SA), each an independent legal entity. The Mission of HPCA is to provide and enhance the provision of sustainable, accessible, quality palliative care. PEPFAR funds will strengthen the capacity of member hospices and other governmental and non-governmental organizations to provide quality services to HIV-infected persons.

BACKGROUND:

HPCA strengthens existing services and develops new services through direct funding to member hospices to promote accessibility and availability of palliative care in SA, including work with religious leaders and member hospices that are faith-based organizations. HPCA personnel at national, provincial and district levels continue to provide the infrastructure and coordination to develop and strengthen palliative care programs within member hospices, the formal health care sector and NGOs. Improved collaboration between HPCA and the National Department of Health (NDOH) is a key objective, aimed at optimum utilization of scarce palliative care resources. FY 2006 funding has allowed the training of 7,108 trainees from October 2006 to July 2007. The major focus of FY 2008 funding will be to provide direct palliative care to patients and their families, to assess quality of palliative care, assist in the development of new services, provide support to the care providers and provide training in palliative care. An HPCA member hospice will also focus on increasing male patients' participation in the fight against HIV and AIDS. The Bana Pele Project, in partnership with St Nicholas Hospice, will be using PEPFAR funding in FY 2008 to focus on the expansion of palliative care in their area. HPCA will provide capacity building support to St Nicholas, who will be administering the Bana Pele Project. Additional funding has been granted for Soweto Hospice in Gauteng for FY 2008 which was managed by Hope Worldwide previously. HPCA intends to liaise with Prison Services and the SA Defense Force (military populations) to share palliative care expertise and support to these organizations.
ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Provision of palliative care

HPCA is funding member hospices to provide care to patients with HIV and their families. Sites providing palliative care include home-based care (HBC), day care centers, and in-patient units. Services include elements of the preventive care package, management of opportunistic infections including provision of cotrimoxazole, pain and symptom management, clinical prophylaxis, prevention with positives, treatment for TB, psychosocial and spiritual care, and bereavement support for families and friends. Addressing prevention with HIV-infected individuals is an important part of a comprehensive care strategy. Through healthy living and reduction of risk behaviors, these prevention with positives interventions can substantially improve quality of life and reduce rates of HIV transmission. The goal of these interventions is to prevent the spread of HIV to sex partners and infants born to HIV-infected mothers and protect the health of infected individuals. Family care includes training in all aspects of patient care, infection control, prevention, nutrition, individual and family counseling and reduction of stigma. Increased participation by male patients will be encouraged by an after-hours clinic at a member hospice. Bereavement care is integral to the provision of palliative care and will be offered throughout the course of the illness as well as after the death of the patient. A key aspect of both individual counseling and hospice support group services is reduction of stigma and discrimination and reconciliation within families. Nutritional support will also be arranged (with non-PEPFAR funding). ART referrals, as additional access sites are made available, will be a component, including pediatric cases of advanced HIV. If the need for OVC services is identified but not provided by the hospice, an established referral system is used to refer the patient to an outside service provider. Through the reprogramming of funds from TBD Male Circumcision, HPCA will use funding to strengthen the integration of Prevention for Positives programs at all member and affiliate hospices in South Africa. Since all eligible patients are already reported as having received care under PEPFAR, no new targets are being added. Rather, these activities are aimed at improving the quality of services provided to individuals who are HIV-infected.

ACTIVITY 2: Development of new palliative care sites

This activity entails enhancing existing and establishing new palliative care services. HPCA Provincial Palliative Care Development Coordinators (PPCDCs) lead development teams (PPCDT) in the regions, comprising technical expertise from local hospices. The PPCDT assists in identifying new development sites and providing financial and non-financial resources and mentorship to help build capacity in these sites. The main criteria for development are community need and available resources. In addition to development the PPCDCs also develop public-private partnerships between HPCA and government departments to support these development sites. PEPFAR-funded Regional Centers of Palliative Learning (CPLs) in 10 regions and mentor hospices will continue to develop new service delivery sites. The CPLs are attended by health professionals in the public and private sectors including doctors, nurses, pharmacists, and home-based care (HBC) workers. A mentor hospice is a fully accredited hospice, and receives funding to provide technical expertise and meet mentorship needs in its region. Through these development activities, the total number of HPCA palliative care sites will be expanded and palliative care will be more accessible to currently under-resourced and under-served areas, increasing the availability of quality palliative care to many more HIV and AIDS patients and families. Sustainability of existing and new sites is addressed through ongoing fundraising workshops, through increased quality of services, through increased human resources capacity building and through increased collaboration with the formal health care sector. The integration of palliative care into existing non-hospice health services e.g. district hospitals, home-based care organizations and clinics, has become an important aspect of the expansion of palliative care.

ACTIVITY 3: Accreditation and Quality Improvement

PEPFAR funding has facilitated the development of comprehensive HPCA and Cohsasa (Council for Health Services Accreditation of SA) Standards of Palliative Care, which include standards of management and governance, and clinical, psychosocial, spiritual care and quality improvement to ensure quality palliative care in service delivery. A mentorship and accreditation program is based on these standards. FY 2008 funding will continue to support the accreditation and quality improvement of existing member hospices based on compliance with these standards. Trained mentors and surveyors visit the hospices and an audit

Activity Narrative: of the hospice standards is carried out. To date, eleven hospices have received full accreditation, and many are in preparation. The hospices that receive full accreditation are used as mentor hospices in Activity 2 above and to assist new member hospices to comply with the standards. The accreditation process is aimed at raising the standard of palliative care services throughout the country.

ACTIVITY 4: Human Capacity Development

The objective of this training is to increase skills in delivery of quality palliative care services including elements of the preventive care package. A CPL is an established hospice which has either achieved, or is close to achieving, full accreditation and which has been selected because it has the best resources and expertise to provide training and promote awareness of palliative care. A multi-disciplinary approach is used in on-going training programs to ensure human capacity development. In partnership with higher education institutions, professional associations and the National and provincial Departments of Health, Social Development and Education, a wide range of accredited palliative care training programs are offered for volunteers, community health workers, nurses and doctors. HPCA strives to have all training curricula accredited.

PLHIV will receive at least one clinical and one other category of palliative care service. Palliative care to family members of PLHIV or OVC will be provided in at least two or the five categories of palliative care services.

HPCA supports the USG South Africa Five-Year Strategy to expand access to quality palliative care services and improve quality of palliative care and HBC services, and thereby contributes to the 2-7-10 goal of providing care to 10 million people affected by HIV.

Table 3.3.06: Activities by Funding Mechansim

Mechanism ID:	519.08	**Mechanism:**	N/A
Prime Partner:	University of KwaZulu-Natal, Nelson Mandela School of Medicine	**USG Agency:**	HHS/Centers for Disease Control & Prevention
Funding Source:	GHCS (State)	**Program Area:**	Palliative Care: Basic Health Care and Support
Budget Code:	HBHC	**Program Area Code:**	06
Activity ID:	3069.08	**Planned Funds:**	$250,000
Activity System ID:	13854		

Activity Narrative: SUMMARY:

The University of KwaZulu-Natal (UKZN) Nelson Mandela School of Medicine (NMSM) is using PEPFAR funds to support the implementation and refinement of common clinical guidelines for HIV and AIDS management by traditional healers, including: the standardization of HIV clinical staging for traditional healers; collaborative introduction of Patient Record Keeping, Monthly Data Sheets, and Data Transfer to the Medical School; and provision of basic medical supplies to trained healers. The main emphasis area is training, with minor emphasis placed on human resources, logistics, policy and guidelines, quality assurance and supportive supervision, and strategic information. The target population includes Traditional Health Practitioners (THPs) in the private and public sector who are members of the KwaZulu-Natal (KZN) and Ethekwini Traditional Health Practitioner Councils.

BACKGROUND:

UKZN has an ongoing collaboration with associations of traditional healers in rural areas of Ethekwini District. Traditional healers are extremely influential and are a largely untapped resource in HIV and AIDS prevention and mitigation on the community level. These activities began in August 2005 with the arrival of FY 2005 PEPFAR funding. NMSM is implementing the project in collaboration with the KZN and Ethekwini Traditional Healer Councils, with the eThekwini Health Unit, and the eThekwini District Health Office of the KZN Department of Health.

ACTIVITIES AND EXPECTED RESULTS:

The principal focus of this project will be training and equipping traditional healers to better deal with the HIV epidemic in KZN.

ACTIVITY 1: Training

Training will be provided through workshops run by the project training team (including senior traditional healers). Trained THPs will be provided with a customized version of the home-based care medical kit currently used by the KZN Department of Health (DOH), modified to include the elements of the Adult Preventive Care Package including, nutritional referral, personal care, counseling, screening for pain and symptoms, recognition of signs and symptoms of opportunistic infections, worsening condition such as increased pain or wasting, and knowledge of when to refer to clinical providers. Treatment adherence, prevention (including prevention with positives) and other holistic care activities as allowed (bathing, wound care will also be covered. Training includes the refinement and implementation of common clinical guidelines for HIV and AIDS patient management by traditional healers, including the standardization of HIV clinical staging, the introduction of patient record keeping, monthly data sheets, and transfer of these data to the Medical School.

ACTIVITY 2: Referrals:

NMSM is working closely with South African Government colleagues to establish viable bi-directional referral pathways (including referral forms); formalizing and enhancing what is currently happening. This process has involved consultation with municipal and district health authorities on the following:
1) the clinics that are near to the THPs and to which the THPs can send referrals;
2) the sharing with the government of the database of THPs registered with the project; this database provides (in addition to other information) details on the location of each THP practice site, their contact details, and the clinics to which these THPs are currently referring patients (informally);
3) a commitment by the government to include notification of referrals received by THPs in their Health Information System; and
4) formalization of a referral form, already reviewed and approved by municipal and district Health, for THPs to use in sending patients to clinics. Since current legislation does not permit public health officials to refer patients to THPs formally, the referral form has a simple tear off sheet to give to the patients to take back to THPs, simply acknowledging whether the patient was attended to at the health facility, and by whom.

ACTIVITY 3: Monitoring and Evaluation-patient record system

NMSM will also ensure that traditional healers have adequate stocks of appropriate medical supplies, through collaboration with the provincial Department of Health. Regular site visits will be conducted to monitor the implementation of these guidelines and data management protocols. THPs are visited regularly by a team of 12 project data monitors to collect anonymous copies of patient record data for entry into the project database. NMSM has determined that the optimum method is to use carbonized patient record forms, patient follow up forms (both in book form) and referral forms (in tear-off pads) and provide patient cards to the THPs. Each patient card is linked to a unique patient record identifier number, pre-printed on the first-visit patient record forms. THPs must enter the patient record number on the patient follow-up forms and patient card. The patient takes the card with them and brings it back to facilitate the THP's use of the patient record system. The referral forms include a tear off sheet for use by the clinic, that the patient is expected to bring back to the THP.

ACTIVITY 4: Medical Kit Supply

Initial medical kits are supplied to the THPs registered with the project using project funds and logistics. These kits are a modification of the type of home-based care kits used by the Municipality and Province, and contain additional items specific to the THP needs. The re-supply in eThekwini District is being provided the District Health approved National Integrated Program (NIP) sites, and other NGO sites approved by District Health. These sites are normally used by DOH to re-supply the DOH Home-based Care (HBC) workers, and therefore are equipped with stock control staff and keep a registry of HBC workers using the material. DOH has agreed to add the THPs on the project to this system, and is exploring with the project the variable amounts of re-supply needed by different THPs (some are much busier than others), and the specific needs of THPs that may vary from those of HBC workers.

ACTIVITY 5. Clinical Management Follow-Up

Activity Narrative: In the refresher training sessions and workshops with THPs already on the project, NMSM concentrates on ensuring that fundamental facts about HIV, patient management, and referral criteria are clearly understood. Discussions between traditional health and biomedical practitioners in these sessions focus on optimizing patient management.

Expected Results:
1. Refine and implement Standardized Clinical Guidelines for HIV and AIDS management for traditional healers.
2. Develop Standardized Therapeutic Protocol for HIV and AIDS patient management by traditional healers.
3. Improve collaboration and referral between biomedical and traditional healers.
4. Improve record keeping by traditional healers and availability of the anonymous data to public health authorities.
5. Provide adequate basic care package to trained traditional healers.
6. Assess the usefulness of working with traditional healers to enhance their capacity to provide palliative care to HIV-infected patients.
7. Human resources: Through this activity, traditional healers will be trained, equipped, with basic medical supplies and enhanced clinical care knowledge. A small number of medical school staff, traditional healer representatives, and support staff receive salaries from the project for administration, training, THP support and monitoring and evaluation.

Logistics: Includes managing the medical kit supply and re-supply, with the trained traditional healers and government colleagues. This overlaps with commodity procurement since NRMSM funds will purchase the initial medical kits. Through regular site visits quality assurance and supportive supervision will be conducted on the use of adapted clinical guidelines and HIV staging, medical kits and record keeping systems.

Through training, monitoring and evaluation, medical supply and referral system implementation in partnership with local government, policy and guidelines for working with traditional healers will be developed.

By providing new tools and materials to traditional healers working with HIV and AIDS patients, this project will expand basic care and support services in KZN, contributing to the PEPFAR goal of providing care and services to ten million HIV-affected individuals. These activities will also support efforts to meet the care and treatment objectives outlined in the USG Five-Year Strategy for South Africa.

Prime Partner: Ubuntu Education Fund

USG Agency: HHS/Centers for Disease Control & Prevention

Funding Source: GHCS (State)

Program Area: Palliative Care: Basic Health Care and Support

Budget Code: HBHC

Program Area Code: 06

Activity ID: 8263.08

Planned Funds: $75,000

Activity System ID: 13848

Activity Narrative: SUMMARY:

Ubuntu's activities will support comprehensive care services for people living with HIV (PLHIV) and their family members to improve HIV management and to stabilize their households through care and support. Palliative care services take place in the townships of Port Elizabeth, a city in the province of the Eastern Cape. Emphasis areas include addressing male norms and behaviors, increasing gender equity in HIV and AIDS programs, increasing women's access to income and productive resources. Specific target populations are PLHIV (including pregnant women, infants and children), HIV and AIDS affected families, discordant couples.

BACKGROUND:

Since 2005, Ubuntu has provided community and clinic-based care services for families coping with HIV and AIDS. Ubuntu uses a family-centered approach to provide care services to PLHIV. The care program is the integral service in the organization binding together all HIV and AIDS components. Ubuntu's care program is integrated with clinical services in CT and HIV management including ART readiness and adherence. Ubuntu has strong referral partnerships to help establish a continuum of care for PLHIV and their families and to coordinate access to service providers including clinics and hospitals, the Department of Social Development, the Department of Home Affairs, Childline, the Rape Crisis Centre at Dora Nginza Hospital, the National Institute for Crime Prevention and the Reintegration of Offenders (NICRO), Family and Marriage Society of South Africa (FAMSA), other CBOs and NGOs, community home-based care providers, and hospice services. With PEPFAR support, Ubuntu will reach more PLHIV and their family members with comprehensive care services.

Ubuntu became a PEPFAR partner in FY 2007 and has only recently received funds so does not yet have PEPFAR-funded results to report.

ACTIVITIES AND EXPECTED RESULTS:

Ubuntu will directly provide comprehensive care services, including elements of the preventive care package, including cotrimoxazole , for PLHIV from the office site in Zwide and clinic sites. Entry points to care services include referrals from Ubuntu's outreach and life skills program, clinic sites and walk-in clients. Based on need, families enrolled in the care program receive assistance to access health services, including CT and ART, monitoring of HIV disease progression, ongoing psychosocial support and counseling, risk reduction and couple counseling, referrals to PMTCT, access to South African government (SAG) grants, including disability, child support and foster care grants, home-based care, nutritional support and referrals to other service providers. Effort will be made to ensure equitable access to care services for both males and females. Household needs are assessed at intake and an action plan is developed that encompasses the care needs of each family member. Care services are linked to other Ubuntu services in gardening and higher education and career guidance.

Ubuntu addresses women's empowerment by providing female-headed households with SAG grant support and referring women to Ubuntu's Empowerment program providing skills training in areas such as catering and urban agriculture and income-generation projects including community gardens. The organization provides intensive legal referral for cases of domestic and gender-based violence, including access to post-exposure prophylaxis. Ubuntu focuses on increasing men's involvement in HIV and AIDS prevention, care and treatment services by encouraging men to access CT through couple counseling, promoting couples access to risk reduction counseling, ensuring men eligible for ART are not lost to follow-up, training male members of the family in home-based care and promoting male partner involvement in PMTCT.

PLHIV identified at the clinic sites will be monitored by Ubuntu staff including a professional nurse for on-time access to clinical services. The professional nurse's mandate is to provide quality assurance and technical support to clinic staff in HIV management and prevention with positives. Clinic sites are KwaZakhele Day Hospital in 2007, expanding to Zwide Clinic in 2008. Ubuntu care workers also regularly refer clients to other clinics in the target area and will coordinate services and referrals with other PEPFAR implementing partners operating from these sites.

Case managers will be placed onsite at the clinics to ease the high demand for psychosocial support services as ART rollout expands. The case managers will work with clinic lay counselors to ensure care monitoring for PLHIV, assistance and support in the treatment readiness and ART initiation phases including conducting required home visits for each client and providing comprehensive psychosocial support services. This will help ensure a cogent continuum of care for PLHIV. Clients will have access to male and female condoms and to prevention counseling, prevention with positives services, including risk reduction counseling, referral to PMTCT, couple counseling and identification of discordant couples. Weekly support group facilitation and meals are provided by Ubuntu as well as the provision of food parcels as needed for high poverty cases. Support group members are encouraged to enroll in Ubuntu's clinic gardening program. Ubuntu is encouraging clinic partners to make HIV management integral to all clinic services to reduce bottlenecks and destigmatize services.

Ubuntu proactively identifies children who have an increased risk for HIV exposure and ensures they receive access to CT, and provides access to treatment services for children and their caregivers who are affected by HIV. Ubuntu works with Dora Nginza's Pediatric ARV Unit to provide ongoing monitoring and support to children on ART. HIV-infected mothers will receive information and support for infant feeding, monitoring to ensure compliance with PMTCT protocols, as well as ensuring that infants complete their immunization schedules and receive necessary vitamin supplementation. Risk reduction plans are developed and ongoing counseling sessions scheduled for individuals identified with high-risk behavior. Ubuntu has several rape cases a year and will ensure that clients receive post-exposure prophylaxis (PEP) for both pregnancy and HIV.

Client home visits are an integral part of care services, where signs and symptoms of illness are assessed, referrals made to health services, food parcels are provided with support from other funding partners, and advice given on the management of side-effects, nutrition and hygiene. Ubuntu care workers assist family members in providing home-based care, including oral and wound care and provide home-based care kits. Care workers engage family members in care services to destigmatize HIV and AIDS within family settings

Activity Narrative: by providing correct information on transmission, treatment and other areas of concern. Ubuntu works with home-based hospice services to provide culturally-appropriate end of life care including referral to spiritual care of the patient's choice.

Ubuntu trains home-based caregivers in the SAG accredited 59-day curriculum.

PLHIV will receive at least one clinical and one other category of palliative care service. Palliative care to family members of PLHIV or OVC will be provided in at least two or the five categories of palliative care services.

These results contribute to the PEPFAR 2-7-10 goals of providing care and services to 10 million HIV-affected individuals by ensuring that individuals coping with HIV and AIDS receive timely HIV clinical services and their households are stabilized through psychosocial services for family members, as well as improved continuum of care for PLHIV through referral networks among service providers in Port Elizabeth. These activities also support the goals outlined in the USG Five-Year Strategy for South Africa by expanding and improving care and support services to needy populations.

Activity System ID:	13857		

Activity Narrative: SUMMARY:

The activities listed below are intended to be competed and awarded to a follow on partner to UKZN CAPRISA since that award is ending in FY 07.

Activities are carried out to provide clinical, spiritual and psychosocial support to the HIV-infected patients and family members affected by the disease at two established treatment sites in KwaZulu-Natal.

BACKGROUND:

CAPRISA was established in 2002 as a not for profit AIDS research organization by five major partner institutions: University of KwaZulu-Natal, University of Cape Town, University of Western Cape, National Institute for Communicable Diseases, and Columbia University. The headquarters of CAPRISA are located in the Doris Duke Medical Research Institute at the Nelson R Mandela School of Medicine, University of KwaZulu-Natal. The PEPFAR-funded CAPRISA AIDS Treatment (CAT) Program was initially started as a supplemental effort to deal with the large volume of HIV-infected clients that were screened out of CAPRISA's other research studies. It has since evolved into one of the pillars of CAPRISA and is evidence of the ongoing commitment to provide comprehensive services to communities. The CAT Program was initiated in June 2004 and currently provides an integrated package of prevention and treatment services. The program provides an innovative method of providing ART by integrating the tuberculosis (TB) and HIV care as well as counseling and testing, family planning, sexually transmitted infections (STI) treatment, prophylaxis and treatment for opportunistic infections (OIs), and other HIV associated conditions at both a rural and urban site. The CAPRISA eThekwini Clinical Research Site is an urban facility attached to the Prince Cyril Zulu Communicable Disease Clinic (CDC) which is a large local government clinic for the diagnosis and treatment of STIs and TB, for which it provides free treatment. The HAART provision at this clinic integrates TB and HIV care into the existing TB control program. Patients are either self referred, or enter the HIV care continuum via the adjoining TB or STI services. The CAPRISA Vulindlela Clinical Research Site is a rural facility located about 150 km west of Durban in KwaZulu-Natal. The Vulindlela district is home to about 500,000 residents whose main access to health care is at seven primary health care (PHC) clinics that provide comprehensive services. The CAT Program at Vulindlela is an entirely rural nurse-driven service with doctors available for the initial eligibility assessment and for advice and referral. At the Vulindlela Site, by the end of June 2007, 2654 people have been enrolled into HIV care and 1002 people had been initiated on ART, with 857 currently actively accessing ART services. At the eThekwini Site, which was initiated in September 2004, 818 people had been ever initiated on ART, with 696 currently actively accessing ART and 2803 people accessing palliative care by the end of June 2007

ACTIVITIES AND EXPECTED RESULTS:

The CAT Program offers a range of free services including treatment services as well as extensive counseling and education around HIV, care and support, disclosure, and HIV treatment adherence. Patients are also encouraged to bring partners in for testing. For women of child-bearing age, program synergy is facilitated at both sites by provision of onsite injectable and barrier methods of contraception, pap smears and pregnancy testing. Both the eThekweni and Vulindlela sites operate with a multi-skilled team of people. Each site has an administrative division, a team of doctors, pharmacists, nurses and counselors. Field workers and peer educators complement the clinic teams as they interact with the community through providing information and education on HIV as well as assisting with patient retention at the clinic.

At the eThekweni site, currently all injectable contraceptives and pap smear analyses are provided free of charge from the eThekwini Municipality. Patients are referred from TB and STI clinics or other CAPRISA research studies. Patients from throughout the greater Durban area who may have TB are routinely evaluated at the communicable disease clinic and are routinely offered counseling and HIV testing. HIV-negative patients are invited to participate in ongoing prevention activities at both facilities.

At the Vulindlela site, all injectable contraceptives and pap smear analyses, TB sputum analysis and basic OI medication is provided free of charge from the Mafakhatinin Clinic. Patients who test positive for HIV are offered HIV specific care through the CAT Program. Concurrent TB diagnostic care and treatment services are accessed via the CAT program from the adjacent TB services. The CAT Program offers extensive counseling and education around HIV, wellness maintenance, disclosure, and HIV treatment adherence. Patients are encouraged to bring partners in for testing. In addition counselors liaise with social welfare departments and other community-based organizations (CBOs) to assist in enhancing social support for patients. HIV clinical care services that are offered include Bactrim prophylaxis, routine screening for OIs, via clinical examination, and blood, urine or sputum testing where required. The CAT project has the capacity to treat commonly occurring OIs at site level and these include pulmonary and extrapulmonary TB, candidiasis, pneumonia, gastro-enteritis, and other respiratory infections. The CAT project also accesses and supplies drugs such as diflucan from DoH PMSC. Patients are referred to tertiary level facilities if they require investigation and inpatient management out of the scope of the clinic management. Referral networks exist for the triaging of sick patients into district and tertiary facilities at both treatment sites. All patients that test HIV positive through the counseling and testing service are offered a routine CD4 count test, which may be repeated at 3, 6 or 9 monthly intervals depending on the level at screening. All patients in the CAT Program with CD4 counts < 200 cells/mm3 see a clinician monthly for clinical and laboratory follow-up and if they are willing to participate in the program, they will also get offered a viral load test. Ongoing adherence support is provided by trained community educators, as well as counselors.

For patients who are TB/HIV co-infected, the TB management is undertaken routinely at the CDC and in accordance with the South African National TB control program. Patients at Vulindlela are referred from the Mafakhatini PHC clinic, research (e.g., non-PEPFAR funded microbicide trial, adolescent cohort, community -based CT Project, community referrals) from community health workers, community advocates and 30 youth peer-educators. The CAT program in Vulindlela aims to address issues of stigma and discrimination and is linked to an Oxfam-funded project which addresses Stigma and Discrimination in the community. The CAT program provides support for disclosing to family members and assists patients in obtaining disability grants. CAPRISA has an extensive community program which supports and facilitates community involvement and informed participation for all CAPRISA projects This includes pre and post-test counseling for HIV infection, treatment and adherence education and support, implementation of ARV treatment, prophylaxis for OIs, management of OIs, adverse events and severe adverse events. These are done at the

Activity Narrative: clinic and through appropriate referral channels when needed. Women account for approximately 70% of participants at both Vulindlela and the eThekweni clinic. Additionally, the majority of staff employed by the CAT project are women. Additionally, a "one stop shop" is available to female participants in that patients access family planning services, STI services, and ART services within the CAT program at both sites. Additionally, Vulindlela patients are also able to access PMTCT services from the adjacent Mafakathini clinic. Male peer educators are employed in order to encourage men's participation in health care, and their uptake of counseling and testing for HIV. This is in keeping with CAPRISA's policy to increase gender equity in their programs. Professional nurses employed are trained and developed to take over routine care activities that are traditionally performed by doctors. This includes ART eligibility assessment, treatment of minor opportunistic infections, and the prescribing of prophylactic agents like contraceptives, cotrimoxazole to program participants. In addition, nurses have been trained to perform a nutritional assessment and identify those participants that may benefit from the nutrition program. Peer educators have been trained to perform a range of activities that have traditionally been performed by nurses, and this includes the provision of health education to participants and provision of support to patients and their caregivers. As part of CAPRISA's retention strategy the CAT program offers services, including ART to all staff employed by the CAT program. This is done in a manner that preserves the privacy and confidentiality of the staff member accessing care. Further, staff training is supported by assistance with fee remuneration, and time to attend training activities.

These results contribute to the PEPFAR 2-7-10 goals by providing facility-based HIV-related palliative care to HIV-infected individuals by providing clinical prophylaxis and treatment for TB/HIV co-infected patients prior to initiation of ARVs.

Budget Code: HBHC

Program Area Code: 06

Activity ID: 13821.08

Planned Funds: $300,000

Activity System ID: 13821

Activity Narrative: SUMMARY:

The Southern African Clothing and Textile Workers Union (SACTWU) project has received PEPFAR funding in previous years through a sub-agreement with the Solidarity Center, but in FY 2007, SACTWU received direct PEPFAR funding. SACTWU has a well-structured training program, initiated in 1999, that has evolved within the dynamics of the industry and includes basic facts on HIV, AIDS, abstinence, being faithful and condom use. The major emphasis area of the activity is training. Target populations include factory workers and people affected by HIV, HIV-infected women and business/ community/ private sector.

BACKGROUND:

The Southern African Clothing and Textile Workers Union is South Africa's largest trade union organizing textile and clothing workers. It also organizes footwear, leather and retail workers. Hence, SACTWU members form part of the economically active population that has been identified as being the hardest hit by the HIV and AIDS epidemic. Further, around 66% of SACTWU's membership is female. The prevention program is a three-level training program that starts with a foundation phase on the basic facts of HIV and AIDS, abstinence, being faithful and consistent and correct condom use (ABC). The FY 2008 the training will focus specifically on the issues of multiple concurrent partnerships, and intergenerational sex. These facts are reinforced and strengthened with the intermediate and advanced modules of training. The intermediate module deals with legal aspects and workplace policy development. In the advanced module, delegates are trained to become trainers, lay counselors and home-based carers. SACTWU also has an HIV and AIDS awareness workplace program where trainers take the training to floor level in 30-minute sessions in the factories.

SACTWU has a membership of approximately 110,000 members nationally. The SACTWU AIDS Project is a national program that provides prevention and care services in five provinces: KwaZulu-Natal, Western Cape, Gauteng, Eastern Cape and Free State. The SACTWU AIDS Project was initiated in 1998 and developed a national comprehensive program, with an initial focus on prevention. It has matured over the years to the point where it now has a well-structured comprehensive training program, provides "in house" testing and counseling (CT) services, access to a social worker in KwaZulu-Natal, runs income generating workshops, provides a primary package of care through the CT service, and provides home-based care through its regional nurses and a home-based care network in KwaZulu-Natal. The nurses provide some level of support in the home through home visits, but this activity is mainly implemented by the home-based care network of 19 home-based carers who provide ongoing home-level support.

ACTIVITIES AND EXPECTED RESULTS:

SACTWU has not received PEPFAR funding for palliative care before. However, though the activities are new, they support the current prevention, counseling and testing (CT) and ARV services components.

SACTWU has an existing care component for the program in KwaZulu-Natal. These include counseling and therapeutic services on social problems to workers and their dependants within the industry to enhance their social functioning; to provide psychosocial support to HIV-infected workers and their families, including support groups; building capacity by running skills development workshops (e.g., food gardens, beadwork skills, cooking, cushion-making skills, and candle making skills). These activities are geared as income generating activities for participants.

In addition the FY 2008 funding provides for the palliative care of the ARV services program, including: screening for pain and symptoms; screening for TB, STI and OI including the management of opportunistic infections; cotrimoxazole prophylaxis; support groups for people on antiretroviral treatment, support groups for those who are HIV-infected but not yet on treatment, integrated preventions services, including prevention with positives and nutrition assessment, counseling and support.

The training programs involve skills transfer for income generation to the targeted participants. These participants include HIV-infected members of SACTWU and their families. The training frequency is expected to be once per month, lasting between 2 and 3 hours for each session.

For health workers, SACTWU has an in-house home-based care training program. There are 3 levels of training: Phase 1 – 2 day theory, 2 day Practical; Phase 2 – Mentorship Program; and Phase 3 – Field Assessment. The mentorship program is conducted at a step-down facility. The field assessments are conducted by the regional nurse who assesses the home-based carers on their skills at the home of a client. Once the assessments are complete the home-based carers are required to conduct 3 home visits on their own. Once the home-based carers have successfully completed the 3 home visits they are given a certificate of competency and are then deployed to provide service

With FY 2008 funding, these services will expand to the Western Cape, and possibly to other areas in the geographic scope of the project.

The SACTWU activities support the PEPFAR 2-7-10 goals of reaching 10 million people with care.

Table 3.3.06: Activities by Funding Mechansim

Mechanism ID: 274.08 **Mechanism:** Masibambisane 1

Prime Partner: South African Military Health Service **USG Agency:** Department of Defense

Funding Source: GHCS (State) **Program Area:** Palliative Care: Basic Health Care and Support

Budget Code: HBHC

Program Area Code: 06

Activity ID: 2979.08

Planned Funds: $100,000

Activity System ID: 13825

Activity Narrative: SUMMARY:

The palliative care program focuses on training of clinic, hospital, and hospice health workers for SANDF, and HIV-infected and affected individuals and their families. Program activities include training of health care workers to effectively manage HIV-infected individuals, expanding terminal care facilities, establishing a home-based care database, and distributing home-based care kits. OI prophylaxis, TB screening, and identification of individuals who qualify for ART as services are available, will be addressed, following National guidelines. The care and support is multi-professional and includes psychosocial, nutritional, spiritual and people living with HIV and AIDS (PLHIV) support. In addition, the program will address the issue of stigma in the workplace through a targeted program evaluation and contribute to effective and innovative palliative care programs through attendance of PEPFAR palliative care partner meetings and conferences. Overall, the program supports the development and implementation of a comprehensive palliative care plan as part of the South Africa Department of Defense (SA DOD) Plan for the Comprehensive Care, Management and Treatment of HIV and AIDS.

BACKGROUND:

The SA DOD provides care to the military and their families. Training of health care professionals in the provision of holistic palliative care has been performed since the inception of PEPFAR, but the development of a strategy for terminal care to HIV-infected members is fairly new and was established through PEPFAR funding in FY 2005 following a needs assessment. Some of the main components of the terminal care strategy are the development of infrastructure, including the upgrading of hospices, of which one was included in the FY 2005 budget. Further hospices were planned for upgrade in FY 2007 and it is anticipated that unit-based facilities for the care and support of terminal HIV-infected members will be established during FY 2008.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Human Capacity Development

The primary aim of this training is to equip health care workers with the knowledge, skills and attitudes required to conduct HIV pre and post-test counseling interviews. Training of health care professionals will be conducted through the Health Care Workers Course developed by the SA DOD. This is a four-day course, of which two days are dedicated to developing interviewing skills and practicing pre and post test counseling scenarios. Some time will be spent on issues of sexuality, policy and legislation, and occupational exposure. This will enhance the ability of health care professionals to manage HIV-infected individuals. Target health care workers will include physicians, nurses, social workers, and psychologists.

ACTIVITY 2: Provision of care

Expansion of terminal care facilities through the establishment of regional step down care facilities within military communities Is planned in FY 2008. This may include upgrading or sourcing of hospice services according to need towards management of individuals with terminal HIV disease. The package of services also includes basic pain and symptom management and facility-based support for adherence to opportunistic infections medications (including cotrimoxazole prophylaxis and TB treatment) and antiretroviral therapy (ART).

Support to individuals providing home-based care through training aimed at optimizing quality of life and effective management of terminal family and community members living with HIV, sourcing of home-based care packages (inclusive of items like gloves) and IEC material to ensure appropriate care to terminal HIV-infected individuals and to prevent transmission of HV to caregivers. The establishment of a home-based care provider data base will help to ensure quality support to HIV-infected members and their dependants when home-based care is required.

Patients will be identified for ART and referred, as additional ART services are expanded. Referral to PLHIV support networks and workshops will help to address stigmatization and discrimination and will be a useful strategy to ensure healthy living.

ACTIVITY 3: Addressing stigma

As a result of findings of KAP survey (SA DOD, 2006), which suggest continuing stigmatizing attitudes of individuals surveyed, the SA DOD requested a program evaluation, using qualitative methodology, to address stigma within the SA DOD associated with HIV-testing and HIV-infected in an effort to modify existing prevention of stigma in the workplace programs and the Health Care Workers Course. The Director of Nursing will work with the Military Psychological Institute (MPI) in the development of the methodology for this evaluation.

ACTIVITY 4: Dissemination of innovation

The SA DOD will disseminate innovation through attendance of PEPFAR palliative care partner meetings, publications in military and peer reviewed magazines and journals and oral and poster presentations on effective and innovative programs at conferences and seminars.

Program implementation will be supported by supervision and quality assurance through staff visits to the regions and monitoring and evaluation through the HIV M&E programs to track performance. Technical assistance will be provided to the SA DOD by the U.S. DOD.

The activities will contribute to the PEPFAR 2-7-10 goals by increasing the number of individuals receiving palliative care and support.

Funding Source: GHCS (State)

Budget Code: HBHC

Activity ID: 13817.08

Activity System ID: 13817

Program Area: Palliative Care: Basic Health Care and Support

Program Area Code: 06

Planned Funds: $485,000

Activity Narrative: SUMMARY:

The Southern African Catholic Bishops Conference (SACBC) AIDS Office has adopted a family-centered developmental approach and a child-focused intervention for its OVC program. For the 2008 fiscal year the SACBC AIDS Office will extend its program and services to the surviving parents, guardians and the foster parents of HIV-infected individuals and orphans and other vulnerable children supported through this program. The SACBC AIDS Office will support its sub-recipients in palliative care program design, implementation and direct services for the surviving parents, guardians and foster parents living with HIV and AIDS. The SACBC AIDS Office will guide its sub-recipients to implement a comprehensive, holistic and interdisciplinary approach to HIV care. This program will strive to achieve optimal quality of life for people living with HIV (PLHIV) and their families and minimize suffering through clinical, psychological, spiritual, social and preventive care support. Through this program PLHIV will be referred to existing ART sites. Some of the sub-recipient sites receive funding through a Track 1 partner, Catholic Relief Services, for HIV care and treatment, and this co-location allows for ease of referrals.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Support to parents (primary caregivers)

The SACBC AIDS Office will strengthen the capacity of families to protect and care for OVC by prolonging the lives of the primary caregivers through clinical care which include HIV counseling and testing, routine follow-up to determine the optimal time to initiate ART if HIV-infected; prevention and treatment of opportunistic infections including cotrimoxazole prophylaxis such as tuberculosis (TB); HIV prevention and behavior change counseling including prevention with positives. Sub-recipients will be encouraged to run counseling and testing (CT) campaigns. Through these campaigns primary caregivers will be encouraged to know their status. In addition the SACBC AIDS Office will support its sub-recipients to provide clinical, psychological, spiritual, social care and integrated prevention services. The SACBC AIDS Office will support its sub-recipients to establish community-based support groups and appropriate training will be provided. Advocacy initiatives will also be conducted at the congregational level to ensure that the local priests are supportive and promotes spiritual care through retreats. In addition the SACBC AIDS Office will support its sub-recipients to develop programs geared towards stigma reduction. Sub-recipients will be supported to run awareness and acceptance HIV campaigns within their respective communities.

ACTIVITY 2: Building Networks through Linkages and Integration

The SACBC AIDS Office will provide technical support to its sub-recipients to strengthen and integrate home-based care, community-based care and facility-based care for family members of HIV-infected into the OVC programmatic interventions. The SACBC AIDS Office will ensure that its sub-recipients build and sustain comprehensive HIV and AIDS care systems. The SACBC AIDS Office will ensure that strong referral systems are in place at local level for the provision of prevention, treatment and care across facilities, clinics, communities and homes. The SACBC AIDS Office has eight sites that already provide on-site health care, and this ensures that access to health care for HIV-infected and OVC is improved.

ACTIVITY 3: Mainstreaming Gender

Gender equity will form an integral part of the SACBC AIDS Office program's activities. The SACBC AIDS Office will ensure that women and men are receiving equitable support and access to essential palliative care services, especially treatment. Sub-recipients will be encouraged to work with male groups in their dioceses to mobilize the involvement of men as caregivers and members of various support groups. Communities will be mobilized to enforce female protection from exploitation and abuse and to mitigate against gender-based violence. The SACBC AIDS Office will support its sub-recipients to work with the existing gender-based violence programs within the Department of Social Development at district level. . The SACBC AIDS Office promotes the teaching of the Catholic Church concerning abstinence and fidelity, as well as the appropriate use of condoms for discordant couples.

ACTIVITY 4: Capacity Building

The SACBC AIDS Office will provide technical support to strengthen the capacity of its sub-recipients by providing training on various aspects of palliative care. In addition the sub-recipients will be provided with ongoing supervision and mentoring. The SACBC AIDS Office will develop wraparounds with other partners (such as the Department of Social Development) for food supplements and nutrition assistance to ensure effective implementation of palliative care.

a) Training for secondary caregivers: In FY 2008, training of secondary caregivers will focus on treatment literacy, psychosocial support and caring for PLHIV. The SACBC AIDS Office will identify a credible service provider to provide the treatment literacy training. The course is conducted over five days. The Regional Psychosocial Support Initiative (REPSSI) will provide the psychosocial support (PSS) course for caregivers who are new to the program and are not well-versed in PSS. The psychosocial support course included themes such as a sense of self-worth, of value, self-esteem, bereavement care, building resilience, listening and talking to distressed children, child development; hero books and the holistic needs of human beings.

b) Training of primary caregivers: Families of HIV-infected individuals and OVC will be trained by secondary caregivers in identifying and establishing viable income-generating activities for economic strengthening of households. Primary caregivers will also be trained in basic nutrition, HIV and AIDS awareness and prevention including prevention with positives, basic hygiene and treatment literacy particularly for families of people living with HIV.

c) Training of trainers: In FY 2008, this program will target a few secondary caregivers from each sub-recipient to be trained as trainers in treatment literacy, psychosocial support and home-based care. These caregivers would then be responsible for training other caregivers using the same curriculum and materials to maximize the impact of training and to improve chances that information gained from the various training sessions is implemented at site level.

In all of the above activities, OVC will be counted only in the OVC program area. PLHIV will receive at least

Activity Narrative: one clinical and one other category of palliative care service. Palliative care to family members of PLHIV or OVC will be provided in at least two or the five categories of palliative care services

These activities will contribute to the PEPFAR goal of reaching 10 million HIV-infected and affected individuals with care.

Activity Narrative: SUMMARY:

The TIPHC embarked on the initiative of providing care and support services to HIV and AIDS infected and affected persons in response to the need to complement the South African Government (SAG) provision of basic health care services to the underserved communities and vulnerable groups. The emphasis area is human capacity development. This is complemented by information, education and communication, linkages and referrals, training and food/nutrition support through private sector partnership of food parcel deliveries. The specific target populations include HIV-infected individuals and their families in underserved communities.

BACKGROUND:

TIPHC is a South African registered non-profit organization which has been operational since April 1994. It has a long history of implementing HIV and AIDS information, education, home-based care and support programs in Emalahleni Municipality, a local authority of Mpumalanga province. TIPHC is a key partner to the South Africa National and Provincial Government HIV and AIDS Prevention and Control Program. Its home-based care program is aligned to SAG's policy guidelines for providing a continuum of support services for HIV and AIDS infected individuals and their affected family members from the time the individual gets infected with HIV through sickness and terminal stages of AIDS through the time of family bereavement when the individual dies. To date, it has cared for and supported hundreds of HIV and AIDS infected and affected persons including OVC. It has since grown and gained the confidence of both the provincial and National Department of Health (NDOH) which have funded the bulk of its prevention and care activities. With PEPFAR funding, TIPHC's home-based care and support program will consolidate the integration of the three pillars of service provision as outlined in the Department of Health Home-based Care and Community-based Care Guidelines. This is a holistic approach that addresses the health, psychosocial and economic needs of the target group whereby PLHIV will be assisted to engage in PEPFAR supported income generating projects. The sustainability of the program is hinged on its integrated strategies for service provision. Every activity is implemented in collaboration with SAG and local municipalities. In addition, training and capacity building of caregivers, client families and communities will ensure that the communities will gain the necessary skills to be able to continue with future initiatives for program implementation.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Palliative Care

The basic service provided under this initiative will include elements of the preventive care package, OI prophylaxis, pain and symptom management and referral within clinical and home-based settings. A team of trained and dedicated home caregivers and supervisors conduct scheduled and emergency home visits to check on patients, arrange for patients visits to the clinic, organize collection of medication where necessary, ensure that patients take prescribed medication and offer physical assistance with cleaning and feeding of those without helpers. Given the high frequency of TB in patients with advanced HIV, there will be an emphasis on TB screening. Effort will be made to ensure equitable access to care services for both males and females.

ACTIVITY 2: Training and support for caregivers

Training of caregivers will increase the level of competence and effectiveness in providing care services. Caregivers will need to be multi-skilled in assessing patient condition, pain and symptom management and referral within clinical and home-based settings. TIPHC will coordinate the training of home-based carers. Caregivers will attend a ten-week training course that is facilitated by the Department of Health. This is a comprehensive course which provides caregivers with the knowledge and essential skills for patient care, illness management, assessment of patient's condition and environment, making referrals to the clinic, providing psychosocial support and counseling and guidance with good nutrition and family economic empowerment. In addition to training, caregivers will be supported through the decentralized district health system (local clinics and hospitals) with referrals, home care supplies and regular psychological debriefing which form the fundamental strategies of the care program.

ACTIVITY 3: Patient and family support

Provision of information to and counseling of the infected and affected persons is a requisite service. It enables the caregiver to establish a rapport with the client for dealing with more sensitive issues like advice and referral for counseling and testing. Other support services that are offered in conjunction with palliative care include the training and education of family members to care for patients as well as other family members in need of help, making arrangements for family psychological and spiritual counseling and support from the religious fraternity. Nutritional assessment and monitoring and provision of non-USG funded food parcels are a vital component of client support. Particular attention will be given to vulnerable groups such as female, granny and child-headed households where gender-equity issues become highlighted due to high potential of gender-based violence, abuse, stigmatization and discrimination towards the disadvantaged groups like the sick, the old and frail, women and children. The importance of nutrition will be highly emphasized especially for the sick, the old and vulnerable children.

ACTIVITY 4: Capacity building for family and community members

Information and education about home-based care and mobilization for community member participation in the program will be intensified through house campaigns with the aim of reducing fear, misconceptions and stigma associated with patients suffering from AIDS related illnesses. During campaigns, families will get counseling and information materials. Family members will be guided on how to manage family resources and initiate income generating projects (IGPs). To facilitate income generating activities, PLHIV will be encouraged to form support groups in each community and the groups will be assisted with inputs for implementing IGPs. The projects will be linked to enterprise development agencies and TIPHC will monitor progress and report on outcomes.

ACTIVITY 5: Referral

Activity Narrative:

Referral and support services are key components of palliative care. It entails working in close cooperation with the Provincial and National Departments of Health, local clinics and hospitals other Government Departments like Education, Social Development, Home Affairs and Local Municipalities. Clients are assisted with hospitalization for clinical care. Support is also provided to enable clients to access subsidies for children's education, social grants, water and electricity and acquisition of personal documentation like birth certificates and identity documents. TIPHC caregivers and program staff will play a critical role of making the referral and following through to ensure that the client receives the entitled service. Clients will be monitored very strictly and their case files documented comprehensively.

In all of the above activities, PLHIV will receive at least one clinical and one other category of palliative care service. Palliative care to family members of PLHIV or OVC will be provided in at least two or the five categories of palliative care services.

This activity will contribute to the PEPFAR objective of providing care to 10 million people infected and affected by HIV and AIDS, including orphans and vulnerable children.

Activity ID: 12371.08

Planned Funds: $325,000

Activity System ID: 13777

Activity Narrative: SUMMARY:

EngenderHealth's Men as Partners (MAP) Program works to reduce the spread and impact of HIV/AIDS and gender-based violence by challenging unhealthy gender-related beliefs and attitudes, such as equating masculinity with dominance over women, pursuing multiple sexual partners and participating in other HIV and AIDS related risk behaviors. The MAP program utilizes a range of strategies, including skills-building workshops, community mobilization, health service provider training, direct service provision related to living counseling and testing and palliative care, media advocacy and public policy advocacy efforts to achieve its major goal of gender norm transformation to reduce the spread and impact of HIV and AIDS and gender-based violence. MAP recognizes that this transformation will assist men and women in achieving such behaviors as sexual abstinence, being faithful to one partner, using condoms consistently and correctly, reducing the numbers of sexual partners, treating women as equals, living positively with HIV and AIDS, among other behaviors. MAP works with individual men and boys, their romantic partners, as well as community structures to influence culture and transform lives. Specially, MAP targets men and boys, in and out-of-school youth, university students, adults, people living with HIV/AIDS (PLHIV), caregivers, community and religious leaders, program managers, public health care providers, CBOs, FBOs and NGOs.

BACKGROUND:

Since 1998, EngenderHealth has received USG funding to support CBOs, FBOs and the South African government to implement MAP programming. EngenderHealth's core strategy is conducting skills-building workshops on gender norm transformation. Through these workshops, MAP develops "transformation agents" (e.g. peer educators) who then spread MAP messages and skills from the workshops to others in their communities. These workshops are tailor made for various communities, integrating abstinence/be faithful messages and/or condoms and other prevention messages, motivating men to know their HIV status and take action if they test positive for HIV, as well as providing support to those men (and women) living with HIV. MAP encourages men to take action in their communities, challenging other men who are practicing behaviors that put them (and their partners) at risk for and living with HIV/AIDS and gender-based violence. Working through various community-based partners, MAP also mobilizes communities to take action via community education events and the formation of "community action teams" (CATs). In addition, MAP works with support groups to make their services for PLHIV to be more “male-friendly”, and encouraging of men to seek such services. EngenderHealth MAP also produces behavior change communication materials which motivate men and boys to address these harmful gender norms and transform themselves. Currently, EngenderHealth is running the “I am a Partner” campaign; focusing on defining what men can do to take action and be more gender equitable to reduce the spread and impact of HIV/AIDS (see www.iamapartner.org). Working through national campaigns, such as annual Men as Partners (MAP) Week, EngenderHealth engages national private sector, media and government partners to increase the effectiveness of MAP. Finally, EngenderHealth staff members coordinate provincial MAP Networks, creating a space for lessons among gender activists to be shared, and formulating a platform for national advocacy efforts - such as actively participating in the development and adoption of the South African National Strategic Plan in HIV/AIDS. Recently, EngenderHealth developed additional programming linked to voluntary counseling and testing palliative care. Based on direct results of challenging men to move beyond harmful gender norms, the MAP Palliative care program has become a necessity, as numerous men are coming forward in need of assistance in living with HIV. They are often accompanied or encouraged by their partners who are also living with HIV. The MAP Palliative care program works to ensure that needs specifically associated with men are met, and work to motivate other men to come forward and seek assistance, at the same time working with their partners for healthy relationships. EngenderHealth will contribute to the overall PEPFAR goals of 2-7-10 by increasing the number of men accessing HIV services including treatment; increasing the number of young and adult men choosing to abstain or be faithful/reduce their number of sexual partners; reducing women's vulnerability to HIV and AIDS by preventing gender-based violence; and increasing the number of men caring for the ill. EngenderHealth will contribute substantially towards meeting the vision outlined in the USG Five-Year Strategy for South Africa by increasing the effectiveness of NGO activities.

ACTIVITY 1: Training/Capacity-building on Male-friendly Palliative Care

EngenderHealth will continue to use its Men’s HIV Palliative Care curriculum with various target audiences in South Africa, including community-based organizations providing home-based care, community centers offering HIV support services, PLHIV organizations, treatment access sites, university-based PLHIV support programs, among other EngenderHealth partners. EngenderHealth will offer these 4-5 day trainings six times a year, reaching 20-25 participants. The trainings will focus building knowledge and skills on male gender norms and their linkages to unhealthy behavior associated with PLHIV – such as not seeking treatment early because men are perceived to be strong. These trainings will assist in building knowledge and skills related to effective palliative care programming specifically for male clients (but not limited to). Issues such as acceptance and understating of HIV status, nutrition, stigma reduction, adherence issues, psychosocial support, disclosure issues, among others will be covered. Emphasis will also be placed on treatment access, ensuring that those in need of treatment receive it. EngenderHealth is also in the process of gaining SAG-approval for this training.

ACTIVITY 2: Provide support to PLHIV

EngenderHealth will provide direct support for PLHIV, specially catering to the unique needs of men, however, not limited only to men. Thus, EngenderHealth will continue its counseling programs, providing both individual and group support, as well as linking PLHIV to existing ARV treatment services. These support activities via groups and one-on-one counseling will cover such issues such as acceptance of one’s HIV status, nutrition, adherence, psychosocial support, disclosure issues, among others. In addition, through its MAP methodology, EngenderHealth will motivate male PLHIV to be more active in their communities, promoting male gender norm transformation to reduce the spread and impact of HIV/AIDS, as well as reducing gender-based violence. Efforts will be targeted to work within selected communities in Gauteng, KZN and Western Cape provinces, working via partner NGOs and public sector institutions. These efforts will also empower PLHIV to assist in reducing HIV-related stigma in these specific communities. EngenderHealth expertise will assist in creating more access to palliative care programs specifically targeted the needs of men.

Activity Narrative: ACTIVITY 3: Mobilize Communities to be supportive of PLHIV

Through its existing MAP network, EngenderHealth will continue to engage men to address male gender norms, with a specific focus on HIV/AIDS stigma reduction. Through bi-monthly workshops (reaching 20-25 individuals per training) and community awareness sessions, EngenderHealth's Palliative Care program will focus on dispelling myths associated with HIV/AIDS, and work to reduce the fear and stigma associated with HIV/AIDS – perceived to be a fatal disease that is often spread through sexual activity. When appropriate, PLHIV who are clients on the MAP Palliative Care program will serve as "transformation agents" assisting in conducting these trainings.

ACTIVITY 4: Advocating for more male-friendly Palliative Care Programs

Through its MAP Network, EngenderHealth will add "male friendly" palliative care issues to its advocacy agenda – working with various sectors of government to ensure this issue is address, as stipulated in the South African National Strategic Plan on HIV/AIDS and STIs. Meeting on a monthly basis for MAP prime partners (approximately 20 individuals) and on a quarterly basis for the prime MAP partners and other key stakeholder (approximately 50-75 individuals), EngenderHealth will coordinate such efforts. In addition, other development partners will cost share on the hosting and benefits of the MAP network

ACTIVITY 5: Monitoring and Evaluation

EngenderHealth staff will also continue to conduct monitoring and evaluation activities of the efforts through various process and impact assessments. Specific monitoring plans have been developed to assess the Palliative Care programs. As well each training session and community event is documented, examining knowledge and attitudinal shifts among participants.

All these activities contribute to the PEPFAR goal of providing care to 10 million HIV-affected individuals through an increased number of people being tested and knowing their status, resulting in fewer infections; higher gender equality through counseling (individuals/couples); increased lifespan due to timely treatment of opportunistic infections, and strengthened linkages between services offered by government and other organizations.

Table 3.3.06: Activities by Funding Mechansim

Mechanism ID:	1201.08	**Mechanism:**	QAP
Prime Partner:	University Research Corporation, LLC	**USG Agency:**	U.S. Agency for International Development
Funding Source:	GHCS (State)	**Program Area:**	Palliative Care: Basic Health Care and Support
Budget Code:	HBHC	**Program Area Code:**	06
Activity ID:	3109.08	**Planned Funds:**	$1,000,000
Activity System ID:	13872		

Activity Narrative: SUMMARY:

University Research Co. LLC/Quality Assurance Project (URC/QAP) will support Department of Health (DOH) facilities in 5 provinces to improve the quality of basic health care for people living with HIV (PLHIV) by improving compliance of healthcare workers with treatment guidelines through capacity building and strengthening of monitoring and supervision The essential elements of QAP support include streamlining of process of care for PLHIV as well as helping improve technical compliance with evidence-based norms and standards, interpersonal communication and counseling and increasing organizational efficiency. The major emphasis area for this activity is quality assurance and supportive supervision, with minor emphasis on development of referral systems, training and policy/guidelines. The activity targets public health workers, program managers, volunteers and PLHIV. These activities will result in improving the continuum of care for adults and children living with HIV and their families as they pass through different stages of the disease or through different levels of healthcare system ensuring that they receive high quality services.

BACKGROUND:

URC/QAP currently works with 70 DOH facilities in five provinces improving the quality of basic healthcare and support services for PLHIV. In FY 2008 the number of DOH facilities that URC/QAP mentors will be expanded. In FY 2008, URC/QAP will work with the South Africa (SA) DOH and Department of Social Development, community-based organizations/home-based organizations (CBOs/HBOs) and other PEPFAR partners to ensure the delivery of comprehensive family-centered services for PLHIV. Using Quality Assurance (QA) tools and approaches, URC/QAP will help facilities provide an essential package of activities following national guidelines and standards, to ensure that PLHIV receive high quality basic healthcare and support services. Temporary medical staff will be made available to healthcare facilities to initiate and strengthen provision of basic health services for PLHIV. URC/QAP will also work with HBOs/CBOs to improve home-based care services by linking home-based caregivers to facilities providing care and support. It is envisioned that URC/QAP activities will support integrated programming in a network of services for all HIV-infected clients and their families by integrating preventive messages and condoms into HIV and AIDS care activities, screening and referral for PLHIV to other service delivery areas, stigma reduction activities and involvement of community/home-based caregivers to promote adherence to ART and anti-tuberculosis (TB) regimens.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Establish Facility-level Quality Improvement Teams

URC/QAP will work with each facility to identify core teams representing various clinical services involved in care and support for PLHIV These teams, with support from URC/QAP and district staff, will be responsible for implementing plans for improving access to quality basic primary healthcare and support services for PLHIV, particularly issues pertaining to equitable access for women and girls/related gender considerations. Each team will conduct baseline assessments to identify and address quality gaps in clinical services. These assessments will be used by the facility teams to develop and implement a quality improvement plan. URC/QAP will assist facility teams in developing and implementing strategic plans for improving access to quality healthcare services. URC/QAP activities will focus on improving preventive care services for PLHIV and their families, including access to HIV counseling and testing services, TB/OI screening and provision of cotrimoxazole prophylaxis. Addressing prevention with HIV-infected individuals is an important part of a comprehensive care strategy. Through healthy living and reduction of risk behaviors, these prevention with positives interventions can substantially improve quality of life and reduce rates of HIV transmission. The goal of these interventions is to prevent the spread of HIV to sex partners and infants born to HIV-infected mothers and protect the health of infected individuals. URC/QAP will monitor staff interventions to provide high quality services in nutrition counseling, diarrhea management, screening for pain and symptoms, treatment for OIs and ARV services, home-based support, social service linkages and community-based ART follow-up and adherence support, in accordance with the national guidelines. URC/QAP will facilitate linkages to treatment and care for eligible clients by training facility staff on the need for treatment referrals. Effort will be made to ensure equitable access to care services for both males and females. URC/QAP will work with facility staff to design and implement referral plans and strengthen the development of networks with CBOs/HBOs to improve referral patterns.

URC/QAP activities at facility level will include an integration of key HIV and AIDS prevention messages and provision, including prevention with positives, and referral for condoms into all care activities. At national and provincial levels, URC/QAP will continue to collaborate with the NDOH on the development of infection control guidelines, emphasizing measures such as good hygiene practices and use of safe water for PLHIV. At a community level, CBOs/HBOs linked to DOH facilities will be assisted to provide home-based care services to PLHIV and expand outreach services to the community. URC/QAP will also train facility and CBO/HBO staff in pain and symptom management for all PLHIV, including basic assessment and management of common pain and symptoms related to HIV disease and appropriate use of the WHO analgesic ladder and referral when necessary.

ACTIVITY 2: Human capacity development

URC/QAP will train facility staff in QA strategies, specific to basic health care. In addition, job-aids and wall charts will be provided to improve compliance with clinical and counseling guidelines. All training will be in accordance with the SA National DOH training guidelines for community and home-based care, HIV and AIDS Care and Treatment Guidelines and PMTCT guidelines for pediatric care. At the community level, URC/QAP will fund and capacitate CBOs/HBOs to better utilize community health workers and strengthen the capacity of families and community members to meet the needs of PLHIV.

ACTIVITY 3: Strengthening supervision

URC/QAP will visit each facility/CBO at least twice a month to provide onsite mentoring to healthcare workers. This will focus on improving clinical skills of staff as well as ensuring that improvement plans are being implemented correctly. During these visits URC/QAP will also review program performance data to ensure expected results are being achieved. URC/QAP will conduct quarterly assessments in each facility/CBO/FBO to assess whether staff is compliant with national guidelines. To ensure staff is being

Activity Narrative: supported on an ongoing basis and promote sustainability, URC/QAP will train district, facility-level, and CBO supervisors in QA and facilitative supervision techniques.

ACTIVITY 4: Care support groups

URC/QAP will provide assistance with set up, running and facilitation of community and facility-based care support groups at all QAP-supported health care sites in the five provinces. The focus will include Prevention with Positives (PwP), wellness programs and care for the caregivers activities.

ACTIVITY 5: Support for families of PLHIV

URC/QAP will provide support to improve support and care services provided to families of PLHIV by facility - and community-based healthcare workers. To this end, staff at URC/QAP-supported facilities and home-based care organizations will be encouraged and mentored on the importance of provision of clinical/physical, psychological, spiritual, social and preventive services to families of PLHIV. URC/QAP staff will focus on identification of clinical/social needs within these families and the development of appropriate referral linkages and networks.

In all of the above activities, PLHIV will receive at least one clinical and one other category of palliative care service. Palliative care to family members of PLHIV or OVC will be provided in at least two or the five categories of palliative care services.

This activity contributes to the PEPFAR target of 10 million people in care. URC/QAP will assist PEPFAR in reaching the vision outlined in the USG/South Africa Five-Year Strategy by improving the continuum of care for PLHIV.

Table 3.3.06: Activities by Funding Mechansim

Mechanism ID:	242.08	**Mechanism:**	ACCESS
Prime Partner:	JHPIEGO	**USG Agency:**	U.S. Agency for International Development
Funding Source:	GHCS (State)	**Program Area:**	Palliative Care: Basic Health Care and Support
Budget Code:	HBHC	**Program Area Code:**	06
Activity ID:	7887.08	**Planned Funds:**	$720,000
Activity System ID:	13780		

Activity Narrative: This activity was approved in the FY 2007 COP, was funded with FY 2007 PEPFAR funds, and is included here to provide complete information for reviewers. The funding mechanism from field support to a local agreement for JHPIEGO is changing in October 2008 therefore a COP entry is being made to reflect this change in mechanism and activity number only. JHPIEGO activities under HBHC are expected to continue under the FY 2008 COP and funds are being requested in the new COP entry.

SUMMARY:

Since 2004, JHPIEGO has been working in HIV and AIDS service delivery areas, supporting human capacity development strategies which include health care worker training and quality assurance that improve provider performance. In FY 2008, JHPIEGO will support the expansion of palliative care services through the provision of clinical and social care services for people living with HIV and AIDS (PLHIV) with an emphasis on opportunistic infections and cancers in service delivery settings and social and legal care at the NDOH. JHPIEGO will provide technical support to the NDOH by placing a HIV and AIDS Care Technical Advisor and training within the NDOH HIV and AIDS Care and Support Unit. The major emphasis areas of these activities are: 1) training, 2) linkages and referral systems, and 3) human resources. Specific target groups are HIV-infected individuals and their families, women of reproductive age, family planning clients, pregnant women, and health care workers.

BACKGROUND:

The JHPIEGO palliative care program is continuing from FY 2006 to provide technical support to the NDOH and to train health workers in state of the art HIV-related care issues. Despite social and legal program successes in South Africa, technical support is required in the NDOH to address national-level social and legal inequities and program gaps for PLHIV. In FY 2008 JHPIEGO will continue to also focus its support on training and health worker skill for screening for opportunistic infections and AIDS-associated malignancies, particularly cervical cancer. Protocols and materials for prophylaxis and treatment of OIs are widely available throughout clinics in South Africa; however, training support is needed at primary health care levels throughout the country. Given the high burden of HIV in South Africa, prevalence of AIDS-related malignancies and the corresponding high incidence of cervical dysplasia among HIV-infected women a gap exists in screening and treatment for AIDS-related cancers, especially cervical cancer. Recently published studies (Moody et al. 2006) document an increased risk for squamous intraepithelial lesions (SIL), the precursor to invasive cervical cancer, among HIV-infected women in Western Cape, confirming data from other international studies. Cancer of the cervix continues to be the second commonest cancer among South African women and is included as one of the defining conditions of the AIDS in South Africa. Studies and clinic experience in South Africa continue to underscore the importance of developing locally relevant cervical screening and management guidelines for HIV-infected women in South Africa. In collaboration with the North West province provincial Department of Health, JHPIEGO will provide training and technical support for OI prophylaxis and care for PLHIV and screening for cervical cancers in HIV-infected women at primary health care centers.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Support for National Department of Health

JHPIEGO will continue to provide technical support to the NDOH by placing a HIV and AIDS Care Technical Advisor within the NDOH HIV and AIDS Care and Support Unit to support and expand the government's programs for care of PLHIV. At the request of the NDOH, emphasis is needed to support and expand legal and social support activities for PLHIV. Activities in FY 2008 include activities to mitigate HIV and AIDS stigma in partnership with PLHIV, and training paralegals on human rights for PLHIV. The advisor will have the full access to technical experts at JHPIEGO and the experts based at Johns Hopkins University. This technical advisor will work closely with a JHPIEGO sponsored advisor focusing on accreditation of primary health care facilities.

ACTIVITY 2: Training and technical support for OI prophylaxis and care for PLHIV and screening for cervical cancers in HIV-infected women at primary health care centers

In FY 2008, JHPIEGO will expand care program in the North West province and work collaboratively with Columbia University in Eastern Cape and KwaZulu-Natal. JHPIEGO will train facility-based health care workers on OI prophylaxis and care (emphasis on cotrimoxazole prophylaxis, TB screening and OI treatment) and will include all elements of the evidence-based adult and pediatric preventive care package, ART adherence and basic pain and symptom management within the training program. Facility-based care also creates an entry point for screening and treatment of human papilloma virus (HPV, the cause of 95% of cases of cervical dysplasia), other sexually transmitted infections, cervical cancer itself and other AIDS-associated cancers which are often overlooked in clinic settings. JHPIEGO will train and support district and primary health care level health professionals working with PLHIV to appropriately screen, diagnose, treat and educate PLHIV and their partners about HPV, other STIs, cervical dysplasia and other AIDS-associated malignancies as a component of comprehensive care services for PLHIV. Protocol and material development, training, supportive supervision and follow-up technical support will be provided. The program will be developed and implemented in partnership with the North West province provincial Department of Health and is intended to improve the capacity of the South African health system to provide holistic care of PLHIV, especially women infected or at risk for both HIV and cervical cancer. This activity addresses gender issues by promoting equal access to OI, STI and cancer care for both males and females and equipping health care workers with skills to address HPV and cervical dysplasia in women, an important element of HIV and AIDS care for HIV-infected women that is largely overlooked. Screening, messaging and referral on gender-based violence will also be integrated into the program.

ACTIVITY 3: Development of linkages between facilities and services

To improve overall program effectiveness and integrate elements of social care to the clinical care program (Activity #2 above), JHPIEGO will support and work with one district DOH in North West province to formalize referral systems and develop linkages between health facilities, and within health facilities (service -to-service) as well referral and counter-referral between the health system and social services as it relates to HIV-related palliative care services.

Activity Narrative: These results contribute to the PEPFAR 2-7-10 goals by improving access to and quality of palliative care services that were not previously provided.

Table 3.3.06: Activities by Funding Mechansim

Mechanism ID: 4763.08
Mechanism: N/A
Prime Partner: Xstrata Coal SA & Re-Action!
USG Agency: HHS/Centers for Disease Control & Prevention
Funding Source: GHCS (State)
Program Area: Palliative Care: Basic Health Care and Support
Budget Code: HBHC
Program Area Code: 06
Activity ID: 8257.08
Planned Funds: $1,348,000
Activity System ID: 13909

Activity Narrative: SUMMARY:

Xstrata received funding in FY 2007 for a public-private partnership with the Mpumalanga Department of Health (MPDOH). The implementing partner for this is Re-Action! Consulting (RAC). RAC will facilitate a co-investment partnership with Xstrata to provide support for strengthening targeted government clinic sites, continuing to improve access to basic preventive, clinical care and psychosocial support services in one district of Mpumalanga, extending into a second district during FY 2008. The project will build on a public-private mix (PPM) model for strengthening HIV and TB service delivery that Xstrata and RAC has already begun to implement in the province with funding from Xstrata (dollar for dollar match with PEPFAR).

Xstrata and RAC will work through established partnerships with local government, MPDOH, community groups and private providers. Project deliverables have been defined in response to specific requests for assistance from the MPDOH. Major emphasis will be given to development of health workforce capacity, with minor focus on community mobilization/participation, building linkages with other sectors, local organization capacity development and strategic information. The target populations are underserved communities of men, women and children, and people living with HIV and AIDS in Nkangala District, extending to a second district during FY 2008, where Xstrata Alloys has its operations.

BACKGROUND:

Xstrata Coal employs 4,000 people at 11 mines (collieries) located within the socio-economically deprived Coal Powerbelt region of Mpumalanga, and has more than 10,000 employees with operations in three provinces of South Africa (Mpumalanga, Limpopo, and North West) and Swaziland. This funding partnership enables scaling up the community extension component of Xstrata's comprehensive workplace HIV and AIDS program that is managed by RAC. The project is based on implementing a PPM service-strengthening model of capacitating government providers within primary care clinic sites to deliver HIV-related preventive, clinical and psychosocial care services. FY 2008 funding will allow continued support to sites established in FY 2007and to expand the number of sites within two target districts. The scope of assistance is defined within a MOU between Xstrata and the MPDOH, and responds to specific requests for support by the provincial department's HIV and AIDS Unit, as well as the district management teams. This fits within a broader range of interlinked corporate social investments being made by Xstrata to support sustainable local development in these communities.

The project will provide technical assistance, health workforce capacity development, clinic infrastructure improvements, strengthening of pharmaceutical supply management systems and service monitoring for public sector primary care clinics to deliver quality HIV-related preventive and clinical care services. This will contribute to strengthening district-level primary health care service networks and district service management, with a strong focus on improving human resource capacity, including through training and deploying community outreach workers to deliver household-level services. The project works in partnership with other PEPFAR partners in the province to achieve synergies and avoid duplicating activities.

ACTIVITIES AND EXPECTED RESULTS:

Three activity areas will be implemented to strengthen delivery of palliative and psychosocial care, HIV prevention, and TB services at government primary health care sites within two districts of Mpumalanga and to create strong linkages with community outreach services and home-based care. Service improvement plans will be implemented at each site based on specific service strengthening needs that are identified and agreed with District Management Teams and facility managers. This will result in more effective delivery of the essential package of HIV-related primary care interventions (including cotrimoxazole provision and integrated preventions services, including prevention with positives)integrated with Sexual and Reproductive Health services (including STI care, family planning, maternal health); Maternal, neonatal and child health services; and TB services to implement TB-HIV collaborative activities. Re-Action will also collaborate with the Foundation for Professional Development (FPD) in implementing services at Witbank Hospital.

ACTIVITY 1: Strengthening primary health care and district hospital delivery of HIV-related palliative and other clinical care services

A multi-skilled RAC Service Strengthening Team will undertake a detailed situation analyses (together with the district management team) within each target sub-district to identify specific service strengthening needs and prioritize sites for accreditation/down-referral. Service improvement plans will be developed to systematically address these needs. All available service providers at this level will be identified and supported to participate in delivering service tasks aligned with the national programs and coordinated through a 'public-private mix' delivery approach.

Services will be improved overall to both ensure that HIV-infected adults and children attending these sites have access to the essential package of HIV-related care and support interventions (including cotrimoxazole provision and integrated preventions services, including prevention with positives) integrated with Sexual and Reproductive Health services (including STI care, family planning, maternal health); Maternal, neonatal, child health services, and basic hygiene and sanitation. Prevention with positives and treatment services will be appropriately integrated into routine primary care services, so that service capacity is strengthened overall. Access to TB diagnosis and treatment will be improved at supported sites by implementing TB/HIV collaborative activities. Health worker training will be addressed through in-service training delivered in collaboration with other PEPFAR partners, based on National Program standards and integrated management approaches.

Technical assistance will be provided to improve public sector human resource management capacity so that health workers can be more effectively recruited to fill vacant positions at these sites. Where necessary, critical staff positions will be filled on a temporary basis (on agreement that these posts will be filled as soon as possible by permanent public sector employees). Site management capacity will be strengthened, including through leadership development activities. Strong linkages will be created between these first-level sites and second-level facilities for appropriate referral of patients and 'down-referral' of treatment, where necessary. Appropriate 'task-shifting' will be encouraged. Physical upgrades to clinic infrastructure will be undertaken through Xstrata co-investment and essential equipment will be procured. Health

Activity Narrative: information management systems and patient monitoring systems will be strengthened through in-service training, technical assistance and procurement of equipment where necessary.

ACTIVITY 2: Community mapping, mobilization, health promotion, treatment preparedness and support, referral to appropriate health and social services

Community outreach workers will be trained to provide basic household health risk assessments and health promotion under supportive supervision. A full time project coordinator will be dedicated to coordinating community initiatives. They will mobilize the community to access care services, including HIV testing and counseling (through the 'I know!' campaign developed by RAC) and will direct community nurses to deliver provider-initiated HIV testing and counseling within households. Individuals with social and health risks will be referred for appropriate services and follow-up will be arranged. This will result in risk mapping of all households within targeted communities and systematic follow-up, linking patients to facility-based HIV and related palliative services.

ACTIVITY 3: Community Support and Psychosocial Care

Linkages with community-based service organizations (including faith-based organizations and non-governmental organizations) will be strengthened and all providers will be encouraged to participate in delivering their service tasks in more coordinated ways through the 'public-private mix' approach (which RAC will support district management teams to oversee). Peer support groups for HIV-infected and affected individual and family members will be established at all sites and linkages to the community will be strengthened through Community Outreach Services to provide social and psychological support. Traditional healers will be engaged and trained in partnership with the MPDOH and supported to provide appropriate referrals to the clinic sites, to provide chronic care support and health promotion. Attention will be given to gender equity, increasing male involvement in the program, addressing stigma and discrimination.

PLHIV will receive at least one clinical and one other category of palliative care service. Palliative care to family members of PLHIV or OVC will be provided in at least two or the five categories of palliative care services.

With FY 2008 reprogramming funds, the community care program will be strengthened; PPM models initiated in 3 more provinces (Limpopo, North West and Northern Cape); and the up and down-referral of patients supported through technical assistance in a third district in Mpumalanga (Gert Sibanda).

Sustainability of this program is assured through the public-private partnership between Xstrata and the MPDOH. By providing support for palliative care in underserved communities, Xstrata is contributing to the 2-7-10 PEPFAR goals of providing care to 10 million people infected and affected by HIV.

Table 3.3.06: Activities by Funding Mechansim

Mechanism ID: 2803.08

Mechanism: N/A

Prime Partner: Hope Worldwide South Africa

USG Agency: U.S. Agency for International Development

Funding Source: GHCS (State)

Program Area: Palliative Care: Basic Health Care and Support

Budget Code: HBHC

Program Area Code: 06

Activity ID: 3303.08

Planned Funds: $727,500

Activity System ID: 13961

Activity Narrative: SUMMARY:

Hope worldwide South Africa (HWSA) will continue activities to provide and strengthen comprehensive care and support of people living with HIV (PLHIV) and their families through community-based support groups and home-based care (HBC) programs. Activities will use a family-centered approach and HWSA will receive support from HPCA to strengthen clinical care services provided to its clients. The target populations are PLHIV and their families and the emphasis area is increasing women's access to income and productive resources, and human capacity development through in-service training.

BACKGROUND:

The activities described below are part of an ongoing Basic Care and Support program of HWSA, funded by PEPFAR since FY 2004. HWSA and their community partners will implement all activities. The HWSA project is managed through an umbrella agreement with PACT, Inc.

ACTIVITIES AND EXPECTED RESULTS:

HWSA collaborates with over 52 local government clinics to provide care and support services. HWSA has established 52 support groups for PLHIV, most of which are integrated into the existing health care system. In FY 2006, HWSA provided 5520 clients and 734 family members with palliative care services. Through a sub-grant to the Soweto Hospice, HWSA has provided 609 home-based care (HBC) clients palliative care services through HBC visits. HWSA has three separate activities in this program area. A family-centered approach will be implemented to ensure that both clinical and supportive needs of HIV-infected adults, children and family members, including OVC, are addressed. Care and support field staff will work in tandem with OVC staff and volunteers. Both care and support and OVC activities at site level will be centralized and managed by the site coordinator.

ACTIVITY 1: Support Groups

The first activity is to provide and strengthen comprehensive care and support of PLHIV through community support groups. HWSA has reached over 6000 PLHIV through its 52 support groups to date. HWSA will continue to facilitate 52 support groups in disadvantaged communities covering 5 national sites located in the Gauteng province, Mthatha and Port Elizabeth in the Eastern Cape province, in Durban in KwaZulu-Natal and in Cape Town in the Western Cape.

PLHIV support groups operate primarily out of local health facilities. The integration into DOH facilities will help ensure government collaboration and facilitate access to appropriate clinical services for clients, including ARV services. At clinics that do not provide ARVs the clients will be referred to appropriate SAG hospitals or clinics. Facility staff will be trained to provide basic clinical services including screening for symptoms and pain management. In addition, HWSA will work closely with provincial government to collaborate and report on progress. New PLHIV referred to support groups will attend HWSA's basic HIV and AIDS education course 'Living with Hope' in which clients meet with facilitators weekly over a period of 10-weeks.The course will be revised and updated to strengthen topics such as prevention with positives, ARVs and adherence, and nutrition. Addressing prevention with HIV-infected individuals is an important part of a comprehensive care strategy. Through healthy living and reduction of risk behaviors, these prevention with positives interventions can substantially improve quality of life and reduce rates of HIV transmission. The course will be disseminated as a training resource to key stakeholders, allowing for the scale-up of community support groups. Selected PLHIV graduates of the course will be invited to assist with facilitation of support groups as well as the course.

ACTIVITY 2: Home-based care services

The second activity is providing HBC for PLHIV. HWSA at all its sites will provide a range of HBC services to clients, including psychosocial support, nutritional support, spiritual support, referrals, clinical support and integrated prevention services. Levels of clinical support include screening for pain and symptoms, screening for STIs and OIs with appropriate referral including referral for cotrimoxazole. HWSA will work closely with government HBC efforts for necessary referrals and follow up.

Ongoing psychosocial and spiritual support will be offered to all clients and their family members with a special focus on elderly female caregivers. Through wraparound programming, non-USG funded food parcels sourced from partners such as Tiger Brands and supermarket outlets will be provided to needy clients identified by staff and volunteers.

Income generation activities, supported by organizations such as Golden Cloud/Tiger brands, will support livelihood strengthening and job creation. These activities will principally target HIV-infected and affected women. Human capacity development at community level will be strengthened through training PLHIV in facilitation of support groups, peer education, ART, facilitation skills and counseling. As a result, trained PLHIV will facilitate support groups and other services to members. This will promote GIPA (Greater Involvement of People Living with HIV and AIDS).

Home-based care sites will be strengthened with Nursing staff in all the sites. Nurses will then train staff, volunteers and caregivers on pain, screening and basic symptoms management. HWSA will also collaborate with hospices that are not PEPFAR funded to ensure greater reach, especially with clinical services

Home-based carers will be trained by SAG-approved service providers in the government HBC training program. The HBC program will continue to collaborate with a host of community partnerships in Hospices and other HBC and community support organizations.

Ongoing training of staff on nutrition will be conducted by partners such as AED and Nestle. AED will also train HWSA staff to conduct nutritional assessments of their clients and educate caregivers and their clients on good nutrition and hygiene practices.

All HIV-infected individuals will receive at least one clinical service and one other category of palliative care

Activity Narrative: services. All family members of HIV-infected individuals and OVC will receive palliative care from at least two of the five categories of service.

ACTIVITY 3: Providing care for caregivers

HWSA will train and educate caregivers on new developments in relation to HIV and AIDS. HWSA will facilitate workshops, in partnership with HWSA's prevention program. HWSA will also strengthen referrals to organizations providing debriefing sessions of caregivers. This activity will be facilitated through camps and /or one-on-one counseling. Using non-PEPFAR funding, HWSA will also help to set up and strengthen Income Generating Activities such as food gardening and sewing.

Through these activities, HWSA contributes to the PEPFAR goal of providing care to 10 million HIV-infected and affected individuals. These activities also support the PEPFAR vision in South Africa as outlined in the Five-Year Strategy by expanding local communities' capacity to deliver quality care for PLHIV in their communities. In addition, HWSA will increase PLHIV access to government support systems and strengthen linkages and referral systems with other social services such as Health and Social Development.

Program Area Context:

The scale of TB epidemic in South Africa (SA) is staggering. SA has one of the highest estimated TB rates in the world, ranking 7th among high burden countries. According to the 2006 National TB Control Program (NTCP) data, there were more than 266,000 reported cases of TB, at a rate of 669 per 100,000 population. The real prevalence is unknown but is estimated to be much higher. 58% of TB patients in SA are co-infected with HIV. The NTCP results for 2005 show little progress in treatment outcomes: the cure rate for new smear positive cases was 56.3% and the overall successful completion rate was 69.5%. Rates of default from treatment were still high at 9.9%. Drug-resistant cases, especially those diagnosed with the extensively drug-resistant (XDR) strain, continue to create many challenges for the National (NDOH) and provincial Departments of Health (PDOH). To date, over 300 XDR cases have been diagnosed during 2006 and the first 4 months of 2007 in seven provinces, which exclude KwaZulu-Natal and Mpumalanga.

South African Government (SAG) investment in TB control is significant; however, due to decentralized funding channeled

through provincial treasuries, the NTCP is unable to quantify the amount of resources committed to TB control. SA adopted the WHO DOTS Strategy in 1996 and most districts have now implemented the core DOTS components. In 2006 the SAG developed the TB Crisis Plan which focuses on social mobilization and multi-sectoral engagement, and initially targets three provinces and four districts with high caseloads and unsatisfactory performance. In 2007, the NDOH created a separate directorate for the NTCP and is finalizing a 5-year strategic plan. Additionally, in acknowledgement of the burden of TB/HIV, the HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011 (NSP) espouses the integration of TB and HIV services as essential to ensuring that co -infected patients receive appropriate care and treatment.

Key constraints to effective TB/HIV collaboration are linked to both broad institutional factors as well as SAG-specific policy. These include: 1. Human resource constraints at district and facility levels and within laboratory services; 2. Program approaches and cultures of TB and HIV programs inhibiting effective collaboration; 3. TB services provided at the primary health care level and HIV and AIDS care services are usually hospital-based; 4. Threat of multidrug-resistant TB (MDR-TB), extensively drug-resistant TB (XDR-TB), with evidence of facility and community transmission; and 5. The MDR-HIV interaction threat in the context of large-scale HIV care and treatment programs.

USG efforts in mitigating the impact of TB/HIV are consistent with the National Department of Health (NDOH) and WHO TB/HIV guidelines, which highlight the need for integrated programming, decreasing the burden of TB among people living with HIV (PLHIV) and decreasing the burden of HIV among TB patients. USG efforts bolster the SAG capacity to address challenges related to TB/HIV coordination. USG partners work in all provinces to strengthen mechanisms of collaboration and ensuring implementation of NDOH guidelines. USG is providing extensive support to TB control programs in the crisis areas and has recently implemented a strong public-private partnership to fight the scourge of TB. To ensure sustainability, USG works closely with NDOH at all levels to develop policies and tools and build the capacity of service providers. Training of trainers and on-the-job training is also implemented. Because of staff rotation at the service provider level, USG has embarked on training all service providers to ensure skill retention.

PEPFAR supports ongoing and new efforts to increase access to HIV services (including routine counseling and testing, HIV care, wellness and ART) among TB patients. Addressing infection control has become an important priority for PEPFAR partners. Efforts to support infection control activities include training, policy development, implementation of assessments, and equipment purchase. TB/HIV and MDR surveillance efforts include enhancements in the electronic TB register (ETR.Net) software to include the ability to measure TB treatment outcomes by HIV status. TB/HIV and MDR data collection tools were revised and it is hoped that the new tools will help reduce barriers to more widespread TB/HIV and MDR surveillance. Partners continue to support TB screening among clients of HIV services.

Ongoing activities also aim to provide additional technical and financial resources for provincial and district health management teams to increase the effectiveness of referral networks between TB and HIV services and to improve the mechanisms of TB and HIV program collaboration. HIV-infected persons are referred to other facilities to receive TB treatment before initation on ART. Routine M&E systems in HIV clinics to monitor TB treatment are weak and partners struggle to provide information on TB treatment for HIV-infected individuals. Partners are working to strengthen M&E systems to track this information.

The USG continues to support the development of a National TB Reference Lab as a key activity aimed at improving diagnosis of TB among PLHIV. Additional laboratory activities will focus on quality assurance, expansion of TB culture and drug susceptibility testing, and supporting improvements in information systems (increase timeliness of laboratory reporting) and testing technology. Public-private partnerships will continue to expand access to TB/HIV services, including cotrimoxazole preventive therapy, expansion of access to ART and, on a limited basis, isoniazid preventive therapy among PLHIV. Emerging concerns about the interaction between TB, HIV and drug resistance came to the forefront in 2006. Efforts to better understand the extent of these threats and to control them have already begun and will be accelerated through 2008. USG is also supporting several public health evaluations to identify improved methods to diagnose TB in HIV co-infected patients, enhance screening for TB in HIV CT and care settings, and improve referral networks between HIV and TB services.

The PEPFAR TB/HIV program is complemented by USAID Operational Plan (OP) TB support. The activities supported include enhancing partnership with the NTCP to build national support by mobilizing resources and creating a conducive environment for expansion of TB services; and with provincial and district health departments as well as communities to create appropriate social mobilization and service delivery models for rapid DOTS expansion in the country; identifying strategic interventions to address challenges from increasing TB/HIV and MDR/XDR threats; supporting several districts identified for service improvement under the SA TB Crisis program; implementing facility-based and community-based TB and HIV/AIDS interventions; and building capacity of service providers to manage TB programs and to review the program to identify gaps and make recommendations for improvement.

In 2007, a brief review of PEPFAR TB/HIV partners indicated that while many partners were implementing TB/HIV activities, there existed a lack of uniform implementation of the DOTS strategy and efforts to ensure co-management of TB and HIV. Several partners noted they did not have standardized operational guidelines for TB/HIV integration or infection control guidelines. Through this effort, PEPFAR partners identified five overarching priorities: 1) expansion of integrated TB/HIV services; 2) continued provision of integrated TB/HIV training to all staff; 3) strengthening the relationship between organizations and NDOH; 4) ensuring availability of protocols and policies at all services; and 5) improving diagnostic, counseling and referral services.

The SA USG TB/HIV team continues to liaise with international donors to ensure collaboration and coordination of activities. While there are many international donors in SA, the key donors who have indicated support for TB/HIV activities are:

1. Belgian Technical Corporation– infrastructure and personnel support for expansion of TB/HIV integration at the NDOH and PDOH levels;
2. UK Department for International Development – training in KwaZulu-Natal;
3. Italian Institute of Health– epidemiology support to KZN;
4. Italian Cooperation – support to the NDOH;
5. Japanese International Cooperation Agency– laboratory strengthening; and

6. Bill and Melinda Gates Foundation - community-based trials of new strategies to combat TB in high HIV prevalence settings.

Through liaison efforts with these donors, data indicates that other donors are focusing their efforts in some areas similar to USG efforts. In 2008, USG plans to increase coordination efforts with other donors to reduce duplication of effort.

To maximize resources and avoid duplication, information obtained from donors along with current PEPFAR TB/HIV and USAID OP TB activities will help inform the SA USG TB/HIV team's efforts to develop a country-specific strategic plan in collaboration with NDOH by January 2008. The plan will be driven by the SAG NTCP and NSP, as well as the OGAC and WHO TB/HIV guidelines. This plan will inform future COP planning and inter-agency planning with USAID TB resources, and establish networking mechanisms among partners to support sharing of best practices for TB/HIV integration.

TB/HIV programming will continue to receive priority attention in FY 2008. Since FY 2006 the USG effort to address TB/HIV services has been expanded. In FY 2007, over $30 million was invested in TB/HIV-related activities, approximately 5% of the country USG PEPFAR budget. In keeping with OGAC guidance to expand TB/HIV programming, close to $33,000,000 is requested in FY 2008 by close to 30 partners of which a majority are SA-based. Complimentary funding from USAID TB funds are expected to continue at $3,000,000 per year.

Program Area Downstream Targets:

7.1 Number of service outlets providing treatment for tuberculosis (TB) to HIV-infected individuals (diagnosed or presumed) in a palliative care setting	1652
7.2 Number of HIV-infected clients attending HIV care/treatment services that are receiving treatment for TB disease	93244
7.3 Number of individuals trained to provide treatment for TB to HIV-infected individuals (diagnosed or presumed)	16467
7.4 Number of registered TB patients who received HIV counseling, testing, and their test results at a USG supported TB service outlet	101759

Custom Targets:

Activity System ID:	13873		

Activity Narrative: SUMMARY:

University Research Co., LLC / Quality Assurance Project (URC/QAP) will work with the Department of Health (DOH) through training, mentoring and introduction of quality assurance (QA) tools/approaches to improve the quality of services for Tuberculosis/HIV (TB/HIV) for co-infected patients in 100 DOH health facilities in 5 provinces. The essential elements of Quality Assurance support include strategies to improve technical compliance with evidence-based norms and standards as well as improving interpersonal communication and counseling and increasing organizational efficiency. The major emphasis area for this activity is quality assurance/supportive supervision with minor emphasis on development of network/linkages/referral systems, training and needs assessment. The activity targets public health workers, NGOs and community leaders, program managers, volunteers and people living with HIV (PLHIV).

BACKGROUND:

Since 2001, URC/QAP has worked with the DOH to improve the quality of TB services. A number of challenges continue to hamper the TB/HIV program, including provider knowledge and skills about TB, poor access to laboratories and poor supervision and follow-up of patients on treatment. The rising TB burden in South Africa (SA) as well as the emerging XDR epidemic is further complicating treatment of TB/HIV co-infected patients. The large pool of TB/HIV co-infected patients necessitates the development of creative strategies to address TB/HIV as a single entity and develop suitable service delivery models. URC/QAP will assist 100 health facilities in 5 provinces to improve screening, referral, treatment, and follow-up of PLHIV to identify those co-infected with TB in line with NDOH standards and guidelines. URC/QAP will assist facilities offering HIV services to better integrate TB screening and treatment services into their programs. URC/QAP will also provide small grants to selected local community-based organizations/home-based organizations (CBOs/HBOs) to integrate TB screening, referral and follow-up into their home-based care programs for PLHIV.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Establish Facility-Level Quality Improvement Teams

URC/QAP will work with each facility to identify core teams representing TB and HIV service providers as well as other staff. These teams, with support from URC/QAP coordinators and district staff, will be responsible for implementing facility plans for improving access to TB screening, treatment and follow-up among PLHIV. Each facility team along with URC/QAP staff will conduct rapid ongoing assessments to identify and address quality gaps in current services for screening, treating and following up of PLHIV for TB. URC/QAP will assist the facility teams in the 5 provinces to increase HIV counseling and testing (CT) for TB patients, utilizing various models for CT, including provider-initiated CT with opt-out option. URC/QAP will assist teams in developing a strategic plan for improving access to quality TB services for PLHIV at all levels, including provision of cotrimoxazole prophylaxis for co-infected TB/HIV patients. URC/QAP will facilitate linkages to ARV treatment for eligible clients by training facility staff on the NDOH National guidelines; and training facility staff in QA methods specific to TB and HIV; designing with facility staff referral improvement plans, including strengthening networks with CBOs/HBOs to improve referral patterns. URC/QAP is already in the process of developing a continuum of care model to ensure cross referral, with improved case finding/case detection rates, and continuity of care, with improved follow up and DOT support for all TB/HIV co-infected patients. Emphasis will also be placed on DOTS support/treatment adherence to prevent multidrug-resistant TB among PLHIV. At the national level, URC/QAP will continue assisting the South Africa National Tuberculosis Control Program (NTCP) in the implementation of the NDOH guidelines for management of HIV-infected TB patients and will utilize this data to support and advance the concept of best practice TB/HIV models of care.

ACTIVITY 2: Training

URC/QAP will train health care providers to screen all HIV-infected clients for symptoms of active TB and support referral of all TB suspects for diagnosis and treatment. It is expected that this will lead to the development of a model protocol which will then be shared with other PEPFAR partners. In collaboration with facility staff, URC/QAP will support "fast-tracking" of clients with TB symptoms for appropriate diagnostic tests to assure timely treatment and to reduce the risk of nosocomial transmission to susceptible PLHIV. URC/QAP will also work with facility staff on the development of a "retrieval" or back-referral system to assure that TB patients continue to access HIV-care within facilities and CBOs/HBOs.

ACTIVITY 3: Human Capacity Development

URC/QAP will provide job-aids such as wall charts to improve compliance with national TB guidelines. URC/QAP will work with CBOs/HBOs to develop strategies for providing TB screening, referrals and DOT support as part of their home-based programs. URC/QAP will train facility and CBO/FBO staff in analyzing their performance (outputs) and quality (compliance) indicators. On a monthly basis staff will use trend lines to see if the interventions are having the desired results of increasing identification of co-infected patients. URC/QAP will visit each facility/CBO/HBO at least twice a month to provide onsite mentoring to staff. This will focus on improving skills of staff in TB screening/treatment as well as ensuring that improvement plans are being implemented correctly. During these visits URC/QAP will review program performance data.

ACTIVITY 4: Building Sustainability

URC/QAP will train district and facility-level supervisors in QA methods and facilitative supervision techniques for improving the quality of TB/HIV coordinated activities at facility and community-levels. To address the short-and long-term human resource needs to manage the enormous burden of HIV-infected TB patients, URC/QAP will work with CBOs/HBOs and health care facilities to provide DOT supporters in order to improve follow-up of co-infected patients as well as provide home-based care for these patients. URC/QAP will also conduct quarterly assessments in each facility/CBO/FBO to assess whether staff is in compliance with national guidelines.

ACTIVITY 5: Infection Prevention and Control

Activity Narrative: URC/QAP sees itself as an integral part of the network of IC delivery, as quality initiatives span a wide range of health systems and processes. This is important to reduce the incidence of nosocomial infections in both in- and out-patient settings. URC/QAP is part of the National Committee of infection prevention and control and will work in partnership with the TASC II TB project and other partners to support the NTP to finalize the development of infection control guidelines for TB program. URC/QAP will provide training and support to QAP-supported facilities in 5 provinces to strengthen infection prevention and control on the implementation of the national policy and guidelines. In addition URC/QAP will be involved in the development and dissemination of information and education materials for TB infection control in work settings for health care workers. In addition, URC/QAP staff will be involved in the dissemination and implementation of the TB/HIV infection control policy guidelines within all facilities and home-based and faith-based organizations supported by URC/QAP.

URC/QAP will assist PEPFAR in reaching the vision outlined in the USG Five-Year Strategy for South Africa by facilitating the expansion of HIV CT to high risk groups (TB patients) and increasing recognition of TB in PLHIV. URC/QAP work contributes to the PEPFAR goal of providing care to 10 million people affected by HIV.

Activity System ID: 13870

Program Area: Palliative Care: TB/HIV

Program Area Code: 07

Planned Funds: $5,407,750

Activity Narrative:

SUMMARY:
TASC II TB Project (TASC II TB), managed by University Research Co., LLC, works with all levels of Department of Health (DOH) to increase screening, referral, treatment, and follow-up of TB and TB/HIV co-infected patients. Activities are designed to improve TB/HIV coordinated activities at program management and service delivery levels. TASC II TB provides support in development of operational policies and capacity development in laboratory, clinical skills, and community outreach. At service delivery level, emphasis is on integrating TB screening at HIV testing sites and vice versa as well as ensuring that TB/HIV co-infected patients are put on appropriate treatment regimens as well as referred for ARV treatment and follow-up services. Limited support is provided to community and home-based care groups to increase awareness of TB/HIV coinfections and need for early screening and follow-up. Emphasis is on human capacity development.

BACKGROUND:
This is an ongoing activity and is part of a larger USAID-funded TB project started in September 2004, with TB/HIV activities funded by PEPFAR. TASC II TB is currently working at all levels of DOH in 5 provinces to improve coordination of TB and HIV strategic and operational planning to integrate TB and HIV services into primary health care; strengthen laboratory services to support comprehensive TB and HIV diagnosis and care; develop new approaches to improve collaboration between TB and HIV programs; and improve coordination between public and private sector to respond to the dual epidemic. TB/HIV strategy is implemented using a collaborative approach to rapidly scale-up integrated TB/HIV services in targeted provinces. Focus is on increasing access to counseling and testing (CT) for TB patients and early referral for ARV therapy, and improve TB detection in HIV-infected people. TASC II TB will work closely with PEPFAR partners involved in palliative care including basic health services for people living with HIV and AIDS (PLHIV). The project will assist partners in integrating TB case management in basic health packages for PLHIV. TASC II TB will also work with USAID partners providing services to children to integrate TB and TB/HIV care algorithms in pediatric and well-baby care for HIV-infected infants and children. This will include working with Medical Care Development International (MCDI), Integrated Primary Health Care (IPHC), and other partners providing care and support for orphans and vulnerable children (OVC).

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Policy Development and Systems Strengthening
TASC II TB will continue working with National TB Program (NTP) and HIV and AIDS Unit at national and provincial levels in developing and refining operational policies on TB/HIV coordinated activities. This includes policies on treatment of co-infected patients. By providing on-going training and mentoring support, TASC II TB will assist health facilities and health care workers to improve compliance with national guidelines and protocols for screening, treatment and follow-up of TB/HIV co-infected patients. A cadre of Master Trainers will be developed in each province to improve knowledge and skills of healthcare workers. Managers and service providers will be trained to improve knowledge and skills in TB/HIV management and service delivery issues; strengthen capacity of private providers and medical schemes to better manage co-infected patients by ensuring that TB services are included as part of a comprehensive package of services; improve HIV services in TB facilities by promoting provider-initiated CT, and appropriate staging and referral of HIV-infected individuals. This will also ensure expansion of CT uptake among TB patients Referral systems will be strengthened at district level between health and social services. Private practitioners will be trained on MDR-TB and TB/HIV management. Systems will be put in place to ensure prompt diagnosis and appropriate treatment. Links will also be developed between private practitioners and district TB coordinators to ensure proper monitoring and reporting of TB/HIV co-infected patients. Funds will also be used to ensure correct implementation of MDR/TB recording and reporting tools in all MDR-TB units in the country. This will include training of healthcare workers and information officers on tools, and printing and dissemination of these tools. TASC II TB will assist facilities and districts in reviewing performance data to ensure all TB and HIV patients are screened for coinfections and co-infected patients are provided with appropriate treatment and referrals.

ACTIVITY 2: Reduce Stigma and Discrimination
TASC II TB will support grassroots advocacy through CBOs/FBOs to counter stigma and promote a supportive environment for people with TB and HIV by implementing community-based awareness campaigns. The project will promote early diagnosis of TB among PLHIV by promoting routine TB screening of HIV-infected patients and CT among TB patients. Small grants will be provided to local FBOs and CBOs to integrate TB and HIV activities and provide nutritional support to individuals to encourage treatment adherence, and also allow organizations to undertake advocacy and public education to create awareness of TB/HIV dual infections and need for early screening. Home-based care groups will be funded to provide adherence support to co-infected patients on TB and ARV drugs. Advocacy materials will be developed. The project will fund local CBOs/NGOs for placing HIV counselors in all MDR-TB units to promote HIV testing of all hospitalized TB patients. In addition, the project will also work with sessional doctors to stage and manage co-infected patients and fast track access to ART for TB patients.

ACTIVITY 3: Strengthen Laboratory Services
The project will work with NTP and National Health Laboratory Services (NHLS) at service delivery level to improve availability and quality of laboratory services critical for identifying TB among HIV-infected individuals. Specific activities will include: 1) enhancing skills of laboratory staff in preparing and reading smears; 2) placement of a laboratory quality assurance system to improve sensitivity and specificity of sputum checking; and 3) development of a simple laboratory information system, linked with the electronic TB Register (ETR) to track turn-around-time of specimens sent to laboratory. Working with NTP, NHLS, World Health Organization (WHO) and Medical Research Council (MRC), laboratory TB policies and guidelines will be updated to be in line with international standards and the STOP TB strategy. The project will work with other partners to train districts and facilities on MDR-TB surveillance data collection and reporting.

ACTIVITY 4: Monitoring and Surveillance
The project will work with NDOH to strengthen recording and reporting systems for TB and HIV by training healthcare workers in implementation of revised TB and HIV registers, data collection and analysis, and on-going problem solving functions. TB TASC will strengthen capacity of provincial, district and local service area (LSA) health offices to establish functional HIV and AIDS, STI and TB (HAST) committees in order to strengthen monitoring, supervision, and surveillance of TB and HIV by using an approach of continuous

Activity Narrative: feedback and mentoring of service providers. The project will also work with National DOH to strengthen and improve TB and HIV monitoring through use of ETR. TASC II TB will work with DOH to monitor TB and HIV programs as well as cross-referrals for TB/HIV and ARV treatment. Technical support will be provided to health facilities and CBOs and FBOs in integrating TB and HIV with other health services to reduce missed opportunities and improve continuum of care by promoting routine CT to TB patients and routine TB screening for HIV people including pregnant women

ACTIVITY 5: Strengthen implementation of TB/HIV infection control policies and guidelines
TASC II TB will work with WHO and NTP to finalize the development of infection control guidelines for TB program. This will be followed by training of primary health care managers and service personnel including doctors, nurses and allied health workers on the implementation of the national policy and guidelines. Information and education materials for TB infection control in work settings will be developed for health care workers.

ACTIVITY 6: Strengthen surveillance of MDR/XDR-TB
TASC II TB will work with NTP as well as local universities to improve and expand surveillance of MDR/XDR-TB in the country. Assistance will be provided to design a simple framework to collect and analyze data on MDR/XDR patients in each province. In addition, mechanisms will be developed and implemented for contact tracing of MDR patients to minimize risk of nosocomial transmission. Close contacts of MDR/XDR-TB patients will be put under close surveillance and appropriate prophylactic treatment if needed.

ACTIVITY 7: Promote Linkages with Palliative Care
TASC II TB will work with PEPFAR partners responsible for delivery of basic health care for PLHIV to integrate TB screening, diagnosis, treatment and follow-up as part of their routine care and management of HIV clients. PEPFAR partners will be helped to ensure all HIV infected clients are regularly screened for TB and those with bacilli are put on TB treatment; and also in management of TB/HIV patients. TASC II TB will provide training and follow-up support to these partners.

ACTIVITY 8: Strengthen TB and TB/HIV services for pediatrics
TASC II TB will work with USG partners working on child health issues to improve quality of services. Partners will be trained in management of pediatric TB including suspecting and referring for TB diagnosis. Key partners may include groups receiving USAID funds as well as other PEPFAR partners tasked with OVC care and support.

Program Area Code: 07

Activity ID: 12464.08

Planned Funds: $679,000

Activity System ID: 13867

Activity Narrative: SUMMARY:

The International Training and Education Center on HIV (I-TECH) FY 2008 COP activities will be expanded to include technical assistance (TA) activities to enhance the Mpumalanga Department of Health (DOH) RTC's organizational and human capacity to train Mpumalanga health care workers (HCW with the primary target audience being doctors and nurses) on the care and treatment of concomitant HIV and TB and thereby increase access to quality concomitant TB/HIV care and treatment in the province. Funds will be used to support the technical (e.g., the development/modification of TB/HIV curricula in accordance with national guidelines; curricula accreditation) and human capacity development of the Mpumalanga DOH RTC (MRTC) to train Mpumalanga HCW on HIV/AIDS, tuberculosis (TB) and sexually transmitted infections (STIs) care and treatment. The primary emphasis area for these activities is local organization capacity building to affect the care and treatment of patients with HIV and TB. Human capacity development and strategic information are secondary emphasis areas. The primary target organization is a host country provincial government organization and its medical teams comprised of doctors and nurses.

BACKGROUND:

I-TECH has been supported by PEPFAR for the past five years to work in the Eastern Cape province, with the invitation and support of the South Africa (SA) National DOH and EC DOH, to develop the organizational and human capacity of the EC RTC to train/mentor clinicians in the care and treatment of HIV, AIDS, TB and STI. Organizational TA to the EC RTC included strategic planning, infrastructure development, human resource development and management, small grant or proposal development, the development of memoranda of understanding, financial management, marketing, health management information systems, and disseminating best practices to improve program efficiency and effectiveness. These activities will be extended to Mpumalanga province in FY 2008 and implemented by the primary partner. Human capacity development of the EC RTC included the longitudinal mentoring of its clinical teams by experienced I-TECH HIV specialists and infectious disease clinicians on the care and treatment of HIV/AIDS/TB/STI and the art of effectively mentoring others. These clinical human capacity development activities will be extended to the MRTC in FY 2008 and will be implemented by I-TECH's sub-contractor, the University of California at San Diego (UCSD) Owen Clinic.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Human Capacity Building, In-country Mentoring of the Mpumalanga Regional Training Centre (MRTC) Clinical Team

This activity expands I-TECH's in-country mentoring program to Mpumalanga. FY 2008 funds will be used to mentor MRTC clinical staff to develop their mentoring skills as well as their clinical skills in the treatment of concomitant TB/HIV patients, complex case management, rapidly emerging treatment complications, and evidence-based clinical decision-making. Six I-TECH UCSD mentors will individually accompany MRTC medical team members as they travel to sites in the province to provide onsite mentoring to Mpumalanga clinicians while seeing together up to 50 patients per week. Mentoring will also include technical assistance centered on systems strengthening provided to MRTC RTC sites/feeder clinics. FY 2008 PEPFAR funds will support UCSD Owen Clinic administrative staff time, and the salaries, travel, lodging and expenses for six infectious disease or HIV specialists to travel to Mpumalanga during FY 2007 for one month stays.

ACTIVITY 2: Program Sustainability: In-country Mentoring of the Mpumalanga Regional Training Centre (MRTC) Clinical Team to Develop and Update Curricula

FY 2007 PEPFAR funds supported a needs assessment of the Mpumalanga HCW TB/HIV training needs. In 2008, the results will be utilized to assist the MRTC to develop/modify and accredit its TB and HIV training courses for health care providers, and develop training plans. In addition, I-TECH will respond to other training needs of the MRTC HCW based on the results of the needs assessment, such as TB/HIV/STI curricula revision and update. Training will be provided through a high-level training specialist who will mentor MRTC staff to update curricula according to provincial and national guidelines. This transfer of skills activity will include developing and strengthening monitoring and evaluation of training programs in this region. FY 2008 funds will be used to support the salary, travel and lodging cost of a training technical expert. Contingent upon the availability of FY 2008 funds and depending on the training needs of MRTC HCW, additional training will be provided through sponsorship at national or international training summits, study tours, or other preceptorships.

ACTIVITY 3: Human Capacity Building: Distance-based ongoing clinical consultation

This activity was first funded for the Eastern Cape RTC by PEPFAR in FY 2005. During UCSD/RTC trainings, EC clinicians are encouraged to contact the RTC team for clinical consultation as needed, who then forward the query and response to the UCSD Owen Clinical mentors for additional guidance before delivering their consultative advice. In FY 2008, PEPFAR funds will be used to expand this activity to the Mpumalanga RTC HCW. Funds will support UCSD consultants' time (a portion of salaries) related to the time spent fielding consultations; estimated at five consults per week.

These activities contribute to the overall PEPFAR 2-7-10 goals and to program sustainability by improving the organizational and human capacity of the MRTC to effectively treat affected patients and mentor other HCW on the care and treatment of concomitant TB/HIV care and treatment, thereby increasing both access to and the quality of TB/HIV care and treatment.

Table 3.3.07: Activities by Funding Mechansim

Mechanism ID: 4746.08
Mechanism: Desmond Tutu TB Centre
Prime Partner: University of Stellenbosch, South Africa
USG Agency: HHS/Centers for Disease Control & Prevention
Funding Source: GHCS (State)
Program Area: Palliative Care: TB/HIV
Budget Code: HVTB
Program Area Code: 07
Activity ID: 8183.08
Planned Funds: $1,594,500
Activity System ID: 13864

Activity Narrative: SUMMARY:

The Desmond Tutu TB Center has developed a project focused on improving the integration of TB and HIV services by expanding access to HIV-related services to large numbers of TB clients in the Western Cape (WC) and intensifying case finding for TB among HIV-infected clients. The major emphasis area is human capacity development through training of staff and managers, development of networks, linkages and appropriate referral systems. The target populations include policy makers, program managers and the general population with specific focus on HIV-infected and TB-infected and diseased adults and children. The project addresses the dual challenges of reducing HIV transmission in communities and minimizing the impact of HIV on individuals and of reducing the TB burden by increasing case-finding and ensuring appropriate TB care.

BACKGROUND:

The extremely high TB rates in the Western Cape, and the increasing prevalence of HIV have led to the health system being put under extreme pressure resulting in a failure to cope with the dual epidemics. Therefore it is necessary to develop effective and feasible strategies that can be adopted by health services to increase access to services and improve the quality of care for people with HIV and TB. This project, implemented in existing government health services, aims to complement, enhance and support these services. It is nested in six Western Cape communities that form part of the Zamstar project (part of the CREATE consortium funded by the Bill and Melinda Gates Foundation through a grant to the Johns Hopkins University) that works to reduce the prevalence of TB by improving integration of HIV and TB services. This project has already established community advisory boards and stakeholder support. The PEPFAR funded project links with the Zamstar project by implementing complementary activities focused on HIV and TB such as routine screening for TB at CT, improved access to TB and HIV care, improved quality of services and collaboration between HIV and TB services at facility level. The project scope has been revised from that submitted in COP07 to address evolving community and health service needs. All activities of the Desmond Tutu TB Centre, including the present project, are implemented in close collaboration with the Western Cape Department of Health, Cape Town City Health Department and non-governmental organizations (NGOs).

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Routine Screening for TB through CT services

Symptomatic screening for TB during CT is current policy. If clients are symptomatic, they are sent to the nurse for investigation. There is no routine data at present to show whether symptomatic clients had sputum samples taken, whether a TB diagnosis was made and TB treatment commenced. An operational evaluation of routine data has been undertaken to assess the efficacy of TB screening at CT as a possible means of increasing TB case-finding. This evaluation has shown that symptomatic screening does take place at CT but that gaps exist in the follow up, particularly with clients having the appropriate sputa taken. Based on the outcome of the evaluation, appropriate training for lay-counselors is being undertaken to help improve the quality of counseling provided to TB and HIV clients at health facilities throughout the City of Cape Town and West Coast-Winelands Districts. Systems will be strengthened to facilitate sputum testing for symptomatic clients identified at VCT. These systems will be implemented at the routine CT centers in clinics and in the 6 PEPFAR-funded Community Flexi-Hour CT Sites. The Audit Tool for evaluation of TB and HIV services will be used to assess whether clients had a symptomatic screen at CT and if symptomatic, whether the appropriate TB tests were done.

ACTIVITY 2: Improve TB/HIV Services at Facility Level

This activity focuses on improving health services and care of people infected and affected with HIV and TB by providing in-service training and ensuring the implementation of current guidelines. For TB clients: that all are offered CT; that those who test positive undergo a baseline evaluation, including WHO staging, CD4 counts, PAP, RPR; that cotrimoxazole prophylaxis, management of concurrent opportunistic infections and referral for antiretrovirals are provided as required. For all HIV-infected clients: In addition to being provided this package of care, that all clients are screened for TB at every clinical visit, including the use of sputum culture in symptomatic clients who are smear negative. In 2008 particular attention will be paid to HIV testing among children with TB and appropriate HIV care for those who are positive. TB services for persons living with HIV and HIV services for TB clients are enhanced and monitored through a system of quality assessment and improvement. The project uses an audit tool that has been developed by the Cape Town City Health Department, Provincial Department of Health and the University of the Western Cape, thus ensuring skills transfer and sustainability. This tool uses the "Conditions for Effectiveness" framework to evaluate availability, capacity, access, initial use of services, continuity of care, quality and impact of TB, HIV and STI services. The tool uses regular audit of clinical folders to identify whether the package of TB and HIV services have been appropriately provided to clients. In-service training and on-site supervision will be used to improve the delivery of these services. Project staff work closely with the health authorities to improve the data management system used to evaluate TB services to those with HIV, and HIV services to those with TB. Project staff advocate for improved monitoring of HIV services to TB clients through the electronic TB register. The skills of facility managers and staff will be developed to improve their ability to evaluate routine data and information from the audit. Staff will be taught a participative planning process to help improve collaboration between the services and to use the data to drive quality improvements in both TB and HIV services. The transfer of appropriate skills will empower people and build local capacity, and in turn, this will help ensure sustainability after completion of the proposed project. The lay counselors will also learn to provide effective counseling to TB suspects and clients, and this will help alleviate time pressures on the nursing staff and allow them to concentrate on professional tasks. It is anticipated that this activity will result in improved job satisfaction among nurses and have a positive influence on the morale of staff. This project contributes to the PEPFAR goals by strengthening linkages between HIV and TB, by encouraging TB patients to undergo HIV testing, by identifying those who are co-infected and, by ensuring treatment, care and support. In addition, the project contributes to PEPFAR goals by providing messages on HIV transmission to schools and communities at large.

Funding Source:	GHCS (State)	**Program Area:**	Palliative Care: TB/HIV
Budget Code:	HVTB	**Program Area Code:**	07
Activity ID:	13862.08	**Planned Funds:**	$291,000
Activity System ID:	13862		

Activity Narrative: The activities listed below are intended to be competed and awarded to a follow on partner to UKZN CAPRISA since that award is ending in FY 07.

BACKGROUND:

CAPRISA was established in 2002 as a not for profit AIDS research organization by five major partner institutions: University of KwaZulu-Natal, University of Cape Town, University of Western Cape, National Institute for Communicable Diseases, and Columbia University. The headquarters of CAPRISA are located in the Doris Duke Medical Research Institute at the Nelson R Mandela School of Medicine, University of KwaZulu-Natal. The PEPFAR-funded CAPRISA AIDS Treatment (CAT) Program was initially started as a supplemental effort to deal with the large volume of HIV-infected clients that were screened out of CAPRISA's other research studies. It has since evolved into one of the pillars of CAPRISA and is evidence of the ongoing commitment to provide comprehensive services to communities. The CAT Program was initiated in June 2004 and currently provides an integrated package of prevention and treatment services. The program also provides an innovative method of providing ART by integrating the tuberculosis (TB) and HIV care as well as counseling and testing, family planning, sexually transmitted infections (STI) treatment, prophylaxis and treatment for opportunistic infections (OIs), and other HIV associated conditions at both a rural and urban site.

The CAPRISA eThekwini Clinical Research Site is attached to the Prince Cyril Zulu Communicable Disease Clinic (CDC) which is a large local government clinic for the diagnosis and treatment of STIs and TB, for which it provides free treatment. The HAART provision at this clinic integrates TB and HIV care into the existing TB control program. This allows for the opportunity to initiate HIV care and HAART for patients identified as HIV infected during TB treatment as well as to be able to continue such management for those who develop TB during HIV treatment. Patients are either self referred, or enter the HIV care continuum via the adjoining TB or STI services.

South Africa in general and the province of KwaZulu-Natal (KZN) in particular has seen a dramatic rise in the prevalence of TB which has largely been fuelled by the HIV epidemic. Due to the large scale of the TB epidemic, and the large number of patients attending designated TB facilities, in last few years, there has been many operational changes in the way TB is managed at the eThekwini Prince Cyril Zulu Communicable Disease Clinic (PCZCDC). For the most part, patients are referred from PCZCDC to their communities for DOT for TB. There has however been a significant reduction in treatment completion rates and cure rates for TB, largely as a result of a loss to follow-up of patients referred out to community facilities to receive their supervised treatment. The burden of daily DOT has financial implications for patients, in terms of transport costs, as well as employed patients' ability to present for treatment daily. Consequently, there has been a shift to community-based supervised DOT, the success of which has not yet been measured.

Retention to the ART treatment program, as well as measurable ART treatment outcomes, which draws from the same population of patients, has been surprisingly good, mostly as a result of good tracking efforts by fieldworkers.

PEPFAR-funded patients receiving TB/HIV care through the CAT program will be identified to receive field-based DOT. Patient visits will be conducted by fieldworkers, and an adherence assessment as well as an observation of DOT will be made. Patients who do not adhere to treatment x will be referred back to clinic, for specialized adherence education and support.

Fieldworkers will be employed via the CAPRISA Community Program and will be supervised by CAPRISA Community Liaison Officers. A treatment program coordinator will provide additional oversight, as well as assist with record collation and management. In-house trainers and coordinators will be identified. Trackers will be employed via the CAPRISA community research support group which is made up of community organizations and key stake holders from the community that are working in the field of HIV/AIDS and TB. A program of training of these field workers will be implemented prior to project start up. An ongoing monitoring and evaluation system will form part of the proposal to establish efficacy and effectiveness of field-based DOT. A comprehensive proposal for the expanded field-based DOT is being developed. TB drugs used for field-based DOT will be acquired from the TB services at PCZCDC. HIV-infected patients receiving ART and TB therapy via the eThekweni CAT program will be selected. Those unwilling to participate, or require daily clinic visits, or have MDR-TB will be excluded.

Currently all clinic information regarding TB diagnosis, clinical course and management is recorded on an electronic database available to both the TB services as well as the CAT. All treatment outcomes derived via the field-based DOT program will be entered and updated onto this electronic system. This will allow us to do efficacy and outcome analysis. It will also form the basis of doing quality assurance reviews. Additionally, a process will be developed to examine the cost-effectiveness of implementing field-based DOT.

These results contribute to the PEPFAR 2-7-10 goals by providing facility-based HIV-related palliative care to HIV-infected individuals by providing clinical prophylaxis and treatment for TB/HIV co-infected patients prior to initiation of ARVs.

Planned Funds: $3,395,000

Activity Narrative: SUMMARY:

Right to Care (RTC) will use FY 2008 PEPFAR funds in five provinces to strengthen the capacity of healthcare providers to deliver TB/HIV services, identify TB and HIV co-infected individuals, and improve the overall quality of clinical and community-based healthcare services. The major areas of emphasis are human capacity development and local organization capacity building. Target populations include people infected with TB/HIV, public health care providers and local organizations.

BACKGROUND:

Throughout South Africa, active TB incidence rates are rising, reaching 608 per 100,000 per annum. HIV-infected patients are at significant risk for developing TB, and 58% of patients attending TB clinics have been identified as HIV-infected. Of primary importance is the identification of TB in HIV infected individuals, with over 60 percent of co-infected patients being sputum negative. Improved and early diagnosis of TB in HIV-infected individuals improves outcomes of morbidity and mortality. Co-infected individuals need to be initiated on antiretroviral therapy, according to standard treatment guidelines, to ensure improvement in mortality, morbidity and TB cure rates. RTC will support the South African government's TB program and the World Health Organization's policy on collaborative TB/HIV activities.

Since FY 2006 RTC has received funding for TB/HIV and plans to integrate the services for TB/HIV for all co-infected patients at sites throughout the RTC network with the FY 2008 funding. The additional activities at each of the sites will be: (1) access to HIV counseling and testing for patients with TB, (2) improved access to induced sputum for TB diagnosis in HIV-infected individuals, (3) improved linkages between the HIV and TB programs at each of the sites through referral, notification and follow-up; (4) infrastructure support to develop TB sputum rooms with appropriate infection control procedures to prevent the transmission of TB. Activities are currently limited by budget to the sites at Themba Lethu Clinic, Sizwe Hospital, Kimberley Hospital, Shongwe and 4 NGO sites. (5) FBO/NGO clinics focusing on underserved populations in rural areas, industrial areas and informal housing sectors as well as targeted gender specific support groups and family centered approaches will be targeted. The programs will promote sustainability through training of health care workers and partnerships with the National Department of Health (NDOH) to partially fund the ongoing running cost and staff components, over time.

ACTIVITIES AND EXPECTED RESULTS:

RTC will continue to work with the national and provincial departments of health and specifically with the HAST (HIV, AIDS STI, and TB) managers to prioritize interventions designed to address weaknesses (identified by the departments of health) in the DOTS and TB/HIV programs. RTC will focus on improving policy adherence and patient follow-up. Individuals will be hired for each site as tracers to track patients and ensure that referrals are completed. RTC is setting aside funding to develop (with other relevant partners or agreement counterparts) standardized tools to ensure that policies and guidelines recommended by NDOH are followed, including guidelines for infection control. RTC will continue to integrate TB/HIV interventions with existing agreement programs as they work seamlessly and side by side with government employees at government facilities.

With FY 2008 funding, the program will be expanded to all sites in the RTC network. RTC support to government sites will include infrastructure, human capacity development, salaries and training. Technical assistance will be provided to improve the integration of TB and HIV services and referral between the sites treating each of the diseases. In all cases where RTC provides salary support an agreement is made with the facility where positions will be created and funded by provinces in due course. Oftentimes a government position has been created, but not filled, and RTC supports a consultant to fill the position until such time as the province successfully recruits for it.

PEPFAR funds will enable long-term sustainability through support of, salaries, training and human capacity development at all RTC-supported TB/HIV clinics, in the form of sub-awards for NGO and FBO clinics and direct salary support for government sites. PEPFAR funds will also be used to adapt existing training materials to specific TB/HIV issues, and address infrastructure needs, such as HIV counseling rooms in TB clinics and specialized sputum induction rooms that comply with occupational and environmental safety standards. This will enhance both safety of obtaining sputum samples and increase sensitivity for positive sputum test.

At TB/HIV treatment sites, emphasis will be placed on identification of co-infected individuals, through promoting routine HIV counseling and testing for TB patients and TB screening of HIV patients who present with risk factors. Co-infected patients will be evaluated for correct application of ARVs and TB medications. Those on combined ARV and TB treatment will be monitored for the development of Immune Reconstitution Inflammatory Syndrome. Emphasis is placed on adherence support to address the increased risk of non-compliance due to high pill burden, and overlapping toxicities, particularly hepatotoxicity. Human capacity development in the management of anticipated drug interactions and shared adverse effects is an additional expected result. Family and community support network will be educated and trained in basic TB knowledge to help support the client with his/her treatment to improve compliance.

In addition to sputum collection, the implementation of low-cost, high through-put, digital, mobile chest x-ray technology, access to screening x-rays will be improved at rural, distant sites and in underserved populations. FY 2008 PEPFAR funding will be used to purchase and equip one mobile x-ray facility to assist the program in rural Northern Cape and Mpumalanga provinces. While x-ray is not a microbiological diagnosis, it is a simple method to augment diagnosis. TB bactecs and bone marrow procedures are not planned for the sites at present.

Although the current government policy includes access to INH for primary TB prophylaxis, most clinics do not have the required capacity or experience to provide this. INH is provided to Helen Joseph by the provincial government. RTC will evaluate INH prophylaxis at the Helen Joseph Hospital using evidence-based locally relevant data collected within the unit. In collaboration with the local National Health Laboratory Services ongoing monitoring of the evolution of mycobacterial resistance and effect on incidence of TB at the hospital will be undertaken. PEPFAR funds will be used for human capacity development, consultant and sessional salaries and infrastructure, but not for the purchase of INH prophylaxis.

Activity Narrative:

RTC and several of its sub-partners will also continue to incorporate TB/HIV training in ART courses for doctors, nurses and lay counselors to ensure quality of care.

Through induced sputum and chest x-ray, this program will improve TB case finding, improved sputum diagnosis and early TB treatment initiation. Through improved adherence to TB treatment, and improved notification and referral, the aim is to improve TB cure rates. Through improved HIV counseling and testing and referral to ARV treatment, overall TB cure rates and mortality outcomes are anticipated.

Overall the planned activities include monitoring and evaluating the outcomes of the integration of TB and HIV services on patients' outcomes, hospital stays, and mycobacterial outcomes of cure and resistance.

By reaching patients with TB/HIV therapy at various outlets, RTC will contribute to the PEPFAR goal of providing services to 10 million HIV-affected individuals. In addition, the activities support the USG Five-Year Strategy for South Africa by training health care workers in TB/HIV services, significantly strengthening these services and their integration into HIV and primary health care services.

Budget Code: HVTB

Program Area Code: 07

Activity ID: 9444.08

Planned Funds: $780,850

Activity System ID: 13790

Activity Narrative: SUMMARY:

The Reproductive Health Research Unit's (RHRU) TB-HIV activities include the ongoing provision of TB clinical services and the expansion of referral networks and service integration in a deprived inner city area of Johannesburg, South Africa. In addition, in KwaZulu-Natal (KZN), the RHRU is supporting implementation of ARV services at two TB hospitals (Don McKenzie & Charles James, where over 80% of TB patients are coinfected with HIV. Lastly, RHRU will pilot a program to provide a health screening program to health care workers in the inner city of Johannesburg, to ensure a healthy workforce and early referral and management of chronic disease. Emphasis areas include human capacity development and local organization capacity building. Target populations include PLHIV, adults and children.

BACKGROUND:

RHRU, a unit of the University of the Witwatersrand in Johannesburg, currently provides technical support to the Operational Plan for Comprehensive HIV and AIDS Care, Management and Treatment for South Africa, which includes the national ARV rollout. Under PEPFAR funding since FY 2004, RHRU has provided regular on-site support, direct treatment, training and quality improvement to DOH sites in 3 provinces. They will continue these activities, which include inner city, district wide and rural programs focusing on providing support to complete up and down treatment referral networks. In addition, RHRU will continue the provision of counseling and testing (CT), palliative care, and prevention services. RHRU continues to develop models of service delivery that can be replicated and expanded, and produces findings from lessons learned and targeted evaluations to disseminate and share with others. It should be noted that the success of ARV treatment scale-up depends on the comprehensive approach detailed in other program areas. In particular, the strengthening of referral from other primary healthcare programs such as TB, family planning, antenatal/postnatal and STI treatment is critical. Basic Health Care and Support is an integral part of this system, and the RHRU will focus this part of its program on PLHIV, in impoverished areas such as the Hillbrow neighborhood in Johannesburg, and at PHC clinics in Durban, and rural areas of the North West province by delivering high quality palliative care, psychosocial support, and intensive training of doctors, nurses, and other health care professionals. Furthermore, RHRU will continue to develop strategies to address underserved communities affected by HIV, such as couples, high risk groups such as adolescents, and gender-based interventions with women at risk, including pregnant women, sex workers, and men. Although approximately 58% of TB patients in South Africa are HIV infected, published data have shown that a low number of patients are referred from surrounding TB sites to ARV services. A large percentage of these patients will qualify for immediate ARV treatment, and represent an untapped population requiring immediate access to ARVs. RHRU has been working with health authorities to provide TB clinical services and training, with the support of Emergency Plan-funding. RHRU has integrated TB into general palliative care training, and trained thousands of health providers in these areas in previous years. In addition, RHRU programs assist in treating HIV-infected people for TB. In FY 2008, RHRU will build on this program by continuing to train health care providers, and continuing to emphasize TB and HIV integration as part of on-site technical support to ARV treatment sites and primary health care clinics and their referral facilities.

ACTIVITIES AND EXPECTED RESULTS:

RHRU will continue to work with the national and provincial departments of health and specifically with the HAST (HIV, AIDS STI, and TB) managers to prioritize interventions designed to address weaknesses (identified by the departments of health) in the DOTS and TB/HIV programs. RHRU will focus on improving policy adherence and patient follow-up. Individuals will be hired for each site as tracers to track patients and ensure that referrals are completed. RHRU is setting aside funding to develop (with other relevant partners or agreement counterparts) standardized tools to ensure that policies and guidelines recommended by NDOH are followed, including guidelines for infection control. RHRU will continue to integrate TB/HIV interventions with existing agreement programs as they work seamlessly and side by side with government employees at government facilities.

ACTIVITY 1: TB Treatment Support & Integration

Tuberculosis treatment represents an ideal opportunity for entry in to an ARV program. Patients being treated for TB have to deal with the public health system entry, daily adherence, drug toxicity, and regular follow-up evaluation, all of which are key components of the ARV program. Ensuring that health care workers understand that referral from TB sites should be seamless, and encouraging patients to test for HIV through the DOH program, will ensure a constant stream of well-prepared co-infected patients entering the system.

ACTIVITY 2: TB Referral & Staging

RHRU's teams will continue to work within the existing TB services in 3 provinces to expand CT, CD4 staging, initiation of opportunistic infection prophylaxis (cotrimoxazole) and preliminary ARV adherence advice. RHRU will also facilitate direct referral of correctly staged patients into ARV treatment sites, and ensure that other patients accessing ARVs in RHRU sites in the 2 provinces are referred for TB treatment where necessary. Additionally, in the case of very immuno-compromised patients with TB who require ARVs relatively quickly in terms of national guidelines, RHRU will train health care workers to recognize this urgency and refer accordingly, while working with accepting ARV sites to similarly treat these cases with urgency.

ACTIVITY 3: Human Capacity Development

RHRU will continue to develop and scale up TB/HIV training programs for TB service providers operating at all levels of facilities in the provinces in which RHRU works. The primary focus will be on increasing access to ARV services from TB services through continual training and engagement with TB managers. RHRU anticipates that this approach will maintain a steady stream of patients into their ARV programs (see ARV Services section for more information).

ACTIVITY 4: Health Maintenance Program for Health Care Workers

RHRU will continue to provide screening for TB, HIV and chronic diseases among health care workers in

Activity Narrative: City of Johannesburg health facilities, to ensure the preservation of human capacity and to determine the risk of TB infection among this important group. In FY 2008, RHRU will continue to undertake M&E activities to inform and develop quality TB/HIV care. RHRU will be in a position to conduct Public Health Evaluations (PHE) of some of its TB-HIV related projects in FY 2008-2009. For each PHE, a detailed proposal will be developed and submitted to PEPFAR for review and funding approval. This activity will contribute to both the vision outlined in South Africa's 5 Year Strategy and to the 2-7-10 goals by identifying and directing more people to ART, and by increasing access to care.

Budget Code:	HVTB	**Program Area Code:**	07
Activity ID:	13774.08	**Planned Funds:**	$242,500
Activity System ID:	13774		

Activity Narrative: SUMMARY:

HIVCare will use FY 2008 funds to work with the Free State Department of Health (FSDOH) to provide antiretroviral treatment and care in private health facilities to patients who do not have medical insurance, either through referrals from the public sector, or self-referrals. The Free State has mainly a rural population, with only two major metropolitan areas (Bloemfontein and Welkom). In addition, the government rollout of HIV care and treatment has been geographically limited, with only one site in each of the five districts.

Since 2005 and the start of the program, patients have been referred from the State facilities to the HIVCare centers mostly already staged for HIV and assessed for TB. Following an analysis of lost to follow-up cases, HIVCare determined that splitting HIV and TB treatment and monitoring resulted in delays with access and adversely impacts on compliance. In coordination conjunction with the TB department of the FSDOH, TB assessment and treatment is to be integrated into HIVCare activities. Following technical input from the FSDOH, the centers chosen for TB treatment sites are suitable and certain recommendations have been made. These recommendations include separate facilities for patients and staff, air circulation and extraction processes in the clinic and a separate area for sputum collection. Various policies relating to infection control have been provided by the FSDOH for HIVCare implementation and these policies have been adopted within the centers' operational procedures.

The clinic is in possession of all of the necessary forms and registers, supplied by the FSDOH, to comply and integrate its TB service with theirs. Staff in the HIVCare centers are experienced public health nurses and refresher training is to be provided in TB management by the local FSDOH offices.

Staff are routinely monitored on an annual basis for TB infection including the requisite chest x-ray.

The major emphasis area for this program will be the provision of comprehensive care and support to persons infected with HIV as well as the improvement of referral systems, with minor emphasis given to quality assurance & supportive supervision, food and nutrition support as well as commodity procurement. The target population includes men and women; families (including infants and children) of those infected and affected factory workers and other employed persons, and government employees - specifically teachers, nurses and other health workers (without medical insurance). A further specific population that will be targeted will be secondary school children. The most significant target group is those persons in the economically active age group of the population that cannot access services in the public health system due to the high demand for services. Additional attention is to be given to the screening and treatment of TB among the patients attending the program. The linkage with the youth center will ensure that HIVCare has a larger proportion of younger persons being attended to, specifically adolescents aged 10-14 and 15-24. This focus on the youth should further encourage some involvement with the street youth and it is anticipated that the program will be marketed among those NGOs working with the street youth as

BACKGROUND:

Since 2005, the main thrust of the activity was to match the FSDOH with partners from the private sector (in this case Netcare, the largest private sector health provider in South Africa, through their primary health centers) in order to build private sector capacity and absorb some of the burden from state facilities. Many FSDOH centers have waiting lists of people waiting to go on ARV treatment. The Free State Province has a large prevalence of TB because of the number of deep mining activities in the area. MDR and XDR-TB have been identified in the province. As a result, a large proportion of newly identified patients are co-infected with TB. In the past all patients were referred back to government facilities to initiate TB treatment prior to beginning on ART with the HIVCare program. Aside from the general delay that this caused, some confusion among patients occurred. In addition, the inconvenience of further travel expenses and waiting periods to access the TB treatment resulted in many patients simply abandoning treatment and not returning to the clinic.

The Medicross Medical Centre in Bloemfontein, a well-equipped private primary health center, provides the main resource base and in conjunction with three other sites in Bloemfontein and another one in Welkom, will provide an effective means of providing TB treatment to patients who are either referred from state facilities or who access the sites by word of mouth.

ACTIVITIES AND EXPECTED RESULTS:

Following consultation with the FSDOH, the activities of the clinic operations have been expanded to include TB screening, related laboratory sampling and clinical treatment of TB using DOTS. Patients from these waiting lists who meet the eligibility criteria for this program are referred from those public sector clinics to one of the three HIVCare primary health centers in Bloemfontein and one in Welkom for TB treatment. The FSDOH is a collaborating partner in this public-private partnership.

All pathology samples will be tested by the National Health Laboratory Service and all statistics relating to TB treatment will be forwarded to the TB department for inclusion in national figures.

Patients referred to the program receive PEPFAR-funded consultations and exams from HIVCare center physicians, who will also order relevant tests and refer patients to expert specialists when necessary. Based on the partnership with the FSDOH and the services requested that HIVCare provide, HIVCare centers do not provide free treatment for complex opportunistic infections, although some prophylaxis is provided (e.g. cotrimoxazole) and HIVCare staff will treat minor infections and HIV conditions that do not require investigative procedures or hospitalization.

Patients are still able to access public health facilities for more serious opportunistic infections/hospitalizations. Likewise, treatment for tuberculosis (TB) can be obtained from the centers. In those instances where patients are referred back to government facilities, a referral letter is provided from the treatment center to the public clinic with a request for information about the patient's TB regimen. Due to the close working relationship and partnership between HIVCare and the FSDOH facilities, this referral process is seamless. Very sick patients that are unable to access the centers will able to receive their medication via the HIVCare linkage with the Red Cross home-based carers.

Activity Narrative: HIVCare's activities to integrate TB and HIV care contribute to the PEPFAR 2-7-10 goals.

Funding Source: GHCS (State)

Program Area: Palliative Care: TB/HIV

Budget Code: HVTB

Program Area Code: 07

Activity ID: 7913.08

Planned Funds: $291,000

Activity System ID: 13369

Activity Narrative: SUMMARY:

The Hlabisa antiretroviral treatment (ART) program aims to deliver safe, effective, efficient, equitable and sustainable ART to all who need it in Hlabisa district in rural KwaZulu-Natal. The program emphasizes the integration of the government PMTCT and Care and Treatment Programs. An important part of the Care and Treatment Program is the diagnosis and management of TB. Co-infection rates are high and the Medical Research Council estimates that 58% of people with TB also have HIV. The target population is people affected by HIV and AIDS. The major emphasis area is development of linkages and referral systems.

BACKGROUND:

The Africa Centre for Health and Population Studies (Hlabisa ART Programme) is a partnership between the KwaZulu-Natal (KZN) Department of Health (DOH) and the Africa Centre, a population research department of the University of KwaZulu-Natal. The DOH program is based in Hlabisa sub-District, a rural health district in northern KZN, and provides healthcare to 220,000 people at one government district hospital and 14 fixed peripheral clinics. The comprehensive ART Program, which includes TB services, is embedded in the DOH antiretroviral therapy roll-out. TB/HIV services are considered part of the comprehensive ART roll-out. The Africa Centre and KZN DOH work to complement each others' abilities and resources in providing TB/HIV and related services. The Africa Centre has expertise in infectious diseases and management that is not available at the district DOH. In addition to clinical staff and infrastructure, the district DOH provides the necessary TB/HIV drugs and laboratory testing for effective roll-out.

With FY 2008 funds, the Africa Centre will continue to partner with the district DOH to improve and expand TB/HIV services by providing additional human resources and training. In addition, Africa Centre will continue to provide comprehensive and integrated services for TB/HIV, palliative care, PMTCT, CT and ART.

With FY 2008 funding the Africa Centre will improve TB and HIV screening and diagnosis for patients and their families. Specifically, Africa Centre involvement will strengthen the TB/HIV Program, palliative care, provision of ART and CT. Increased attention will be given to address gender issues through a greater involvement of men and to promote TB and ART services among men and children.

ACTIVITIES AND EXPECTED RESULTS:

Africa Centre will continue to work with the national and provincial Departments of Health and specifically with the HAST (HIV, AIDS STI, and TB) managers to prioritize interventions designed to address weaknesses (identified by the departments of health) in the DOTS and TB/HIV programs. Africa Centre will focus on improving policy adherence and patient follow-up. Individuals will be hired for each site as tracers to track patients and ensure that referrals are completed. Africa Centre is setting aside funding to develop (with other relevant partners or agreement counterparts) standardized tools to ensure that policies and guidelines recommended by NDOH are followed, including guidelines for infection control. Africa Centre will continue to integrate TB/HIV interventions with existing agreement programs as Africa Centre works seamlessly and side by side with government employees at government facilities.

ACTIVITY 1: Partnership with South African Government

Africa Centre will expand TB/HIV screening and diagnosis services in collaboration with the DOH TB program and will explore other options for TB screening (including CT and PMTCT). Services will be expanded at all 14 facilities. The Africa Centre will work closely with the DOH to ensure that all patients who enter the ART program are screened for TB and treated, if necessary. In addition, Africa Centre will provide training and mentorship to medical staff in order to strengthen the referral of people who receive DOTS for HIV testing.

ACTIVITY 2: Screening and Diagnosis

As part of general patient work-up for the ART program, Africa Centre-placed staff in close collaboration with DOH physicians and nurses will ensure that all patients in the ART program receive TB screening and diagnosis. For those individuals who are unable to produce sputum for TB diagnosis, Africa Centre and DOH staff in line with current SAG standard practice will refer patients for chest x-rays. Currently, patients either incur large transportation costs or pay for the chest x-rays out of their own pockets at private providers. In FY 2006 the ART program contracted a private physician in Mtubatuba sub-District to provide chest x-rays for free for patients in the ART program. This has substantially reduced the expenses and time costs of a large proportion of ART patients in having chest x-rays. Contracting the services of more accessible service providers ensures increased access to the service for patients who need it.

ACTIVITY 3: Treatment

All individuals in the ART program who are diagnosed with TB are treated through the DOT support program in close collaboration with the existing DOH TB program. Africa Centre, in addition to initiating TB screening in all individuals who are enrolled in the ART program, monitors the completion of TB treatment both in individuals in the monitoring cohort and before ART initiation.

In accordance with the South African national HIV and AIDS treatment guidelines, all HIV-infected patients who are coinfected with TB will receive a full course of TB treatment independent of their HIV stage. In addition, before TB patients can receive ART, they will have been treated for TB (for two months if CD4 count >50, at least for two weeks if CD4 count <50). All patients who receive treatment for TB will also receive cotrimoxazole prophylaxis. A family centered approach will be adopted. Given the contagious nature of TB, patients with TB will be encouraged to bring their families in to be screened. Africa Centre will use this approach to increase male participation.

ACTIVITY 4: Human Capacity Development

Activity Narrative: The mobile team initiative started in FY 2006 with the goal to provide ART in all 15 DOH clinics, instead of only in 3 DOH clinics as in FY 2005. In FY 2008, this concept will be extended to provide home-based palliative care, with a team consisting of nurses, counselors, social worker and the assistance of a physician when required. Home-based palliative care will include educating patients about the need to screen for TB and to treat TB, if necessary.

The target population for home-based care is non-ambulatory patients who cannot access treatment in clinics and ambulatory patients who request a home visit, for instance to involve their partners and other family members in their care. The team will be able to provide ART and symptom relief, including symptomatic management of pain. The social worker will provide social counseling and information to the household on how to access available government psychosocial services (food aid, social workers, and government grants).

The nurses and the social workers who form the palliative care mobile team will receive intensive training. A baseline course is based on the DOH curriculum and is comprised of four sessions of three hours each; covering the basics of HIV and ART and TB, follow up of patients, and practical issues (including blood taking for CD4 counts and viral loads). In addition, the mobile care team will be specifically trained in administering and managing palliative care in the family setting.

This training will be further supported with clinic visits from training officers, during which the officers will monitor counseling and provide individual mentoring. In addition, nurses and treatment counselors will be encouraged to participate in short courses covering, the management of ART side effects, TB and HIV, and pediatric ART and TB. Counselors and nurses will be trained to provide TB care with a focus on the family.

ACTIVITY 5: Referrals and linkages

Counselors will be trained on available government support structures to link PLHIV and their families to other government programs, like ART services, PMTCT clinics, food aid and social workers, who can assist the families with applying for government grants. All patients who have TB will be tested for HIV and referred to the ART clinic if tested positive.

Individuals presenting to the DOH TB program independently from the ART program, will be routinely referred to CT. In order to start this activity, TB staff will be systematically and repeatedly informed where to access CT and how to talk to patients about HIV.

These activities will contribute to the PEPFAR goals of 2-7-10 by contributing to the goal of 10 million people receiving care through PEPFAR assistance.

Table 3.3.07: Activities by Funding Mechansim

Mechanism ID: 167.08

Mechanism: N/A

Prime Partner: Africare

USG Agency: HHS/Centers for Disease Control & Prevention

Funding Source: GHCS (State)

Program Area: Palliative Care: TB/HIV

Budget Code: HVTB

Program Area Code: 07

Activity ID: 3752.08

Planned Funds: $485,000

Activity System ID: 13377

Activity Narrative: SUMMARY:

Africare's Injongo Yethu Project will continue to encourage identification of HIV infection among TB clients, and TB disease detection and management among HIV clients. Major emphasis is on local organization development of clinics in the Hewu Hospital catchment area in the Eastern Cape and the feeder clinics for Frontier Hospital and Glen Grey Hospital. Emphasis of project interventions is also on training, monitoring and evaluation support through information technology development (the ARV and HIV electronic register) and developing supportive supervision. FY 2008 will include Nkonkobe LSA and a selection of the clinics feeding those hospitals.

BACKGROUND:

This is an ongoing activity that has received some support for training of nurses in TB and HIV care and an orientation of Service Corps Volunteers on the frequency of HIV infection among TB clients. Testing of TB clients has increased, but in many clinics is poorly documented in the counseling and testing program (better documented in the TB program records). Implementation of TB prophylaxis guidelines for HIV-infected clients in the Eastern Cape has been put on hold by the Eastern Cape Department of Health (ECDOH). Health workers express frustration and difficulty in diagnosing TB in HIV-infected patients who are sputum negative.

ACTIVITIES AND EXPECTED RESULTS:

Activities will focus on providing tools and mechanisms to improve the quality of home- and facility-based management of TB screening and management in HIV-infected clients, and HIV screening and management for clients on TB treatment. Tools for monitoring, supportive supervision and referral will also be provided.

ACTIVITY 1: Improve HIV Testing Rates of TB Clients

The project will support development of a standard client HIV education flip chart for TB clients similar to the CDC-supported antenatal care (ANC) counseling guide that achieved much success in Botswana. Nurses from 10 clinics will be recruited to field-test the flip chart and the counseling routine and note any effect on HIV testing among TB clients. Nurses will be encouraged to offer counseling both at the initiation of TB therapy and after the two-month intensive treatment phase to clients who had declined testing at initiation. South African Government DOT supporters from selected clinics will be provided with additional basic HIV and AIDS training, particularly for those not recently trained or provided with an update and refresher course. The flip chart piloted by clinics will be made available to DOT supporters from the same clinics in order to further encourage HIV testing among the TB clients.

ACTIVITY 2: Improve TB Screening Among HIV Clients

Active TB screening will be implemented in home-based care along with an orientation of HIV chronic care nurses on TB screening. In addition, key support group members will be trained to help screen for pulmonary TB and some key signs of non-pulmonary TB and refer to the clinic. Increased screening will be captured in the HBC records and the clinic chronic care record.

ACTIVITY 3: Training and Capacity Building

To ensure effective integration of TB and HIV care, doctors and nurses from Hewu Hospital, Sada CHC, Frontier Hospital and Glen Grey Hospital will be prioritized for updated training on TB and HIV co-management, using recent WHO and NDOH materials. Training for doctors will be open to 20 local general practitioners. Routine technical information packets of information from e-newsletters, tools and guides from PEPFAR partners, publications from USG cooperating agencies, such as WHO and the AIDS Vaccine Bulletin will be collated and distributed to the doctors, HIV service managers and nurses in ARV clinics. The project will subscribe to newsletters and training materials from various membership organizations on behalf of the health care providers at the three hospitals.

ACTIVITY 4: Strengthen Organizational and Supervisory Support for TB and HIV Integration

The project will support the Chris Hani District HIV, AIDS, STI, TB (HAST) committee to create objectives and a standing agenda item for monitoring progress toward integration of TB and HIV services. Development of tools to monitor and evaluate the effectiveness of integration will be advocated.

ACTIVITY 5: Ensure and Monitor Cotrimoxazole Therapy Implementation

Cotrimoxazole therapy is widely given to HIV clients, but the effects are not routinely monitored. To ensure that all appropriate clients benefit from cotrimoxazole, relevant data elements will be included in the HIV patient electronic register and therapy will be included in the algorithms as will the proposed HIV client care plans.

ACTIVITY 6: Effective Monitoring of TB and HIV-infected Patients

The flow of information and documentation of information between services to HIV-infected and TB patients will be assessed for bottlenecks and potential for losing follow-up of clients using client flow analysis and current client records to find where clients drop out of the system and delays are experienced. Africare will collaborate with another PEPFAR partner, QAP to capitalize on, and to reinforce, principles and processes of quality assurance that will allow facility teams to uncover their local constraints and to plan solutions.

ACTIVITY 7: Support to TB Clients as Potential or Diagnosed HIV Clients

TB clients will be informed of, and welcomed to the new HIV support groups at the clinics. It is understood that some TB clients are not ready to be tested for HIV and might find support to do so in the group. FY 2008 activities will also include dissemination of the new TB guidelines, accompanied by refresher training for hospital and private doctors. Africare's TB and HIV support contributes to PEPFAR's goal of 10 million

Budget Code:	HVTB	**Program Area Code:**	07
Activity ID:	3320.08	**Planned Funds:**	$2,530,267
Activity System ID:	13732		

Activity Narrative: SUMMARY:

Activities support implementation and expansion of best-practice models for integration of tuberculosis (TB) and HIV services in public sector facilities in Eastern Cape (EC) and KwaZulu-Natal (KZN). TB/HIV activities are implemented through technical assistance and will result in a decrease of TB in HIV-infected children and adults, increase prevention and early detection of TB in HIV-infected children and adults, and provide overall support to provincial TB/HIV activities. The emphasis area for this program will be human resources. The target population will include infants, children and youth (non-OVC), men and women (including pregnant women and family planning clients), people living with HIV (PLHIV) and public and private sectors.

BACKGROUND:

Columbia University (Columbia) began TB/HIV integration activities in FY 2006. Health facilities initially identified in EC included 3 TB hospitals (Nkqubela, Fort Grey and Empilweni Hospitals) and 8 HIV care and treatment sites (Holy Cross, St. Patrick's, Rietvlei, Cecilia Makhiwane, Frere, Dora Nginza and Livingstone Hospitals, Ikhwezi Lokusa Wellness Center). In the TB hospitals inpatients are counseled and tested for HIV, initiated on cotrimoxazole prophylaxis if they are found to be HIV-infected and if they are eligible, started on antiretroviral treatment (ART). On discharge from TB hospitals, patients are linked to primary health care clinics or nearest facility where they can access HIV and TB treatment services. In FY 2006, Columbia began training of nurses, doctors and lay health workers on TB/HIV integration in both programmatic and clinical aspects: active TB case finding among HIV-infected patients, ART for eligible TB/HIV co-infected clients, and leveraging existing referral services to provide comprehensive HIV support. In FY 2008 Columbia will continue to implement activities in these 3 TB hospitals and 38 HIV care and treatment sites, for a total of 42 health facilities, in EC and KZN. Four new health facilities in Free State (FS) will be identified in FY 2008 for TB/HIV support. In FY 2007, Columbia formed a new partnership with Yale University AIDS Program in support of TB/HIV integration activities in Tugela Ferry, KZN, which will continue in FY 2008.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: TB hospitals in Eastern Cape

Activities will include:

1. Provide ongoing TB/HIV clinical support by conducting didactic and onsite TB/HIV training for doctors, nurses and lay health staff to improve knowledge and practice around managing TB/HIV patients. Provide clinical mentorship through case presentations and discussion.

2. Continue to support the hiring and placement of doctors, nurses, and peer educators to improve uptake of HIV counseling and testing and to increase enrollment of TB/HIV co-infected patients into ART.

3. Provide technical support for monitoring and evaluation (M&E) activities by implementing a system to track/monitor referrals and patients between HIV and TB programs. This activity includes training and use of the pre-ART and ART facility registers.

ACTIVITY 2: HIV Care and Treatment Sites

Activities in the 38 HIV care and treatment sites will be focused on strengthening:

1. TB case-finding among clients enrolled into HIV care and ART. Columbia is in the process of implementing a facility held patient record that captures information on TB case finding within the patient record. Columbia is training doctors and nurses in the supported facilities to use the patient record to improve TB/HIV clinical care and treatment. These staff will be routinely mentored by Columbia nurse mentors/clinical advisors.

2. Referral linkages with the TB program to initiate TB therapy for those in HIV care and/or ART. The Columbia supported community health centers and primary health clinics (PHCs) with HIV care and treatment services also have TB services on site where Columbia supports TB services by improving referrals of TB/HIV co-infected clients on ART to on site TB services to receive TB treatment. This includes development of a referral slip to the TB services and also ensuring the facility held patient record in the HIV clinic is updated with the relevant TB information.

With FY 2008 reprogramming funding, Columbia will support infection control activities in 5 sites in EC.

ACTIVITY 3: Yale University Partnership

Columbia will partner with the Yale University to develop the following services at the Church of Scotland Hospital (COSH), Tugela Ferry:

1. Increase HIV counseling and testing (CT) of clients accessing TB services in the COSH. This will be implemented through the introduction of various models of provider-initiated CT at the TB treatment programs (drawing on experiences from other settings) that is inclusive of training of TB treatment staff in HIV CT, training in HIV pre- and post-test counseling with establishment of strong linkages to laboratory HIV diagnostic services, and training of TB treatment staff in the referral of TB patients to CT services.

2. Prevent the development of multidrug-resistant tuberculosis (MDR-TB) cases and improving treatment completion rates by strengthening the existing TB DOTS program and integrating with HIV treatment. Under the Yale partnership the program components for this specific program activity will include:
-Defining the baseline TB treatment completion and cure rates
-Overall program improvement by: providing routine HIV counseling and testing, developing effective TB screening tools for HIV-infected patients, use of a standardized once-daily ARV regimen to be administered concurrently with standard TB regimen for TB/HIV co-infected patients, using modified observed therapy, family and community-based health workers as treatment supporters, providing TB treatment literacy materials at ART initiation and training of case management teams to strengthen treatment follow-up and

Activity Narrative: completion by tracing defaulters in the community

3. Prevent nosocomial transmission of MDR-TB and extensively drug-resistant tuberculosis (XDR-TB) by instituting infection control. This will include; a. evaluation of nosocomial spread of MDR and XDR-TB by supporting sputum culture testing on all new and suspected TB cases (months 0, 2, 6), spoligotyping on selected isolates and confirmed MDR-TB isolates to determine timing of acquisition and possibility of nosocomial spread; spoligotyping of sensitive TB isolates and non HIV infected TB patients to determine if KZN strain confined only to MDR and XDR and HIV or more widely distributed; b. Improve program implementation by screening HIV-infected patients for TB, creating isolation facilities, improving air handling within wards, educating healthcare staff in personal infection control practices and provide personal protective equipment to minimize their risk, minimizing number of TB patients hospitalized, decreasing the length of stay for all TB patients by developing and evaluating protocols for earlier hospital discharge, and increase community-based care for TB treatment to absorb shift of TB care from inpatient to outpatient setting.

4. Implement a decentralized MDR-TB treatment program. Patients found to have MDR-TB travel 120 km to Durban to be admitted to King George V Hospital for second line therapy however the average waiting time for a bed is 2-3 weeks. Key components would include: Sputum culture testing on all suspected and confirmed TB cases in both inpatient and outpatient settings to identify cases of MDR-TB; Initiate a treatment program to provide second line TB treatment locally; Develop a contact tracing program for all MDR-TB and re-treatment cases to identify MDR-TB cases in community; spoligotyping MDR-TB isolates

5. Screen for active TB among HIV-infected patients through use of standardized screening questionnaires and/or algorithms by all types of healthcare workers followed by standardized follow-up and diagnostic algorithms of TB suspects and supported by the introduction of effective recording and reporting systems for these activities.

Originally support to COSH was to include a PHE, but as this PHE was not approved, the funding is reprogrammed back into the TB-HIV services to support service delivery in Tugela Ferry, in partnership with Yale.

In FY 2008 Columbia will embark on these additional activities:

ACTIVITY 4: Scale up use of TB screening tool at HIV care and treatment facilities

Columbia will ensure that the PHC record (which incorporates TB signs and symptoms) is used at all supported HIV care and treatment outlets. This TB screening tool will improve the quality of TB services provided at the HIV clinic and also increase TB case finding in this high risk population. In addition, this activity will dovetail with the proposed TB screening PHE about to be conducted in select health facilities.

ACTIVITY 5: Targeted TB prevention and control strategies

TB infection control activities targeted at 2 health facilities in EC (Motherwell Community Health Centre in Port Elizabeth and Cecilia Makiwane Hospital in East London). The objective of this activity is to minimize the risk of nosocomial TB transmission through minimizing source infectiousness. Activities include: assessing TB infection control procedures for gaps and needs for each facility; establishing work practice, clinical management and administrative procedures to minimize the nosocomial transmission of TB; assessing the impact of these interventions; and developing practice manual and educational tools for health care workers. New health facilities in FS will be determined in collaboration with the Health Department to receive support for TB/HIV and proposed activities to be implemented include those outlined above.

Columbia's activities will contribute to the realization of the PEPFAR goal of providing care to 10 million people.

Planned Funds: $950,600

Activity System ID: 13742

Activity Narrative: SUMMARY:

The program supports the expansion of access to comprehensive HIV and AIDS care by focusing on service delivery and Human Capacity Development with a view to increasing the detection and treatment of patients with TB and HIV coinfection. The emphasis areas for these activities are construction/renovation and HCD. The target populations for these activities include people living with HIV and AIDS (PLHIV), and most at risk populations.

BACKGROUND:

The Foundation for Professional Development (FPD) is a South African Private Institution of Higher Education working exclusively in the health sector in Southern Africa. PEPFAR funding has allowed large scale training and antiretroviral treatment to take place over the past year. FPD supports ART sites that are in high TB prevalence areas with case rates ranging from 300-1500:100,000 and as such there is a need to integrate TB and HIV services, improve the diagnosis and treatment of TB and provide training to health care professionals on TB/HIV in FY 2008. FPD provided training to over 800 clinicians and nurses on the management of TB/HIV during FY 06 and introduced programs in all the ARV clinics it supports to increase the identification of TB/HIV co-infected individuals while in FY 2007 the emphasis is on strengthening TB treatment sites with regard to identification of HIV co-infected individuals an initiation of ART at such sites. Treatment related activities are closely coordinated with provincial Departments of Health (DOH) through memorandums of understanding (MOUs) with provincial DOH and through close coordination with district TB programs. National Department of Health (NDOH) guidelines are also incorporated in all activities and training programs. A gender focus is built into all aspects of the project ranging from ensuring gender parity in uptake of testing and treatment, including gender in data collection, all counselors will be trained on aspects relating to male norms and behavior and equal access to training activities will be ensured. It is envisaged that FPD will be the main project implementer; however, sub-agreements with CBOs and FBOs may be used to increase community participation and to increase CT for TB and HIV. This project will place specific emphasis on gender issues in the context of the CT activities. All CT staff will be trained and provided with counseling tools in order to equip them to undertake couple counseling, identify, counsel and refer victims of sexual abuse and violence, and reduction of stigma and discrimination. Most of these activities will be aimed at strengthening the public healthcare system, promoting closer cooperation between the public sector and civil society institutions, and developing human capacity. Activities will offer sustainable and long-term benefits for the South African healthcare system.

ACTIVITIES AND EXPECTED RESULTS:

FPD will continue to work with the national and provincial departments of health and specifically with the HAST (HIV, AIDS STI, and TB) managers to prioritize interventions designed to address weaknesses (identified by the departments of health) in the DOTS and TB/HIV programs. FPD will focus on improving policy adherence and patient follow-up. Individuals will be hired for each site as tracers to track patients and ensure that referrals are completed. FPD is setting aside funding to develop (with other relevant partners or agreement counterparts) standardized tools to ensure that policies and guidelines recommended by NDOH are followed, including guidelines for infection control. FPD will continue to integrate TB/HIV interventions with existing agreement programs as they work seamlessly and side by side with government employees at government facilities.

ACTIVITY 1: Support to South African Government

PEPFAR funds will be used for human resources at public sector ART sites and surrounding TB clinics. Funds will be utilized predominantly and in the form of salary support for FPD staff seconded to these sites. Sustainability will be ensured through strengthening systems and developing and supplementing capacity of existing government staff to increase identification of TB/HIV co-infected individuals, through promoting routine HIV CT for TB patients and routine TB screening of HIV patients at ART treatment sites. This will allow in time withdrawal of FPD seconded staff. Emphasis will also be placed on strengthening systems and developing and supplementing capacity to increase identification of TB/HIV co-infected individuals, through promoting routine HIV counseling and testing (CT) for TB patients and routine TB screening of HIV patients at TB treatment sites. Dedicated and cross-trained TB/HIV counselors will be placed at all TB sites who will actively promote CT among TB patients. TB Nurses will be deployed to all ARV sites and tasked with increasing the diagnosis of TB, especially sputum-infected TB in patients receiving ART. TB screening will be done by nurses following a protocol of history taking, routine sputum specimens, and x-rays as needed, and suspected smear-negative TB will be referred to an infectious disease clinician. These dedicated nurses will also ensure a fast track for patients requiring TB therapy and will maintain contact with patients to ensure they are not lost to ART. Co-infected patients who are on ARV treatment and TB treatment simultaneously will receive additional clinical monitoring due to the increased risk of Immune Reconstitution Syndrome, and challenges in the profiling of side effects. Emphasis is placed on adherence support to address the heightened risk of non-compliance due to high pill burden, and to cope with higher incidence of side effects due to drug interaction and overlapping hepatotoxicity. This activity plays an institutional strengthening role at TB sites with a view to such sites becoming ART down referral sites. PEPFAR funds will also be used to address minor infrastructure needs e.g. sputum rooms, nebulization apparatus and mobile x-ray facilities to improve the diagnosis and infection control of TB transmission. Funds will be utilized for culture and sensitivity tests where MDR-TB is suspected if government protocols or facility budgets do not make provision for such testing.

ACTIVITY 2: Outreach

Active TB case finding will be utilized at selected sites to increase uptake of TB and HIV testing among contacts of patients with TB and HIV coinfection. Dedicated staff (mentioned in Activity 1) will actively trace all contacts of TB patients on treatment to encourage the participation of these contacts in CT for both TB and HIV. ACTIVITY 3: Human Capacity Development. This activity ensures a cadre of skilled healthcare practitioners, in predominantly government service, who are able to provide care to PLHIV who are co-infected with TB. Healthcare workers will be trained on various subjects such as: clinical management of AIDS and TB, Management of CT, Palliative care, and Adherence and Workplace, using a proven short course training methodology that provides training close to participants work. PLHIV form part of the faculty to help with stigma reduction among participants and to articulate the needs of PLHIV. To maintain

Activity Narrative: knowledge, an alumni program of newsletters and regular refresher sessions has been developed. Given the high risk that MDR-TB poses for immune compromised individuals, particular emphasis will be placed on training facility managers, facility designers and clinical managers on infection control. Training takes place in all provinces for both public and civil society organizations, for public sector training such training is coordinated with relevant HR Departments. ACTIVITY 4: Referral and linkages. The strengthening and expansion of referral networks and linkages with care and treatment services for clients identified TB/HIV co -infected will be a central focus of the project. Linkages with community mobilization and outreach activities will be initiated to promote the uptake of both TB and HIV CT services PEPFAR funds may be utilized in the form of sub-awards for NGOs working in the field of DOT support and community outreach.

FY 2008 COP activities will expand on the activities successfully started in previous years. FPD will contribute to the PEPFAR goals of 2-7-10 by developing the capacity of organizations to expand access to ART services for adults and children, building capacity for monitoring ART service delivery and reaching thousands of individuals with care and ART.

Activity System ID: 13694

Program Area: Palliative Care: TB/HIV

Program Area Code: 07

Planned Funds: $1,455,000

Activity Narrative: SUMMARY:

BroadReach Healthcare's (BRHC) activities include doctor consultations, lab testing, adherence support, patient counseling, remote decision support, quality assurance monitoring, training for both patients and health professionals, support groups and data management.

BACKGROUND:

PEPFAR funds support BRHC initiatives that provide HIV and AIDS clinical management, care and support services to HIV-infected individuals in areas where the SAG rollout has not yet been implemented and assists ART rollout in the public sector. BRHC taps private sector health professionals to provide comprehensive care and treatment, fostering capacity-building initiatives within the public health system, and supporting community-based programs. BRHC leverages PLHIV support programs to identify and assist with treatment literacy, adherence support and ongoing community mobilization, prevention education activities, and positive living initiatives. BRHC also works to build capacity in public health facilities, focusing efforts on human capacity development (HCD) activities, including clinical didactic training, clinical mentorships, patient training and operational assistance training. BRHC is expanding its provision of staff and infrastructure support to SAG facilities. Finally, BRHC is expanding its involvement in the design of scaleable down referral models in partnership with faith-based organizations (FBOs), community-based organizations (CBOs), and public-private partnerships (PPPs).

ACTIVITIES AND EXPECTED RESULTS:

BRHC will continue to work with the national and provincial Departments of Health and specifically with the HAST (HIV, AIDS STI, and TB) managers to prioritize interventions designed to address weaknesses (identified by the departments of health) in the DOTS and TB/HIV programs. BRHC will focus on improving policy adherence and patient follow-up. Individuals will be hired for each site as tracers to track patients and ensure that referrals are completed. BRHC is setting aside funding to develop (with other relevant partners or agreement counterparts) standardized tools to ensure that policies and guidelines recommended by NDOH are followed, including guidelines for infection control. BRHC will continue to integrate TB/HIV interventions with existing agreement programs as BRHC works seamlessly and side by side with government employees at government facilities.

ACTIVITY 1: Human Capacity Development (HCD)

This program aims to provide TB care and treatment for HIV-infected patients by strengthening the TB skills of health professionals through didactic training and clinical mentorships focusing on TB, TB/HIV coinfection and systems integration. Health professionals will also receive decision support and training from the BRHC clinical expert panel and disease management system for difficult cases. At the local level, HCD efforts will target the communities in which the program operates by providing training and information, education and communication (IEC) to patients and support group facilitators on TB, as well as HIV and AIDS, ART, adherence, living positively, and accessing clinical psychosocial support and linkages to other sectors and initiatives in their communities.

ACTIVITY 2: Support to SAG

This program will support the SAG TB program to increase the capacity of facilities in the testing and identification of TB patients. This will be accomplished through general healthcare financing which could include commodity procurement such as screening equipment to salary support of TB-focused clinical staff. Salary support would be given in line with government facility rates along with transition plans for the government facility to absorb the staff into their budget within a finite period. Alternatively staff would be financed on a contract basis while plans were implemented in government facilities to accommodate staffing needs. Further assistance could be given in assisting with health professional recruitment and developing retention strategies, as well as supporting BRHC network doctors who assist with TB/HIV care and treatment within government health facilities in their communities in order to increase treatment capacity. Training of these doctors assists with sustainability as it provides ongoing stable support to government facilities and allows government infrastructure to cope with fluctuating need through the provision of sessionals. Finally, BRHC will support SAG TB/HIV efforts through infrastructure upgrade by building and/or refurbishing hospital/clinic/lab space and purchasing equipment as needed, in order to support government clinic activities such as screening, diagnosis and closely supervised treatment. The approach would be to address the individual needs of each facility within areas where BroadReach provides assistance in the form of ARV treatment or CT services across the provinces.

BRHC activities in support of TB treatment will be guided by consultations at national, provincial and district level re: government identified shortcomings in TB programs. These interventions may include human resource support, equipment, facility-specific policy development and business systems according to SAG articulated needs. BRHC program support priorities will reflect SAG-identified priorities. Moreover, BRHC HIV and TB/HIV integrated activities will build on and support pre-existing initiatives at sites, and integrate with the facility, and district, provincial and national TB and TB/HIV programs. TB/HIV services will also be integrated with all other related care and support services offered at facility level.

ACTIVITY 3: Referral Networks

Additional support to SAG will be provided in the form of systems strengthening around TB/HIV activities. This will include improvement of referral linkages between the private sector general practitioners (GPs) and public sector facilities that treat BRHC patients for TB infection in the BRHC Comprehensive Care model. In addition, BRHC may work with government sites to facilitate linkages between TB and HIV clinics, as well as creating capacity and linkages within communities to support BRHC patients with TB/HIV coinfection within the context of a BRHC supported public-private partnership with Daimler Chrysler (PPP). These linkages will be established by implementing referral processes between caregivers by holding workshops, creating referral material (referral forms that inform the receiving provider where the patient originated and the findings of the original provider), and informing various groups of activities in the area. Processes will specify whether HIV patients with TB are referred to HIV clinics or TB clinics or vice versa. The expected outcome is that patients are treated holistically and not in isolation by various providers. Since these

Activity Narrative: diseases are closely linked it is important that the treating physician treats the patient for TB and HIV so that s/he is able to manage treatment regimes. BRHC will institute processes to ensure smooth referrals and coordinated patient management for co-infected patients. These processes may include employing TB/HIV case managers, integrating HIV and TB databases to facilitate patient tracking, support DOTS programs, utilize home-based carers to monitor and support patients. Patients with TB should have access to HIV testing and should they require ARV therapy, they would need to be treated or referred to an ARV facility.

ACTIVITY 4: Quality Assurance/Quality Improvement

TB/HIV activities will benefit from the same level of oversight and quality control as all other aspects of the BRHC treatment program including regular internal data and systems audits, collection of patient level surveillance data, exception reports, doctor-specific feedback report, and doctor decision making support, and community-based modified (directly observed treatment) DOTS programs. TB/HIV quality assurance is further enhanced by the tracking of co-infected patients through screening, diagnosis and treatment through the use of improved clinical forms and referral forms. A clinical oversight committee provides any guidance to GPs regarding complicated cases presenting with TB/HIV coinfection. Data collection and reporting on TB, and TB/HIV coinfection will be integrated into ARV Program management reports to ensure constant monitoring of patients and to facilitate program improvement.

All BRHC activities articulated in the FY 2007 COP will be scaled up significantly through partnerships with 15 SAG hospital systems (which include hospitals and affiliated CHCs and PHCs). With FY 08 funding, activities will be expanded/enhanced (i.e. no new activities) as follows:

-BRHC supports QA/QI at each of its public sector partner hospitals through QA assessments, systems re-engineering, and the development of reporting systems that provide program management feedback to improve program performance.
-As part of systems re-engineering BRHC will focus on improving integration between HIV/AIDS treatment programs and TB programs for testing, treatment coordination and referrals.
-Strengthen down referral activities between public sector hospital partners and their affiliated clinics by re-engineering referral processes, improved data management and patient tracking, and training.
-Training for health professionals at all public sector sites (hospitals and PHCs) covers TB/HIV co-management.
-HIV/AIDS literacy training for patients as part of community mobilization.
-Staff augmentation: BRHC will provide additional salary support to fill key positions within SAG partner hospital sites. BRHC will also work with the site to motivate for the creation of permanent posts where needed and ensure that BRHC/PEPFAR supported staff are incorporated into subsequent site budgets to ensure a sustainable staffing solution.

Table 3.3.07: Activities by Funding Mechansim

Mechanism ID:	2787.08	**Mechanism:**	N/A
Prime Partner:	Absolute Return for Kids	**USG Agency:**	U.S. Agency for International Development
Funding Source:	GHCS (State)	**Program Area:**	Palliative Care: TB/HIV

Budget Code: HVTB

Activity ID: 7882.08

Activity System ID: 13345

Program Area Code: 07

Planned Funds: $194,000

Activity Narrative: SUMMARY:

As part of a comprehensive treatment program, Absolute Return for Kids' (ARK) focus is to improve and enhance TB screening and treatment services for HIV-infected patients and their families. ARK will train and place required human resources (medical and counseling staff) and develop performance monitoring systems to strengthen adherence monitoring. The primary emphasis area is human resources. The target population is people living with HIV and AIDS (PLHIV) and HIV-affected families.

BACKGROUND:

ARK is a charity organization whose mission is to facilitate and support delivery of accessible and sustainable comprehensive treatment, care and support services to children and their caregivers in communities affected by HIV and AIDS and poverty. In partnership with the KwaZulu-Natal (KZN) provincial government, ARK has established an HIV and AIDS treatment program in government primary health facilities and hospitals. To date, PEPFAR funding has enabled ARK to successfully put over 15,000 patients onto ARV treatment in KwaZulu-Natal. Dual infection rates of TB with HIV are very high. The Medical Research Council reports the national rate at 58%. Many TB/HIV co-infected individuals are unaware of their dual infection, and CT services for coinfection are limited or non-existent. With COP 08 funding, ARK will continue its work to enhance and improve its HIV and AIDS treatment program by strengthening TB screening, care and support services for HIV-infected patients and their families.

ACTIVITIES AND EXPECTED RESULTS:

ARK will continue to work with the national and provincial departments of health and specifically with the HAST (HIV, AIDS STI, and TB) managers to prioritize interventions designed to address weaknesses (identified by the Departments of Health) in the DOTS and TB/HIV programs. ARK will focus on improving policy adherence and patient follow-up. Individuals will be hired for each site as tracers to track patients and ensure that referrals are completed. ARK is setting aside funding to develop (with other relevant partners or agreement counterparts) standardized tools to ensure that policies and guidelines recommended by NDOH are followed, including guidelines for infection control. ARK will continue to integrate TB/HIV interventions with existing agreement programs as they work seamlessly and side by side with government employees at government facilities.

ACTIVITY 1: Support to Provincial Government

ARK works with provincial government in developing the necessary processes and systems to manage the HIV care and treatment program and to ensure that the model created is scaleable, sustainable and replicable elsewhere. Specifically ARK has a mandate with provincial government to recruit and place human resources (doctors, nurses and pharmacists) in public clinics for a maximum of three years. ARK fully funds these positions, which will be taken over by provincial governments at the end of the period. The clinicians provide screening for TB, CT for HIV, and treatment management including patient consultations and treatment of opportunistic and sexually transmitted infections if necessary. ARK also provides training and mentorship to government community health workers (CHWs) to improve and enhance TB/HIV co-infected patient support. Community health workers provide care and support services including needs assessment and psychosocial support, and serve as a link, during and after TB treatment, and between the patient and the clinic to address patient needs. At government clinics, ARK strengthens data information systems to enable clinics to provide quarterly updates to provincial government to improve ongoing evaluation, data for outcomes computation and analysis.

ACTIVITY 2: Human Capacity Development

Formal and informal training and on-site mentorship is provided to all CHWs. ARK, together with the Centre for Social Science Research Unit, University of Cape Town, developed training modules for CHWs on HIV and AIDS care. The areas covered include: TB/HIV coinfection, TB treatment guidelines for adults and children, maternal and child care in the context of HIV and AIDS, and adherence to TB and ART treatment. ARK provides overall supervision of the program, ensuring ongoing mentorship of the trained CHWs.

ACTIVITY 3: Screening for TB with HIV-infected Patients

All HIV-infected individuals entering the program will be assessed for the presence of active TB. An inquiry about symptoms that would suggest active TB and any history of TB or known/likely exposure will be ascertained. For patients who report that they have received treatment of active TB or latent TB in the past, the adequacy of the treatment will be assessed. A physical examination that includes examination of extra-pulmonary sites of disease, such as lymph nodes, and chest radiography will be performed. ARK clinical and counseling staff will work with patients with infectious TB to identify their close contacts for screening and preventative treatment. ARK will also integrate TB screening into established PMTCT programs at ARK sites. HIV-infected patients who are candidates for, but who do not receive, TB preventive therapy will be assessed periodically for symptoms of active TB as part of ongoing management of HIV infection.

ACTIVITY 4: CT for DOTS Program

Patients with TB constitute an important "sentinel" population for HIV screening. The benefits of identifying previously unrecognized HIV infection are substantial in terms of both the opportunities for preventing future HIV transmission and the large potential benefits to the patient of antiretroviral therapy. Knowledge of the HIV sero-status of TB patients may also influence the treatment of their TB. ARK will work with established DOTS programs in its sites to promote the routine offering of CT for TB patients in order to increase the number of TB patients undergoing HIV CT. ARK will offer training to DOT supporters on HIV and AIDS and coinfection, and treatment and referral options. ARK will work with healthcare providers, administrators, and designated TB controllers to promote routine offering of CT and more coordinated care for patients with TB and HIV in government clinics through strengthening, and in some cases, establishing referral systems between the TB control programs and HIV and AIDS programs. Referrals and service use will be tracked to monitor the use of CT services among TB clients. ARK will also facilitate the sharing of information from the treatment program to the TB program and through the TB register. For TB patients who test positive for HIV, ARK CHWs will ensure that patients who are awaiting ARV treatment are adequately informed about ART

Activity Narrative: and are prepared to take treatment adherently. All patients who are pre-assessed undergo a treatment literacy program and are educated about "Positive Living." Patients are encouraged to motivate their partners/spouses to get tested.

ACTIVITY 5: Treatment, Care and Support

Individuals accessing ARK's services will be staged and entered into ARK's ARV treatment program. The program provides patient uptake, patient consultation, ongoing assessment and monitoring, CT and drug provision. HIV-infected patients, without active TB and not in-need of ARV treatment, will be offered isoniazid prophylaxis, monitoring, and ongoing counseling support for 6 months. At the end of the 6 months, these patients will be reassessed for further treatment. HIV-infected patients with active TB will be linked with DOT supporters and ARK's community health workers will provide them with ongoing TB treatment management and support. Once the patient has been successfully treated for TB, ARK will enroll the patient onto ART. Adherence support is a critical component, complementing clinical services. ARK utilizes a family centered approach for care and treatment. ARK-trained CHWs conduct pre-treatment home visits and provide ongoing psychosocial support to patients and their families. CHWs promote and support disclosure to partners and family, partner testing and facilitate treatment access. CHWs are required to facilitate support groups for their clients and ensure that all patients and their families have access to grants, spiritual support and psychological support and counseling where indicated. ARK will strive to identify children needing TB treatment and ART through ARK's OVC care and support, and CT programs. This activity will contribute to PEPFAR goals of 2-7-10 by providing care and treatment to many South Africans through ARK's TB/HIV program.

Table 3.3.07: Activities by Funding Mechansim

Mechanism ID: 190.08

Mechanism: N/A

Prime Partner: Aurum Health Research

USG Agency: HHS/Centers for Disease Control & Prevention

Funding Source: GHCS (State)

Program Area: Palliative Care: TB/HIV

Budget Code: HVTB

Program Area Code: 07

Activity ID: 2914.08

Planned Funds: $1,338,200

Activity System ID: 13685

Activity Narrative: SUMMARY:

Aurum's TB/HIV program aims to integrate HIV care with TB prevention and treatment. This integration is planned at all the HIV treatment sites which include general practitioners' clinics and community clinics throughout the country. In addition, Aurum plans to improve TB/HIV integration at Chris Hani-Baragwanath Hospital in Gauteng by providing support to the TB clinic in the form of nursing staff and data management support. In addition, Aurum plans to work with the Platinum mining industry to insure TB/HIV integration within the mining health services and to provide mobile services to contacts of miners who are treated with TB. In the Eastern Cape, Aurum intends to provide support to Themba TB hospital to ensure they receive accreditation to provide HIV services. Emphasis areas include human resources, infrastructure, commodity procurement, logistics, quality assurance and training. The primary target populations are people living with HIV (PLHIV), HIV-infected children, prisoners, homeless people and street youth. TB/HIV Care is a new activity under the SME Project. The screening and identification of TB
cases among the employed sector and taxi drivers is of particular importance as they come into contact with a large number of people each day and successful treatment will result in the prevention of several new infections. In addition, successful identification and treatment of TB in the employed sector, including Traders and Taxi drivers will ensure they continue to be economically active and are able to support themselves and their dependents and continue to run a viable business. SMEs contribute half of the total employment in South Africa and 75% of the employed people in Johannesburg utilize Taxis to commute to and from work.

BACKGROUND:

The main focus of the Aurum program in the public, private and NGO sector is to provide HIV care and treatment to a large number of persons in a cost-effective standardized manner ensuring a high quality of counseling, patient care and patient monitoring. The model is centrally coordinated and designed to be implemented on a large scale where the peripheral sites are in resource-constrained settings and lack HIV specialists, information technology (IT) infrastructure, and laboratory and pharmacy capacity. Aurum has developed a centralized system of support which includes the following: (1) training of all levels of healthcare workers to ensure capacity building of clinicians to manage patients in resource-poor settings with remote HIV specialist support; (2) provision and maintenance of guidelines for HIV preventive therapy (including INH and cotrimoxazole), treatment of adults and children, prevention of mother-to-child transmission and voluntary counseling and testing; (3) clinical and administrative support through site visits by staff involved in psychological support, training, clinical support and monitoring data management system; and (4) centralized distribution of medication and laboratory testing.

This program will supplement the South African government ARV rollout plan and therefore the program adheres to national guidelines and protocols.

This is a new activity that only received PEPFAR funding since FY 2007, although Aurum has received PEPFAR funds for other activities such as TB preventive therapy described in the FY 2006 COP under palliative care. In most areas, clients are referred to the public health clinics for definitive diagnosis and treatment of TB. Aurum is initiating a program where healthcare workers at sites are able to diagnose TB patients using algorithms and guidelines that are in line with the National Department of Health (NDOH). Healthcare workers then refer patients to public sector clinics for treatment. In addition, patients who test HIV-infected under the counseling and testing program will be screened for TB.

ACTIVITIES AND EXPECTED RESULTS:

There are seven main activities in this program area.

ACTIVITY 1: TB Preventive Therapy for HIV-infected Individuals

CD4 count testing is done 6-monthly or 3-monthly in patients with CD4 above or below 350 respectively. Patients are given TB preventive therapy with 300mg isoniazid taken daily for 6 months after exclusion of TB, repeated every 2 years. Aurum expects that a minimum of 10% of all palliative care patients will require TB preventive therapy. This integration will be implemented at all the HIV treatment sites run by general practitioners and community clinics throughout the country. Sites include the Metro Evangelical Services Clinic, which provides services for the homeless population and street youth of Hillbrow, Johannesburg, and the Medical Research Council (MRC) sites, providing care primarily to women. Aurum's sites are located primarily in Gauteng, North West and KwaZulu-Natal. There are sites in all the other provinces but only one site in each of Northern Cape and Western Cape

ACTIVITY 2: Diagnosis and Treatment of TB in the HIV-infected

When initiating the ARV program or the palliative care program, a symptom screen and a chest radiograph will be done on each patient. At each clinic visit, there is symptom screening by trained nurses. Guidelines for screening tuberculosis will be followed and monitored. An evaluation of current screening practices is currently underway and this will be used to ensure improved monitoring of screening and standardization of the TB screening process. At Tshepong hospital the project will be enrolling new patients who are started on treatment onto a TB screening process (including symptom screening, sputum testing and chest radiography) to identify the most appropriate screening methods.

ACTIVITY 3: Support for HIV-TB integration services at Chris Hani-Baragwanath hospital

Aurum will provide support to provide TB/HIV integration services at the Chris Hani-Baragwanath hospital, a large government hospital in Gauteng. Aurum will employ a nurse and counselor who will provide HIV counseling and testing to all TB patients and ensure referral of those who test positive to the HIV clinic. In addition, Aurum will develop a data system that will assist in ensuring successful incorporation of these patients in the HIV care program.

ACTIVITY 4: Public-Private Partnership within Platinum Mining Industry

Aurum is establishing a partnership with Anglo Platinum and other platinum mining companies to strengthen

Activity Narrative: their TB/HIV integration activities within their mining facilities. In addition, a program to trace dependents and household contacts of miners diagnosed with TB will be introduced. This program will include household visits with HIV education and counseling, HIV testing, TB screening and referral for TB and HIV services. Aurum aims to visit around 800 households with approximately 5 persons per household. In addition, public TB services in the communities will be strengthened to cope with the increased workload. Originally support to the platinum mining industry was to include a PHE, but as this PHE was not approved, the funding is reprogrammed back into the TB-HIV services to support service delivery in this industry.

ACTIVITY 5: Support at Eastern Cape Themba TB hospital

Aurum will provide support to the Eastern Cape Themba hospital to assist them to obtain accreditation for the national CCMT program. This support will include provision of limited renovation, staff and technical support.

ACTIVITY 6: TB screening at Johannesburg Correctional Facility

Aurum will be undertaking a TB and HIV screening project at Johannesburg Correctional Facility. This will determine HIV and TB prevalence and appropriateness of various screening methods. In addition it will determine yield and cost-effectiveness of routine screening within the prison. This will be started with FY 2007 funding and completed in FY 2008. The project is expected to provide information that may lead to routine screening in other facilities.

ACTIVITY 7: TB Activities in the SME Project

People identified as HIV infected through the counselling and testing process performed by the SME Project will be screened for the presence of TB symptoms and referred for treatment to the nearest TB centre for follow-up. At some sites, sputum collection will be performed according to South African government protocols and the clients will then be informed of the results and referred for treatment. All HIV positive clients who do not have active TB will be offered IPT and training on the use of IPT will be provided to Aurum clinical staff, counselors, peer educators and staff at occupational health clinics. Education sessions to SME employees will include the simple identification of TB symptoms, importance of treatment and importance of IPT in HIV and their contacts.

ACTIVITY 8: Tembisa HIV-TB Integration
With FY08 reprogramming funds, Aurum will implement an integrated TB-HIV model for Tembisa (outside Johannesburg) that will utilize the principles of intensive case finding, isoniazid prophylaxis and infection control to improve TB-HIV services at Tembisa hospital, Tembisa Main Clinic and Winnie Mandela Clinic. Additional clinics in the sub-district will also be identified for strengthening activities. This activity would aim to engage private and civil society partners to ensure horizontal integration at the household level, utilizing mobile services and capacity development of clinics.

In addition to these activities, Aurum will conduct a public health evaluation, described elsewhere in the COP.

Funding Source: GHCS (State)

Program Area: Palliative Care: TB/HIV

Budget Code: HVTB

Program Area Code: 07

Activity ID: 7953.08

Planned Funds: $630,500

Activity System ID: 13711

Activity Narrative: SUMMARY:

Activities are implemented to support provision of TB diagnosis under the comprehensive antiretroviral treatment (ART) program carried out by Catholic Relief Services (CRS) in 25 field sites in 8 provinces in South Africa. The focus of the activity is on diagnosing patients with TB so that they can be referred to the South African Government TB program for treatment, and commence with ART while on TB treatment as soon as the doctor at the site sees this as being medically feasible. The field sites target those in need of these services, who live in the catchment area of the site, and who lack the financial means to access services elsewhere.

BACKGROUND:

AIDSRelief (the Consortium led by Catholic Relief Services) received Track 1 funding in FY 2004 to rapidly scale-up antiretroviral therapy in nine countries, including South Africa. In FY 2005, FY 2006 and FY 2007, South Africa COP funding was received to supplement central funding, with continued funding applied for in FY 2008. The activity is implemented through two major in-country partners, Southern African Catholic Bishops' Conference (SACBC) and the Institute for Youth Development South Africa (IYD-SA).

All sites operate under the terms of a Memorandum of Understanding (MOU) with the provincial Department of Health (DOH) in which they operate, observing the national and provincial health protocols. There is a concerted effort at each site to ensure coordination with the South African Government (SAG) and sustainability by diagnosing TB in potential ART patients, referring them to nearby SAG TB treatment facilities, and commencing ART once the patients are ready.

ACTIVITIES AND EXPECTED RESULTS:

With funding provided in FY 2008 AIDSRelief will continue implementing the activities in support of the South African national ARV rollout. Of the 25 existing field sites, activated in program year 1 (Mar '04 - Mar '05), two have transferred all their ART patients to SAG rollout facilities in FY 2006, and have ceased providing treatment. Two new field sites have been activated in FY 2007 to replace these sites and to enroll additional ART patients in support of the SAG rollout plan.

Utilizing technical assistance from AIDSRelief staff members and South African experts, ongoing support and guidance will be provided to sites in the form of appropriate refresher medical training courses, patient tracking and reporting, monitoring and evaluation mechanisms and other necessary support.

All TB treatment in South Africa is provided for free by the SAG. Screening of TB patients is problematic in NGO sites, but this programmatic area is strengthened with CDC-Atlanta technical assistance and increased focus in FY 2008. AIDSRelief will screen all patients who present themselves to field sites for TB, and will perform laboratory smear microscopy and culture (if indicated according to NDOH algorithms) on those suspected of having TB. If laboratory tests are positive, they will be referred to the SAG TB program for treatment, as per the agreement with the government. This activity includes additional training and commodities for the vast network of home-based carers to implement a single TB screening algorithm within the home setting, which improves referrals.

As part of the home-based care training, all home-based carers have to complete a module in TB DOTS. Most of them were selected as ART adherence monitors in the first place because of the considerable experience they have gained over the years in implementing the TB DOTS program.

AIDS (in itself and its relation to TB/HIV) is stigmatized in many South African communities because of the association with death. This is because the perception exists that AIDS inevitably leads to death. As the number of patients on treatment has grown, and as communities see that those on treatment are living normal, healthy lives, stigma is decreasing visibly and more and more patients are presenting themselves to be tested, either in VCT, or if they know that they are positive, to have their CD4 counts tested and see whether they qualify for treatment. This process has been accelerated by the way in which patients on treatment at each site are used as community peer educators and counselors.

As described earlier, all activities will be implemented in close collaboration with the South African Government's health authorities to ensure coordination and information sharing, thus directly contributing to the success of the SAG rollout and the goals of PEPFAR. These activities are also aimed at successful integration of AIDSRelief activities into those implemented by the SAG, thus ensuring long-term sustainability.

Budget Code: HVTB

Program Area Code: 07

Activity ID: 13800.08

Planned Funds: $97,000

Activity System ID: 13800

Activity Narrative: SUMMARY:

The Hospice Palliative Care Association of South Africa (HPCA) currently has 75 member hospices throughout South Africa (SA), each an independent legal entity. The Mission of HPCA is to provide and enhance the provision of sustainable, accessible, quality palliative care. PEPFAR funds will strengthen the capacity of member hospices and other governmental and non-governmental organizations to provide quality services to HIV-infected persons.

BACKGROUND:

HPCA strengthens existing services and develops new services through direct funding to member hospices to promote accessibility and availability of palliative care in SA, including work with religious leaders and member hospices that are faith-based organizations. HPCA personnel at national, provincial and district levels continue to provide the infrastructure and coordination to develop and strengthen palliative care programs within member hospices, the formal health care sector and NGOs. Improved collaboration between HPCA and National Department of Health (NDOH) is a key objective, aimed at optimum utilization of scarce palliative care resources. FY 2006 funding has allowed the training of 7,108 individuals from October 2006 to July 2007. The major focus of FY 2008 funding will be to provide direct palliative care to patients and their families, to assess quality of palliative care, assist in the development of new services, provide support to the care providers and provide training in palliative care. The services provided by HPCA members for TB care are included in Palliative Care where the HIV patient is also diagnosed with TB.

ACTIVITY 1: Patient Care

Patients' adherence to uninterrupted treatment is encouraged and monitored. It is the practice of HPCA member hospices and development sites to integrate TB care of the patient with HIV care, and the HPCA training courses include DOTS training for home-based carers. HIV patients receiving HIV-related care are routinely referred for TB screening. They are also referred to the local clinic or district hospitals for TB medication and followed up through the home-based care network. Many hospices use the DOTS-based national TB control strategy, in collaboration with the provincial Department of Health. HPCA also supports efforts to prevent and manage drug-resistant TB among HIV-infected TB patients. TB infection controls are implemented at hospice sites, such as maximized ventilation as an environmental control measure. Exposure to TB is an occupational hazard in the course of caring for patients. HPCA has developed guidelines for the Prevention of Transmission of Tuberculosis for staff in member hospices. The HPCA guidelines recommend that all HIV-infected patients be tested for TB before admission to a hospice program and that those with TB should be on TB treatment for 2 weeks before being considered for admission to a hospice in-patient unit, for the protection of staff and other patients. HPCA and its members will also focus on strengthening the relationships with public TB clinics to ensure appropriate referral and follow-up mechanisms are in place for TB patients. In FY 2008 PEPFAR funding will be used to build on existing TB services provided by member hospices by enhancing and expanding them. Joint TB/HIV activities will be implemented at member sites. All patients receiving HIV care and treatment support will be routinely referred for TB screening and followed up as appropriate.

ACTIVITY 2: TB Training

This activity will entail additional training of hospice staff and home-based care worker in TB screening, TB testing, treatment and infection prevention. No additional staff will need to be employed for the TB program. HPCA's existing training structures of Centers of Palliative Learning and the Regional Education Forums will be utilized and the TB aspects will be incorporated in the palliative care curriculum. Training will be given in accordance with national standards and will include TB screening, TB testing and treatment, prevention of infection, and environmental controls. Because of multidrug-resistant (MDR) and Extensively Drug Resistant (XDR) strains of TB, intensive training and Guidelines for HPCA members will be provided. Workshops will be held regionally presenting optimum environmental controls. Funding will be used for this additional training and possibly also to assist member hospices with ventilation equipment, irradiation lighting and respirator masks as appropriate. Both of the above TB activities will be monitored and evaluated on an ongoing basis. The target populations for this activity are people living with HIV and AIDS and the emphasis area is human capacity development as both pre-service and in-service training will be provided to all HPCA staff members and their affiliate organizations.

HPCA supports the USG South Africa Five-Year Strategy to expand access to quality palliative care services and improve quality of palliative care and HBC services, and thereby contributes to the 2-7-10 goal of providing care to 10 million people affected by HIV.

Table 3.3.07: Activities by Funding Mechansim

Mechanism ID:	1066.08	**Mechanism:**	PHRU
Prime Partner:	Wits Health Consortium, Perinatal HIV Research Unit	**USG Agency:**	U.S. Agency for International Development
Funding Source:	GHCS (State)	**Program Area:**	Palliative Care: TB/HIV
Budget Code:	HVTB	**Program Area Code:**	07
Activity ID:	3099.08	**Planned Funds:**	$873,000
Activity System ID:	14265		

Activity Narrative: SUMMARY:

The approach taken by the Perinatal HIV Research Unit (PHRU) is one of comprehensive, high quality care and support for PLHIV. PHRU will use PEPFAR funds to continue its TB services to patients accessing care in Soweto (Gauteng), rural Limpopo/Mpumalanga Provinces and in the Western Cape. The TB/HIV program is integrated into all programs by providing screening, referring people with active TB to National TB treatment sites and providing preventative treatment for latent TB. The program is also linked to National TB treatment sites providing HIV care and treatment. The major emphasis areas are human capacity development and local organization capacity building. The primary target populations are HIV-infected adults and children.

BACKGROUND:

PHRU established palliative care programs in Soweto (Gauteng) and in rural Limpopo and Mpumalanga and have partnered with organizations in the Western Cape to provide care and support to people identified as HIV-infected through PMTCT and CT. High rates of TB in South Africa continue to be challenging and MDR-TB is considered to be on the rise. The PHRU will strengthen its emphasis on diagnosis of TB via its PMTCT program (through screening during CT when possible), and through screening of all patients testing positive. Once tested positive, all patients enter a wellness program where they will be screened and treated according to WHO protocols for TB. In South Africa, a wellness program covers the period from testing positive to needing treatment. The high HIV prevalence in South Africa requires a cost-effective package of care and support for people with HIV prior to ARV treatment. Primary health care nurses are the main providers of care under physician supervision in these programs. The programs follow the Department of Health guidelines for HIV care and laboratory testing to ensure compatibility with South African Government treatment sites. The programs have been approved by the medical ethical review board of the University of the Witwatersrand. The aim of the programs is to delay the progression of HIV to AIDS by providing palliative care and support to HIV-infected clients who do not yet qualify for ARV treatment. Care includes: elements of the preventive care package, screening for active TB, preventative treatment for latent TB infection, cotrimoxazole prophylaxis for opportunistic infections, syphilis screening, symptomatic screening for syndromic STIs, screening for cervical cancer, provision of family planning and regular CD4 counts. Opportunistic illnesses are treated using a formulary based on the South African Essential Drug List. Support for clients, their families and community members is provided by support groups and education sessions at all sites covering issues such as basic HIV and AIDS information, HIV services, PMTCT, ARV treatment, opportunistic infections, TB, prevention, disclosure, nutrition, stigma positive living and adherence. Training of professional and lay staff takes place on a regular basis.

ACTIVITIES AND EXPECTED RESULTS:

PHRU will continue to work with the national and provincial departments of health and specifically with the HAST (HIV, AIDS STI, and TB) managers to prioritize interventions designed to address weaknesses (identified by the departments of health) in the DOTS and TB/HIV programs. PHRU will focus on improving policy adherence and patient follow-up. Individuals will be hired for each site as tracers to track patients and ensure that referrals are completed. PHRU is setting aside funding to develop (with other relevant partners or agreement counterparts) standardized tools to ensure that policies and guidelines recommended by NDOH are followed, including guidelines for infection control. PHRU will continue to integrate TB/HIV interventions with existing agreement programs as they work seamlessly and side by side with government employees at government facilities.

ACTIVITY 1: Soweto, Gauteng

In 2002 a care program was initiated in Soweto, a large urban area south-west of Johannesburg with very high HIV prevalence (30% in the ante-natal clinics). A holistic approach is provided to all enrolled in the wellness program and covers clinical services, psychosocial support, and healthy lifestyle promotion, including exercise, nutrition, and decreasing the use of alcohol and tobacco. To date over 4,500 adults have accessed the program with PEPFAR support. Support groups and education sessions, run by HIVSA, are available to all clients. All clients are symptom screened for TB at each visit and are referred for TB treatment to the government TB treatment clinics. PHRU is supporting the Charles Hurwitz Hospital, a government TB treatment facility, to integrate TB and HIV care and treatment. Expanding the program with FY 2008 funds, PHRU proposes to link TB screening into PMTCT service in Soweto and screen all pregnant women for active TB and refer those with positive results to government TB treatment sites. PHRU will work with public facilities to ensure that care for both TB and HIV is monitored and coordinated. Training for health care professionals working at PHRU and its partners (including the provincial Department of Health) in all aspects of HIV palliative care takes place on an ongoing basis.

ACTIVITY 2: Bushbuckridge, Rural Mpumalanga/Limpopo

Bushbuckridge district in Mpumalanga/Limpopo is one of the poorest in South Africa. Access to information and HIV healthcare and support is a basic need for all people living with HIV. PHRU in partnership with Rural AIDS Development Action Research Program (RADAR) and HIVSA established a wellness clinic at Tintswalo hospital and a district-wide support network for people living with HIV and AIDS. Since 2003, over 2,000 people have accessed the wellness clinic and more than 2,500 have accessed the support groups. A training program has been implemented to train nurses and lay facilitators, counselors and NGOs to provide effective support to people living with HIV and AIDS and basic education on HIV, TB, CT, HIV services and related issues to the broader community and build the capacity of linked local organizations. All clients are screened for active TB at each visit.

ACTIVITY 3: Tzaneen, Rural Limpopo

Since 2003, the University of Limpopo has been supporting the Department of Health to develop a wellness program based in primary healthcare clinics in Tzaneen District. In 2004 PHRU partnered with University of Limpopo to formalize and expand the program. PHRU has mentored the program, assisted with training health workers and has provided infrastructural support. In addition, HIVSA has provided training to support group members to enable them to run more effective support groups, and provide better information to people in the district. The program takes a district health approach and aims to operate throughout the

Activity Narrative: district. Over 600 people have enrolled in the program and more than 100 have been referred to ART sites for ARV treatment. People on treatment are supported at primary care clinics through this program. The program will be expanded to other sub-districts in the Tzaneen area. All clients attending Wellness services will be screened for active TB at each visit. US-based volunteers have supported this program.

ACTIVITY 4: Western Cape

In 2006 PHRU partnered with a number of organizations in the Western Cape including the University of Stellenbosch, Red Cross Children's Hospital and the Desmond Tutu HIV/AIDS Foundation. The aim is to support government ART sites to scale-up and develop down referral systems. PHRU will continue to screen HIV-infected clients for TB and those who are found to be co-infected will be referred to public sites for treatment. Expansion of these activities is planned. These activities will contribute to the PEPFAR 2-7-10 goals by providing TB/HIV care and services to HIV-affected people.

Budget Code:	HVTB	**Program Area Code:**	07
Activity ID:	7968.08	**Planned Funds:**	$1,070,000
Activity System ID:	13765		

Activity Narrative: SUMMARY:

The Elizabeth Glaser Pediatric AIDS Foundation (EGPAF) will support all of its care and treatment partners in addressing the barriers to increasing case detection and cure rates in TB co-infected HIV-infected patients. The program intends to strengthen collaboration between TB control initiatives and HIV and AIDS programs at EGPAF supported sites in KwaZulu-Natal, Gauteng, Free State and North West. EGPAF receives both Track 1 and Track 2 (South Africa) PEPFAR funding. The primary emphasis areas for activities are human capacity development and expansion of services through training and task shifting, quality improvement, development of networks, linkages, referral systems and strengthening local organization, development of infrastructure, policy and guidelines, and health information systems strengthening. Primary populations to be targeted include infants, men and women, both pregnant and not, people living with HIV (PLHIV), and public and private healthcare providers.

BACKGROUND:

Tuberculosis (TB) poses a serious threat to the public health and economic well-being of South Africans and in the advent of HIV, affects the most productive segments of the population, as well as disproportionately affects the poor. The HIV and AIDS epidemic in South Africa has further complicated control and treatment of TB. Although the South Africa National TB Control Program (NTCP) has made significant progress over the past several years, it still faces challenges in increasing case detection and cure rates. Key barriers include a lack of community understanding about the disease, limited access to services, inadequate provider knowledge and compliance with DOTS, and patient adherence to treatment.

The program's key focus will be at the district, municipal, and community levels. EGPAF will:

1. Assist stakeholders and partners to strengthen local capacity to detect, treat, and prevent TB.

2. Develop community-based strategies to identify potential TB cases and ensure early referrals for diagnosis and treatment.

3. Assist sites to integrate TB services with HIV and other healthcare services.

4. Support and develop community-based approaches to ensure treatment adherence.

ACTIVITIES AND EXPECTED RESULTS:

EGPAF will strengthen linkages between healthcare centers and community DOT supporters to reduce treatment interruption rates and improve treatment adherence. EGPAF will establish mechanisms for collaboration between TB and HIV services by providing counseling and testing within TB services, and screening HIV-infected individuals for TB.

EGPAF will assist in strengthening the technical capacity at the sites where the comprehensive care management and treatment programs are being supported. The key activities will involve the integration of TB services, VCT services, and antiretroviral treatment (ART) services, at primary health care and hospital level. These activities will be included in the site TB control and evaluation plans.

Mechanisms for integration are:

1. Support the district/site TB/HIV coordinator to expand and improve the referral linkages between TB and CT.

For all TB patients, provider initiated HIV testing and counseling will be offered and HIV-infected patients referred to CT. CD4 count and ART initiation will be carried at TB service points where possible. Cotrimoxazole prophylaxis will also be made available. All HIV-infected patients will be screened for TB, and referred to TB service points. Where possible, anti-TB treatment will be initiated in CT setting.

2. Assist in the development and implementation plan for TB/HIV at sites at which EGPAF will be providing comprehensive HIV and AIDS services.

The plan will include human capacity development through training. Health care providers at TB and CT service points will be trained in both TB and HIV management so that they can provide a comprehensive package of care. Use of community-based care and support initiatives will be explored to improve adherence and compliance

3. Assist in developing and strengthening monitoring and evaluation of referral systems for TB/HIV related activities.

EGPAF promotes the use of referral registers between service points e.g. VCT register reflecting the service point a patient was referred from e.g. TB, as well as TB and CT registers showing referrals between the two service points. At TB service points, HIV tests and CD4 counts done are recorded in registers to facilitate referral. All confirmed TB cases diagnosed at CT service points are recorded in registers and immediately referred to TB service points. Where possible, electronic TB registers will be maintained

4. For monitoring and evaluation, a core set of indicators, based on national guidelines for monitoring and evaluation of collaborative TB/HIV activities will be used to measure the success of the program.

EGPAF will support the following activities to reduce the burden of HIV in TB patients (adults and pediatrics):

1. HIV counseling and testing for all TB cases

2. Increased screening rates of TB for all HIV-infected patients within existing care and treatment sites and services. Intensified case finding methods include screening for symptoms and signs of TB i.e. cough for more than 2 or 3 weeks, fever, night sweats, recent weight loss, lymphadenopathy, routine three sputum

Activity Narrative: samples for Acid-Fast Bacilli (AFB), chest x-ray, TB culture may be used to confirm smear-negative pulmonary TB. When TB diagnosis is confirmed, TB notification is done. All HIV-infected patients with confirmed TB are referred (referral given) to TB service points for initiation of anti-TB treatment according to national ARV treatment guidelines. All TB referrals are recorded in the TB registers. In addition to the above screening methods, primary health care (PHC) facilities are encouraged to use TB Suspect Registers, which are in the form of a questionnaire, to screen for TB.

3. Provision of cotrimoxazole preventive therapy to TB patients with HIV infection as part of the comprehensive care and treatment program.

4. Provision of antiretroviral therapy and anti-TB treatment to eligible TB patients with HIV infection, will be carried out according to national ARV treatment guidelines. Staff will be trained on managing patients co-infected with HIV and TB.

5. Provision of care and support services to TB patients with HIV infection. All TB patients diagnosed HIV-infected are provided with cotrimoxazole prophylaxis. Prevention with positives activities are implemented and nutritional support provided in the form nutritional supplements, education, and food parcels.

6. Provision of isoniazid preventive therapy as part of the package of care for PLHIV when active TB is excluded. Currently, INH prophylaxis is mainly offered in the clinical setting. In its geographic areas of support, EGPAF will facilitate the provision of INH prophylaxis under DOT, as well as through home-based care programs, where possible.

EGPAF will assist the National TB Control Program to strengthen information systems, supervision, and program management. EGPAF will work with provincial, district, municipal, and community health systems to build or strengthen capacity to prevent, detect, and treat TB. Human capacity development through training and task-shifting (e.g. DOT staff giving INH prophylaxis). Mentoring, coaching and preceptorships will be used to ensure skills transfer in all areas including M&E, which will lead to a more sustainable program

Emphasis will be put on strengthening linkages with home-based care organizations and community healthcare workers to identify suspected TB cases, ensure early referrals for diagnosis and treatment, as well as support treatment adherence through DOT.

By supporting HIV care and treatment services, EGPAF contributes to the 2-7-10 goals of PEPFAR and the USG South Africa Five-Year Strategic Plan.

With FY08 reprogramming funding, EGPAF will address infection control support (assessment, technical assistance, training); and pediatric TB (training and mentoring) in the Free State and North West provinces.

Table 3.3.07: Activities by Funding Mechansim

Mechanism ID: 4625.08

Mechanism: N/A

Prime Partner: McCord Hospital

USG Agency: HHS/Centers for Disease Control & Prevention

Funding Source: GHCS (State)

Program Area: Palliative Care: TB/HIV

Budget Code: HVTB

Program Area Code: 07

Activity ID: 7910.08

Planned Funds: $167,810

Activity System ID: 14008

Activity Narrative: SUMMARY:

McCord/Zoe Life activities will build capacity in four municipal clinics, three non-government organizations (NGOs) and a corporate outreach program in Durban to provide proactive and integrated TB/HIV services within the framework of a primary health decentralized HIV care and treatment program. Emphasis areas include: development of referral systems between vertical HIV-related programs and other health services; local organization capacity development; and development of a workplace program.

BACKGROUND:

The prevalence of tuberculosis (TB) in KwaZulu-Natal (KZN) is high, with 60% of TB clients co-infected with HIV. Local TB programs are vertical programs that do not integrate HIV and TB care. An outbreak of multidrug-resistant tuberculosis (MDR-TB) along with poor treatment completion rates highlights the challenges of TB management in KZN. The tools used for diagnosis of TB where an estimated 75% of active TB is extrapulmonary and/or sputum negative pulmonary TB are limited to sputum microscopy for AFB. Chest x-rays (CXR) do help with diagnosis, but is not confirmatory, and the CXR picture of pulmonary TB in HIV is not the classic picture. Diagnosis is often complicated by other infections such as pneumocystis carinii pneumonia (PCP). The yield on sputum culture for TB is higher, especially with sputum negative on microscopy, and the yield of AFB on blood cultures in extrapulmonary and sputum negative TB is also fairly high. The best tool at this stage, however, is the clinician with a high index of suspicion for TB. Effective management of TB is one of the most important upcoming fields of care in South Africa. This new project will be implemented by the McCord/Zoe Life team and seeks to integrate HIV and TB care using National Department of Health (NDOH) guidelines and best practice models to provide a seamless continuum of care to clients co-infected with TB and HIV. Gender will be addressed by increasing access to TB screening in the workplace, increasing TB screening for women in PMTCT projects and in women's income generating projects run through the NGOs. The project will also provide TB/HIV care to refugees.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Training

Counselors and clinical staff will be trained in provider-initiated CT, and this service will be offered to all TB-infected clients accessing care at the municipal clinics, and to TB patients accessing services at NGO sites. Counselors will be trained to enroll all HIV-infected clients into wellness/ARV services and to refer for CD4 screening. Counselors will be trained to screen for TB during any contact with an HIV-infected client and to refer appropriately. Nurses working in prevention of mother-to-child transmission (PMTCT) or sexually transmitted infections (STI) NGOs will be cross-trained to screen all HIV-infected clients at each contact and to refer appropriately for quick diagnosis, treatment and CD4 monitoring. They will be trained to provide focused wellness and adherence counseling to patients co-infected with TB and HIV. Staff working within clinic-based TB programs will be trained in integrated TB/HIV management and reporting, including provision of cotrimoxazole. Staff at NGOs will be trained to screen for TB in community settings and provide community-based wellness training, dual testing for TB/HIV, and household adherence support for TB/HIV.

ACTIVITY 2: Increase screening of TB in all HIV-related settings including community

This activity will provide technical support for counselors, community workers and nurses to routinely screen for TB in PMTCT, CT, palliative care and ARV services using a simple symptom-based screening tool.

ACTIVITY 3: Mentorship and supervision of staff

Mentorship and supervision of staff will provide integrated active case management of TB/HIV with multidisciplinary service provision in palliative care and ARV services where required. Staff will be assisted to integrate all patients with TB/HIV into comprehensive HIV management services with contact tracing, screening and partner/family testing encouraged as standard of care. Sites will be assisted to provide cotrimoxazole to all TB/HIV clients.

ACTIVITY 4: Linkages and referrals

McCord/Zoe Life will assist in strengthening linkages and referrals to ensure full range of HIV care and treatment services (including extrapulmonary TB) are available without loss of continuity of care or patients lost to follow-up.

ACTIVITY 5: Development of workplace program and mobile clinic

Staff and employees participating in the HIV workplace program will be trained to understand the link between HIV and TB. Employees accessing the workplace CT services will be screened for TB by history and symptom screening. Occupational nurses will be trained to screen for TB per protocol in the management of HIV. Additional funding will be sought to equip a mobile clinic with a mobile x-ray machine and microscopy. This unit will be used to provide TB and HIV screening and diagnosis to all workers accessing the workplace wellness program. Funding will be sought through industry and international funding to purchase this equipment which is vital to managing TB in the workplace. Until this is a reality, linkages between workplace programs and referral centers for treatment will be established. Where possible, TB treatment will be initiated onsite and TB rates reported to the district TB program.

ACTIVITY 6: Development and strengthening of M&E system

An M&E system should have the capacity to track HIV-infected clients receiving TB treatment, to ensure tracking of visits, active case management and retrieval of TB patients. The system will require strengthening of linkages between the municipal clinics, the Durban TB clinic and the DOTS workers. A patient-held record for communication between health facilities will be used in conjunction with the pharmacies and providers at the health facilities to ensure continuity of care in all services.

ACTIVITY 7: Sharing best-practices

Activity Narrative: McCord/Zoe Life will engage with provincial and district TB coordinating bodies to share best-practices to improve services. This includes revisiting diagnostic algorithms, accessing funding to pilot better diagnostic testing algorithms and expanding treatment centers.

ACTIVITY 8:

Staff will be trained and technical support provided to implement sustainable and affordable infection control policies and measures within each environment.

Sustainability is addressed through development of integrated services within existing public health facilities, establishment of linkages and referral pathways making access to diagnosis of TB easier, and through cost sharing in workplace programs.

Through integrated TB/HIV services, McCord Hospital/Zoe Life expects to increase provider-initiated HIV testing through the municipal TB services to all TB patients, expecting 40-60% of TB patients to be HIV infected. Any HIV-infected client on TB treatment will be offered the full spectrum of palliative care services and be referred to for ARV services according to provincial treatment guidelines. All HIV-infected clients will be screened for TB. It is expected that 20% of all HIV-infected clients will require TB treatment. In the NGO setting the goal is to increase community-based referral for TB screening, adherence support and strengthening of referral systems. In the workplace, the goal is to increase workplace screening, diagnosis and treatment of TB in the HIV workplace program through mobile onsite services.

The McCord Hospital activities contribute to the 2-7-10 PEPFAR goals and the USG South Africa Five-Year Strategic Plan by strengthening the public sector and expanding access to care and treatment.

Table 3.3.07: Activities by Funding Mechansim

Mechanism ID:	6183.08	**Mechanism:**	N/A
Prime Partner:	Tuberculosis Care Association	**USG Agency:**	HHS/Centers for Disease Control & Prevention
Funding Source:	GHCS (State)	**Program Area:**	Palliative Care: TB/HIV
Budget Code:	HVTB	**Program Area Code:**	07
Activity ID:	12516.08	**Planned Funds:**	$1,600,000
Activity System ID:	13836		

Activity Narrative: SUMMARY:

Activities will be carried out to screen people for TB in non-clinical counseling and testing (CT) and in clinical sites and to ensure referral for care. The project will support care and treatment services at three hospital-based clinics and eight primary health clinics (PHC). Clinical training and mentorship will be provided to screen HIV-infected people for TB, provide appropriate TB treatment, and to screen for isoniazid preventive therapy (IPT) to prevent TB. Community health workers (CHWs) will educate community members about the symptoms of TB and the importance of seeking care and completing TB treatment. They will screen community members for TB symptoms of TB and STIs and refer symptomatic people to health services. Community adherence support will be provided by CHWs for TB treatment, for prophylaxis (IPT and cotrimoxazole) and for antiretroviral therapy (ART). The adherence support model used for ART will be piloted with TB patients.

BACKGROUND:

TB Care Association (TBCA) will implement this activity in collaboration with provincial and district departments of health. TBCA has been providing community-based counseling, emergency material relief and TB treatment support in the Western Cape since 1992. The Western Cape province has requested support from TBCA for the West Coast Winelands district because the burden of TB with HIV coinfection is high. TBCA is exploring the possibility of expanding activities to the Northern Cape province as well.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: TB and STI Case Finding Linked to VCT

VCT will be provided in non-clinical sites including workplaces. During CT, counselors will routinely screen for TB and STIs, utilizing a questionnaire. Clients who have TB symptoms will be given 2 sputum containers by the nurse counselor and a referral letter to go immediately to their nearest health facility. Clients with STI symptoms will also be given a referral letter to their nearest health facility. The CT register will have additional columns to indicate if clients have TB or STI symptoms as well as a column to determine if the patient presents at the health facility to which they are referred.

PEPFAR funds will be used to employ one data capturer for each supported health facility to assist with recording laboratory results and to trace people with positive TB smears to ensure that they are initiated on treatment. The data capturer will also be responsible for informing the CT teams and community health workers (CHWs) if referred patients attend the facilities to which they have been referred.

ACTIVITY 2: Improve the Quality of TB/HIV Care and Treatment

TB/HIV clinical training & mentoring will be provided for all relevant health care workers, in accordance with the South African National TB Control Program guidelines and national guidelines for HIV care, utilizing materials adopted by the Western Cape Department of Health (i.e. PALSA plus). Training will focus on the co-management of TB, HIV and STIs. Health care providers will also be trained to routinely counsel TB patients about the benefits of knowing their HIV status and to give patients the opportunity to test or to opt out of testing. HIV-infected TB patients will be offered cotrimoxazole prophylaxis and will have a CD4 count done as part of screening for antiretroviral therapy (ART). The new NTCP TB register will be introduced to register all TB patients, to document their HIV status, and to record which TB patients are started on cotrimoxazole and screened for ART. Health workers who provide care for TB patients will be trained on the prevention and management of opportunistic infections, on ART and on the new TB register.

Health workers, who provide HIV care, including pediatric services, will be trained to screen all HIV-infected clients for TB and to screen asymptomatic patients for IPT. HIV-infected individuals with symptoms of TB will be provided with diagnostic services at the level of care where screened (i.e. ART clinic), including TB culture. Recording and reporting of TB status will occur at the closest TB treatment clinic. TBCA will work closely with DOH to integrate services, to allow co-infected patients to seek care at one point of service.

Under the guidance of the clinical coordinator, two nurse mentors will visit health facilities on a regular basis to provide supervisory support to ensure optimal co-management of HIV, TB and STIs. These visits will reinforce didactic training and will assist health staff in facilities to solve clinical problems they encounter through case studies. Nurse mentors will also liaise with the community team leader in each facility to assist with monitoring referrals to ensure a continuum of care between communities, clinics and hospitals. Training and mentoring initiatives will address clinical issues identified through quality assurance reviews.

ACTIVITY 3: Improve TB and ART Case Holding through Community-based Adherence Support

The policy of the Western Cape Department of Health is to provide funding for multi-skilled community health workers (CHWs) rather than community workers that focus on vertical program. CHWs will be trained on priority health issues to provide integrated community care. They will be responsible for the following activities:

-HIV prevention and condom distribution
-Education on STI symptoms and the importance of seeking treatment for STIs
-Promotion of HIV voluntary counseling and testing, particularly for pregnant women
-Infant feeding counseling
-Education on TB symptoms and the importance of seeking treatment for TB
-Screening community members for TB and STI symptoms and referring suspects to health facilities
-Education on the importance of adhering to prophylaxis (isoniazid and cotrimoxazole), antiretroviral treatment and TB treatment
-Monitoring and providing adherence support to TB patients and HIV-infected clients taking prophylaxis or ARVs with modified directly observed treatment (DOT)
-Home-based care
-Identification of malnourished children and referral to health facilities
-Assistance in obtaining social support grants
-Referral to support services to address substance abuse and domestic violence

Activity Narrative: -Stigma and discrimination towards people living with HIV will be addressed through the efforts of community mobilizers and CHWs who will increase awareness of HIV in their communities utilizing IEC strategies.

The TB Alliance DOTS Support Association (TADSA) will be a partner in the formative assessment of adherence support services. The first step will be to identify existing organizations that are providing home-based care services in the area. Where possible, existing home-based carers will be recruited and trained to provide more comprehensive care as CHWs. Carers who are already engaged in home-based care and who receive a stipend from the provincial government will integrate the new activities into their existing functions. In areas where there are no home-based care organizations, CHWs will be recruited from the communities in the catchment areas of the facilities. Stipends for CHWs will be funded from the PEPFAR budget, at a similar rate to what the Provincial Government pays. This will ensure sustainability for when the program is taken over by the government. TBCA has a well developed system of financial controls for managing the payment of stipends. Approximately ten CHWs and one community team leader will be employed per health facility, depending on the estimated burden of TB & HIV in the community (see Activity 4).

Health facilities will inform TBCA community team leaders of all patients who are initiated on prophylaxis, ART or TB treatment. Community team leaders will identify a CHW who lives close to the patient and arrange for the CHW to meet the patient. Patients on treatment will be visited by a CHW daily for the first two weeks of treatment, then weekly up to eight weeks of treatment, then every two weeks (modified DOT). CHWs will identify any potential adherence problems, try to address them with the patient and inform the health professionals of issues that need to be addressed (e.g., side effects).

ACTIVITY 4: Assessment of Quality of Services

The University of the Western Cape, School of Public Health, will be sub-contracted to evaluate the quality of TB/HIV/STI services. This will be done by conducting facility audits using an integrated TB/HIV/STI evaluation tool at the beginning of the project, at one year and at the end of the project.

The quality of services will also be assessed through routine TB and HIV monitoring and evaluation. Existing forms and registers will be reviewed and, if necessary, be revised, piloted and implemented to collect information for key indicators. District and facility managers will be assisted in monitoring progress in achieving agreed upon targets.

A baseline survey will be done to assess demographics, TB and HIV education and stigma as well as health seeking behaviors and uptake of VCT. This survey will be repeated at the end of the project to assess the impact of the services provided.

ACTIVITY 5: Improving HIV and TB treatment Adherence and Outcomes

Drawing on ART adherence promotion models this project evaluates a pilot program using lay health workers to support adherence to TB treatment in Cape Town. The pilot replicates what are seen as the key elements of the ART adherence model: intensive treatment counseling and preparation sessions by trained lay adherence counselors; the use of a 'buddy' to support patients; and frequent lay treatment supporters visits to help patients manage problems that arise during treatment. A qualitative assessment will be done of the feasibility and acceptability of the adherence model. TB treatment outcomes using the adherence model will be compared with treatment outcomes with the standard of care (directly observed treatment).

Activity ID: 13964.08

Planned Funds: $970,000

Activity System ID: 13964

Activity Narrative: SUMMARY:

Johns Hopkins University Center for Communication Programs (JHU/CCP), coordinates the work of 20 South African partners and provides technical assistance and capacity building to mobilize and educate communities and clinicians about the linkages between Tuberculosis (TB) and HIV. The focus is TB literacy, and training clinicians through distance learning. The target populations for this activity are adult men and women (including pregnant women) living with HIV (PLHIV), discordant couples, volunteers, public health workers, and community-based, faith-based and non-governmental organizations. The major emphasis area will be human capacity development and other activities will include community mobilization, information, education and communication and training. Findings from the 2008 National HIV and AIDS Communication Survey will help focus TB interventions and assist in improving understanding regarding TB and its treatment. The survey will provide a valuable baseline to further develop present communication interventions on TB.

BACKGROUND:

This is the first year that JHU/CCP will undertake community mobilization and mass media in support of TB/HIV that builds upon the successful four year program and ongoing partnerships that have utilized interpersonal communication and mass media in support of treatment literacy, adherence and clinician training. Eight of the twenty partners that work with JHU/CCP will be engaged in work on TB/HIV including the South African Broadcasting Corporation (SABC), Mindset Health Channel (MHC), Community Health and Media Trust (CHMT), LifeLine, The Valley Trust (TVT), DramAidE, Lesedi Lechabile, Mothusimpilo, Lighthouse foundation and ABC Ulwazi. The work will be in coordination with other PEPFAR funded partners such as URC's TB TASCII Project and the National Department of Health (NDOH) TB Sub-Directorate. All these interventions seek to undertake public awareness and education around the dual epidemics of TB/HIV using interpersonal communication interventions and mass media. The awareness and educational programs will be reinforced within health care facilities through interventions that provide more human input into the care and support of TB patients in their interactions with the public health system and upon their return to their communities. One of the weaknesses of the current care package is that patients are only provided with verbal guidance on how to access health care services and there is very little follow-up once they leave the health care facility. All community outreach workers will provide step-by-step assistance to each individual patient and walk them through the health system. By providing one-on-one assistance this will ensure that patients do not "get lost" which enhances the probability of them receiving adequate care and support including accessing treatment. The same outreach workers will do home and community follow-up to ensure that patients are compliant with their treatment regimens. It is anticipated that this will ensure better initiation completion rate of treatment rates among TB patients.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Community Mobilization

CHMT, with PEPFAR funding, has developed a series of video and print materials for people affected by and living with HIV, their caregivers and communities that includes material on TB. PEPFAR funding assists CHMT to revise and update the TB-HIV component of these materials. The materials are used in group sessions and workshops facilitated by 92 Treatment Literacy and Prevention Practitioners (TLPPs) (72 funded by PEPFAR and 20 NDOH) within the TB and ART clinics where they encourage TB patients to be tested for HIV and HIV patients to be screened for TB. The treatment literacy work of the TLPPs within clinical settings task shifts the responsibility of the management of treatment literacy for patients living with HIV from health practitioners thus freeing them up to provide to provide improved clinical services. TLPPs provide capacity building and mentoring to local community-based organizations to use the treatment literacy material in strengthening their support for people living with HIV. This intervention has received National Department of Health (NDOH) approval.

The Mindset Health Channel (MHC) is a public-private partnership that provides information directly into health clinics, targeting patients in waiting rooms with general information, and healthcare providers with training and technical information. JHU/CCP continues its collaboration with MHC which, at the beginning of FY 2008, will be in more than 400 health facilities. Existing material will be revised and updated, including treatment videos, web content and print materials in up to five languages for healthcare workers at these sites. CHMT treatment literacy practitioners spend half their time with patients in ARV rollout and downstream referral sites that have the MHC.

Mindset uses its onsite access to clinicians to build their capacity to deliver quality TB services in line with national protocols. This includes encouraging TB patients to be tested for HIV and for HIV patients to be screened for TB, adherence messages for persons on treatment, treatment support education for families and individuals supporting those on treatment. Other issues covered include prevention with positives with emphasis on discordant couples. Information includes adherence for treatment.

Both Mindset and CHMT material have been developed through public-private partnerships including; business (MTN, Liberty Foundation and Sunday Times) as well as assistance from government and parastatals (e.g. NDOH, SABC).

DramAidE utilizes HIV-infected Health Promoters in 23 tertiary institutions in South Africa to undertake community sensitization efforts among students on campuses using events such as World TB Day and through their support groups of students living with HIV around the need to be screened for TB and adherence to TB treatment.

Lesedi Lechabile and Mothusimpilo trains their peer educators working in mobile clinics and one static site to provide counseling to vulnerable women, mine workers and people living with HIV on the need for TB screening and treatment adherence in the mining districts of the Free State and North West Provinces. They undertake community sensitization and mobilization around TB/HIV.

Lighthouse Foundation (LF) trains its peer educators and community facilitators to work in the 13 informal settlements in the Madibeng District of the North West Province to undertake community sensitization efforts using their door-to-door campaigns and community events. LF uses events such as World TB Day

Activity Narrative: and their support groups of students living with HIV to disseminate messages around the need to be screened for TB and adherence to TB treatment.

ACTIVITY 2: Media support for community mobilization

ABC Ulwazi produces a radio talk show series tailored to 60 different community radio stations. Special emphasis is on treatment adherence and establishing support systems for those people who have TB. Each episode ends with a summary and clear messages on the topic discussed.

SABC continues the theme of treatment through two programs: Trailblazers, a 13 episode TV series highlighting success stories including best practices in this area; and a new 26 episode adult TV drama series. Both TV programs are accompanied by radio talk shows (on 9 local language stations) as well as web-based content. The storylines focus on TB and HIV treatment and prevention with positives.

JHU/CCP contributes substantially towards meeting the vision outlined in the USG PEPFAR Five-Year Strategy for South Africa by ensuring that 1) all persons who are screened for TB are tested for HIV and that all persons living with HIV are screened for TB; 2) that TB patients and patients living with HIV have access to TB/HIV services; 3) implementing joint TB/HIV information, education and communication activities. By training individuals to deliver quality TB/HIV services this activity contributes to the PEPFAR goal of putting two million HIV-infected people on treatment. This activity also contributes towards the objectives of the National Strategic Plan for South Africa through ensuring that 80% of people have access to appropriate treatment, care and support services through the effective management of TB and HIV coinfection.

7.4 Number of registered TB patients who received HIV counseling, testing, and their test results at a USG supported TB service outlet	10,000	False

Indirect Targets

Every opportunity will be utilized to undertake community mobilization and sensitization concerning the linkages between TB-HIV, encouraging people to be screened for TB and tested for HIV. This includes ensuring that persons tested for HIV are also screened for TB. This activity will contribute towards ensuring that greater numbers of persons in need are able to access TB-HIV on a timely basis. A study that will investigate the manner in which task shifting the management of people living with HIV in health centers and tertiary institutions from health care workers to TLPPs and HPs on tertiary campuses contributes towards improved care and support for people living with HIV, will ensure better care and support for people living with HIV, including those who have TB.

Activity ID: 2955.08

Planned Funds: $1,355,000

Activity System ID: 14020

Activity Narrative: SUMMARY:

The Medical Research Council (MRC) will carry out activities to support a comprehensive best-practice approach to integrated TB/HIV care at existing sites and new sites in KwaZulu-Natal, North West, Eastern Cape, Western Cape and Mpumalanga. The project aims to improve access to HIV care and treatment for tuberculosis (TB) patients by strengthening the role of TB services as an entry point for delivery of HIV and AIDS care, and by expanding TB screening to people living with HIV (PLHIV). Project results and lessons learnt will be shared with the national and provincial Departments of Health to inform existing policies and guidelines on TB/HIV care. TB patients and PLHIV are the key target populations and include pregnant women (referred to PMTCT services) and children (receiving ARVs if indicated).

BACKGROUND:

The MRC initiated a best-practice approach to integrated TB/HIV care with FY 2004 PEPFAR funding. Early activities included a systematic description of barriers faced by TB patients co-infected with HIV in an accredited antiretroviral (ARV) site, and in FY 2005, activities were focused on the development and implementation of a best-practice model. Preliminary results from the model site confirmed the benefits of an integrated TB/HIV approach, reflected in a drastic reduction in patient mortality, improved quality of life for TB patients living with HIV and prolonged survival rates. Results also confirm the safety and efficacy of dual regimens, showing that antiretroviral treatment (ART) can safely be instituted within the first month of TB treatment. Activities in the established sites will continue in FY 2008. The best-practice approach will be expanded to additional sites in FY 2008 i.e. one site in Mpumalanga, 2 sites in the Western Cape, one site in the Eastern Cape and one more site in the North West. The best-practices model drew from lessons learnt in the start-up sites, such as the need for essential human resources, the importance of negotiated partnerships with health departments, and the challenges posed by dual stigmatization and discrimination. The new sites are characterized by extreme poverty, poor health infrastructure, cross border migration and limited healthcare access. Meeting the challenges of an integrated TB/HIV approach in such settings will be specifically addressed, as will strengthening down-referral capacity in existing sites. Activities are implemented by the MRC and sub-partners, World Vision and the Foundation for Professional Development (a PEPFAR prime partner).

ACTIVITIES AND EXPECTED RESULTS:

Activities include provider-initiated HIV CT; TB screening by symptoms and sputum investigations; referral to appropriate services such as PMTCT, STI and partner counseling programs; and enrollment of patients in relevant HIV care and treatment programs. Three activities will be implemented:

ACTIVITY 1: Best-Practice Model

The MRC will support implementation of a best-practice model of integrated TB/HIV care in sites providing TB and HIV services. This approach involves: (1) clinical management (CT, ART, management of adverse drug effects, STI management, preventive therapy); (2) nursing care (TB screening, patient education, treatment adherence, HIV prevention); (3) integrated TB/HIV information, education and communication; (4) nutrition intervention; and (5) palliative care and support. Activities include site renovation to meet SA accreditation requirements for ARV rollout, site and supervisory staff training, hiring key personnel, development of patient educational materials, commodities procurement, and establishment of appropriate referral links, including those with governmental ARV sites to ensure continuity of care. MRC will monitor CT practices, strengths and weaknesses of TB/HIV referral systems, human resources and conventional TB treatment outcomes. The MRC will implement ongoing quality assessments through onsite supervision and external quality assurance mechanisms such as checklists. Regular feedback meetings will be held with project staff and Provincial representatives in the relevant programs to identify potential problems and to facilitate corrective action. Stigma around HIV, AIDS and TB is specifically addressed through patient education and targeted interventions such as peer group counseling and advocacy campaigns. Results from the project will facilitate evidence-based policy formulation on expansion of integrated TB/HIV care, improve access to HIV care by co-infected TB patients, and increase TB case finding among PLHIV. Implementation of lessons learnt in the best-practice approach will facilitate rapid identification of systems and operational needs, and allow for corrective action. Results of this expanded approach to integrated TB/HIV management will facilitate national scale-up of comprehensive programs for dually-infected patients. This activity will strengthen TB services as a point of delivery of ART, by ensuring that human, financial and infrastructure needs for integrated TB/HIV programs are met through equitable allocation of scarce resources and through analyses of cost-effectiveness and cost-benefit. Increased TB case finding in HIV settings is a crucial component of disease control; yet largely lacking in routine health services. In FY 2008 the project will continue to evaluate strategies for active TB case finding in vulnerable populations and assess implications for TB and HIV control programs. PEPFAR funding will also be used to implement an integrated electronic patient information system at the sites to support routine data collection, facilitate patient referral and allow data transfer to the national routine TB recording and reporting system, which is now integrating HIV testing and service data. Lastly, funds will be used to support an International Training Centre (ITC) on multidrug-resistant TB (MDR-TB) and HIV. The ITC's focus will be on human capacity development. TB and MDR-TB infection control in HIV settings and prevention of institutional transmission and outbreaks will be a prime focus area. Training will utilize didactic, interactive adult teaching methods aimed at different health sector groups (clinical, nursing, health facility management, health facility design and maintenance), and will be enriched by mentorship programs and study tours through the SA network of MDR-TB hospitals.

ACTIVITY 2: Community TB/HIV Case Finding and Holding Among Women in PMTCT

This activity will identify pregnant women in the 34 project clusters and provide peer support to each of these households until the infants reach 6 months of age. Community peer supporters will educate households on symptoms of TB, cure rates, and adherence to TB treatment. They will refer household members with TB symptoms to health services for diagnosis. Children under 5 years who are TB contacts will be referred for TB preventive therapy, and HIV-infected mothers will be encouraged to take HIV-exposed infants for CPT, PCR testing and screening for ART. In addition, adherence support for all household members on TB treatment, to pregnant women/mothers taking ART and infants on CPT or ART will be provided. PEPFAR funds will provide stipends to peer supporters and allow for

Activity Narrative: supervision/mentoring of peer supporters and transport to visit mothers in the clusters. Expected results include: recruitment of HIV-infected women, provision of community peer support and referral of TB suspects. MRC's activities contribute to the PEPFAR goals by integrating TB and HIV services and expanding access to care and treatment.

Activity Narrative: SUMMARY:

The Eastern Cape Regional Training Center (RTC) will use FY 2008 funds in the Eastern Cape to strengthen the capacity of health care workers (HCW), facility managers, social workers, doctors, nurses, lay counselors and community health workers (CHW), including DOT supporters, to deliver quality TB/HIV services. Three teams from RTC will each support a facility and its feeder clinics for a period of four months to initially evaluate the TB/HIV training needs and provide targeted didactic training according to the NTP policies and guidelines, ongoing mentoring and coaching using standardized procedure manuals and tools. NGO facilitators will be trained to implement a level four comprehensive community health worker curriculum incorporating HIV and TB. Primary emphasis will be given to training, quality assurance and supportive performance improvement supervision, and information and reporting systems strengthening at facility level.

BACKGROUND:

RTC was established through a service agreement between the prime partner Eastern Cape Department of Health (ECDOH) and the Walter Sisulu University (WSU) to provide ongoing training for quality improvement in HIV and TB care programs.

The function of RTC has been to develop accredited training modules and care protocols for different categories of health workers based on National Department of Health guidelines. RTC has demonstrated and evaluated the HIV, TB and STI best practices continuum of prevention, care and treatment model in selected facilities, providing direct patient care and the opportunity for HCW to receive practical training. RTC provides technical assistance to the ECDOH regarding the expansion of its HIV intervention programs supporting Eastern Cape hospital/clinic site readiness for accreditation to provide comprehensive HIV care and treatment.

During the past three years ECDOH has introduced a comprehensive program for HIV care. From observations during RTC activities in clinics and communities, more than 70 percent of TB patients are HIV-infected and there seems to be a gap in screening all TB patients for HIV and early identification of TB in HIV patients who are presenting in facilities. Patients present late for care, already with severe complications. No clinical prophylaxis of TB is currently provided. There is limited awareness and skill among the communities to enable early entry into the care system. There are known drug-drug interactions in patients with co-treatment of ARV and TB drugs. There is an opportunity to combine follow-up of TB patients with patients on ARVs at community level.

RTC has been working with ECDOH managers in developing and disseminating care protocols and will be providing support and working closely with the district and facility managers to increase skills capacity to improve the quality of TB/HIV treatment and support services at facilities and community level.

ACTIVITIES AND EXPECTED RESULTS:

In FY 2008 RTC will continue to address the following areas: training; local organization capacity development; quality assurance; and supportive Supervision and performance improvement. Funding will be used to enhance the RTC strategy of training preparation of new provincial sites for accreditation as ARV sites and providing clinical mentoring to increased sites. RTC will continue supporting training administration and logistics of a comprehensive care training team allocated to provide dedicated support to three district hospital sites and at least five feeder clinics, for a period of four months, which will then move to the next three sites for the next four months, completing three cycles a year. The intensity of support and Performance Improvement supervision will Increase with introduction of a performance improvement officer, a critical efficiency improvement position in the teams. Information and reporting improvement will be achieved by appointing an information officer, whose primary responsibility will be facility information and reporting systems improvement.

During this period the team will work with and support the facility managers to initially evaluate the TB/HIV palliative care services training needs, adapt standardized protocols and procedures for local facilities, and provide targeted didactic training, ongoing mentoring and coaching using standardized protocols and operating procedure manuals. The activity will address the priority areas of human capacity development, improving skills of a care team including managers, doctors, social workers, health promoters, CHW, DOT supporters and nurses at a facility and its feeder clinics through targeted didactic, case discussions, mentoring and community follow-up of patients with facility staff while considering and reviewing relevant local system issues. Focus will also be given to building patient information and reporting capacity at facilities. This activity is aimed at strengthening the recording and reporting system for TB and TB/HIV at facility level; coaching clinic staff on correct data entry and reporting. Ongoing support will continue through telephone consultations and special need visits after 4 months. RTC will train and mentor 35 facilitators from 7 NGOs who will cascade the training of a comprehensive level four curriculum for community health workers who will be providing community awareness for TB/HIV symptoms and follow-up of both patients for HIV and TB treatment adherence.

RTC will hold three-monthly sessions with three local CBOs at each facility to articulate their role and function in TB treatment services and enhance their knowledge and skills required to function in that role.

The RTC team will develop simplified TB screening algorithms for HIV patients at clinics and support the improved provision of INH prophylaxis, early detection and better management of TB/HIV in clinics. RTC training and mentoring will address the establishment of wellness programs at each facility to encourage community follow-up, nutrition advice, infection control, referrals to clinics and social support at community level. RTC through its M&E function will strengthen records management and reporting in TB/HIV clinics, RTC will continue to piloting the Patient information database management systems at IDC -Mthatha with a view of rolling it out to other partner hospitals and clinics to Improve patient tracking and records management.

RTC training and mentoring will address data collection, maintaining accurate records, feedback and usage through quality improvement cycles to address early presentation, and follow-up and referral of patients on TB treatment.

Activity Narrative:

RTC is an ECDOH initiative based at the Walter Sisulu University and conducts training at public facilities. RTC has and will continue to provide technical assistance to the province through regular meetings and assignments from province managers as well as training for managers.

The PEPFAR funding is helping to establish the program on a firm footing where it can continue with ECDOH funding.

The primary objective of the project is sustainable targeted human capacity development for all health workers. RTC staff will also continue to improve their knowledge and skills by having weekly academic discussions, two internal workshops, attending relevant conferences and ongoing mentoring from another PEPFAR partner, I-TECH.

This activity contributes to the PEPFAR objective of 2-7-10 by increasing the number of people in care and strengthening the linkages between HIV and TB programs.

Table 3.3.07: Activities by Funding Mechansim

Mechanism ID:	486.08	**Mechanism:**	N/A
Prime Partner:	National Department of Correctional Services, South Africa	**USG Agency:**	HHS/Centers for Disease Control & Prevention
Funding Source:	GHCS (State)	**Program Area:**	Palliative Care: TB/HIV
Budget Code:	HVTB	**Program Area Code:**	07
Activity ID:	6544.08	**Planned Funds:**	$388,000
Activity System ID:	14037		

Activity Narrative: SUMMARY:

PEPFAR funds will be used by the National Department of Correctional Services (DCS) to train professional nurses in the management of tuberculosis (TB) and patients who are on the antiretroviral treatment (ART) program. The major emphasis of this activity will be training, with minor emphasis on community mobilization and participation; development of network/linkage/referral systems; information, education and communication; linkages with other sectors and initiatives; and local organization capacity development. The populations will include men and women of productive age, people living with HIV (PLHIV) and their caregivers.

BACKGROUND:

This is an initial project. Currently there are about 635 professional nurses in the DCS. This project will train about half of them to provide on-site primary healthcare services in the management of TB and for patients who are on ART. South Africa has a fairly extensive and mobile correctional center population. Overcrowding in Correctional Centers creates ideal conditions for the transmission of communicable diseases such as TB.

ACTIVITY 1: Training of the Professional Nurses in the Management of TB

This is a continuation of the activity as indicated in COP FY 2007. A number of nurses have been trained in the Management of TB. This has improved patient care in the Correctional Centers. Nurses that have not been trained will be included in this training initiative. It is envisaged that the training will lay a firm foundation for improved service delivery and the effective management of tuberculosis in Correctional Centers.

ACTIVITY 2: Appointment of Communicable Disease Control Management Area Coordinators

A need has been identified to appoint 12 Communicable Disease Control Management Area Coordinators on contract. The appointment of the above-mentioned officials will ensure improved Communicable Disease Control. The Communicable Disease Control Coordinator will be responsible for the planning, implementation, monitoring and evaluation of communicable diseases programs and services at a Management Area level. They will also ensure program analysis, formulation and evaluation as well as budgetary management for the program. They will further more liaise with relevant stakeholders at a national, provincial, district and local level. These positions will be absorbed in the DCS establishment to ensure continuation of services and programs.

ACTIVITY 3: TB/HIV Campaigns in Correctional Centers

TB/HIV campaigns will be held in all the 36 Centers of Excellence to raise awareness on the impact that this epidemic has as well as to equip offenders and members with the necessary knowledge. This will add value to the prevention and management of TB and HIV among offenders and members. It is envisaged that the raising of awareness on TB will decrease the level of stigmatization and discrimination as well as to encourage offenders who are on TB treatment to continue and finish their treatment. If offenders can be made aware that having TB does not necessarily means you have HIV as well. Should the offender have TB and HIV he must be made aware that TB is curable although HIV is not. The DOT support program will also be encouraged and offenders will be motivated to have a DOT supporter.

Table 3.3.07: Activities by Funding Mechansim

Mechanism ID:	262.08	**Mechanism:**	N/A
Prime Partner:	National Institute for Communicable Diseases	**USG Agency:**	HHS/Centers for Disease Control & Prevention
Funding Source:	GHCS (State)	**Program Area:**	Palliative Care: TB/HIV
Budget Code:	HVTB	**Program Area Code:**	07
Activity ID:	12473.08	**Planned Funds:**	$873,000
Activity System ID:	14074		

Activity Narrative: SUMMARY:

Activities will be carried out to strengthen the current TB laboratory infrastructure and capacity under the NHLS with direct support from NICD. With significant increases in MDR and XDR-TB cases within South Africa, and recognizing the limited laboratory capacity to capture and report cases within NHLS and the NTP, there is an immediate need to provide increased access of TB culture and referral services, investigations into creative approaches to increasing laboratory through-put of sputum specimens to meet increased demand, expansion and refinement of information management and dissemination methods of TB diagnostic results, as well as strengthening NHLS ability to improve MDR and XDR-TB reporting and surveillance activities.

BACKGROUND:

NHLS is a public laboratory network that provides services within all 9 provinces. NHLS is composed of close to 300 laboratories located in both rural and urban settings, and provides diagnostic services to almost 85 percent of general population. NHLS is a parastatal organization, with NICD residing within the NHLS organizational structure.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Integrated TB/HIV technologist training program (co support in HLAB)

Funds are requested to respond to technical assistance requests from NHLS to assist in the development of an integrated TB/HIV technologist training program. It is apparent that many of the rural NHLS laboratory staffing needs fall short of the human resource requirements needed to maintain and sustain viable HIV and TB diagnostic services. In light of this shortcoming, NICD/NHLS has proposed an integrated training program that would encompass the needs of understaffed testing sites. The objectives of the training curriculum would address technical HIV testing methodologies and practical hands on training to meet the increased technical demands of HIV testing services, as well as the need to improve TB smear microscopy and AFB culture techniques. The proposed 1 year training curriculum would include didactic sessions, but more importantly on-site laboratory practicums. Funding would be used to assist in curriculum development and technical content review, as well as training implementation and oversight. Efforts will be coordinated with SA Health Care Professionals Association to ensure course accreditation

ACTIVITY 2: Automated NALC decontamination

With the current number of sputum samples submitted for laboratory smear microscopy and culture already at an all time high and continuing to increase, it is recognized that one of the most significant rate determining factors directly impacting laboratory through-put is that of the NALC decontamination process, a labor intensive processes of sputum concentration and decontamination. In order to streamline this process and to increase overall laboratory through-put of sputum specimens to meet the increased demand and lack of available staff to process such specimens, alternate or automated measures should be investigated. Currently, NICD has vested time in investigating possible automated methods that could significantly reduce and provide standardized decontamination processes. The currently proposed funds would be used, in partnership and through co-funding with NHLS, for the development of automated NALC decontamination instrumentation and technologies.

ACTIVITY 3: Expansion and refinement of information management processes

Information management and dissemination of TB/HIV diagnostic results is a continuing issue that needs to be addressed. Current laboratory reporting mechanisms, as well as patient enrollment systems into DOTS treatment programs need IT support and information bridges that currently do not exist. Currently, NICD has vested time in investigating logistic support mechanism for strengthening the current system. A draft proposal has been submitted by LTS, an engineering firm within South Africa, to address this problem. The currently proposed system will utilize biometric enrollment systems as confirmation of patient identification and incorporates the existing NHLS data warehouse as a source of laboratory information that can be used to increase the efficacy and use of the existing systems for diagnostic and treatment purposes. CDC proposes a modular approach to address the overarching system needs. The currently proposed funds would be used, in partnership and through co-funding with NHLS, for the development of modular logistical and information management support systems as a means to address the current integration issues associated with the existing system.

Table 3.3.07: Activities by Funding Mechansim

Mechanism ID:	500.08	**Mechanism:**	CDC Support - with CARE UGM
Prime Partner:	National Department of Health, South Africa	**USG Agency:**	HHS/Centers for Disease Control & Prevention
Funding Source:	GHCS (State)	**Program Area:**	Palliative Care: TB/HIV
Budget Code:	HVTB	**Program Area Code:**	07
Activity ID:	3045.08	**Planned Funds:**	$3,654,550
Activity System ID:	14059		

Activity Narrative: SUMMARY:

Tuberculosis (TB) is the leading cause of death among people living with HIV/AIDS, and addressing TB/HIV is an important part of meeting the Emergency Plan 2-7-10 goals. CDC/PEPFAR carries out additional activities to strengthen and enhance TB/HIV activities in support of the South Africa National Department of Health (NDOH). Activities supported with these funds focus on TB/HIV program and laboratory support.

ACTIVITES AND EXPECTED RESULTS:

ACTIVITY 1: Technical Assistance

CDC staff will provide technical assistance to the NDOH and related organizations regarding TB/HIV program and laboratory activities. Staff needs consist of one CDC direct-hire, 2 locally-employed staff (TB/HIV clinical coordinator and TB/HIV monitoring and evaluation advisor), 2 contractors (TBHIV laboratory officer and TB/HIV laboratory training advisor).

ACTIVITY 2: TB/HIV Surveillance

The ETR.Net is the software application conceived and managed by the NDOH National TB Control Program (NTCP) and reflects program-defined needs and inputs. This has been developed by WamTechnology CC, a South African private information technology firm. WamTechnology works with CDC South Africa and the NTCP to develop software and provide support for the ETR.Net. This software has been modified to track HIV testing and care services among TB patients. The TB/HIV module will be fully implemented during FY 2008. Expected results include strengthening of TB/HIV recording and reporting system to include patient-level data collection on TB/HIV (TB patients counseled and tested for HIV, started on cotrimoxazole (CTX), referred for HIV care and starting antiretroviral treatment (ART). This will in turn be used to bolster referral systems between services leading to more comprehensive care for TB/HIV patients.

ACTIVITY 3: MDR/XDR reporting

Funds will be used to improve reporting and surveillance systems for drug-resistant TB cases. In collaboration with the NDOH, funds will be used to expand the number of users using a web-based system to improve the management and reporting of MDR and XDR-TB cases, data mining activities, and surveillance analysis of drug-resistant TB cases. Data linkages with the laboratory information management systems within the National Health Laboratory Services will be expanded.

ACTIVITY 4: Infection Control

In collaboration with the NDOH, funds will support the implementation of a national TB infection control plan including a national training agenda, standardized training materials, involvement of other partners (universities, research centers) to accelerate provision of trainings within South Africa. Expansion of activities will also support expansion of an infection control warmline and/or technical assistance unit for ongoing technical assistance requests from provinces and partners.

ACTIVITY 5: TB/HIV Pediatric clinical management

In collaboration and with support from the NDOH, funds will be used to develop a standardized pediatric TB/HIV clinical management training course materials reflecting SA NDOH and WHO guidelines, initiate efforts to provide access to training via online services, and to implement a warmline consultation service to provide pediatric TBHIV clinical management guidance to providers.

ACTIVITY 6: TB/HIV integration

In collaboration with the NDOH, expand implementation of field-based DOT program in 4 districts with high default rates. Efforts would include treatment monitoring in addition to patient tracking and management using Community health care workers. Project would be evaluated and compared to other DOT models.

ACTIVITY 7: MDR/TB/HIV clinical management

In collaboration and with support from the NDOH, funds will be used to expand efforts to provide access to MDR/TB/HIV clinical management training, and continued support for a warmline consultation service to provide MDR/XDR/TB/HIV clinical management guidance to providers.

ACTIVITY 8: TB/HIV Strategic Plan

Funds will be used to support the implementation and monitoring of the TB/HIV strategic plan for South Africa PEPFAR partners.

ACTIVITY 9: TB/HIV Laboratory Quality Assurance

In collaboration with the National Health Laboratory System (NHLS) and the National Institute of Communicable Diseases (NICD), funds will be used to strengthening quality assurance measures among laboratories and to strengthening existing and initiating new External Quality Assurance (EQA) programs related to HIV and TB diagnostics. Activities will support measures to strengthen reviews, measuring clinical performance, reporting indicators, and disseminating performance reviews for action.

ACTIVITY 10: TB/HIV Regional Laboratory Training Center (RLTC)

With the availability of significant HIV and TB technical and scientific resources within South Africa, NICD and NHLS are both well placed to continue to provide regional laboratory support within Sub-Saharan Africa in these areas. Funds will be used, in collaboration with NICD and NHLS to expand and strengthen existing TB and HIV regional support mechanisms and enhance further collaboration with other PEPFAR-funded countries through the established RLTC. Regional support will include TB and HIV related laboratory services and training initiatives.

Activity Narrative:

ACTIVITY 11: TB/HIV Laboratory capacity

In collaboration and with support from the NDOH, PDOH, NHLS, and NICD, funds will be used to increase the national coverage of HIV and TB diagnostics and treatment monitoring capabilities. Efforts will also include strengthening laboratory reporting systems and specimen transport needs in support of rural clinics and laboratories. Efforts will focus to address existing gaps in laboratory testing outreach and penetration.

ACTIVITY 12. Laboratory Policy Standards

In collaboration and with support from the NDOH, PDOH, NHLS, NICD, National Institute of Occupational Health (NIOH), South African National Accreditation System (SANAS), and the Medical Research Council (MRC), funds will be used to encourage and support the development and implementation of a South African National Laboratory Strategy Plan. The plan will provide the vehicle for establishing minimum standards and/or requirements for any laboratory (public/private) that performs tests on human specimens and certify through issuance of a certificate those laboratories that meet the certificate requirements. Efforts will also attempt to synchronize infection control standards and policies across all TB/HIV laboratories.

ACTIVITY 13: New TB/HIV Automation and Technologies

In collaboration and with support from the NHLS and NICD through co-funding, funds will be used to assess existing, validate, and implement new automated laboratory diagnostic equipment and high capacity instrumentation for TB and HIV. Activities will be carried out to increase laboratory through-put for infant PCR, viral load, and TB diagnostics to meet increased demand, as well as strengthening NHLS's ability to improve diagnostic, reporting and surveillance activities in relation to TB and HIV.

7.1 Number of service outlets providing treatment for tuberculosis (TB) to HIV-infected individuals (diagnosed or presumed) in a palliative care setting	N/A	True
7.2 Number of HIV-infected clients attending HIV care/treatment services that are receiving treatment for TB disease	N/A	True
7.3 Number of individuals trained to provide treatment for TB to HIV-infected individuals (diagnosed or presumed)	N/A	True
7.4 Number of registered TB patients who received HIV counseling, testing, and their test results at a USG supported TB service outlet	N/A	True

Indirect Targets

USG staff support the national TB program to improve integration of TB/HIV services and increase TB treatment uptake. PEPFAR funds also support the TB surveillance system.

Program Area: Palliative Care: TB/HIV
Budget Code: HVTB
Program Area Code: 07
Activity ID: 7856.08
Planned Funds: $407,400
Activity System ID: 14003

Activity Narrative: SUMMARY:

MSH has been awarded the RPM Plus follow-on: Strengthening Pharmaceutical Systems (SPS), therefore all RPM Plus activities for FY 2008 will be undertaken by SPS. SPS will assist the National Department of Health TB sub-directorate to strengthen drug supply management for TB and more specifically the management of TB patient on ARVs by training health workers supporting the TB program on clinical pharmacology related to TB/HIV coinfection, and improving infection control, adherence monitoring, adverse drug-event reporting, medication errors and referral system(s) at selected government institutions (hospitals, community health centers, primary health care clinics). SPS will also train pharmacists on estimating requirements for ARV and TB medicines. The major area of emphasis include training and task shifting, as pharmacists and pharmacist assistants will take on greater roles in TB/HIV care.

BACKGROUND:

RPM Plus has been working very closely with the National Department of Health Pharmaceutical Policy and Planning Directorate since 2004 to support the delivery of pharmaceutical services at all levels (national, provincial, district, institutional). This included training TB provincial coordinators (and pharmacists) on Drug Supply Management for TB in collaboration with the National TB sub-directorate. The coexistence of TB and HIV infections has made the treatment of patients on ARVs more complex and health personnel need to be trained to manage it. Moreover, a national plan has been developed to address what has been described as the "TB Crisis," making TB and HIV management a priority. The smear negative rate at the end of treatment in South Africa, 51%, remains well below the WHO target of 85%. These smear positive patients remain infective and continue to spread TB; people infected with HIV are particularly vulnerable to acquiring TB. It therefore follows that against the background of the high HIV prevalence rate in South Africa it is important to reduce the infectious reservoirs within the community. Currently only 63% of patients complete their course of treatment and the South African Medical Research Council estimates that 6.7% of previously treated patients are resistant. The financial burden of multidrug-resistant TB (MDR-TB) is considerable -- the usual course of treatment costs approximately $60 while that of MDR is approximately $3,500. In addition the social impact is considerable as these patients are hospitalized in isolation facilities for long periods of time. Recently extensively drug-resistant (XDR-TB) has been identified in South Africa which requires highly specialized treatment facilities and medicines. In December 2005, RPM Plus published the "Managing Pharmaceuticals and Commodities for Tuberculosis; A Guide for National Tuberculosis Programs". This publication was shared with the National TB sub-directorate and they have expressed interest in using these guidelines to support their own program. All these activities will be conducted in close collaboration with the directorates dealing with TB, HIV and AIDS and Quality Assurance at the National level. The Department of Correctional Services and local governments have requested support from SPS to strengthen the role of pharmacy personnel in supporting the TB program.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Drug Supply Management for TB

RPM Plus has experience with ARV supply management in South Africa. As other projects are involved in the actual patient care and medication administration, SPS will assure that the medications are where they need to be and tracked appropriately. SPS will perform a similar function in the TB/HIV program area. In FY 2007 RPM Plus adapted the Drug Supply Management for TB training material they developed to include topics related to the treatment of TB patients on ART. The training program covers clinical pharmacology principles and other relevant issues such as: drug-to-drug interactions between Rifampicin and different classes of ARVs; immune reconstitution inflammatory syndrome (IRIS); rationale for changing ART regimen in the presence of TB; assessment of tolerance to TB drugs; increased toxicity; adherence to both ARV and TB treatment; and counseling. One National and nine provincial workshops will be conducted for doctors, pharmacists, and nurses involved in the management and implementation of the National TB program. The integrated computerized drug supply management system developed by RPM Plus (RxSolution) will be implemented at selected TB hospitals. The implementation of this system will assist these institutions in providing data for the National TB indicators; this will also assist in validating the data captured on the National Electronic TB Register (ETR) for these facilities and provide detailed information on patient treatment. This activity will assist with the overall monitoring and evaluation of the TB program.

ACTIVITY 2: Adherence to Treatment and Rational Use of Medicines

SPS will directly assist selected institutions that are providing TB treatment to implement adherence monitoring systems for TB patients on ARVs. This will include recognition, treatment and reporting of adverse drug events (ADR) and medication errors reporting, and quality improvement strategy. The institutions will be selected in consultation with provincial DOH, and will most likely be located in Eastern Cape, KwaZulu-Natal, and Gauteng – priority provinces in the National TB Crisis Plan. SPS will also strengthen the referral system for TB patients to access ARVs. SPS will provide assistance to the Eastern Cape and Mpumalanga provincial Departments of Health to develop and pilot a standardized adherence package for TB patients. The ARV adherence assessment tool recently developed by RPM Plus will be adapted by SPS for use in TB patients by both the patient as well as the treatment supporter. Training will be provided to staff in the application of the adherence package for MDR and XDR-TB patients. Finally technical support will be provided to the MDR-TB facilities in order to improve referral mechanisms, comply with regulatory requirement pertaining to XDR treatments, reporting and quality improvement of medication errors and the reporting and management of adverse drug events. In 2006 RPM Plus medication error surveillance systems identified an ongoing trend of prescribing errors in hospitalized TB patients. In order to further define the required rational prescribing interventions, Drug Utilization Reviews (DUR) will be conducted at selected sites. The findings will then be used in the planning and execution of a TB rational prescribing intervention at the hospital level. This is significant because an increasing number of patients who are HIV-infected require initiation of TB treatment at the hospital level. The piloting of the DUR tool has revealed deficiencies in the pharmacy discharge procedures and patients are sent home with treatment without the necessary referral to DOTS. SPS will develop guidelines to improve referral to DOTS supporter. In the Eastern Cape SPS will use the Medicines Information center at Rhodes university to provide patient and prescribing information for MDR and XDR-TB medications. Furthermore this service will provide support to pharmacists and prescribers in assessing drug interactions. SPS will be training pharmacy personnel (and other health workers) on the management of both TB and HIV/AIDS (see ARV Services) to

Activity Narrative: support the national effort in integrating TB and HIV programs within the national health services.

ACTIVITY 3: Quantification

The management of TB in HIV-infected patients is critical since TB is the number one opportunistic infection and the leading cause of death for HIV-infected clients - making the availability of TB medicines critical. SPS will train provincial and district pharmacists in the use of morbidity-based quantification models for the quantification of TB medicines using TB National Standard Treatment Guidelines (STGs). Pharmacists will be trained. This activity will also assist in monitoring prescription trends against National TB STGs.

ACTIVITY 4: TB/HIV Infection Control

TB infection control, given the high burden of HIV co-morbidity, has been identified as a critical area needing support. RPM Plus has developed an Infection Control Assessment Tool (ICAT) which will be used to assess infection control practices in these settings. SPS will train health workers on implementing TB infection control measures and procedures at facilities where TB/HIV services are provided. As a follow-up an Infection Control improvement plan will be developed to address gaps identified using the ICAT. Opportunities to work with other PEPFAR partners will be explored. This is done in collaboration with the National Department for Quality Assurance.

All these activities contribute to the PEPFAR 2-7-10 goals by improving the treatment of patients with TB and HIV infection and supporting the national effort in dealing with the “TB crisis”.

Targets

Target	Target Value	Not Applicable
Indirect number of service outlets providing clinical prophylaxis and/or treatment for tuberculosis (TB) for HIV-infected individuals (diagnosed or presumed) in a palliative care setting	N/A	True
Indirect number of HIV-infected individuals (diagnosed or presumed) who received clinical prophylaxis and/or treatment for TB during the reporting period	240,000	False
Indirect number of individuals trained to provide clinical prophylaxis and/or treatment for TB to HIV-infected individuals (diagnosed or presumed)	N/A	True
7.1 Number of service outlets providing treatment for tuberculosis (TB) to HIV-infected individuals (diagnosed or presumed) in a palliative care setting	N/A	True
7.2 Number of HIV-infected clients attending HIV care/treatment services that are receiving treatment for TB disease	N/A	True
7.3 Number of individuals trained to provide treatment for TB to HIV-infected individuals (diagnosed or presumed)	450	False
7.4 Number of registered TB patients who received HIV counseling, testing, and their test results at a USG supported TB service outlet	N/A	True

Indirect Targets

By training 50 health workers (pharmacy personnel and nurses) to support TB/HIV services; SPS will indirectly strengthen service delivery for the overall TB program in the provinces. In addition, SPS will be supporting the TB program on clinical pharmacology related to TB/HIV coinfection, and improving adherence monitoring, adverse drug-event reporting, medication errors and referral system(s) at selected government institutions (hospitals, community health centers, primary health care clinics). Quantification will also indirectly support all patients enrolled in the national TB treatment program.

Program Area Code: 07

Activity ID: 16335.08

Planned Funds: $0

Activity System ID: 16335

Activity Narrative: Title: Patient Outcomes and Management Practices: A Comparison of Proposed 2006 WHO Guidelines for the Diagnosis of Smear-Negative Pulmonary Tuberculosis against Current Practice in KwaZulu-Natal, South Africa

Timeline and money: After appropriate approvals of the evaluation (still ongoing), the evaluation will last approximately 12 months: one month of staff training; six months of data collection; two months of patient follow-up for each patient cohort (to occur simultaneously with patient enrollment, when applicable); and three months of data close-out, analysis and reporting. Total budget: no cost extension.

Local Co-investigator: Dr. Douglas Ross, Edendale Hospital, Pietermaritzburg, KZN, South Africa and Local in-country implementing partner (to be named)

Project Description: Local implementing partner (to be named), in collaboration with three healthcare facilities in KwaZulu-Natal Province (Edendale Hospital (Pietermaritzburg), McCord Hospital (Durban) and St. Mary's Hospital (Mariannhill)), will continue to conduct an observational evaluation to assess the diagnostic utility of the newly proposed WHO guidelines for the diagnosis of smear-negative TB among hospitalized, seriously-ill adult TB suspects with HIV infection. Specific patient and clinical management outcomes among patients managed using the WHO algorithm will be compared to these same outcomes among hospitalized, seriously-ill TB suspects managed with current practices at each collaborating facility.

Evaluation Question: Through this evaluation the partner will attempt to answer the following study questions in regards to patients managed using current medical practices vs. the proposed 2006 WHO algorithm:

1.Is there a significant difference in the proportion of patients surviving to completion (i.e., report of final results) of diagnostic evaluation?

2.Is there a significant difference in the proportion of patients discharged from the hospital due to medical improvement at 3 weeks after admission?

3.Is there a significant difference in the proportion of patients for whom the diagnosis of SNPTB agrees with blood and/or sputum Mycobacterium tuberculosis (MTB) culture results (i.e., algorithm sensitivity and specificity)?

4.Compared with current practices at each hospital, is the 2006 WHO algorithm more, less, or equally acceptable to healthcare providers and staff in regards to perceived time, human resource and material resource requirements (to be assessed via surveys)?

We will conduct an observational evaluation to assess the diagnostic utility of the WHO SNPTB guidelines proposed in 2006 among hospitalized, seriously-ill adult TB suspects with HIV infection. Seriously-ill HIV infected TB patients are a medically vulnerable population in whom the timing and sequence of clinical management decisions are particularly critical to patient survival. Additionally, hospitalized seriously-ill patients are an accessible group whose clinical management is more easily controllable compared to non-hospitalized patients. By assessing seriously-ill TB suspects the partner hopes to yield information that will improve the survival rates of this population.

Programmatic Importance/Anticipated Outcomes: The knowledge generated from this assessment will be used by the provincial and national TB programs, and potentially by other local organizations, to support decisions on the implementation of new international recommendations. Hopefully, this knowledge will also result in increased survival rates among seriously-ill, HIV-infected persons with suspected, and confirmed, TB.

Methodology: This evaluation will involve seriously-ill adult TB suspects with HIV infection. One cohort will be patients managed using the proposed WHO algorithm, and the second cohort will be patients managed with current hospital practices. All study participants will be identified from the inpatient services of the participating facilities. Healthcare facilities routinely collect standard data about patients. The extent of such routine data collection varies depending on facility and provider practice. Separate study-specific forms will be used to collect data about the patient's demographic features, recent clinical history, past medical history, and specific laboratory and diagnostic test results (e.g., sputum AFB smear, sputum and blood mycobacterial culture, chest radiograph, CD4 T-lymphocyte cell count) relevant to TB disease and HIV infection. Data elements will be collected using three, newly-created, study-specific forms that will be managed by the evaluation's data extractors and project coordinator.

Population of Interest: The partner will enroll study participants who have received a diagnosis of HIV infection within 60 days of current admission. They will identify study subjects from three hospitals in KwaZulu-Natal (KZN), a province in the southeastern portion of South Africa that includes the city of Durban, South Africa's second largest city. In KZN the estimated HIV prevalence in pregnant women was 40.7% in 2004- the highest of all of South Africa's provinces.

Budget Justification: The bulk of the evaluation's cost will be for the requisition of human resource/staffing and laboratory support. Additional costs will be needed for the use of printing and photocopying services (for data collection elements) and staff travel, between facilities. Evaluation-specific personnel will be required to collect data from patient records, as well as to coordinate evaluation procedures from within South Africa. Budget estimates include salary and transportation support for these staff members. Both blood and sputum mycobacterial cultures will be obtained as part of this evaluation. Blood mycobacterial cultures, in particular, require processing at private laboratory facilities, at considerable expense, per specimen.

Information Dissemination Plan: The evaluation will be conducted with cooperation from the National Department of Health and the Provincial TB Programme as well as the National Health Laboratory Service. Results will be disseminated to the selected sites, the province, and the national TB programme via a report and presentations.

Activity System ID: 16338

Activity Narrative: Title: Enhancing Diagnosis of Multidrug-resistant Tuberculosis in HIV-infected Patients
Time and Money: This project was approved in COP07 but has not yet begun. Evaluation sites are still being chosen. After logistical arrangements have been made and the appropriate protocol clearances have been obtained, the evaluation is expected to be completed in a 6 month time period. Total estimated budget: no cost extension
Local Co-investigator: Local in-country implementing partner (To be determined)
Project Description: Study will evaluate the implementation of enhanced diagnostic techniques to diagnose multidrug-resistant TB (MDR-TB) and extensively drug-resistant TB (XDR-TB) in HIV-infected TB patients. In selected sites in a high-HIV prevalence setting, all HIV-infected and un-infected TB patients will undergo early culture and drug susceptibility testing (DST) at diagnosis to enable earlier detection of MDR-TB and XDR-TB in the initiation of anti-tuberculosis therapy. Expands upon TB program policy of performing culture and DST in patients who are smear-positive after two months of TB treatment, are re-treatment patients, or are high-risk contacts of other MDR-TB patients.
Evaluation Question: MDR-TB is more difficult and costly to treat, and MDR-TB patients have worse outcomes than patients with drug-susceptible TB. The association between MDR-TB and HIV is unclear, but a recent study in KwaZulu-Natal has found a higher prevalence of MDR-TB than previously recognized. In addition, this study found that all patients enrolled with resistance to isoniazid, rifampin, as well as kanamycin and ofloxacin (XDR-TB) were HIV-infected. There was significant evidence of nosocomial MDR-TB transmission occurring in the study site. As HIV-infected individuals often have weakened immunity, nosocomial transmission of TB is of increased concern for this population. The proposed evaluation intends to examine the number of MDR-TB cases diagnosed at the start of TB treatment in HIV-infected TB patients as compared with HIV-uninfected TB patients.
Programmatic Importance/Anticipated Outcomes: Results will be used to describe the rates of MDR-TB and XDR-TB in selected study sites, implement infection control guidelines in the evaluated facilities, and make recommendations for diagnosis and treatment of MDR-TB and control of nosocomial transmission of TB and MDR-TB in high HIV prevalence settings. In addition, the evaluation will strengthen the networks between the study sites and the laboratory.
Methods: The partner proposes to conduct this evaluation in 2 sites in South Africa. The chosen sites will, as a prerequisite, be conducting provider-initiated HIV counseling and testing, and as such, most of the study population will know their HIV status. Sputum samples will be collected from all TB suspects and newly diagnosed (according to South Africa national guidelines) TB patients from January-March 2008. Sputum specimens will be cultured and DST against first-line drugs will be performed for all study participants at diagnosis to determine resistance patterns and the proper treatment regimen. Isolates found to be resistant to isoniazid and rifampicin will be sent for drug susceptibility testing against second-line drugs.
For those patients found to have MDR-TB at diagnosis, an individualized treatment regimen will be designed and best practices for MDR-TB treatment will be followed. In addition, each subsequent sputum sample for MDR-TB patients will be cultured (every other month as required by WHO guidelines). All lab services will be performed at an NHLS laboratory. A data abstraction form will be developed to collect pertinent demographic information and to record laboratory results. In addition, current infection control practices will be assessed in each site
Population of Interest:
HIV-infected TB suspects and newly diagnosed TB patients
HIV-negative TB suspects and newly diagnosed TB patients
As this project is intended to be a demonstration of the use of enhanced diagnostic techniques to identify cases of MDR-TB in a high-HIV prevalence setting at the time of TB diagnosis, a sample size will not be calculated. The partner is applying appropriate diagnostic techniques for diagnosing TB in a population with a high rate of HIV infection, with the express purpose of MDR-TB case finding. All eligible patients will be enrolled in the study during the 3-month timeframe.
Information Dissemination Plan: The evaluation will be conducted with cooperation from the National Department of Health and the Provincial TB Program, as well as NHLS. Results will be disseminated to the selected sites, the province, and the national TB program via a report and presentations.
Budget: This submission is a no-cost extension of 2007 funds. The total budget is 100,000.

Activity Narrative: Title: Improved HIV Screening among Pediatric TB Patients (< 18 years old) in Community Health Care Centers
Time and Money: Initial planning for this COP07 approved project has recently begun. After logistical arrangements have been made and the appropriate protocol clearances have been obtained, the evaluation is expected to be completed in a 6 month time period. The proposed start date for project is Jan 2008. Total estimated budget: no cost extension from COP07
Local Co-investigator: Nulda Beyers, Desmond Tutu TB Research Center, Stellenbosch University, Cape Town, South Africa
Project Description: Estimates of HIV-1 coinfection among children with TB in Africa vary from 13% to 70%. Given the high prevalence of HIV in South Africa and the high morbidity and mortality associated with TB coinfection, earlier identification and treatment of HIV in children with TB will lead to improved outcomes. This project will evaluate current HIV screening and referral activities in community health care centers caring for pediatric (<18 yo) TB patients. The partner will assess the proximity, availability, and accessibility of HIV counseling and testing facilities for pediatric TB patients as well as frequency of counseling and testing. They will also evaluate perceptions of pediatric patients (as appropriate for age) and their caregivers/families as well as those of healthcare workers regarding acceptability, availability and interest in HIV testing.
Evaluation Question: This project will evaluate current HIV screening and referral activities in community health care centers caring for pediatric (<18 yo) TB patients. The partner will assess and improve the proximity, availability, and accessibility of HIV counseling and testing facilities for pediatric TB patients as well as frequency of counseling and testing.
Programmatic Importance/Anticipated Outcomes: This project will result in improved surveillance of HIV among children with TB and a better understanding of potential barriers and opportunities to identifying HIV coinfection in children with TB that will inform strategies to improve HIV counseling and testing, treatment, and care in this vulnerable, often overlooked population.
Methods: Evaluation will include both quantitative and qualitative components. Quantitative components will include a) analysis of pediatric/adolescent data collected by the Zamstar project - both before and after implementation of new policy of HIV testing for pediatric TB patients (eg. 4th quarter 2006 and 4th quarter 2007), and b) folder (medical record) review to determine where HIV testing done.
The qualitative component will include key informant interviews and/or focus groups (parents/caregivers, adolescents, healthcare workers (eg. nurses, doctors, TB program staff, VCT staff)) at a subset of clinics.
Population of Interest:
Ages included in this study will be less than 18 year old TB patients with analysis/reporting, at a minimum, done by WHO age categories of 0-4yrs and 5-14yrs plus 15-17yrs. In addition, a sample of healthcare workers from each clinic will be interviewed.
Information Dissemination Plan: The evaluation will be conducted with cooperation from the National Department of Health and the Provincial TB Program, as well as Desmond Tutu Research Center. Results will be disseminated to the selected sites, the province, and the national TB program via a report and presentations.
Budget: This submission is a no-cost extension of 2007 funds. The total budget is 75,000.

Funding Source: GHCS (State)

Program Area: Palliative Care: TB/HIV

Budget Code: HVTB

Program Area Code: 07

Activity ID: 7666.08

Planned Funds: $533,500

Activity System ID: 16858

Activity Narrative: SUMMARY:

Management Sciences for Health/Integrated Primary Health Care Project (IPHC) in collaboration with the NDOH and respective PDOH will support the provision of basic care and support to those who have tested positive in 80 public health facilities (hospitals and clinics) in 8 districts in 5 provinces (Eastern Cape, Mpumalanga, KwaZulu-Natal, Limpopo and North West). IPHC project supports the mission of the South African Government -National Department of Health (NDOH) in the prevention of the spread of HIV, STI and TB infections as well as the mitigation of the impact of dual infection of HIV and AIDS and TB epidemic in the country. The target population will be men and women (of reproductive age), family planning clients, pregnant women (including HIV-infected women), PLHIV, HIV and AIDS-affected families, caregivers of OVC and PLHIV, and nurses and other health care workers. The emphasis area for this activity is human capacity development through training.

BACKGROUND:

This activity is a continuation of FY 2007. IPHC project will be guided by the NDOH Comprehensive Plan for HIV and AIDS and the National TB Crisis Plan to improvement of quality in HIV and AIDS, STI and TB (HAST) collaborative activities by ensuring compliance to TB/HIV policies and guidelines One of the major challenges currently is the collection of quality data to monitor implementation of TB/HIV collaborative activities. IPHC will support districts to develop and strengthen HAST committees by training the committees to conduct regular reviews of the HAST program to monitor progress towards targets., To improve flow of data and capturing of this to ensure accurate reporting of activities, IPHC will assist provinces and districts by training health care workers on the TB Recording and Reporting Systems including data management. Screening for TB in HIV-infected and offering VCT to TB clients will be intensified to ensure that the number of TB clients who are tested is increased. IPHC will support the eight districts in the 5 provinces in improving the TB management by training the supervisors to support the TB/HIV and AIDS programs. This will provide in-depth reviews and identify gaps that can be addressed to improve the quality of care. The IPHC project will partner with TASC-II TB Project in implementing these activities.

Community awareness strategies form one of the pillars of the National TB Crisis management plan. To improve compliance to TB treatment and improve treatment outcomes. IPHC will work with health care workers and NGOs in the 5 provinces to intensify strategies to improve patient adherence to treatment. With the lessons learnt from the ARV Programs, DOT Supporters, Lay Counselors and other community-based organizations will be trained on adherence counseling.

Patient follow up is a challenge in many parts of the country especially in rural settings. Systems currently in place are not well structured to ensure continuity of care. (not sure what to suggest here but need to talk of strengthening follow up systems maybe develop patient recall system, work on back referral processes, but for MDR patients, IPHC is working on a system where there will be a central register, patients have to go back to the center monthly through province making the arrangements for this. There are also issues around the implementation of an infection control policy and TASC TB has worked with the NTCP in developing infection control guidelines)

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Training

In FY 2008, IPHC will train 500 health care providers in 8 districts on TB diagnosis, HIV counseling and testing of TB clients, treatment and adherence to treatment by PLHIV with active, screening for TB symptoms in all PLHIV. IPHC will strengthen DOTS at the community level by monitoring treatment compliance and contact tracing. IPHC will ensure that TB screening and treatment is initiated at primary health care facilities. The continuity of care provided through the DOTS program will be strengthened by ensuring the availability of treatment regimens at facility levels. IPHC will provide HIV, AIDS and TB clinical management training to health care workers using the national treatment guidelines and the treatment care and support policy of the NDOH.

ACTIVITY 2: Integrating Services

Integration of services through the HAST committees will be strengthened with DOT supporters' full participation as members of HAST committees. IPHC will monitor the attendance registers from the meetings to ensure there is consistent participation from DOT supporters. IPHC will ensure that TB and HIV and AIDS programs are not stand alone services but are fully integrated with other Primary Health Care (PHC) services. Working with managers and supervisors at primary, secondary and tertiary level, IPHC project will strengthen the referral system to ensure continuity of care. Tangible networks will be established between DOT supporters and community home-based care (CHBC) so as to facilitate enhanced community healthcare and referral.

ACTIVITY 3: Human Capacity Development

Human capacity development of professional and non-professional staff will be a focal area to ensure professionals and non-professionals are kept up to date on recognizing and detecting drug interactions and improving record keeping of all TB clients. Since every TB client has to be tested for HIV, record keeping is critical in monitoring the status of each client. Training and on-site mentoring will be provided to facilitate rapid scaling-up of HIV counseling and testing (CT) of TB clients and also to encourage sustainability of these activities. The quality of the TB management will be monitored on fortnight basis to ensure that the clients continue with their TB treatment and are tested, and if positive, monitored so they can access ARVs. IPHC will provide supportive follow up to ensure that the health providers are implementing the NDOH TB Policy and referring TB clients for HIV counseling and testing. IPHC will also strengthen supervision of facilities through training of supervisors on TB/HIV program management, and support district and facility-level supervisors through regular “program indicators monitoring” meetings

FY 08 COP activities will be expanded to include:

Activity Narrative: -IPHC will conduct in-depth programs review and training on TB data management at the facility
-Closely monitor the TB program indicators and progress towards outcomes (register for case finding, treatment interrupters, treatment failure rates)
-Monitor sputum collection intervals and turn around time
-Increase HIV screening for all TB clients
-Increase the number of TB clients who receive cotrimoxazole prophylaxis

This activity will be achieved by using the In-Depth TB review tool from the Clinic Supervisors Manual. The reviews help to identify quality management gaps e.g. availability of equipment, like sputum jars, adherence to Guidelines, protocols that need to be followed to ensure that the TB program is well managed. Improved recording will result in identifying drop outs and TB defaulters. Linking with home-based carers and Directly Observed Treatment Supporters (DOT Supporters), IPHC will decrease defaulter rates. This will be achieved by training the health professionals and the DOT supporters on adherence counseling. One of the strategies, currently used by IPHC, is to facilitate quarterly district reviews of TB data, where all the TB data is reviewed by the district team. Team members learn from each other the strategies for improving the program, with the support of the IPHC project.

IPHC activities contribute to the PEPFAR goal of providing care to 10 million HIV-affected people. In addition, these IPHC activities will address the priority area of increased linkages between TB/HIV services and health systems networks from the USG Five-Year Strategy for South Africa.

Activity Narrative: Title of study:
A preliminary study of screening for tuberculosis in a South Africa Correctional Facility

Expected timeframe:
June 2007 – June 2009 (Please note that this timeline is already delayed as the protocol development has not been completed)

June 2007 – December 2007: Protocol development; Submission for ethical approval; Development of participant information sheet and data collection forms

January 2008 – March 2008: Sourcing screening tools (sputum microscopy, culture and drug susceptibility testing, CXR, urine test for HIV and LAM testing); Translation of all forms into relevant languages; Piloting of all relevant forms; Design of database; Appointment of research nurses; Training of research nurses; TB awareness campaigns within the correctional facility

April 2008 – December 2008: Recruitment of participants; Follow up of participants

January 2009 – May 2009: Finish follow up of participants; Begin write up of papers; Analysis of initial data

May 2009 – June 2009: Finish analysis of data; Finish write up of report; Dissemination of results

Total Projected Budget: $109,000

Local Co-Investigators:

Aurum Institute for Health Research:

b) Dr. Mikateko Shisana: Study design, study management, negotiation with relevant authorities, data analysis, report writing
c) Dr. Salome Charalambous: Study design, advice on study implementation, data analysis, report writing, managerial oversight and support at the site
d) Professor Gavin Churchyard: Study design, advice on study implementation

Chris Hani Baragwanath Hospital:
a) Dr. Alan Karstaedt: Study design, advice on study implementation

Department of Correctional Services:
a) Dr. Gladys Nthageni: Study design, advice and assistance with implementation and support at the site
b) Dr. David Mathabathe: Study design, advice and assistance with implementation, support at the site and liaison with prison authorities

London School of Hygiene & Tropical Medicine:
a) Dr. Alison Grant: Study design, advice on study implementation, data analysis, and report writing
b) Dr. Katherine Fielding: Study design, advice on study implementation, data analysis, and report writing

Project Description:
Correctional facilities provide a unique environment for the spread of tuberculosis. Currently in South African correctional facilities, all new enrollees are seen by the medical team and screened for tuberculosis using past history and current symptoms. We propose to actively screen a representative population of the Johannesburg correctional facility, and we will also be offering screening to the staff, to determine the prevalence of tuberculosis, among the offenders, and the staff. This will give a more accurate picture of the burden of the disease and aid the control program by demonstrating how best to use new and existing screening tools.

Evaluation questions:
Primary objective: Determine the prevalence of active tuberculosis among offenders in the Johannesburg correctional facility in South Africa.

Secondary objectives:
a) Determine the proportion of prevalent TB that is undiagnosed
b) Comparing screening methods (symptoms, CXR, sputum microscopy, sputum culture and the new urine LAM – Mycobacterial Lipoarabinomannan testing) to determine the optimal screening tool for active TB among offenders
c) Investigate risk factors for prevalent TB, including HIV infection
d) Explore the prevalence of drug resistant TB
e) Explore the prevalence of TB among correctional facility staff that have volunteered to be tested

Anticipated study outcomes:
The results of this study will give a more accurate picture of the burden of tuberculosis within the correctional facility. Screening will be done using a symptom questionnaire, sputum for microscopy and culture, chest X-ray and the new urine Lipoarabinomannan test. Study participants will also we offered testing for HIV. These results will aid the control programme by demonstrating how best to use new and existing screening tools or tuberculosis. This, will not only improving the health of the offenders but also the health of the staff.

The new experimental urine LAM (Mycobacterial Lipoarabinomannan) test for TB will be used in this study, and its sensitivity and specificity and positive and negative predictive values will be calculated. This may guide the future use of this tool in screening for tuberculosis.

Methods:
Following informed voluntary consent, all study participants will be screened for TB using a questionnaire (with information on demographics and symptoms of active tuberculosis), two sputum specimens for microscopy and culture, a chest X-ray and a urine specimen for LAM testing.

Activity Narrative: All study participants will be offered voluntary counselling and testing for HIV. If consent is provided, a rapid test will be performed, and the results made available to the individual. The results of the rapid test will not be used in the study. A second urine sample will be collected, for research purposes, if consent is provided. It will be anonymously linked to the data gathered and will be anonymously tested for HIV. The results of the urine tests will not be given to the study participants.

Any participant with a positive result on screening for TB will be recalled and reviewed with a further symptom screen, two further sputum samples for microscopy and culture and a repeat CXR, for evidence of active TB. All positive results obtained for an offender will be made available to the medical unit at the correctional facility, so that they can be further evaluated and treated if appropriate.

If a diagnosis of TB has been made, we will ask the health services staff at the correctional facility to collect extra information for these offenders on a study questionnaire, at 2 months, to judge response to treatment. All offenders will have their medical records reviewed at 3 and 6 months, and if necessary at a later stage, to see if they have been diagnosed with TB or any other condition.

If treatment is required for a staff member, a referral letter will be written to their preferred provider. With their permission, we will contact staff members at 3 and 6 months to see if they have been diagnosed with TB or any other condition.

The duration of recruitment will be April 2008 to December 2008 (9 months). Follow up of medical files will be completed by May 2009.

Population of Interest:
The setting is a Medium B, Johannesburg correctional facility in Johannesburg, South Africa. The population studied will be:
a) A representative sample of the Medium B, correctional facility population – both new admissions and currently incarcerated offenders who have already been sentenced
b) All “members” (staff) working in Medium B of the facility (total estimated at 200-300) will be offered confidential screening on a voluntary basis

The sampling procedure will be as follows:

OFFENDERS – Medium B: Total Sample Size 1000
Group 1:
a) New Entrants
b) Sample size 500
c) Consecutive new admissions

Group 2:
a) Sentenced Incarcerated Offenders
b) Sample size 500
c) Random sample from a list of existing offenders with a predicted stay greater than 6 months

STAFF – Medium B
All staff members will be offered confidential screening on a voluntary basis

Dissemination Plan:
All data will initially be presented to the Department of Corrections. Following this, we aim to present the preliminary data at an appropriate conference and to publish the findings in a peer reviewed journal if appropriate.

Budget for Year 1:

Object Classification Amount
Salaries/Fringe benefits $54,500
Equipment $0
Supplies $16,500
Travel $0
Participant Incentives $0
Laboratory testing $31,500
Other $6,300
Total $109,000

Planned Funds: $15,524

Activity System ID: 19530

Activity Narrative: SUMMARY:

CARE serves as an umbrella grant making mechanism for the Centers of Disease Control. CARE has been an umbrella grants mechanism since FY 2006. CARE's primary responsibility is for the financial oversight of the grant which includes review of the financial reports and on-site assessment of the supporting documentation. CARE does not provide programmatic level technical assistance to the sub-grantees. Technical assistance and programmatic over-site is provided by CDC activity managers. The specific activities that CARE is responsible are listed below. CARE will oversee the sub-grant to UKZN CAPRISA.

ACTIVITIES AND EXPECTED RESULTS

ACTIVITY 1: Contractual Responsibilities

CARE is responsible for the contractual arrangements of the sub-grants with CDC South Africa. These arrangements include application for funding for implementation of activities by the sub-grantees that have been approved by CDC South Africa to meet the PEPFAR goals. CARE will prepare all supplemental and continuation application, and ensure that progress reports are received by the sub-grantees. CDC activity managers will be responsible for the technical review of the sub-grantees; thus targets met by the sub-grantees for the PMTCT program will not be assigned to CARE.

ACTIVITY 2: Financial Oversight

CARE is responsible for the financial oversight of the sub-grants. This activity includes the review of financial reports submitted by the grantees on quarterly/6-monthly basis; and on-site assessment of the supporting documents to ensure compliance with the contract. These on-site assessments will be conducted on a 6-monthly basis. CARE will also ensure progress reports are received from the sub-grantees and approved by the activity managers of CDC South Africa on a quarterly/6-monthly basis prior to the disbursement of continuation funding.

Although these activities do not directly contribute to the overall PEPFAR goals and objectives, the Umbrella Grants Mechanism ensure that PEPFAR support can be given to small and medium-sized organizations, enabling them to facilitate the achievement of the PEPFAR 2-7-10 goals.

Activity Narrative: Summary

The University of Western Cape (UWC) is implementing multiple activities aimed at improving human capacity development to address HIV and AIDS in South Africa.

BACKGROUND

The 2004 report of the Joint Learning Initiative on health human resources states that "after a century of most spectacular health advances in human history, Human survival gains are being lost because of feeble national health systems. The HIV and AIDS emergency has undoubtedly contributed to this problem, particularly in South Africa. The pressure on health care workers is immense and with the crisis of attrition and out-migration of personnel, systems in South Africa are challenged as never before. This has been placed in stark relief by the urgent need to respond to HIV and AIDS epidemic, and especially the current imperative to deliver antiretroviral therapy (ART) to large numbers of sick people who are often living in areas where health systems have been poorly developed. This project focuses on strengthening and expanding the development and implementation of comprehensive HIV and AIDS prevention in South Africa in order to mitigate the impact of the HIV and AIDS epidemic. The emphasis area for these activities is human capacity development, training, including pre-service and in-service training. The minor emphasis area is local organization capacity building. Target populations include public and private sector health care workers and youth attending secondary schools.

ACTIVITIES AND EXPECTED RESULTS:

HIV and AIDS require a comprehensive approach with a view beyond the health system. Consistent with this approach, the activities in this program area demonstrate a multi sectoral approach to targeting a variety of health professionals. There are two separate activities in the program area.

Activity 1: A web resource to support TB/HIV Clinicians in South Africa

TB is the most common opportunistic infection and most important cause of death in people infected with HIV in South Africa. Information for clinical management of multiple drug resistant TB (MDR), and extensively drug resistant TB (XDR) is changing very quickly and it is difficult for clinicians to access this information. This project will develop and pilot a remote web-assisted consultation service for TB/HIV will diagnosis and treatment. This service will build the capacity of clinicians in Southern Africa to provide optimal TB/HIV care. A specialist consultative service and information of relevance to clinicians necessary to support accurate TB/HIV diagnosis, treatment and palliative care will be provided as a single web-accessible system. The system will offer a web-based consultation service to which clinicians can send in questions on how to manage problem cases and receive responses from recognized experts. The site will provide links to existing clinical guidelines, a photo library with images of clinical presentations and relevant data-mined information of the most recent updates from scientific literature. 20 Clinicians from various service outlets dealing with TB/HIV will be trained in efficient use of the system and will participate in the pilot. The system will be modified after the pilot and 90 clinicians will be trained in the use of the final system.

Activity 2: Addressing TB/HIV through the development of health promoting schools

A holistic approach is needed to address TB/HIV effectively. The World Health Organization has noted that "the school is an extraordinary setting through which to improve the health of student, school personnel, families and members of the community." The UWC Health Promoting Schools Forum is a partnership between academics at UWC, the Western Cape Reference Group for Health Promoting Schools, the Western Cape Department of education (WCED) and the Western Cape Department of Health. This forum has been active in supporting the development of health promoting schools in the Western Cape. There are currently 130 health promoting schools in the Western Cape. WCED has identified 21 communities as being in particular need of multi-sectoral interventions through Western Cape Social Transformation program. The broad goal of this activity is to reduce the spread of TB/HIV in the school community. The specific aim of the activity is to build and strengthen human capacity among all in the school community. The purpose of this activity is to ensure the establishment of health promoting secondary schools, to facilitate the development of TB/HIV policies in the schools and to facilitate a process of developing healthy psychosocial and physical environment in the school community, and to improve knowledge in the school community related to TB/HIV.

These activities contribute to the PEPFAR 2-7-10 targets by building human capacity and ensuring the delivery of quality HIV/TB services.

HKID - OVC

Program Area:	Orphans and Vulnerable Children
Budget Code:	HKID
Program Area Code:	08

Total Planned Funding for Program Area: $52,372,549

Estimated PEPFAR contribution in dollars	$2,231,000
Estimated local PPP contribution in dollars	$8,066,652
Estimated PEPFAR dollars spent on food	$89,499
Estimation of other dollars leveraged in FY 2008 for food	$7,877,401

Program Area Context:

The South African (SA) HIV and AIDS epidemic continues to create a large number of children without adult protection, nurturing and financial support. Income poverty affects 55 percent of children, is most prevalent in rural disadvantaged provinces and is experienced most extensively by African children. Of South Africa's more than 18 million children, about 3.4 million children have lost one or both parents (18.6% percent of all children). Half of all orphans are living in KwaZulu-Natal (23%) and Eastern Cape (25%). Over 626,000 have lost both parents, and over 100,000 children are estimated to be living in child-headed households (CHH). The majority of children (75%) living in CHH are in Limpopo (39%), Eastern Cape (23%) and KwaZulu-Natal (13%) provinces (Child Gauge 2006, Children Institute, University of Cape Town). The AIDS epidemic destroys children's lives by forcing them to assume caregiver and provider roles. Many orphans and vulnerable children (OVC) live with, and are cared for by a grandparent or a great-grandparent (over 81%). Four in ten young children are living in extended families with at least six other people. Without adequate protection and care, OVC are more susceptible to child labor, and sexual and other forms of exploitation that increase their risk of acquiring HIV.

The SA Government (SAG) Policy Framework for OVC is a blueprint for the care of OVC. Both the Policy Framework and the National Action Plan (NAP) provide a clear path for addressing the social impact of HIV and AIDS and for providing services to OVC. The six key strategies: strengthen the capacity of families to care for OVC; mobilize community-based responses for care, support and protection of OVC; ensure that legislation, policy, and programs are in place to protect the most vulnerable children; ensure access to essential services for OVC; increase awareness and advocacy regarding OVC issues; and engage the business community to actively support OVC. In all instances, family and community care is prioritized, and institutional care is viewed as a last resort.

The USG OVC approach is consistent with the OVC Policy Framework. The USG provides direct assistance to the Department of Social Development (DOSD) and partners with diverse local and international organizations to scale-up existing, effective OVC programs that complement and support the DOSD efforts. At the end of March 2007, 23 PEPFAR partners had reached 151,461 OVC with primary and supplementary direct services. In addition, 24,521 OVC were reached indirectly and 7,796 caregivers were trained.

In FY 2008, USG funding for OVC activities will almost meet the 10% budget requirement (9.73%). In line with the Three Ones principle, the USG will continue to support the DOSD to strengthen coordination of OVC programs. Since FY 2006, the USG has supported a full-time Monitoring and Evaluation (M&E) specialist for the DOSD which will continue in FY 2008. The M&E specialist provides technical assistance to the DOSD Chief Directorate of HIV/AIDS and Chief Directorate of Children on M&E issues and the development of indicators for monitoring the NAP. Support has been provided to develop a management information system (MIS) to track, monitor and utilize data on orphans and vulnerable children at the DOSD. M&E assistance to the DOSD will be expanded in FY 2008 with two M&E advisors at the DOSD to strengthen information gathering and use at the national and provincial levels.

In FY 2008, USG partners will continue to focus on innovative ways to scale up OVC services through integrated systemic interventions; support and training of volunteers, caregivers and community-based organizations, and address service delivery issues. To ensure high quality, the USG has defined primary direct service provision as each child receiving a minimum of three services from a menu of eleven (an expansion on OGAC's seven services). These include: clinical nutrition interventions; targeted, short-term food and nutritional support with PEPFAR funding and leveraging food and/or food parcels from other sources including the DOSD, private sector companies and churches; shelter and care; child protection (i.e. birth registration,

identification and inheritance issues); assistance in accessing general healthcare; health care support specifically for anti-retroviral treatment; psychosocial support; increased access to education (including uniforms, after school tutoring etc.); HIV prevention education or interventions (e.g. life skills, etc.); vocational training; and assistance in accessing economic support (accessing social grants, income-generation activities, etc.). In FY 2008 the USG will continue to emphasize quality improvements in the delivery of OVC services and will ensure that a standard-based approach to quality in program planning and implementation is piloted among USG-supported partners.

USG partners will focus on scaling-up OVC interventions to meet the enormous needs of OVC. Emphasis will be on improving the quality of OVC programs interventions, strengthening coordination of care, innovative new initiatives focusing on reaching especially vulnerable children, and strengthening the DOSD Child Care Forums (CCF) structure as well as local OVC coordinating mechanisms at the district level. USG partners will continue to integrate wrap-around programs into the delivery of OVC services. For example through Management Sciences for Health, Integrated Primary Health Care Project (IPHC), 23 small OVC community -based organizations will be linked to the child survival activities of the IPHC project through the community-based Integrated Management of Childhood Infections (IMCI) implemented in eight districts in conjunction with the Department of Health. IPHC is working with the local health facilities in these districts to ensure that OVC in their area are fully immunized and are able to access necessary child and adolescent health services. USG-funded programs continue to actively encourage and link with pediatric treatment programs and VCT programs to encourage HIV testing of OVC and to ensure that HIV-infected OVC have access to pediatric treatment and palliative care services.

DOSD recommended CCF as a national model to respond to the increasing needs of children and to provide support to OVC at the community level. CCFs are the communities' and local authorities' "eyes and ears" that identify OVC and ensure that they have access to care and essential services and are widespread through the country. CCFs are a mechanism to build capacity in community-based systems for sustaining care and support to OVC and households over the long term. The DOSD with support from UNICEF has contracted for a National Audit of CCFs, to determine how CCFs provide services at the local level to OVC. The audit will provide a picture of national coverage of CCFs and an analysis of the services provided by CCFs, their organizational and coordination features, funding sources and costs.

USG OVC assistance addresses gender issues. An increasing number of USG partners are finding innovative ways to include men as caregivers of OVC (FHI, National Association of Child Care Workers and Heartbeat) and encourage men to be champions for community protection interventions for child, women and elderly-headed households. Heartbeat's After-school care programs provide a safe place for supervised homework, one-on-one academic tutoring, nutritious food, often provided by private sector companies, and a wide-range of psychosocial support to OVC. Heartbeat's mentoring program provides life skills and HIV prevention education. OVC support groups, dramas, storytelling and other psychosocial support interventions are facilitated by OVC themselves and involve significant child participation. Assistance has and will continue to focus on reaching especially vulnerable populations through Early Childhood Development Interventions with the CARE sub-partners, Sekhukhune Education Trust and NOAH. Partners like NACCW have added a component to reach disabled children. Studies have shown that disabled people, especially young people, are particularly vulnerable to being infected and affected by HIV and AIDS. Most OVC partners provide HIV prevention messages especially for older OVC and efforts will be made to include boys and girls with disabilities in all training, programs and services offered. USG partners will continue to focus on reducing gender-based violence and will continue to confront gender issues and gender dynamics that become apparent in the implementation of OVC programs.

USG assistance in South Africa aims to build the capacity of local organizations and encourage sustainable interventions for OVC. Two previous sub-partners of Starfish Foundation (Heartbeat and Hands at Work) have graduated, and are now receiving direct USG funding and managing their own programs directly. Training and mentoring of local community-based partners and expansion of income-generating activities strengthens capacity at the community and family level to sustain the protection, support and care of OVC. An increasing emphasis on vocational training and a need for a clear exit strategy for older adolescents (over 18 years) is addressed by partners such as the FHI sub-partner, South African Catholic Bishops Conference and its sub-recipients. This will ensure that that OVC do not drop out of school and that when they leave the OVC programs there are plans in place for them to further their education, access vocations and skills training and establish income generating activities that will enable their survival and secure income.

There are other donors supporting OVC in SA. The USG works closely with UNICEF including co-funding OVC research activities. The USG program in South Africa continues to complement the efforts of the DOSD and other donors to leverage resources and to ensure that there is no duplication of effort.

Program Area Downstream Targets:

8.1 Number of OVC served by OVC programs	454330
*** 8.1.A Primary Direct	318353
*** 8.1.B Supplemental Direct	135977
8.2 Number of providers/caregivers trained in caring for OVC	28613

Custom Targets:

Program Area: Orphans and Vulnerable Children

Budget Code: HKID

Program Area Code: 08

Activity ID: 21638.08

Planned Funds: $2,250,000

Activity System ID: 21638

Activity Narrative: Summary: CARE South Africa's Deepening and Expanding Local Links Project (DELL) is a follow on activity to CARE's Local Links Project, Track 1. The two projects will be implemented concurrently in FY 09 with funding separately managed. In FY 2010 Local Links programming will be integrated into DELL. In Limpopo, DELL will be implemented in Mopani and Sekhukuneland districts and expand to Vhembe district. In the Free State, implementation in Motheo district will be discontinued, and scaled up in Thabo Mofutsyane District. The proposed expansion into Ehlanzeni Region of Mpumalanga will not be effected. DELL's goal is for OVC and their caregivers to access and use a wide range of high-quality, comprehensive services from government and civil society institutions.
Background:DELL will be implemented through 9 new sub-partners and 4 district or local municipalities. Two sub-categories of implementing partners will be contracted. Technical Partners (totaling 5) - who are able to scale up their reach directly and /or mentor smaller community based organizations (CBO) will be supported to recruit professionally qualified nurses and a social worker to ensure sustainable access to skilled staff. The technical partners will also provide services to OVC in their operational areas. 4 New CBOs (referred to as Implementing Partners) will be contracted to only provide services to OVC and their caregivers. OVC focal posts will be funded and supported to develop 4 district or local municipalities' capacity to coordinate services, ensure OVC needs are integrated into local plans and budgets, provide further support and access to training and funding opportunities to CBO and improve the coordination function of relevant government -civil society structures.
Activities and Expected Results: Objective 1-CBOs provide access to a core package of services to meet the needs and rights of OVC. Three outputs are envisaged: a) a minimum package of core services will be agreed upon with sub-grantees which will be developed through building their own capacity or building linkages to ensure effective referrals; b) CBOs deliver high quality services through ensuring OVC access comprehensive coordinated services through placing critical technical capacity like social workers, nurses in the Technical Partners to provide skilled and consistent outreach to Implementing Partners and ;c) Referral Systems are established and tracked. A local municipal and district based multi- sectoral mapping of services will be undertaken with Government Departments and CBOs. CARE's economic work with the OVC caregivers is well established, its adaptation to reach adolescents and youth will be strengthened through ensuring that the head office based Economic Support Coordinator is experienced in working with youth. Older OVC access to HIV/AIDS related services will be strengthened through placing 3 youth counselors in strategic clinics (funded through Track 1). Objective 2-The economic Security of OVC and their families and caregivers is strengthened. Households with OVC will have more diversified and sustainable livelihoods through a)using their income grants productively through engaging in CARE's savings and lending model (VSL), and supported to develop income generating activities (IGA); b)develop the regulatory mechanism to ensure compliance with South African Financial Service Act and beneficiaries are provided with other means to grow their savings; c)the social support function of the VSL groups is strengthened by CBO and other stakeholders through making technical input into the groups; and d)the adaptation of VSL and IGA for older OVC. 400 Caregivers will be trained and supported to save; 100 youth will engage in viable income security activities. Objective 3-Local government policy and implementation environment is enhanced to further benefit of OVC and their caregivers. CARE will place 4 OVC Focal persons in District or Local Municipalities to develop government's capacity to respond to OVC needs and develop policy and program decision that support OVC and their caregivers. The OVC Focal persons will coordinate OVC services and data, participate in and strengthen relevant structures to build effective referral and support networks; provide hands on support to CBOs and develop district database to inform Integrated Development Plans and Budgets; and to address bottlenecks in government service delivery. CARE will document at least one promising practice. Objective 4-Organizational capacity of implementing and technical partners is strengthened, to ensure long term sustainability, self reliance and maximize project impact. DELL will focus on institutional strengthening of implementing partners to ensure enhanced strategic leadership; improved institutional planning and monitoring thereof, stronger governance and human resource management capacity; and increased resource mobilization and financial management capacities. The overall organizational framework for ensuring the long term sustainability of implementing partners recognizes the value of small CBO to reach marginalized farming communities. These groups will be supported to provide peer learning and coordinated into a network. Partners and related government stakeholders will participate in a national Project Steering Committee and capacity development initiatives as required, to enable the Committee to increasingly take strategic oversight of the project.
CROSS CUTTING ISSUES: CARE will undertake a baseline study of OVC needs and service satisfaction. To reduce CARE and partner staff and volunteer caregiver turnover- CARE will build in incentives for staff development like access to accredited training, provide protective clothing and systematize the care of caregivers. DELL will contribute to PEPFAR 2-7-10 goals by improving access to quality care for12 500 OVC, train 600 caregivers, build sustainable local organizations and improve local and district government's capacity to coordinate and provide services to OVC.

Funding Source: GHCS (State)

Program Area: Orphans and Vulnerable Children

Budget Code: HKID

Program Area Code: 08

Activity ID: 19452.08

Planned Funds: $350,000

Activity System ID: 19452

Activity Narrative: SUMMARY:

South African Democratic Teachers Union (SADTU) workplace program aims to provide support to 50 eligible orphans and vulnerable children in two schools per SADTU region out 17 regions in the three provinces, NW, FS, GP.

BACKGROUND:

The HIV and AIDS pandemic has created workplace environments that are not conducive to quality teaching and learning for both educators and learners alike. The SADTU project aims to reduce the impact of HIV and AIDS by focusing on preventing transmission of HIV for teachers and caring for orphans and vulnerable children (OVC) in the workplace.

ACTIVITIES AND EXPECTED RESULTS:

Activity 1: Establish school-based care and support for OVCs

In collaboration wit the Department of Social Development (DSD), the South African Social Security Agency and the Department of Education, SADTU will work with schools to identify OVC and establish school-based care and support centers to support these children. School-based interventions will be established in two schools in each of the seventeen regions with FY 2007 funds. SADTU will ensure that OVC are registered with the DSD. SADTU will work with each school to identify and prioritize the needs of OVC. This could include, but is not limited to, paying school fees in schools that require this, supplying them with school uniforms, educational necessities not provided for, community gardens, and ensuring OVC have access to social services through the DSD. They will also build upon existing life skills programs to ensure that HIV prevention messages are integrated into the OVC program.

Activity 2:
SADTU will train 1 caregiver per school in the 34 identified OVC schools….
Children's rights, first aid including universal precautions, HIV Transmission & prevention; positive living; life skills; substance abuse, violence including sexual abuse, sexuality, study skills. Entrepreneurship skills, health and hygiene.

Activity 3:
SADTU will establish a further 10 peer education support groups in regions to bring the number to 20. These will be organized for PLWA and/affected individuals to promote positive living, care and treatment access thus further reducing HIV transmission. Monthly meetings will be facilitated by the PE facilitators and AIDS ambassadors.
These activities contribute to the PEPFAR 2-7-10 goals and objectives by ensuring that OVCs are identified within schools and services are provided to them.

Activity ID:	19707.08	**Planned Funds:**	$800,000
Activity System ID:	21156		

Activity Narrative: SUMMARY:

In collaboration with the South African Department of Social Development (DOSD), PEPFAR funds will be used to provide child protection and abuse (physical and sexual) identification and support training to community-based, faith-based and other organizations that provide services to these vulnerable children. A service provider to implement this activity will be selected in October 2007. Expert and specialist organizations will be recruited to provide the training to all OVC partners supported under the PEPFAR program in South Africa, to ensure effective support and service provision to OVC and other children made vulnerable by abuse or abusive situations. Funding will be used primarily in the emphasis area of gender in reducing violence and coercion, training specifically in-services training with additional efforts in local capacity building with a focus on quality assurance and supportive supervision to ensure follow-up and mentoring of trained participants. The primary target populations for the intervention include orphans and vulnerable children (OVC) and people infected with HIV and AIDS, and the general population aged over 25 years.

BACKGROUND:

In FY 2006, PEPFAR provided funding for OVC services to more than 20 organizations in South Africa. More than half of these organizations reported that they have seen a sharp increase in the number of abused (sexual and physical abuse) children in their programs over the last twelve months. These partners requested that training be provided on child abuse identification, caring for abused children with a specific focus on the referral networks for abused children. They have specifically requested that within their organization at least one or two individuals be trained as a resource person for dealing with child abuse, the legal ramifications of the court case, and the after-effects and trauma of the abuse on the child. Caregivers, guardians and OVC themselves on the front lines are in a prime position to identify early signs of abuse of OVC and to initiate interventions. A 2005 case study of Violence Against Children Affected by HIV/AIDS in Uganda indicated that training and support are required for guardians and other children in households where orphans are living. It also states that a training package should be developed and delivered to guardians covering issues such as the care and support needs of orphans, changes to family household, use of memory books, HIV/AIDS and managing difficult behavior. Community Care Coalitions and Community Volunteers should also be trained on these issues to provide support to the families where orphans are staying and to further monitor situations where orphans are believed to be treated poorly including where they are abused. It identifies the training of guardians to better care for orphans as the optimal way to address the issues of discrimination.

ACTIVITIES AND EXPECTED RESULTS:

This activity will focus on providing training on abuse identification, trauma counseling, dealing with child abuse through the court systems (court chaperones) and developing linkages and strong referral networks with the healthcare systems and the police systems. Suggested role players who could be included in such training besides the NGOs, CBOs and FBOs, are teachers, health professionals, the police service, foster parents, psychologists, trauma counselors, churches, caregivers and volunteers. Training will focus on prevention and early interventions to safe guard the well-being and best interest of the child. Innovative methods in the identification, education and prevention of sexual abuse will be a major focus. A sexually abused child is doubly vulnerable since medico-legal information is required to sustain a court case, and medical information must be available within 72 hours or less to ensure that the child can get post exposure prophylaxis (PEP). In addition to the training, this activity will also work with organizations to identify champions among the police service, the healthcare system, as well as the justice and legal system, and will work with the CBO/FBO and NGOs to be advocates for abused children to ensure that they get the best quality service. This activity will work with the OVC support organizations and OVC advocates to share resources, skills, knowledge and techniques. In addition, this intervention will build the human capacity of OVC organizations to be able to address child protection and child abuse issues in a sustainable manner. This activity will promote the collaboration between organizations working with OVC and those working to address sexual abuse and exploitation. This activity will be designed and implemented in consultation with USAID/South Africa's Democracy and Governance program which is supporting the Sexual Offenses and Community Affairs (SOCA) Unit of the National Prosecuting Authority of South Africa in its endeavor to eradicate all forms of gender-based violence against women and children, especially the crime of rape. The South Africa National Strategic Plan includes as part of its intervention packages the prevention and identification of child abuse and neglect. This activity also supports the COP objective of increasing the number of providers/caretakers trained in caring for OVC. The activities and products will contribute to sustainability of approaches to increasing and enhancing the capacity of caregivers.

This activity will contribute to the PEPFAR goal of providing care and support to 10 million HIV-affected individuals, including OVC.

Funding Source: GHCS (State)

Program Area: Orphans and Vulnerable Children

Budget Code: HKID

Program Area Code: 08

Activity ID: 21160.08

Planned Funds: $1,552,000

Activity System ID: 21160

Activity Narrative: SUMMARY:

This activity aims to improve OVC information gathering and reporting systems for both the Department of Social Development (DSD) and PEPFAR OVC implementing partners. In addition, the activity aims to improve OVC service delivery and assess program effectiveness by generating information about OVC programs through a targeted evaluation.

BACKGROUND:

This activity was supported by MEASURE Evaluation in FY 2005 and FY 2006. The MEASURE activities will be recompeted in FY 2007 and it is anticipated that the same partner will continue these activities in FY 2008. PEPFAR funds have been used to work with the DSD to support a resident advisor (RA) within the DSD under the direction of Chief Director of the HIV and AIDS Unit. His role includes developing the M&E component of the National Plan of Action for OVC and the DSD's policy framework for OVC made vulnerable by HIV and AIDS, as well as developing an operational plan. In FY 2006 the M&E Advisor provided program management support to the organization selected to develop a management information system (MIS) to track OVC. In addition, the RA works to build the capacity of DSD staff in M&E to ensure sustainability of the M&E systems that will be developed.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: M&E Strategy
The PEPFAR funded M&E RA to the DSD will assist them to implement the M&E strategy. A key component of the DSD M&E system in South Africa will be the MIS for OVC co-funded by PEPFAR and the DSD. The M&E RA will continue to serve as the liaison between DSD, the MIS contractor, implementing partners and other donor agencies; oversee major time-lines for the MIS Contractor, and provide technical assistance to the MIS Contractor in the following areas: guidance on database design issues relevant to DSD's M&E strategy and operational plan to ensure key objectives of DSD are met with the system; oversight on functionality and user interface; ensure that data quality and integrity is maintained; and coordinate training needs of the users at local and provincial level once the MIS system is fully developed. The expected result of this activity is a functional national MIS system for OVC programs.

ACTIVITY 2: M&E Capacity Development

The M&E RA will continue to develop the M&E capacity of staff within the DSD and local partners. The M&E RA will coordinate M&E training needs within the DSD and of local implementing partners, conduct site visits to local and provincial sites in order to assess gaps in skills and knowledge in M&E and provide technical assistance to meet such needs. The M&E RA will evaluate and modify data utilization and flow within DSD. The expected result of this activity is a sustainable M&E unit within the DSD.

These activities will contribute to tracking the success of achieving the PEPFAR objective of 10 million people in care at both a local and global levels by providing valuable information for decision making.

Activity ID: 21157.08
Planned Funds: $1,000,000
Activity System ID: 21157

Activity Narrative: SUMMARY:

In collaboration with the South African Government (SAG), FY 2008 PEPFAR funds will be used to support a service availability mapping exercise that will allow organizations to be able to locate all necessary HIV and AIDS related services they may need in order to strengthen their own care and treatment service delivery. This service availability mapping exercise of districts and sub-districts will assist home-based caregivers, volunteers, community-based organizations, faith-based organizations and public health facilities to provide referrals efficiently in order for clients to access services closest to their household. USAID/South Africa recognizes the need to be aware of available services and resources in order to identify gaps, avoid duplication and to maximize collaboration and linkages with other stakeholders and partners. This activity will include mapping of the essential services available from the South African Government, for example Home Affairs for birth certificates and identification documents, legal-aid centers for land disputes and inheritance issues, Social Development for access to grants, Rape Centers for access to post exposure prophylaxis (PEP), and ART treatment sites for access to pediatric and adult treatment, etc. Mapping provides a means of organizing local knowledge through the common language of geography and visual representation. Through a participatory process, local knowledge can be gathered, integrated, represented, and shared. Maps can then act as a basis for community discussion, empowerment, and decision-making. A service provider to implement this activity will be selected in October 2007.

Primary emphasis will be on local capacity building and the development of network referrals and Information, Education and Communication. The final product, a directory of services, will be used widely both by PEPFAR supported partners as well as the SAG and other organizations that provide HIV and AIDS services in South Africa. This booklet will be shared widely through the HIV and AIDS networks and forums in South Africa.

The primary target populations for the intervention include OVC, people living with HIV and AIDS and the general population aged over 25 years.

BACKGROUND:

The South Africa PEPFAR program embarked on a geographical information systems (GIS) mapping activity in FY 2005. These maps have proven a valuable tool for planning and coordinating activities within and across partners. However, to date, these maps only show PEPFAR supported services, as well as SAG ART services. The USG Team would like to take this mapping down to a community level to improve service delivery on the ground. This activity will strengthen referrals and linkages between government departments, NGOs, civil society groups and HIV and AIDS service providers through sharing and dissemination of information on the availability and location of essential services in South Africa.

ACTIVITIES AND EXPECTED RESULTS:

A directory of organizations providing HIV and AIDS related services in South Africa will provide a useful guide to the many agencies and organizations working to address the critical challenges faced by HIV and AIDS in South Africa. There is a need for a comprehensive database of organizations working with and for HIV-infected and affected individuals in South Africa. In 2001 a directory of Child HIV and AIDS services was published by the Department of Social Development in collaboration with Save UK and UNICEF. In addition, service availability mapping was completed in the Eastern Cape province during the former USAID equity project. These directories are now out of date, however they will be used as the starting point to establish a district map of the services and key service providers will be added. The availability mapping exercise will inform all those concerned about HIV and AIDS, especially the partners funded by PEPFAR, of the various services and initiatives available to assist them and to strengthen their efforts to support HIV-infected individuals and their families. This directory will be user-friendly and will facilitate smooth referrals and encourage linkages. The service directory will also enable organizations to better utilize services that are available, facilitate new partnerships to address the gaps in service delivery and encourage a multi-agency approach to assisting individual infected by HIV, their families and their communities. This activity would begin in three of the provinces and will then be replicated in all nine provinces of South Africa. In addition, this directory will be linked to GIS data points for more interactive usage of the directory and to produce various maps.

This activity will contribute to the PEPFAR goal of providing care and support to 10 million HIV-affected and infected individuals, including OVC. In addition it will contribute to the success of the following objectives of the SAGâ€™s National Strategic Plan; to develop and implement mechanisms to identify, track and link OVC and child-headed households to grants, benefits and social services at local levels and to increase the proportion of vulnerable children accessing social grants, benefits and services.

Program Area: Orphans and Vulnerable Children

Budget Code: HKID

Program Area Code: 08

Activity ID: 21165.08

Planned Funds: $250,000

Activity System ID: 21165

Activity Narrative: Organization Name: Medical Care Development International (MCDI)

Duration of Projects in years: 3 years

Prevention AB & OP:Objective 1: To prevent HIV/AIDS and other STIs and pregnancy among in and out-of-school youth through tested peer education behavior change communication (BCC) activities and using creative drama and film methods

MCDI undertakes to expand on and enhance its already successful activities in this area. IDCYSP activities are in line with the PEPFAR objective of preventing HIV transmission through the promotion of safe and healthy sexual behavior among HIV infected and uninfected individuals. Proposed activities are also consistent with the South African Government's AIDS Programme mission of preventing the spread of HIV. These proposed activities recognize the important role that community education, outreach and advocacy can play in educating youth and preventing HIV/AIDS. Specifically, the youth activities will address increased risk to youth and the disproportionately high risk among girls and young women. The Mobile Education Unit will reach underserved rural communities. The education of community influencers in a behavior change and communication approach will emphasize the particular vulnerabilities all of these vulnerable groups, while creating a more supportive environment for PLWHA and youth.

OVC: Objective 2: To provide quality comprehensive and compassionate care for AIDS orphans and other vulnerable children by expanding the model crèche to other areas, including access to essential health, social, psychosocial and legal services for OVC and their households.

IDCYSP will encourage enrollment of OVC, specifically targeting those children in child- or sibling-headed households, to crèches who are often excluded because of tuition fees through MCDI's previously successful approach of fee waivers for orphans. In the Mavela crèche, enrollment increased from 40 to 100 through using this approach. OVC will be identified through MCDI PMTCT activities. They will also be identified by home-based caregivers (HBCs), who are local community residents that have completed secondary school and an MCDI 21-day training course to deliver palliative care. MCDI is currently transitioning the supervision of HBCs to CBOs who have funding to support their income. IDCYSP will provide legal support to OVC and their caretakers, which will have a significant impact on their current and future economic well-being. Protecting and promoting the inheritance rights of OVC and fighting against disinheritance is crucial to comprehensive care and support of these children.

Abuse Referral Network

In collaboration with the South African Department of Social Development (DOSD), PEPFAR funds will be used to provide child protection and abuse (physical and sexual) identification and support training to community-based, faith-based and other organizations that provide services to these vulnerable children. A service provider to implement this activity will be selected in October 2007. Expert and specialist organizations will be recruited to provide the training to all OVC partners supported under the PEPFAR program in South Africa, to ensure effective support and service provision to OVC and other children made vulnerable by abuse or abusive situations. Funding will be used primarily in the emphasis area of gender in reducing violence and coercion, training specifically in-services training with additional efforts in local capacity building with a focus on quality assurance and supportive supervision to ensure follow-up and mentoring of trained participants. The primary target populations for the intervention include orphans and vulnerable children (OVC) and people infected with HIV and AIDS, and the general population aged over 25 years.

BACKGROUND:

In FY 2006, PEPFAR provided funding for OVC services to more than 20 organizations in South Africa. More than half of these organizations reported that they have seen a sharp increase in the number of abused (sexual and physical abuse) children in their programs over the last twelve months. These partners requested that training be provided on child abuse identification, caring for abused children with a specific focus on the referral networks for abused children. They have specifically requested that within their organization at least one or two individuals be trained as a resource person for dealing with child abuse, the legal ramifications of the court case, and the after-effects and trauma of the abuse on the child. Caregivers, guardians and OVC themselves on the front lines are in a prime position to identify early signs of abuse of OVC and to initiate interventions. A 2005 case study of Violence Against Children Affected by HIV/AIDS in Uganda indicated that training and support are required for guardians and other children in households where orphans are living. It also states that a training package should be developed and delivered to guardians covering issues such as the care and support needs of orphans, changes to family household, use of memory books, HIV/AIDS and managing difficult behavior. Community Care Coalitions and Community Volunteers should also be trained on these issues to provide support to the families where orphans are staying and to further monitor situations where orphans are believed to be treated poorly including where they are abused. It identifies the training of guardians to better care for orphans as the optimal way to address the issues of discrimination.

ACTIVITIES AND EXPECTED RESULTS:

This activity will focus on providing training on abuse identification, trauma counseling, dealing with child abuse through the court systems (court chaperones) and developing linkages and strong referral networks with the healthcare systems and the police systems. Suggested role players who could be included in such training besides the NGOs, CBOs and FBOs, are teachers, health professionals, the police service, foster parents, psychologists, trauma counselors, churches, caregivers and volunteers. Training will focus on prevention and early interventions to safe guard the well-being and best interest of the child. Innovative methods in the identification, education and prevention of sexual abuse will be a major focus. A sexually abused child is doubly vulnerable since medico-legal information is required to sustain a court case, and medical information must be available within 72 hours or less to ensure that the child can get post exposure prophylaxis (PEP). In addition to the training, this activity will also work with organizations to identify champions among the police service, the healthcare system, as well as the justice and legal system, and will work with the CBO/FBO and NGOs to be advocates for abused children to ensure that they get the best quality service. This activity will work with the OVC support organizations and OVC advocates to share resources, skills, knowledge and techniques. In addition, this intervention will build the human capacity of OVC organizations to be able to address child protection and child abuse issues in a sustainable manner. This activity will promote the collaboration between organizations working with OVC and those working to address sexual abuse and exploitation. This activity will be designed and implemented in consultation with USAID/South Africa's Democracy and Governance program which is supporting the Sexual Offenses and Community Affairs (SOCA) Unit of the National Prosecuting Authority of South Africa in its endeavor to eradicate all forms of gender-based violence against women and children, especially the crime of rape. The South Africa National Strategic Plan includes as part of its intervention packages the prevention and identification of child abuse and neglect. This activity also supports the COP objective of increasing the number of providers/caretakers trained in caring for OVC. The activities and products will contribute to sustainability of approaches to increasing and enhancing the capacity of caregivers.

This activity will contribute to the PEPFAR goal of providing care and support to 10 million HIV-affected individuals, including OVC.

Activity System ID: 14645

Activity Narrative: This activity was approved in the FY 2007 COP, is funded with FY 2007 PEPFAR funds, and is included here to provide complete information for reviewers. No FY 2008 funding is requested for this activity.

PEPFAR funds were allocated to FHI to provide technical assistance to modify and strengthen a specific FHI capacity building tool know as the Organizational Performance Capacity Assessment Tool (OPCAT) for use by other PEPFAR partners to strengthen their organizational capacity. The PEPFAR Taskforce has sourced a similar tool and technical assistance from a local South African institution and plans to continue with this activity using the local institution. This will allow the intervention be locally owned and sustainable.

Therefore there is no need to continue funding this activity with FY 2008 COP funds.

Program Area: Orphans and Vulnerable Children
Budget Code: HKID
Program Area Code: 08
Activity ID: 2980.08
Planned Funds: $150,000
Activity System ID: 17435

Activity Narrative: SUMMARY:

The SA DOD Orphans and Vulnerable Children (OVC) program is a relatively new development in the Masibambisane program with a focus on establishing a data base and referral system for OVC of military members. A needs assessment and pilot projects in four sites during FY 2006 will provide the direction for the future focus and strategy of this program to include support services for HIV-infected infants, children and caregivers in the military communities and capacity building of these services within the military through the assistance of NGOs near these communities. The major emphasis area is linkages with other sectors and initiatives and minor emphasis areas are infrastructure and community mobilization and participation. The target populations are OVC and their caregivers, HIV-infected infants and children, military personnel, volunteers and community leaders.

BACKGROUND:

The Masibambisane program initiated the OVC program in FY 2005 with an institutional focus in terms of establishing a database on military OVC and the initiation of projects at four sites as a pilot to determine the need and direction in terms of services to OVC. The underlying principle was to establish networks within communities to address the needs of OVC in general, address stigma and discrimination through access to comprehensive services and military OVC specifically through collaborative partnerships. Due to the extensive community involvement and leadership by the communities themselves, the four pilot projects have had varying levels of success during implementation in FY 2006. This has provided valuable information that will guide future strategies in this regard. Lessons learned at the pilot sites confirmed that the approach towards the management of OVC will differ from site to site and need to address activities that include training caregivers, increasing access to education, economic support, targeted food and nutrition support, legal aid, as well as psychosocial support and palliative care. Collaboration with local NGOs will be encouraged in all communities.

The OVC project is coordinated by the Directorate Social Work in the SA DOD as a sub-program of Masibambisane and has been initiated at the four sites through a local coordinator and collaborative workgroups from the communities. The projects at the four sites will be expanded to other appropriate regions and integrated with terminal care activities where appropriate. The program will support the activities of a military site in Phalaborwa (Limpopo province) while local NGOs will be targeted for funding through USAID in the other three sites (KwaZulu-Natal, Eastern Cape and North West provinces). This program will address beliefs and myths about HIV infection, prevention and treatment versus "cures". Self-help resources that include books about military separation and its affect on families will be provided.

ACTIVITIES AND EXPECTED RESULTS:

The implementation of activities that were planned for FY 2007 was delayed due to the staff restructuring in the SA DOD. These activities will therefore be continued in the FY 2008.

ACTIVITY 1: OVC Tracking System

The SA DOD will develop a tracking system to identify and monitor orphans of military members in order to provide these orphans with the healthcare services and support to which they are entitled.

ACTIVITY 2: OVC Service Site

The SA DOD will renovate a library at the Ba-Phalaborwa military site in Limpopo province to provide a place for children to learn and foster their education after school. This library will provide an educational atmosphere that emphasizes learning and a healthy lifestyle for OVC. References will address beliefs and myths about HIV infection, prevention, and treatment and will include myths about "cures". In addition information will be provided that deals with family separations and the stress that places on the family including age-appropriate strategies to address these concerns.

ACTIVITY 3: Sharing Information

The SA DOD will sharing information and experiences through attendance of PEPFAR OVC partner meetings, publications in military and peer reviewed magazines and journals and oral and poster presentations on effective and innovative programs at conferences and seminars. The SA DOD and other African countries will benefit from the information presented in peer-reviewed journal and at professional conferences.

All these activities will be monitored and evaluated with close supervision and support for quality assurance and the identification of best practices in this program area. Technical assistance will be provided to SA DOD by the US DOD in order to continue the participatory project begun in 2004, to assist with selection of additional province to begin OVC military community mobilization and participatory action and to support the participatory process as it evolves.

These SA DOD OVC activities will contribute to the PEPFAR goal of providing 10 million people with care, including OVC.

Table 3.3.08: Activities by Funding Mechansim

Mechanism ID: 7313.08
Mechanism: N/A
Prime Partner: Childline Mpumalanga
USG Agency: U.S. Agency for International Development
Funding Source: GHCS (State)
Program Area: Orphans and Vulnerable Children
Budget Code: HKID
Program Area Code: 08
Activity ID: 16016.08
Planned Funds: $410,000
Activity System ID: 16016

Activity Narrative: SUMMARY:

Childline Mpumalanga provides care and support services to orphaned and vulnerable Children (OVC) in five underserved and rural areas in Mpumalanga Province. The main emphasis areas of activities are training, reducing violence and coercion and local organization capacity building. Primary target populations are OVC, adolescents 10 to 24 years and people living with HIV and AIDS.

BACKGROUND:

Childline South Africa is a national non-governmental organization with eight affiliate offices providing services in all of the nine provinces of South Africa. The Mpumalanga office was established three years ago by Childline SA and Mpumalanga Department of Social Services to provide services to children in the province. Statistics South Africa estimates that approximately 18 percent of the children living in Mpumalanga province are OVC. Childline Mpumalanga aims to help restore and transform communities, facilitate the development of strong, community-based support systems for children affected by HIV and AIDS with the hope of assuring a secure and healthy future for the OVC living in Mpumalanga. The programs that Childline Mpumalanga offers are in line with the service specifications of the Department of Social Development as published in 2005, and included in the business plan of Childline Mpumalanga and partially subsidized by the Department of Health and Social Services of Mpumalanga.

Childline Mpumalanga is well known for its telephone helpline 'Crisis line' and offers therapeutic and face-to-face counseling services for children who have undergone serious trauma, including as a result of AIDS. In response to the increasing numbers of OVC, Childline has also developed a comprehensive outreach model that will help extend services to the most rural parts of the Mpumalanga province. Childline works closely with the Department of Education and implements HIV prevention and awareness programs and children's rights and child abuse programs in schools in Mpumalanga. Childline Mpumalanga also has a strong working agreement with the Office on the Rights of the Child from the Office of the Premier of Mpumalanga in their combined efforts to make the voices of children heard in the services delivered to children in the province.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Strengthening community care for OVC

Childline has conducted baseline research to identify five sites for service delivery. Childline has identified five projects with partners in rural under serviced areas with high numbers of vulnerable children, where community infrastructure will be developed to establish and deliver interventions for vulnerable children and their families. Each site will be managed by a dedicated social worker. This will include conducting the baseline needs assessment, drawing up a memorandum of understanding with the community, identifying role players and stakeholders, the recruitment of volunteers and setting up infrastructure for the project. This will ensure that OVC and people living with HIV in the community are aware of and able to access assistance for dealing with the needs of children who are orphaned, affected by child abuse or domestic violence, poverty, substance abuse and neglect. Each project site will be developed through networking with local tribal chiefs, municipal managers, community structures and members.

ACTIVITY 2: Human capacity development

This project will offer various trainings developed by Childline and available from the Department of Health and other sectors on children, on communicating/counseling children, dealing with children's rights, child abuse and the basic needs of vulnerable and orphaned children to community volunteers, parents, teachers, children and youth in order to set up networks and systems and to capacitate role players within communities to offer referral opportunities. Each site will advertise for volunteer counselors. Candidates will be interviewed and selected in conjunction with each site's governing body. Selected counselors will be trained on personal growth; communicating with children; and counseling skills. Trained caregivers will also be capacitated to provide case management to OVC to ensure comprehensive support and services are provided. Networking with schools, clinics, early childhood development centers and churches in the community will be facilitated to help in identifying vulnerable children in the community and implement service delivery to these children by volunteers that are trained in the community. In addition, each site's governing body and other community role players involved in service provision to OVC will also be trained using Childline's courses on organizational management and capacity building. The social worker will work with trained counselors to develop schedules and work hours for volunteer counselors. Monthly supervisory sessions will be set up with volunteer caregivers to share their trauma and provide debriefing session from their experiences in the filed and to deal with stress coping strategies.

ACTIVITY 3: Facilitating access to social security grants and OVC services

Childline will introduce counselors to the community through holding awareness campaigns at local schools, at mass meetings and through posters advertising Childline's services. Children identified as in need of services will be visited at home by trained volunteers who will conduct an assessment to identify the services each child needs. Childline will also organize 'Access Jamborees' with the Departments of Home Affairs, Social Services, Social Development, local government and tribal authorities. These Jamborees will enable not only vulnerable children but also other marginalized members from the community to access necessary legal documents; apply for social security grants and access information on services. Caregivers will follow up on all cases identified to ensure that OVC access services. Caregivers will also train household/family members on budgeting to ensure that OVC are cared for and maximizing the resources available. Caregivers will also provide households with information on other social, economic and health services available in each community such as health, education and social service provided by government as well as civil society.

ACTIVITY 4: Specialized psychosocial support for children

Counseling and therapy that is appropriate for their age, development stage and context, will be provided to OVC by social workers on a weekly basis. 24-hour Crisis line counseling will be available to all children and adults with concerns about children at the Childline office. This will serve as an access point to services

Activity Narrative: close to the child, and children calling the Crisis line will be referred to service providers in the geographical area where the child concerned resides. Trained counselors will follow up with children individually during home visits and provide referrals to child protection services available as necessary.
A needs assessment will be done with volunteer counselors to develop a year plan for monthly continuous training. Continuous training will be according to standardized SETA accredited training modules developed by Childline SA. Trends and new policy relating to child protection and the management of child abuse will also be covered during these trainings. Training with parties like South African Police Service, Department of Health, other government stakeholders and civil society organizations will also be facilitated to ensure collaborative service delivery to vulnerable children in the community. Service providers will be trained on communicating with children and on the emotional needs of children to ensure services are delivered with sensitivity to children needs.

ACTIVITY 5: Psychosocial support to caregivers

Social workers will supervise volunteer counselors from the community to ensure that children are provided with the care and support they need to cope with the situations they are facing as a result of the effect of HIV and AIDS on their lives. With PEPFAR support, children will be able to access services to obtain legal documents, cope with grief and loss, and deal with abuse and violence related issues. Children will be able to talk and think about relationships with parents, peers, siblings, opposite sex, step- and extended families. Quality of services rendered by volunteer counselors will be monitored thorough statistics, reviewing process reports, and holding monthly sessions for debriefing and in-service training.

ACTIVITY 6: Life Skills development

Social workers, in cooperation with local schools, will develop youth groups/clubs to actualize the youth potential to act as agents of change in their own communities. Focus group discussion will be conducted on a weekly basic dealing with various topics identified by the youth. Gender specific program for boys and girls will be offered. Trained counselors will facilitate youth groups providing educational support, recreation opportunities and life skills training focusing on HIV prevention, reproductive health and gender-based violence. A community event will also be identified, planned and executed with the support of the social worker by the youth to have a mass impact of the community e.g. National Aids day / Youth day to develop skills and create potential for young people to participate in organizing community care and support events.

Activities conducted by Childline Mpumalanga will contribute to the PEPFAR objective of providing 10 million people with care.

Table 3.3.08: Activities by Funding Mechansim

Mechanism ID: 7296.08
Mechanism: N/A
Prime Partner: Hands at Work in Africa
USG Agency: U.S. Agency for International Development
Funding Source: GHCS (State)
Program Area: Orphans and Vulnerable Children
Budget Code: HKID
Program Area Code: 08
Activity ID: 15934.08
Planned Funds: $1,000,000
Activity System ID: 15934

Activity Narrative: SUMMARY:

Hands at Work in Africa (hereafter Hands at Work) will use FY 2008 PEPFAR funds to provide a holistic package of basic services to OVC, including increased access to educational support and social services through community-based programs in four provinces. The specific target population is orphans and vulnerable children and the major emphasis area is local organization capacity building.

BACKGROUND:

Established in 2002, Hands At Work (HAW) is a South African NGO that provides comprehensive care and support services to OVC and their families through a network of associated community-based organizations (CBOs). Hands at Work has a vision to reach 100,000 OVC by 2010 in sub-Sahara Africa. The Hands at Work model, and in particular, the Masoyi project, (described by various independent organizations as a best practice model) lends itself towards mobilizing new community initiatives in resource-poor settings. It model builds on the foundation of home-based care and local community ownership by mobilizing the local church to accept the biblical mandate to look after the sick and the dying in their communities and to care for the orphans. Hands at Work helps to establish, encourage and build capacity in CBOs that are formed out of local churches that agree to implement the Masoyi Community Intervention Model. With PEPFAR funding Hands at Work has reached 6500 OVC and over 1200 caregivers with an integrated service package that includes education, psychosocial and nutrition assistance. With FY 2008 funding, Hands At Work will continue to increase the program's reach and extend additional support to established care centers to provide support groups for young mothers, facilitate reintegration of young mothers into schools; ensure OVC access to counseling and testing and ARV treatment, when needed; train and mentor Community Child Care Forums (CCCFs) and provide life skills and prevention education for all beneficiaries. In addition, Hands At Work will also continue to implement income-generating initiatives, home-based care and resilience-building programs to further support improved security and livelihoods for children. The Hands at Work program is aligned with the South African National Action Plan for Orphans and Other Children made vulnerable by HIV and AIDS and the Department of Social Development (DOSD) Policy Framework and has a good relationship with both the national and provincial DOSDs.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Local Organization Capacity Development

Local organization capacity will be developed through a CBO training and mentoring program. Partner CBOs are trained and mentored for an 18 month period in OVC care and support, and the provision of direct services to OVC; also developing and improving organizational capacity. Organizations are taught how to access and implement services within the frameworks provided by the departments of education, home affairs and DOSD. E.g., they are taught how to secure school fee exemption, rather than trying to raise funds for fees; how to apply for and access legal documents and secure grants; rather than directly paying monthly household expenses/needs. Hands at Work in Africa assists organizations with the development and use of data collection tools, methods and processes; implementation plans and subsequent monitoring, evaluation and reporting obligations. In the Training and Mentoring program, CBOs will be trained in organizational matters such as bookkeeping, proposal and report writing, conflict mediation, forming linkages and partnerships and establishing relationships with local government departments and local service providers (treatment sites etc.). Local organization capacity will be developed further with the training and mentoring of lead Child Care Workers in various organizations.

ACTIVITY 2: Human Capacity Development

Hands At Work will partner with 45 local CBOs to identify, train and mentor caregivers providing direct care and support services to OVC and their families. Training topics will include basic child care, the role of the childcare worker, OVC selection criteria and community care forums; minimizing discrimination and stigma, HIV prevention, children issues, promoting gender equality, child rights and protection; and caregiver participation in service delivery. Caregivers will also be trained to identify cases of vulnerability, abuse, ill health and HIV and AIDS infection and referral mechanisms. In addition, caregivers will receive training and support on family-centered care including basic parenting skills, nutrition counseling and food gardening and health. Hands At Work will support local CBOs to develop caregiver support groups, led by senior caregivers, to facilitate peer-to-peer support and information dissemination. Child care workers will also be the first link to ensure M&E data capturing and integrity. Each child care workers will be mentored on appropriate case management including documentation.

ACTIVITY 3: Psychosocial Support

Hands At Work will provide training and support to local CBO partners to provide a targeted psychosocial support to OVC and their families. Psychosocial support activities will include the provision of one-on-one counseling, group counseling (support groups), play therapy at care centers, and age-appropriate development programs such as youth camps (based on Survive Your Life and Better Choice curricula) and life-skills training. In addition, child-headed households (CHH) will receive training in grief managment, sexuality and HIV prevention. Support groups will also be formed for members of these households to provide ongoing counseling and support.

ACTIVITY 4: Educational Support.

Hands At Work's community care centers are multi-purpose centers based in the community and used for pre-school training for OVC and HIV-infected infants (0-5yrs), after-school care and homework tutoring, and nutritional support for CHH. All the centers follow a set, pre-school curriculum to ensure that OVC are adequately prepared for entry into primary school. Hands at Work works closely with the Department of Education to ensure every OVC is enrolled in school and exempted from school fees. Academic assistance and homework support will be facilitated at care centers by qualified teachers and volunteers, with a focus on English and mathematics. Care centers are also places of safety for OVC. All school going CHH OVC within the area of a care center will also receive nutritional counseling and a cooked meal (provided with non-PEPFAR funding) at the care centers. Food parcels (sourced through public-private partnerships) will also be provided to those children in need.

Activity Narrative:

ACTIVITY 5: Health

Workshops on HIV and AIDS information and education will be held with all the OVC above 10 years. All the OVC will be de-wormed at least once with assistance from the local health clinic. Health Care and home visits are provided to the OVC by the Home-based Care staff funded by other Hands at Work donors. The CBOs link OVC with health services including screening, immunizations and where needed home-based care services (varying from adherence monitoring, basic wound care to cleaning) as well as pediatric testing for infants and VCT for older OVC.

ACTIVITY 6: Legal Assistance and Economic Support

A birth certificate and identity document drive will enable social workers (who are employed to facilitate this intervention) to apply for government social grants for OVC who qualify for them. This intervention will assist government to fulfill their mandate as stipulated in the Department of Social Development's Strategic Framework. Blankets will be distributed to all the new OVC registered after October 2008.
Hands at Work will support skills training for older OVC and income generating activities for caregivers, to bring revenue and new skills that contribute to reducing the susceptibility of OVC and their caregivers to HIV infection.

ACTIVITY 7: Nutritional Support

Active support will be given to ensure that food gardens provide fresh produce to supplement monthly food parcels, and supply soup kitchens for daily meals provided to pre- and school going OVC at care centers. Provision of monthly food parcels is a wrap around activity funded through national and local business partnerships. Soya porridge is distributed to severely malnourished OVC as part of an emergency feeding scheme funded from non-PEPFAR sources. Nutritional education training will be given to OVC-headed households and caregivers to assist in improving OVC nutritional status by covering topics such as healthy food choices, food preparation and storage.

ACTIVITY 8: Prevention Education

HIV Prevention and protection training will be provided to child-headed households, primary caregivers (PCG), and OVC The training will focus on core themes such as life skills, gender equality, child protection with the view to reduce violence and coercion, sexuality, HIV and AIDS and reproductive health. The youth development programs, Survive Your Life, Better Choices and young moms focuses particularly on abstinence and faithfulness. The young mom program is focused on integrating the girls back into the education system while supporting them in caring for their babies.

Hands at Work contributes to the PEPFAR 2-7-10 goals of caring for 10 million people including OVC by strengthening the community-based network for OVC care and support in an accountable and sustainable way.

Indirect Targets

Children affected by being involved in the replication of effective Community Child Care Forums. The CCCFs being assisted will be listed, with their catchments areas and demographics in respect of the estimated OVC in the area (this would exclude OVC being reached directly with PEPFAR funds). Children that are involved in the replication of effective Community Child Care Forums will be the focus. CCCFs affect the lives of all the OVC in that specific community – this could range from a few hundred to a few thousand depending on the area. Hands at Work is working closer with the Mpumalanga Provincial Government to assist in developing and training CCCFs in communities outside of the current reach of projects affected by the PEPFAR direct targets. It is expected that this reach will increase as CCCFs become pivotal to the communities response to the vulnerability of children.

Activity ID:	15935.08	**Planned Funds:**	$700,000
Activity System ID:	15935		

Activity Narrative:

SUMMARY:
This project is being initiated by the Department of Education (DOE) in the Free State province, managed and supported by Health and Development Africa (HDA). The project will support orphans and vulnerable children (OVC) through a school-based intervention in 90 schools in the Free State province, and the development of 18 Communities Child Care Forums (CCFs). Community Facilitators will work with structures at a school and district level to identify OVC and support them. The emphasis areas are human capacity development and local organizational capacity development. The specific target populations are OVC, and children and adolescents.

BACKGROUND:
Health Development Africa (HDA) is a South African health consulting company, which has been working in the field of HIV for the past 7 years. Between 2000 and 2003 HDA staff led and participated in a number of HIV Impact Studies for Ministries of Education across Southern Africa. As a result, HDA developed the Circles of Support (COS) model to provide education ministries with a model they could use to develop ways to support OVC within the education system. This model trains educators and community members to work together to identify vulnerable children. These children are then assisted with their basic needs and the project also ensures that children stay in school and complete their education. By using schools, which are present in all communities, the COS model becomes a sustainable way to support vulnerable children, and make sure that they do not get trapped in a cycle of poverty, which also makes them more vulnerable to HIV infection.

This project will build on existing initiatives to support OVC by the DOE that are already underway in the Free State province. It will also build on the Circles of Support (COS) project developed by HDA, and implemented in Swaziland, Botswana and Namibia between 2003 and 2005. While the project aims to target most of the OVC in the project schools, there will be particular focus on the vulnerable girls, and will aim to ensure that these girls continue with their schooling.

ACTIVITIES AND EXPECTED RESULTS:
ACTIVITY 1: Training and Assessment
The first activity will be to review and adapt the materials that have been used for similar projects in Botswana, Namibia, Swaziland and the Eastern Cape Province. The DOE will assist HDA decide the most important content for the facilitation materials including but not limited to: Understanding children's lives, talking and listening to children, setting up a circle of support group at school, setting up a neighborhood circle of support group, basic HIV and AIDS knowledge, know the community your school serves, know who to ask for help and support, find ways to get financial or other material support for children, decide what action to take to help children, how to use the circles of support diary.

After this, HDA will train at least 6 Circles of Support (COS) facilitators (dedicated project staff) and at least 6 learning support facilitators (DOE staff) on the topics listed above. HDA will recruit the six facilitators in this period, and conduct training workshops that will allow them to start providing immediate training and support to the School-based Support Teams and the CCFs.

ACTIVITY 2: Capacity Audit
HDA will also coordinate a capacity audit in a sample of project schools. The capacity assessment processes will ensure that any significant policy or institutional issues that may impede the implementation of the project are identified at the beginning and discussed with the DOE and key stakeholders. This will ensure that the facilitation manuals and awareness materials are sensitive to the school environment and address key capacity gaps.

ACTIVITY 3: Community Care Forums
The third activity will be the facilitation and development of eighteen community forums. These structures will be established at the request of the Department of Education in the Free State. They are multi-sectoral bodies that can overcome some of the common obstacles that OVC face. For example, it is not possible for OVC to access child support grants without identity documents, but often this requires the Department of Home Affairs, as well as the police and other stakeholders to assist OVC to get all of the necessary documents in order.

Each local COS facilitator will be responsible for the development of three CCFs. This will involve identification of stakeholders, community mapping, introductory workshops, monthly meetings and oversight of a program of activities. It is expected that the CCFs will be operational within the first six months of project implementation. These forums will typically be made up of community members, as well as representatives from the Departments of Education, Health and Social Development (DOSD). HDA will orient and train the CCF members, using a similar curriculum to that used for the School-based Support Teams (SBSTs). After this the COS facilitators will ensure that community forums meet at least monthly, and that any problems within the SBSTs are being raised and solutions discussed.

ACTIVITY 4: Strengthening School-based Support
HDA will partner with 90 schools in the Lejweleputswa district to establish SBSTs. SBSTs will include teachers, concerned parents and community members who can play an active role in supporting children. In schools where the Department of Education has established Health Advisory Communities (HACs), the HAC will serve as the SBST. These SBSTs will be supported by a local COS facilitator and learning support facilitator/s. The local COS facilitator will lead the process of introducing the COS project to SBSTs and will, through a program of half day workshops train SBST members on the needs of vulnerable children, how to identify children, community mapping, networking with government and other resources, action planning and monitoring and reporting.

Once members of the SBST have been trained they will start to actively identify vulnerable children in the school. All teachers will be asked to be involved in a process of identifying these children, many of whom are already known. Although the initial process will prioritize children in school, it is expected to extend to siblings who are not in school, and also children who have dropped out of school. The children that are supported at school will not be identified as "AIDS orphans", and the HDA will train the teachers to approach all vulnerable children in a sensitive manner.

ACTIVITY 5: Care and Support

Activity Narrative: HDA and the Department of Education will ensure that all children who are identified through this project are provided with a package of services through referrals to ensure that the child's needs are met as comprehensively as possible. The SBST will meet monthly, and discuss and assess the children who are being supported.

After a child has been identified, members of the SBST will conduct interviews with the child and caregivers to determine the child's needs, and to discuss priority interventions. If necessary home visits will be organized to establish the circumstances under which the child is living. Once the needs assessment is completed the SBST will provide the child with support to meet their needs. This support is likely to include the following: provision of school equipment and uniform, assistance to ensure exemption of school fees, working with local clinics to get access to health care, and assistance with ensuring the child receives a social grant and nutritional support. This is usually delivered by referring the child to NGOs working in the community, or through helping the school set up a feeding program. Children will also receive assistance with home care and homework. Often these children are looking after ill adults and younger children. The SBST works with neighbors and community organizations to make sure that these children get support in these tasks, while at the same time get help with their own school work. There may be extreme cases where children are in severe need, either because they do not have housing, or food, or are being abused in some way. In this case the SBST will work closely with the DOSD and the South African Police, to ensure the safety of that child.

If the SBST is unable to find a way to provide for child's needs, they will then consult the COS facilitator and the Community Forum. The COS facilitator will also help to share experiences between SBSTs, and highlight solutions that can then be used in other areas. The COS facilitator will also help to monitor the progress that the SBSTs are making.

The COS Project will ensure the following is monitored in terms of gender: the gender of OVC receiving direct support, the involvement of women in all COS structures (particularly at the local level where there can be over representation of women), adequate involvement of men in COS structures. Additional exercises specifically addressing gender issues will be integrated into set-up training. For example, the training will focus on the increased vulnerability of girls, and ways to ensure that girls are kept safe, both in and out of school. Training will also discuss critical child safety and protection issues such as sexual abuse. SBSTs will be encouraged to introduce child participation activities designed to build self esteem of vulnerable children, particularly girls where this may be necessary to build resilience.

By the end of FY 2008 all 90 schools will be actively implementing COS support activities. While the main focus of the SBSTs is to keep OVC in school, other services will be to ensure that OVC get social grants, to provide psychosocial support, and to provide for material needs where this is a problem for that child. The schools will get some funds for emergency support for OVC, which may include the purchase of food, transport of children and caregivers to places of safety, etc.

Activity Narrative: SUMMARY:

Currently, USAID/South Africa (SA) supports institutional capacity-building of indigenous organizations that implement PEPFAR programs, including OVC focused care programs, through three competitively-selected Umbrella Grants Mechanism partners: Pact, the Academy for Educational Development (AED), and Family Health International (FHI). The main purposes of these UGM projects are to: (1) facilitate further scale-up of OVC services in the short term; and (2) develop indigenous capability thereby creating a more sustainable program. The emphasis area is local organizational capacity development. Primary target populations are indigenous organizations, including non-governmental organizations (NGOs), faith-based organizations (FBOs), and community-based organizations (CBOs). The current UGM with FHI will support five sub-partners who have transitioned over from Pact and five new sub-partners. The activity described below refers only to the USAID/SA UGM project managed by FHI.

BACKGROUND:

USAID's Health and HIV/AIDS strategy responds to the overwhelming challenges posed by the HIV and AIDS epidemic on individuals, communities and society in South Africa. In response, the Mission has obligated funds to many partners and sub-partners in South Africa playing valuable roles in the fight against HIV and AIDS, including organizations that are providing comprehensive services to OVC. Through this UGM, FHI is responsible for managing sub-grants to ten of USAID's partners (all of whom submit their own COPs directly to USAID). As USAID's prime partner and the managing umbrella organization, FHI will not directly implement program activities, but rather act as a grants management partner to manage and mentor sub-recipients who, in turn, carry out the assistance programs. Thus, FHI functions primarily as a sub-grant making entity, and a relatively small percentage of overall funds is used for administrative purposes. Given that grant recipients require significant technical assistance and management support to grant recipients, FHI will devote a reasonable percentage of overall funding to provide this support.

USAID closely collaborates and coordinates with the South African Government (SAG) in supporting PEPFAR partners through the umbrella grant mechanism. Although some of the partners work closely with various SAG Departments at national and/or local (i.e., provincial and district) levels, the umbrella grant's primary interface with the SAG is through the Senior Management Team (SMT), which includes key staff from USAID, National Departments of Health and Social Development (NDOH, DOSD), and representatives from the provincial departments.

Under this UGM with FHI USAID is supporting six indigenous and international NGOs providing care and support services to OVC in South Africa. Active in all provinces except Eastern Cape, these partners identify and train caregivers, establish community care centers, and provide psychosocial support. These are: Mpilonhle, NOAH, PSA-SA, Starfish, Hands at Work, and Heartbeat. Grants to OVC partners support a range of locally-driven best practices for orphan care using a variety of models of service delivery and working in collaboration with the South African Government's Department of Social Development. During their partnership with PEPFAR, OVC partners will increase their reach two to three-fold. This scale-up will require adequate financial, monitoring and evaluation, and management systems to accommodate growth and maximize sustainability.

ACTIVITIES AND EXPECTED RESULTS:

In FY 2008, USAID will continue to support current OVC partners through this UGM with FHI. Funds budgeted under this narrative will support costs for administering and managing these OVC sub-partners of FHI. Separate COP entries describe the OVC activities implemented by each sub-partner under FHI. Institutional capacity building of indigenous organizations is a key feature of the umbrella grant mechanism and an important strategy for achieving prevention, care and treatment goals of PEPFAR to ensure long-term sustainability of programs and organizations.

ACTIVITY 1: Grants Management

The umbrella mechanism will award and administer grants to partners selected through the PEPFAR APS competitive process to implement OVC activities. These are: Mpilonhle; NOAH; PSA-SA; Starfish; Hands at Work; and Heartbeat. This involves an array of related activities including award and administration of grants, monitoring of grant progress, meeting reporting requirements, and grant closeout. The umbrella mechanisms will monitor OVC partners' program implementation and adherence to financial regulations. This involves provision of extensive technical assistance to partners on project development and implementation, financial management, monitoring and evaluation, and reporting.

ACTIVITY 2: Capacity Building

The new umbrella mechanism will support institutional capacity building of indigenous organizations, defined as activities that strengthen the skills of indigenous organizations to implement HIV and AIDS programs efficiently, with diminishing reliance on internationally-based technical assistance and support. The umbrella partners will support activities to improve the financial management, program management, quality assurance, strategic information (M&E) and reporting, and leadership and coordination of partner organizations implementing OVC activities.

ACTIVITY 3: Monitoring and Evaluation (& Reporting)

The umbrella mechanisms will provide support to OVC partners on monitoring and evaluation, in order to strengthen measurement of the implementation and impact of program activities, an eventual achievement of PEPFAR goals. M&E support of OVC partners includes: measurement of program progress; provision of feedback for accountability and quality; surveillance; and implementation of information management systems. In addition, the umbrella mechanism will provide supportive supervision to provide guidance, monitoring, mentoring and oversight through site visits, technical assistance, and performance evaluation.

The umbrella grant mechanism will contribute to the PEPFAR goals to provide treatment to 2 million HIV-infected people; prevent 7 million HIV infections; and provide care to 10 million people infected by HIV and AIDS, including orphans and vulnerable children.

Activity System ID: 14254

Activity Narrative: SUMMARY:

Pact's Rapid Response for HIV/AIDS in South Africa is an umbrella grant mechanism for USAID PEPFAR grants identified through a USG interagency competitive process. Pact's primary goal is to build sustainable institutional capacity and increase the effectiveness of local partners to achieve expanded and quality services. Primary target populations include Non-Governmental Organizations (NGOs), Private Voluntary Organizations (PVOs), and Faith-Based Organizations (FBOs). Pact's major emphasis is the enhancement of local sub-partner capacity through the development and implementation of documented organizational systems and procedures and human capacity development at management and operational levels.

BACKGROUND:

Since 2004, Pact has facilitated the efficient flow of grant funds during the rapid scale-up of the PEPFAR South Africa program. Pact provides PEPFAR funding and assistance to over 30 total PEPFAR partners and sub partners in South Africa playing valuable roles in the fight against HIV and AIDS.

Grants to OVC partners support best practices for OVC care using a variety of models of service delivery and working in coordination with the South African Government. During their partnership with PEPFAR, Pact OVC partners will significantly increase their reach. Scale up will require strong financial, monitoring & evaluation (M&E), and management systems to accommodate growth and maximize sustainability. Pact conducts technical assessments of OVC partners and sources the assistance required to address any gaps in service delivery. In FY 2008, Pact will continue to provide capacity building support to all OVC partners. Pact will also facilitate the sharing of established systems between emerging and well-established partners to further support enhanced and expanded networks of care.

Pact has contributed to the 2-7-10 PEFPAR goals through support to 11 PEPFAR partners providing care and support services to over 60,000 OVC in South Africa. Active in all nine provinces, these partners identify and train caregivers, establish community care centers and provide psychosocial and educational support. Ongoing efforts to secure identification documents, social grants, increased access to education and protection from abuse and exploitation have resulted in improved livelihoods for vulnerable children.

FY 2008 additional funds awarded to DSD under the PEPFAR sub-contract line item USAID/SA proposes to expand its collaboration and partnering with the South Africa DSD in to promote the well-being of OVC in South Africa.

ACTIVITY 1: Grant Management

Pact conducts a participatory assessment of each partner organization and collaboratively develops an organizational capacity building strategy that details planned interventions. These assessment results also inform Pact of what type of assistance must be provided urgently in order to ensure that the organizations comply with USAID rules and regulations.

Prior to the signing of grant agreements, Pact provides extensive assistance to organizations in developing comprehensive program design documents that accurately reflect planned activities and clearly articulate defined goals and objectives. Further assistance is provided in costing program activities and developing a detailed budget that is consistent with program objectives. Pact assists partners in developing realistic cost share levels and emphasizes the sustainability aspect of this requirement. After the signing of the agreement, Pact works with each partner in developing a very detailed annual work plan that includes specific activities to be implemented, timelines, budgeted amounts, target beneficiaries and projected reach. The ability to clearly articulate program goals and activities and develop realistic budgets greatly enhances the ability of partner organizations to diversify their funding base and ensure sustainability.

ACTIVITY 2: Human Capacity and NGO Development

Pact has developed a customized training series to orient new partners and their sub partners. The training series includes basic and advanced grants and sub grant management which addresses USAID rules and regulations, good governance and minimum financial management standards. Monitoring and evaluation courses cover basic principles of monitoring and evaluation and PEPFAR data requirements as well as internal data quality assurance. Refresher courses are also offered throughout program implementation. Pact also ensures that ongoing, intensive on- site training and mentoring is provided to partners and sub partners. On a quarterly basis, Pact assesses the level and type of assistance required by each organization and develops a site visit plan that ensures that the necessary support is delivered to each partner and sub partner. Pact organizes and supports technical consultation meetings for the sharing of best practices and lessons learned among PEPFAR and non-PEPFAR partners. As required, technical assistance from select regional and international providers is sourced to assist partners in improving their technical capacity.

ACTIVITY 3: Monitoring and Evaluation (M&E)

Pact SA assists each grantee in developing a results framework that tracks success against both PEPFAR program and organizational indicators. Pact further assists partners and sub partners in the development of monitoring, evaluation and reporting (MER) plans and systems. Participation in a five day M&E training is mandatory for all partners prior to full implementation. Pact provides additional M&E assistance to all partners in the following areas: review and development of effective data collection, analysis and reporting tools; setting realistic and achievable targets; establishing and strengthening data quality management systems, conducting internal data quality audits and verifying and validating partner and sub-partner data submissions.

ACTIVITY 4: Program and Financial Monitoring

Pact recognizes the importance of monitoring partner and sub partner program progress and early identification and resolution of implementation issues. Pact has frequent and regular contact with partners and if technical/programmatic gaps or problems are identified, ensures that issues are promptly addressed and resolved.

Activity Narrative:

In addition to monitoring program progress, Pact closely monitors partner financial management and ensures that grants funds are utilized only for activities approved by USAID under PEPFAR funding. All partners submit monthly financial reports that that detail and document expenditures. Once Pact has ascertained that the partner has implemented and/or strengthened financial management systems which fully comply with USAID regulations, the documentation requirement is removed and only the monthly reporting requirement remains in effect. Pact finance staff visit partners every quarter to audit program expenses and accompanying documentation, compliance with USAID rules (including branding requirements) and cost share.

ACTIVITY 5: Technical Assistance

Pact will provide and manage direct technical assistance in prevention, care and support strategies for all sub-grantees. Pact technical staff will conduct assessments and provide consultation and training on the development and implementation of programs and services (in line with best practice models, donor and SAG recommended methodologies and standards). In addition, sub-grantees will be supported with guidance and ongoing assistance on the design and delivery of partner HIV and AIDS curricula, training modules and publications. Pact will also work closely with partners to ensure the effective incorporation and strengthening of nutrition and food security, protection services, gender mainstreaming, and human capacity development in existing programs.

FY 2008 REPROGRAMMING:

ACTIVITIES AND EXPECTED RESULTS:
PACT will provide the following support to the DSD:
Exploration of opportunities for co-funding programs and assessing current co-funded programs to lessons learned and identify scalable best practices. Continuation of technical, training and consultative support in the areas of M&E of programs in support of the DSD Strategic Plan for OVC and Child Protection. Providing TA on gender issues as they affect OVC programs. Assist with assuring that appropriate information is available for OVC policy makers (e.g. studies, assessments, research). Providing support for forums, sharing and skills development workshops, etc. in an effort to obtain broad based participation, input and feedback for identifying the most effective action steps and interventions. Continuation of efforts to develop an OVC Quality Improvement Program for OVC service in South Africa. Develop a focused bereavement counseling activity for specific groups. Custom designed bereavement counseling will be developed and grief workshop developed to strengthen the capacity of OVC, their family and caregivers so that effective grief work will cascade down to the younger children receiving care. The focus will be on OVC caregivers at all levels.

These activities are inherently aligned to several South African policy frameworks, including the National Department of Social Development Strategic Plan 2005/2005-2009/10, the HIV&AIDS and STI National Strategic Plan 2007-2011 (NSP), the National Action Plan for OVC and Other Children Made Vulnerable by HIV and AIDS (NAPOVC), the National Guidelines for Social Services to Children Infected and Affected by HIV/AIDS, and is rooted in conducting all activities in line with the new Children's Act (CA). The proposed activities also support government's efforts to develop policies, strategies and programs on integrating services for orphan and vulnerable children.

Activity System ID:	15936		

Activity Narrative: SUMMARY:
Heartbeat will use PEPFAR funds to assist in providing a holistic package of basic services to orphans and vulnerable children (OVC), including increased access to educational support and psychosocial support services through community-based programs in eight provinces. Specific target populations include OVC, their families and caregivers. The major emphasis areas for the program are human capacity development and local organization capacity building.

BACKGROUND:
In the seven years since its inception, Heartbeat has successfully worked with partners to implement projects in seven provinces, meeting the needs of 11,000 orphaned and vulnerable children and approximately 1,100 primary caregivers. Heartbeat is reaching these children through two priorities: (1) their own direct project initiatives and (2) their training and mentorship initiative.

Heartbeat projects are physical communities and sites from which the organization runs its services. Heartbeat reaches three specific categories of children in their projects, namely: (1) Children living in child-headed households (CHH), approximately 10% of the children; (2) Children living in relative - (mostly grannies / aunts) headed households (RHH), approximately 60% of the children; and (3) Children living with a primary caretaker that is terminally ill (PO). Heartbeat programs contribute to the positive transformation of the whole child. These programs are sustainable and focused and are delivered through project sites called After School Centers. These programs include: material provision, education, children's empowerment, rights and access to basic services, capacity building and a sponsorship program through Sponsor a Child in Need (SACIN).

The services that Heartbeat provides are provided in partnership with other stakeholders in a supply-chain, for example Heartbeat partners with stakeholders that assist with Early Childhood Development Services (e.g. Project Head start); Tertiary Education Support especially for older OVC and as part of an exit strategy for OVC that reach 18 years (e.g. Tomorrow Trust; CIDA City University Campus); Sports and Recreation and Health care training and support (Big Shoes Foundation which provides medical care to OVC especially those affected by HIV and AIDS). Through this chain of service providers, Heartbeat has a continuous and close collaboration with other NGOs, the South Africa Government, Public-Private Partnerships (PPP), Community-based Organizations (CBOs) and individuals.

Apart from implementing the recognized Heartbeat Model of Care for OVC, Heartbeat has also developed a Mentorship Program to extend their reach to more children by empowering existing organizations (e.g. CBOs and FBOs), to implement the Heartbeat model of care. Heartbeat's program is aligned with the South African National Strategic Plan for Orphans & Other Children made vulnerable by HIV/AIDS and the Department of Social Development's (DOSD) Policy Framework. Heartbeat is also part of the National Action Committee for Children affected and infected by HIV and AIDS.

Heartbeat services and program are supported by partnerships with the South African Government, international funding and with business, including more than 30 business contributing small and large amounts of money to support services such as food parcels, seedlings for food gardens, home visits, toiletries, psychosocial support and educational support. Heartbeat's largest donor through a PPP is Tiger Brands, which has supported Heartbeat with food parcels since 2002.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Local Organization Capacity Development
Core to Heartbeat's scale-up strategy is a sustainable training and mentoring program. Partner organizations are trained and mentored for a 24 month period in OVC care and support and direct service provision to OVC; as well as developing and improving organizational capacity. As the number of capacitated organizations increase nationally, more OVC can be cost effectively reached and brought into a safety net of care in a way that ensures sustainable service delivery. Heartbeat will work to access and implement services within the frameworks provided by the Departments of Education, Home Affairs and Social Development. Partner organizations will be trained and mentored to secure school fee exemption, rather than trying to raise funds for fees and to apply for and access legal documents and secure social grants; rather than directly paying monthly household expenses and needs. Heartbeat delivers other services such as psychosocial support and legal aid services in partnership with these organizations in eight provinces in South Africa.

ACTIVITY 2: Human Capacity Development
As part of the Heartbeat's "Tswelopele" Training and Mentoring program, Heartbeat and other partners' care workers will be trained in organizational matters such as OVC care and support topics that include basic child care, the role of the childcare worker, establishing OVC selection criteria and community child care forums; minimizing discrimination and stigma, HIV/AIDS and children issues; and promoting gender equality, child protection and participation and psychosocial support services in service delivery. Organizations with care workers should proof potential to be sustainable, i.e. have the ability to attract donors to support the implementation of the Heartbeat model of care. Basic parenting skills, nutrition and food gardening form part of the curriculum. Orphaned and vulnerable children will in addition receive training in child protection and child participation, gender equality, sexuality and HIV prevention and AIDS information.

ACTIVITY 3: Psychosocial Support
The psychosocial support programs link OVC to psychological and emotional care and leads to the empowerment of children and improvement of their well-being. A network of care workers regularly visit OVC at their homes to offer emotional support and practical support, i.e. household chores, cooking, cleaning and some homework assistance. These care workers are recruited from advertisements in communities. PEPFAR funds will be used to provide training, ongoing supportive supervision and mentoring to care workers as well as stipends. Psychosocial support services to children will include support groups, individual counseling, bereavement support, memory work, children's workshops, puppet shows, and youth camps.

ACTIVITY 4: Prevention and Protection
Heartbeat will provide age-appropriate developmental programs will include children's workshops, puppet

Activity Narrative: shows, and youth camps in FY 2008. The youth camps (for older OVC) will focus on core themes such as life skills, gender equality, child protection (including issues around alcohol and drug abuse) with the view to reduce violence and coercion, sexuality education, HIV and AIDS prevention information and reproductive health. The youth camps will also train and mentor young peer educators through a partnership with Harvard School of Public Health. The children workshops will enforce prevention messages regarding HIV and AIDS and will focus on child protection and gender equality information and tools. The puppet shows will have a specific focus on values and child protection and will be done among other with Heartbeat's Early Childhood Development partners and projects.

ACTIVITY 5: Educational Support
School uniforms and stationery are supplied to OVC as part of Heartbeat's educational program with funding from Heartbeat's other corporate and international donors. This is a very important intervention as it is known to reduce stigma and discrimination and thereby encourage school attendance. PEPFAR funding will be used to fund academic assistance and homework support facilitated at After School Centers by qualified teachers and volunteers or in partnership with Tomorrow Trust, with a focus on English and Mathematics during school holidays. Heartbeat's After School Centers are also places of safety and support for OVC and provide a hub from which Heartbeat delivers other necessary services to OVC.

ACTIVITY 6: Legal Assistance and Economic Support
PEPFAR funding will support a birth certificate and identity document drive that will enable social workers (who are, and will be, employed by Heartbeat to facilitate this intervention) to apply for government social grants for OVC who qualify for them. This intervention will assist government to fulfill their mandate as stipulated in the DOSD's Strategic Framework. PEPFAR funding will also ensure that blankets be distributed as one intervention that will provide a safe and secure environment for OVC. Other services that will also contribute to the safety and security of children include child protection workshops, abuse interventions from social workers, mobilization of the Community Child Care Forum that consists of concerned community members, access to the After School Centers and visits from the care workers.

ACTIVITY 7: Nutritional Support
Food gardens provide fresh produce to supplement monthly food parcels, and meet the needs for daily meals provided to pre- and school going OVC at Heartbeat's After School Center and the Heartbeat supported pre-schools where OVC are integrated. PEPFAR has supported the establishment and maintenance of these food gardens in the past and will continue to support this initiative in FY 2008. Furthermore, nutritional education training will be given to OVC, caregivers and pre-school teachers, to assist in improving OVC nutritional status by covering topics such as healthy food choices, food preparation and storage. Provision of monthly food parcels is a wrap around activity funded through national and local business partnerships (e.g. Tiger Brands a local food producer). Food parcels with non-perishable food products are provided to families without any government economic support (grants) from non-PEPFAR sources.

Program Area: Orphans and Vulnerable Children

Budget Code: HKID

Program Area Code: 08

Activity ID: 14042.08

Planned Funds: $291,000

Activity System ID: 14042

Activity Narrative: SUMMARY:

Support for orphans and vulnerable children (OVC) and training for their caregivers in targeted schools will be carried out by a local NGO to support the Department of Education (DOE), to improve the lives of the OVC. Activities will provide services to OVC in schools and will train caregivers to mentor and support OVC. Primary areas of emphasis will be gender, human capacity development, psychosocial support, education and training to support OVC. The program will support the DOE strategy to use schools as full service centers for learning, teaching, prevention care and support. The target population will be OVC and children ages 5 - 17 in Grades 0 - 12, and caregivers servicing the focus schools.

BACKGROUND:

The DOE is committed to increasing access to quality education for all students including students with special needs. Policies are in place to address student retention rates at schools through the expansion of the feeding scheme program which provides access to nutritious food. DOE is focusing at improving access for children in rural areas and exemption and elimination of school fees for children whose parents cannot afford the cost of education. The no fee paying schools offer access to five million children. The DOE's inclusive education polices are aimed at creating an education environment where there is no discrimination. The DOE uses a district-based approach to support a cluster of schools with special needs. Some of these schools have been earmarked as full service schools where therapy, counseling, assessment, treatment, care and support will be provided to students who require these services.

Many children in rural areas do not have access to any of the services discussed above. Girls still suffer from various forms of discrimination. Children have to travel long unsafe distances to school and in some instances they experience abuse and rape along the way. Other children are abused in their homes, maltreated their peers, and live without adequate adult support and supervision. In some cases children are absent from school due to ill health or psychosocial factors. Children are marginalized and stigmatized due to their disability, ill-health or when parents are terminally ill or have died of AIDS. In rural areas children with disabilities do not have easy access to schools due to lack of transport. They are sometimes hidden by families or mainstreamed without recognition of their disabilities.

ACTIVITY 1: Caregiver Training

This program will provide training for caregivers to support children and teachers to address disability and vulnerability issues. The education system is not equipped with qualified caregivers, social workers, psychologist, and therapists to assess, and provide support to children with disabilities, children traumatized due to death of a parent, or children infected with AIDS. Teachers do not have adequate skills and the capacity to serve as counselors and caregivers. Human and physical resources are limited to urban areas and economically affluent schools. While the DOE has set aside finances to support children with disabilities, this plan has not yet started to yield the desired results due to lack of capacity. Support will include training for 30 caregivers from school governing body members to increase capacity to offer quality education to OVC and disabled children. Support will increase measures to protect OVC from violence, exploitation, discrimination, abuse and obviate any secondary trauma that may result from their orphanhood and/or vulnerability. Training for caregivers will impart skills to mitigate the impact of HIV and AIDS, address disabilities and fight discrimination. Caregivers will receive training to identify OVC, access for referrals for the identified children to appropriate service providers, establishment and support of child care forums and monitoring and evaluation systems to ensure that there is accurate data to respond to emerging problems. The skills acquired through the training will also assist members of the local community especially women to access income.

Other education funds will be leveraged to provide a comprehensive integrated wraparound OVC program. Support will include conducting a baseline study in target schools to determine the specific needs of the students. The targeted schools will receive support for abstinence and be faithful activities.

ACTIVITY 2: OVC with Disabilities

PEPFAR funds will assist 2000 OVC to fight the impact of HIV and AIDS and address disabilities. USG funds will be used to strengthen mentoring training programs for OVC and more vulnerable disabled children and increase access to social services, health, nutrition, and education. Activities will support prevention against HIV and AIDS, equip children with skills to counter abuse, teach children about gender-based violence prevention, offer OVC career guidance opportunities, tertiary education and training programs, child protection services and legal aid. Training and workshops will address psychosocial issues for OVC in schools, integrate HIV and AIDS and gender into the curriculum, addressing sexual harassment, sexual abuse and unwanted pregnancies to reduce abuse and cohesion.

Support will be linked to the schools that are currently receiving peer education assistance and special schools identified by DOE as full service schools. This link is aimed at consolidating USG education support to ensure comprehensive programming in the area.

The OVC program will support children in a cluster of 200 rural KZN schools. The program will focus at the Kokstad, Mzimkulu schools in the Sisonke District with high poverty levels and HIV prevalence rates. OVC include children with mental, physical and learning disabilities, and children orphaned by AIDS. The support to OVC is in line with the DOE's objectives on inclusive education, and uses schools as supportive centers of learning.

In KZN the provincial education department is working with other donors and local NGOs to strengthen school structures to provide care and support for children and teachers. This program will be implemented in collaboration with other ongoing DOE activities. Other partnerships will include establishing links with local health, social, law enforcement and legal aid services. This is to ensure that the activity is integrated with existing service institutions in the area to sustain the collaboration between education, health, social services and police. A local service provider will be identified competitively through an Annual Program Statement to implement this program.

The results of this activity will contribute to the PEPFAR 2-7-10 goal of 10 million HIV-infected and affected

Activity Narrative: individuals including orphans and vulnerable children received care.

Table 3.3.08: Activities by Funding Mechansim

Mechanism ID:	328.08	**Mechanism:**	N/A
Prime Partner:	Johns Hopkins University Center for Communication Programs	**USG Agency:**	U.S. Agency for International Development
Funding Source:	GHCS (State)	**Program Area:**	Orphans and Vulnerable Children
Budget Code:	HKID	**Program Area Code:**	08
Activity ID:	2990.08	**Planned Funds:**	$485,000
Activity System ID:	13955		

Activity Narrative: SUMMARY:

The Johns Hopkins University/Center for Communication Programs (JHU/CCP) will implement an orphans and vulnerable children (OVC) intervention that builds networks of support around OVC, their caregivers and educators. OVC will be assisted in accessing basic needs and psychosocial support. Proven psychosocial models for supporting OVC will be used to build the capacity of organizations working with OVC. The target populations for this program are OVC, people living with HIV, religious leaders, and teachers and existing PEPFAR partners. The major emphasis area for the activity is local organization capacity building.

BACKGROUND:
This program is now in its third year and focuses on using tools developed in past years to work with communities, caregivers and OVC to implement appropriate responses which address a range of OVC needs, including physical, social and emotional issues. DramAidE, The Valley Trust and the Anglican church have worked with schools, FBOs and CBOs to identify OVC, who have received needed services. This partner's activities to date include community mobilization for the provision of psychosocial and direct support for OVC in communities. Direct support includes; home visits to OVC to monitor their progress, referrals to social workers, tribal authorities, assisting in applying for the waiving of school fees for OVC through the Department of Education, referrals to the Department of Social Development and the Department of Home affairs for Child Support, Foster Care and Child Dependency grants. Support has also focused on collaboration with local police and other community organizations to promote child protection.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Direct Support to OVC

The Valley Trust (TVT) works in the rural areas of KwaZulu-Natal and identifies and trains caregivers within local communities to provide direct care and support to OVC. This includes protection from abuse and exploitation and working with school officials to identify and work with OVC who are trained as Peer educators within the school settings. Peer Educators identify and work with other OVC on creating safe spaces and providing psychosocial support that that uses group recreational activities including music, drama and sports to decrease social isolation. Peer Educators also provide support to OVC for bereavement and compiling and maintaining memory boxes.

DramAidE Community facilitators (CFs) are trained to work in communities to assist OVC to gain access to basic material needs and ongoing psychosocial support activities. In addition to providing direct assistance to OVC, CFs work with communities, FBOs, NGOs, educators and caregivers to lay the foundation for community action in support of these OVC.

Through these activities DramAidE and TVT strengthen the capacity of the communities to be able to respond to the needs of and to develop a culture of care, nurture and support for OVC.

ACTIVITY 2: Technical Assistance (TA) for PEPFAR OVC Partners on Psychosocial Support

DramAidE provides training and technical assistance on psychosocial support to other PEPFAR OVC partners. Creative, interactive and culturally appropriate activities to reach OVC, such as drama, storytelling and workshops are used to equip and enhance existing PEPFAR OVC programs in responding to the psychosocial needs of OVC and include HIV prevention interventions for OVC which are age appropriate. Educators and caregivers are trained and provided with on-going support in implementing these programs. The meaningful participation of affected children, OVC and youth is critical to the success and sustainability of any effective intervention targeting OVC. To this end, OVC are consulted regarding their needs and are involved in developing local support networks.

ACTIVITY 3: Communication Training

JHU/CCP and PEPFAR partner Soul City work together to provide communication training to assist caregivers in developing tools and skills which will enhance their ability to provide more effective and efficient services. Interpersonal communication skills training will be conducted, and a core set of materials adapted from media programs, along with facilitator guides, will also be produced and distributed as part of this activity.

These activities will contribute towards meeting the vision outlined in the USG Five Year Strategy for South Africa, by providing care for children made vulnerable by HIV and AIDS through the expansion of community capacity to deliver good quality care. In addition they increase OVC access to government support systems, and strengthen linkages and referral systems to other social services such as health, education and social welfare. The latter will be achieved through the establishment of child care forums with all relevant stakeholders, including government departments that provide services to OVC; compilation of directory of government and civil society services available for children and also through facilitation of community conversations for OVC, pre-school practitioners, school governing bodies, community policing forums, other stakeholders and youth caregivers to address stigma directed at OVC

JHU/CCP and its partners contribute towards the attainment of the National Strategic Plan target of ensuring that 80% of people living with HIV and their families are provided with an appropriate package of treatment, care and support through ensuring the effective implementation of policies and strategies that mitigate the impact of HIV on orphans, vulnerable children and youth-headed households.

Activities implemented by JHU/CCP will contribute to the PEPFAR objective of providing care to 10 million people, including OVC.

Budget Code: HKID

Program Area Code: 08

Activity ID: 8245.08

Planned Funds: $600,000

Activity System ID: 13984

Activity Narrative: SUMMARY:

Ingwavuma Orphan Care (IOC), in partnership with Lulisandla Kumntwana (LK), provides psychosocial, educational and nutritional support to OVC and facilitates access to government social grants and other social services. Activities aim to extend the reach of OVC projects in Ingwavuma and Mseleni areas of Northern KwaZulu-Natal. FY 2008 funding will be used to double the numbers of OVC reached. The primary emphasis area for this project is human capacity development with additional emphasis on local organization capacity development, development of network/linkages/referral systems and training. The primary target populations are OVC, HIV-infected children, and caregivers of OVC.

BACKGROUND:

This project is part of the work of two organizations, Ingwavuma Orphan Care (IOC) and their partner Lulisandla Kumntwana (LK), which began their work in 2000 and 2002, respectively. The organizations work in adjacent districts in Northern KwaZulu-Natal, covering an area of around 4,000 square kilometers between them. There are thought to be about 10,000 orphans (both parents deceased) in this area. Most of the other 100,000 children under 18 in the region could be said to be vulnerable due to poverty and the severe impact of HIV and AIDS in the community. The organizations have been networking with each other since 2002 and benefit from this partnership through sharing ideas, information and resources, and occasionally loaning each other staff with particular expertise. Both organizations were new to PEPFAR in 2007, and are registered as Welfare Organizations with the South African Department of Social Development (DOSD). Three of their social workers are funded by the DOSD. IOC also has strong links with the Department of Home Affairs and its paralegal officers assist clients with getting their applications in order to secure birth certificates, death certificates and identity documents from this department. IOC's OVC services are closely linked to its palliative care services, ensuring that children of terminally ill clients are referred early for support. LK works closely with the Department of Health, which refers OVC to LK and helps facilitate psychosocial workshops that train boys and girls in life skills, gender issues, and sexual education. LK also has an MOU with the KwaZulu-Natal Department of Welfare to ensure that there is no duplication of services and to facilitate sharing of information, skills, and resources.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Service Delivery Improvement and Expansion

In FY 2008 with PEPFAR support, IOC and its partner LK will continue to expand their current OVC services by establishing more staff and family support teams in areas that are currently not being served. Infrastructure will be improved with the establishment of further satellite resource centers and upgrading the central offices and care center. The orphan coordinators will continue to mobilize, train and support teams of people from local churches who will regularly visit OVC and their caregivers and assist them practically, spiritually, emotionally and socially. This will lessen the burden of OVC care on women and girls, as many of the caregivers for OVC are elderly grandmothers and female OVC. Training of the team members includes child abuse awareness, how to refer children to other services, and addresses the area of reducing violence and coercion. The coordinators will continue to distribute food and clothes to those in need from the resource centers, refer families to the social worker to access foster care grants and deal with cases of child abuse, and refer children in need of health care to the home-based care teams, HIV support groups or local clinics. The paralegal officers will assist families in getting the documents they need to apply for the grants. School support officers, memory box workers and a youth pastor, who are funded by other grants, provide psychosocial, bereavement and spiritual support to the children. The team will ensure that OVC are attending school and will provide uniforms if needed. A housing project is also ongoing, funded by other grants such as Greater Good South Africa and school groups, which rebuilds houses for some orphan families whose houses have collapsed.

ACTIVITY 2: Capacity Building

The organizational capacity of both IOC and LK will continue to be enhanced. This will include in-service training of existing staff and employing and training new staff to improve sustainability. Training provided to the IOC and LK staff includes driving lessons, computer literacy, project management skills and advocacy skills. Another key feature is the implementation of a database to provide clear information on the work done by the field staff and volunteers and show how many children are receiving at least three of the nine key OVC interventions. This will allow managers to monitor activities and develop quality improvement plans.

ACTIVITY 3: Foster Care Facilitation

With FY 2008 PEPFAR funding, LK will continue to run a fostering agency to identify children in need of care and place them with qualified community families. LK employs two social workers to facilitate this process. LK recruits foster parents, who attend parenting workshops run by the organizations. IOC will duplicate this service. The social workers investigate home circumstances, screen the foster parent, and assist the children in accessing birth and death certificates. The social workers take the family to the Children's Court at Ubombo and Ingwavuma where the children are officially placed in foster care. The family is then able to apply for the government foster care grant. The social workers continue to supervise the placement to ensure quality of care and timely application for foster care renewal. IOC and LK address gender by reducing the burden on girls and women of caring for OVC and reducing the need for teenage girls and young women to use sex to get food.

ACTIVITY 4: Memory Boxes

IOC and LK will continue to help HIV-affected families create Memory Boxes for OVC. Memory boxes are created by the family, and consist of a collection of important documents, photos, meaningful items, and stories about themselves. This then serves as a memento for the children once the parent has died and the documents make it easier to sort out a government foster care grant for the children. This is a valuable psychosocial intervention which helps the OVC to cope with what is happening in their lives. IOC and LK each employ a Memory Box worker. Community team members are also trained in Memory Box work. Support groups for HIV-affected and infected children are established which will provide psychosocial

Activity Narrative: support and information for the caregivers and the children.

ACTIVITY 5: Youth Clubs

FY 2008 PEPFAR funding will support 25 after-school youth clubs in 25 primary schools, in addition to youth clubs that both IOC and LK will establish and run at their centers. These youth clubs will develop the life skills and spiritual growth of youth in general (aged 5 to 24 years), and orphans and vulnerable children in particular. The life skills program in the youth clubs and the psychosocial support workshops will include training for youth on male norms and behaviors and violence avoidance. The support offered to OVC through these clubs also enables young girls, who are especially vulnerable to abuse, teenage pregnancy, and HIV infection, to develop self-respect and self-esteem and to develop strategies to protect themselves. Training for both girls and boys will include discussion on the challenges of early sexual activity, the benefits of abstinence, and the importance of faithfulness for life with one partner. Youth clubs and workshops encourage OVC to remain in school and offer help with homework supervision and support. The youth clubs and psychosocial workshops described below provide a forum for young people to discuss gender issues and for young girls to boost self-esteem and build self-confidence.

ACTIVITY 6: Renovation of Training Center and Expanded Office Facility

IOC will renovate a building at a new office complex which will allow for the integration of all IOC activities at the geographical center of the area in which it works. A run-down building requires extensive renovation to convert it into some offices and storage area for PEPFAR-funded staff. Current offices were built to accommodate 7 staff while by 2008 there will be around 30. The current offices will be converted to a full time training center, providing much needed infrastructure and services in the area. The training center will be used by the organization to train staff, volunteers and community members for many of the PEPFAR related activities. PEPFAR funding will be used to do the landscaping of the grounds and equipment and furniture purchases.

These IOC activities contribute to the overall PEPFAR 2-7-10 goals by contributing to the 10 million people provided with care, including OVC so that OVC are able to grow up in their own communities with their basic needs and rights fulfilled.

Budget Code:	HKID	**Program Area Code:**	08
Activity ID:	3301.08	**Planned Funds:**	$450,000
Activity System ID:	13967		

Activity Narrative: SUMMARY:

The Africa Network for Children Orphaned and at Risk (ANCHOR) partnership will continue to strengthen and develop community support groups for orphans and vulnerable children (OVC), facilitate kids clubs, strengthen Child Care Forums (CCF), train partner organizations and provide one sub-grant to a Community-Based Organization (CBO). ANCHOR partners will continue to build relationships with local Rotary Clubs, local and provincial government departments, health facilities and local NGOs and CBOs. The primary target populations include orphans and vulnerable children and their families, youth, people living with HIV and AIDS. The program has reached over 3,600 OVC in 2006. The major emphasis areas are training and local organization capacity building.

BACKGROUND:

ANCHOR is a regional OVC partnership initiative operating in six African countries (South Africa, Cote d'Ivoire, Kenya, Nigeria, Botswana and Zambia). ANCHOR comprises four organizations: HOPE worldwide, Rotarians For Fighting AIDS (RFFA), Coca-Cola/Africa (CC), and the Schools of Public Health and Nursing at Emory University. ANCHOR will contribute to the PEPFAR vision in South Africa as outlined in the Five Year Strategy by providing care for OVC through the expansion of local community capacity to deliver quality care for orphans and vulnerable children and their families. ANCHOR will strengthen community capacity to scale-up OVC efforts at the community level. Through ANCHOR participation in the National Action Committee for Children Affected by AIDS (NACCA) at the national Department of Social Development (DOSD) level, ANCHOR SA is making a contribution to achieving these goals.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Care and support

ANCHOR will continue to provide comprehensive integrated care and support to OVC, their caregivers and families. ANCHOR activities will include providing services such as assisting OVC to access education (waivers for school fees, school supplies and uniforms), assistance in securing government social security grants for OVC, access to health care, and legal aid on issues of inheritance, nutritional and psychosocial support. In addition, as part of its wrap around activities, ANCHOR will continue to work with Tiger Brands, a major food producer, which provides OVC with food support. Nestle will provide training to OVC and their families on how to prepare meals with high content nutritional meals. ANCHOR will continue to build linkages and support with local schools and clinics as key partners in providing educational and health services to OVC.

ACTIVITY 2: Training and capacity building

In 2006, 200 participants from Gauteng and Port Elizabeth were trained in psychosocial support (PSS) for OVC. In FY 2008 ANCHOR will continue to train community members in PSS skills to support OVC. ANCHOR will develop user-friendly and outcome-based psychosocial support and basic counseling training manuals to be used by community workers. ANCHOR will continue to be supported by Hope worldwide (HWSA) Regional OVC Organization Support Initiative (ROSI) to provide training to partner organizations, SA-based volunteers, caregivers, and Hope staff use a 'Training of Trainers' (TOT) approach to scale up efforts and increase the number of OVC service providers that have been trained in PSS skills. HWSA's Abstinence focused (AB) team in partnership with ANCHOR will continue to train the caregivers/families on parenting and leadership skills. The involvement of caregivers and community groups will ensure that ANCHOR strategies remain relevant to the community and that they meet the best interests of the children and families. ANCHOR will provide training for caregivers and family members to address strategies on child protection, psychosocial support of OVC and strategies to reduce the abuse of women and children especially girls. Workshops and family interventions will be facilitated on topics such as succession planning, stigma and discrimination, children's rights, gender equality and HIV prevention for OVC, community members and caregivers.

ACTIVITY 3: Support Groups and Kids Clubs

ANCHOR will establish new OVC support groups and strengthen community OVC support groups and Kids Clubs which will be school and community-based, to address the psychosocial needs of all vulnerable children. Psychosocial support (to build resilience and empowerment), educational support (including homework supervision), nutritional support and comprehensive referrals to other care and support services are key components of the support groups and Kids Clubs. The Kids Clubs have a strong emphasis on youth involvement and leadership, as well as child participation at all levels. Children with strong leadership potential have been identified in different Kids clubs. These children will be trained as facilitators, will be consulted in needs assessment, planning and implementation of activities and finally in the monitoring of activities. Local Rotary Clubs will strengthen the kids clubs by providing educational and age appropriate life skill materials, school supplies and refurbished containers in areas where there are no centers to house Kids Clubs.

ACTIVITY 4: Child Care Forums

Child Care Forums (CCF) will be established in ANCHOR sites in the two provinces. One CCF was established in 2006 and ANCHOR plans to establish four more in Gauteng and Port Elizabeth. These forums will consist of key stakeholders in local communities, including health workers, the police, government departments, and CBOs, FBO, caregivers and child/youth representatives. In addition, educators will be represented on each CCF to ensure children's educational issues are addressed. The functions of the CCF are to ensure that the needs of OVC are met in a sustainable local structure and to be advocates for children within their community. The Journey of Life (JOL) manual will be used to train CCF members and caregivers.

ACTIVITY 5: Sub-grantees

Boitshoko, an OVC-focused organization, has been identified as a sub-grantee for the ANCHOR Track 1 program. Boitshoko, located in Soweto, Gauteng, will provide OVC support in education, nutrition,

Activity Narrative: developing and supporting Kids Clubs, support groups and providing psychosocial support. ANCHOR will provide technical assistance to Boitshoko which has a focus on organizational capacity development, to improve implementation of Boathook's OVC program. Regular mentoring and feedback sessions will be held to review progress. Funds will be used to support staff, training, community mobilization and other program support needs. Coca Cola Africa Foundation and other donors have been approached to fund organizational capacity development and staff development for all ANCHOR community partners. If this request for funding is successful it will strengthen sub-grantees and OVC serving NGOs.

The ANCHOR South Africa activities contribute substantially to the PEPFAR goal of providing care and services to 10 million HIV-affected people, including OVC. These activities specifically support the USG/South Africa Five Year Strategy by expanding the capacity of communities to respond to the needs of OVC, focusing on community participation.

Program Area Code: 08

Activity ID: 3294.08

Planned Funds: $800,000

Activity System ID: 13759

Activity Narrative: SUMMARY:

CompreCare, through its partnership with Child Welfare Tshwane (CWT), will identify and provide a holistic package of services to orphans and vulnerable children and their families. Program activities include nutrition, shelter, psychosocial, educational, economic and health care support for OVC as well as outreach and HIV prevention education. Primary target populations are orphans and vulnerable children (OVC), their care workers, and people living with HIV and AIDS. The primary emphasis is human capacity development.

BACKGROUND:

CompreCare is a South African non-governmental organization (NGO) implementing HIV and AIDS prevention and care activities under a multi-partner initiative called CHAMPS. The CHAMPS Initiative aims to reduce the impact of HIV and AIDS on OVC and their families in the Tshwane metropolitan area, specifically Mamelodi and Olievenhoutbosch, by raising awareness about HIV/AIDS preventative practices and through strengthening care and response networks for OVC.

In partnership with Child Welfare Tshwane, the largest service provider addressing the needs of OVC in the Tshwane metropolitan area, CompreCare recruits, trains and mentors care workers and facilitates increased access to education and government services for OVC. To date, PEPFAR funding has enabled CompreCare to train 76 care workers and service 2601 children with care and support services. Child Welfare Tshwane is a member of the South African Government local Department of Social Development Forum. This forum was created to strengthen linkages and networks between local government officials and NGO, CBO and FBO members in order to improve coordination between public and private service provider's programs. Child Welfare Tshwane has established a partnership with the Ford Motor Company which donates a facility for their wellness center. The Wellness Center offers a range of services to OVC and their families including; psychosocial services, prevention education, nutritional counseling and support, and income generation activities.

ACTIVITIES AND EXPECTED RESULTS:

CompreCare's OVC care and support program will focus on the early identification of infected and affected children and families and ensure that their basic needs (food, health care and education) are met. The program will conduct household needs assessments and link OVC and their care workers to the appropriate government and community services. Trained community care workers residing in the target areas enable CompreCare and its implementing partner to provide comprehensive and holistic care for OVC.

ACTIVITY 1: Training

CompreCare, in collaboration with their implementing partner, Child Welfare Tshwane, will offer a standardized OVC training and service package/strategy to train and support community care workers. The training is based on the Iso labantwana ("eye on the children") model that was originally developed by Child Welfare Cape Town. Child Welfare Tshwane has adapted the model to address the needs of children infected and affected by HIV and AIDS and has produced a manual for trained volunteers. The training is a 10 module course that emphasizes community-based approaches for the early identification and care and protection of vulnerable children. Care workers are recruited from the communities, in which they reside and provided with training in the following; basic HIV and AIDS information and prevention, child abuse and neglect, assessment counseling and resources, parenting skills, child care act, domestic violence and maintenance act, substance abuse, management and administration skills. Care workers will also be exposed to a value-based prevention program (accredited) so as to enable them to render a more comprehensive prevention education to the OVC and their families. Care workers will also be given the opportunity to be trained in basic first aid (accredited) which will enable them to more accurately assess the clinical needs of the OVC. CompreCare and Child Welfare Tshwane provide on site follow-up training and mentoring for all care workers. In addition, Child Welfare social and auxiliary social workers and M&E staff provide group counseling sessions for care workers to provide additional mentorship and support and to share best practices and lessons learned.

ACTIVITY 2: Care and Support Services

The program recruits care workers from target communities to ensure that care and support services are readily available to OVC. As a result, the program, as a whole, benefits as the care workers are often well-known and respected by community leaders. The CWT OVC care program already has a cadre of trained, experienced and active care workers. The focus will be to recruit and train new care workers who can then slot straight into the work with mentoring in place. The transition will be smoother and more effective. Already trained and active care workers will be exposed to a continuous program of retraining and so expanding their capacity to render a more comprehensive service and also to improve the quality of the service rendered. Care workers are well positioned to easily access the services of other community groups and service providers including schools, churches, and community care forums. Each care worker reports to and receives ongoing support from a Child Welfare Tshwane social worker and M&E Officer. When a family is identified, the care workers complete an initial assessment and develop a plan of action in collaboration with the social worker for each child and their family. The plan of action details the type of assistance required by the OVC which includes obtaining identity documents and government social grants, household budgeting, and distribution of food parcels and establishment of food gardens (made possible through public and private donations). Care workers provide these services during weekly home visits. Additionally, care workers provide educational and psychosocial support including school fee exemptions, homework supervision, care for ill parents/caregiver, succession planning and bereavement counseling for OVC and their family members. When circumstances exist that require advanced or intensive support, such as health related issues and child abuse, care workers refer OVC to the appropriate service provider and follow-up to ensure that the relevant services are provided and that the continuum of care continues for each child. CWT already offers a comprehensive range of services that are based on the needs of the clients. More emphasis will be placed onto income generation opportunities and vocational guidance as OVC coming through the education system are struggling to find employment. The income generation opportunities will be made economically viable and sustainable.

ACTIVITY 3: Community Wellness Center

Activity Narrative:

In addition to providing home-based support services, Child Welfare Tshwane also manages a community wellness center that provides care services, five days a week, for OVC and their families. The center operates a 12 -month intensive therapeutic program that includes individual and group support sessions to provide information on HIV and AIDS and build coping skills for OVC and their ill caregivers. A full-time social worker and community volunteers provide OVC with psychosocial support, referrals to social services and on going training and mentoring to start income generation activities e.g. beading. The program also offers life skills training for OVC, tailored to the specific needs of the child and includes HIV and AIDS prevention. Life skills courses are provided through after-school activities, school holiday programs and group play therapy.

ACTIVITY 4: Linkages

CompreCare and its implementing partner, HospiVision, train care workers in value-based HIV prevention emphasizing abstinence and fidelity. The program focuses on six central spiritual values (respect, responsibility, integrity, fairness, love and service) and enhancing the life skills of: decision-making, assertiveness and negotiation. The training also addresses issues of stigma and discrimination and gender through role play. Skills learned in the program empower care workers to further support OVC with knowledge, skills and attitudes to make informed decisions about living healthy, productive lives. As the CWT program is in an urban setting a comprehensive network of referrals is in place and CWT has a leading role in this network. CWT has a particularly strong relationship in the health sector and so are able to ensure that their clients receive the required care and treatment. These linkages will be further strengthened so as to improve care received by the OVC. USG's contact with the Department of Home Affairs who assist CompreCare with applications for birth certificates and identity documents is increasing and this will be further addressed. This will contribute a great deal to the economic strengthening of the OVC and their families as well as education.

Regarding expansion of FY 2008 COP activities, currently the OVC care program's main focus is on Mamelodi and Olievenhoutsbosch - based on the greatest needs and under resourced areas. However, the program will be expanded to other CWT sites in the Tshwane area. These sites are Sunnyside, Mid City, Atteridgeville, Eersterust and Centurion - these will become the focus for the expansion of CompreCare services.

CompreCare's OVC program activities will contribute towards PEPFAR goals of providing 10 million people with care by improving the quality of life of OVC and infected and affected families.

Budget Code:	HKID	**Program Area Code:**	08
Activity ID:	2922.08	**Planned Funds:**	$928,281
Activity System ID:	13737		

Activity Narrative: SUMMARY:

Family Health International (FHI) will continue to support the Southern African Catholic Bishops Conference (SACBC) and its sub-recipients (SRs) in orphans and vulnerable children (OVC) program design, implementation and direct OVC service provision through ongoing training, mentoring and support. FHI will continue to strengthen the monitoring and evaluation (M&E) system through quality assurance and improvement procedures and regular data verification checks. The emphasis areas for this program are local organization capacity building and gender. The primary target populations are OVC and caregivers.

BACKGROUND:

FHI, together with SACBC, began implementing the Track 1 FABRIC program across 11 sites in South Africa in February 2006. In FY 2008, the SRs will reach OVC and their families with psychosocial, educational, nutritional, and economic support, health care, palliative care, legal support, pediatric treatment referrals and child protection services. The program will seek formal partnerships with SACBC's home and community-based care program and other partners to strengthen the integration of home and community-based care so as to ensure that OVC and family members receive comprehensive care and to scale up pediatric treatment for children. The program will integrate age-appropriate HIV prevention messages in its key activities and will use the FHI Family Life Education curriculum to train youth and adults in reproductive health and HIV prevention from a Christian perspective. The major components of this program are: 1) capacity building in OVC program design and implementation; 2) collaboration and coordination with government and other services/programs for the provision of quality care and support to OVC; 3) effective M&E; and 4) gender mainstreaming. These activities are directly aligned to the South Africa Department of Social Development (DOSD) strategic priorities for OVC in its national plan of action for OVC for 2006 to 2008. Strategy one seeks to strengthen the capacity of families to provide essential care and support for OVC. Strategy two seeks to mobilize communities to care for OVC. The remaining DOSD strategies focus on creating an enabling environment in terms of policy, legislation, advocacy and coordination. FABRIC will ensure that at least 50% of all OVC served receive 3 or more services, per the South Africa PEPFAR guidance.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Capacity building

FHI will provide further technical assistance to SACBC to strengthen their organizational capacity to support SRs using capacity assessment and improvement tools and quality assurance checklists. Both FHI and SACBC will continue to provide assistance in project and financial management and OVC technical areas to SRs to improve the quality of their OVC programs. This support will include training and ongoing supervision and mentoring. FHI will ensure that SACBC together with each SR have clear sustainability plans and will provide training and links to other providers for the establishment of creative income-generating activities (IGAs) to support OVC and their families. Public-private partnerships will be encouraged at the local level, for example soliciting support from local businesses such as bakeries.

ACTIVITY 2: Collaboration and coordination

In line with the DOSD policy framework for OVC, FHI and SACBC will jointly boost networks developed with government and with other USG partners. FHI and SACBC will work closely with DOSD through forums such as the National Action Committee for Children Affected by AIDS (NACCA) and the provincial and district committees to strengthen networks and linkages to improve care and support for OVC and also to link caregivers to other government programs. FHI will ensure that strong referral systems are in place at local level for the provision of essential services such as health care, educational support, food security and nutrition and legal assistance. FHI will continue to support community mobilization and coordination. SRs will be encouraged to liaise with community leaders and community members to target the most vulnerable, identify local resources and develop linkages with other services. In FY 2008, FHI will continue to emphasize pediatric treatment. SRs will be supported in conducting mapping exercises to identify the nearest treatment sites for pediatric referrals. SRs will be trained in basic pediatric HIV testing, treatment and care in order to provide essential information and support for pediatric treatment to OVC and their families. All referrals will be tracked closely to ensure the referral service has been provided and the feedback form has been completed and returned to the SR by the referral site. Age-appropriate prevention messages and life skills programs will be integrated into the after-school care program.

ACTIVITY 3: M&E

FHI will strengthen technical skills around M&E for SACBC and the SRs through ongoing training and mentoring. FHI will participate and provide ongoing comments in the development of the national DOSD M&E system and will ensure that the indicators required for the national database are included and collected by the SRs. FHI and SACBC will implement information verification procedures as part of regular site visits and will ensure that the M&E forms are translated into local languages in low-literacy areas. FHI will pilot an OVC database in collaboration with the USG technical working group that is developing an OVC database.

ACTIVITY 4: Mainstreaming gender

In FY 2008 gender will form an integral part of the FABRIC program's activities. FHI will ensure that girls and boys are receiving equitable support and access to essential OVC services, especially education. Partners will work with male groups in their dioceses to mobilize the involvement of men as caregivers. Female child-headed households will receive special attention to ensure that the burden of care on them is decreased and that they continue to access education and to receive adequate mentoring and support. Communities will be mobilized to enforce OVC protection from exploitation, violence and abuse and to mitigate against stigma and discrimination. Advocacy initiatives will also be conducted at the congregational level to ensure that the church is supportive and promotes the same messages to address gender inequities. FHI will link gender to sustainability efforts by improving access to training and resources for female primary and secondary caregivers. FHI will set-up a tracking system to ensure that equitable access to care and support is enhanced and that activities addressing gender inequities and child protection are

Activity Narrative: recorded and reported.

NEW ACTIVITIES

ACTIVITY 5: Reaching Disabled OVC
This activity will be implemented in three sites in Free State and Gauteng that have identified children with disabilities. Special programs to support these children will be initiated in collaboration with medical practitioners, academics and local experts in this field. The program will facilitate identification and assessments of disabilities and will identify local resources for continued support and follow-up. Caregivers in each site will be trained to identify and care for disabled children and to support applications for disability grants.

ACTIVITY 6: Bicycle Project

In FY 2008, the bicycle project in collaboration with the Institute for Transportation and Development Policy (ITDP) will be introduced and piloted in 3 sites where access to public transport is poor and where children have to travel long distances to school. The bicycles will be given to older OVC living in remote areas to assist them to reach school and to attend the after-school care activities at the selected project sites. A feasibility assessment will be done in advance to identify opportunities and challenges of introducing this project in the selected sites.

ACTIVITY 7: Exit strategies for older OVC

The sites will be assisted in developing exit plans for children above 15 years. This is to ensure that when children leave the program there are plans in place for them to further their education, access vocational training, establish income generating activities or gain employment.

ACTIVITY 8: Research

In FY 2007, FHI and SACBC submitted a concept note to the Joint Learning Initiative for Children and HIV/AIDS (JLICA) to conduct a study on lessons learned in implementing family centered approaches to OVC service provision. The concept note was accepted and the Rockefeller Brothers Foundation has granted SACBC $25000 for the study upon approval of the full proposal to be submitted in October 2007.

EXPECTED RESULTS:

Improve reach (# of OVC) and coverage (# of geographic regions) in 10 sites across 7 provinces; Strengthen the capacity of SACBC and its SRs to effectively coordinate and sustain programs at the local level; Enhance skills and knowledge of caregivers through training in OVC technical areas; Improve the FABRIC M&E system and align with the DOSD national system and indicators through quality assessment and improvement; Equitable access to care and support and resources for male and female OVC; Increase in the number of male caregivers trained and mentored to care for OVC; Establish linkages to income generation service providers and training opportunities for SRs and families caring for OVC; and Increased awareness and community mobilization against gender-based violence and child abuse. By the end of FY 2007 semi-annual reporting period, FABRIC had met the annual target of 7000 OVC and of these, more than half (57%) received primary direct support (3 or more services).

Through these OVC activities, FHI will assist PEPFAR to achieve its goal of caring for 10 million people, including OVC.

Activity System ID:	13729		

Activity Narrative: SUMMARY:

Activities are carried out by Children in Distress (CINDI) in KwaZulu-Natal (KZN), to support the expansion of services aimed at improving the lives of orphans and vulnerable children (OVC) and families affected by AIDS through providing comprehensive services and to strengthen communities and ensure that the needs of OVC are met. The emphasis areas of the project include local organization capacity-building, gender and wrap-around program (education). Primary target populations include orphans and vulnerable children, children 5-9 years, adolescents 10-14 years and 15-24 years, and people living with HIV.

BACKGROUND:

CINDI, founded in July 1996, consists of over 100 member organizations (NGOs, CBOs, FBOs) that collaborate to reduce the impact of HIV and AIDS on children in KZN. This project is part of a larger initiative implemented by CINDI members. The project was implemented in FY 2007 with PEPFAR support. The activity is supported by the Department of Education in KZN with whom CINDI liaises in selecting the targeted schools. Four member organizations are implementing the project for CINDI - Project Gateway, Sinani, LifeLine and Youth for Christ/ KZN (YFC). Both LifeLine and YFC receive PEPFAR funds in other program areas and have no OVC activities that overlap under this CINDI project. LifeLine and Project Gateway have both received accreditations from the provincial Department of Health as counseling and testing (CT) sites. CINDI will address gender issues through increasing access to services for girls/women; encouraging the participation of males as facilitators and caregivers wherever possible (since they are mostly female); prioritizes gender issues within targeted schools; and provides training addressing male norms and behaviors.

ACTIVITIES & EXPECTED RESULTS:

ACTIVITY 1: Life skills training for OVC

CINDI, in partnership with 4 sub-partners, will provide life skills, peer education training and promote learner access to CT (and encourage access to pediatric ARV therapy) in 14 new targeted primary and high schools in FY 2008 and will provide follow-up in the 14 schools from FY 2007. Lifeline and Project Gateway have both been accredited as CT sites and have mechanisms in place for formal referral systems for children identified. Children identified will be followed up with care and support activities aimed at orphans and vulnerable children and their families. The 14 targeted primary and high schools are provided with training for learner peer educators and selected teachers. All learners participate in a creatively-designed school-based presentation which will increase their knowledge and information on HIV and AIDS and related issues such as stigmatization and discrimination, gender issues, CT and age appropriate sexuality training to motivate for abstinence and encourage behavior change. Learners also participate in a 4-day HIV and AIDS intensive workshop which will increase their knowledge on safe healthy sexual behavior, HIV messages, personal development and gender issues and skills in accessing grants, fees exemption from schools, skills in heading up child-headed households, which will facilitate positive behavior change. In addition, all learners voluntarily participating in CT will be able to communicate what they have learned about voluntary testing in their communities and be encouraged to live their lives responsibly. Learners participating in CT will be assisted in dealing with previous and/or current sexual abuse and serious sexual offences will be taken up through the legal system. Life skills in accessing grants, etc. will assist the learners in schools to be aware of their rights, build resilience and individual empowerment. Youth workers in schools will assist, provide support, and refer the child to the necessary sub-partner who will ensure that their needs are met. FY 2008 funding will support staff and youth workers to provide these services in the targeted schools. Sustainability of these activities is built in through the training of interested and committed teachers within each school who will support the activities into the future, and the trained learner peer educators will be enabled to continue with the activities. Youth workers and peer educators will have first contact with OVC and provide necessary support and care before referring. Schools will also be linked directly with organizations and government departments who can provide ongoing services. CINDI supports all 4 sub-partners with project supervision and management, financial management, monitoring and evaluation of this activity and ensures quality assurance of record-keeping and data-capturing.

ACTIVITY 2: OVC and Family Support

CINDI, in partnership with Project Gateway, identifies OVC in the 14 new target schools and provides services to improve the quality of life of vulnerable children, and HIV-infected individuals and their families. The families and caregivers will be supported through capacity-building activities to provide better care for their households; the stability and sustainability of families will be increased through access to shelter, food (in conjunction with the DOSD), economic support, education, psychosocial support and health care. Identified families will have at least one child who attends one of the 14 target schools. FY 2008 funding will support CINDI staff and trained volunteers working with the families to deliver the required services. Sustainability of these activities and services is provided through training of caregivers, linking families with relevant government departments and organizations who provide ongoing services, and through capacity-building provided to household providers/caregivers. CINDI supports Project Gateway with project supervision and management, financial management, monitoring and evaluation of this activity and ensures quality assurance of record-keeping and data-capturing.

ACTIVITY 3: Psychosocial Support for OVC

CINDI, in partnership with Sinani, will provide good quality comprehensive and compassionate care for children orphaned by AIDS and other vulnerable children to help ensure they grow up to be healthy, educated and socially well-adjusted adults, through all CINDI sub-partners. The identified children will come from targeted primary schools. OVC will participate in a Structured Group Therapy Program which effectively reduces distress and builds resilience, with the aim of decreasing depression while increasing children's access to social support. The duration of therapeutic sessions will vary according to the child's or group's needs. Youth and adult community leaders and members will be sensitized to the needs of OVC which will result in an increase in community- awareness of the needs of OVC in communities. This activity is facilitated by Sinani, one of the CINDI members specializing on psychosocial support with a counseling psychologist to transfer skills to trained facilitators and volunteers. CINDI supports Sinani with project supervision and management, financial management, monitoring and evaluation of this activity and ensures

Activity Narrative: quality assurance of record-keeping and data-capturing.

ACTIVITY 4: Providing care and supervision for providers/caretakers

In FY 2008 caregivers will be given on-site and group training by CINDI, in partnership with Project Gateway, to be able to identify and manage stress and burn-out. Regular supervision will be given to enable caregivers to be efficient in their work while debriefing sessions will take place for caregivers to discuss problems associated with their work. All the four CINDI members will ensure that each OVC counted is provided with at least a minimum of three services which include access to education, health care, psychosocial support, nutrition support, protection from abuse, economic support, pediatric HIV and AIDS treatment, legal assistance and mobilizing and building capacity of communities to respond to OVC needs. The CINDI OVC activities will contribute to the PEPFAR 2-7-10 goals by improving access to care for 10 million people, including OVC.

Program Area Code: 08

Activity ID: 6561.08

Planned Funds: $3,939,000

Activity System ID: 13908

Activity Narrative: SUMMARY:

World Vision (WV), together with the Christian AIDS Bureau of South Africa (CABSA), will mobilize and strengthen a community led response to protect and care for orphans and vulnerable children (OVC) and their families. The program is active in the Free State, Limpopo and the Eastern Cape provinces and with will expand to the KwaZulu-Natal province. The major emphasis area is human capacity development (training). The target population is OVC.

BACKGROUND:
WV works in six provinces in South Africa (SA) in collaboration with CBOs, FBOs and government entities to support over 42,000 sponsored children including 4,439 OVC registered at present. Currently, PEPFAR supports Area Development Programs (ADPs in three and this will be expanded to four additional sites within KwaZulu-Natal province. WV partners with CABSA to empower faith communities to develop projects addressing HIV and AIDS. WV will use the CABSA curriculum (Channels of Hope (CoH)) to address churches and FBOs to deal effectively with HIV and AIDS. The South African Government (SAG) Policy Framework for OVC asserts that NGOs should assist in rolling out innovative and tested models to mobilize, strengthen and support community led OVC efforts. With FY 2008 funding, WV will continue to assist targeted communities to establish structures through which the community can care for and support OVC. One element of an enabling environment for OVC support is the sustainability of community-based organizations (CBO) such as Community Care Coalitions (CCC) which are equivalent to Child Care Forums. WV will implement an organizational capacity building guide that includes self-assessment, training based on the assessment and the follow-up support. WV will facilitate a process of sustainable community involvement through this training to enable communities to develop and support their OVC. The WV program will continue to work toward gender equity in service deliver by offering short gender courses to NGOs and CBOs to improve their knowledge about child protection and how to address the factors that keep girls out of school. FY 2008 additional funding, will expand activities under the Networks of Hope program that they currently support expanding from 3 provinces to 4 with the addition of Kwazulu-Natal.
ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Human Capacity Development
WV will conduct workshops, utilizing the CABSA CoH curriculum. A two-day Leaders Workshop will be held with interested religious leaders The workshop will help religious leaders understand the urgency of the HIV and AIDS crisis, to address negative and discriminatory attitudes and to work towards compassionate and effective responses in congregations and communities. These leaders return to their congregations and to FBOs to identify interested members who will in turn attend a four day workshop, which give attention to best practice models for prevention, care for OVC, home-based care, voluntary counseling and testing and advocacy. As a result of the four-day workshop, WV will work with each FBO to develop action plans to address congregational and community, as well as confront gender discrimination, promoting gender equity in communities. Trained congregation and FBO members will form Hope Teams which WV will support with ongoing training and mentorship. In turn, these Hope teams will develop and carry out action plans relating to the protection and care of OVC. The Hope Teams will work closely with the CCCs. 111 Hope Teams have already been formed, training at this level will continue in FY 2008.

ACTIVITY 2: Community Mobilization
Through CCCs, WV will mobilize community stakeholders, including FBOs, CBOs, local government, traditional leaders, school committees, health representatives, women groups, associations of people living with HIV (PLHIV) and OVC. A two day stakeholder workshop will be held to identify gaps, and select the CCC structure most appropriate to the local context. WV and CCCs will recruit new Home visitors (HV) to visit OVC in their homes. CCCs will be encouraged to link and play an active role within the District Action Committee for Children affected by HIV and AIDS (DACCA). Together with the CCC the HV will receive training on Child Rights and Protection, access to education, health and nutrition, HIV prevention, Life Skills, psychosocial support (PSS) and succession planning over five days. As a result, each identified OVC will receive support from HV ranging from direct material provision to greater livelihood security.

ACTIVITY 3: Care and Support
After the workshops for CCCs and HVs, each OVC will receive a basic minimum package of services and support. The services will include child monitoring and protection, PSS, agricultural inputs, facilitating access to education, health care, basic nutrition training, HIV prevention, home-based care for chronically ill adults and children, succession planning and supervised recreation. Direct support will include school fees, vocational training, school uniforms, books and supplies, facilitation with transport for primary health care checkups, improved diets/livelihoods through, clothing shoes, bedding and blankets.

ACIVITY 4: Local Organizational Capacity Development
WV developed an Organizational Capacity Building (OCB) guide to build organizational capacity. The OCB process begins with an organizational self-assessment, training based on the result of the assessment and follow-up support. The training may include Organizational Purpose, Planning, Procedures, Group dynamics, Monitoring, Evaluation and Reporting, Finance, Resource Mobilization and external relations. Through this activity WV will build the capacity of local organizations to operate effectively in providing adequate protection and care to OVC and their families. WV will partner with CABSA to establish resource centers in each ADP; stocked with relevant HIV and AIDS materials. The resource centers will be used by the CCCs and community assisting them in the development of an adequate response to the OVC issues facing their community.

ACIVITY 5: Referrals and linkages
WV works in collaboration with the DOSD, the Departments of Health, Education, Agriculture, private companies, FBOs and CBOs. These partnerships will be expanded to ensure that all OVC are provided with a full package of care and referred for appropriate treatment and care services. In addition to establishing a program of 'community conversations', the project will integrate a gender component and advocacy into all activities. The aim of these activities is to build stronger, more gender-equitable relationships with better communication between partners utilizing participatory learning to improve the health, well-being and resilience of adolescent OVC (Boys and Girls). Emphasis is place on options to delay sexual activity.

In FY 2008 the following activities will be added:

Activity Narrative: ACTIVITY 6: Community conversations
Facilitated community conversations will focus on raising awareness of social-economic and cultural inequalities that put women at a disadvantage and how this contributes to the spread of HIV and AIDS. Specifically, discussions will focus on how to strengthen the negotiating powers of women and girls in sexual relationships and on raising the awareness of men about the role they play in sexual relationships. This gender equality dialogue will emphasize the positive aspects of changing the behaviors that increase the risk of becoming HIV-infected and using best practices. WV will benefit from participatory research conducted demonstrating that these open and frank but sensitive "community conversations" help cement new positive attitudes among youth and reduce gender-biased stereotypes. The majority of care workers (Home visitors/HV) in OVC programs are women (over 70%). WV will work to increase the involvement of men in care-giving of OVC. As part of the CCC (Community Care Coalition) trainings, HV's will engage men by focusing on such topics as family violence, anger management, fathering and parenting skills. Training materials will include discussion of power relations between girls and boys, women and men, and will give girls skills in refusal and negotiation. CoH training will also emphasize addressing gender from a standpoint of context and attitudes. WV will focus on men and boys as agents of change in this process of awareness building, mobilizing and spreading HIV prevention messages.

ACTIVITY 7: Peer-support groups and Youth AIDS clubs
Peer support groups and Youth AIDS clubs will be targeted toward adolescents. WV will connect with these adolescent OVC through schools and churches. Training in Youth prevention strategies will target boys and girls. Using a participatory process, OVC will identify role models (including positive deviants) to serve as the peer support leaders. The adolescents will form peer-education groups and these groups will form the critical catalysts for the community social discourse on healthy norms and avoidance of risk behavior. The anticipated outcome of this process is a re-emergence of AB as a community norm and a reduction in the practice of cross-generational sex, transactional sex and multiple casual sex partnerships, etc.

In all WVSA ADP PEPFAR-funded sites there are sponsored children, funded by donors from different countries, many of whom are OVC. WV requires at least quarterly visits to each of these children by Development Workers. Through this process WVSA identifies the education, health, spiritual and other needs of the children and their families. WV field staff provides a proactive role in identifying the needs of OVC and the subsequent delivery of services, justifying the allocation of WV Matching funding to the budget allocated by PEPFAR.

The WV OVC activities will contribute to the PEPFAR 2-7-10 goal by improving access to quality care to 10 million people including OVC.

Planned Funds: $290,000

Activity System ID: 13927

Activity Narrative: SUMMARY:

Thirty Community HIV/AIDS Outreach Project (CHOP) Peace Corps Volunteers (PCVs) and twenty Schools and Community Resources Project (SCRP) PCVs will be involved in this program area. PEPFAR funds will be used to train the CHOP PCVs and their counterparts in organizational capacity building-that is the strengthening of organizational and human capacity. Both CHOP and SCRP PCVs will receive PEPFAR-funded training in OVC caretaker support-that is enabling PCVs and their counterparts to develop the skills and knowledge needed to meet the physical, psychosocial and financial needs of OVC and OVC caretakers. Using the PEPFAR VAST (Volunteer Activity Support and Training) mechanism, these PCVs and their counterparts will train OVC caretakers, CSO employees and OVC volunteer workers. SCRP PCVs will specialize in training teachers and OVC peer support groups in the schools while CHOP PCVs will focus more on the training CSO counterparts and OVC volunteer works, and out-of-school OVC peer support groups and mobilizing traditional, business and religious leaders in supporting community- and school-based OVC support activities. CHOP and SCRP PCVs and their counterparts will be encouraged to work together in designing and delivering comprehensive OVC and OVC caretaker training and outreach programs in their rural communities. OVC training and outreach activities will be conducted in the KwaZulu-Natal, Limpopo, North West, Northern Cape and Mpumalanga provinces.

BACKGROUND:

To date, the program in South Africa has relied primarily on PEPFAR-funded PCVs assigned to the (previous) NGO Capacity Building Project. Although the FY 2007 program still utilizes PEPFAR-funded PCVs, in FY 2008 there will be no PEPFAR-funded PCVs and instead all CHOP and SCRP PCVs will be encouraged to be involved in training and outreach activities that will enable OVC caretakers, community outreach volunteers and CSO employees to better meet the needs of OVC.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1:

In FY 2008, approximately 50 PCVs and 50 counterparts will receive training in meeting the physical and psychosocial needs of OVC, using internationally and locally produced materials. The training will provide skills and knowledge in counseling (e.g. dealing with feelings of isolation , stigma and discrimination and the negative attitudes of others, production of memory books/boxes), physical care (e.g. helping OVC and caretakers establish trench and raised gardens, nutrition education, training in sewing clothes), and legal and financial assistance (e.g. helping OVC and caretakers access South African Government social grants e.g. child-support grants and care-dependency grants).

ACTIVITY 2:

Approximately 50 PCV and 50 counterparts will train 50 teachers, OVC peer educators, CSO employees, HBC volunteer workers and OVC caretakers in topics addressed in Activity 1, using the PEPFAR VAST mechanism to fund the training. This will result in improved care provided to 3000 OVC. PCVs and counterparts will also directly provide outreach to OVC. The CHOP and SCRP PCVs will contribute to this program area of the U.S. Mission by uniquely providing American citizen assistance in rural communities. Their activities are also closely aligned to the South African government strategies in each of the provinces in which PCVs work.

NOTE: PCVs involved in this program area are part of the population of PCVs who are required to participate in Activities 2 and 4 described under the prevention program area. CHOP PCVs in this program area are part of the population of PCVs who may participate in Activity 3 described under the prevention program area.

Program Area: Orphans and Vulnerable Children

Budget Code: HKID

Program Area Code: 08

Activity ID: 3118.08

Planned Funds: $1,000,000

Activity System ID: 13922

Activity Narrative: SUMMARY:

The Small Grants program aims to support OVC in South Africa to have equal access to basic essential services. The USG acknowledges the invaluable role that small community-based organizations and caregivers play in caring for OVC, and therefore funds, supports and capacitates small NGOs and small CBOs through the provision of funding for direct services and training to enable better community responses in caring for OVC within their care and reach. The Ambassador's HIV and AIDS Small Grants Program will use FY 2008 PEPFAR funds to continue to support South Africa's most promising small community and faith-based organizations making significant contributions to the fight against HIV and AIDS. Major emphasis areas for this activity are training, procurement of basic equipment, and local organization capacity development. The target population for these activities is OVC, HIV-infected infants and children, their families and caregivers, community volunteers, community-based organizations (CBOs), faith-based organizations (FBOs) and non-governmental organizations (NGOs).

BACKGROUND:

The Ambassador's HIV and AIDS Small Grants Program in South Africa (Small Grants) has had three tremendously successful years. Out of over 1,000 applications, the South Africa Mission has entered into agreement with 237 small community-based organizations (FY 2005, FY 2006, & FY 2007) in the areas of prevention, hospice care, home-based care, treatment support, and care for orphans and vulnerable children. Funded projects are located in nine provinces, primarily in disadvantaged rural areas. The average funding amount is approximately $10,000. Programs supported with Small Grants funds provide service delivery that directly impacts communities and people affected by HIV and AIDS. The USG PEPFAR Task Force is increasingly linking community and faith-based organizations funded through Small Grants with larger PEPFAR partners and South African Government departments to build capacity and ensure project sustainability. Small grants projects generate positive publicity for PEPFAR and goodwill in communities. The Mission has established guidelines and review procedures to ensure that strong applications are considered for funding through a fair, transparent process. Criteria for selection include: improvement of basic conditions at the community level; benefit a substantial number of people in the community; be within the means of the local community to operate and maintain; and quick implementation of grant within one-year agreement period. Grants must conform to the PEPFAR Small Grants Guidelines. Projects are reviewed by a technical Mission Health Committee and supervised through the Embassy and each Consulate General by State Department Small Grants Coordinators. Based on experience in FY 2005, FY 2006 and FY 2007, the USG PEPFAR Task Force anticipates the strongest applications for FY 2008 will be in the areas of (1) care, particularly hospice and community-based care, and (2) orphans and vulnerable children.

ACTIVITIES AND EXPECTED RESULTS:

The next round of applications and approvals for Small Grants has begun (with anticipated FY 2008 funding). Given three successful years of the program, the USG PEPFAR Task Force expects to fund approximately 95 community and faith-based organizations assisting OVC in FY 2008. These organizations are expected to reach 17,000 OVC with the following services: nutritious meals; educational activities including HIV prevention messages; regular home visits; assistance in birth registration and accessing government social security grants; psychosocial support and training in the establishment of food gardens. Anticipated activities include training for caregivers, stipends for caregivers, basic equipment for orphanages such as bedding and kitchen equipment, transportation costs for OVC, educational materials, and nursing supplies.

Examples of programs funded in FY 2007 include: St. Anna and Joachim Roman Catholic Organization, a faith-based organization in King Dinizulu Township, KwaZulu-Natal that provides care to more than 476 OVC. Members of the local Catholic church started the organization when they saw a growing number of orphans in the community who needed care, but were receiving little or no support. Volunteers from St. Anna and Joachim visit child-headed households provide food, help OVC gain access to government grants and services, assist with school uniforms, provide psychological support, and encourage community involvement with OVC. A small grant of $10,000 will help train the caregivers and fund small stipends to support the St. Anna and Joachim caregivers. Caregivers training typically include identification training for cases of vulnerability, abuse, ill health and HIV/AIDS infection and information and mechanisms for referral to access other Government services. Basic parenting skills, nutrition and food gardening, health and hygiene normally form part of the training.

Diabashe Day Care Center and Orphanage, a small CBO located in Mdantsane township outside East London, Eastern Cape, shelters 15 HIV positive orphans. It also provides care to 183 OVC through its day care center. The center, apart from being a safe haven where children can interact with each other and with adults in a supportive environment, may also provide daily nutritious meals, access to educational support, and other support to OVC. Diabashe works closely with government social services, which place orphans at their Center. A small grant of $10,000 will provide training to Diabashe staff on pediatric AIDS care, as well as provide the Orphanage with beds, bedding, towels, heaters, and fans. Caregivers will also receive gloves, first aid kits, nursing supplies, and small stipends.

These activities support the South Africa Mission's Five Year Strategy by providing support to and building capacity in small local organizations working at the community level. These activities also contribute to the PEPFAR goals of providing care and service to 10 million HIV-affected individuals, including orphans and vulnerable children.

Budget Code: HKID

Program Area Code: 08

Activity ID: 3128.08

Planned Funds: $3,922,500

Activity System ID: 14032

Activity Narrative: SUMMARY:

The National Association of Childcare Workers (NACCW) provides accredited child and youth care training to community members in order to provide holistic services to OVC. Funding will be used in the emphasis area of training and community mobilization, developing referrals and linkages, and conducting needs assessments. Primary target populations are OVC, HIV-infected families and their caregivers, and community organizations.

BACKGROUND:

NACCW is the only South African NGO focusing on provision of specialized, professional training in child and youth care. NACCW has developed a unique community-based child and youth care response to the HIV and AIDS crisis called the Isibindi Model. This program trains unemployed community members in an accredited child and youth care course and provides an integrated child and youth care service to child-headed households and vulnerable families through partnerships between NACCW and community-based organizations. This project is part of a larger initiative of the NACCW to replicate the Isibindi Model nationally in partnership with the Department of Social Development (DOSD). Since 2004, PEPFAR has supported 24 of NACCW's 40 Isibindi projects, providing direct services to 10 891 OVC and training for 430 child and youth care workers in 7 provinces in South Africa. The NACCW also offers this accredited training to other PEPFAR funded projects.

To promote the sustainability of the NACCW Isibindi childcare model, public-private partnerships will support the program in selected provinces. Partners include De Beers Fund, Anglo America Chairman's Fund, AngloGold, Royal Netherlands Embassy, UNICEF, ABSA Bank and the Impumelelo Innovations Award Trust. The NACCW has a program called Masihlangane Ngezingane Zetu: Make a Difference which focuses on securing funding for food parcels for the Isibindi projects from various other donors and private enterprises like Old Mutual, Independent Newspapers and Private Sponsorships.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Training and Mentorship

Accredited child and youth care training at South Africa's National Qualification Framework (NQF) level will be provided to child and youth care workers and selected volunteers in all sites. This training is the only accredited basic child and youth care course in the country in the profession of Child Care Work. This accredited training will allow workers to be registered as Auxiliary Child and Youth Care Workers with the South African Professional Board for Child and Youth Care Work. This registration promotes professional practice and ensures that workers function within a professional code of ethics. In FY 2008 expert consultants and mentors will be provided to all 50 Isibindi Projects to ensure development of the project staff and thus ensure provision of quality services.

ACTIVITY 2: OVC Outreach Services

NACCW will ensure that all OVC are visited regularly and provided with services within a child rights framework. These services will include education on children's rights and assistance with access to education, facilitating access to legal documents, food parcels, social security grants, ARV treatment for children and health care, child protection, services for recreation and play, educational support and bereavement and grief work. Health Care services will include general health care, health care for HIV-infected OVC and preventive health care services. NACCW will ensure that OVC also receive child care services including counseling, grief-work, age-appropriate developmental programs and assessment in the context of ordinary daily events like bath-times, mealtimes, study times and playtimes. Lifespace work (using daily events and routines like meal preparation, meal times, study times, play times etc developmentally and therapeutically) will be offered in the community in homes, schools and drop-in centers to build resilience and empower OVC to take charge of their lives. To respond to large numbers of children requiring after school care services and less intensive support, the NACCW Isibindi projects will create safe parks - safe places where children can play with access to child and youth care workers. The safe park will provide homework supervision, health care assessments and HIV prevention and psychosocial discussions, organized sports fixtures, free play, group discussions by age group and gender as appropriate, cultural activities and the opportunity for children to connect with adults in a safe environment. This intervention will be replicated in the communities and in the established Isibindi Projects; the additional components serviced will be added.

ACTIVITY 3: Child Protection and Gender Equity

The NACCW program will focus on the identification, care, management and referral of children who are abused and neglected. This will be a focus area of the NACCW project in FY 2008. Expert training and support from other specialist organizations will ensure effective service from the child and youth care workers according to minimum standards and practice procedure. Caregivers will be sensitized and trained to actively identify and address gender-based violence in vulnerable households, particularly households headed by young females. Children with disabilities will benefit from focused developmental and support programs by trained child care workers including referrals and physical therapy. In addition, a gender program for the protection and promotion of the girl child will be developed in the 50 PEPFAR supported NACCW sites. This gender program will include women's development/leadership skills workshops for the child and youth workers so that gender sensitivity, women's rights and protection will be integrated into the ethos of daily activities and programs of the Isibindi project. A specific girl child program will be in place in all Isibindi sites including career camps and bursaries for girl children who have passed their final exams (grade 12) and are heading households; this will increase the economic security for the girl child and siblings in the home.

In addition to NACCW's child protection and gender equity activities, NACCW will also implement interventions designed to meet the needs of adolescent OVC girls and boys. CYCW will be trained on the needs of adolescent girls and boys and activities will be mainstreamed into all household visits and at Safe Parks. Activities will include information and education on reproductive health and teenage pregnancy, prevention of gender-based violence and gender roles and role models. This gender program initiated in FY

Activity Narrative: 2007 will be ongoing in the sites that it was piloted in and new additional projects will be provided with the program needs assessment. Ongoing follow up and support will be provided to sites that have already started this program,

ACTIVITY 4: Advocacy

The Isibindi Model translates SAG policy for OVC into practice. By sharing better practices from the Isibindi model with national and provincial government departments, NACCW will help inform national policy on OVC. NACCW promotes the UN Children's Rights Charter, the South African National OVC policy and the South African Draft Children's Bill as well as other national policy and legislation for the protection and promotion of children rights and interests in the context of HIV and AIDS. The focused advocacy from the NACCW in the consultations on the Draft Children's Bill has resulted in amendments for the inclusion of child and youth care workers in the Bill in communities as a cadre of caregivers providing social services. This will have significant impact on future of the Isibindi Model and the future security of the child and youth care workers being developed. In FY 2008 NACCW will continue to target key stakeholders such as magistrates, social workers, and officials in SAG departments such as Home Affairs (responsible for birth certificates) and Education, at provincial local level through meetings and other forums to ensure that government policy and legislation are implemented in the best interests of the child. In all Isibindi projects, children who have been refused admission to school (for lack of school uniforms or nonpayment of school fees) have all been successfully readmitted.

ACTIVITY 5: Care and Support for Disabled Orphans and Vulnerable Children

NACCW will conduct a needs assessment of each Isibindi site to identify OVC requiring care and support. CYCW will network with health care facilities and service providers in each site to foster access to specialized and disability services. A report for each site will document the number of children with special needs, describe the identified needs (both in individual children and as a group), outline existing local health/social service facilities, and articulate an action plan. NACCW mentors will meet with appropriate rehabilitation departments at local hospitals or clinics. CYCW will refer OVC for services and follow up to ensure services are received.

The NACCW activities and the replication of the Isibindi model to provide support to OVC will assist PEPFAR in achieving it goal of caring for 10 million people, including OVC.

Activity ID: 8246.08

Planned Funds: $540,000

Activity System ID: 14029

Activity Narrative: SUMMARY:

Mpilonhle is a new South African community-based organization registered in 2007 with the South African Directorate of NGOs. It is dedicated to improving the health and well-being of adolescents in high schools in Umkhanyakude District Municipality, KwaZulu-Natal (KZN) through its "Mpilonhle Mobile Health and Education Project. It will begin operations in late 2007 with a single mobile unit funded with support from Oprah's Angel Network, and expand with two further mobile unites funded by PEPFAR funds. It is currently building up its staff, which is expected to be 40, and is based in the Mpilonhle office in Mtubatuba, KZN. The Mpilonhle program will provide orphans and vulnerable children (OVC) with support to access education, economic support, psychosocial support, legal assistance. Mpilonhle will reach the OVC through the implementation of three schools-based activities (1) health screening, (2) health education and (3) computer -assisted learning. These services will be delivered through mobile clinic and computer laboratory facilities to OVC in 12 secondary schools in rural KwaZulu-Natal, South Africa. The emphasis areas for the Mpilonhle program will be on gender and local organization capacity building. The targeted populations are adolescents aged between 10 and 24 years and OVC among secondary school students.

BACKGROUND:

This is a new activity to be implemented by a local NGO, Mpilonhle, with support from the South African Government leadership at the district and provincial level in KwaZulu-Natal. Activities will be implemented in the Umkhanyekude District, the poorest and most rural district in KwaZulu-Natal province, with one of highest HIV prevalence. Mpilonhle will implement activities in 12 rural secondary schools that have inadequate resources in the Umkhanyekude District Municipality. Approximately 33% of secondary school students have lost at least one parent. Partners consist of the Department of Education, the South African Democratic Teachers' Union, District Health Services, and District and Municipal leadership.

ACTIVITIES AND EXPECTED RESULTS:

Mpilonhle will conduct three schools-based activities for OVC: health screening, health education, and computer-assisted learning. These count as OVC support since they provide supportive health care services, increasing access to education, economic support, and supportive social services including legal aid. These activities will be provided through mobile facilities. Each mobile facility consists of a paired-up mobile clinic and mobile computer lab, staffed by 1 primary care nurse, 4 health counselors, 1 health educator, and 1 computer educator. Each mobile facility will visit a participating secondary school one week per month for eight months per year. This allows each mobile facility to serve 4 secondary schools per school year. The project will have three mobile facilities, allowing them to serve 12 secondary schools in total. Six of the 12 schools have been pre-selected. The remaining six schools and the 24 community sites will be determined with the Mayors of Umkhanyakude District, Mtubatuba Municipality, and Hlabisa Municipality and with local officers of the DOE.

ACTIVITY 1: Health screening

A health counselor will provide students with an annual individualized health screening that includes VCT; individualized AB-counseling for HIV prevention and behavior change; counseling or referral to further services for PMTCT, ART, TB and psychosocial support; and referral to a staff social worker for assistance with accessing government grants and assistance with legal matters. School principals, local Department of Education officials, District and Municipal mayors, and focus groups of teachers and students have expressed the community acceptability of schools-based VCT. This activity provides support for OVC in the form of improving their access to health care.

ACTIVITY 2: Health education

A Mpilonhle health educator will provide students with four 90 minute small-group HIV, health and life-skills education sessions per year that will discuss the basic facts about HIV, VCT, STIs, TB, ART, PMTCT; reducing stigma and discrimination against PLHIV; and promoting respect between men and women. An age-appropriate curriculum on these topics will be developed by the Educational Development Center (EDC) and the South African Democratic Teacher's Union (SADTU), drawing on material developed by the EDC in collaboration with SADTU, and the World Health Organization (WHO). This curriculum emphasizes the tradition of improving Knowledge, Attitudes, and Practice (KAP), skill-building methods in topics such as risk reduction, being faithful, decision making, and social responsibility, as a way of preventing HIV infection, providing support to those infected and affected by HIV, respect for women, fighting stigma and discrimination, and dealing effectively with the challenges of everyday life. Group health education provides supportive social care in the form of efforts to reduce stigma and efforts to increase community awareness of care, prevention, and treatment. This activity will provide support to OVC in the form of psychosocial support and HIV prevention messages.

ACTIVITY 3: Computer-assisted learning

An Mpilonhle computer educator will provide students in participating schools with four 90 minute small-group computer education sessions per year that will provide training on how to use computers, basic software, and the internet; and computer-assisted learning for improved school performance, HIV prevention, and general health promotion. This activity is expected to improve student learning, raise graduation rates, self-confidence and employability. This in turn increases self-reliance, self-confidence and self-sufficiency and the socio-economic status of the females, thus reduces their vulnerability to coercive, cross-generational, and transactional sex. This activity will improve educational development of OVC through computer-assisted learning and will encourage OVC to stay in school and complete their education. In addition, having computer skills will improve the market skills and employability of OVC that head households.

Sustainability of activities is facilitated by building human capacity in remote rural areas. Mpilonhle maximize the capacities and skills of relatively abundant lay health workers to enable them to perform critical yet currently scarce services such as VCT, health screening and personalized risk assessment, and health education, shifting the burden of these activities away from relatively scares professional health workers like nurses and doctors. Mpilonhle will build the technical expertise and capacities of lay health

Activity Narrative: workers through rigorous training and regular refresher courses. Sustainability is also facilitated by political commitment from District and Municipal governments and the local Department of Education to scale-up and fund-raise for this activity.

Gender issues will be addressed in the provision of care and support to in-school OVC with special emphasis on the girl child. The emphasis areas for this program are Human Resources in the form of salaries for health counselors, health educators, and computer educators, Information, Education and Communication in the form of resources for health education and computer education, Infrastructure in the form of deployment of mobile clinics and computer laboratories and Development of Network/Linkages/Referral Systems through the referral of OVC to the staff social worker.

The Mpilonhle OVC activities outlined above contribute to PEPFAR 2-7-10 goals of providing care and support to 10 million people, including OVC, in the form of supporting access to health services, psychosocial support and increasing access to with economic opportunities.

Funding Source: GHCS (State)

Program Area: Orphans and Vulnerable Children

Budget Code: HKID

Program Area Code: 08

Activity ID: 8259.08

Planned Funds: $250,000

Activity System ID: 13809

Activity Narrative: SUMMARY:

Senzakwenzeke (SEKA), a South African non-governmental organization (NGO) based in KwaZulu-Natal, provides psychosocial support, nutrition, counseling, homework assistance and social grant application assistance to orphans and vulnerable children (OVC). SEKA conducts training programs for Child Care Forums (CCFs) and caregivers on children's rights, child protection, and care and support for OVC. The main emphasis areas of Senzakwenzeke activities are community mobilization and participation, the development of networks, linkages, and referral systems, and training. The target beneficiaries are orphans and vulnerable children, caregivers of OVC, community leaders, SA-based volunteers, and people living with HIV and AIDS.

BACKGROUND:

Senzakwenzeke (SEKA) is a community-based organization operating in Nkandla Local Municipality, in the Uthungulu District 28 in KwaZulu-Natal province (KZN). KwaZulu-Natal is the South African province with the highest HIV prevalence rate (39 percent). The Nkandla District, one of the largest districts in KZN is characterized by high unemployment, lack of resources and a very poor infrastructure. This affects service delivery to children and the community. Within their population radius, Senzakwenzeke has identified 924 OVC, and this number is likely to increase during the next few years.

SEKA is a partnership between the local community and local health professionals. The Nkandla Hospital had identified the need for a community-based care program to provide services to OVC. SEKA provides services that are relevant to the development and well-being of OVC, such as assistance in getting social security grants, health promotion, HIV prevention messages and reproductive health education, assistance in waiving school fees for OVC to access education, and access to legal documents for succession planning. SEKA was a sub-partner under the Nelson Mandela Children's Fund program which ended in FY 2006.

With PEPFAR support since 2006, SEKA has expanded their OVC activities to three wards in the Nkandla District. As of March 2006, SEKA has been able to provide services to 924 OVC. SEKA has established strong links with the traditional leadership, the local government of Nkandla, the Nardini Sisters (a faith-based organization providing shelter and food to OVC), and the Nkandla Hospital (for OVC ART referral), in an effort to provide a strong community response to care for OVC. These and other partners work with SEKA to provide food aid, scholarships for tertiary education and skills training for OVC.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Strengthening Community Care Forums (CCFs)

SEKA will provide support in the establishment and training of Child Care Forums (CCFs). CCFs are community-based structures focusing on meeting the needs of OVC. The role of the CCF is to ensure the identification of OVC, to be aware of initiatives involving child care and support, to create awareness of OVC issues, to assess OVC needs, to liaise with other community-driven initiatives focused on children, and to perform advocacy for OVC in the community. CCFs are vital for sustainability of OVC programs and community involvement in ensuring that the needs of OVC are addressed. SEKA partners with the Department of Social Development (DOSD) to train the CCFs, which is composed of representatives from the community. The training follows the DOSD Guidelines for establishing CCFs. SEKA implements all its OVC activities in line with the DOSD OVC Policy Framework and the National Plan of Action. Topics covered in the CCF training include, the role of the CCFs, drawing up a community profile, costing and fundraising, monitoring and evaluation, and understanding the needs and rights of children.

SEKA will expand the program by mobilizing and training 25 new caregivers in the CCFs. They will be linked to the 35 existing caregivers. These 35 caregivers will receive refresher training through a direct Train the Trainers course. SEKA will ensure close monitoring and tracking of trained caregivers and their CCFs.

ACTIVITY 2: Human Capacity Development

SEKA will provide monthly training and mentoring for their thirty-five caregivers (recruited from the community) on counseling, psychosocial support, OVC needs assessments, children's rights, special needs of the girl and boy child, referrals for ART, nutrition, child protection and gardening. In FY 2008 SEKA will recruit and train an additional twenty five OVC caregivers. During these training sessions Supervisors will provide psychosocial support or debriefing sessions for the SEKA caregivers to share their concerns and provide a forum to openly discuss what they see and experience in caring and supporting OVC.

ACTIVITY 3: OVC Care and Support

Through using the Sinomlando and REPPSI models, SEKA trains OVC on how to create memory boxes to capture family memories, deal with grief, and build resilience in OVC. Periodic home visits to the OVC, provide an opportunity for follow-up and monitoring to see if the OVC are coping with the difficult situation in their home environment. SEKA works with a number of partners in the Nkandla area, to assist with OVC follow-up by observing resilience in the families that have benefited from memory boxes.

ACTIVITY 4: Improving OVC access to Social Security Grants

During home visits, SEKA caregivers will assess whether OVC are in possession of legal documents such as birth certificates and identity documents. These documents are required in order for OVC to access government social security grants. Once the OVC is in possession of the required documents, the caregiver will assist the household with the application process to access the government social security grants and the caregivers will also provide training in budgeting skills so the OVC are able to manage this new source of household income. OVC and their households will also receive information and counseling on other available government social and health related services such as child protection and pediatric ART. The SEKA caregiver will act as a point of linkage, referral and follow-up for the OVC to access these services.

SEKA will continue to coordinate community-based outreach by Home Affairs to assist in fast tracking legal

Activity Narrative: documents for succession planning of the OVC (using mobile vans).

ACTIVITY 5: Strengthening Gender-Based Activities

SEKA caregivers work in and out of schools which run specific gender programs for girls and boys. Special sessions are held for girls and boys separately and cover issues such as sexual reproductive health, sexuality and abuse. South African Government training materials are used for the training. Additionally, SEKA caregivers will host sessions where boys and girls interact together, to share their experiences and learn from each other. Caregivers also ensure that during the OVC home visits they spend time with each individual child to give them an opportunity to ask questions or share concerns around these topics.

ACTIVITY 6: Food Gardens for Child-Headed Households

SEKA caregivers will provide training to OVC, especially child-headed households, on the skills required to create survival food gardens. The food gardens are at the homes of the children and on community land provided by the municipality. This is a wrap around activity where other stakeholders in the community provide the seeds and fertilizers for the gardens. The survival food gardens will provide vegetables which enable the children to have better nutrition. A SEKA two-week training module on food gardening includes a nutrition component encouraging the use of local plants and high nutrition vegetables to supplement the OVC nutritional needs.

Additionally, post-harvest food processing and storage activities will be included with help from the AED Umbrella Grant Management Program.

The Senzakwenzeke OVC activities will contribute to the PEPFAR goal of providing care and support to 10 million HIV-affected individuals, including OVC.

Activity Narrative: SUMMARY:

Management Sciences for Health, Integrated Primary Health Care Project (IPHC), in collaboration with the National Department of Health (NDOH), will continue to support the expansion of the orphans and vulnerable children (OVC) program in 5 provinces of South Africa (Eastern Cape, Mpumalanga, KwaZulu-Natal, Limpopo and North West).

The OVC activities supported aim to strengthen communities to meet the needs of OVC and their families; supporting community-based responses, helping children and adolescents to meet their own needs and creating a supportive social environment. The activities under this program specifically aim to assist OVC with access to education, economic support, provision of food and or nutrition, legal assistance, healthcare, psychological support and protection from abuse. The target populations for the activity are OVC and their caregivers and people living with HIV. The major emphasis areas are in local organization capacity and wrap around activities with child survival interventions that link the IPHC partner organizations to their nearest clinics.

In FY 2007, IPHC increased the number of partner NGOs from 7 to 23 and they now include the following:
-Eastern Cape Province: Inkwanca Home-based Care, Ikhwezi Lomso Child & Family Welfare Society, House of Hope Hospice, Ncedisizwe Home-based Care, Bonukhanyo Youth Organization.
-KwaZulu-Natal Province: Khanyiselani Development Trust/National Peace Accord, Sibambisene Organization, Inkosinathi HIV/AIDS Project, Masakhane Women's Organization,
-Limpopo Province: Makotse Women's Club, Direlang Project, Makhuduthamaga Community Home-based Care Organization, Lafata Home-based Care, Mohlarekoma Home-based Care,
-Mpumalanga Province: Zimeleni Home-based Care, Thuthukani Home-based Care, Sizanani Home-based Care, Luncedo Lwesizwe Home-based Care,
-North West Province: Thibela Bolwetse Project, Botho Jwa Rona Home-based Care, Pholo Modi Wa Sechaba Home-based Care, Winterveldt HIV/ AIDS Project, Progressive AIDS Project.

BACKGROUND:

This activity is on-going and continuing from activities initiated in FY 2006 and FY 2007. IPHC will be working with NGOs and Community-Based Organizations (CBOs) that are implementing activities aimed at improving the lives of OVC. All NGO/CBO activities are integrated into the plans of the Departments of Health and Social Development. With FY 2008 PEPFAR funding, the IPHC will also establish and strengthen the referral system between the NGOs and CBOs and, local municipality and health facilities to increase access to health services e.g. provision of childhood immunization, pediatric HIV testing, clinical monitoring and management of ARV therapy when necessary. IPHC has a wrap around child survival activity at the health facilities surrounding these OVC organizations and will work to actively encourage and support referrals between the CBOs and the health facility. IPHC and its sub-partners will strengthen collaboration between the South African Police Services and Child Protection Units to report cases of abuse and rape especially in child-headed households. IPHC will engage traditional leaders to raise awareness and address the abuse of girl children in their communities.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Community Mobilization and Participation

Using FY 2007 funds, IPHC managed to increase the number of NGOs providing care and support to OVC from seven (7) to twenty-three (23) in the 5 provinces. As a result the number of OVC served surpassed the set target of 10,000 for FY 2007. In FY 2008 the aim is to continue to increase the number of caregivers, expand the services provided and increase the number of OVC that receive support. To achieve this IPHC will build the capacity of NGOs and CBOs through training, expanding networks and partnerships, and identifying opportunities for fund raising. This will enable organizations to effectively and efficiently implement integrated programs that are responsive to the needs of OVC at local level.

IPHC will also increase the number of caregivers trained in psychosocial aspects of working with OVC, including understanding their developmental needs and support requirements of children. IPHC will also assist with the identification of accredited service providers to provide training to the NGOs on technical aspects related to OVC care. Examples of such training include financial and project management, data management and reporting, financial proposal development and fundraising. IPHC will work with the NGOs that have crèches and drop-in centers and raise their knowledge in relation to children's needs and rights, in line with the guidelines of the Department of Social Development on early childhood development. The trainings shall be at local district level in the five provinces.

It is expected that a total of 15,000 OVC shall be reached by end of FY 2008.This will be done through specific training that will be conducted on child rights, child participation and memory work' with children.

ACTIVITY 2: Capacity Building/Technical Support

With FY 2008 PEPFAR funding, IPHC will provide technical support to NGOs and CBOs to enable them to provide a comprehensive package of care and support to OVC. The package includes support to OVC to obtain birth certificates and identification documents; access social security grants; psychosocial support that includes trauma, bereavement and basic counseling; emotional and spiritual support; counseling and debriefing of caregivers to prevent burnout; referral to clinics and hospital for pediatric ARV treatment and adherence; immunization; age appropriate messages on prevention of HIV infection; support for child-headed households and protection interventions to prevent sexual abuse, rape, land grabs and provide security of inheritance; access to life skills education; access to legal aid to prevent social neglect.

In FY 2008, IPHC will directly provide mentoring and technical support to NGOs in the areas of administration, financial management and reporting, data collection, monitoring, evaluation and report writing. A simple accounting and financial package, that is user friendly, will be provided to all NGOs trained so that they can apply it in their financial reporting. The newly designed data collection and reporting forms, registers and child in-take forms will be used in group trainings to build the skills of NGOs in data reporting. All 23 NGOs shall be supported to develop a monitoring and evaluation system that has activity plans,

Activity Narrative: targets, simple indicators, outputs and outcomes and time-frames. This will be done through short-term one week training sessions that will be followed up with on-site field visits by the technical advisor and provincial coordinators.

ACTIVITY 3: Linkages and Networks

IPHC will facilitate partnerships between the 23 NGOs and other local organizations working with OVC in order to encourage shared knowledge and learning. IPHC will also ensure that NGOs participate in the local coordinating structures such as District AIDS Councils (DACs) to facilitate access to resources for OVC. IPHC will also form Child Care Forums to ensure that OVC receive appropriate services and encourage community protection of OVC. IPHC supported NGOs will also advocate for the inclusion of OVC care and support service into the Local Government's Integrated Development Plans (IDPs). The 23 NGO sub-partners will be linked to the child survival activities through the Integrated Management of Childhood Infections (IMCI) portion of the IPHC implemented in conjunction with the Department of Health and other partners. IPHC will ensure that OVC continue to be fully immunized through referrals by the 23 NGOs to nearby clinics. The NGOs will also be encouraged to monitor the weight of children, especially in the light of HIV/AIDS, to enable early detection of children failing to thrive. Access to ARVs will be improved through facilitation of referrals of OVC to nearby health facilities that offer these services.

IPHC will assist PEPFAR to achieve its goal of caring for 10 million people, including OVC, by increasing OVC access to government support, expanding linkages and referral systems with other health and social services, and strengthening and expanding OVC policies and guidelines.

Program Area Code: 08
Activity ID: 7542.08
Planned Funds: $446,068
Activity System ID: 13708

Activity Narrative: SUMMARY:

CARE USA Local Links Project (CARE) provides support to orphans and vulnerable Children (OVC) and strengthens families affected by HIV and AIDS. CARE works through South African locally-based sub-partners to stimulate and support the use of local resources (human, economic and knowledge systems) to promote the wellbeing and protection of OVC. Local Links will expand it technical support for OVC services to implementing partners working through CARE's LETSEMA project. This will also entail expansion into Mpumalanga. Emphasis will be on building the capacity of local organizations to strengthen direct service delivery to OVC and their caregivers and developing networks for linkages and referrals. Targeted populations are OVC, people living with HIV and AIDS (PLHIV) and religious leaders.

BACKGROUND:

Local Links is part of the CARE USA OVC-focused Track 1 project implemented in South Africa and Kenya. This is the fourth year of Local Links Project, ending in March 2009 funded through Track One. CARE Local Links activities are: strengthening economic coping mechanisms of households caring for OVC; strengthening the capacity of sub-partners to provide a range of innovative services to OVC and their families; and promotion of advocacy efforts sensitive to the needs and rights of OVC and PLHIV. CARE implements activities in Motheo and Thabo Mofutsanyane Districts in the Free State province, as well as Mopane and Sekhukhune in the Limpopo province. CARE works in partnership with eleven sub-partners. Due to increased funding from the local mission and the redirection of OVC program funding for LETSEMA, new partners be added to scale up and reach more OVC. Scale-up will be done in consultation with the provincial Departments of Social Development (DOSD) and Health.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Economic Strengthening - Voluntary Saving and Loans (VSL).

CARE will continue to focus on women's (caregivers) access to income and productive resources through VSL (VSL is a group savings and internal lending model that creates a base for economic security for vulnerable families. The loans are circulated among group members based on individual emergency needs, which are usually medication, transport to health service, school fees and uniforms for children, food, etc. VSL members use groups as social safety net to help them cope with family stresses including death and others related stresses) and Income Generating Activities (IGA). In addition CARE will focus on improving the qualitative aspect of the economic empowerment component. Usually, a VSL group has at least six members who meet monthly for saving and internal lending. VSL induces demand for IGA training, CARE will continue to provide training and support to caregivers needing IGA training. Economic security activities are contributing to improved wellbeing of OVC and caregivers; feedback indicates that VSL members have increased ability to buy food, pay school fees, pay for health services etc. VSL groups serve as one of the entry points to reach caregivers and OVC with other services. CARE will strengthen the social support function of VSL and will facilitate training for grandmothers with a particular focus on communicating and caring for adolescent OVC. CARE will expand the baseline and impact study two additional villages. In addition, CARE USA will facilitate an evaluation across Local Links in Kenya and South Africa.

ACTIVITY 2: Capacity Building for Sub-Partners

CARE will continue to strengthen and improve the quality of services offered to OVC and their caregivers by focusing on in-depth institutional and programmatic support. CARE will continue to support and build the capacity of sub-partners to provide a range of services; this will include strengthening home-based care support services offered to OVC and their caregivers and work on the support groups for OVC and caregivers who are both infected and affected by HIV and AIDS. In order to improve capacity of sub-partners to provide better services, in FY 2007, CARE appointed a Social Worker to work with sub-partners across Limpopo Province. CARE will adapt the Hands at Work curriculum for use in training caregivers, especially grandmother to improve their communication with adolescent OVC. Elderly caregivers experience great difficulty in raising OVC, particularly adolescent OVC. CARE also attended the International Child Development Program (ICDP) focusing on caregivers' communication skills with OVC. The social worker will support partners in improving OVC access to legal documentation, state income grants, support for staying in school, and volunteer stipends CARE with the help from an intern from CARE USA has developed a Sexual Health Reproduction manual targeted at caregivers and OVC with one of the sub-partners in the Free Sate Province (Mosamaria). This manual will be used to enhance the capacity of caregivers in communicating with OVC about issues of sexual health and reproduction, and issues related to HIV and AIDS prevention. CARE will also focus on enhancing the capacity of sub-partners to provide support to caregivers to cope with stresses of home-based care through care of caregivers program that is based on group debriefing, the model will also be used to strengthen support groups of the infected and affected. Through the appointment of the Professional Nurse, CARE will strengthen the health component within sub-partners to work with government departments at district and provincial level to ensure access to basic health care, ART, training and mentoring of volunteers and staff to improve the clinical component of home-based care. The nurse will also work with Early Childhood Development and Drop-in-centers in strengthening teachers and caregivers' capacity to access basic health services, improve on nutrition, and early identification of positive children and referral for pediatric treatment. CARE will also explore partnerships with PEPFAR partners who have a strong focus on ECD in order to strengthen the capacity of ECD teachers to deal with children who infected and affected by HIV and AIDS. A special focus will be on youth programs within sub-partners to improve HIV prevention messages and peer-led youth education and counseling using, the Harvard OVC Peer-led Education intervention program. In addition, CARE will explore Youth Vocational Training to strengthen the livelihood and economic security of the vulnerable and orphaned youth. In order to do this, CARE will link with partners and private sector that have strong Vocational Training focus. CARE will use the organizational development (OD) experience and lessons learned to replicate to sub-partners to strengthen their OD capacity. The OD support is aimed at organizational sustainability and improved quality of services delivered to OVC and their caregivers

ACTIVITY 3: Advocacy

CARE will continue to use Participatory Educational Theatre (PET) to deal with issues of stigma and discrimination and other OVC rights-based issues, for preventative messaging and training of youth

Activity Narrative: counselors. Cooperation with DramAidE (PEPFAR partner) will be explored to strengthen this activity. CARE will continue to work with the mainstream and traditional church leaders to use sermons to address issues of stigma and discrimination in their congregations and enlisting their support for HIV and AIDS affected households. Training manual for use by the church leaders has been developed; CARE will disseminate the manual and lessons learned about this activity to sub-partners for their adoption. In FY 2007 CARE developed an advocacy strategy that will help sub-partners identify advocacy issues as they relate to OVC, for example, one of the partners in Free State trained caregivers on starting food gardens in order to improve the nutrition of OVC; lack of water facilities in the area made it difficult for the caregivers to implement the training. The strategy will help sub-partners undertake appropriate actions in order to improve OVC services. CARE will continue to participate in the National Plan of Action through the National Action Committee for Children affected by HIV and AIDS (NACCA) and on the NACCA sub-committee on food security. This activity will continue through FY 2008. The CARE program is consistent with the Department of Social Development's Plan of Action for OVC. In addition, CARE will continue liaising with other relevant Departments in as far as influencing the improvement of OVC services, namely the Department of Health, Agriculture and Education and participation in the police forum in Tzaneen to ensure that the police have the appropriate response to issues of child and women abuse.

In Limpopo, CARE will contribute to the development of appropriate policies for OVC within the Provincial Department of Social Development.

CARE activities will contribute to PEPFAR 2-7-10 goals by improving access to quality care for 10 million people, including OVC.

Program Area: Orphans and Vulnerable Children

Budget Code: HKID

Program Area Code: 08

Activity ID: 12511.08

Planned Funds: $0

Activity System ID: 13705

Activity Narrative: This activity was approved in the FY 2007 COP, is funded with FY 2007 PEPFAR funds, and is included here to provide complete information for reviewers. No FY 2008 funding is requested for this activity.

PEPFAR funds $400,000 were allocated to CARE International to provide services to OVC within their palliative care program. The number of OVC identified by CARE International warrants a program on its own. CARE International is funded by USAID to provide services to OVC in South Africa. In FY08 all OVC identified by CARE International will be transferred to the USAID funded project. Both projects are implemented by CARE International therefore a smooth transition with uninterrupted services at the same level is anticipated.

Activity Narrative: SUMMARY:

ARK's activities are aimed at improving the lives of orphans and other children made vulnerable by HIV and AIDS through strengthening school communities to meet the needs of orphans and vulnerable children (OVC); identifying OVC and assisting them to access government social grants, community support as well as appropriate referral to health facilities; and nutritional support through establishing sustainable food gardens in the schools. The primary emphasis areas for these activities are training and local organization capacity development. Specific target populations include the general population from children less than 5 years to adults, OVC and their caregivers.

BACKGROUND:

ARK is a charity organization whose mission is to facilitate and support delivery of accessible and sustainable comprehensive treatment, care and support services to children and their caregivers in communities affected by HIV and AIDS and poverty.

In partnership with the KwaZulu-Natal (KZN) provincial government, ARK has established a comprehensive antiretroviral HIV and AIDS treatment program in government primary health centers and hospitals. Specifically, ARK works with the provincial government to identify sites and areas for capacity building including human resources, human capacity development, and modest infrastructure. Last year with other donor funds, the ARK Child Services program piloted its interventions through schools and community care workers to identify and assist OVC to access government grants; improve access to health facilities; access counseling; and providing a seven-day school-based feeding and sustainable food gardens. To date 5,000 children from 12 schools in rural KZN are fed daily; 687 children have been assisted to access grants; 461 children referred to health facilities; 1000 received the services of social workers; and 50 destitute families were provided with monthly food parcels. With FY 2008 PEPFAR funding, ARK will expand its child services program in KZN communities.

ARK's activities will be implemented in partnership with the provincial government of KZN, specifically with Departments of Education, Health and Social Development. The KZN Departments of Education and Social Development support the expansion of this project

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Support to Provincial Government

ARK will work with provincial government to develop the necessary processes and systems to manage the OVC program and to ensure that the model created is scaleable, sustainable and replicable. ARK will employ social workers and nursing staff to work with the local government schools in linking sick children to primary healthcare facilities at which ARK's ARV treatment program is in place.

ACTIVITY 2: Community Mobilization

This activity will mobilize and empower school communities to meet the needs of OVC. Schools will form clusters (4 - 8 schools per cluster) around primary healthcare facilities at which ARK's ARV program is in place. These schools will be empowered with knowledge, skills and strategies to plan, execute and monitor interventions that respond to the needs of orphans and vulnerable children attending their schools. This activity will provide a strong base in the community by utilizing available resources (schools and educators) to ensure that vulnerable children are cared for. This activity is in line with one of the key strategies of the government to mobilize and strengthen community-based responses for the care, support and protection of orphans and other children made vulnerable by HIV and AIDS. ARK will develop a tool which accurately and reliably identifies children who fit the profile of the target population including those in need of grants who have not accessed one.

ACTIVITY 3: Healthcare Support

Each cluster of schools will be allocated at least one registered community health nurse who will visit the schools to assist with the identification of sick children needing ARV treatment and other health services. ARK will develop a tool which accurately and reliably identifies children who fit the profile of ARK's target population; HIV-infected children and those in need of ARV treatment. Each cluster of schools will have a social worker who will oversee home visits; conduct needs assessments and refers sick siblings in the household to the relevant healthcare facility.

ACTIVITY 3: Economic and Social Support

Community care workers (CCW) will be recruited to assist orphans and vulnerable children in accessing suitable social and health facilities. These community workers (3-4 community workers per school) will be trained to identify OVC, follow-up through home visits, conduct needs assessments, and assist with access to birth certificates and government grants. Each cluster of schools will have a social worker who will be responsible for supervising the community workers and following up the more serious cases. The CCW will co-ordinate the referral system between teachers and community workers and will ensure appropriate case management. The community workers will also be trained to facilitate support groups for the children especially groups for child-headed households and will focus on special needs of girls.

ACTIVITY 4: Food Security

ARK will provide nutrition support through the establishment of food gardens in the cluster of schools. Schools will work with the community workers to initiate food gardens. ARK will partner with KZN provincial government, specifically the Department of Agriculture's extension officers, and other NGOs that provide training for the development of food gardens and ongoing agricultural support. ARK will provide the resources such as gardening equipment, services of an agricultural organization to train and mentor the schools for the sustainability of the food gardens.

ACTIVITY 5: Capacity development

Activity Narrative:

ARK will provide both formal and informal training per cluster for two social workers, 18 - 24 community care workers, as well as 80 educators and institutional management teams in the schools. ARK will utilize existing and will develop specialized training modules where needed, that will address topics such as: the developmental stages of the child (male and female); grant access; child protection, special needs of the girl child, and minimizing stigma. Training of community workers will be conducted in collaboration with accredited service providers such as the National Association of Child Care Workers (NACCW). The Valley Trust will provide training in establishing food gardens. ARK will provide overall support and supervision to the project, ensuring ongoing mentorship of the trained groups, as well as liaison with other partners for knowledge sharing and identifying opportunities for growth. Through home visits, Child Care workers (CCW) will be able to train and support caregivers to better care for their children.

ACTIVITY 6: Referrals and Linkages

ARK works in partnership with other NGOs, local government and government departments. ARK has had extensive consultations with the Departments of Education, Health and Social Development to ensure support of this program. Other local service providers, NGOs, CBOs and FBOs will be identified for referrals to and from ARK services.

The Department of Social Development has acknowledged the significant contributions from ARK in the policy development processes for OVC and this will continue. ARK participates in the National Action Committee for Children Affected by HIV and AIDS (NACCA).

ARK's OVC activities directly contribute to the PEPFAR goal of 2-7-10 by providing care to 10 million people, including OVC.

Budget Code:	HKID	**Program Area Code:**	08
Activity ID:	2933.08	**Planned Funds:**	$400,000
Activity System ID:	13386		

Activity Narrative: SUMMARY:

Through the Center for the Support of Peer Education (CSPE), the Harvard School of Public Health (HSPH) contributes to PEPFAR prevention (abstinence and being faithful (AB) and Other), orphans and vulnerable children (OVC), and system/capacity building goals by providing training, technical assistance, and materials development to government, NGOs, faith-based organizations (FBOs), corporate, and other organizations using peer education strategies. CSPE is the first South African academic center devoted to development and continuing improvement of a sustainable national inter-sectoral peer education system. The major emphasis area for this activity is training with a minor focus on local organization capacity development and policy and guidelines. The target populations are OVC, their caregivers, primary and secondary school students, community and religious leaders, volunteers, teachers, CBOs, FBOs and NGOs.

BACKGROUND:
This project is an expansion and institutionalization of a five-year national consultative process developing consensus on goals, essential elements and standards of practice for peer education programs, and materials and tools in wide circulation to improve how peer education is conducted (Rutanang). Rutanang peer education is consistently defined and implemented as including, among other characteristics, multiple-dose small-group structured and facilitated discussions; informal influence; recognition and referral of those with further needs (e.g., voluntary counseling and testing (VCT), treatment, OVC); and advocacy.

ACTIVITIES AND EXPECTED RESULTS:

All CSPE OVC peer education activities and materials will explicitly and intensively address the following areas of legislative interest: male norms and behaviors, sexual violence and coercion, stigma reduction, and maintaining infected and affected children in school. Though focused on specific OVC needs, peer education activities also emphasize delay of sexual debut, secondary abstinence, and reduction in concurrent partners. Peer education to provide psychosocial support for OVC also seeks to promote advocacy to make environments safer.

The OVC peer led intervention in FY 2008 will expand the initial pilot program (materials development, design and pilot in FY 2007) for 14 - 16 year olds, in selected sites to be determined. The expansion will target 5 OVC organizations, across 10 sites. This results in training of 30 adult supervisors; 30 peer educators trained in implementation; and 120 OVC supported through a peer led intervention.
In FY 2008 CSPE will also conduct a situational analysis, materials development, training and implementation of a pilot program for 5-10 year olds with selected partners yet to be identified. CSPE will maintain support and mentoring to the sites that initiated the programs for 10-13 year olds and 14-16 year olds in previous years.

NGOs and government departments addressing the urgent needs of South Africa's estimated one million OVC face a critical shortage of professional capacity. Beyond necessary survival resources, OVC require sustained psychosocial support, assistance with a variety of concrete coping skills, and effective education to prevent behaviors that put them at risk of HIV infection and other threats to health and safety. Many OVC do not understand these needs or seek this help, and will only receive it in environments that have their own appeal and are protected from stigma and shame. They also need what all young people need: Social activities that are fun and connect them with their peers, schools and churches, and communities. Structured, time-limited, highly interactive groups with clear sequential educational objectives can provide activities that get youth to laugh, and also help them acknowledge and express their grief and fears and recognize their strengths and assets. Focused mutual-help groups also enable participants to experience themselves as valued supporters for their peers while they are being helped themselves. Well-trained and carefully supervised peer educators can plan and facilitate these groups, serve as role models of resilience, and help OVC form a mutual support network to assist with maintaining school attendance and accessing critical services.

Building on its ongoing PEPFAR-funded work to promote a sustainable intersectoral system of rigorous peer education standards and practices, the Harvard School of Public Health will collaborate with six PEPFAR-funded OVC service providers to develop, implement, assess, refine and disseminate tools and materials, training and technical assistance packages, and monitoring and evaluation protocols for peer education strategies to help OVC apply their own considerable strengths to the creation of sustainable community-based supports. In late 2007 and in 2008, with materials field-tested and formative evaluation complete, HSPH will implement systematic training and technical assistance in the use of these materials to support OVC. We will also take advantage of national meetings and conferences to convene working groups of OVC-serving partners for periodic feedback on how the materials are being used, and on needed improvements and additions. Special attention will be paid to monitoring and evaluation processes, including the tracking of group participants over time to assess their degree of effective coping.

Materials and models developed through this project will constitute much-needed resources to expand the number of OVC for whom psychosocial support, with its positive effects on other OVC outcomes such as retention in school and access to health services, will be available.

Targets

Target	Target Value	Not Applicable
Indirect number of OVC programs	N/A	True
Indirect number of OVC served by OVC programs	N/A	True
Indirect number of providers/caregivers trained in caring for OVC	N/A	True
8.1 Number of OVC served by OVC programs	N/A	True
8.1.A Primary Direct	N/A	True
8.1.B Supplemental Direct	N/A	True
8.2 Number of providers/caregivers trained in caring for OVC	690	False

Indirect Targets

No indirect targets will be reported in FY 2008.
Initial FY 2007 goals are to work with a limited number of PEPFAR partners to develop and implement, assess and refine a set of tools and materials and technical assistance training packages and monitoring and evaluation protocols for peer education in OVC settings. All contributing organizations will be PEPFAR partners. This initial phase of the project will entail working on new materials and activities with our partners through their work with OVC populations (5 organizations, 10 sites, 1 or 2 groups per site, 20 youth per organization = 180 youth or children). In FY 2008 we will provide intensive training and technical assistance to CBOs and FBOs in the use of the models and materials developed and tested in FY 2007/FY 2008. TA will primarily be directed towards PEPFAR partners, but agencies supported by the Department of Social Development may also benefit from HSPH materials and services. The estimates of #s of OVC reached indirectly are highly conservative; they do not count individuals trained by HSPH/CSPE-trained colleagues, or individuals who use Rutanang materials without training.

10-13 years: 40 sites x 3 supervisors per site = 120; 40 sites x 6 PEs per site = 240; 40 sites x 4 groups x 12 OVC = 1920 OVC; This is the third year of implementation.
14-16 years: 20 sites x 3 supervisors = 60; 20 sites x 6 PEs = 120; 20 x 2 groups x 12 OVC = 480 second year of implementation.
5 - 10 years: 10 sites x 3 supervisors = 30; 10 sites x 6 PEs = 60; 10 sites x 2 groups x 12 OVC = 240: pilot phase

Table 3.3.08: Activities by Funding Mechansim

Mechanism ID:	4745.08	**Mechanism:**	N/A
Prime Partner:	Anglican Church of the Province of Southern Africa	**USG Agency:**	U.S. Agency for International Development
Funding Source:	GHCS (State)	**Program Area:**	Orphans and Vulnerable Children
Budget Code:	HKID	**Program Area Code:**	08
Activity ID:	8182.08	**Planned Funds:**	$1,200,000
Activity System ID:	13383		

Activity Narrative: SUMMARY:
The Anglican Church of Southern Africa (ACSA) program aims to support orphans and vulnerable children (OVC) by meeting basic and immediate needs while simultaneously building capacity in families, leaders and communities to develop local sustainable solutions to meet the long term needs identified by children and their caregivers in their communities. The primary emphasis area for this activity is in-service training of caregivers. Specific target populations are OVC (boys and girls ages 0-18 years), people living with HIV and AIDS, religious leaders and teachers.
BACKGROUND:
The ACSA Care for Orphaned and Vulnerable Children (OVC) program builds on a successful OVC model piloted under ACSA's "Isiseko Sokomeleza" which means Building a Foundation, program in partnership with Heartbeat Center for Community Development, the Barnabas Trust and the Anglican Mothers Union (MU), in the four Eastern Cape Dioceses of Grahamstown, Port Elizabeth, Umzimvubu and Mthatha. All activities will be implemented directly by the Anglican Mothers Unions, an important women's group within the Anglican Church. Partner organizations provide mentoring and technical assistance to groups of trained caregivers. This model encourages community participation and supports traditional community life while strengthening mutual assistance and social responsibility. This ACSA model ensures that communities understand the needs and rights of the children in their community and protects them from abuse. The ACSA model will be scaled-up and expanded in all nine provinces. A preliminary needs analysis of the 20 dioceses in South Africa showed that all 20 dioceses would benefit from coordinated support in implementing programs that care for OVC. The ACSA's approach to caring for children builds on the 6 strategies in the policy framework of National Plan of Action of the South African Government's Department of Social Development (DOSD). The South African constitution guarantees all children the right to comprehensive healthcare and basic health services. In addition, ACSA will give special consideration to HIV-infected OVC to ensure that they are referred to HIV pediatric treatment. ACSA also plans to develop activities to focus on vocational training for older OVC and caregivers.

To assist girls to understand the risk of early sexual activity, the ACSA program will provide age-appropriate, culturally sensitive educational interventions for comprehensive HIV and AIDS knowledge, reproductive and sexual health and life skills at kids clubs, schools and in communities. Gender inequalities affect girls' access to and interaction with health services, including those for HIV prevention and AIDS care. The ACSA program will emphasize keeping girls in schools and promoting girls' access to health services. Teachers are ideally placed to track the wellbeing and change in children and identify OVC. Age-appropriate life skills and sex education including HIV prevention messages and empowerment activities combined with caregiver training will help mitigate this trend and protect young girls.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Building community capacity to care for OVC
Volunteers will be trained to provide care and support of OVC. The trained volunteers will recruit and train community caregivers to increase the local capacity of their communities. The training will focus on the process of planning and implementing OVC projects in community parishes. Upon completion volunteers will have a better understanding of how to deal with OVC in order to provide comprehensive, integrated and quality responses such as psychosocial support, accessing child support grants, healthcare, nutrition and other life sustaining services. The training will be provided through a partnership comprised of Barnabas Trust, Care for Kids and staff from the Anglican Church. Each partner will have its own curriculum but in essence focus on enabling community organizations (parish-based projects) to have an integrated approach to delivery of services to orphans and vulnerable children. The partner organizations will provide mentoring to all trained caregivers, after the training. The mentors will provide technical assistance and retraining to groups of caregivers in each diocese as the need arises. The Project officer will assist the Diocesan OVC Coordinators and will also provide technical assistance to the caregivers. They will receive all the necessary forms to assist with the assessment process of children and households. The principals and teachers at schools within the Diocese will complete a survey to assist the caregivers to identify the children who will be provided assistance through the "Back to school" support intervention. In addition ACSA will locate a new partner to provide vocational training for older OVC and caregivers.

ACTIVITY 2: Community engagement workshops
These workshops will serve to influence norms on acceptable treatment of OVC thus confronting stigma and discrimination. The workshops will provide platforms for ACSA partners to network and share lessons learned on how to best intervene on behalf of OVC, create gender awareness and eliminate stigma and denial. Joint action and initiatives will be implemented at annual mass events such as International Children's Day, Child Protection Day, Women's Day, 16 Day of No Violence Against Women and Children, the Special Day of Prayer for Orphans and "The School is Cool" Campaign with special emphasis on involving meaningful participation of young people in the planning and delivery of these events.

ACTIVITY 3: Partnerships
Partnerships with organizations and institutions (Barnabas Trust, Heartbeat, etc.) that have developed programs and material on abstinence, sexuality, life choices, etc. will be strengthened. The content of these programs will be discussed with Parish coordinators and communities. New partnerships will be developed and child care workers will be trained in abstinence and behavior change interventions, reproductive, sexual health and life skills. HIV education and awareness will be facilitated at the schools with special emphasis on supporting OVC in schools; this will support the children who attend the psychosocial support groups. Four workshops will be held in the 20 Anglican Church dioceses.

ACTIVITY 4: Care and counseling of children, caregivers and parents
Care and counseling will be provided to meet the bereavement needs of OVC and to facilitate the mourning processes for adults who care for OVC. Bereavement workshops will be held quarterly to assist parents and caregivers. Four retreats will be held semi-annually for caregivers to facilitate debriefing and sharing experiences. Follow-up home visits will be conducted to ensure that, in child-headed households are provided with support and they know how to access the necessary services. Follow-up and monitoring to track the progress of children who receive school uniforms and other school supplies through the Back to School intervention is vital for the program. This will also ensure that ACSA track children who drop-out of school for specific reasons and to offer support through the after school activities. The OVC will receive assistance with homework and assignments. This will happen at parish level and retired teachers and older learners are recruited. Donations from non-PEPFAR sources will be delivered to households and families,

Activity Narrative: i.e. blankets, food parcels, toys, etc.

ACTIVITY 5: Linkages with Faith-based Organizations (FBOs) and Community-based Organizations (CBOs)
This activity will develop effective linkages with FBOs and CBOs to share resources, information on best practices and increase capacity of FBOs and CBOs to support OVC in their communities. These Child Care Community Forums, comprising, FBOs, CBOs, the South African Police Service (SAPS), schools and community leaders will ensure that all stakeholders develop a common vision in dealing effectively with the challenges that children face in their communities. ACSA will provide advice and training to other faith leaders, traditional leaders, NGOs and community leaders on how to effectively collaborate, in order to appropriately respond to OVC needs. Consultations will be held at parish level to get the support of the leadership and clergy as well as other religious leaders of various faiths in the communities to address the plight of orphans and other vulnerable children.

ACTIVITY 6: Advocacy
This activity will focus on building caregiver capacity (within ACSA and externally) to advocate on behalf of OVC. This will be done by establishing linkages with government departments, municipalities and other service providers to facilitate the provision of wrap-around services and support such as accessing government social grants, health services, registration of birth certificates, legal aid, advice and support to establish food gardens, etc. ACSA will explore ways to introduce tools to avoid and reduce the issue of gender-based violence into their activities, in order to strengthen social cohesion in communities. Assistance will be given to families and households by providing information on the rights of women regarding inheritance, developing legal wills and other legal advice. The sustainability of the project will be ensured by empowering local communities with the knowledge and experience of working with OVC. Continued support from the church and expanded linkages will ensure the long-term viability of the project. ACSA will focus on expanding partnerships with governmental agencies, FBOs, and the private sector to increase its funding base. Local partnerships will be expanded to other FBOs, CBOs and NGOs in an effort to expand the network of care and resources. The development of relationships with corporate and private partners who can contribute funding and in-kind resources to the project will also be initiated.

Program Area Code: 08

Activity ID: 7936.08

Planned Funds: $0

Activity System ID: 13982

Activity Narrative: This activity was approved in the FY 2007 COP. PEPFAR funds were allocated to Kingdom Trust through NMCF to provide OVC services. Kingdom Trust provided psychosocial support training and HIV prevention education for OVC. In addition, Kingdom Trust facilitated training of child care forums (CCFs), which are community based structures focusing on the needs of OVC. In July 2007, USAID received the report that Kingdom Trust will not be able to accept PEPFAR funds since the Board has dissolved the organization. In order to ensure continuity of the services rendered by Kingdom Trust, the $240,000 approved in FY 2007 and also earmarked $240,000 for FY 2008 are requested to be reallocated to increase the capacity of CWSA, which works in the same province where Kingdom Trust was operating, to ensure continuity of services. Therefore, the original earmark for Kingdom Trust in FY 2008 will increase CWSA to continue rendering services in Limpopo and there is no need to continue Kingdom Trust in FY 2008. No FY 2008 funding is requested for this activity.

Table 3.3.08: Activities by Funding Mechansim

Mechanism ID:	504.08	**Mechanism:**	N/A
Prime Partner:	Nurturing Orphans of AIDS for Humanity, South Africa	**USG Agency:**	U.S. Agency for International Development
Funding Source:	GHCS (State)	**Program Area:**	Orphans and Vulnerable Children
Budget Code:	HKID	**Program Area Code:**	08
Activity ID:	3052.08	**Planned Funds:**	$1,998,200
Activity System ID:	14251		

Activity Narrative: SUMMARY:
Nurturing Orphans of AIDS for Humanity (NOAH) mobilizes communities form networks of care called "Arks", which provide a range of services to orphans and vulnerable children (OVC) including: nutritious meals; educational activities including HIV prevention messages; regular home visits; assistance in birth registration and accessing government social security grants; psychosocial support and training in the establishment of food gardens. Through effective implementation of the NOAH model, with continued emphasis on sustainability and capacity building NOAH plans to capacitate community OVC programs (Arks) to become self-governing and to graduate into independent local CBOs. Emphasis areas for NOAH are Local Organization Capacity Building, and Human Capacity Development (Pre- and In-service training). The target populations for NOAH activities are orphans and vulnerable children.

BACKGROUND:
NOAH was established in 2000, and began receiving PEPFAR funding in 2004. With PEPFAR support, NOAH has registered over 20,000 children and provided over 10,000 children with direct comprehensive care throughout Gauteng, one community in the North West, and KwaZulu-Natal provinces. NOAH is currently active in 112 communities nationally, of which 35 are supported by PEPFAR. With FY 2008 funding, NOAH will strengthen the NOAH model through retraining committees, volunteers and resource center staff. Additional resources will be directed towards development and capacity building in order to capacitate communities to manage and sustain Arks as independent CBOs.

ACTIVITY 1: Local Organization Capacity Building
NOAH focuses on community mobilization and participation to develop community networks, or Arks, to support OVC affected by HIV and AIDS. Mobilization is initiated through an interactive process which allows communities to identify and evaluate themselves to determine whether the NOAH model will work for them. Subsequently, through the establishment and training of NOAH committees (which target all major stakeholders in the community: private sector, community, religious and local government leaders) and a group of volunteers, OVC are identified and provided with services. The committee oversees the general activities of the volunteers and is involved in fundraising and building relationships with local government offices and surrounding schools to sustain the program. The staff of the Ark is accountable to the committee and to NOAH headquarters and manages the day to day running of the Ark, including caring for the OVC. In many Arks the committee has successfully secured material and monetary donations from local businesses through public-private partnerships (PPPs), in other Arks schools have donated classrooms, resources and teacher-time. All Arks are encouraged to build relationships with the local Department of Social Development (DOSD). With FY 2008 funding, NOAH will continue to support community mobilization in all 35 existing NOAH sites.

ACTIVITY 2: Human Capacity Development
NOAH training builds volunteers, Ark staff and committee members' skills to identify and register OVC and conduct home visits to monitor their progress and link them to appropriate government social services (e.g. Department of Home Affairs for issuing of birth certificates and Department of Social Development for child support grants). The training provided for volunteers includes Bereavement Counseling as well as technical training in how to access social welfare benefits for the children. For committee members, training includes Financial Management, governance, leadership, management and sustainability training. Nutritional counseling on how to provide healthy and balanced meals in a resource scarce environment, and accredited Early Childhood Development (ECD) training from Ntataise Trust (a partner NGO, registered on the National Qualifications Framework) for Ark staff members at resource centers is also provided. NOAH will continue to provide psychosocial support to OVC through training volunteers in Play Therapy and counseling techniques, and by partnering with organizations such as GoLD (another PEPFAR partner) in at least four PEPFAR Arks, two existing and two new ones in FY 2008, to provide peer counseling training on HIV and AIDS at secondary school level (over 13 years). Food security and nutritional support of OVC and volunteers is achieved through permaculture training and the subsequent establishment and maintenance of vegetable gardens.

Quality Assurance and supportive supervision is delivered through monthly meetings with NOAH staff in each region. This allows NOAH Ark Managers and community leaders to share successes and challenges and to come up with innovative solutions to solve the problems specific to their communities. Monitoring and evaluation (M&E) systems at community level are strengthened through ongoing training and data quality is improved through immediate verification of all numbers reported. Ark staff are trained in all of the skills they need for effective and cost efficient management of the Ark. Each Ark is responsible for its own budget and financial management and for reporting and its own Information Management System. All training is geared toward capacitating the Ark to be able to run independently and includes Financial Management, Computer Literacy, Fundraising, Project Management and Governance.

ACTIVITY 3: Care and Support
Through community, school and other donor-support, NOAH establishes, staffs and supports resource centers, satellite offices and satellite feeding schemes in 35 PEPFAR Arks. NOAH resource centers, apart from being safe havens where children can interact with each other and with adults in a supportive environment, also provide daily nutritious meals, access to educational support including ECD for young children and schoolwork support for older children, computer rooms and libraries, and opportunities to assess and monitor children's general health on a daily basis. Wherever children are identified as in need of healthcare they are referred to appropriate facilities and provided with ongoing follow-up and care. Parents, volunteers, children and teachers are actively involved in the maintenance and day to day activities of the center. All Resource Centers which operate daycare or crèche facilities are manned by staff trained in Ntataise's intensive 3-week course on ECD. PEPFAR supports the day-to-day costs of the 35 centers such as staffing and materials and supplies (books, pencils, etc.). PEPFAR does not fund any construction of new Arks.

Outside of the Resource Center structures children's health and wellbeing is monitored through monthly home visits provided by Ark volunteers focusing on family-centered care. The home visit provides an opportunity for volunteers to work with parents to apply for birth certificates and social welfare grants for OVC as well as to assess the child's health, school performance and psychosocial wellbeing. All volunteers are trained in bereavement counseling and play therapy techniques to enable them to interact with the child and provide immediate psychosocial support wherever necessary. If the child is identified as being unwell they are referred to a nearby clinic.

Activity Narrative:

In the interests of gender equality, NOAH actively monitors the number of girls and boys receiving services at Resource Centers. In most Arks there are an equal number of boys and girls attending the center and receiving services. Wherever discrepancies are noted Ark staff addresses imbalances through home visits and additional follow-ups. Two of the PEPFAR Arks (one in Gauteng and one in KZN) provide programs specifically for adolescent girls and in these cases there are usually more girl children attending centers than boy children, though there is no gender discrimination in service provision. In addition, NOAH volunteers and staff identify sick children and caregivers and facilitate referrals to the nearest hospital or clinic for health assessment and where necessary HIV counseling, testing and ARV treatment. These referrals are recorded, with an average of 75 children referred to clinics each month within PEPFAR Arks. HIV Prevention is provided through a partnership with GoLD Peer Education program which will be implementing programs in at least two additional PEPFAR Arks in FY 2008. NOAH has PPP with some companies that have provided material/resource support in the form of school uniforms and/or food; others offer the time of their employees to work with an Ark, its personnel and children.

Relationships with the South African Government (SAG) have been developed at the local, provincial and national levels. NOAH partners with the Department of Social Development (DOSD) and Education (DOE), to capacitate communities to access government funds and assistance. Local government representatives are active members of Ark committees. Close relationships with local social workers are fostered and encouraged. Seven NOAH Arks of the total 112 active Noah Arks are currently funded by the Department of Social Development with further funding provisionally allocated to more Arks. NOAH has partnered with the DOE in KwaZulu-Natal to provide long term sustainable support by integrating the Ark model into schools. NOAH advocates for stipends for volunteers through the Department's Expanded Public Works Program which aims to advance rural communities both socially and economically by involving them in government-run programs. To date four PEPFAR Arks are accessing EPWP stipends for NOAH volunteers. NOAH is a founding member of the National Action Plan for Children Affected by HIV and AIDS and has been instrumental in policy development through this structure. NOAH activities contribute to supporting the PEPFAR goal of providing care and support to 10 million individuals affected by HIV and AIDS by increasing access to quality, comprehensive care to OVC.

Budget Code: HKID

Program Area Code: 08

Activity ID: 6562.08

Planned Funds: $2,231,000

Activity System ID: 13373

Activity Narrative: SUMMARY:
The African Medical and Research Foundation (AMREF) will strengthen capacity of South African district government departments, Child Care Forums (CCFs), NGOs and CBOs, and service providers to provide quality and accessible care and support for OVC, through training, mentoring, awareness-raising and advocacy for children's rights. Emphasis areas for this program are training, gender (addressing male norms and behaviors and reducing violence and coercion and local organization capacity development. Target groups include OVC (0-18yrs) and their caregivers.
BACKGROUND:
AMREF is an international health and development NGO working in East and Southern Africa. In South Africa, AMREF previously worked in Mpumalanga (from 2001 to 2004) strengthening community care-giving infrastructure for OVC, including the improvement of capacity and integration of service providers and government departments. Building on this initiative, AMREF has formed partnerships with key government and civil society stakeholders in both Limpopo province (Sekhukhune district) and KwaZulu-Natal (KZN) province (Umkhanyakude district). In these two particular districts, in which 55% and 57% respectively of the population are under the age of 18, AMREF has identified the need to develop a comprehensive program to address the needs of OVC by strengthening collaboration between, and capacity of, local service providers, government and civil society groups. The districts are presidential rural nodal points recognized by the SAG as the poorest and most under-resourced districts in South Africa. The NDOH (2006) survey reported that KZN and Limpopo have high HIV prevalence rates (20.6% and 11.7%, respectively) and a high number of OVC (57% and 55% respectively). Currently, AMREF has seven local partners providing services to OVC located in sites in Sekhukhune and Umkhanyakude districts of KwaZulu-Natal and Limpopo provinces, respectively where intervention will continue with FY 2007 PEPFAR funding. Each of these partners, in turn, work with an average of three second line partners who spearhead identification of children and servicing of these children within their locality. In FY 2008, AMREF is proposing to add a new partner (Ndumo Drop-In Center) to be contracted as one of AMREF's first line partners to increase reach and improve access to services in Umkhanyakude. AMREF work is closely aligned to the aims of the Department of Social Development's (DOSD) National Action Plan for OVC as well as the National HIV and AIDS Strategic Plan (2007-2011).
ACTIVITIES AND EXPECTED RESULTS:
ACTIVITY 1: Human Capacity Development
With FY 2008 PEPFAR funding AMREF will provide training, mentoring and on-site support to its eight established CBO partners (first line partners) and their individual networks of emerging community groups (second line partners) to strengthen care and support systems for OVC in the two districts. AMREF's first line partners are those partners who have signed contracts with AMREF and receive sub grants from AMREF and have been registered as community-based organizations (CBOs). Second line partners on the other hand are community groups that have been formed to address needs that will have been identified in their communities such as home-based care and orphans and vulnerable children. AMREF will focus on system development at community level for first line level and service delivery at second line partner level. For AMREF's first-line partners, capacity development activities will include training in financial, project, organizational and human resource management. In addition, they will be trained in supportive supervision to ensure that volunteers do the work they are supposed to do and that the quality is of a high standard. AMREF will also provide capacity building support for second line partners from where most of the children are identified and serviced. Particular attention will be on the identification, referral and support mechanisms to ensure that children who will have been identified receive a comprehensive package of services. Second line partners will receive essential training in the identification, servicing and referral system that has been developed.
ACTIVITY 2: Care and Support Services
AMREF-trained community care workers and service providers will provide a comprehensive care and support package for children requiring psychosocial, nutritional, educational and health care support. Trained service providers will identify OVC and conduct needs assessments, home-visits, and psychosocial support, provide nutritional support and counseling, and life skills training and homework supervision. In addition, AMREF and its partners will also provide assistance with SAG social security grant applications, succession planning and birth registration as well as on-going monitoring and follow-up for other essential services including access to primary health care protection services, and information on HIV prevention and interventions to reduce gender-based violence (GBV). AMREF will also continue to ensure that OVC under five years access health care through integrated management of childhood infections (IMCI) and the expanded immunization program (EIP) supported by UNICEF. This service package is provided directly to OVC by the Children's Drop in Centers, CCFs, CBOs and NGOs including home-based care organizations. Health practitioner capacity has often been cited as presenting a barrier for children and adolescents to access health services. AMREF will strengthen the skills base of health care professionals in the delivery of child friendly health services. AMREF also will work with the local clinics and health service providers to promote provision of reproductive health service, counseling and testing, management of sexual violence as well as information and counseling on development including nutrition, hygiene, and substance abuse. This will be a major focus aimed at reducing death and disease, deliver on the rights of the children and adolescents to health care
ACTIVITY 3: Strengthening district and civil society capacity and coordination
To ensure sustainability of support for OVC, AMREF will provide training in program design, planning and implementation, monitoring and evaluation as well as technical support for government at district and municipality levels (including District AIDS Council). AMREF will facilitate improved collaboration between departments and integration of services by organizing and facilitating regular inter-agency/ departmental meetings and forums. AMREF will provide organizational strengthening training and systems development, support and follow-up for CBOs/NGOs engaged in OVC service delivery, including financial and program management skills, leadership and resource mobilization training. AMREF will train selected NGO workers and community care workers in psychosocial support and counseling for OVC. To cope with the number of children in need of care, the establishment of community care structures is essential. AMREF will build on the childcare forums that will have been established and strengthen these structures. CCFs will be key in the identification and support of orphans through community-based care and support program. CCFs will continue to be established in every ward and strengthened.
ACTIVITY 4: Community-level Advocacy
In FY 2008 AMREF will conduct consultations with civil society and government stakeholders to determine community level advocacy issues. In response, AMREF will train youth, caregivers, service providers on advocacy skills and planning and assist to develop strategies to advocate for changes to SAG policy and practice concerning OVC, identify and work to eliminate bottlenecks in service provision and mobilize resources. AMREF will facilitate and support advocacy meetings with traditional leaders, local and district

Activity Narrative: government. AMREF will also continue to support CCFs in their advocacy role at community level on behalf of OVC. Specifically, AMREF will provide CCF members with training to support advocacy against GBV, especially against female OVC. Some of the major challenges that orphans face include lack of access to adequate treatment and care services, loss of property and lack of protection from abuse and exploitation. AMREF will partner with organizations such as Legal AID, mobile clinical service providers as well as other civil society and community-based organizations to ensure that there is synergy in the implementation of program and that children get a comprehensive package of services.
ACTIVITY 5: Gender Mainstreaming
This component will build on the peer education initiative pilot that was started in 2007. Male OVC are a key group of focus under this initiative. The gender-mainstreaming component seeks to increase the participation of male OVC in the provision of care to other children as well as address the gender stereotypes that tend to predispose female OVC to abuse. Male OVC will be educated on the norms and behaviors that promote equality of the sexes. AMREF will use PEPFAR funds to continue training and supporting community care workers, partners and other stakeholders (e.g. traditional leaders, teachers, health workers, social workers) to mainstream gender into the delivery of a comprehensive service package for OVC. AMREF will work with OVC service providers and stakeholders to develop and implement gender-based violence awareness campaigns with specific focus on vulnerable populations such as female OVC and the disabled. In addition, AMREF will work to sensitize parents and teachers to mainstream gender issues in life skills training. Gender mainstreaming will include training on gender roles, genderbased violence recognition and prevention, male/female norms and behaviors in OVC identification, referral, care and support. AMREF willcontribute to PEPFAR's 2-7-10 goals ensuring qualitycare and supportservices forOVC.

Program Area: Orphans and Vulnerable Children
Budget Code: HKID
Program Area Code: 08
Activity ID: 6559.08
Planned Funds: $1,073,000
Activity System ID: 13378

Activity Narrative: SUMMARY:

Africare's Injongo Yethu Project will establish the structures and processes that will facilitate service delivery and support to orphans and vulnerable children (OVC) in Lukhanji and Emalahleni Local Service Areas in the Eastern Cape. Interventions are in support of the Department of Social Development's (DOSD) aims in the National Plan of Action. Child Forums, Kids Clubs, counseling, health care, social services coordination and livelihood will be linked together and to other Injongo Yethu Project activities to create an integral support system. Major emphasis is on community mobilization, with additional emphasis on human resource, training and local organizational capacity development. Target populations include OVC and their caregivers.

BACKGROUND:

Started in FY 2007, the Project's OVC program and will continue build on existing community caregiver services, the Service Corps Volunteers and Africare's programs with youth and faith-based organizations. FY 2007 saw the establishment of more than 10 Child Protection Units, identification of households and OVC in critical need, and initiation of direct service delivery. Originally designated as "Child Care Forums", the local Department of Social Development (DOSD) team and the community decided to combine OVC functions into the Child Protection Committees, also mandated to be established in each community and with very similar functions.

ACTIVITIES AND EXPECTED RESULTS:

Africare's activities will continue in FY 2008, emphasizing the development of sound public sector and community responses to OVC needs. Public sector departments involved are the Department of Social Development (DOSD), Department of Health (DOH) and Department of Education (DOE). FY 2008 will include efforts to engage the Department of Labor (DOL), Department of Agriculture (DOA).

ACTIVITY 1: Strengthen Communities to Meet the Needs of OVC Affected by HIV and AIDS

In addition to the nine Service Corps Volunteers (SCVs) that will be recruited to support OVC community-based activities in FY 2007, six more will be engaged in FY 2008. To support the identification and tracking of support to OVC, Africare will support the Eastern Cape DOSD in designing and developing an OVC services tracking system and other tools for identifying vulnerable households, their needs, and tracking services delivered. SCVs, health sector community care-givers and the newly established Child Protection Committees (CPCs) members will be trained to identify OVC and vulnerable households, and ongoing household needs assessments will be initiated and made routine. CPCs will continue to be developed for 15 wards (or clusters of wards) to provide a mechanism for coordinating resources to meet the children's needs. CPCs will also function as the accountability body for local OVC identification, monitoring and services coordination. Small grants will be provided to the CPCs to enable them to meet and coordinate activities for OVC. A memorandum of understanding will be signed with each CPC, each will be assessed for its development and resource needs; each forum will meet at least quarterly. Africare support will be provided through a Service Corps Volunteer to establish patterns of OVC needs identification, work planning, and the development of an OVC community service plan. Kids' Clubs will be established with Africare support, designed in conjunction with the DOSD and their district committee for HIV and OVC ("DACCA"). Workshops will continue to be held to jointly establish roles, functions, and the service complement of CPCs and Kids' Clubs. CPCs, Kids Clubs, and community caregivers will link OVC and child heads of households to social services for necessary support in addition to providing direct support where they are capable.

ACTIVITY 2: Community-based Responses in Support of OVC and Their Households

Africare will provide grants and technical assistance to selected community-based organization (CBO) members of CPCs. Two CBOs have been engaged and provided with initial grants. Orientation on financial management and monitoring and evaluation will be provided to the currently engaged CBOs and as well as those engaged in FY 2008 to cover the remaining CPCs. Grants will focus on enabling CBOs to provide care and support to OVC in their communities. Training of CBO caregivers will enable them to monitor, directly provide, and refer to specific services. Both service CBOs and public sector health volunteers will be provided with tools and training to monitor health status and to promote child utilization of well-child health services and to be cared for when sick. OVC households will be linked to ongoing and expanding food garden projects, soup kitchens and locally available food parcels distributed by the DOSD, churches and CBOs. A local legal aid service will be engaged to train child forums and volunteers in basic legal aid support for OVC and families, such as wills, succession planning, identity documents, deferment of school fees, etc. The project will facilitate the development of a referral system between the community, DOSD and legal aid for common legal needs. The South African Depression and Anxiety Group (SADAG) will continue to provide specific support in developing community-oriented psychosocial support training. They will initiate caregiver support groups, train the support group leaders. The SADAG 'talking book' for OVC will be used by community and household caregivers for facilitating discussion and engaging children and youth. They will also establish a toll-free call line for support.

ACTIVITY 3: Direct Assistance to OVC

Africare will facilitate establishing effective referral patterns and access to social services and various benefits. SCVs will be trained to assist CPCs and train child-headed households on home management, services and entitlements. To foster school compliance with the provincial no-fee policy in disadvantaged areas, minor repairs and rehabilitation or other school-wide benefits will be undertaken in exchange for waiving fees for OVC. Enrollment by OVC in school and routine attendance will be monitored. Africare will capacitate the community volunteers and child care forums to ensure that OVC in need of shelter get referred. Monthly monitoring of access and utilization of a standardized package of services will continue in FY 2008. Children and youth attending Kids' Clubs will be trained in Life Skills. Kids' Clubs leaders will be trained in HIV prevention, AIDS care and support of OVC. Africare will provide small grants to Kids' Clubs to organize recreational activities. Africare will seek leveraged matching funds. Peer Educators (40) and Peer Counselors (40) will be trained to support children and youth attending Kids' Clubs and in the community. Children heading households and older OVC will be targeted for training in vocational and livelihood skills

Activity Narrative: through vocational training centers and training organizations. Local organizations will be trained to support the development of income generating activities (IGA), and OVC and caregivers will be assisted in securing funding for IGA activities.

ACTIVITY 4: Access to Health Care

Home-based caregivers based at clinics will ensure that OVC under 2-year olds encountered in the homes of their HIV clients are weighed, immunized, and those that are HIV-exposed are screened for infections, receive their follow-up HIV test, and access care and treatment, when required. OVC caregivers (OVCGs) deployed by the CBOs under each CPC will monitor clinic utilization for growth monitoring and immunizations and will support the clinics in direct weight monitoring for high-risk children. Older children encountered in the home will also be linked to clinic care and treatment services as needed. Schools and Kid's Clubs will be alert to children and youth, who need referrals for healthcare and HIV treatment, linking them through the structures above to ensure that clinic or hospital level care is provided.

New FY 2008 activities will include:

CPC members will continue to be trained in FY 2008 to provide community-based support and advocacy, e.g. prevention of exploitation and abuse, prevention of "land-grabbing", and identification of children and households in distress. CPC development will continue to be nurtured to provide a sustainable response to the need for OVC identification and service coordination.

District and LSA-level committees established by the DOSD for children ("DACCA and LACCA) will be supported to continue to map local services

Household-centered care will be strengthened through assessment and capacity building of the CBOs engaged to monitor OVC in the community. Capacity building will be in the form of topical one-day workshops on specific OVC issues, monitoring and evaluation, and on-site support. In addition to the two CBOs engaged (for 4 wards) to date, additional CBOs will be engaged to cater for the remaining 11 CPC catchment areas.

Kids clubs will be established in schools and communities to incorporate specific life skills such as life goal planning, personal empowerment, caring for others, public speaking, writing skills, etc, as well as homework support. Kids' clubs will also provide a venue for play, additional meals for young children, and access to referral for professional social workers and others. Youth leadership and child participation will be nurtured and developed through Kid's Clubs and engagement of the Youth Council in Queenstown to bring the voice of youth into the design of services and to engage youth in caring for others.

Extending into Emalahleni Local Service Area (or other LSA assigned for clinical care, in order to ensure a continuum of care)

Africare's activities focused on orphans and vulnerable children contribute to the PEPFAR goal of 10 million people in care, including OVC.

Activity ID:	12512.08	**Planned Funds:**	$485,000
Activity System ID:	13363		

Activity Narrative: SUMMARY:

As an Umbrella Grants Management (UGM) partner, Academy for Education Development (AED) supports institutional capacity building, technical assistance and grants administration for indigenous organizations that implement PEPFAR programs. These partners and sub-partners consist of indigenous NGOs, FBOs, and CBOs that were selected through the Inter-Agency PEPFAR Annual Program Statement (APS) and have met the criteria for full and open competition. The main functions of the UGM program are: 1) to facilitate further scale-up of HIV and AIDS care services and (2) to develop indigenous capability, thus creating a more sustainable program. The emphasis area is Local Organization Capacity Development and the primary target population is indigenous organizations.

BACKGROUND:

AED has extensive experience managing grants programs on behalf of USAID with PEPFAR funds. Prior to award of the UGM under the South Africa APS, AED was already managing grant programs funded with PEFPAR dollars in Ghana and Honduras, and providing TA and capacity building to PEPFAR partners on palliative care and OVC work in Mozambique and Kenya. In addition, AED has been sourced as USAID's exclusive partner for capacity building to the 23 NGOs funded under the PEPFAR Round One New Partners Initiative. As such, AED is well experienced in providing TA and capacity building on the broad array of technical areas related to PEPFAR programs, monitoring and evaluation, organizational development and finance management. In addition, AED has also been a key PEPFAR implementing partner in South Africa and is thoroughly familiar with working on HIV/AIDS programs within that context. As a UGM partner, AED will not directly implement program activities, but rather act as a grants administrator, technical assistance provider, and mentor for sub-recipients, who in turn carry out the assistance programs. AED collaborates and coordinates with the South African Government (SAG) in supporting PEPFAR partners through the umbrella grant mechanism. Although some of the partners work closely with various SAG Departments, AED's primary interface with the SAG is through the Senior Management Team (SMT), which includes key staff from USAID, National Departments of Health and Social Development, and representatives from the provincial departments. Under AED, between 6 and 11 indigenous partners will be supported via sup-grants and technical assistance. Partners are active in many provinces across South Africa and provide support for OVC by identifying and training caregivers, establishing community care centers, and providing psychosocial support. Grants to OVC partners support a range of locally-driven best practices for orphan care using a variety of models of service delivery and working in collaboration with the South African Government's Department of Social Development. During their partnership with PEPFAR, OVC partners will increase their reach while also building their own capacity towards long-term sustainability. This scale-up will require adequate financial, monitoring and evaluation, and management systems to accommodate growth and maximize sustainability.

ACTIVITIES AND EXPECTED RESULTS:

Funds budgeted under this narrative will support costs for administering and managing these OVC partners. Separate COP entries describe the OVC activities implemented by each partner. Institutional capacity building of indigenous organizations is a key feature of umbrella grant mechanism and is designed to promote sustainability of care programs and organizations.

ACTIVITY 1: Grants Management

AED will award and administer grants to partners selected through the PEPFAR APS competitive process to implement OVC activities. This involves an array of related activities including award and administration of grants, monitoring of grant progress, meeting reporting requirements, financial oversight, ensuring compliance with USG regulations, and grant closeout. AED will monitor OVC partners' program implementation and adherence to financial regulations. This involves provision of extensive technical assistance to partners on project development and implementation, financial management, monitoring and evaluation, and reporting.

ACTIVITY 2: Capacity Building

AED will support institutional capacity building of indigenous organizations. (Capacity building activities are defined as activities that strengthen the skills of indigenous organizations to implement HIV and AIDS programs efficiently, with diminishing reliance on internationally-based technical assistance and support.) AED will support activities to improve the financial management, program management, quality assurance, strategic information (M&E) and reporting, and leadership and coordination of partner organizations implementing OVC activities.

ACTIVITY 3: Monitoring and Evaluation (& Reporting)

AED will provide support to OVC partners on monitoring and evaluation, in order to strengthen measurement of the implementation and impact of program activities, an eventual achievement of PEPFAR goals. M&E support of OVC partners includes: measurement of program progress; provision of feedback for accountability and quality; surveillance; and implementation of information management systems. In addition, AED will provide supportive supervision to provide guidance, monitoring, mentoring and oversight through site visits, technical assistance, and performance evaluation. The management of service delivery programs under this project will contribute to the PEPFAR goals to provide treatment to 2 million HIV-infected people; prevent 7 million HIV infections; and provide care to 10 million people infected by HIV and AIDS, including orphans and vulnerable children.

Indirect Targets

As an Umbrella Grants Manager focused on administering, supporting and mentoring indigenous NGOs; AED will not be working on direct or indirect targets related to OVC Care and Support, but rather will be addressing capacity building of organizations offering Care and Support for OVC.

Table 3.3.08: Activities by Funding Mechansim

Mechanism ID: 512.08
Mechanism: N/A
Prime Partner: Child Welfare South Africa
USG Agency: U.S. Agency for International Development
Funding Source: GHCS (State)
Program Area: Orphans and Vulnerable Children
Budget Code: HKID
Program Area Code: 08
Activity ID: 3060.08
Planned Funds: $1,840,000
Activity System ID: 13726

Activity Narrative: SUMMARY:

The Child Welfare South Africa (CWSA) Asibavikele (Let's Protect Them) program facilitates the recruitment and training of community volunteers who work in teams to identify and meet the needs of Orphans and Vulnerable Children (OVC) and AIDS affected households and to uphold children's rights. The program emphasis is human capacity development. Primary target populations are OVC and people living with HIV and AIDS.

BACKGROUND:

CWSA is the umbrella, development, capacity building and coordinating body for 170 member organizations and 49 developing child welfare organizations. It is a not-for-profit organization that works closely with the South African Government (SAG) Department of Social Development (DOSD) in advocating for the rights of children and addressing children needs. In dealing with the HIV and AIDS pandemic, CWSA with PEPFAR assistance, has developed a national program, Asibavikele, implemented by Child Welfare member organizations. The Asibavikele program now in its forth year, was initially implemented in 21 pilot sites in 2005 trained more than 600 community volunteers and reached over 7000 children within its first year. By FY 2008 the program will be implemented in a total of 40 sites. Asibavikele is a nationally coordinated program facilitating community-based care and support for OVC in disadvantaged communities. The program involves communities in the identification and care of OVC, sensitizes communities to the rights of children and establishes foster care and safe homes. CWSA has succeeded in leveraging support for these safe homes through a public-private partnership with Thokomala Orphan Care.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Community Consultation and Mobilization of Child Welfare Affiliate members

CWSA personnel together with member organizations will identify communities where there are high numbers of OVC as a result of HIV and AIDS. Project staff will consult with local leaders and other key role players to ensure buy-in and support for the program. Baseline studies and community profiles will be conducted to gain a deeper understanding of the community, its needs and resources. This activity lays the foundation for strong working relationships, fosters community participation and sets in motion M&E processes.

ACTIVITY 2: Human Capacity Development

i) Employing Additional Staff
Building human resource capacity at national, provincial and site level has been identified as a priority. CWSA will therefore ensure the employment of additional staff at national level for program and financial management, M&E, and administrative support. Provincial program coordinators, bookkeepers, administrative and M & E support will be employed in each province to ensure decentralization of activities. The employment of Asibavikele dedicated social workers at site level will ensure that children needs are met and targets achieved.

ii) Training Activities and Training Strategy
The focus in FY 2008 will be to sustain the existing 40 sites. CWSA will train all employees on the Asibavikele program, not only those directly implementing the program at site level. This will ensure that trained staff is always available to implement the program even during times of staff turnover. Training of Project Teams will be conducted at provincial. This will allow for training in smaller teams, providing more time to workshop issues specific to each of the provinces. All staff will attend a training workshop to equip them with knowledge and skills to implement the program as well as to train and support community volunteers. These trainers will constitute the Project Teams at site level, and will recruit screen and train community volunteers. Screening of volunteers is key to motivation, skills and ability of prospective volunteers to achieve the goals of Asibavikele. Structured training sessions in accordance with the volunteer training manual will be conducted at each site, preparing volunteers to provide services to OVC.

iii) Mentoring and Support
Set procedures and policies to guide project teams and community volunteers in implementing the Asibavikele program have been developed and will continue to be used together with a structured M&E plan. Provincial coordinators, bookkeepers and administrative staff will provide ongoing training, mentoring and support to project teams collectively and individually through monthly meetings and regular site visits. Program reviews and exchange visits will be conducted within provinces and nationally to share best practices. On-going support will focus on strengthening project teams, developing work plans and administrative procedures to ensure efficient rollout and implementation. Member organizations will be assessed in each province to identify roll-out sites in FY 2009. This strategy will contribute toward ensuring sustainability of the program at all levels in the long term. The National Steering Committee will meet quarterly to oversee the full implementation of the program and to focus on the CWSA national goals and targets. These mechanisms ensure that the program is implemented in a standardized manner and quality controls are in place.

ACTIVITY 3: Outreach Services

Volunteers will conduct door-to-door visits, introducing the program, identifying OVC and providing prevention messages to the community. Together with social workers, volunteers will draw up care plans for each OVC and their family within the context of their families thus promoting family centered care. Volunteers will provide a range of assistance including: applications for birth certificates, other legal documents, SAG child support grants, school fee exemptions; provision of targeted short term emergency food, shelter and clothing; emotional support to children and their caregivers; referrals to relevant medical services, primary health care clinics, pediatric ART programs and linking OVC with social workers when foster care is needed. In addition, partnerships with other organizations to strengthen psychosocial service delivery and memory work will be sustained. Focus will also be placed on aiding communities in developing food gardens to enhance food security. Volunteers will provide a comprehensive care package addressing the physical, educational and emotional needs of OVC. Social workers will primarily focus on protection of OVC through statutory child placements and supervision of care.

Activity Narrative:

ACTIVITY 4: Community Campaigns

Volunteers will develop and present bi-monthly HIV and AIDS prevention and awareness campaigns for their communities as a means to provide information and make them aware of the Asibavikele program, children rights, and gender issues. These campaigns will be aimed at OVC and their families. CWSA will ensure that through such campaigns affected households are aware of pertinent issues affecting OVC, including the rights of the girl child as well as changes to South African legislation regarding children and OVC. The knowledge and information provided through these targeted awareness- raising activities will empower households affected by the epidemic to make informed life choices and to plan for the future.
ACTIVITY 5: Volunteer support and sustainability

Volunteers are central to the program and aid social workers in reaching OVC. Emphasis will be placed on sustaining volunteers with the support and guidance provided by social workers. Bi-weekly volunteer group supervision as well as monthly volunteer training sessions will be held to aid volunteers in their interventions with children and to enhance their skills. Social workers will also be available for individual consultations with volunteers as a means to mentor and support them. These mechanisms are aimed at ensuring a quality service to OVC as well as to prevent burnout and loss of volunteers. From focus group discussions with volunteers and evaluations, CWSA has established that this support plays an important role in sustaining the volunteer commitment to the program. This activity will require the employment of professional social workers or social auxiliary workers at each site dedicated to the Asibavikele program. Additional support for volunteers in the form of specialized training to enhance volunteer skills and knowledge will be used to further sustain these valued caregivers. A dedicated caring for caregiver's component will be added to the program to enhance volunteer debriefing and prevent burnout. Volunteer support "clubs" will be encouraged so to provide assistance to each other in times of personal need, e.g. burial funds.

ACTIVITY 6: Referrals and Linkages

The Asibavikele program is a community-based response to OVC and requires strong networks within the community to ensure the needs of children are met. The CWSA program is consistent with the Department of Social Development's strategic framework on OVC. CWSA has developed a strong relationship with the Department of Social Development, which provides funding as well as support services to CWSA organizations on the ground. Further, at the onset of the program community profiles are developed highlighting role players within the community who will aid CWSA in providing a comprehensive service to children and their families. These will include hospice care, pediatric treatment programs, psychological counseling and material aid. Volunteers track referrals and make follow-ups to establish whether OVC received services. These activities will contribute to the PEPFAR goal of providing care and support to 10 million HIV-affected individuals, including OVC.

Funding Source:	GHCS (State)	**Program Area:**	Orphans and Vulnerable Children
Budget Code:	HKID	**Program Area Code:**	08
Activity ID:	12479.08	**Planned Funds:**	$1,250,000
Activity System ID:	13799		

Activity Narrative: SUMMARY:

The Hospice Palliative Care Association of South Africa (HPCA), founded in 1988, currently has 75 member hospices throughout South Africa (SA), each an independent legal entity. The HPCA Mission is to provide and enhance the provision of sustainable, accessible, quality palliative care. The target population is orphans and vulnerable children (OVC). The emphasis areas are human capacity development (training) and local organizational capacity building. PEPFAR funding used to strengthen the capacity of HPCA member hospices to provide pediatric palliative care to vulnerable children through identifying hospices that provide care for OVC. The Bana Pele project, in partnership with St Nicholas Children's Hospice (St Nicolas) in Bloemfontein, a sub-partner will improve the quality of life of OVC in the Motheo and Xhariep Districts of the Free State, and increase identification of HIV positive children and improve access to antiretroviral therapy for them.

BACKGROUND:

HPCA strengthens existing services and develops new services through direct funding to member hospices to promote accessibility and availability of palliative care in SA. HPCA personnel at national, provincial and district levels continue to provide the infrastructure and coordination to develop and strengthen palliative care programs within member hospices, and government and non-government organizations. FY 2006 PEPFAR funding has allowed the Palliative Care training of 7,108 trainees from October 2006 to July 2007. These trainees include Doctors, Social Workers, Trainers, Professional Nurses, Enrolled Nurses, Home-based Caregivers and Managers. The major focus of PEPFAR funding in FY 2008 is to provide direct palliative care to patients and their families, to assess quality of palliative care, assist in the development of new services, provide support to the care providers, and provide training in palliative care. In FY 2008 an OVC funding component has been added to the HPCA program, to ensure that children infected and affected by HIV and any other life-limiting conditions will be identified, supported, receive pediatric palliative care and antiretroviral therapy and, where necessary, referred for further support.

ACTIVITY 1: Bana Pele Project

In FY 2008 HPCA will be managing the Bana Pele Partnership grant. HPCA will provide mentorship to St Nicholas to build capacity within that hospice. Capacity Building for the Bana Pele project will also include the appointment of new staff in the Free State to coordinate the project and expand services to new regions and into more rural areas. Capacity building in the communities will take place to identify and care for HIV infected and affected children through education and training from the wellness centers. The wellness centers are health drop-in facilities to promote and monitor health. Holistic services are provided, including weighing of babies, nutritional advice, and immunization. Education in the homes and in community groups will also be provided in order that communities can develop the capacity to provide care for these vulnerable children and use community resources including local primary health care clinics. PEPFAR funding for the Bana Pele Project, will be used to improve the quality of life of OVC in the Motheo and Xhariep Districts of the Free State, increase identification of HIV positive children and improve access to antiretroviral therapy through a strengthened referral system and the establishment of a cooperative network consisting of relevant government departments, the antiretroviral program, faith-based organizations and other non-profit organizations. OVC will receive direct support and family members will receive psychosocial, emotional and spiritual care into the bereavement period.

Training for the Bana Pele Project: A Pediatric Palliative Care Training and Resource Center will be established in collaboration with all project partners and the Department of Pediatrics of the University of the Free State. The objective is to promote palliative care for children and provide a resource for the Free State Province for expert advice and support. Materials on palliative care for children will be developed and used for training. Community capacity will be improved through training and services from eight community Wellness Centers in impoverished areas linked to the development of a Pediatric Palliative Care Training and Resource Center, together with the Department of Pediatrics and Family Medicine. Prevention education will be provided with the faith-based organizations to reach young people and training in palliative care for children will be given to individuals. This activity will be supported by an array of monitoring and evaluation activities to assist in monitoring the progress and measuring the results.

ACTIVITY 2: Capacity Building

HPCA will provide capacity building expertise to the member hospices selected to participate in the OVC program. The selection of participating hospices is based on the following criteria: 1.Those hospices which currently have an established children's program included in the palliative care services they offer were considered.2.The numbers of OVC patients reported in their statistics.3.A representative spread of the difference models of OVC service provision e.g. day care, home-based care and in patient units.4.The community need in the region and availability of OVC services within each region. PEPFAR support will be provided to these hospice sites to enable them to equip the hospice for this role. This funding will also be used for the salary of an OVC coordinator at each OVC site, plus partial funded posts. In FY 2007 20 hospices were supported by this project and in FY 2008 this will increase to 29.

ACTIVITY 3: OVC Care Services

The pediatric care services will be provided as follows: identification of OVC, accessing grants, assistance with foster care placements, assisting with access to education, HIV prevention information, education and counseling, health care including pain and symptom management, Anti Retroviral Therapy (ARV) and TB Medication supervision, day care, support to Child and Youth-Headed Households, bereavement support, resilience and memory training, spiritual, emotional and psychosocial care, and support for elderly caregivers, home-based care, in-patient care and early childhood development programs. HPCA will provide the following OVC services: psychosocial, emotional and spiritual support will be provided to family members with identification of very vulnerable households such as those headed by children and young people, or the elderly. This activity will be supported by appropriate Monitoring, Evaluation and Reporting (M&E) activities and tools to measure progress. Other support activities are improving access to ARVs, monitoring and adherence of ARVs, nutritional interventions and facilitating access to social grants. Funds will be used for direct funding for nurses, social workers, and social auxiliary workers and for transport and admin costs of these human resources. Focus will be on the girl-child and the role of the female caregiver,

Activity Narrative: including the role of the grandmothers in support of OVC. This program will be for five specific pediatric services and seven integrated pediatric services, with at least one per province. This program will also focus on strengthening of existing comprehensive and or extensive pediatric programs through direct funding. Linkages to other services such as TB treatment, ARV treatment and support will be integrated into the OVC services.

ACTIVITY 4: Advocacy and Liaison

HPCA will liaise with corporate social investment programs and Government to strengthen and increase funding for the care and protection of OVC. Where OVC support services are required which are outside the scope of hospice expertise, e.g. child protection and nutrition, HPCA will identify suitable partners with the technical expertise and resources to provide these services and to strengthen HPCA OVC programs. The Bana Pele project will promote palliative care for children and raise public awareness. Links through existing Child Care Forums will be strengthened through liaison with the Department of Social Development.

ACTIVITY 5: OVC and Pediatric Palliative Care Training

The Pediatric Palliative Care training will be strengthened to include the South Africa PEPFAR OVC indicators, gender issues etc. Existing Pediatric Training curricula will be revised and expanded. Pediatric palliative care training courses will include the following: Definitions of pediatric palliative care, Conditions requiring pediatric palliative care, Models of pediatric palliative care, The Rights of the Child, Palliative care within the context of childhood development, Pain management in children, Symptom management, Nutrition, young person's understanding of death, Communication with children, Emotions of the child and family members, Spiritual care and support of the child, young person and family, Bereavement support including resilience and memory approaches, Social and legal issues relating to children and young people. Ethical issues Core competencies and practical experience, and the mapping of family members (similar to a family tree), to determine the support structure which each child has in their home environment.

Through these activities, HPCA supports the vision outlined in USG's South African Five Year Strategy to expand access to quality OVC services thereby contributing to the 2-7-10 goal of providing care to 10 million people affected by HIV.

Activity System ID: 13786

Activity Narrative: SUMMARY:

Project Support Association - Southern Africa (PSASA) is a community-based HIV and AIDS prevention and care organization based in Mpumalanga. With FY 2008 PEPFAR funding, PSASA will increase the scope of services provided by integrating orphans and vulnerable Children (OVC) care, adult palliative care and community-based HIV counseling and testing. PSASA will also improve the quality of these programs. The major emphasis areas are training and local organization capacity development. Target groups are OVC, people living with HIV (PLHIV), and their families. With FY 2008 funding PSASA will expand the number of OVC programs. These new PSASA OVC projects will target poorer rural communities of Mpumalanga, Limpopo and KwaZulu-Natal provinces where health services are limited.

BACKGROUND:

PSASA is a non-profit organization, which was established in 1998 in HIV prevention, care and support, and mitigation. Its mission is to create community partnerships that enhance their ability to prevent, mitigate and alleviate the impact of HIV and AIDS of which home-based care (HBC) programs are an integral component. Care in the home at community level is a strategy within the South African Government Strategic Plan. PSASA has established and continues to support over 60 home care programs. Many of these were established in partnership with the Mpumalanga Department of Health from 1998 onwards. In 2004, 127,614 clients received direct support from a PSASA project and over 32,000 household members received training from a community caregiver. Currently, PSASA works with OVC programs in three municipalities of Mpumalanga province; Thaba Cheuw, Emalahlene, and Steve Tswete. These projects will be expanded and integrated into their home-based care programs with FY 2008 funding. PSASA will continue to work closely with Departments of Health, Welfare and Population Development. In recent years closer relationships have been formed with the provincial Department of Home Affairs, Agriculture Development, Provincial Premier's Office (Gender), Department of Education and Department of Labor (specifically for income generation activities). The Mpumalanga provincial Department of Health & Social Services (DOH&SS) provided R800, 000 to conduct training in HIV and AIDS in 2005-2007. The DOH&SS also provides PSASA with HIV test kits and home-based care kits, as well as assistance with establishing referral networks for family planning, antiretroviral (ARV) and tuberculosis (TB) programs. Social grants, food packages and child assessments are undertaken closely with Department of Social Development (DOSD) with funding from the Dutch. Each of the PSASA projects are encouraged to work closely with local AIDS Councils, churches, government departments and municipalities, schools and businesses that are able to provide "in kind" support. PSAS worked with its partners to provide social grants, food packages, child assessments and psychosocial training to OVC, teachers and foster parents in 2007 to strengthen the resilience of OVC. These activities will continue in FY 2008.

ACTIVITIES AND EXPECTED RESULTS:

PSASA will conduct two key activities for OVC: 1) Train child care workers, teachers and foster parents and OVC on psychosocial support; and 2) Ensure that OVC services are fully integrated into the home-based care programs.

ACTIVITY 1: Training on psychosocial support

In FY 2008, PEPFAR funding will be used to train child care workers (CCWs), teachers, foster parents on OVC psychosocial support. These CCWs will be recruited from and work within PSASA's HBC programs. Training will include: how to identify and assess OVC, how to plan for various needs of OVC and how to provide psychosocial support. Additional training will be provided on communication skills, referral and follow-up. HBC workers will receive training on how to identify OVC and will refer to the CCWs for follow-up. A social worker will assist in building the capacity of the CCW through training and mentoring.

ACTIVITY 2: Integration of OVC Programs into Existing HBC Programs

PSASA will fully integrating OVC programs into existing HBC programs. Once trained, the CCWs will be working with the 77 existing PSASA HBC programs. Referral to CCWs for the identification of OVC will come through the HBC workers. CCWs will provide or ensure that spiritual support is provided. CCWs will provide psychosocial support, referral for medical issues as observed and nutritional and material assistance including birth certificates, social grants or educational assistance. Emphasis will be placed on keeping school-aged children within the educational system. This may include, after-school homework supervision, provision of school uniforms or assistance with school fee waivers. PSASA will work closely with DOSD and with the drop in centers to assist with homework support and nutritional support and feeding OVC. PSASA, through funding from the Dutch, will provide targeted nutritional support and supplemental food provisions to selected OVC and their families. PSASA will ensure that where appropriate guardian consents can be obtained, OVC will be referred for HIV counseling and testing. The ability of OVC to access existing grants from the South African Government is vital to the survival of each individual OVC. With the support of the PSASA home caregiver, OVC will be able to draw on local, community and other more sustainable funding sources. PSASA is well known to the provincial Department of Health & Social Services. The DHSS has requested PSASA to support some of the home care projects in the province and it is likely that Government will provide some cost sharing. The OVC projects link closely with community and church groups who regularly supply "in kind" support (usually 10% of project budget). Certain components of the home care program have become fully sustainable. Income generation activities for care workers such as food gardens have become sustainable with care workers receiving R1000 per annum through the selling of vegetables and fruit. These activities are extended to OVC especially those in child or orphan-headed households.

By providing care and support to OVC and their families, PSASA's activities contribute substantially to the PEPFAR goal of providing care services to 10 million people, including OVC. The activities also support the USG Five-Year Strategy for South Africa by collaborating closely with SAG to improve access to and quality of basic care and support.

Table 3.3.08: Activities by Funding Mechansim

Mechanism ID:	335.08	**Mechanism:**	N/A
Prime Partner:	Salvation Army	**USG Agency:**	U.S. Agency for International Development
Funding Source:	GHCS (State)	**Program Area:**	Orphans and Vulnerable Children
Budget Code:	HKID	**Program Area Code:**	08
Activity ID:	2994.08	**Planned Funds:**	$1,350,000

Activity System ID: 13805

Activity Narrative: SUMMARY:

The Salvation Army will provide OVC with a comprehensive range of services through the establishment of OVC Support Centers, which will offer psychosocial support, access to government grants for eligible OVC, school fee exemption, and referrals to other service providers such as social workers. Through leveraging community resources, trained community members will also facilitate access to feeding schemes and educational support (including assistance with uniforms and school materials). The major and minor emphasis area for this activity is training and building the capacity of the volunteer caregivers to respond more effectively to the needs of the OVC, community mobilization/participation and the development of networks, linkages and referral systems. Key target populations are OVC, families affected by HIV and AIDS, caregivers and volunteers.

BACKGROUND:

The Salvation Army is an international Christian denomination with specific community programs to address all aspects of HIV and AIDS through community-based care and prevention programming including home-based care, psychosocial support for OVC, individualized pre- and post-test counseling, clinical care for opportunistic infections, community counseling, and youth mobilization. Salvation Army developed Matsoho A Thuso, a care and prevention model in November 2004 with PEPFAR funding. This model includes care and support activities for OVC in accordance with South African Government (SAG) OVC policy. Salvation Army works to capacitate communities to care for OVC through training volunteers, offering outreach services and mobilizing community resources. The project currently operates in 70 sites in eight of South Africa's nine provinces, many of which are in rural and underserved areas. In FY 2007 Salvation Army will intensify and enhance OVC care and support activities through training new caregivers as well as retraining existing caregivers on a range of care and support services for OVC and their families.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Training

To respond to the needs of OVC, The Salvation Army has developed a training course for its community networks to establish and strengthen services for OVC. Volunteers attend a 5-day training course based on a collection of resources used practically in the field to equip them with skills to employ child-friendly interactive methodologies to identify and support OVC and to set up OVC Support Centers in their communities, providing children with a range of support services. The collection of resources that will be used includes practical exercises which cover the following topics: defining and identifying OVC, practical skills for care and support, establishing and managing an OVC support center, understanding and accessing the SAG social support system, and basic monitoring and evaluation. Community volunteers are identified and profiled from local congregations and return to serve their communities after training increasing community support for OVC. Community volunteers will be provided with ongoing, on-site support and mentorship by skilled program staff. In the period ending June 2006, 85 volunteers were trained as OVC caregivers. In FY 2007 the Salvation Army will train additional caregivers to expand service delivery and enhance the quality of care provided through intensive supervision.

ACTIVITY 2: Establishment of OVC Support Centers

This activity involves the establishment of OVC Support Centers in communities where The Salvation Army already has a presence. Through extensive outreach to churches, community leaders and networks, community volunteers will inform the community of the establishment of the OVC Support Center and its services. As a result of this outreach, OVC will come to the OVC Support Center where their needs will be assessed and documented. OVC will then be provided with a comprehensive range of services based on each child's individual needs that include, but are not limited to, psychosocial support (primarily through child-friendly participatory approaches), building resilience, life skills and assistance in accessing SAG social support systems (including HIV prevention advocacy on behalf of OVC and their families). Volunteers will also negotiate with schools to help OVC obtain school-fee exemptions to ensure OVC have access to education. In addition, OVC will be linked to existing community resources for the provision of food, school uniforms and supplies. All outreach activities will be sensitive to gender and will address gender issues that arise in the equity of access to services through the routine monitoring of service data. Any imbalances detected will be addressed. In the period ending June 2006, Salvation Army provided services to just over 2000 OVC. FY 2007 funding will be used to intensify and enhance OVC services. Salvation Army will facilitate the referral system to ensure that the OVC have access to health and treatment services.

ACTIVITY 3: Establishment of referral networks and linkages

When volunteers identify cases they are not equipped to deal with, referrals will be made to relevant service providers such as child protection services, health care providers and social workers. The Salvation Army will form linkages and partnerships with existing specialized service providers such as social workers, police, child protection units and child health systems to improve and/or increase access to such services as well as to public and private institutions providing pediatric ARV treatment and services for HIV-infected children. Through utilizing established networks (such as women's groups, study groups, and Sunday School programs) and private and public sector partnerships, the Salvation Army will be able to access other community resources to further enhance OVC outreach initiatives. Reports on activities and data will be routinely forwarded to the local Departments of Social Development to share data and information contributing to national statistics of the OVC profiles the country and leveraging more support and resources for the OVC. This will improve the quality of service delivery and the services rendered and ensure that the program is in line with SAG policy, guidelines and priorities. With the incorporation of Abaqulusi child survival program and Community youth and OVC response into Matsoho A Thuso, attention will be given to documenting the best practices from their way of working and try and replicate them in other service hubs. Wherever feasible, The Salvation Army will retain the knowledge and services of the staff and volunteers associated with the Abaqulusi Child Survival program Northern KwaZulu-Natal and Western Cape Community Youth and OVC response program.

This activity will contribute to the PEPFAR goal of providing care and support to ten million people affected by HIV and AIDS including OVC and their families.

Program Area: Orphans and Vulnerable Children
Budget Code: HKID
Program Area Code: 08
Activity ID: 3054.08
Planned Funds: $3,395,000
Activity System ID: 13806

Activity Narrative:

SUMMARY:
Save the Children UK (SC), in partnership with The Center for Positive Care (CPC), supports the South African local government (LG), Departments of Social Development (DOSD), Education (DOE) and Health (DOH) and other NGOs in the Free State (FS) and Limpopo provinces to provide comprehensive care for OVC. Activities include building community capacity by establishing, training and mentoring Child Care Forums (CCFs), training home-based care (HBC) givers, helping schools to plan and implement care for OVC and improving local, district, provincial and national coordination of OVC programming

BACKGROUND:
SC's OVC program in SA began in 2003 and has been supported by PEPFAR since 2004. SC works with LG to rapidly roll out CCFs at ward level. In FY 2006 SC and CPC assisted 40,381 OVC. FY 2008 funding will continue to strengthen the reach, quality and long term sustainability of care provided to OVC by expanding ward level networks of support and extending these to additional municipalities. SC actively seeks support of government, local business and FBOs for network activities. SC activities will be implemented in underserved areas in the FS in Thabo Mofutsanyana District, a SA presidential poverty area, and selected rural and underserved municipalities in Fezile Dabi and Lejweleputswa Districts. In Limpopo, SC in partnership with CPC, will provide services in Vhembe district, a designated homeland during Apartheid. In FY 2008 services will be expanded to incorporate the needs of very young OVC, OVC with disabilities and OVC in farming communities

The project is in line with SA's National HIV/AIDS and STI Strategic Plan, Policy Framework for OVC, National Action Plan for OVC and SAG policies. SC is a member of the National Action Committee for Children affected by HIV/AIDS steering committee and participates in the development of national policy and guidelines. SC coordinates the national Caring Schools Network of organizations establishing OVC care through schools in South Africa

ACTIVITIES AND EXPECTED RESULTS:
ACTIVITY 1: Establishing and strengthening community structures
SC and CPC, with partner NGOs, establish and strengthen ward level networks comprising of a CCF, HBC groups, schools, local business, faith-based and other groups, which are led by the ward councilor and the Community Development Worker (CDW) in each province. SC establishes and strengthens CCFs, which identify OVC, ensure OVC and their caregivers access services, mobilize community support for OVC and their caregivers, actively support community initiatives for OVC, and keep records of OVC. CCFs monitor the well-being of OVC (taking account of needs according to age and gender) and their caregivers, and raise issues related to service delivery for OVC with relevant local authorities through the OVC Task Team or other coordinating structures. SC will enable schools to plan and implement programs to care for OVC and to establish children's groups to ensure that children are actively involved in all aspects of support. In FY 2008 SC will extend community-based care for OVC to selected, underserved municipalities of in the FS and to additional wards in Limpopo. SC and CPC will extend the caring schools component of the program, including support for adolescent OVC, to additional schools in all districts in which the program is implemented

ACTIVITY 2: Human Capacity Development
SC supports human capacity development by training CCF members, school-based youth facilitators (YF) and community stakeholders in children's rights including child participation, HIV and AIDS, identifying OVC, supporting access to essential services, psychosocial support and home visits and child protection. HBC groups will be trained in health care for children in AIDS-affected households, with an emphasis on very young and adolescent OVC, and support to children that are caring for ill adults. Organizational development and OVC program training will be given to CBOs, FBOs and partner NGOs. All ward-based CDWs will be trained in comprehensive child wellbeing and mentored to assume leadership of a ward network to achieve child wellbeing. Additional training for YFs, CCF and HBC members on understanding adolescents will be incorporated into the program. This will include; how to talk to and listen to adolescents to help them to understand the changes in their bodies and how to initiate groups and activities that they will participate in. YFs will be trained to initiate and support peer education activities for adolescent in school OVC. All activities will include a focus on gender and gender roles in adolescent sexuality. Clinic staff will be offered training and support by SC in working with adolescents and responding to their health needs

ACTIVITY 3: Care Services
With SC support, CCF members will identify OVC; facilitate access to birth registration, health care (including pediatric treatment) and HIV counseling and testing, social security grants and protection: monitor that services are delivered; make home visits and initiate children's and caregiver's activities to enhance psychosocial well-being and provide or arrange for food assistance, school fee waivers, uniforms and transport to government services. Schools are capacitated to support OVC improving access to nutritional support, recreation, play and psychosocial support for children and their caregivers (both teachers and family caregivers); extracurricular activities that encourage children to excel in different fields and that teach children relevant skills; clothes and uniform banks; improved safety and protection for children; the provision of other government services at schools; and linkages with community programs that support OVC. SC will explore the role of gender and activities will respond to the needs of young girls and boys and caregivers, including older women. Women will actively participate in decision-making while men and youth will play an active role in community care and support activities. SC data for specific indicators will be recorded and analyzed by gender and monitored to ensure gender-balanced outcomes

Adolescent OVC will be referred to clinics for sexual and reproductive health services and SC with the DOH will ensure that the clinics are responsive to adolescent OVC needs. SC will start support groups for adolescent OVC, in conjunction with resource centers in Vhembe district. Services will include support for peer-led activities and services from trained adult caregivers. OVC will be supported to discuss and find solutions to their problems, access information and services, and interact socially with each other in a safe space supervised by trained adult caregivers. SC will expand the in-school youth peer education program using existing best practice models, such as the RADS (Radically Different Species) life skills program developed with Rutanang, in the Free State and Vhembe. Teenage mothers will be included in support groups for positive mothers. (May be obvious but a word on the rationale may be useful)

In addition, in FY 2008, SC will utilize PEPFAR support to respond to gaps identified through SC's internal impact monitoring process. Support for OVC under-five years will be introduced to respond to

Activity Narrative: recommendations from research into the strengths of different programs of home and community care for young children that SC is currently conducting. This will include support for caregivers to stimulate OVC and ensure health and nutritional support. In addition, approaches to supporting OVC in the sparsely populated farming communities will be initiated and piloted. SC and partners will build on existing infrastructure, such as farm schools and mobile health services for the development of support networks for OVC. SC will work in partnership with farmers and farm worker unions to reach OVC currently not receiving services on farms. Services for OVC with disabilities will be a focus area in all districts. Members of all CCF groups and YFs will be trained in community-based rehabilitation for OVC with disabilities to ensure inclusion in all OVC programs. SC will provide support to schools to enroll children with disabilities in schools where possible in accordance with SAG policy

ACTIVITY 4: Advocacy
SC will continue to advocate for improved service delivery to OVC. A key element will be the collation and sharing of data on service delivery with SAG. SC will refine its database and decentralize data collection to ward level to generate reports on the status of service provision. These will be analyzed collaboratively with LG and Home Affairs, DOSD, DOE, and DOH to design more responsive services including child-oriented CT. OVC Task Teams will be capacitated to monitor OVC service provision. LG will be encouraged to include children's issues in their integrated development plans. For long term sustainability SC will lobby DOSD to ensure that all CCF members are provided with stipends and with DOE to include YFs in programs that receive stipends. SC will extend the reach of the CASNET program through training and active engagement of DOE at provincial level to expand OVC care through schools in all provinces. SC will continue to actively support the national rollout of CCFs by NACCA

ACTIVITY 5: Improved Coordination
SC will support OVC Task Teams to coordinate services for OVC including hosting meetings between service providers and strengthening links with CCFs, other ward structures and the district level. SC will support exchange visits and promote participation of OVC in ward and local level decision making. Stakeholders at district and provincial levels will be encouraged and supported to form appropriate coordination mechanisms. SC will also support NACCA to engage with the SAG's National AIDS Council, and localgovernment bodies. SC OVCactivities will assistPEPFAR toachieve it goalof caring for 10 ml. people,including OVC

Activity System ID: 13808

USG Agency: U.S. Agency for International Development

Program Area: Orphans and Vulnerable Children

Program Area Code: 08

Planned Funds: $250,000

Activity Narrative: SUMMARY:

Sekhukhune Educare Project (SEP), is a Limpopo-based non-governmental organization (NGO) that provides psychosocial, educational and nutritional support to orphaned and vulnerable children (OVC) and facilitates increased access to social security grants and other social services. SEP identifies and trains community members as child care volunteers, building their capacity to provide direct care and support to OVC. The primary emphasis area for these activities is human capacity development (training). Target populations include orphans and vulnerable children, caregivers, people living with HIV and AIDS. SEP integrates OVC and home-based care (HBC) work through a home visit system, where caregivers identify and supply services for both adults and children. Children then receive some additional services outside the home through Child Support Groups and Theatre. SEP does not provide food, except in emergency situations. SEP assists with food security through grant access, household budget training and follow-up, gardens and provides referrals for food parcels from the South African Government. Through an ongoing reflection/action process SEP asks questions about community ownership and sustainability. This process helps Sekhukhune to improve the safety nets for children model, which provides a range of services for vulnerable children and their families, including training, child support groups, grants access, etc.

BACKGROUND:

SEP works in Limpopo, one of the poorest provinces in South Africa with an HIV prevalence rate of 21.5 percent. In Makhuduthamaga Municipality, where SEP operates 52% of the population is unemployed (census 2001), 44% have not had schooling and only 11% have matriculated.

SEP will continue to work closely with Child Care Forums (CCFs), government departments, schools and the local municipalities to raise awareness about the impact of HIV and AIDS on children and their families and encourages communities to find their own solutions for OVC who need care. CCFs are community-based structures focusing on the needs of OVC. The role of the CCF is to ensure the identification of OVC, to be aware of initiatives involving child care and support, to create awareness of OVC issues, to assess OVC needs, to liaise with other community-driven initiatives focused on children and to perform advocacy for OVC in the community. CCFs are a vital component for sustainability of OVC programs and community involvement in ensuring that the needs of OVC are addressed. SEP will partner with the Local AIDS Council and encourages key local players to actively participate and support OVC in the Limpopo province. With PEPFAR funding through the Nelson Mandela Children's Fund, SEP has delivered care and support services to over 1,500 OVC in the past two years. SEP used to be a sub-partner under the Nelson Mandela Children's Fund program which ended in FY 2006. SEP has a cadre of 70 trained caregivers providing services to OVC in the Sekhukhune district.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: OVC Support

With FY 2008 PEPFAR funding, SEP will continue to provide intensive care and support services for OVC including individual needs assessments for each OVC, psychosocial and nutritional counseling, homework assistance, play group therapy at the resource centers, and training in home-based care, counseling, child development, community development, mapping, keyhole gardening and psychosocial support. During home visits, SEP child care volunteers conduct individual OVC needs assessment and provide counseling and guidance on nutrition, hygiene and appropriate child protection guidance. OVC support, referrals, and household and family support will be provided by the child care volunteers when they identify a household with an ill parent. SEP child care volunteers will also provide homework assistance and support to ensure that OVC stay in school. SEP child care volunteers will continue to provide support to obtain legal documentation such as birth and death certificates to assist OVC to access government social security grants. For OVC who cannot afford school fees and uniforms, SEP child care volunteers will assist with school fee exemption applications and will ensure that OVC have the necessary school uniforms, school shoes and stationery. SEP will strengthen its partnership with a local SCORE Supermarket, to provide food vouchers for OVC who need emergency food assistance.

One-day workshops will be held in villages to assist OVC households with budgeting skills to provide OVC households with the skills needed to efficiently utilize their social security income to meet long- and short-term needs of OVC. OVC households are also provided with training to establish and cultivate food gardens to improve the nutritional content of the meals for OVC and their families. SEP will provide training and will act as the secretariat for the CCFs and the local municipality in monitoring and reporting on OVC issues in the community. Feedback will be used to improve service delivery and strengthen coordination of services.

ACTIVITY 2: Human Capacity Development

SEP will provide training to its child care volunteers on counseling, needs assessment, referrals, child rights, child protection and the special needs of the girl and boy child. Child care volunteers are also trained as home-based care providers. In FY 2008, PEPFAR funds will be used to provide the Government's 49 days of training for home-based care (HBC) which is the South African Government standard HBC training program. These trainings are conducted by the Department of Social Development (DOSD) which has a tailor-made Home-Based Care (HBC) module. Training is also provided to SEP volunteers by another PEPFAR partner, the Hospice and Palliative Care Association. This training covers the topics of child care, child rights, and other useful modules that relate to palliative care.
SEP will provide HIV prevention messages to all primary schools in its district. The South African Police Service also conducts gender sensitivity training for SEP child care volunteers.

ACTIVITY 3: Home-Based Care (HBC) for OVC

HBC is provided for OVC who are ill and the affected household will be assisted in managing the child's illness. SEP will train home-based caregivers to provide these services. Households with OVC who are sick are visited once per week and more often if necessary. For OVC and the families that are terminally ill, visits are done on a daily basis. In order to sustain HBC for OVC, strong linkages have been established with the local hospitals and clinics. OVC are referred to SEP from the hospitals and vice versa.

Activity Narrative: ACTIVITY 4: Psychosocial Support

SEP child care volunteers will identify and provide OVC with psychosocial support and these children will receive advanced psychosocial support and follow-up. The SEP psychosocial support program will address coping skills, self-esteem issues, memory work, family trees, and spirituality. SEP will also establish child support groups which will provide among other things, healthy and appropriate recreation activities for OVC. This will be done in partnership with community groups, churches and schools. Safe spaces will be identified for these groups to meet on a biweekly basis. SEP will use community theatre techniques to increase the resilience and confidence of children. Children who have participated in the theatre activities have an opportunity to act out or dramatize their experiences, challenges, frustrations and angers and it also has provided OVC with an opportunity to search for solutions to the challenges they face. The plays focus on gender issues and provide an opportunity to sensitize the community and the children to gender-related problems and solutions. In FY 2008, PEPFAR funds will be used to facilitate theatre camps and expose children to visual art and dance. For those children who live too far from the Ikageng Dishaba Theatre, SEP partners with these select primary and secondary schools to arrange theatre activities at the local school. During these theatre activities, participation of the child is encouraged and children are given the opportunity to lead activities.

ACTIVITY 5: Keyhole gardens

Sekhukhune is affected by drought and lack of water is a big issue. Shortage of water combined with challenges encountered with community gardens, has led SEP to use keyhole gardens within household premises. Keyhole gardens are small and use recycled waste water from the household. SEP will also investigate the use of drip irrigation. Keyhole gardening techniques will be facilitated by the child care volunteers who will receive training. Disused boreholes will be investigated, and made productive again through Play Pumps and other providers with necessary expertise to rehabilitate unused boreholes. The SEP partnership with the Department of Agriculture will be used to provide seeds and equipment, where necessary.

ACTIVITY 6: Children with disabilities

A community assessment/mapping exercise will assist us to identify disabled children. SEP will also map what services/resources already exist and develop relationships/partnerships with other institutions for referral and resources. Disabled children will receive both home and other community services, offered through child support groups.

ACTIVITY 7: Early Childhood Development (ECD) Teacher training for preschools

SEP offers ETDP-SETA accredited ECD training for preschool teachers. The training covers good health and safety practices, active learning for children, making equipment and learning resources and activities for children, working with families, and management of a preschool. One group of 25 practitioners will be trained.The Sekuhukhune Educare Project OVC activities will contribute to the PEPFAR goal of providing care and support to 10 million HIV-affected individuals, including OVC.

Activity Narrative: SUMMARY:

The Southern African Catholic Bishops' Conference AIDS Office (SACBC) provides comprehensive care for orphans and vulnerable children (OVC) to help them grow to be healthy, educated, and socially well-adjusted adults. SACBC supports community programs and projects, linking them to various sources of financial assistance, healthcare, legal aid and nutritional support. OVC services will be provided in 23 sites in all eight provinces of rural South Africa within 18 dioceses of the SACBC Region. SACBC is a sub-partner through Catholic Relief Services for its HIV care and treatment programs.

BACKGROUND:

The SACBC launched this PEPFAR-funded OVC program in September 2007. Over the last eleven months the SACBC AIDS Office supported 21 sites in eight provinces with funding provided directly to sub-recipients. Through this program about 6,700 OVC were reached with psychosocial, educational, nutritional, economic support, health care, pediatric treatment referrals and child protection. In FY 2008, the sub-recipients will continue to use PEPFAR funds to expand and scale up existing services to meet the increasing needs of OVC in South Africa. The SACBC coordinates OVC services at 23 sites. Identification of the OVC sites was based on evaluations of previous programs. Six of the 23 OVC sites also provide antiretroviral (ARV) treatment to people living with HIV (PLHIV), including OVC. Many SACBC sites have a network of trained volunteers. Mostly these are unemployed women, who volunteer in return for training and a monthly stipend. These volunteers become auxiliary community home-based caregivers and continue to develop into specialized OVC caregivers. Some of the volunteer caregivers are so well-trained that they are able to move on to more sustainable jobs in other healthcare sectors. This creates a need for ongoing recruitment of new volunteers and training. OVC at schools are highly stigmatized, and therefore the SACBC response includes stigma mitigation. OVC face many forms of differential treatment and human rights abuses, being denied access to schools and health care facilities. The OVC program will target gender sensitivity and awareness training at schools, and will focus on advocating for the rights of the girl-child, especially adolescent girls. One of the key partners in this program is the Catholic Institute of Education, which focuses on the Education Access Project (EAP). The EAP aims to enable OVC in Catholic schools to continue their education and remain healthy. EAP's strategy is to provide resources to poor schools to assist selected learners orphaned by HIV and AIDS and made vulnerable by poverty with education expenses, including fees, uniforms, transport, sport, outings and a daily ration of food (depending on individual needs) and to motivate school communities to contribute to the care of those affected by HIV and AIDS. SACBC is in partnership with the National Department of Social Development's (DOSD) National Action Committee for Children Affected by HIV and AIDS (NACCA). The mandate for NACCA at national level is to coordinate action for children affected by HIV and AIDS. SACBC adheres to the DOSD Policy Framework on Orphans and other Children made Vulnerable by HIV and AIDS. SACBC is also an active member of the various NACCA tasks teams, including Food and Nutrition, and Care and Support. SACBC will encourage their sites to become active members of the provincial structures of NACCA as well as local districts structures. Most of the selected OVC sites provide community care; only one provides residential care. The family-centered developmental approach of the SACBC OVC program ensures that OVC are placed in families and communities of care. The community mobilization program ensures that members of the local community are in the best position to know which households need assistance and what assistance is required for OVC care.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Support to parents

SACBC will strengthen the capacity of families to protect and care for OVC by prolonging the lives of parents and providing economic, psychosocial and other support. This is currently carried out at some of centers and will be expanded to other sites with PEPFAR funds. Economic strengthening, such as income-generating activities play a key role in maintaining the livelihoods of OVC and their families. These income-generating activities include food gardens, sewing school uniforms, and brick making training.

ACTIVITY 2: Community mobilization

SACBC will mobilize and support FBO/CBO community-based responses to OVC care by building community responses through local networks and advocacy initiatives. This includes establishing Child Care Forums at local level to reinforce the capacity of communities to respond to the needs of OVC. SACBC will also increase the capacity of FBOs/CBOs with training programs for OVC care and support, utilizing lessons learned and best practices from 'Choose to Care' to enhance training skills. SACBC will provide technical assistance to FBO/CBO projects as they respond to the needs of OVC and their families, including skills training and development and assistance to access the funding necessary to provide needed services.

ACTIVITY 3: Access to services

SACBC will ensure that OVC and their families access essential services including education, healthcare and other support. Existing services will be improved and expanded, including psychosocial counseling. Coping strategies will include life skills training to reduce vulnerability, as well as assistance for education costs (school uniforms and stationery) in line with South African Government policies and programs. The SACBC project will also scale up educational, nutritional, social, medical assistance and psychosocial support for OVC at new sites within 18 dioceses. The components of the program will feature cross-cutting issues, child participation, gender issues and will address stigma and HIV prevention.

ACTIVITY 4: Gender, Stigma and HIV Prevention

The Education for Life Program, is a behavior change skills building program geared towards young people, targeting OVC aged 10 -15. It is divided into 3 stages, whereby the participants are led through a process of self-introspection on their present reality to name and own behaviors that are life threatening and harmful to their dignity. Through ongoing questioning and various participative activities youth are led to choose and commit themselves to possible new behaviors that promote a positive and healthy lifestyle. The process will provide positive engagement and open discussion around sexuality, sexual behavior, teenage pregnancies

Activity Narrative: and the role of women. It also addresses gender mainstreaming, and the SACBC will continue to develop sites on the promotion of the needs of the girl child, especially from age 10-16.

NEW ACTIVITIES

ACTIVITY 5: Bicycle Project

In FY 2008, the bicycle project through collaboration with the Institute for Transport and Development Policy (ITDP) will be introduced and piloted in 10 sites. A feasibility assessment will be done in advance to identify opportunities and challenges of introducing this project in the selected sites. The pilot will include the bicycles for OVC who have to travel long distances to attend school and the secondary caregivers to reach OVC.

ACTIVITY 6: Exit strategies for OVC

23 sites will be assisted in developing exit plans for children above 15. This is to ensure that when children leave the program there are plans in place to further their education, access vocational training, establish income generating activities or gain employment. The SACBC will develop wrap-around programs with other partners (e.g.DOSD) for food supplements and nutrition assistance to ensure effective implementation of OVC interventions.

ACTIVITY 7: Training

Secondary caregivers: Training to be provided will focus on child and youth care, psychosocial support and caring for children with disabilities, equipping participants with an understanding of the fundamentals of child and youth care work and developing basic caring skills for children and youth. Another important activity inclusion. Training of primary caregivers: Families of OVC will be trained by secondary caregivers in identifying and establishing viable income-generating activities for household economic strengthening. Training will also focus on basic nutrition, HIV awareness and prevention, basic hygiene and treatment literacy, particularly for families of PLHIV. Training of trainers: This program will target a few secondary caregivers from each sub-recipient to be trained as trainers in child and youth care work, psychosocial support and M&E. Training of OVC: A series of formal and informal training sessions will be conducted with OVC across the program, including child-headed households, focusing on life skills training (provided by two PEPFAR partners - Soul City and FHI), reproductive health and HIV and AIDS. Informal training sessions will be held during career camps and the after school programs, covering various topics, including child rights, basic saving and budgeting as well as career guidance for older youth. Training of sub-recipients: In FY 2008, training will focus on proposal writing and financial management.

Family Health International (FHI) is also funding SACBC as a sub-partner but these are different sites. Once the agreement with FHI ends, these sites will all be transitioned to the SACBC (as a prime partner) program.

Program Area Code: 08

Activity ID: 8272.08

Planned Funds: $250,000

Activity System ID: 13849

Activity Narrative: SUMMARY:

Ubuntu Education Fund (Ubuntu) offers counseling, access to health services, nutritional support, assistance with obtaining child support and foster care grants, assistance with obtaining birth certificates, school kits, internship/scholarship opportunities, holiday camps and support groups for orphans and vulnerable children (OVC) living in resource-constrained townships of Port Elizabeth, a city in the province of the Eastern Cape. The emphasis areas are community mobilization/participation, food and nutritional support, development of network/linkages/referrals, and linkages with other sectors and initiatives. Specific target populations include OVC, HIV-infected infants, HIV-infected children and caregivers of OVC.

BACKGROUND:

Ubuntu began working with OVC in 2003 with school-based psychosocial support, which has evolved over the past three years into a comprehensive OVC care program. There are an estimated 50,000 OVC in the townships of Port Elizabeth. The rapidly increasing number of OVC in the target area is an immediate measure of the impact of HIV and AIDS on local communities. In a recent intake of a general population of schoolchildren into an Ubuntu activity, 40 percent were OVC. Child-headed households in South Africa are rapidly increasing, as are the number of elderly grandparents caring for orphaned grandchildren. The burden of responsibility for care giving and coping with a family member who is suffering from AIDS-related illnesses invariably falls on women, particularly girls and grandmothers. Children are experiencing "repeat orphaning" - where they are taken in by a close relative who then also becomes sick and dies. OVC are also particularly at-risk for sexual abuse, economic exploitation and HIV infection.

Ubuntu uses a community-based approach to mobilize community members to recognize and care for OVC. The program targets children who are orphaned, or those whose parents or caregiver are living with HIV to ensure they access treatment when appropriate, and child-headed households. Ubuntu also provides services to a significant number of children living with HIV who are in need of coordinated services from providers that are family-centered and integrate child and parent services. Ubuntu became a PEPFAR partner in FY 2007 and has only recently received funds so does not yet have PEPFAR-funded results to report. FY 2008 PEPFAR support will allow Ubuntu to scale up the OVC program to provide comprehensive services to an increased number of OVC.

ACTIVITIES AND EXPECTED RESULTS:

The OVC program targets high-poverty, high-risk schools as evidenced by intakes into Ubuntu's counseling program. Ubuntu places full-time OVC specialists on site at the school to identify OVC for intake into their psychosocial support services. Ubuntu ascribes to the school as a "center of care, support and prevention" model (SCCSP) and proactively engages school governing boards, administrators, teachers and parents to establish a caring, supportive school environment. Ubuntu is an active participant in the training and best-practice sharing of the Caring Schools Network (CASNET) of OVC service providers organized by Save the Children UK. Ubuntu's OVC services are in close alignment with the Department of Social Development's Policy Framework and National Action Plan for Orphans and Other Children Made Vulnerable by HIV and AIDS, 2006 - 2008. In alignment with these policies, Ubuntu aims to strengthen family and community-based care for OVC. Ubuntu works closely with social workers to coordinate services for families. Staff are engaged in ongoing policy meetings with the Department of Social Development regarding income grants, nutrition assistance and efficient and effective service delivery. Ubuntu participates in a local network of corporate organizations, NGOs and CBOs which work with the Department of Social Development and the Department of Home Affairs to coordinate income grant and identity document events in local community settings. Ubuntu provides comprehensive psychosocial services to 11 OVC as an implementing partner in the Umzi Wethu project coordinated by the Wilderness Foundation which provides skills training and learner ships for OVC in the ecotourism industry. Ubuntu has strong referral partnerships with the Child Protection Units of the South African Police, Childline and the Rape Crisis Center at Dora Nginza Hospital. Other Ubuntu programs provide wrap-around services to OVC including a school gardening/lunch program, improved educational facilities and life skills education.

ACTIVITY 1: Comprehensive Care Services for OVC

Through case management and school-based counseling services Ubuntu provides comprehensive care for OVC. Ubuntu uses a family-centered approach to address the needs of OVC and work with their caregivers to stabilize the household and to provide a supportive, caring environment for the child. Each OVC and their household's needs are assessed and an individualized action plan is developed. Service plans include the following as needed: counseling, access to health services including voluntary counseling and testing (VCT) and antiretroviral treatment (ART), protection from abuse, assistance with obtaining South African government (SAG) grants including disability, child support and foster care grants; legal documents such as identity documents and birth certificates; assistance with food security including food parcels are provided with support from other funding partners, daily school lunches, or backyard garden support; and assistance with access to education such as school kits, tutoring , waiving school fees, internship/scholarship opportunities, referrals to other service providers, support groups and school holiday camps. Community partners are encouraged to refer child-headed households to ensure that they receive comprehensive care services.

Support groups for OVC girls who have survived sexual abuse, OVC who are teenage mothers, and OVC living with HIV are provided on a weekly basis. OVC Specialists assist OVC girls and adolescents to avoid transactional sexual relationships with older men by providing emotional, economic, nutritional and educational support as well as sexual and reproductive health education and access to services. Group therapy is provided to OVC boys who are acting out aggressively in home or school settings. These support groups meet weekly and focus on addressing male norms and behavior. All support groups are linked to Ubuntu's career and higher education program that builds skills and facilitates access to ongoing education for these particularly vulnerable groups.

Through Ubuntu's VCT and Care services, children at higher risk of HIV exposure are proactively identified to ensure they receive access to VCT as well as providing access to treatment services for children living with HIV and AIDS and their caregivers. Ubuntu case managers work with Dora Nginza's Pediatric ARV Unit and its sub-clinics to provide ongoing monitoring and support to children on ART.

Activity Narrative:

ACTIVITY 2: Developing Schools as Centers of Care, Support and Prevention

Ubuntu uses a model of "schools as centers of care, support and prevention" based on the school playing a central role in the caring and safety of OVC. Ubuntu works closely with school communities to create a caring and safe school environment both during and outside of school hours. The school management, staff and Ubuntu sign a Memorandum of Understanding (MOU) that lays out the model including the roles and responsibilities of the school and Ubuntu. Ubuntu works with the school to develop a garden on-site and ensures that all school children receive a daily hot meal. Ubuntu OVC specialists provide life skills classes, case management services to OVC and their families, and facilitate support groups. Each Ubuntu OVC Specialist has a dedicated counseling room to provide on-site confidential counseling services to OVC. Committees are created at each school comprised of staff, parents, community members and the OVC Specialist. Committees discuss the needs of OVC in the community, coordinate government services events and mobilize community members to care for OVC and child-headed households. Ubuntu works with mobile units from the Department of Social Development, Department of Home Affairs, and the Police to hold government service events that bring relevant government agencies together at the school to enable the greater school community to access vital services such as affidavits, identity documents and income grants in community settings. During school holidays, Ubuntu holds school-based day camps for OVC staffed by OVC specialists, parents, teachers and volunteers. The school holiday program targets 200 OVC in Grades 4-12 and consists of life skills, tutoring and technology workshops, activity clubs, mentoring and peer support, and arts and sports activities with partnering organizations. The camp takes place during the school holidays in July and December for a two-week period. During the week-long school holidays in September and April, Ubuntu holds more focused intensive interventions with OVC including retreats and intensive tutoring programs. Ubuntu provides two nutritious meals per day during the camp sourced from the school garden Ubuntu has developed. In 2009, Ubuntu will expand to two additional schools to provide comprehensive SCCSP services.

These results contribute to the PEPFAR 2-7-10 goals by increasing access to comprehensive care services for orphans and vulnerable children, reducing their vulnerability and improving access to essential resources and services.

Table 3.3.08: Activities by Funding Mechansim

Mechanism ID:	519.08	**Mechanism:**	N/A
Prime Partner:	University of KwaZulu-Natal, Nelson Mandela School of Medicine	**USG Agency:**	HHS/Centers for Disease Control & Prevention
Funding Source:	GHCS (State)	**Program Area:**	Orphans and Vulnerable Children
Budget Code:	HKID	**Program Area Code:**	08
Activity ID:	6421.08	**Planned Funds:**	$50,000
Activity System ID:	13855		

Activity Narrative: SUMMARY:

The Nelson Mandela School of Medicine will introduce additional training modules to explore developmental disability prevalence and interventions for orphans and vulnerable children (OVC) seeing Traditional Health Practitioners (THPs), either directly as patients or as family members of patients. The primary emphasis area will be training, with minor emphases in information, education and communication and needs assessment. The target populations are OVC, their caregivers and traditional healers.

BACKGROUND:

It is estimated that 6 to 11 percent of South African children under 15 years of age are orphaned due to loss of one or both parents due to HIV and AIDS. These children are particularly vulnerable to neglect within households, marginalization within communities, and are less likely to receive adequate, education, growth and nutrition, regular healthcare and social services. Many of these children may be infected with HIV themselves. This emphasizes the need to address the bio-psychosocial problems facing this group of children in addition to access to antiretroviral drugs. Traditional healers may facilitate preventive care in these households and children.

ACTIVITIES AND EXPECTED RESULTS:

This traditional healer and the biomedical collaboration will facilitate the following specific activities:

ACTIVITY 1: VCT

Provide support for voluntary counseling and testing (VCT) of OVC, families and child caregivers, including HIV prevention and treatment education.

ACTIVITY 2: Psychosocial Support

Provide psychosocial support to OVC, their caregivers and families by introducing coping strategies, mental health assistance, counseling and referral for problems that can be dealt with on the biomedical side.

ACTIVITY 3: Training

Activities 1 and 2 will be included in one-day training modules for THPs (entire FY 2006 cohort) on a ten-question screen for pediatric developmental disabilities as well as for HIV that lay counselors can also use. This will be introduced and adapted to THP practice. OVC are especially at risk for developmental disabilities, delayed school entry, etc. Field evaluation will follow to validate negative or positive screens of OVC. Workers from the Department of Community Health at the Nelson Mandela School of Medicine (NMSM) will apply an inter-rater reliability test for sample THP groups.

ACITIVITY 4: Stigma and Discrimination

A pilot workshop will be held with smaller group of THPs from FY 2006 cohort to explore assistance and biomedical-traditional healing collaboration on managing stigma and discrimination problems for OVC. Advise will be provided on treatment availability and confidentiality. In addition, the NMSM will explore joint strategies with THPs on disclosure of child's status and daily drug regimens.

ACTIVITY 5: HBC

Integrating child health and wellbeing into home-based care (HBC) for the sick will be done in collaboration with current HBC training modules. THPs visiting patients and patient families can do rapid checks on kids when visiting homes or dealing with parents and determine if OVC are receiving government grants. This will be added to the monitoring and evaluation practices.

ACTIVITY 6: Public Sector Services

NMSM will work to improve utilization of public sector services - such as social welfare and health, including facilitating access to antiretrovirals. They will ensure that all THPs in the program are fully aware of social security grants available and special facilities for kids, people in communities who receive special training to engage children in early education activities, before pre-school. The same is true for care dependency grants, foster care grants, disability grants. This training and collaboration will form part of training sessions discussed in item 3 above. THPs could help direct children and their caregivers to social workers at community level instead of patients only meeting a social worker at the tertiary level and having to be referred back to the community level social worker (a common situation currently). NMSM will conduct training and interact with THPs to include discussion of advocacy on behalf of children on issues of guardianship, school attendance, and legal issues.

ACITIVITY 7: M&E

NMSM will carry out follow-up sessions with THPs on these issues during the course of the year to explore implementation successes and failures and needs for modification of training.

The following parameters will be monitored to measure the impact of traditional healer involvement in improving the health and wellbeing of OVC:

1. Numbers of OVC and households in the care of traditional healers;
2. Description of the psychosocial context and needs of OVC and their extended families;
3. Changes in utilization public sector services;
4. Changes in school attendance;
5. Access to social and welfare grants;
6. Access to preventative and curative healthcare services, including antiretrovirals, immunization, growth and nutrition monitoring.

Activity Narrative: This project contributes to the PEPFAR goal of providing care to 10 million people, including OVC by caring for OVC and their primary caregivers. It also contributes to the USG Five-Year Strategy by providing care for OVC through local communities and improving their capacity to deliver quality care for OVC in their communities.

Funding Source: GHCS (State)

Program Area: Orphans and Vulnerable Children

Budget Code: HKID

Program Area Code: 08

Activity ID: 8269.08

Planned Funds: $200,000

Activity System ID: 13845

Activity Narrative: SUMMARY:

The Training Institute for Primary Health Care (TIPHC) has implemented OVC-related support activities as part of its Basic Health Care and Support Services to HIV and AIDS infected and affected people. With increased PEPFAR funding, TIPHC will expand their orphans and vulnerable children (OVC) program and provide OVC-specific services focusing on support with educational, psychosocial and nutritional needs of OVC. Selected members of the community will be trained as caregivers and young counselors (OVC volunteer buddies) The emphasis areas for the program are human capacity development, training, community mobilization and the strengthening of partnerships and linkages with the Departments of Social Development, Health, Education and Home Affairs. The target populations are the OVC, HIV and AIDS-affected families, caregivers and youth OVC "buddies".

BACKGROUND:

TIPHC is a South African registered non-profit organization established in April 1994 working in the Emalahleni Municipality, of Mpumalanga province. Its OVC program is in line with the Operational Plan for Comprehensive HIV and AIDS Care, Management and Treatment Plan for South Africa. TIPHC is a key partner to South Africa's National and Provincial Government HIV and AIDS Prevention and Control Program. The program aim is to enable equitable access to HIV and AIDS health care and social services and protect this most vulnerable group from abuse. With FY 2008 PEPFAR funding, TIPHC intends to intensify its activities and provide effective and coordinated OVC care and support services to ensure that OVC receive a minimum of three services in line with PEPFAR South Africa OVC support requirements. TIPHC's main activities will include facilitating access to clinical health care services through referrals, enabling receipt of social security grants, processing of legal documentation, provision of psychological counseling, support with schooling requirements and promoting good nutrition. Capacity building interventions will involve conducting training workshops, home visits and family information, education and counseling to de-stigmatize HIV and AIDS.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: OVC care and support

OVC care will involve allocating a number of OVC to a caregiver and a "buddy". The caregiver will visit the OVC at home to assess the child's health and home environment. During the visit, the caregiver will provide information on where to go for help, offer psychosocial counseling and give guidance on nutrition, hygiene and protection from abuse. Where a child is sick and in need of medical care, the caregiver will obtain a referral letter from the nurse and arrange to take the child to the clinic. Palliative care for OVC will be provided through the home-based care system. Home-based caregivers will be assigned sick OVC to make sure that they are receive the necessary care with feeding, cleaning, medication and counseling. The OVC buddy will also visit and assist with school work and available to talk to the child.

ACTIVITY 2: Facilitating OVC Access to Basic Services

Enabling access to basic services will involve meeting OVC educational needs like waiving school fees, providing school uniforms and tuition, ensuring economic support through social grants, assistance with obtaining legal aid and birth certificates as well as provision of food and nutrition needs with other donor support. TIPHC will identify selected preschools, drop-in centers and primary schools in the target communities where TIPHC is implementing the home-based care program. With assistance from school principals and community leaders, TIPHC will develop a data base of OVC and assess their needs. Based on the needs identified, referral and support services will be provided.

ACTIVITY 3: Training of caregivers and youth

Effective support and care for OVC will be achieved through the work of caregivers and youth OVC buddies. These facilitators will go through a two-week skills training on HIV and AIDS, lay counseling, children's rights and protection, nutrition, hygiene and child development. The training will not include palliative care since sick children will be put into the care of home-based caregivers. The training courses will be provided by the Department of Social Development. Other modules like First Aid will be provided by the Red Cross.

ACTIVITY 4: Community Information, Education and Communication

The information and education messages about the needs of OVC and the role of the community as caregivers and supporters will be included in the HIV and AIDS awareness and prevention program. Meetings will be held with for community leaders (church pastors, union leaders, ward councilors, business owners, teachers and traditional healers) where they will be informed about the program their accountability role and expectations explained. Reporting meetings will also take place to ensure adequate communication with all stakeholders.

ACTIVITY 5: Strengthening networks and linkages with partners

A situational analysis that will be done at the beginning of the program will include the identification of other health and social development initiatives in the area. TIPHC will maintain a comprehensive database of the organizations and service providers. Furthermore, it will establish a forum that will bring key role players to support the OVC program. TIPHC will arrange regular information sharing meetings.

These TIPHC activities will contribute to the PEPFAR objective of providing care to 10 million people infected and affected by HIV and AIDS, including orphans and vulnerable children.

Table 3.3.08: Activities by Funding Mechansim

Mechanism ID:	513.08	**Mechanism:**	N/A
Prime Partner:	Starfish	**USG Agency:**	U.S. Agency for International Development
Funding Source:	GHCS (State)	**Program Area:**	Orphans and Vulnerable Children
Budget Code:	HKID	**Program Area Code:**	08
Activity ID:	3061.08	**Planned Funds:**	$1,000,000
Activity System ID:	13835		

Activity Narrative: SUMMARY:

Starfish will use PEPFAR funds to provide a holistic package of basic services to orphans and vulnerable children (OVC), including increased access to educational support and social services through community-based programs in six provinces. Major emphasis areas for the program are human capacity development (training) and local organizational capacity building. The program's specific target population is OVC.

BACKGROUND:

Starfish Greathearts Foundation (Starfish), a South African NGO, uses a multi-tiered capacity building model that focuses on partnerships, the ability to replicate or scale-up programs and sustainability to ensure necessary care and support services reach as many OVC as possible. Starfish acknowledges the invaluable role that community-based organizations (CBOs) and caregivers play in the care of OVC, and supports and capacitates Non Governmental Organizations (NGOs) and CBOs through training and mentorship to provide direct OVC services to OVC. The Starfish program is aligned with the South African National Plan of Action for Orphans and Other Children made vulnerable by HIV and AIDS and the Department of Social Development's (DOSD) Policy Framework.

With FY 2008 funding, Starfish will increase and expand its range of services and reach to OVC following a three-pronged strategy: (i) qualitatively improved programming for improved training to CBOs; (ii) quality care and services to OVC and; (iii) organizational, managerial and technical competence to support improved programming and service delivery. This strategy will continue to strengthen Starfish's Mentoring and Training Program (M&TP) which builds capacity of CBOs providing direct services to OVC. PEPFAR funds will train, mentor and support 48 CB0 and their caregivers and workers in the following provinces: Eastern Cape, Gauteng, KwaZulu-Natal, Limpopo, North West and the Western Cape. The program will continue to partner with a number of preferred Service Providers, especially Heartbeat. In particular, Heartbeat's child protection training modules are widely used. Starfish will also continue to work with other Mentoring Service Providers (MSP) in the following provinces: Unsung Heroes (Gauteng Province), Barnabas Trust (Eastern Cape), CHOICE (Limpopo), Seboka and Ragoga (North West) and Narcosa (Western Cape).

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Local Organization Capacity Development

Central to Starfish's scale-up strategy is a sustainable CBO training and mentoring program. Partner CBOs are trained and mentored for an 18-month period in OVC care and support as well as in developing and improving their organizational capacity. As the number of trained and strengthened CBOs increases nationally, more OVC can be reached more cost effectively and brought into a safety net of care in a sustainable manner. CBOs are provided with the skills to access and implement services provided by the Departments of Education, Home Affairs, Department of Labor (learner ships for 18 year old OVC and those graduating from OVC categorization due to age including those OVC who are heads of households) and the Department of Social Development (DOSD). Starfish also assists CBOs with the development and implementation of work plans, their monitoring, and use of data collection tools, methods of good quality data collection and overall monitoring and evaluation of their programs. Skills, methods, tools and strategies acquired during these workshops combine to add value to the work of CBOs in their OVC Care programs. In addition, good quality programs allow CBOs to solicit additional funding from other sources. The value added to the work of these CBOs is achieved with PEPFAR funding.

ACTIVITY 2: Human Capacity Development (HCD)

The HCD program provides skills in practical management and organizational governance which would include topics such as: vision-building, planning and evaluation which covers following eight steps of planning: delegation and participation, problem solving, planning and implementation, strategic planning, administration, personnel, leadership, legal registration, managing money and fund raising. Fund raising includes: financial systems, bookkeeping, developing a finance policy, budget reporting, conflict mediation, linkages and partnerships and establishing relationships with local government departments and local service providers.

OVC care and support topics covered in the CBO training include; identification of OVC, establishing OVC selection criteria, children's rights, models of care for children, parenting skills, minimizing discrimination and stigma, HIV prevention education; The training will also cover; promoting gender equality and child protection, the roles of community development facilitators and child care workers. Caregivers will receive training on identification of OVC who are particularly vulnerable, abused, sick and HIV-infected The latter are linked to CBO networks of trained caregivers who regularly visit OVC in their homes. Special care programs and mechanisms for referral are then put into place. The caregivers also serve as points of contact for OVC and ensure that linkages and referrals are made to provide OVC with the necessary services. Training in OVC care will also be provided to Granny support groups who create a network of caregivers supporting each other, reducing the individual burden of care and providing a forum for sharing information.

ACTIVITY 3: Psychosocial Support (PSS)

Age-appropriate PSS programs will be provided by CBOs and caregivers working with them. Thee PSS programs will include, play therapy and youth support groups, The focus will be on core themes such as life skills, establishing and balancing gender equity by addressing cultural stereotypes held particularly by boys, child protection with the view of reducing violence and sexual coercion. Sexual and reproductive health especially for adolescent OVC forms part of the PSS program and it is aimed at preventing HIV infections and providing reproductive health information. PSS programs will link OVC to psychological and emotional care. A network of care workers will regularly visit OVC at their homes to provide follow up care at the household level.

ACTIVITY 4: Educational Support

Activity Narrative: The Heartbeat training module will be used to train CBOs to address educational support topics. Starfish will train and support its partner CBOs to ensure OVC are able to access to primary and secondary school education. For example: In various participatory workshops, CBOs and their caregivers/workers contingent are trained on how to secure school fee exemptions, how to apply for and access legal documents and secure social grants etc. Caregivers will work with local schools to facilitate school fees exemption. Caregivers will be assisted to form partnerships with local educators to assist OVC with their homework and monitor on-going school progress. Starfish will also develop local partnerships to secure bursaries for older OVC. Caregivers will provide advice on and enroll older OVC on learner ship programs offered by the Department of Labor. Academic assistance and homework support will be facilitated at care centers and, where possible, qualified teachers will be engaged to work alongside volunteers. Particular attention will be given to English and Mathematics as these subjects are traditionally the most difficult. Starfish will identify, via CBO partners, tutoring and homework after school centers where work can be conducted simultaneously whilst providing a places of safety for OVC. Linkages to programs and services providing school uniforms and stationary will continue to be made. This is an important intervention as it is known to reduce stigma and discrimination and encourages school attendance.

ACTIVITY 5: Legal Assistance

Heartbeat's training module will be used in training CBOs to address topics in this area. The training module covers: Children's Protection; Children's Rights and Child Protection Policy; Assessing and Minimizing Risks; Prevention and Management of Abuse. CBOs will be empowered to ensure that OVC legal status including their possession of birth certificates and identity documents are in place. This will ensure that children are able to access social grants and other economic support services they are entitled to and will assist government to fulfill its mandate as stipulated in the Department of Social Development's Strategic Framework. Post-training activities by caregivers will include ensuring that all topics covered in the training sessions are implemented.

ACTIVITY 6: Nutritional Support

CBO OVC care training will include modules that will focus on nutritional training courses. Trained caregivers will be placed in areas within specified communities to ensure that nutritional education is spread as widely as possible. Nutritional education training given to OVC-headed households and caregivers will assist in improving OVC nutritional status. Training programs in this regard will include topics on healthy food choices, food preparation and storage. The training will focus on CBOs who provide food parcels, manage food gardens, run soup kitchens or assist grandmothers who receive social grants on behalf of OVC. Provision of monthly food parcels is a wrap around activity funded through national and local business partnerships. Soya porridge is distributed to severely malnourished OVC as part of an emergency feeding scheme using non-PEPFAR funding.

Starfish donors e.g. Coca-Cola, Virgin Unite, Cell C etc. provide basic services to over 12,000 OVC through PPPs.

Starfish's OVC activities contribute to the PEPFAR goal of caring for 10 million people including OVC, by strengthening the community-based network for OVC care and support in a sustainable manner.

Budget Code: HKID

Activity ID: 3304.08

Activity System ID: 13962

USG Agency: U.S. Agency for International Development

Program Area: Orphans and Vulnerable Children

Program Area Code: 08

Planned Funds: $2,667,500

Activity Narrative: SUMMARY:

Hope worldwide South Africa (HWSA) will continue to strengthen and develop community orphans and vulnerable Children (OVC) support groups, facilitate kids clubs, strengthen community child care forums, train partner organizations and provide small sub-grants to community-based organizations (CBOs). Primary target populations reached include OVC, youth, and people living with HIV and AIDS. The major emphasis area for the program is training. There will also be a strong focus on educating boys and girls on gender issues. HWSA will also embark on a strong prevention program for older OVC. Older OVC and their families will also be assisted with income generating activities development through public-private partnerships (PPPs).

BACKGROUND:

The OVC program is one of the five focus areas funded by PEPFAR since 2004. The program's main objective is to strengthen and scale-up community-based interventions to provide comprehensive care and improve the quality of life of OVC in areas where HWSA operates. The three activities described below began in 2004 and will be strengthened and scaled-up in FY 2008. HWSA has a PPP with Coca Cola which started in the Western Cape. HWSA will increase care and support of OVC and their families as outlined in the South African Government (SAG) OVC National Plan of Action and National Strategic Plan. HWSA is an active member of the National Action Committee for Children affected by Aids (NACCA) implemented through Department of Social Development (DOSD) in collaboration with other departments to address the OVC National Plan of Action. In FY 2006, HWSA reached almost 14,000 OVC across 4 provinces.

ACTIVITY 1: Training and Capacity Building

HWSA in partnership with ROSI (Regional OVC Support initiative), will continue to provide training to NGOs, CBOs and FBOs in working with children and Psychosocial Support, Kids Clubs, Community Child Care Forums, Basic Play skills, Basic Counseling for Children and support groups to partner organizations. This partnership will enhance HWSA's capacity to offer quality training, enhance capacity of communities to provide comprehensive care and support to orphans and help scale up the OVC reach across the country. In FY 2008 ROSI will train HWSA site coordinators and fieldworkers who will then conduct training of other organizations, Caregivers, Community Child Care Forums and Kids Club Leaders. ROSI trainers will follow up on trained organizations and staff to observe implementation. HWSA continues to emphasize the importance of youth participation in all its activities, and a key component of the Kids Clubs is that the children themselves lead the discussions. To encourage child and youth participation, Kids Club leaders will be trained on Basic HIV/AIDS and knowledge on how to run Kids Clubs (e.g. facilitation skills, lesson plans, games etc.). During Kids Club Activities the HWSA fieldworkers observe, and then organize workshops to help Kids Club Leaders improve their skills.

ROSI's expert on Child protection has sensitized HWSA managers on the need for the organization to adhere to Child Protection. HWSA is drafting a Child Protection Policy which will ensure that all staff and Caregivers working with OVC have been checked and qualify to work with OVC.

Caregivers and family members will be trained on succession planning, children's rights, child participation and child protection. The Children Commission, in collaboration with HWSA and local police, conduct annual campaigns on Children's Rights and Child Protection. These campaigns will be held in schools and community centers and will educate OVC on their rights and responsibilities and help them identify and address physical and sexual abuse issues.

ACTIVITY 2: Comprehensive OVC support

The OVC program will continue to provide comprehensive care and support to OVC and their families. OVC are identified by the program through schools, referrals from Community Child Care Forums, Adults from HWSA's Care and Support program. All OVC referred are assessed and registered on HWSA's database, HWSA conducts baseline surveys when entering communities and establishes networks of service providers and NGOs to facilitate referrals. Services such as access to education, social security grants, health care, legal aid, targeted food, nutrition and psychosocial support will be provided to OVC through activities Kids Clubs lead by trained OVC, Home Visits will be done by Caregivers to ensure OVC receive comprehensive care. OVC will be counseled will be done by trained HWSA field workers, coordinators and trained caregivers either one on one in groups. HWSA field workers, coordinators and caregivers will educate OVC and refer others for services not provided directly by HWSA. OVC will receive ART treatment and adherence support at the closest SAG accredited treatment site. In the Soweto area abused children will be supported and referred for special treatment to Harriet Shezi Clinic in Soweto, where they will receive psychosocial support and ART treatment. In addition, through HWSA's partnership with Tiger Brands (the largest cereal producer in South Africa), local markets, churches and schools. With non-PEPFAR funds, OVC will receive food parcels at least once a month; others may receive more regular food parcels depending on the need. HWSA will provide a meal to every OVC during activities like Kids Clubs and Support groups on a weekly basis. Various other services will be provided in partnership with the local schools, women's groups, community and youth centers, clinics and government departments. For example, ABSA a major South African banking group, is supporting Kids Clubs with educational and life skills material with funding raised from the public through Special Campaigns for the purpose of assisting OVC educational needs. HWSA's caregivers who do home visits then identify educational needs and provide educational material to OVC identified as in need. This is supervised by coordinators and tracked through HWSA's procurement procedures. Through the Kids Clubs and support groups, HWSA conducts life skill activities, organize leadership camps, and provides one-on-one and group counseling to children with special needs.

ACTIVITY 3: Sub-grants

NGOs such as VUKA and Emthonjeni will assist in scaling-up OVC activities in the areas where they operate. The objective is to expand programs in rural areas of Eastern and Western Cape provinces. Sub-grants will be awarded for OVC support to provide nutritional, psychosocial and material support. Technical assistance will be provided on organizational capacity development where necessary to improve the care and support of OVC. In addition, regular mentoring and feedback sessions will be held to review progress.

Activity Narrative:

ACTIVITY 4: Public-Private Partnership with Coca Cola

HWSA will pioneer a Vendor Employment Model for orphans and vulnerable children in South Africa. Through a public-private partnership with Coca Cola, HWSA will explore a vendor economic support activity for OVC/child-headed families and granny support groups. HWWSA has recruited 20 OVC and this number will be increased in FY 2008. The children will be provided training in small business management, money management and how to save and reinvest in their business. OVC will also be trained on basic business skills, marketing and budgeting. In addition, psychosocial training, support and supervision will be provided by HWSA. The necessary trolleys, uniforms, umbrellas and the first inventory of Coca-Cola will be provided to the children. The Coca-Cola management assigned the children in the most appropriate areas where they can sell Coca-Cola. This income generating activity will bring revenue autonomy and new skills into the lives and homes of the OVC which will contribute to reducing the susceptibility of the OVC to HIV.

ACTIVITY 5: HIV Prevention and Gender Socialization

HWSA will use the funds as follows: a) To strengthen adolescent OVC program to focus on HIV Prevention including reproductive health education. OVC face pressures to engage in risky sexual behavior like any other adolescents, but their situation is magnified due to their increased vulnerability because of lack adequate parental guidance. HWSA has undergone training on conducting prevention activities for adolescent OVC to enhance their knowledge, skills and capacity to prevent HIV infection. HIV prevention messages will be incorporated into Kids Clubs and Support group activities. Kids Club leaders, HWSA field workers and coordinators who conduct Kids Clubs and support groups will all be trained on HIV prevention messages for OVC. b) To integrate gender issues within the OVC program: While caregivers and adolescent OVC (especially child-headed households) face serious challenges due to illnesses and bereavement, the realities of gender inequalities and social norms contributes to their vulnerability. HWSA Coordinators and fieldworkers, as well as Caregivers and members of CCFs will undergo training and mentoring support on how to conducting gender socialization messages for adolescent OVC to enhance their knowledge, skills and capacity and to build resilience to face gender related issues. Gender socialization messages will be incorporated into Kids Clubs and Support group activities.

These Hope worldwide South Africa (HWSA) OVC support activities will contribute to the PEPFAR goal of providing care and support to ten million people affected by HIV and AIDS including OVC and their families.

Budget Code:	HKID	**Program Area Code:**	08
Activity ID:	13974.08	**Planned Funds:**	$200,000
Activity System ID:	13974		

Activity Narrative: SUMMARY:

PEPFAR funds will be used to support monitoring and evaluation (M&E) of orphaned and vulnerable children (OVC) interventions at two sites: Kopanang in the southern Free State Province and Kanana near Orkney in the North West Province. The HSRC has been involved in promoting and evaluating OVC interventions at these sites since 2002, but has not received PEPFAR support for these activities previously. The emphasis area for this project is monitoring and evaluation and building capacity of local indigenous organizations to deliver quality OVC care.

BACKGROUND:

In 2002, the HSRC and the Nelson Mandela Children's Fund established an evaluation and intervention project to work with OVC at four sites in South Africa. The main aims of the project were to:

1) Improve the social conditions, health, development and quality of life of OVC;

2) Support families and households coping with an increased burden of care for affected and vulnerable children;

3) Strengthen community-based support systems as an indirect means of assisting vulnerable children;

4) Build capacity in community-based systems for sustaining care and support to vulnerable children and households, over the long term.

A number of existing interventions were supported, a baseline evaluation was conducted to inform future interventions, and new interventions believed to represent best practice were developed and implemented. Funding for these activities ended in March 2007. PEPFAR funds will be used to conduct M&E of OVC activities at two of the four sites.

At Kopanang in the southern Free State, interventions are being carried out by Diketso Eseng Dipuo (DEDI). These include a family support program, early childhood development, and capacity-building activities. Local facilitators hold workshops with the community, complemented by a program of ongoing home visits. Activities conducted during home visits include child assessment, and assisting with completing documentation to qualify for social grants. The intervention also includes a Local Economic Development (LED) component whereby families are encouraged to form small savings societies (stokvels) and receive basic guidance in establishing themselves as micro-enterprises. An AIDS awareness campaign was carried out in February 2007, reaching approximately 650 youth, but its impact has not yet been evaluated.

At Kanana in the North-West Province interventions are being carried out by Child Welfare North-West (CWNW). CWNW has four OVC interventions in the area: 1) Three Child Protection Projects (CPP); 2) a Victim Empowerment Project (VEP); 3) a Kinship Project; and 4) a Child Care and Stimulation Project (CCSP).

ACTIVITIES AND EXPECTED RESULTS:

PEPFAR funds will be used to conduct an evaluation of OVC interventions at the Kopanang and Kanana sites to assess whether the interventions represent good practices and to determine the cost-effectiveness of these interventions. The same evaluation methods will be used at each site. Both quantitative and qualitative methods will be used. These include:

1) Observations carried out during site visits;

2) A review of annual progress reports for the five-year period 2003-2008;

3) Focus group discussions and interviews with beneficiaries and key informants;

4) Costing of the interventions.

Interventions will be assessed using a set scoring system on a scale of 0 to 20. A project will be assessed as representing good practice if it scores 16-20, promising practice if it scores 10-15, and poor practice if it scores less than 10.

Once the evaluation is completed, feedback will be given to the organizations providing services with recommendations for program strengthening, and positive reinforcement for interventions that are working well. The results of the evaluation will be shared widely within the OVC community. HSRC will also liaise with the Department of Social Development and propose incorporation of cost-effective and good interventions into OVC policies and strategies.

These activities will contribute to PEPFAR 2-7-10 goals by identifying good practice OVC interventions and contributing to the delivery of quality OVC programs.

HVCT - Counseling and Testing

Program Area: Counseling and Testing
Budget Code: HVCT
Program Area Code: 09

Total Planned Funding for Program Area: $42,403,701

Estimated PEPFAR contribution in dollars	$280,000
Estimated local PPP contribution in dollars	$467,500

Program Area Context:

Since 2000 the National Department of Health (NDOH) supported widespread implementation of a national program for voluntary counseling and testing (VCT). NDOH established policies and guidelines; systems for procurement of supplies and commodities; and regulations for laboratory quality assurance. Each of the nine provinces ensures that national guidelines are followed. PEPFAR partners are located at sites where the government has requested support and as a result, are in areas of need.

The FY 2007 counseling and testing (CT) target was estimated by reviewing the antiretroviral treatment (ART) targets for each year over a five-year period in order to reach 500,000 persons on ART by September 2009. Over the past 3 years, approximately 19 people were tested for HIV per every one person placed on ART. The September 2008 and 2009 CT targets are estimated at 2,036,000 for each year.

About 80% of public health facilities offer VCT nationwide through 4,000 public VCT service points. Though this may seem adequate, more recent data show that only 2% of persons who need to be tested undergo testing. In May 2007, NDOH released the new HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011 (NSP). The NSP sets new targets for CT to ensure that all persons at risk get tested, especially those at highest risk who present at clinics for family planning, sexually transmitted infections, antenatal and TB services and those in high transmission areas. The new NSP recommends provision of provider-initiated testing and counseling (PITC) in health facilities. It sets a target of 75% of all public health facilities using this model by 2011. The PITC model is used in addition to the standard VCT model.

USG and PEPFAR partners continue to support the NDOH in their efforts to update policy, training and mentoring in order to increase the demand for, and the availability of quality CT services. More than 45 PEPFAR-funded partners identify CT as a primary activity, and all treatment partners are funded for CT. Although some partners provide CT directly to the public while others support South African government (SAG) sites, all comply with SAG policies. SAG-supported sites integrate CT services within a comprehensive health service package. Levels of support to SAG sites vary among partners, but common elements are provision and training of lay counselors and professional nurses; and provision of technical assistance and mentoring. The SAG provides test kits to public health facilities.

All partners described their training activities in COP FY 2008. Thus, the USG team is able to determine the training curricula that needs to be accredited by NDOH.

Barriers persist for increasing uptake of VCT. These include physical space, distance from CT sites, inaccessible transport systems, stigma and discrimination, long counseling sessions that require the client to opt-in after the session, and lack of external quality assurance of rapid testing. Large community mobilization programs lack adequate messages that clearly communicate HIV risk. Improvement is needed in ensuring that mothers who test positive in PMTCT programs are followed postpartum to prevent mother infant pairs from being lost to follow-up. To compound this issue, there is a lack of sufficient child- and youth-friendly services and services targeting couples to encourage safe disclosure and to promote decreased risk through partner reduction.

The NDOH is involved in updating policy and looking to PEPFAR partners to roll out PITC in all provinces according to new updated WHO guidelines. PEPFAR partners in South Africa will deliver multiple types of HIV testing including diagnostic testing whenever indicated, confidential routine offer with opt-out rapid testing in multiple clinical settings, and community-based family-centered VCT. PEPFAR partners will be evaluated on their CT training, and if task shifting policies are implemented, expansion on current practice may include lay counselors who can learn to do finger prick and perhaps oral rapid testing. In FY 2008, partners will carry out community activities that address gaps in the provision of CT services, particularly for discordant couples and special populations such as clients of traditional healers, family members of persons who test positive, prison inmates, the military, adolescents, and small children. Partners will ensure that there are systems for quality measurement among CT sites. USG partners will continue to provide public health messages on awareness, the need to determine one's status and promoting behavior change through health promotion messages including consistent and correct use of condoms.

As HIV care and treatment activities expand, partners are required to work within a functioning comprehensive referral system that includes NDOH public health facilities, faith- and community-based organizations, and the private sector. USG partners integrate secondary prevention strategies in care and treatment sites; provide simplified prevention messages and access to condoms; offer post-test counseling with support to encourage disclosure to partners and families; identify and counsel on reduction of substance use; help HIV-infected individuals and discordant couples to develop prevention plans; counsel on adherence to ART when indicated; integrate gender-based violence counseling, screening and referral; and provide linkages to basic palliative care, reproductive health, STI screening, and PMTCT for the unborn and breastfeeding child. PEPFAR-supported CT activities provide linkages for special populations such as clients of traditional healers, couples, children and prisoners. Partners will also ensure that persons with TB are tested for HIV and those who are HIV-infected are screened for TB.

Other PEPFAR CT activities, in collaboration with NDOH, include expanding laboratory accreditation and quality assurance programs for CT sites; supporting provincial health departments through regular CT meetings and an annual CT technical meeting; developing and updating CT training materials for provider initiated CT; and providing targeted training for all providers. PEPFAR partners working in public facilities will only purchase emergency back-up supplies to prevent stock-out.

During FY 2007, the USG held the first CT/PMTCT partner meeting. Partners and stakeholders discussed state of the art and evidence based models and furthered their commitment to increasing the number of persons tested. A CT technical review was completed by the PEPFAR technical working group co-chairs from Atlanta and Washington, DC. Several recommendations were made that have become part of the activities of PEPFAR partners.

There are several other donors focusing their efforts on CT in South Africa. The German KFW Banken Grupe through the Development Bank of South Africa supports infrastructure upgrading of public VCT facilities. The European Union funds Higher Education South Africa's HIV activities, including CT. Other international donors such as DFID/United Kingdom, Deutsche Gesellschaft fur Technische Zusammenarbeit, UNESCO and the Canadian International Development Agency provide support to local NGOs.

Program Area Downstream Targets:

9.1 Number of service outlets providing counseling and testing according to national and international standards	1657
9.3 Number of individuals trained in counseling and testing according to national and international standards	26803
9.4 Number of individuals who received counseling and testing for HIV and received their test results (excluding TB)	1139726

Custom Targets:

Activity ID:	8276.08	**Planned Funds:**	$300,000
Activity System ID:	13971		

Activity Narrative: TITLE OF STUDY: Review of counseling and testing (CT) programs, policies and practices in South Africa.

TIME AND MONEY SUMMARY: The Human Sciences Research Council (HSRC) will use FY 2007 funds to conduct a review of counseling and testing (CT) programs, policies and practices in South Africa. The estimated start date is October 2007 and the project is expected to run over three years. The activities described in the 2007 COP are expected to be completed in the first year of funding. The HSRC has applied for $300,000 in Year 1 of this activity (FY 2007 funds), and a further $300,000 in Year 2 (FY 2008 funds). There will be no funds leveraged from other sources.

LOCAL CO-INVESTIGATOR: The Principal Investigator for the HSRC's CDC-PEPFAR award is Laetitia Rispel. Carol Metcalf will serve as the lead local co-investigator on HSRC's counseling and testing activities. Other HSRC co-investigators will include Laetitia Rispel, Heidi van Rooyen, Geoff Setswe, and Charles Hongoro.

PROJECT DESCRIPTION: The HSRC will use PEPFAR funds to conduct a public health evaluation (PHE) of counseling and testing (CT) activities in South Africa. The purpose of this activity is to obtain information on current CT practice, with a view to promote good program practices. The HSRC will include services that have a reputation for best practice or for offering innovative forms of CT. The sample will also include CT services that differ by type of provider (public, private, NGO); models of delivery; and that include a range of geographic settings throughout South Africa, both urban and rural. Structured and semi-structured interviews and field observations will be conducted with service managers, frontline service providers, and clients. Statistics will be gathered on numbers of clients tested, reasons for testing (if available), HIV seroprevalence among clients, and client demographics. Information will be collected on charges for services, staff training, staff supervision, quality assurance practices, types of HIV tests used, counseling models used and whether the model is theory-based and/or evidence-based, outreach activities, policies and practices relating to consent and disclosure, and integration and linkages with other relevant health and social services. For a limited number of services using different models of delivery, cost information will be gathered for purposes of a comparative evaluation. The HSRC will try to include examples of integrated, stand-alone, and mobile or home-based services in the evaluation, as well as different forms of counseling delivery (e.g. individual, couples, and small group).

This activity will gather evidence relevant for effective and cost-effective scaling up of CT services in South Africa, thus contributing indirectly to the overall 2-7-10 PEPFAR objectives (2 million individuals on treatment, 7 million infections averted and 10 million people in care). The results of this activity will be used to improve quality of CT services, which should impact indirectly on the number of people tested and referred to treatment, care and support. This activity will also contribute to achieving the goals of the South African National Strategic Plan on HIV and AIDS and STIs, 2007-2011 (NSP) of reducing the incidence of HIV infection by 50% and making treatment available to 80% of PLHIV who qualify for treatment according to national guidelines.

STATUS OF STUDY/PROGRESS TO DATE: A study protocol has not yet been developed. A study protocol will be developed and submitted to the HSRC Research Ethics Committee and the CDC for review once the HSRC receives FY 2007 funding for this activity.

LESSONS LEARNED: Not applicable. This project has not yet started.

INFORMATION DISSEMINATION PLAN: Once the review and evaluation has been completed, the HSRC will host a one-day symposium for CT program managers and policymakers to discuss the results and to plan for appropriate action based on the findings. Select providers that are examples of good practices or innovative HIV testing and counseling strategies will be invited to speak at the symposium. The HSRC will facilitate the development of an implementation plan to ensure that the results of the targeted evaluation are turned into action. he findings of the review and evaluation, combined with stakeholder recommendations from the symposium will be published in the form of a report which will be distributed to policymakers in national and provincial government and made available for free download on the HSRC Press website. In addition, the HSRC will develop policy briefs for policymakers summarizing the key findings in simple language and making brief practical policy recommendations.

Activities: FY 2008 COP activities will be expanded to include:

(1) A targeted evaluation of barriers and facilitators to HIV testing from a client perspective. Methods may include exit interviews with people attending outpatient health facilities, structured one-on-one interviews with people recruited from the general community (community-based surveys), and focus group discussions. The HSRC will convene a workshop with health officials and policymakers to discuss the findings and to develop practical strategies to address the problems identified with a view to increasing counseling and testing uptake.

(2) An assessment of provider-initiated TC in healthcare settings (such as casualty and emergency departments) with a pilot intervention project to increase the use of provider-initiated CT in these settings. This will be modeled on similar projects that have been conducted in U.S. hospitals with CDC support.

(3) A pilot project to implement one of the models of good practice identified as part of FY 2007 activities in a new setting, or alternatively to adapt or translate training and intervention materials from one of the models of good practice to promote scale-up. The choice of intervention or model will be based in part in the findings of the initial program evaluation.

FY 2008 COP activities will be planned in detail once the initial evaluation (using FY 2007 funds) has been conducted.

Planned Funds: $242,500
Activity System ID: 13963

Activity Narrative: SUMMARY:

HOPE worldwide SA (HWSA) will use FY 2008 PEPFAR funds to continue its work in partnership with local Departments of Health (DOH) to increase access to quality CT services at public sites in the Eastern Cape, Gauteng, KwaZulu-Natal, and Western Cape provinces.

Counseling and testing (CT) targets adolescents from 15 - 24 years both in- and out-of-school through the abstinence and being faithful (AB) program, adults from 25 years and over and nurses in the public sector. The main emphasis areas for this CT activity are to increase gender equity in HIV and AIDS programs and to build capacity at local organizations.

BACKGROUND:

CT is acknowledged within the international arena as an entry point to HIV prevention and AIDS care. HWSA's CT strategies strengthen provincial government's capacity to manage counseling and testing centers and so to create demand for the services. In addition, HWSA has developed 35 CT partner sites around South Africa.

HWSA plans to use FY2008 funds to continue existing activities, but focusing on increasing the uptake of CT services. Currently the uptake of CT services in South Africa is still predominantly by women and HWSA will attempt to increase the number of males being tested and to promote couple and family counseling. HWSA, in conjunction with Engender Health, developed the Men As Partners (MAP) program to increase male involvement. HWSA's FY2008 CT strategy is to educate and sensitize men, women, and youth (in- and out-of-school) about HIV and AIDS to increase CT uptakes. HWSA undertakes to train of male counselors. The continued mentoring of counselors to ensure a high level of competency will remain imperative.

HWSA, through PEPFAR-funded counseling activities, will, in FY 2008, build on successes achieved in FY 2006. HWSA provided CT services to 12,000 people in FY 2006, and CT is integrally linked with all other programs at HWSA. If a client has tested HIV positive, the client is referred to care and support and the children are referred to the orphans and vulnerable children (OVC) program. If the client has tested negative the risk reduction plan is repeate to the client to encourage him/her to maintain their negative status.

The following factors will be considered and addressed to counter low male uptakes at CT sites: proxy testing (using partner status as theirs); gender socialization; an unfriendly health care system; fear of dying; and stigma. The partnership between HWSA and the departments of health has ensured the establishment of a male clinic and a CT/MAP program to ensure education and sensitization on these factors.

Although uptakes of men are steadily rising, they still show a resistance to HIV testing. HWSA found that its male-targeted campaigns tended to increase demand for testing by men.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1. Provision of CT

Pre- and post-test counseling will continue to be rendered at 30 existing DOH CT sites as a strategy for preventing the further spread of HIV infection. Part of the HWSA FY2007 strategy will be to increase the number of CT visits by men. Strategies to promote couple-oriented CT will be enhanced and referrals to antiretroviral treatment centers increased to encourage the CT demand. HWSA CT continues to be implemented as part of integrated healthcare services, directly linked to existing HIV care and treatment services. HWSA will continue to support referrals from OVC and prevention activities and will continue to refer clients testing positive to HWSA's support groups.

FY 2008 PEPFAR funding will be used to conduct, workshops and campaigns addressing constructive male involvement in CT, gender-based violence and HIV and AIDS. Reduction of HIV and AIDS stigmatization, staffing of new sites, and outreach to workplaces will be a focus of this activity.

ACTIVITY 2: Training CT Counselors

Ongoing emphasis will be laid on training more male counselors, to further capacitate CT counselors on MAP methodologies and to equip the latter with skills to pre- and post- test counsel men. This supports HWSA's strategy to reach more men. There will be a two-week CT training and orientation session to capacitate counselors to run CT/MAP workshops. For newly appointed peer educators and CT counselors there will be a 5-day Peer Education training course and a 10-day counseling course on CT protocols. In addition, a MAP facilitator/trainer will be hired to engage CT counselors on how to involve men on HIV and AIDS issues. HWSA also aims to capacitate counselors with adherence and couple counseling.

Regular assessments and mentoring of participants will take place during and after training. The latter group's reach will be tracked. HWSA will examine the CT protocol and solicit feedback from the trainer/learner assessor after each training session. HWSA activities in FY 2008 will include further training of existing and new CT counselors with an emphasis on couple counseling, CT protocol, and CT training and technical support of other CT organizations. In FY 2006, HWSA capacitated 100 CT counselors. HWSA CT trainers will continue to provide their services to partner organizations while the use of international CT protocols to ensure standardization of services will be ensured.

ACTIVITY 3: Expansion of CT Provision

HWSA will conduct community campaigns to promote the uptake of CT services and to reduce the stigma associated with HIV testing. Trained community volunteers will conduct activities in workplaces, at community meetings, and through door-to-door visits. Strategies to promote the uptake of CT services will include providing information on CT, awareness-raising on the benefits of HIV testing, promoting couple counseling, and marketing CT as an entry point for ARV treatment.

HWSA will use a mobile CT truck to provide CT services at educational campaigns and to provide CT

Activity Narrative: services in areas and/or sites that lack CT provision. HWSA will also ensure that two-way referral systems between their OVC, prevention, care and treatment support programs are strengthened to ensure that clients receive appropriate services as determined by their HIV status. HWSA will also advocate for the provision of confidential and voluntary CT in the public sector.

HWSA has learnt that that counseling and testing works best if you take the services to - and involve the communities. Activities like campaigns within the communities have been one of the successful methods used to reach more community members, especially men who feel that clinics are unfriendly and impersonal.

HWSA will maintain the 35 public and private sites from which HWSA CT program has been operating. Introducing the MAP program at these sites will enhance the quality of the CT services provided, and consequently, HWSA will reach more men. Efforts to engage private doctors as partners in the CT will continue. HWSA will identify areas without CT service and attempt to extend HWSA coverage to these areas by establishing new partnerships. The PEPFAR program contributed, through these partner sites, to reach over 11,000 people through the CT services.

HWSA will also work very closely with South African prisons to increase the uptake of males who are accessing CT services. HWSA will initially start work with the Johannesburg prison, which has given approval for the provision of CT and training (protocol). This activity will (a) promote the benefits of CT during peer education in all the medium security centers within the prison, and (b) promote referral of inmates to counseling and testing. If tested positive the client will be referred to support groups. Inmates will be identified and screened for training. The counseling and testing protocol will be used for counseling. Inmates from Johannesburg prison will be trained to become counselors and a refresher course will be done for those who were trained by other organizations.

Existing HWSA staff members will be trained on couple counseling and further training will be extended to organizations that have already been trained by HWSA on counseling and testing.

These activities contribute to the PEPFAR goal of providing care and support to 10 million HIV-affected individuals. Consistent with the USG Five Year Strategy for South Africa, these activities also strengthen community demand for CT services; engaged communities on reducing the stigma associated with low CT uptakes; strengthen partner capacities through training. Therefore, through these interventions HWSA CT will strengthen community resolves on knowing their sero-status, promote and engage communities on reducing the stigma associated with low uptakes at CT sites, promote and expand the partner network with the goal of identifying additional resources for the sustainability of the program and identify and strengthen partner capacities through training.

9.3 Number of individuals trained in counseling and testing according to national and international standards	130	False
9.4 Number of individuals who received counseling and testing for HIV and received their test results (excluding TB)	15,000	False

Indirect Targets

In addition to HWSA's direct CT targets, HWSA is training and mentoring a group of CBOs and FBOs to increase their organizational capacity. These organizations are then able to provide better quality CT services.

Prime Partner: Xstrata Coal SA & Re-Action!

USG Agency: HHS/Centers for Disease Control & Prevention

Funding Source: GHCS (State)

Program Area: Counseling and Testing

Budget Code: HVCT

Program Area Code: 09

Activity ID: 8258.08

Planned Funds: $832,000

Activity System ID: 13910

Activity Narrative: SUMMARY:

Xstrata received funding in FY 2007 for a public-private partnership with the Mpumalanga Department of Health (MPDOH). The implementing partner for this activity is Re-Action! Consulting (RAC). RAC will facilitate a co-investment partnership with Xstrata to provide support for strengthening targeted government clinic sites, continuing to improve access to basic preventive, clinical care and psychosocial support services in one district of Mpumalanga, extending into a second district during FY 2008. The project will build on a public-private mix model for strengthening HIV and TB service delivery that Xstrata and RAC has already begun to implement in the province with funding from Xstrata (dollar for dollar match with PEPFAR).

Xstrata and RAC will work through established partnerships with local government, MPDOH, community groups and private providers. Project deliverables have been defined in response to specific requests for assistance from the MPDOH. Major emphasis will be given to development of health workforce capacity, with minor focus on community mobilization/participation, building linkages with other sectors, local organization capacity development and strategic information. The target populations are underserved communities of men, women and children and people living with HIV and AIDS in Nkangala District, extending to a second district during FY 2008, where Xstrata Alloys has its operations.

BACKGROUND:

Xstrata Coal is a subsidiary of a multi-national mining group committed to practical ways of achieving sustainable development and contributing to the health and social welfare of employees and their communities. The company employs 4,000 people at 11 mines (collieries) located within the socio-economically deprived Coal Powerbelt region of Mpumalanga. Xstrata Alloys has more than 10,000 employees with operations in 3 provinces (Mpumalanga, Limpopo, and North West) and Swaziland. This funding partnership enables scaling up the community extension component of Xstrata's comprehensive workplace HIV and AIDS program managed by RAC. The project is focused on implementing a public-private mix service-strengthening model of capacitating government providers within primary care clinic sites to deliver HIV-related preventive, clinical and psychosocial care services. FY 2008 funding will allow continued support to sites established in FY 2007 (working towards full site accreditation) and to expand the number of sites within two target districts. The scope of assistance is defined within a Memorandum of Understanding between Xstrata and the Mpumalanga Department of Health and Social Services, and responds to specific requests for support by the provincial department's HIV and AIDS Unit, as well as the district management teams. This fits within a broader range of interlinked corporate social investments being made by the Xstrata Group to support sustainable local development in these communities.

The project will provide technical assistance, health workforce capacity development, clinic infrastructure improvements, strengthening of pharmaceutical supply management systems and service monitoring for public sector primary care clinics to deliver quality HIV-related preventive and clinical care services. This will contribute to strengthening district-level primary health care service networks and district service management, with a strong focus on improving human resource capacity, including through training and deploying community outreach workers to deliver household-level services. The project works in partnership with other PEPFAR contractors in the province to achieve synergies and avoid duplicating activities.

ACTIVITIES AND EXPECTED RESULTS:

Three activities will be implemented to strengthen the provider-initiated testing and counseling (PITC) services in two districts in Mpumalanga, in collaboration with the Mpumalanga Department of Health.

ACTIVITY 1: Strengthen Primary Health Care sites to deliver Counseling and Testing Services

Technical assistance and training will be provided to improve public sector human resource management capacity so that critical staff positions will be filled to strengthen counseling and testing services. Physical upgrades to clinic infrastructure (undertaken by Xstrata) will accommodate additional counseling space and essential equipment will be procured. Health information management systems and patient monitoring systems will be strengthened through in-service training, technical assistance and procurement of equipment where necessary. Service delivery will be improved overall to ensure that HIV-infected adults and children testing positive are referred to the essential package of HIV-related, treatment, care and support interventions at designated clinic sites.

ACTIVITY 2: Public Health Sector Workplace HIV Response at the Identified Sites

Retention of health workforce capacity and health worker performance through strengthening public health sector workplace HIV response at the identified sites will be undertaken. A workplace HIV intervention for health and allied workers will be implemented to build 'AIDS competence' in the health workforce at the selected sites, to encourage uptake of HIV testing and counseling and to promote appropriate health action (including care-seeking) and improved attitudes towards patients.

ACTIVITY 3: Community Mapping, Mobilization, Health Promotion, Treatment Preparedness and Support, Referral to Appropriate Health and Social Services

Community outreach workers will be trained to provide basic household health risk assessments and health promotion under supportive supervision. They will mobilize the community for HIV testing and counseling (through the 'I know!' campaign developed by RAC) and will direct community nurses to deliver provider-initiated HIV testing and counseling within households (door-to-door campaign). Individuals with social and health risks will be referred for appropriate services and appropriate follow-up arranged. This will result in risk mapping of all households within targeted communities and systematic follow-up, linked to facility-based services. The community program will be monitored and improved using normative standards and tools developed by WHO (IMAI). Community Health Workers will receive close supportive supervision by professional nurses. A regular learning review will be undertaken, based on an established improvement methodology and ongoing in-service training will be provided from both 'in-house' and external sources. Periodic review of strategic information and performance indicators will support monitoring the quality of service delivery. Each community health worker will undergo routine performance appraisal based on Re-Action's established Human Resource management procedures.

Activity Narrative:

With FY 2008 reprogramming funds, RAC will expand the door-to-door VCT campaign in two communities in Mpumalanga – Ermelo and Breyten.

ACTIVITY 4: Community Support and Psychosocial Care

Linkages with community-based service organizations (including faith-based organizations and non-governmental organizations) will be strengthened and all providers will be encouraged to participate in delivering their service tasks in more coordinated ways through the 'public-private mix' approach (which RAC will support district management teams to oversee). Peer support groups will be established at all sites and linkages to the community will be strengthened through Community Outreach Services. Traditional healers will be engaged and trained in partnership with the MPDOH and supported to provide appropriate referrals to the clinic sites, to provide chronic care support and health promotion. Attention will be given to gender equity, increasing male involvement in the program, addressing stigma and discrimination

Sustainability of this program is assured through the public-private partnership between Xstrata and the MPDOH. By providing support for counseling and testing in underserved communities, Xstrata is contributing to the 2-7-10 PEPFAR goals.

Table 3.3.09: Activities by Funding Mechansim

Mechanism ID: 4746.08

Mechanism: Desmond Tutu TB Centre

Prime Partner: University of Stellenbosch, South Africa

USG Agency: HHS/Centers for Disease Control & Prevention

Funding Source: GHCS (State)

Program Area: Counseling and Testing

Budget Code: HVCT

Program Area Code: 09

Activity ID: 13866.08

Planned Funds: $200,000

Activity System ID: 13866

Activity Narrative: SUMMARY:

The Desmond Tutu TB Center has developed a project in the Western Cape (WC) focused on improving the integration of TB and HIV services by increasing access to counseling and testing (CT) services, intensifying case finding for TB among those who are HIV-infected and expanding access to HIV-care for those diagnosed positive. The major emphasis area is human capacity development through training of staff and managers, developing the capacity of local organizations to implement and manage community CT sites; development of networks, linkages and appropriate referral systems and increasing gender equity through improving male access to CT. The target populations include policy makers, program managers and the general population with a specific focus on couples, men and youth. The project addresses the dual challenges of reducing HIV transmission in communities and minimizing the impact of HIV on individuals and of reducing the TB burden by increasing TB case-finding and ensuring appropriate TB care.

BACKGROUND:

The extremely high TB rates in the WC and the increasing prevalence of HIV have led to the health system being placed under extreme pressure resulting in a failure to cope with the dual epidemics. Therefore, it is necessary to develop effective and feasible strategies that can be adopted by health services and supporting community organizations to increase access to services and improve the quality of care for people with HIV and TB. This project is closely aligned with existing health services and aims to complement, enhance and support these services. It will be nested in six Western Cape communities that form part of the Zamstar project. The Zamstar project is part of the CREATE consortium and is funded by the Bill and Melinda Gates Foundation through a grant to the Johns Hopkins University. Zamstar works to reduce the prevalence of TB by improving integration of HIV and TB services, and through these efforts, have established community advisory boards and stakeholder support. The PEPFAR funded project will benefit the Zamstar project by establishing Community Flexi Hour CT Centers, and improving access to and utilization of CT services through social mobilization and existing household and community activities. It will implement routine screening for TB at CT at the Community Flexi Hour CT Centers and improved access to TB and HIV care through strong referral networks. The project scope has been revised from that submitted in COP FY 2007 to address evolving community and health service needs. All Desmond Tutu TB Centre's projects are implemented in close collaboration with the Western Cape Department of Health, Cape Town City Health Department and non-governmental organizations (NGOs).

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Establish Six Community Flexi-Hour CT Centers

Approximately 8% of the adult population of the WC access CT through existing healthcare services annually. The majority of people accessing CT are women who are exposed to CT through prevention of mother-to-child transmission (PMTCT) programs, and clients who are tested in health centers for medical reasons. Only about 30% of people undergo CT through self-referral. Community Flexi-hour CT Centers aim to expand the reach of CT to settings outside health facilities, making CT more accessible to those who do not access routine health facility-based CT services. The target groups include youth, couples, working people and males and this activity will therefore address the gender inequality in access to CT.

The Community Flexi-hour CT Centers focus on outreach activities in the community (sports clubs, youth clubs, church organizations, local small businesses) and individual households. The Centers aim to raise awareness about HIV and to promote CT. Six Community Flexi-hour CT Centers will be established through contracts with existing NGOs already employing CT counselors deployed to health facilities. NGOs should have the capacity to manage the service and to sustain the initiative in the long term. Project staff will be employed to run the CT centers in partnership with the NGO. Each center will be staffed by (a) a professional nurse who will manage the center, oversee HIV testing and test if required; (b) an enrolled nurse who will do HIV and TB testing; and (c) three to four CT counselors who will provide pre- and post-test counseling, symptomatic screening for TB and be responsible for health promotion in the community and at the center. Staff will be responsible for mobilizing the community to utilize the service, for provision of the service at the site and on an outreach basis and for routine data collation.

A database will be established at each site to collect and collate routine client information, including demographics, referral source to the center (from community drama events, school initiatives, household interventions etc), HIV test results, TB screening and referral to clinics. The Monitoring and Evaluation (M&E) manager will undertake data validation, quality control, data collation across sites and evaluation of data. A mentor will provide support to staff at these sites through case discussions, debriefing, stress management and team building. The mentor will visit sites every two weeks.

Symptomatic screening for TB will be undertaken during CT at the Community Flexi-hour CT Centers. Counselors will be trained to implement a simple screening tool that is used in health facilities in the Western Cape. Symptomatic clients will have sputa collected and the nurses at centers will use standard national diagnostic algorithms to diagnose TB. Those diagnosed positive will be referred to local clinics to commence TB treatment. Feedback loops from clinics will be used to minimize primary TB treatment default rates. Project staff will monitor the referral process to ensure timely visits and back-referral. Approximately 15% of clients with newly detected HIV infection will have active TB disease. Community Flexi-hour CT Centers will be regarded as a "ward" of the established health facility. Although Community Flexi-hour CT Centers will not be situated on the grounds of a health facility, they will be linked to formal structures, ensuring appropriate patient referrals to treatment, care and support, and ultimately, helping to ensure sustainability. Close links will be maintained between the Community Flexi-hour CT Centers and the Sub-District Management Team to ensure good communication and feedback and to address referral issues.

Table 3.3.09: Activities by Funding Mechansim

Mechanism ID: 216.08

Mechanism: ACQUIRE

Prime Partner: Engender Health

USG Agency: U.S. Agency for International Development

Funding Source: GHCS (State)

Program Area: Counseling and Testing

Budget Code: HVCT

Program Area Code: 09

Activity ID: 7983.08

Planned Funds: $290,000

Activity System ID: 13778

Activity Narrative: SUMMARY:

EngenderHealth's Men as Partners (MAP) program works to reduce the spread and impact of HIV and gender-based violence by challenging unhealthy gender-related beliefs and attitudes, such as equating masculinity with dominance over women, pursuing multiple sexual partners, and participating in other HIV risk behaviors. The MAP program utilizes a range of strategies including skills-building workshops, community mobilization, health service provider training, media advocacy and public policy advocacy efforts to achieve its major goal of gender norm transformation to reduce the spread and impact of HIV and gender -based violence. MAP recognizes that this transformation will assist men and women in achieving low-risk behavior such as sexual abstinence, being faithful to one partner, using condoms consistently and correctly, reducing the numbers of sexual partners, and treating women as equals. MAP works with individual men and boys, their romantic partners, as well as community structures to influence culture and transform lives. In addition, MAP targets in and out-of-school youth, university students, adults, people living with HIV, caregivers, community and religious leaders, program managers, public healthcare providers, and community-based, faith-based and non-governmental organizations (CBOs, FBOs, NGOs).

BACKGROUND:

Since 1998, EngenderHealth has received USG funding to support CBOs, FBOs and the South African government to implement MAP programming. EngenderHealth's core strategy is conducting skills-building workshops on gender norm transformation. Through these workshops, MAP develops "transformation agents" (peer educators) who then spread MAP messages and skills from the workshops to others in their communities. These workshops are tailor-made for various communities, integrating abstinence/be faithful messages and/or condoms and other prevention messages, as well motivating men to know their HIV status and to take action if they test positive for HIV. MAP encourages men to take action in their communities, challenging other men who are practicing high-risk behaviors and gender-based violence. Working through various community-based partners, MAP also mobilizes communities to take action via community education events and the formation of "community action teams" (CATs). EngenderHealth/MAP also produces behavior change communication materials that are used to motivate men and boys to address these harmful gender norms and transform themselves. Currently, EngenderHealth is running the “I am a Partner” campaign; focusing on defining what men can do to take action and be more gender equitable to reduce the spread and impact of HIV. (See www.iamapartner.org). Working through national campaigns, such as the annual Men as Partners (MAP) Week, EngenderHealth engages national, private sector, media, and government partners to increase the effectiveness of MAP. Finally, EngenderHealth staff coordinate provincial MAP Networks, creating a space for gender activists to share lessons learned, and formulating a platform for national advocacy efforts, such as participating in the development and adoption of the HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011.

Recently, EngenderHealth developed additional programming linked to voluntary counseling and testing and palliative care. In 2006, EngenderHealth carried out research to investigate why men were not testing for HIV. In response to the findings of this research, EngenderHealth created a counseling and testing (CT) program consisting of a mobile vehicle that focuses on getting men to test. In addition, it has become apparent that more men need palliative care. Thus, EngenderHealth has recently launched a program to meet the specific needs of men dealing with the stigma and stress of living with HIV, as well as other issues related to gender norm transformation.

ACTIVITY 1: University Based Counseling and Testing

EngenderHealth will continue to support CT that has been provided on five government-supported university campuses to increase access to young men and women. Using PEPFAR funds, EngenderHealth will expand these services to three additional universities outside the Western Cape. Transformation Agents (peer educators) will be trained, according to South African Government (SAG) guidelines, to promote CT through workshops and community mobilization on campuses. It is estimated that EngenderHealth will reach more than 100 students per month per campus with these activities. EngenderHealth will also use a mobile CT unit, staffed with professional nurses and counselors as per SAG guidelines, to provide CT services on campuses. Education materials, which will also comply with SAG policies, will be designed, developed, and tested to spread the message. A monitoring and evaluation system will be developed and utilized to track the effectiveness of the activities on campuses.

Students will be referred for TB screening and for CD4 count and ARV services when necessary. This activity consists of three components: (a) provide support to CT sites at eight tertiary institutions through sub-agreements; (b) develop referral systems to CT sites; and promote CT among students. Activities will also include training of counselors, with a focus on gender counseling, couple counseling, and stigma reduction. Additionally, CT outreach days will be organized to introduce CT to the wider campus population, reaching those who do not use the who do not use the university health clinic. During these outreach days, testing booths and the mobile CT unit will be will be placed at strategic points throughout the campuses and CT services offered to all. These booths will be designed to ensure confidentiality. Posters, posters, campus radio, and other media will be used to attract students. Referral systems for HIV-infected students to existing support groups and media services will be established, and those students testing negative will receive reinforced prevention messages. EngenderHealth will collaborate with the universities’ health services to help build sustainable programming.

ACTIVITY 2: Community-Based Counseling and Testing

EngenderHealth will expand their reach of CT services through additional mobile testing drives. Special community CT drives promote CT services to men in the community. EngenderHealth will team up with its MAP partners in Gauteng, Limpopo, KwaZulu-Natal, North West, and Western Cape to sponsor community CT drives. EngenderHealth's mobile clinic is designed to ensure confidentiality. Experience has shown that mobile testing will attract a large number of people who would not usually visit clinics. This activity will improve and expand on the work already conducted in the inner-city area of Johannesburg. In addition to the nurses, male Transformation Agents (peer educators) have been trained on gender-specific counseling, couple counseling, and stigma reduction. All training has been approved by the South African government. Referral systems for HIV-infected people to existing support and medical groups will be established, and those testing negative will receive reinforced prevention messages. A follow up system will be established

Activity Narrative: to ensure that those referred to get the necessary services. EngenderHealth will also sub-contract the Township AIDS Project to provide additional confidential male-friendly mobile CT testing throughout Gauteng.

ACTIVITY 3: Health Service Provider Training

EngenderHealth will train public sector healthcare providers in Gauteng and Western Cape. Training will adhere to South African government policies, and will aim to improve CT services, taking into account male-specific needs. By linking with the public sector, EngenderHealth intends to build more sustainable programs. The improvement of services will, in turn, increase men's utilization of HIV services, CT, TB screening, antiretroviral treatment uptake and adherence, and their support for their partners' participation in these services, especially prevention of mother-to-child transmission (PMTCT). EngenderHealth's programs will also improve the quality and availability of male-friendly HIV services. Staff will focus on key target areas, linking its prevention and palliative care programs to these CT efforts. Staff expect to conduct quarterly training, reaching at least 30-40 providers per training.

ACTIVITY 4: National and Local Government Key Stakeholder Program

Using the CT mobile unit, EngenderHealth will provide CT services to outlets at public sector institutions, such as the South African Police Services. Working through these government offices and linkages with communities, CT services will be provided to encourage more men to know their status. The CT mobile unit will be available at community events, government workplace HIV and AIDS awareness days, and other important events. Employees and community members will be encouraged to test. EngenderHealth recognizes the importance of public sector partnerships on the sustainability of such programming. On a monthly basis, CT drives will be take place in various parts of Gauteng, Limpopo, Northwest and KZN provinces.

ACTIVITY 5: Monitoring and Evaluation

EngenderHealth staff will continue to monitor and evaluate the project through various process and impact assessments. Specific monitoring plans have been developed to assess CT programs. Each training session and community event is documented, and knowledge and attitudinal shifts among participants is examined.

Activity ID:	7991.08	**Planned Funds:**	$1,940,000
Activity System ID:	13906		

Activity Narrative: SUMMARY:

University Research Co., LLC (URC) works with the national and provincial Departments of Health in South Africa to expand access to and uptake of HIV testing and counseling. URC's major strategy is to assist NDOH/PDOHs in implementing provider-initiated HIV testing, with the option to opt-out, to reduce missed opportunities for HIV identification and further spread of HIV in the country. URC will use a collaborative approach for rapidly expanding the HIV testing services. The approach will include integrating HIV testing with antenatal care, sexually transmitted infections (STI), tuberculosis (TB), family planning (FP) and general clinical service areas. Training of program managers and healthcare providers in strategies to expand uptake of HIV testing and counseling rapidly will be a focus. URC will place temporary clinical staff to provide HIV testing in high volume facilities where current staff are unable to meet the demand for testing, thus ensuring that HIV clients are referred for onward treatment and support services. Finally URC will strength supervision and monitoring systems to ensure provision of high quality HIV testing. Support will also be provided to improve recording and reporting systems for HIV testing at all levels. The major emphasis area is local organization capacity development, with minor emphasis on quality assurance and supportive supervision, network/linkages/referral systems, and training. The activity targets public health workers, community-based organizations (CBOs) and faith-based organizations (FBOs), program managers and community volunteers, youth and adults, and STI, TB, and general clinic attendees.

BACKGROUND:

Uptake of HIV testing remains low due to limited provision of this service at most facilities, staff shortages as well as stigma and perceptions about poor follow-up and treatment options available for people with HIV and AIDS. Since 2006, URC has been working through a CDC-funded program to expand uptake of HIV testing at healthcare facilities in five provinces (Mpumalanga, KwaZulu-Natal, Limpopo, North West, and Eastern Cape) to increase uptake of HIV testing. The basic strategy is to help healthcare facilities introduce provider-initiated HIV testing and counseling as referred to in the HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011. This is being achieved by integrating provider-initiated HIV testing, with the option to opt-out, with TB, STI, FP, antenatal care and other general clinical services targeting both adults and youth. In FY 2008, URC will continue using the district-based HIV testing expansion model whereby public healthcare facilities will be assisted to increase uptake of HIV testing through direct provision of high quality provider-initiated services as well as through referrals to CT where direct HIV testing provision is not possible. In clinics that lack the requisite number of staff or the existing staff do not have the appropriate skills for initiating HIV testing; URC will place temporary staff (counselors and testers) to roll out the HIV testing services. The maximum duration of temporary staff assignments to a facility will not exceed six months. URC will develop the capacity of healthcare workers in their ability to provide high quality provider-initiated CT services, including post-test counseling for HIV-infected and uninfected persons.

ACTIVITIES AND EXPECTED RESULTS:

URC will carry out eight separate activities in FY 2008.

ACTIVITY 1: Assist NDOH to Streamline Policies and Develop Guidelines on Provider-initiated HIV Testing and Counseling

URC will work with the National Department of Health (NDOH) to develop a policy framework to streamline the integration of provider-initiated HIV testing in clinical settings. URC will support policy dialogue workshops at national and provincial levels to expedite the development of the policy framework as well as operational plans.

ACTIVITY 2: Develop District-based HIV Testing Expansion Strategy

URC, in consultation with provincial health offices, will identify target districts for HIV testing rollout. All facilities in a district will be covered under URC's HIV testing expansion program. URC will assist each focus district in developing a strategy for increasing uptake of provider-initiated HIV testing services. A typical strategy will include the following elements: (a) training facility staff in provision of HIV testing services; (b) monitoring key performance indicators (number of people trained; number of people who receive the HIV testing services, number of HIV-infected people referred for onward treatment and support services percent of providers who follow national guidelines for HIV testing and counseling; quality of testing services); (c) maintaining a training schedule (who will be trained, when will they be trained); and (d) supervising and mentoring (who will be responsible for providing supervision and mentoring to facilities to ensure the HIV testing is being integrated and the quality of services are per national standards, etc.). Each district will establish a HIV testing expansion team representing HIV, maternal and child health, TB, and STI directorates. These teams will be responsible for reviewing results every three months to determine if HIV expansion strategies are producing desired results.

ACTIVITY 3: Establish Baseline HIV Testing and Counseling Uptake Levels in Each New Facility

URC staff will review clinic logs and patient records to establish baseline HIV testing uptake, and referrals for antiretroviral treatment (ART) in various clinical settings (TB, STI, antenatal health clinic, etc.). These assessments will help the facility teams identify clinical services that are offering CT as well as the levels of uptake. The rapid assessments will also examine the quality of services that may be affecting the CT uptake. The assessments will target both service providers and CT clients (those who accept and those who opt-out). Observations, chart and record reviews, and interviews are some of the approaches that will be used for data collection.

ACTIVITY 4: Training

URC will work with the departments of health to train clinic staff (doctors, nurses, midwives, counselors, and testers) in provider-initiated HIV testing and counseling. Training will focus on how to provide basic pre-test information and how to provide post-test counseling to HIV-infected and uninfected persons. The training will also include a module on the management of provider-initiated HIV testing, which covers logistics, recording and reporting, referral systems for HIV testing (for sites that are unable to provide testing within their sites) and ART. Specific case studies will be presented and participants will work in groups to identify

Activity Narrative: gaps in CT services and suggest possible solutions. URC will provide job-aids, wall charts, and other needed materials to improve compliance with clinical and counseling guidelines.

ACTIVITY 5: Referrals and Linkages

Not all service providers or facilities will be able to offer HIV testing within their facilities. In such instances, URC will work with provincial and district departments of health to develop referral linkages to ensure that clients have easy access to services. URC will also develop linkages between CT sites and sites offering ARV treatment.

ACTIVITY 6: Community Linkages

URC will assist each participating healthcare facility to develop community linkages to increase awareness as well as uptake of HIV testing services. This will be done through building partnerships with local community- and faith-based organizations working in the catchments areas of clinics.

ACTIVITY 7: Compliance Audits

URC will conduct annual compliance assessments in a sample of participating facilities to assess whether the staff complies with the national HIV testing and counseling guidelines. These assessments will also examine the quality of performance data reported to the program.

ACTIVITY 8: Strengthening Quality Assurance and Supervision System

URC will train district and facility-level supervisors in quality assurance and quality improvement methods and facilitative supervision techniques for improving the quality of CT services. These activities are expected to increase uptake of HIV CT in 150 healthcare facilities (100 current and 50 new facilities) by assisting them to rapidly expand CT services. Facilities receiving URC assistance will provide HIV testing results to 100,000 men and women as a result of the integration of HIV CT with other high volume health services. URC will train 1,400 healthcare workers in CT integrated with antenatal care, TB, STI and general health services. By focusing on promoting the uptake of counseling and testing through community structures and increasing local capacity, URC will contribute to the PEPFAR goals of 10 million people in care and 7 million infections averted.

Planned Funds: $446,200
Activity System ID: 13874

Activity Narrative: SUMMARY:

University Research Co., LLC/Quality Assurance Project (URC/QAP) will work in 140 South African Department of Health (DOH) facilities in five provinces to improve the quality of provider-initiated testing and counseling (PITC) services through training, mentoring and introducing quality assurance (QA) tools and approaches. The essential elements of QA support include assuring technical compliance with evidence-based norms and standards, improving interpersonal communication and counseling, and increasing organizational efficiency. The major emphasis area for this activity is quality assurance/supportive supervision with minor emphasis on development of network/linkages/referral systems, training and needs assessment. The activity targets public health workers, community-based organizations (CBOs), faith-based organizations (FBOs), program managers, community volunteers, children, youth, adults, family planning clients, and pregnant women.

BACKGROUND:

URC/QAP has been supporting DOH facilities in five provinces (Eastern Cape, KwaZulu-Natal, Limpopo, Mpumalanga, and North West) to improve CT services. The focus of this activity has been on improving counseling skills, as well as better integration of CT in several high-volume services. South Africa continues to face major problems in increasing CT uptake among high-risk groups. Stigma, as well as fear of knowing one's HIV status, remains primary reasons for low uptake of CT. In addition, most men do not visit health centers unless they are very sick, resulting in a low number of men requesting CT. URC/QAP will increase the awareness about CT among communities by creating linkages between public and community-based facilities, and by actively promoting strategies that involve men. Integrating HIV and AIDS services with other high volume and problem-prone health services such as antenatal care, family planning, sexually transmitted infection services, as well as other curative health services, will improve social mobilization and public awareness.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Establish Facility-level Quality Improvement Teams

URC/QAP will work with facilities to identify a core team representing staff from various clinical services. The facility-based teams, with support from URC/QAP and DOH staff, will be responsible for plans for improving uptake of quality of CT services in various clinical settings. Each facility team will conduct a rapid baseline assessment (if this has not already been completed) to identify quality gaps in current CT services. The facility teams will use these assessments and QA tools to develop and implement the quality improvement plan. URC/QAP will assist facility teams in developing strategic plans for improving access to and quality of CT services. PICT services will be linked with high-volume and problem-prone services, such as TB, STI, FP, and antenatal care services, which have large proportions of HIV-infected clinic attendees. URC/QAP will also integrate routine HIV testing services, thereby increasing access to CT in all clinical settings. Emphasis will be placed on increasing recruitment of couples and families, including children and adolescents, to CT services. Facility staff will promote access and availability of confidential HIV testing, ensure that HIV testing is informed and voluntary, ensure effective and prompt provision of test results for all clients who undergo HIV testing, utilize a prevention counseling approach aimed at personal risk reduction for HIV-infected persons and those who have a higher risk of HIV exposure. URC/QAP will ensure that all facility staff are aware that HIV prevention counseling should focus on the client's unique personal circumstances and risk, and counseling should help the client set and reach an explicit behavior-change goal to reduce the chance of acquiring or transmitting HIV.

ACTIVITY 2: Human Capacity Development

Staff will receive QA training which will include specifics on CT quality, the meaning of quality in services, and compliance with national guidelines. Emphasis will be placed on the indicators used to monitor clinical performance, such as the presence of guidelines at facility level or the knowledge and skills of counselors. Specific case studies will be presented during the training, and participants will work in groups to identify quality gaps and suggest possible solutions. URC/QAP will provide job-aids such as wall charts to improve compliance with clinical and counseling guidelines. URC/QAP will visit each facility and CBO/FBO at least twice a month to provide on-the-job support and mentoring to healthcare workers in participating facilities. The mentoring will focus on improving skills of CT and other high-volume clinical service staff on HIV counseling and referring. During these visits, URC/QAP will also review program performance data.

ACTIVITY 3: Referrals and Linkages

URC/QAP is working on a continuum of care model for all HIV-infected persons. The model emphasizes the identification and early referral of all people living with HIV (PLHIV) to care, treatment, and other support services. As part of this mandate, URC/QAP works to link different levels of care (facility, CBO, FBO, home-based organization) and different services to minimize missed opportunities. To ensure that CT is widely available, various innovative CT approaches -- such as family-based, door-to-door, community-based, outreach services, youth focused and within home-based care -- will be incorporated into existing programs. URC/QAP will continue to expand this focus and promote available methods for prevention for all clients, including a specific focus on discordant couples. In addition, URC/QAP will continue to work with local CBOs and FBOs to increase community outreach and support for knowing one's HIV status. URC/QAP will train facility, CBO and FBO staff in analyzing their performance (outputs) and quality (compliance) indicators. The staff will use site-specific data to see if the interventions are increasing uptake of basic healthcare and support services on a monthly basis.

ACTIVITY 4: Building Sustainability

URC/QAP will train district and facility-level supervisors in QA methods and facilitative supervision techniques for improving the quality of CT services. URC/QAP has begun the process of reviewing the national CT guidelines and evaluating the quality of CT at facility level, in partnership with the provincial health departments at all levels. This will be a key focus area in the next 12 months. To ensure the quality and reliability of data obtained at all QAP supported sites, it has been necessary to ensure uniform reporting structures, with the introduction of QAP-specific data collection tools. Only URC/QAP staff utilize these

Activity Narrative: tools, as DOH facility staff have their own reporting registers which are facility and district specific. URC/QAP will conduct quarterly assessments in each facility/CBO/FBO to assess whether the staff are in compliance with the NDOH CT guidelines. At least once a year, sample-based surveys will be undertaken in a small number of QAP and non-QAP sites to assess the differences in compliance and other performance indicators.

URC/QAP will assist PEPFAR in reaching the vision outlined in the South Africa Five-Year Strategy by increasing access to CT services. URC/QAP work contributes to the PEPFAR goal of providing care to 10 million people affected by HIV.

Mechanism ID:	4632.08	**Mechanism:**	N/A
Prime Partner:	South African Clothing & Textile Workers' Union	**USG Agency:**	HHS/Centers for Disease Control & Prevention
Funding Source:	GHCS (State)	**Program Area:**	Counseling and Testing
Budget Code:	HVCT	**Program Area Code:**	09
Activity ID:	7932.08	**Planned Funds:**	$1,000,000

Activity System ID: 13819

Activity Narrative: SUMMARY:

This activity will provide access to comprehensive voluntary counseling and testing (CT) services in five provinces with initial emphasis in KwaZulu Natal. The Southern African Clothing and Textile Workers Union (SACTWU) program will provide training, support and supervision to CT counselors. SACTWU has five existing CT sites and intends to establish two additional sites in KwaZulu-Natal and one site in Western Cape, the two provinces with the largest union membership. Target populations include factory workers, nurses and other healthcare workers. CT services will be on site at the factory health facility.

BACKGROUND:

The Southern African Clothing and Textile Workers Union is South Africa's largest trade union organizing textile and clothing workers. It also organizes footwear, leather and retail workers. SACTWU members form part of the economically active population that has been identified as hardest hit by the epidemic and, due to work constraints, cannot access offsite CT services. Onsite services allows access to all employees including the nearly 66% of SACTWU's membership which is female.

SACTWU has a membership of approximately 110,000 members nationally. The SACTWU AIDS Project is a national program that provides services in five provinces, KwaZulu-Natal, Western Cape, Gauteng, Eastern Cape and Free State. The SACTWU AIDS Project was initiated in 1998 and developed into a national comprehensive program. Prior to FY 2007 SACTWU received PEPFAR funding as a sub-grant from the Solidarity Center. The voluntary counseling and testing (CT) program was initiated in June 2002 and is ongoing nationally, and received PEPFAR funding in FY 2006 through the sub-agreement. In FY 2007, SACTWU became a prime partner and received direct funding to scale up services in KwaZulu-Natal.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Capacity Building for Counseling and Testing (CT) Services

This activity will provide access to workplace CT services for SACTWU members and their dependents who are members of the communities in the five provinces, starting in KwaZulu-Natal. SACTWU has three general settings for service delivery: (1) the clinic setting, (2) the regional office setting, and (3) stand-alone sites within factory-based settings. This project, however, emphasizes is on the factory-based health facility setting. The program also includes training, support and supervision of CT counselors using the National Department of Health (NDOH) training model. PEPFAR funds will be used for human resources to employ nurses and counselors who will provide CT services, infrastructure (minor refurbishment), procurement of test kits, quality assurance using NDOH guidelines and supportive supervision and capacity development of the counselors. The nurses will provide a rapid test while lay counselors will perform pre- and post-test counseling. The site will be a down-referral site for ART and provide dispensing for antiretroviral treatment (ART) and care/support services. Initiation of ART will be done in nearby hospital accredited ART sites.

SACTWU will train lay counselors to provide CT services. The target group for this activity is shop-stewards, industry healthcare practitioners, and volunteers. The training includes pre- and post-training assessments.

ACTIVITY 2: Commodity Procurement

SACTWU will purchase rapid test kits and other expendable materials from a competitive pharmaceutical supplier. Purchasing staff will make sure that the tests used are recommended by the NDOH. Quality assurance testing will be done in compliance with national guidelines.

In FY 2008 SACTWU will expand the CT program to two new sites in KwaZulu-Natal. The national campaign among clothing and textile workers will be increased significantly with the additional funding. Community and Family members are also eligible for CT at the SACTWU sites.

The SACTWU activities contribute to the PEPFAR 2-7-10 goals.

Mechanism ID:	274.08	**Mechanism:**	Masibambisane 1
Prime Partner:	South African Military Health Service	**USG Agency:**	Department of Defense
Funding Source:	GHCS (State)	**Program Area:**	Counseling and Testing
Budget Code:	HVCT	**Program Area Code:**	09
Activity ID:	2982.08	**Planned Funds:**	$50,000
Activity System ID:	13827		

Activity Narrative: SUMMARY:

Counseling and testing is a critical point of entry to care and treatment services, supports HIV prevention, and is a pivotal component in the South African Department of Defense (SADOD) plan for the Comprehensive Care, Management and Treatment of HIV and AIDS. The South African Military Health Service has a scheduled health-monitoring program that includes HIV testing with pre- and post-test counseling. Many of the regions have opted for the establishment of a centralized health assessment and counseling and testing center. Routine counseling and testing (RCT) will be offered as an expansion to counseling and testing (CT) for individuals as part of sexually transmitted infection (STI) consultations, pregnant women and couples who plan a family, and CT performed as part of differential and TB diagnoses. Individuals themselves will make voluntary counseling and testing (VCT) requests.

CT has a positive impact on HIV prevention, and the advantages of early identification and management of HIV-infected individuals has been shown. This program area is supported through the development and sourcing of media items, pamphlets and posters to encourage members and dependants to request or accept an HIV test if they do not know their status or if they have been exposed to an activity with a high risk of HIV transmission.

One of the major obstacles to requests for and acceptance of CT is stigma and discrimination, and further support towards this program area is provided through the development and sourcing of media items, pamphlets, and posters towards the establishment of a non-discriminatory organizational environment. This includes media products aimed at informing members of the SADOD on the organizational HIV and AIDS policy and strategy, as well as the management of HIV and AIDS in the SADOD.

The primary emphasis area of this activity is infrastructure development, and minor emphasis is given to human resources, strategic information and training. Specific target populations include military personnel, children and youth (non-OVC), men and women of reproductive age, doctors, nurses and healthcare workers.

BACKGROUND:

The military community is considered a high risk group due to various factors that include foreign deployments and high mobility. CT provides an opportunity for prevention to both infected and uninfected individuals. This activity is ongoing. FY 2006 PEPFAR funds were used for renovations and upgrade of three centralized counseling and testing centers, and for training of healthcare workers. These activities will continue during FY 2007 and FY 2008. Counseling and testing takes place at all military health care facilities and therefore it is essential that all healthcare workers are trained in CT.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Offering of Routine Counseling and Testing/ Provider-initiated Testing and Counseling (PITC)

SADOD will upgrade healthcare facilities that will be used to provide confidential and effective HIV counseling and testing in highly populated military areas. Healthcare workers will be trained on PITC and RCT which will be supported by the development and printing of training material. SA DOD will develop information education and communication materials, which will be used to encourage members to accept an HIV test if they do not know their status, or, if they have been exposed to an activity with a high risk of HIV transmission. Best practices will be shared through attending PEPFAR CT partner meetings, publications in military and peer reviewed magazines and journals, and oral and poster presentations on effective and innovative programs at conferences and seminars.

Counseling and testing centers will be established using PEPFAR funding. These centers will enable confidential and effective CT for HIV, and in addition, will provide venues for the training of healthcare professionals in CT. Training will continue during FY 2007 and FY 2008. Supportive media campaigns will be established, and these campaigns will encourage voluntary requests for, and uptake of HIV testing. Uptake of counseling and testing services will be monitored and evaluated through the HIV Monitoring and Evaluation (M&E) plan of the SADOD HIV and AIDS program. The impact of media on the reduction of stigma and discrimination is monitored through the annual Knowledge, Attitudes, and Practices (KAP) survey that is a sub-component of the M&E plan.

Table 3.3.09: Activities by Funding Mechansim

Mechanism ID: 519.08
Mechanism: N/A
Prime Partner: University of KwaZulu-Natal, Nelson Mandela School of Medicine
USG Agency: HHS/Centers for Disease Control & Prevention
Funding Source: GHCS (State)
Program Area: Counseling and Testing
Budget Code: HVCT
Program Area Code: 09
Activity ID: 3070.08
Planned Funds: $150,000
Activity System ID: 13856

Activity Narrative: SUMMARY:

The University of KwaZulu-Natal (UKZN) Nelson Mandela School of Medicine (NMSM) is using PEPFAR funds to support the implementation and refinement of common clinical guidelines for HIV and AIDS management by traditional healers. Specific activities include (1) the standardization of HIV clinical staging for traditional healers; (2) collaborative introduction of patient record keeping, monthly data sheets and data transfer to the Medical School; and (3) provision of basic medical supplies to trained healers. The main emphasis area is first in training, with minor emphasis placed on human resources, logistics, policy and guidelines, quality assurance and supportive supervision, and strategic information. The target population includes Traditional Health Practitioners (THPs) in the private and public sector who are members of the KwaZulu-Natal (KZN) and Ethekwini Traditional Health Practitioner Councils.

BACKGROUND:

UKZN has an ongoing collaboration with associations of traditional healers in rural areas of Ethekwini District. Traditional healers are extremely influential and are a largely untapped resource in HIV prevention and mitigation on the community level. These activities began in August 2005 with the arrival of FY 2005 PEPFAR funding. NMSM is implementing the project in collaboration with the KZN and Ethekwini Traditional Healer Councils, with the eThekwini Health Unit, and the eThekwini District Health Office of the KZN Department of Health.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Training

Training will be provided through workshops run by the project training team (including senior traditional healers). The training includes sections on pre-pre-test counseling and post-post-test counseling, as the THPs work with patients whom they themselves refer for CT, and with many who consult THPs after receiving CT test results, seeking advice and counsel.

THPs on the project work both with HIV-infected patients who do not yet qualify for ART (CD4 count is too high), or patients who are already on ART, or on the waiting list for ART. Clinicians on the project and senior THPs who are part of the training team work with THPs in the project to ensure optimum management of these patients, and timely referrals and follow-up.

ACTIVITY 2: Referrals

NMSM is works closely with South African government colleagues to establish viable bi-directional referral pathways (including referral forms); and to formalize and enhance current events. This referral system includes referral for CT services. NMSM is working with the government to ensure that these referrals are captured in the Health Information System. Although public health staff are not currently permitted under the law to refer patients to THPs, the NMSM has developed a referral form in collaboration with the THPs and the government. This form permits the clinics to acknowledge receipt of the referred patient and to note whether the patient was assisted at the public health facility, and by whom. Patients can, and frequently do return to THPs.

ACTIVITY 3: Monitoring and Evaluation

A team of data monitors visit the THPs on an ongoing basis to collect patient record system data. This data includes information on whether patients have been referred for CT, whether patients have come to THPs with test results, whether the patients qualify for ART, whether they are on ART, and how the THP manages all of these patients. This data is entered into the project database. The project is also working on a process with local government to assure that referrals captured into the Health Information System will be communicated to the project team and captured in the project database. This will assist in determining the success of referrals for CT and ART.

Explanation of Training Activities

C&T 08 Explanation of Training Activities

1) Who is the target audience for the training?
The target audience for the training is the traditional health practitioners (THPs) enrolled in the project.
2) How will the training be used (e.g., trainees will become trainers, implement activities, supervise, etc.)?
Primarily the training is used by the trainees to enhance their work with their patients. The objective is to provide THPs with the requisite skills to counsel their patients on the advisability of getting tested for HIV, when appropriate, and to counsel those patients who have received HIV tests, whether positive or negative.
3) What topics are covered?
The training is part of the larger training program run by the project, which includes detailed understanding of what HIV is, where it came from, how it is transmitted from person to person (through all possible routes), and how to prevent its transmission. In this context, the necessity and advisability of HIV testing is explained, and the details of the testing procedure and technology are explained to THPs, so that they can clearly explain it to their patients. For Counseling purposes, the implications of positive and negative tests are covered. The patient response pattern acronym DABDA (Denial, Anger, Bargaining, Depression, Acceptance) is discussed and explored. The dangers of pre-existing depression, the necessity of partner notification, the implications for family income and welfare are explored in the context of the type of patients and the type of care and counseling given by THPs and expected of them by their patients.
A. The CT training session explains what the normal CT protocol is that patients can expect at CT clinic: What is CT, Benefits of CT, Stages in Voluntary Testing and Counseling, Rapid HIV Test used in South Africa, and Educating patients with HIV positive results
B. The ARV training session topics are Introduction, Goals of ART, Classes of ART, Side Effects, TB and ART, Adherence, Resistance, and AIDS treatment for Children
4) What is the duration of the training?
The specific C&T section forms part of one day during the five day HIV& AIDS training course run by the

Activity Narrative: project. But the related information, including information on ARV management and side effects, Opportunistic Infections and their management, and other relevant topics are covered during the week.

5) How frequent is the training offered?
The training is currently offered in alternate months.
6) Who is conducting the training?
The training team consists of the Project Coordinator and Co-PI who coordinates the training and specifically teaches the section on Origins, What is a Virus, how is it transmitted, and how does it cause disease.
The Clinical Coordinator and head of the Dept. of Family Medicine, teaches on clinical management of HIV infected patients (Opportunistic Infections).
The Senior Nurse, who also has over 3 decades of experience in nursing and provides many practical examples of the advantages of prevention and culturally successful ways to deliver the message. This nurse, a native Zulu speaker, also provides translation for the Project Coordinator and the Clinical Coordinator.
Three Traditional Healers, who have years of experience in HIV & AIDS education.
A Masters-level public health specialist who assists with translation and cultural understanding.
Additional senior leaders from the traditional healer project team members ("sub-district coordinators") who assist in ensuring that their fellow healers understand the training content..

7) Is the training curriculum accredited by the South African Qualifications Authority (SAQA)? No
8) How do you assess training quality assurance? Pre- and post-workshop assessment questionnaires at refresher trainings.

Activity Narrative: SUMMARY:

Ubuntu Education Fund (Ubuntu) will expand and improve comprehensive counseling and testing (CT) linked to prevention, care and treatment services at two clinic sites and a freestanding site, which will be a part of Ubuntu's multi-purpose community center in Port Elizabeth, Eastern Cape. Emphasis areas include increasing gender equity in HIV and AIDS programs. Target populations include children under 5, children 5 -9, adolescents 10-14, adolescents 15-24, adults 25 and over, persons who engage in transactional sex, but who do not identify as persons in sex work, street youth, discordant couples, people living with HIV, pregnant women, and orphans and vulnerable children (OVC).

In order to target high-risk groups that are statistically less likely to visit clinicmobile CT will be done in every quarter. Target populations include out-of-school youth and men, For the past six years, Ubuntu has provided targeted HIV prevention community outreach activities in the townships of Port Elizabeth. Ubuntu has a comparative advantage in the community with its great capacity to gather large groups of community members and then provide testing in the community

BACKGROUND:

In 2005, Ubuntu began providing comprehensive CT and access to care and treatment services at KwaZakhele Day Hospital, a large outpatient public healthcare center located in the middle of an informal settlement. Counseling and testing (CT) services are linked to community outreach in and around the clinic, and focus on CT uptake and treatment availability. CT counselors are trained to provide family and couple counseling, and risk reduction counseling to clients who test HIV positive. Counselors assist with partner referrals to reduce onward HIV transmission and ensure access to prevention of mother-to-child transmission (PMTCT) services. Clients who test negative, but who display high-risk behavior, also receive risk reduction counseling. CT counselors ensure that clients testing seropositive receive CD4 testing and obtain their results. Counselors enroll HIV-infected clients into Ubuntu's comprehensive family case management program providing care and support services. The district and provincial health departments support Ubuntu's strategy to work with and capacitate public clinics and hospitals to support CT uptake. CT counselors received a 10-day training from Hope Worldwide that meets national and international standards.

Ubuntu became a PEPFAR partner in FY 2007 and has only recently received funds so does not yet have PEPFAR-funded results to report.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Expansion of CT

This activity builds on existing services at KwaZakhele Day Hospital and serves as an entry point to comprehensive HIV and AIDS care services at public clinics. In FY 2008 Ubuntu will expand CT services to Zwide Clinic. There will be three CT staff at each of the two sites; staff will consist of a professional nurse skilled in HIV management and two CT counselors on site. Mobile CT will be done every quarter targeting youth during school holidays. All sites feed into Dora Nginza Hospital. The CT teams will be deployed full-time at the sites and their mandate will include in-service training, quality assurance and provision of technical support to ensure that patients receiving antenatal or family planning services, or presenting with AIDS-related opportunistic infections, are offered CT and integrated HIV management, particularly in antenatal and tuberculosis (TB) services. The professional nurse will provide technical support to nursing staff and clinic lay counselors.

In order to target high-risk groups which are statistically less likely to visit clinics, such as out of school youth and men, mobile CT will be done every quarter. For the past six years, Ubuntu has provided targeted HIV prevention community outreach activities in the townships of Port Elizabeth. Ubuntu has a comparative advantage in the community with its great capacity to gather large groups of community members and then provide testing in the community.

ACTIVITY 2: Expansion of Couple and Family Counseling

The Zwide Clinic team will build on their success in providing couple and family counseling, and in FY 2008 the team will focus on increasing male uptake of CT. Ubuntu reaches couples in two ways: (1) by conducting outreach to encourage couples to access CT; and (2) by requesting people testing seropositive to refer and accompany their partner(s) for CT. Ubuntu provides couple counseling sessions based on safer sex, family planning and supporting a partner living with HIV to discordant couples. Parents testing seropositive are asked to bring their children for CT, and OVC and children with parents who are enrolled in our HIV care services are routinely offered counseling and testing. Children are counseled and tested with their guardian's consent and in their presence. The CT program is fully integrated with treatment services at the clinic sites; CT counselors also provide treatment readiness and adherence counseling. These sites also manage pediatric HIV patients after they are referred back from the Paediatric ARV Unit at Dora Nginza Hospital. Children living with HIV are highly underserved in target areas and Ubuntu is pursuing every opportunity to identify them.

ACTIVITY 3: Counseling and Testing for Pregnant Women and Infants

Services also focus on uptake of PMTCT services by pregnant women. Pregnant women and infants must to be identified earlier for more timely enrolment into treatment. Women and infants enrolled in PMTCT programs are monitored to ensure compliance with PMTCT program that has been adapted by the National Department of Health. All babies born by HIV-infected mothers will get a routine polymerase chain reaction (PCR) test starting from six weeks after birth. CT staff develop risk reduction plans with the client as part of ongoing counseling, and this also serves to reduce onward HIV transmission and prevent HIV infection in individuals identified with as practicing higher risk behavior. Clients with symptomatic sexually transmitted infections (STIs) are referred to on-site treatment. Male and female condoms are available to all clients accessing CT. All clients testing seropositive are referred for CD4 testing, and referred for enrolment in treatment readiness if indicated. They are enrolled in Ubuntu's on-site care services including a support

Activity Narrative: group, food garden and family case management services. Clinic sites maintain a daily registry of all clients accessing pre- and post-test counseling disaggregated by gender, age, and test results. Results are collated monthly and submitted in standardized reports to the National Department of Health (NDOH).

ACTIVITY 4: Free-standing CT Site

In 2009 Ubuntu will open a free-standing CT center at the organization's offices in Zwide. Non-medical sites provide access to higher risk populations, particularly youth and men. The provincial and district health departments strongly support Ubuntu's initiation of non-clinic based CT provision. There is significant unmet demand for CT services especially in a non-specialized site that reduces stigma by providing other services and that ensures confidentiality and a youth-friendly approach. The CT center will be part of a community center providing an array of other programs including a health resource library, career center and computer laboratory. The CT center will be staffed by three full-time counselors and a professional nurse. The center will be open five days a week on a walk-in basis. The SAG has agreed to provide rapid test kits.

ACTIVITY 5: Referrals to On-site Care Services

Clients accessing CT services will be referred to on-site care services if they test seropositive. Ubuntu's care program is integrated with clinical services in HIV management including CD4 testing, ART readiness and adherence, ongoing psychosocial support and counseling, risk reduction and couple counseling, referrals to PMTCT, access to income grants, home-based care, nutritional support, support groups and referrals to other service providers. Ubuntu has developed strong referral partnerships to help establish a continuum of care for PLHIV and their families, and to coordinate access to service providers including clinics and hospitals, the Department of Social Development, the Department of Home Affairs, Childline, the Rape Crisis Centre at Dora Nginza Hospital, the National Institute for Crime Prevention and the Reintegration of Offenders (NICRO), Family and Marriage Society of South Africa (FAMSA), community-based organizations, non-governmental organizations, community home-based care providers and hospice services.

Ubuntu's services will contribute to the PEPFAR 2-7-10 goals by improving access to and quality of CT services for highly vulnerable populations to identify HIV-infected persons, reduce onward transmission of HIV between serodiscordant partners and from mother-to-child, and improve health and timely entry to ART through early diagnosis of HIV infection.

Table 3.3.09: Activities by Funding Mechansim

Mechanism ID: 520.08 **Mechanism:** CAPRISA Follow On

Prime Partner: University of Kwazulu-Natal, Nelson Mandela School of Medicine, Comprehensive International Program for Research on AIDS

USG Agency: HHS/Centers for Disease Control & Prevention

Funding Source: GHCS (State)

Program Area: Counseling and Testing

Budget Code: HVCT

Program Area Code: 09

Activity ID: 3071.08

Planned Funds: $470,000

Activity System ID: 13858

Activity Narrative: The activities listed below are intended to be competed and awarded to a follow on partner to UKZN CAPRISA since that award is ending in FY 07.

SUMMARY:

Activities are carried out to support comprehensive counseling and testing (CT) services in the rural area of Vulindlela and the CAPRISA eThekwini Clinical Research Site, which is located next to the TB clinic in Durban. In addition, activities will involve the continuation of expanding CT among two high-risk groups at two established treatment sites in KwaZulu Natal. These high-risk groups include sexually transmitted infection (STI) patients, and an adolescent population in rural Vulindlela. This partner will follow the National Department of Health's recommended algorithm for rapid HIV testing.

The primary emphasis area for this activity is Human capacity development, with minor areas of emphasis on community mobilization and on information, education and communication. Specific target populations include children and youth (non-OVC), out-of-school youth and men and women of reproductive age.

BACKGROUND:

CAPRISA was established in 2002 as a not-for-profit AIDS research organization by five major partner institutions: University of KwaZulu-Natal, University of Cape Town, University of Western Cape, National Institute for Communicable Diseases (NICD), and Columbia University. The headquarters of CAPRISA are located in the Doris Duke Medical Research Institute at the Nelson R. Mandela School of Medicine, University of KwaZulu-Natal. The PEPFAR-funded CAPRISA AIDS Treatment (CAT) Program was initially started as a supplemental effort to deal with the large volume of HIV-infected clients that were screened out of CAPRISA's other research studies.

The existing counseling and testing services at two treatment sites will be continued with FY 2007 funding. The strength of the current CAT program is that it provides an integrated package of prevention and treatment services and provides an innovative method of providing antiretroviral treatment (ART) by integrating the TB and HIV care at both an urban and rural site. In 2006, CAPRISA began offering counseling and testing services to two high-risk populations in order to enhance the uptake of counseling and testing in these populations. This service has enabled the CAT program to create a synergy between treatment and prevention services while simultaneously identifying high-risk HIV individuals to enhance their prevention potential through ART.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Voluntary Counseling and Testing

The voluntary counseling and testing (VCT) services will be continued in the rural primary care clinic in Vulindlela and the eThekwini Clinical Research Site based at the Prince Cyril Zulu Communicable Disease Centre (CDC) in Durban. All CT is currently offered in conjunction with an NGO, known as Open Door, to patients attending these two facilities. The CT that is offered includes prevention education and condom distribution.

ACTIVITY 2: Provider-Initiated Testing and Counseling

Provider-initiated testing and counseling (PITC) will be offered to all TB and STI patients at the Prince Cyril Zulu Communicable Diseases Centre (CDC). The Centre is a large local government clinic that provides free diagnosis and treatment of TB and sexually transmitted infections (STIs). Annually, approximately 4,000 cases of STIs, are treated at this clinic, with an average of about 135 STI patients per day. Given the high HIV prevalence of 63% in this group, these patients are a high-risk group for acquiring and transmitting HIV. The clinic sees approximately 8,000 TB patients per month, with a HIV/TB co-infection rate of approximately 65%. All patients attending both the STI clinic, as well as the TB clinic are routinely offered counseling and testing by the STI nurses and the health educators located in the TB facility. Male and female patients seeking STI or TB care at the clinic are offered group counseling and individual HIV testing. Those who test HIV positive are individually post-test counseled and referred for ongoing supportive counseling and medical care in the CAT program. The CAT program has partnered with a community-based organization, (CBO), TAI for the provision of health education, peer education and support to program participants. Although the TB clinic sees approximately 8,000 cases per month, more than 95% of these are repeat visits for either follow-up clinic visits, or X-Ray visits. Approximately 400 newly diagnosed TB patients are counseled each month. It is likely that the Centre will reach the target of 7,500 when efforts are combined with the STI patients and with the activities for adolescents described below.

ACTIVITY 3: Routine Testing for Adolescents

This program targets the adolescent population in rural Vulindlela. South African adolescents, particularly young women, are at high risk of acquiring HIV. Adolescents in the area, primarily those utilizing the primary healthcare services for antenatal, family planning or STI services are routinely offered counseling and testing. The counseling and testing is coordinated with other programs and projects in the area. In addition, youth peer educators have been integrated within this program.

Thus far, antiretroviral treatment rollout activities have targeted those people that are most accessible, like those people visiting health facilities. This implies that activities has have not met the challenge of using ART provision to enhance prevention, especially prevention in HIV-infected individuals. In FY 2008 CAPRISA plans to continue targeting the two high-risk groups with client and provider-initiated testing and counseling. The expanded counseling and testing program will continue to exploit the synergy that exists between the promotion of counseling and testing and availability of high-quality HIV care to enhance both prevention and treatment in TB patients, STI patients and adolescents. HIV-infected persons will be referred to the CAT Program for follow-up treatment and care. HIV negative persons will be referred to other CAPRISA, government or NGO prevention programs. Importantly, this strategy begins to address the ethical dilemma of how scarce resources for HIV can be used effectively by focusing on high-risk groups and utilizing access to ART to enhance counseling and testing for treatment and prevention.

Activity Narrative: During FY 2008, the expanded counseling and testing service will not require additional counselors or field workers. However, the counselors and fieldworkers will receive ongoing training in counseling with role-playing to ensure high quality counseling and testing. As part of an internal quality assurance process, a senior counselor often analyzes counseling sessions, and training is based on common areas of deficiencies identified. A constant review process has been established to reflect of reasons for refusal of uptake of CT, and strategies have been implemented to address common reasons for refusal. A high refusal rate for testing was initially seen by male patients counseled by female counselors, and this was addressed by having male counselors on hand to see male patients. In addition, regular debriefing sessions are scheduled to allow counselors suffering from burnout to distress and support one another.

These results contribute to the PEPFAR 2-7-10 goals by improving access to and quality of CT services in order to identify HIV-infected persons and increase the number of persons receiving ARV services in three high risk groups; TB patients, STI patients and adolescents.

Activity ID:	8254.08	**Planned Funds:**	$300,000
Activity System ID:	13787		

Activity Narrative: SUMMARY:

The Project Support Association of Southern Africa (PSASA) will use FY 2007 funding to expand access to integrated services for HIV-infected and affected individuals in home-based care (HBC) programs by strengthening the linkages between HBC and voluntary counseling and testing (CT). This will be done by establishing referral mechanism with Family Health International's Mobile Support Units (MSU) and through strengthening referral systems with provincial Department of Health clinics. PSASA will refer HBC clients and community members to CT from underserved areas in Mpumalanga and KwaZulu-Natal provinces. The emphasis areas for the following activities are the development of network/linkages/referral systems, training and local capacity development. Target populations addressed are people living with HIV (PLHIV) and their families, health professionals, volunteers, and caregivers.

BACKGROUND:

PSASA is a non-profit organization who aims to create community partnerships prevent, mitigate, and alleviate the impact of HIV and AIDS. Home-based care programs are an integral component of this activity. Care at the home and community level is a strategy within the HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011. PSASA has established, and continues to support over 60 HBC programs. Many of these programs were established in partnership with the Mpumalanga Department of Health from 1998 onwards. In 2004, 127,614 clients received direct support from a PSASA project and more than 32,000 household members received training from community caregivers. Currently, PSASA will refer HBC clients to CT when a government clinic is nearby; however, much of the population lives in areas where access to CT is limited. These projects will be expanded under PEPFAR as part of PSASA's ongoing core activities. Tighter links between HBC and CT and antiretroviral treatment (ART) services will afford men and women the opportunity to improve their overall quality of life through integrated services. This project addresses the need to establish formal referral and follow-up mechanisms for CT and ART and other essential healthcare services in HBC programs. Through the use of MSUs, PSASA's referred clients will have better access to CT, diagnosis and treatment of sexually transmitted infections (STIs), ARV services, and family planning (FP). These integrated mobile services target HIV-infected individuals and their families, orphans and vulnerable children (OVC) and their families, HBC caregivers, as well as the surrounding communities.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Counseling and Testing Referral

In close collaboration with the Mpumalanga Department of Health, PSASA will, through referral, expand access to quality integrated services for infected and affected individuals. Services that will be targeted for referral to MSUs will include CT, ARV services, and STI screening in rural and underserved areas. These projects in Mpumalanga, where existing home-based care programs are operating, will have limited associations with existing referral facilities such as private or government CT providers. A Testing Coordinator will provide training in CT referral, follow-up, and communication skills to each of the HBC Coordinators. Mentoring and didactic case scenarios will also be used. The HBC Coordinators will assist the HBC worker to counsel one person or family per week and encourage or refer them for CT. The testing will be conducted by FHI but the home-based care workers will provide follow-up counseling. PSASA will strengthen links between the HBC program and the CT facility in 37 municipalities where PSASA-run HBC programs will not be reached by the MSU and where government or private access to CT is available. A tracking system will be formalized to track CT referrals. HBC workers, of which many are traditional healers, will receive additional training in CT referral and follow-up. This will be augmented through CT mentorship and follow-up by project coordinators. PSASA will continue to provide ongoing basic care and support services for its clients and refer clients and their family members, OVC and their family members and community members for CT. In many cases, PSASA's home-based care workers will accompany individuals (with consent) for CT. Working with the Testing Coordinator, the PSASA home-based care workers conduct community outreach to promote CT.

These activities will contribute to the PEPFAR 2-7-10 goals by increasing the number of people receiving counseling and testing and by increasing the number of people receiving ARV treatment.

Program Area: Counseling and Testing

Budget Code: HVCT

Program Area Code: 09

Activity ID: 2972.08

Planned Funds: $1,616,000

Activity System ID: 13795

Activity Narrative: SUMMARY:

Right to Care's PEPFAR program will be recompeted through an Annual Program Statement (APS) in 2008. Right to Care (RTC) will use FY 2008 PEPFAR funds to identify HIV-infected individuals by supporting selected antiretroviral treatment (ART) sites and through direct community-based access to counseling and testing (CT) in seven provinces, namely KwaZulu-Natal, Free State, Eastern Cape, Limpopo, Mpumalanga, Western Cape and Northern Cape. CT is used as a prevention mechanism to promote abstinence, be faithful and condoms, as well as an entry-point into care, support and ART. It is also an essential tool for fighting stigma and discrimination. The major area of emphasis is human resources. Minor areas of emphasis include community mobilization/participation, training and workplace program. Specific target populations include university students, adults, pregnant women, HIV-infected infants, truckers, and public and private sector healthcare providers.

BACKGROUND:

RTC's CT services are a continuation of ongoing activities. CT was originally part of RTC's holistic education, testing, care and treatment program for the employed sector, known as the Direct AIDS Intervention (DAI) program. RTC's CT activities have since expanded their reach through a range of partnerships with government sites, private sector providers and non-governmental and faith-based clinics and organizations, and are now reaching substantial numbers of clients from predominantly vulnerable populations, through clinic-based and mobile CT services.

RTC is currently implementing a program of CT for vulnerable populations. Testing is conducted by nurse networks, General Practitioner (GP) networks, mobile CT clinics or by sub-partner non-governmental organizations (NGOs). RTC implements workplace programs and often collaborates with a private sectorr partner, Alexander Forbes' Comprehensive Health and Wellness Solutions.

Uptake of on-site CT is reaching high proportions. Almost 90% of employees volunteer to go for CT. RTC supports the Access CT activities of treatment partners, including the Thusong network of private practitioners, several government sites, and non-governmental and faith-based organization sites. CT training is conducted by RTC's Training Unit as well as by several of RTC's sub-partners.

All RTC CT initiatives are coordinated through the Proudly Tested campaign. This campaign, a registered trade mark under RTC, is intended to create a brand that promotes regular CT for individuals and groups in all social levels. High-profile leaders within communities will promote this brand and strategy to create increased social acceptance of CT. The Proudly Tested activities will also include commercial CT, which will receive technical support through PEPFAR funds.

ACTIVITIES AND EXPECTED RESULTS:

RTC used FY 2008 funds to consolidate and expand its existing activities; building on past successes. RTC tested more than 52,000 clients, and trained 180 healthcare workers and lay counselors in the first three quarters of FY 2007.

ACTIVITY 1: Assistance to South African Government Sites

FY 2008 funds will support the continuation of assistance to government sites, NGO, and FBO clinics as well as to private practitioners to ensure the widespread availability of CT services. PEPFAR funds will largely be used for human capacity development including (a) salaries for consultants and part-time healthcare workers at all CT providers; (b) sub-grants for NGO and FBO clinics and organizations that are partially earmarked for nurses and lay counselors; (c) direct salary support for lay counselors and nurses at government sites; and (d) support for a fee-for-service arrangement with private contractors such as the private and Access CT programs and a network of private practitioners for the Thusong program. PEPFAR funds will also be utilized to address minor infrastructure needs such as for the delivery of CT services at NGO, FBO and government sites, for the maintenance of RTC's mobile clinics, and for the procurement and distribution of HIV test kits for NGO and FBO clinics.

ACTIVITY 2: Support for CT Providers

RTC will support all its CT providers by disseminating guidelines on CT, by providing quality assurance through sharing best practices and supportive supervision, and by offering guidance on monitoring and reporting of results. RTC and several of its sub-partners will also provide ongoing training in CT services for lay counselors and nurses (either employed by RTC or its partners, or external health workers) to ensure strict adherence to CT protocols and high quality counseling. RTC will also support healthcare providers in public health facilities to implement provider-initiated testing and counseling (PITC) as recommended in the HIV & AIDS and STI Strategic Plan for South Africa, 2007–2011. Providers will be trained on PITC as well as on conducting HIV rapid tests. This activity will include internal and external quality assurance around rapid testing.

ACTIVITY 3: Prevention and Behavior Change

The success of CT as a prevention activity should include promoting prevention and behavior change including "abstinence, be faithful and condom use", reducing stigma, encouraging disclosure and couple counseling. HIV-infected individuals are referred from CT to care services. RTC's counselors are trained to provide counseling services in all prevention areas. In FY 2007 RTC will maintain models of increasing transition to care including the use of CD4 count testing at the time of CT to encourage early patient staging for referral. Access to a 24-hour call center for post-test counseling has also proven to be beneficial.

ACTIVITY 4: Strengthening Expansion of Referral Networks and Increasing Initiation to Treatment

The strengthening and expansion of referral networks and linkages with care and treatment services for clients identified as HIV-infected remains one of the central focus areas of RTC's CT activities. Linkages with community mobilization and outreach activities will be continued to promote the uptake of CT services and to normalize CT-seeking behavior using community lay counselors and educators. These linkages and

Activity Narrative: capacity building with indigenous organizations will affect long-term sustainability. Prior to all CT activities, referral linkages will be established for direct referral at the time of CT. A CT module through Therapy Edge, an electronic patient database system, is being developed to track all positive CT clients, for call center counselors to follow-up and direct referral and regular CD4 test.

ACTIVITY 5: Community-based CT

The strategic mix of clinic-based and community-based CT will see further expansion of activities which will bring CT services to the doorstep of impoverished populations and high-risk, male dominated groups such as truck drivers, farm workers, small and medium enterprise (SME) employees, DAI contract/temporary workers, tertiary students, rural communities and residents of informal settlements. Mobile and rural clinics, home-based CT in partnership with the Home Loan Guarantee Company, and clinic-linked units will be established in vulnerable communities. Through a public-private partnership, RTC will increase CT uptake in a cost-sharing model with commercial companies. PEPFAR funds will be used for technical support, training and CT kits, while the commercial partner will cover the substantial direct cost of nurses, facilities and other direct activities. This cost-sharing model will enable CT of contract workers, employees and unemployed persons.

Emphasis will be placed on consolidating and expanding CT services for couples, infants and children, and cross-testing (testing STI and TB patients for HIV and vice versa, and testing of pregnant women).

FY 2008 funds for counseling and testing will be used by Right to Care to expand services in government sites, NGO and FBO clinics as well as to private practitioners to ensure the widespread availability of CT services. The organization will assist the National Department of Health and the provincial Departments of Health in Gauteng, Northern Cape, and Mpumalanga with activities for National Testing Week. The South African National Testing Week will include enhanced testing at mobile and facility-based sites and other non -traditional testing sites. Right to Care will also focus on improving provider-initiated testing and counseling.

RTC's CT activities will contribute to the PEPFAR 2-7-10 goals by identifying HIV-infected individuals for care, support and treatment and preventing infection in those who are HIV-negative. This will contribute to the PEPFAR vision outlined in the Five-Year Strategy for South Africa by expanding access to, and availability and quality of CT services.

Mechanism ID: 2801.08 **Mechanism:** N/A

Prime Partner: HIVCARE **USG Agency:** HHS/Centers for Disease Control & Prevention

Funding Source: GHCS (State)

Budget Code: HVCT

Activity ID: 7988.08

Activity System ID: 13771

Program Area: Counseling and Testing

Program Area Code: 09

Planned Funds: $291,000

Activity Narrative: SUMMARY:

HIVCare will use FY 2008 funds to work with the Free State Department of Health (FSDOH) to provide antiretroviral treatment in private health facilities to patients who do not have medical insurance (either through referrals from the public sector, or self-referral). The Free State has mainly a rural population, with only two major metropolitan areas (Bloemfontein and Welkom). In addition, the government rollout of HIV care and treatment has been geographically limited with only one treatment site in each of the five districts.

The Medicross Medical Centre, a well-equipped private primary health center, provides the main resource base in conjunction with three other sites in Bloemfontein, another two in Welkom and nine other centers located in rural towns within the province. The centers will provide an effective means of providing HIV care and treatment to patients who are either referred from state facilities or who access the sites by word of mouth. The major emphasis area for this program will be commodity procurement, with minor emphasis given to logistics and the development of networks, linkages and referral systems, quality assurance and supportive supervision. The target population already includes men and women; families (including infants and children) of those infected and affected factory workers and other employed persons, and government employees - specifically teachers, nurses and other health workers. A further specific population that will be targeted will be secondary school children as HIVCare has determined that a definite need exists. Activities will include active prevention campaigns, HIV counseling and testing (CT) and treatment for those diagnosed. The most significant target group is those persons in the economically active age group of the population that cannot access services in the public health system. Additional attention is to be given to the screening and treatment of TB amongst the patients attending the program. The linkage with the youth centre will ensure that the program will have a larger proportion of younger persons being attended to, specifically adolescents aged 10-14 and 15-24. This focus on youth should further encourage involvement with the street youth and it is anticipated that the program will be marketed among those NGOs working with the street youth as a testing and treatment site.

BACKGROUND:

The HIVCare project began in June 2005 with PEPFAR funding. The main aim of the program was to match the FSDOH with partners from the private sector (in this case Netcare, the largest private sector health provider in South Africa, through their primary health centers) in order to build private sector capacity and absorb some of the burden from state facilities. Many FSDOH centers have waiting lists of people for ARV treatment and given that CT is the mainstay of the National Strategic Plan, these waiting lists are likely to continue to grow. Prevalence amongst children in the 9 to 15 year age group in the Free State province is among the highest in the country. The HIVCare site is the only child-friendly site in the area. Patients from these waiting lists, who meet the eligibility criteria for treatment, are referred from those public sector clinics to one of the HIVCare primary health centers. The FSDOH is a collaborating partner in this public-private partnership.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Provision of Medical Services

The HIVCare treatment sites will provide all medical services related to the delivery of HIV care and treatment. In addition they will provide counseling and testing services. Management and coordination activities will be provided by HIVCare. Active marketing of CT service will only be done within local secondary schools as part of an HIV awareness and prevention strategy although it is expected that word of mouth and the central location of the sites will provide the desired accessibility for the public and will furthermore ensure that the required patient numbers are achieved. Consideration will be given to the principle of opt out testing embodied in the HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011. This principle will be applied with due regard to the sensitivities involved with dealing with the youth. In addition to clinic referrals, Free State government employees will be encouraged to make use of the HIVCare services. The HIVCare centers are promoted among government employees (who do not have medical insurance) in the Bloemfontein area as independent testing and treatment sites where confidentiality can be ensured.

ACTIVITY 2: Counseling and Testing

Patients attending the center for testing receive comprehensive counseling and testing. Persons testing positive, with their consent, are screened for treatment and care options including staging tests (e.g. CD4) to determine the level of disease progression. Those that meet the clinical criteria will be referred to the treatment program. Persons participating in CT will be provided with a call center number, which they will be able to use to access further advice and /or information. Literature on HIV and related matters will also be provided. All persons testing negative receive post test counseling and are encouraged to test again within three months, receive information as to where they can access condoms and are provided with the phone number of the 24-hour assistance line. Those persons testing positive receive the same information and are staged. On returning for their results are asked to return after six months to check the progression of the disease should they not need to initiate antiretroviral treatment (ART).

ACTIVITY 3: Public Private Partnership

This program area will promote the public-private partnership between HIVCare/Medicross and the FSDOH. This partnership strengthens the system of both parties and allows for the sharing of knowledge and skills. This public-private partnership has been ongoing for a number of years and includes the greater Netcare Group in the Free State. In addition, HIVCare will expand its existing project to target children as part of its continuum of care. This activity targets girls and boys of mainly secondary school age through messages of awareness of HIV care and treatment. A teen center catering for the specific needs of this age group has been established and PEPFAR funding will be used to continue the treatment services already started. CT that takes place at this center will be provided in an environment that is sensitive to the special needs of this group and in line with the South African laws and regulations pertaining to children and HIV.

By providing comprehensive CT services to patients and promoting ARV services for a significant population (people without private insurance and school age children) HIVCare is contributing to the

Activity Narrative: PEPFAR goals of placing 2 million people on ARV treatment and providing care for 10 million others who are infected with HIV. These activities also support care and treatment objectives outlined in the USG Five-Year Strategy for South Africa by expanding public-private partnerships and expanding care to an underserved population.

Funding Source: GHCS (State)

Program Area: Counseling and Testing

Budget Code: HVCT

Program Area Code: 09

Activity ID: 3095.08

Planned Funds: $8,730,000

Activity System ID: 13784

Activity Narrative: SUMMARY:

This project promotes a mix of community-based and clinical counseling and testing (CT) models. The Society for Family Health and the Population Services International (SFH/PSI) will manage a franchise network (under the brand name, New Start) of 12 stand-alone CT sites, each with a mobile CT program. From these CT sites, SFH will provide training and support to at least six healthcare facilities to increase the number of tuberculosis (TB) patients who receive HIV CT in clinical settings, and to private healthcare workers to enable them to make CT a routine part of medical care. Emphasis areas include community mobilization/participation, development of network/linkages/referral systems, local organization capacity development, quality assurance/quality improvement/supportive supervision and training. Primary target populations include men and couples for CT in non-medical settings, and TB patients for CT in medical settings. Higher risk populations such as prisoners, sex workers, and men who have sex with men are targeted when possible.

BACKGROUND:

Activities are ongoing. New Start opened in December 2004. At this time, 83% of FY 2006 has elapsed and New Start has achieved 76% of its FY 2006 client flow goal and exceeded its training target. The program addresses gender issues primarily by targeting men and couples for CT. To date, 52% of clients are male and 11% are couples. Although funding for the TB/HIV project only arrived in July 2006, one medical facility in Durban was able to begin working with New Start in August, 2006. SFH works closely with and has strong support from the South African government at national and provincial levels. The program started off with PEPFAR funding and today is co-funded by the South African government.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1:

SFH will manage a network of 12 stand-alone CT sites, each operating a mobile and workplace CT program. SFH will manage three sites, and partner NGOs will manage the remaining nine sites. SFH will provide technical, financial, management, marketing, and quality assurance support to the nine sites. The nine partner-managed "franchise" New Start sites will open in late 2006 and early 2007. Non-profit CT franchising has proven effective at building the capacity of local NGOs to provide CT services and increase client flow. New Start franchising is based on standardized systems for management, training, supervision, quality assurance and referrals and linkages to other services. SFH, the South African government and the National Institute for Communicable Diseases (NICD) will train New Start counselors and testing staff. SFH and NICD will carry out quality assurance. Marketing activities will use radio, public relations, print media and community mobilization to reach men and couples. Beginning in late 2006, Levi's will promote New Start services through Levi's stores, Levi's sponsored mobile CT and Levi's media activities. Mobile CT and below-the-line marketing will continue to target prisoners, men who have sex with men, and commercial sex workers when possible. Mobile CT activities will expand and work with a variety of hosts -- including workplaces, NGOs, communities, churches, and government agencies such as the prison system and the commuter rail system. New Start has an agreement with the Anglican church to provide CT services through its parishes. New Start CT protocols include non-medical TB and STI screening. Each New Start site has a site-specific referral guide to allow counselors to refer clients to an array of post-test care and support services. Each New Start site also has a Referral Coordinator to maintain linkages with referral points. From New Start sites, SFH will provide training and support to NGOs not part of the New Start network in CT service provision and to private doctors in routine offer CT using rapid test kits. These training and quality assurance activities will be carried out in partnership with NICD and the FPD, the training arm of the South African Medical Association.

ACTIVITY 2:

SFH will increase the number of TB patients who are tested and referred for HIV treatment. The project will partner with and mentor NGO, private sector and/or government facilities, strengthen already existing systems and work to fill important gaps where the testing and referral of TB patients can be improved. The support provided to these TB healthcare providers will depend on the needs of the facilities. Support will include some or all elements of the following assistance models: (a) SFH will provide training and support to partner organizations in routine provider-initiated CT, so that partner organizations can introduce routine testing for TB patients. (b) SFH will provide training and support to partner organizations in client-initiated CT, so that partner organizations can introduce and manage their own CT operations in TB facilities. (c) SFH will create New Start satellite operations at TB facilities. Partner organizations will provide space and support to New Start to provide CT from TB facilities on a daily basis. (d) SFH will provide training and support to partner organizations who wish to open New Start franchises within TB facilities.

Franchise partners will be fully integrated into the New Start network. Gender issues will be addressed through targeting men and couples for CT services, including testing targeting male construction workers. Testing rates among men are low. Encouraging couple CT allows women a structured environment to address HIV issues with their male partners. Diminishing HIV stigma is best achieved by increasing the number of people who learn their HIV status and disclose to family and friends. The proposed activities encourage sustainability by focusing on human capacity and organizational development. Franchising develops the capacity of a network of NGOs to provide high quality services, including the development of workplace programs that bring in revenue to partner NGOs. The proposed activities also encourage a sustainable response to the need to test large numbers by providing training and support to private doctors to make CT a routine part of medical care. Mobile CT activities bring together non-health sectors of society such as churches or workplaces in the fight against HIV.

ACTIVITY 3:

PSI/SFH will develop and carry out a mass media campaign to encourage HIV counseling and testing. PSI/SFH will work in partnership with at least one private sector partner. The campaign will be national and will culminate in a one week testing drive. This testing week will bring together PSI/SFH's New Start static site and mobile testing services, the testing services of other service providers, including other NGO and Government of South Africa testing services. The campaign's private sector partner will associate its brand

Activity Narrative: with the campaign and spend its own funds on the campaign. Media used will include television or radio and public relations. The campaign and one-week testing drive will take place in late 2007 or early 2008. SFH is developing the campaign, selecting campaign target groups, determining private sector partners and developing testing targets. SFH will work closely with the government of South Africa to ensure that the campaign has government support and buy-in at all levels.

ACTIVITY 4:

SFH will partner with Careworks, a private organization which provides healthcare services. Careworks will provide mobile CT services to men in construction works and in mining throughout the country. This activity is aimed at reaching men who would otherwise not access testing services at public healthcare facilities.

Program Area: Counseling and Testing
Budget Code: HVCT
Program Area Code: 09
Activity ID: 9445.08
Planned Funds: $908,000
Activity System ID: 13791

Activity Narrative: SUMMARY:

The Reproductive Health and HIV Research Unit's (RHRU) PEPFAR-funded program, subsequently referred to as the "Follow-on to the RHRU Program" (FRP), was re-competed through an Annual Program Statement (APS) in 2007, and awarded to the RHRU. PEPFAR funds will support the FRP to continue to provide counseling and testing (CT) services, and to expand services tailored to target groups such as couples, pregnant women, young people, children, and families, as part of an integrated prevention, care and treatment program. FRP will also provide training and mentoring in voluntary counseling and testing to Department of Health (DOH) staff, to ensure the implementation of provider-initiated testing and counseling (PITC) in TB, STI, antenatal/postnatal and contraceptive services at all levels. Major emphasis in this program area is on quality assurance and supportive supervision, with additional emphasis on the development of network/linkages/referral systems, human resources, and training. These activities target HIV-affected families (children, youth, and adults), sex workers, men, pregnant women, discordant couples, and public health workers.

BACKGROUND:

RHRU, a unit of the University of the Witwatersrand in Johannesburg, currently provides technical support to the Operational Plan for Comprehensive HIV and AIDS Care, Management and Treatment for South Africa, which includes the national antiretroviral (ARV) roll-out strategy. Under PEPFAR funding since FY 2004, RHRU has provided regular on-site support, direct treatment, training, and quality improvement to DOH sites in three provinces (Gauteng, KwaZulu-Natal and North West). The FRP will continue these activities, which include inner city, district wide and rural programs focusing on providing support to a complete up and down treatment referral network. In addition, FRP will continue the provision of counseling and testing (CT), palliative care, and prevention services. FRP will seek to develop models of service delivery that can be replicated and expanded, and produces findings from lessons learned and targeted evaluations to disseminate and share with others. It should be noted that the success of ARV treatment scale-up depends on the comprehensive approach detailed in other program areas. In particular, the strengthening of referral from other primary healthcare programs such as TB, family planning, antenatal/postnatal and STI services is critical.

In FY 2007, FRP will continue to focus on further strengthening DOH adult and pediatric treatment, and on continuing the development of a family-based approach to HIV care and treatment in the public sector. Furthermore, FRP will continue to develop strategies to address underserved communities affected by HIV, such as couples, high-risk groups such as adolescents, and gender-based interventions with women at risk, including pregnant women and sex workers, and men. FRP places strong emphasis on quality assurance for all interventions supporting CT and will draw on the tools that have a proven track record in terms of improving quality of care, such as pocket reminders for counselors, wall charts with trigger messages for clients and counselors, and routine performance assessments.
ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Counseling and Testing

PEPFAR funds will support FRP to continue to directly provide CT services at multiple sites, and to expand services tailored to target groups such as couples, family planning clients, children, families, men, pregnant women, and sex workers as part of an integrated prevention, care and treatment program. Discordant couples will be targeted for prevention education, and concordant couples can benefit from referral to a wellness program. Both groups will benefit from fertility and family planning advice. FRP will work closely with the national DOH and will ensure that CT is integrated into other health programs at all levels. In addition, FRP will focus on integrating provider-initiated testing and counseling (PITC) into TB, STI, antenatal/postnatal and family planning services as recommended in the HIV & AIDS and STI Strategic Plan for South Africa, 2007 - 2011.

ACTIVITY 1.1: Gender-based Voluntary Counseling and Testing

Approximately 70% of individuals currently accessing antiretroviral treatment (ART) are women. FRP will continue to develop services that aim to address this gender inequality, and to increase the number of men who obtain HIV care. This will be done through the development of male-friendly CT methods, such as family-centered counseling and testing, and interventions to encourage health-seeking behaviors. This program will contribute towards increasing gender equity in HIV and AIDS programs.

ACTIVITY 1.2: Family-Centered Testing

Children and families have special needs that will be addressed in the program. Previous work in antenatal clinics and in pediatric treatment will have given FRP the opportunity to promote family testing to DOH staff and community social workers, and to develop approaches to this activity. A youth-friendly CT model will continue to be developed and implemented in the inner city of Johannesburg and Durban. Mobile CT units will be utilized to increase access to CT for families at weekends and to other hard-to-reach groups. Age-appropriate counseling and testing techniques will be developed, and opportunities to scale-up counseling and testing of this group will be identified and interventions implemented accordingly.

ACTIVITY 2: Human Capacity Development

FRP will train counselors, doctors, nurses, and other healthcare workers to provide comprehensive and appropriate CT services, in line with South African guidelines. This includes appropriate referral, and updates on new practices and current debates in an evolving field. In addition, FRP staff will provide mentoring to local NGOs, lay counselors, and DOH staff in the public sector facilities in which they work, through weekly supportive supervision sessions with all counselors and regular meetings to discuss the development and application of new practices.

In FY 2008, RHRU will continue to undertake monitoring and evaluation activities to inform and develop quality HIV care. RHRU will be in a position to conduct targeted evaluations (TE) and Public Health Evaluations (PHEs) of some of its counseling and testing projects in FY 2008 and FY 2009. For each PHE, a detailed proposal will be developed and submitted to PEPFAR for review and funding approval.

Activity Narrative: These activities expand CT services to important high-risk populations, and serve as a critical entry point into HIV care and treatment programs, thus contributing to the 2-7-10 goals by enabling access to treatment and prevention for those who test.

Funding Source: GHCS (State)

Budget Code: HVCT

Activity ID: 7911.08

Activity System ID: 13370

Program Area: Counseling and Testing

Program Area Code: 09

Planned Funds: $824,500

Activity Narrative: SUMMARY:

The Hlabisa antiretroviral treatment (ART) program aims to deliver comprehensive, integrated, safe, effective, efficient, equitable and sustainable ART and related services to all who need it in the community. Counseling and testing (CT) is part of this program in the Hlabisa District set in rural KwaZulu-Natal, South Africa. The target population for the program is adults and people affected by HIV and their families. The major emphasis area of this program is community mobilization/participation. Minor emphasis areas include information, education and communication (IEC), local organization capacity development, and quality assurance and supportive supervision.

BACKGROUND:

The Africa Centre for Health and Population Studies' Hlabisa ART program is a partnership between the KwaZulu-Natal Department of Health (KZNDOH) and the Africa Centre, a population research department of the University of KwaZulu-Natal. The Hlabisa ART program is comprehensive and integrated. CT-related activities fall within this program. The program is based in Hlabisa District, a rural health district in northern KwaZulu-Natal, and provides health care to 220,000 people at one government district hospital and 13 fixed peripheral clinics. The ART program is embedded in the Department of Health's antiretroviral therapy rollout where the Africa Centre and KZNDOH work to complement each other's abilities and resources in providing ART. The Africa Centre has expertise in infectious diseases and management that are not available at the district Department of Health (DOH). In addition to clinical staff and infrastructure, the district DOH provides the necessary drugs, laboratory tests, and rapid test kits for effective rollout.

With FY 2008 funds, the Africa Centre will continue to improve and expand CT services by providing additional human resources and training. Africa Centre will link CT services to prevention of mother-to-child transmission (PMTCT) services, TB/HIV, palliative care, and treatment programs. Increased attention will be given to addressing gender inequality (including increasing male involvement in CT and care) and to promoting ART services among men and children.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Partnership with South African Government

Africa Centre will expand CT and provider-initiated testing and counseling (PITC) in collaboration with DOH. The Africa Centre will work closely with the DOH to ensure that all patients who enter the 14 clinics will be offered an HIV test.

ACTIVITY 2: Counseling

Counseling centers were established in partnership with another of Africa Centre's donors, the Wellcome Trust-UK. PEPFAR funds will be used to expand and promote the center at Mtubatuba. Another testing center will be established at Hlabisa. A mobile testing center will be used during road shows and other public events. The traditional leaders will be approached for testing in their Isigodi. (Isigodi is the geographical area where a traditional Zulu authority called the Induna is in charge.)

The Africa Centre covers a research area of approximately 90,000 people in 11,000 households. Funded by the Wellcome Trust UK, all inhabitants older than 15 years are offered an HIV test annually. Approximately 10,000 people are participating in that study each year. This study is one of the most reliable sources for incidence data in Africa. The method used for HIV testing is a dried blood sample on filter paper analyzed in the Africa Centre Virology Lab in Durban. The Africa Centre will return the test result within three weeks of testing; clients will be provided with post-test counseling together with their test results at one of the Africa Centre centers. PEPFAR funds will be used to fund HIV counselors accompanying the study team. Counselors will offer rapid tests for HIV. A small study suggested that 20% of the participants of the study are interested in a rapid test.

Moving away from clinics and offering the CT in a broader range of settings (e.g. close to a supermarket, in town), Africa Centre hopes to attract hard-to-reach people to CT. Further, it is hoped that CT centers in non-clinical settings will help to minimize the stigma attached to taking up HIV testing and counseling. The counseling centers will offer rapid testing with pre- and post-test counseling. CT services will follow South African government protocols. CT counselors will refer clients to appropriate further services, including the ART programs, TB programs and government support services (disability grant, food help). CT counselors will encourage clients to disclose their status to partners. Prevention counseling will be specifically aimed at people who are at increased risk for HIV and will be tailored to the individual needs of the patient. Clients will be counseled on personal risk reduction including messages about partner reduction and behavioral changes to achieve healthy life styles. Counseling and testing takes place in separate closed rooms in order to ensure confidentiality. All clients will receive their test results during the post-test counseling session. New PHEs OGAC money has been reprogrammed to CT services to assist this program towards universal testing in their assigned district. Monitoring and Evaluation and measurement for this activity will be a BPE.

ACTIVITY 3: Community Mobilization

For several years, the Africa Centre has been conducting road shows to provide information, education and communication (IEC) services to rural Zulu communities. These road shows and other community events will be used to promote CT. Specifically, the community will be informed that rapid testing will be offered at the CT sites. The road shows will also be a forum to reduce the stigma around visiting a CT center. Appropriate materials will be developed for informing the community about CT and other services offered through the Africa Centre. All possible efforts will be made to encourage couples and youth to receive counseling and testing. PLHIV have to play a major role in the community mobilization. Africa Centre will involve PLHIV in educating the community about HIV, sharing their experiences with the people, and through that getting more people tested. A behavior change communication specialist will be employed to develop an appropriate strategy (such as the Stepping Stones strategy).

ACTIVITY 4: Referral and Linkages

Activity Narrative: Africa Centre will strengthen the referral system from the Department of Health's TB program to CT by providing training to direct observation treatment supporters (DOTS) on the need for HIV testing for patients who receive TB treatment. HIV-infected people will be referred for CD4 testing and treatment where applicable. The counselors will inform clients on where to enroll in the ART program and on how to access government support programs, such as disability grants and food aid.

ACTIVITY 5: Human Capacity Development

PEPFAR funding will be used to provide CT centers with additional CT counselors. As part of capacity building, counselors are recruited from the local area, and trained and provided with mentoring and supervision on a regular basis by Africa Centre. In addition, Africa Centre will conduct counselor-debriefing sessions to discuss their work with their peers and support staff. Counselors will participate in short courses to refresh their counseling skills. These courses will incorporate education on new initiatives that had not been a part of their initial training. In addition, Africa Centre will provide training and mentorship to medical staff in order to strengthen their knowledge about CT and to introduce provider-initiated testing and counseling into the clinics.

Funding will also be used for additional staffing in clinics and hospital.

These activities will contribute to the PEPFAR goals of 2-7-10 by contributing to the 10 million people who will receive care through PEPFAR assistance by providing counseling and testing to many individuals in Hlabisa district.

Table 3.3.09: Activities by Funding Mechansim

Mechanism ID: 167.08

Mechanism: N/A

Prime Partner: Africare

USG Agency: HHS/Centers for Disease Control & Prevention

Funding Source: GHCS (State)

Program Area: Counseling and Testing

Budget Code: HVCT

Program Area Code: 09

Activity ID: 2910.08

Planned Funds: $388,000

Activity System ID: 13379

Activity Narrative: SUMMARY:

Africare's counseling and testing (CT) activities will include linking testing to community events, increasing the participation of people living with HIV (PLHIV) in the counseling process, and supporting clinics to integrate CT into all services and ensure quality of counseling and testing. Major emphasis will be on community mobilization and participation. Additional emphasis will be placed on strengthening quality and short-term human resource support and training. The aim is to increase testing in communities among adults and secondary school students. FY 2008 will also include interventions to encourage men to test.

BACKGROUND:

Counseling and testing in the Lukhanji Local Service Area (Eastern Cape) has been supported by Africare in terms of encouragement of testing in community events and volunteer pre-test counseling. A perception of limited time for counseling and testomg has been expressed as interfering with integrating counseling and testing throughout clinic services, particularly in Sada Community Health Centre. Accredited training for counseling and testing has been very limited in the district, hampering preparation of volunteers to support the nurses.

ACTIVITIES AND EXPECTED RESULTS:

Four activities will focus on ensuring greater participation of PLHIV; increasing community mobilization; and strengthening existing counseling and testing services.

ACTIVITY 1: Develop PLHIV for Counseling Support

PLHIV will be trained as both support group co-facilitators and CT counselors. On a voluntary basis, they will support clinic and community-based testing activities, adding particular value to post-test counseling and referral to support groups and services. CT services will be provided at public health facilities to increase testing in areas that are widely disbursed and hard to reach.

ACTIVITY 2: Mobile CT Services

Mobile CT services will be initiated to ensure that CT services are provided to the whole community, in particular the villages not in the immediate vicinity of the local clinic. Mobile services will be designed with the Eastern Cape Department of Health (ECDOH) clinic teams to augment their reach. Where practical, clinic nurses will join the mobile team to perform the test. Where required, a nurse recruited by the project to support CT will provide testing. Service Corps Volunteers (SCV) from the clinics and community caregivers who are trained can support pre- and post-test counseling and logistics. In order to address community concerns about being tested by someone they know, SCVs can exchange sites and the Africare nurse will test. Mobile testing will take place monthly, rotating sites. A compensation plan for volunteer community caregivers supporting testing will be developed with the Lukhanji health team. To ensure maximum uptake, the mobile CT team will work with the project's peer educators and drama group to provide entertainment in the form of street theater (skits, songs, poems, monologues and dances) that include, but are not limited to, HIV and AIDS themes. These preparatory sessions will help to reduce fear and tension while addressing myths, misconceptions and promoting behavior change.

Linking with the project’s initiative to ensure that every positive person is encouraged to enter care and support services, each person testing positive will be (a) referred to a support group, (b) have CD4 count drawn and results sent to the clinic of their choice, and (c) provided with a description of services available at nearby facilities. Those who wish to be enrolled in chronic HIV care at the nearest clinic on that day will have their enrolment form initiated.

ACTIVITY 3: CT Training

Training on CT will include both initial and refresher training. Refresher training will be conducted at least once every three months for nurses and volunteers already trained in counseling and testing. Project support will include hiring an accredited nurse trainer, training workshops, and supporting training sessions with onsite follow-up. Training of SCVs and community caregivers from among the 18 clinics in the Whittlesea community will strengthen the clinic's ability to provide more facility-based testing and to conduct outreach. Community-based organizations providing home-based care will also benefit from the training of their caregivers, as needed.

ACTIVITY 4: Optimize Clinic Flow for Integrated CT

Africare will review clinic flow, clinic efficiency and integration of services at three selected sites to increase the amount of time allocated to CT services. Findings from the review will be analyzed in a workshop with the clinic teams to identify options for increasing CT access to family planning clients, TB clients and general clinic attendees. Support will be provided to teams piloting their changes. FY 2008 activities will focus on engaging male health workers for counseling and testing as a key strategy to increase male testing.

Funding Source:	GHCS (State)	**Program Area:**	Counseling and Testing
Budget Code:	HVCT	**Program Area Code:**	09
Activity ID:	3136.08	**Planned Funds:**	$870,000
Activity System ID:	13695		

Activity Narrative: SUMMARY:

The primary goal of BroadReach Healthcare's (BRHC) counseling and testing (CT) is to ensure that those testing positive for HIV are started on antiretroviral treatment (ART) when clinically qualified and enrolled patients continue to receive outstanding care and support. CT is the entry point for this goal. BRHC also supports activities that include test-kit procurement, meeting infrastructure and human resource demands, increasing testing uptake, prevention, patient counseling, referral systems, and training. Primary target populations include children, adolescents, adults, pregnant women, and people living with HIV (PLHIV).

BACKGROUND:

PEPFAR funds support BRHC initiatives that provide HIV and AIDS clinical management, care and support services to HIV-infected individuals in areas where the South African Government (SAG) rollout has not yet been implemented and assists ART rollout in the public sector. The BRHC PEPFAR program began in May 2005 and now operates across five provinces. BRHC is supporting approximately 5,000 people directly with care and treatment and 15,000 indirectly. BRHC taps private sector health professionals to provide comprehensive care and treatment, fostering capacity-building initiatives within the public health system, and supporting community-based programs. BRHC leverages PLHIV support programs to identify and assist with treatment literacy, adherence support and ongoing community mobilization, prevention education activities, and positive living initiatives. BRHC also works to build capacity in public health facilities, focusing efforts on human capacity development (HCD) activities, including clinical didactic training, clinical mentorships, patient training, and operational assistance training. BRHC is expanding its provision of staff and infrastructure support to SAG facilities. Finally, BRHC is expanding its involvement in the design of scaleable down referral models in partnership with faith-based organizations (FBOs), community-based organizations (CBOs), and public-private partnerships (PPPs).

ACTIVITIES AND EXPECTED RESULTS:

The primary goal of the program is to ensure that those testing positive for HIV are started on ART when clinically qualified and enrolled patients continue to receive outstanding care and support. CT is the entry point for this goal.

ACTIVITY 1: Voluntary Counseling and Testing

BRHC will provide access to rapid voluntary counseling and testing (CT) at enrollment sessions and, where available, CD4 testing services for patients who test positive to determine eligibility for treatment. In accordance with SAG guidelines, BRHC patients will be properly counseled (pre- and post-test), tested, and referred as appropriate to a BRHC network doctor or to an accredited SAG facility.

ACTIVITY 2: Support to South African Government

BRHC will expand access and availability of CT by (1) procuring testing materials (rapid test kits when unavailable through the government system); (2) improving operational efficiency through needs assessment, identification of operational bottlenecks, implementing solutions to address bottlenecks; (3) assisting with refurbishing physical space at government clinics/hospitals; and (4) advising SAG partner clinics on increasing CT uptake and improving the percentage of results received. BRHC will further support SAG efforts in meeting the increased demand created by testing. This will range from providing salary support for counselors to improved processes and systems for enrolling and following up greater numbers of new patients.

ACTIVITY 3: Outreach

Using a family-centered approach to care and treatment, BRHC will encourage the testing of families and households, utilizing patients already enrolled in the BRHC program as a point of entry. BRHC will also promote community-based programs such as support groups, CBOs, and churches as entry points for CT services.

ACTIVITY 4: Referrals and Linkages

All HIV-infected patients identified through BRHC-supported CT efforts, will be linked (via BRHC network doctors, home-based care (HBC) and support groups) to other services such as TB care, nutrition and wellness, and psychosocial support.

ACTIVITY 5: Human Capacity Development

BRHC may enhance the quality of CT services at selected sites (assigned by the relevant district authorities) through training and mentoring for counselors, health professional staff, outreach workers and support group facilitators. In addition to training, BRHC will assist CT programs at sites by providing salary support to counselors as sites expand access to CT services.

BRHC's CT activities directly contribute to the 2-7-10 objectives by identifying infected individuals who are unaware of their HIV status and who may be eligible for treatment. Greater numbers of people tested means meeting the treatment and care and support objectives. Moreover, prevention messages given to both infected and uninfected individuals during post-test counseling will contribute to the goal of averting 7 million infections.

All BRHC activities articulated in the FY07 COP will be scaled up significantly in FY 2008 through its partnerships with 15 SAG hospital systems, which include hospitals and affiliated community and primary health centers.

The FY 2007 activities will be expanded and enhanced in FY 2008 as follows:

BRHC will support quality assurance at each of its public sector partner hospitals through quality assurance assessments, systems re-engineering, and the development of reporting systems that provide program

Activity Narrative: management feedback that is used to improve program performance and more closely monitor patient care. This includes monitoring, tracking and reporting on CT activities at partner sites.

As part of systems re-engineering BRHC will focus on improving CT referrals at sites to boost the number of patients tested, and the numbers that receive their results and ultimately enroll in treatment. A special effort will be made to test family members of patients in an effort to boost family-centered care initiatives at sites through partnerships with CBOs and home-based care organizations.

Funding Source:	GHCS (State)	**Program Area:**	Counseling and Testing
Budget Code:	HVCT	**Program Area Code:**	09

Activity ID: 7987.08

Planned Funds: $900,000

Activity System ID: 13743

Activity Narrative: SUMMARY:

This Foundation for Professional Development (FPD) project focuses on promoting early diagnosis of HIV as an entry point to wellness programs and access to prophylactic treatment. FPD will expand counseling and testing (CT) activities through various models ranging from institutional based CT at antiretroviral treatment (ART) sites to introduce new easily accessible CT at sites based in civil society e.g. pharmacies, faith-based organizations (FBOs), tertiary academic institutions and private medical practices. FPD will focus on offering routine CT (RCT) to all patients admitted to public sector hospitals where FPD supports ART services. All patients who test positive will be referred to wellness programs to reduce loss to treatment initiation. The emphasis areas are gender, human capacity development and local organization capacity development. The activities will directly and indirectly target people living with HIV (PLHIV) and most-at-risk populations.

BACKGROUND:

FPD is a South African private institution of higher education working exclusively in the health sector in southern Africa. PEPFAR funding has enabled large-scale training and substantially increased access to ART. FPD has not received PEPFAR funding for CT activities in the past, even though CT services are an integral part of the comprehensive care package offered at a number of FPD-supported clinics since FY 2004. To date, FPD has provided training for approximately 800 clinicians and nurses on CT. Coordination with provincial Departments of Health (DOH) takes place through Memorandums of Understanding (MOUs). The project will focus on various gender-related activities. It is envisaged that FPD will be the main project implementer, but given that this is a new project activity, sub-agreements with local non-governmental organizations (NGOs) and FBOs may be used to increase community participation and to increase CT services.

ACTIVITIES AND EXPECTED RESULTS:

FPD's activities will be aimed at strengthening the existing healthcare system, promoting closer cooperation between the public sector and civil society institutions, and developing human capacity. It is expected that all activities will offer sustainable and long-term benefits for the South African healthcare system.

ACTIVITY 1: Support to the South African Government at the sites where FPD is supporting treatment activities

FPD will increase dedicated staff who will focus on expanding CT services for couples, infants and children and adults, as well as cross-testing (testing STI and TB patients for HIV and vice versa). Dedicated CT nurses and counselors will offer RCT for all patients moving through these healthcare facilities. Standard registers and negotiated performance targets will be used to drive this activity and monitor its implementation. PEPFAR funds will largely be used for human resources (e.g. nurses and lay counselors). PEPFAR funds will also be utilized for training and to address minor infrastructure needs where necessary for the delivery of CT services at government, NGO, and FBO sites. PEPFAR funds will be utilized for the procurement and distribution of HIV test kits if necessary and may be utilized for CD4 count testing where such tests are required to increase access to care.

ACTIVITY 2: Establishment of New CT Sites

FPD will introduce new civil society based CT services at easily accessible sites such as private medical practices, private pharmacies, tertiary educational facilities, mobile testing sites and NGOs and FBOs. In addition, FPD will expand of CT services in the existing treatment services sites. Outreach activities will be introduced to create awareness of these services in the larger community with specific emphasis on at risk groups and vulnerable populations. The introduction of new testing sites at NGOs, FBOs, student healthcare services, private practices, and private pharmacies will ensure the widespread and sustainable availability of CT services. Emphasis will be placed on promoting client-friendly rapid testing facilities. The introduction of CT services in venues that are not perceived as having an HIV or AIDS connotation (private pharmacies or private medical practices) will contribute to overcoming stigma induced barriers to accessing CT due to fears of being seen at an "AIDS facility". Staff will be trained on proper recording and data management.

ACTIVITY 3: Human Capacity Development

FPD will provide training in CT services for medical practitioners, lay counselors, and nurses to ensure strict adherence to CT protocols and high quality counseling. This activity emphasize gender issues as all participants and CT staff will be trained on couple counseling, identifying and referring of victims of sexual abuse and violence, and stigma reduction. The program will address gender by creating an ARV-related set of services that will increase gender equity through mitigating the burden of care on women. At the time of CT and other ARV related services women will be identified and -- if they fit the profile -- will be referred to a number of faith-based programs that also support the clinics and CT sites. These faith-based programs provide women with resources ranging from accommodation, to nutritional support and job creation programs. Male norms and behaviors are addressed in the counseling provided at these facilities and all staff actively work towards reducing violence and coercion by identifying victims of violence. The FBO partners provide a shelter for female victims of violence. Training takes place in all provinces for both public and civil society organizations. For public sector training such training is coordinated with relevant human resources departments

ACTIVITY 4: Linkages and Referrals

The strengthening and expansion of referral networks and linkages with care and treatment services for clients identified as HIV-infected will be a central focus of the project. FPD will link with local CBOs, NGOs, and FBOs to increase demand for CT services and to help with referral and follow up. All CT staff will be trained on referrals and linkages. Each CT site will have a list of local service providers that patients can be referred to. All referrals will be bi-directional and followed up to make sure that clients are accessing the services and providers are providing the services. PEPFAR funds will largely be used for human resources (e.g. nurses and lay counselors) in support of CT services.

Activity Narrative:

PEPFAR funds will largely be used for human resources (e.g. nurses and lay counselors) in support of CT services. PEPFAR funds will also be utilized for training and to address minor infrastructure needs where necessary for the delivery of CT services at government sites. The government will provide test kits at government sites and kits will be purchased for use at non government sites. Funds may be utilized for CD4 count testing where such tests are required to increase access to care. FPD will also expand new civil society based CT services at easily accessible sites such as tertiary educational facilities, NGOs and FBOs. Outreach activities will be introduced to create awareness of these services in the larger community with specific emphasis on at risk groups and vulnerable populations. The introduction of new testing sites at NGOs, FBOs, student healthcare services will ensure the widespread and sustainable availability of CT services. Emphasis will be placed on promoting client-friendly, provider-initiated, rapid testing.

The above activities will be continued in FY 2008. Activities will be expanded to at least 20 new sites in FY 2008.

Funding Source:	GHCS (State)	**Program Area:**	Counseling and Testing
Budget Code:	HVCT	**Program Area Code:**	09
Activity ID:	3321.08	**Planned Funds:**	$436,500
Activity System ID:	13733		

Activity Narrative: SUMMARY:

Columbia University (Columbia) and its identified partners in the Eastern Cape have been supporting the care and treatment of patients dually infected by HIV and tuberculosis (TB) since FY 2006. This activity focuses on HIV counseling and testing (CT) for TB patients and will be an ongoing activity for Columbia in FY 2008. The major emphasis area for this program will be human resources, with minor emphasis on development of network/linkages/referral systems, linkages with other sectors, quality assurance and supportive supervision, strategic information and training. The target population will include people infected and affected by TB and HIV including infants, children and youth (non-OVC), men and women (including pregnant women and family planning clients).

BACKGROUND:

Columbia will use FY 2008 funds to continue strengthening the Eastern Cape Department of Health's capacity to provide routine HIV counseling and testing (RCT) services to tuberculosis patients. In the latter part of FY 2006, Columbia began RCT activities in three TB hospitals: Empilweni, Nkqubela and Fort Grey. In FY 2008, PEPFAR funds will be used to continue to screen TB inpatients for HIV, implement TB/HIV patient prevention education and to ensure that TBand HIV co-infected patients are referred for appropriate HIV care and treatment services. Referral mechanisms with adjacent health facilities (including hospitals and primary health clinics) have already been identified and established. Ongoing program emphasis area will be on the development of network/linkage/referral systems that will eventually result in retention into HIV treatment services for the TB and HIV co-infected after completing of TB treatment and improved adherence to TB and HIV therapies.

ACTIVITIES AND EXPECTED RESULTS:

In FY 2008 Columbia University will continue to implement four activities in three TB hospitals: Fort Grey, Nkqubela and Empilweni.

ACTIVITY 1: Support Routine HIV Counseling and Testing for TB patients

Columbia will provide assistance through hiring and training of additional clinical staff (nurses and peer educators) to increase the uptake of HIV testing among TB patients. Columbia will actively promote provider -initiated testing and counseling for HIV (PITC) for TB patients. Registered nurses at each hospital will be responsible for performing the HIV tests and post-test counseling, and trained peer educators will provide pre-test counseling.

ACTIVITY 2: Provide Patient HIV Prevention Education

This activity will consist of collaboration with the Eastern Cape Department of Health, community-based organizations and other local non-governmental organizations to provide information and education on TB/HIV. In addition, trained peer educators will be actively involved in one-to-one patient education.

ACTIVITY 3: Referrals for TB Patients

Practitioners will continue to take advantage of and support the existing referral systems for TB patients into HIV care and treatment activities, and where feasible, develop and promote more efficient referral linkages.

ACTIVITY 4: Monitoring and Evaluation

Data collection and reporting will be strengthened by training and hiring data staff, as needed, to collect accurate counseling and testing patient information and to provide monitoring and evaluation technical support for data interpretation and dissemination that will result in program improvement.

In FY2008, Columbia proposes the following additional activities:

ACTIVITY 5: Strengthen Provider-Initiated HIV Counseling

Columbia will expand provider-initiated testing and counseling services to all the 36 antiretroviral treatment (ART) sites that will be supported in FY 2008. With this approach, people attending the health care services or those seeking specific medical attention can also receive CT. Pre-test counseling will be conducted by peer educators and reinforced by the health unit staff or by HIV and AIDS counselors during post-test counseling.

ACTIVITY 6: Provision of Mobile Counseling and Testing Services in KwaZulu-Natal

In order to make HIV and AIDS care and treatment more widely available to inaccessible populations, a mobile clinic is being procured for the Kokstad area, in KwaZulu-Natal. A mobile CT team will be integrated with the care and treatment team to provide services at fixed times at a variety of outreach sites in Kokstad. Pre-advertising will be conducted (via fliers and public announcements), to provide potential clients with information, maps and schedules for the mobile service. Rapid tests will be used to ensure immediate results for clients within the same day and session.

Activity 7: Provision of Group Counseling at 36 ART sites

In the facilities supported by Columbia, the patients wait for some period of time after checking into the clinics and before seeing the healthcare providers. Through peer educators, Columbia will motivate and support this opportunity to tell the patients that it is recommended that all patients are tested for HIV and to provide them with information about HIV and TB (group pre-test counseling). Brochures will be developed in liaison with the Department of Health and will be given to patients when they check in to read in the waiting room. Posters will also be placed in waiting rooms and throughout the clinic, noting the importance of knowing one's HIV status to facilitate the pre-test counseling sessions. Those who opt for the test will then be privately counseled post-test.

Activity Narrative: ACTIVITY 8: Creation of a Functioning Referral System for Counseled and Tested Patients

Functional links will be established between the different departments at the health facilities including the ART clinics to facilitate cross-referral. Mechanisms for referral to post-test diagnostic and care services will be established including regular clinical meetings.

ACTIVITY 9: Establishment of Quality Assurance Systems for Testing and Counseling Services

Columbia will support two overarching principles of quality assurance: (a) supporting clients' rights, and, (b) addressing providers' needs. To meet the clients rights, Columbia will refurbish the facilities to ensure private and confidential space (aural and visual privacy) at each of the facilities providing CT services. The sites will be supported to undertake rapid counseling and testing. Mechanisms will be instituted for sample referral for quality assurance testing (10% of samples to be confirmed centrally) in an external facility/laboratory.

To support the work of providers, Columbia will guarantee accurate documentation and information management procedures to ensure accuracy and confidentiality of all patient test and diagnostic information. Adequate supply of simple/rapid tests, condoms and client information materials from the DOH will also be ensured. In addition good quality management and supervisory support including information, training and skills development will be supported by Columbia.

Activity 10: Engaging Stakeholders

Columbia will engage stakeholders in the planning and management of the program through meetings, sensitization workshops and feedback reports. The stakeholders include Department of Health officials, district managers, health facility managers, clinic supervisors, laboratory personnel, and staff representatives, including doctors and nurses.

By providing HIV counseling and testing to patients on TB treatment, Columbia's activities will contribute to the realization of the PEPFAR goal of providing care to 10 million people. These activities will also support efforts to meet HIV and AIDS care and support objectives outlined in the USG Five-Year Plan for South Africa.

Program Area Code: 09

Activity ID: 7883.08

Planned Funds: $194,000

Activity System ID: 13347

Activity Narrative: SUMMARY:

ARK's focus is to provide antiretroviral treatment (ART) and accompanying support to primary HIV-infected caregivers with children. This includes the encouragement and support for the voluntary counseling and testing (CT) of partners and children, to ensure complete family coverage and earlier access to ongoing treatment, care and support. Although the primary focus of ARK is on the caregivers of children, ARK offers its services to the entire population in all of its service areas. CT services will be delivered in all of ARK's supported communities.

The primary emphasis areas for these activities are community mobilization, local organization capacity development, human resources, and training. Primary target populations include adult women and men and their families.

BACKGROUND:

ARK is a charity organization whose mission is to facilitate and support delivery of accessible and sustainable comprehensive treatment, care and support services to children and their caregivers in communities affected by HIV and AIDS and poverty.

In partnership with the KwaZulu-Natal (KZN) provincial government, ARK has established a comprehensive ART program in government primary health centers and hospitals. ARK works with the provincial government to identify sites and areas for capacity building in areas such as human resources, human capacity development, modest infrastructure improvements and service delivery. ARK's activities enable the provincial government to increase the number of patients counseled, tested, and provided ART and related services.

To date, PEPFAR funding has enabled ARK to successfully provide over 15,000 patients onto ART in KZN through the sustained development of primary care facilities and their down referral sites in five districts, in primarily peri-urban and rural communities.

With FY 2008 funding, ARK will focus on provider driven opt-out testing to all pregnant mothers entering the antenatal clinics, and CT services to children and spouses/partners of caregivers and other household members. This activity will be linked to home visits undertaken by ARK's community adherence workers. Home visits serve to evaluate the psychosocial situation of patients, the degree of family support, and issues related to disclosure. Although ARK's treatment target population is predominantly mothers, caregivers, and their spouses/partners and children, increased attention is given to encourage men, single women and children to come forward for testing and treatment.

ACTIVITIES AND EXPECTED RESULTS:

ARK's primary objective is to keep mothers alive to continue caring for their children and to reduce the incidence of orphans and vulnerable children (OVC). Early, widespread testing and access to ART reduces the likelihood of morbidity and mortality from HIV. This, in turn, increases the likelihood of survival of family units, which guard income security and ongoing nurturing required by children in these households. Furthermore, the psychosocial component of counseling and testing forms a vital component for behavior change.

ACTIVITY 1: Support to Provincial Government for CT Services

ARK works with the KZN provincial government to develop the necessary processes and systems to manage a comprehensive HIV and AIDS treatment program, and to ensure that the model created is scaleable, sustainable and replicable elsewhere. ARK, in partnership with KZN provincial government, will provide training and mentoring for government employed lay counselors and community adherence workers working at these primary sites where ARK's ART program exists. ARK will ensure that management systems are in place to support the work of the counselors and the delivery of CT.

ARK will strengthen or initiate CT services at all sites identified by the provincial health department and assigned to ARK for support. To better ensure sustainability, where possible, ARK will use the counselors available through the district HIV program. ARK will also employ counselors and train existing employed community care workers to provide counseling for CT services. Where infrastructure support is required, ARK will, in consultation with the facility managers and district managers, decide on the most cost-effective infrastructure support (prefab or modest renovations). ARK's OVC program, through the social workers and community workers placed at schools, will establish links with clinic services to ensure better and more efficient referral of children in need of testing and care, including their caregivers and immediate family.

ACTIVITY 2: Human Capacity Development

Formal and informal training and on-site mentorship will be provided to all lay counselors in the program. ARK, in partnership with the Centre for Social Science Research at the University of Cape Town, will continue to develop and improve training modules for lay counselors. The areas covered in training include basic and advanced counseling skills, positive living, disease progression, opportunistic infections, risk reduction for HIV transmission, and safer sex. Counseling and ongoing training will be in line with the National Department of Health’s (NDOH) guidelines. ARK will provide mentorship and supportive supervision to lay counselors in the program to ensure high-quality standards for CT. Nurses conduct testing, in accordance with NDOH standards, at the CT sites. Support in terms of systems management and coordination of lay counseling will be provided to CT sites.

ACTIVITY 3: Referrals and Linkages

Community care workers and social workers will be recruited to assist OVC and their caregivers in accessing ARK-assisted primary health facilities for CT. They will coordinate the referral system between caregivers, children and CT services. ARK will inform and coordinate activities with local NGOs, CBOs, and FBOs to establish effective referral networks for CT services. Lay counselors will refer HIV-infected individuals to ARK's ART sites.

Program Area Code: 09

Activity ID: 2970.08

Planned Funds: $339,500

Activity System ID: 14272

Activity Narrative: SUMMARY:

Prevention efforts are key to reducing sexual transmission of HIV. In South Africa, the Population Council (PC) has implemented several prevention programs targeting men and women of reproductive age including young people, learners, as well as couples to delay sexual debut, promote faithfulness and mutual monogamy, promote voluntary counseling and testing and to reduce risk behaviors. With PEPFAR FY 2008 funds, PC intends to strengthen and expand these activities. The proposed activities are in response to requests from various government departments (provincial and national), and will draw upon exiting partnerships with South African institutions and organizations such as the Departments of Health and Education and the South African Council of Churches.

BACKGROUND:

Over the past years, the PC has developed expertise in developing strategies and interventions focused on preventing HIV transmission including promotion of counseling and testing. The first activity, which is co-funded by the Department of Health (DOH) seeks to operationalize the South African government policy and the national contraceptive guidelines by increasing counseling and testing (CT) uptake by family planning (FP) clients. These models have been implemented in three South African districts in 30 clinics in the North West province and will be introduced to all seven regions in the North West, Gauteng and the Eastern Cape provinces. The second activity builds on ongoing work with faith-based organizations (FBO) in the Eastern Cape. To date, earlier work examined ways of promoting mutual monogamy and promoting partner reduction among members of churches affiliated to the Eastern Cape Council of Churches. Most HIV transmission in sub-Saharan Africa occurs among people in stable sexual partnerships, and rates of HIV serodiscordance are as high as 20-30%. However, uptake of HIV testing has been extremely low, particularly couples' HIV testing. In this second activity, Population Council has been working with the Department of Education, the South African Council of Churches and local FBOs piloting interventions on AB in primary schools and mutual monogamy in churches in Mpumalanga and the Eastern Cape provinces, respectively. These community interventions have reached couples, church members, youths, teachers, learners, parents/guardians and other stakeholders. However, reaching an adequate number of men through churches is a major challenge because fewer men than women participate in church activities. The target population for this activity is men and women of reproductive age, program managers, program implementers, church leaders, NGOs and other stakeholders. The emphasize areas are gender, human capacity development (training), public health evaluations / targeted evaluations and strategic information.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Training, Ongoing Quality Assurance and Supportive Supervision

PC will provide continued technical assistance (TA) for capacity building and support training on HIV and FP integration to DOH as they train providers in the three provinces. Developed training material and information, education and communication (IEC) will be shared with the national and provincial departments of health for adoption in various provinces. TA will be provided to adapt materials to provincial contexts for example addressing language. A register will be developed to keep track of the number of trained staff, staff turnover and to ensure completion of training for each provider in intervention clinics. Support to relevant DOH staff will be provided to strengthen and clarify supervisory roles and responsibilities. In addition, PC will plan and host, in collaboration with the NDOH, the review of the National Contraceptive Policy and Management guidelines with a view to integrating relevant HIV issues.

ACTIVITY 2: Development of Network/Linkages/Referral Systems

PC will facilitate the establishment of provincial fora to address challenges and solutions to the implementation of tested models of integrating HIV into FP. In order to ensure sustainability, PEPFAR funds will be used to support NDOH-to-province and province-to-province collaboration on the Maternal, Child, Women's Health and Genetics, Voluntary Counseling and Testing, Comprehensive HIV and AIDS, Care, Management and Treatment Plan programs. Strengthening referral systems for HIV-infected clients post CT will be one of the major foci in order to improve continuity of care. This activity involves raising awareness on the importance of creating links among treatment, care and support with FP services, so that HIV-infected clients can benefit from an effective referral system. Treatment sites as well as sites that provide care and support will be identified. Training will be provided to FP providers and lay counselors on appropriate referral and available sites for referral in the location. The target group for this activity includes healthcare providers, DOH program managers as well as community-based organizations and non-governmental organizations.

ACTIVITY 3: Continued Partnership with the National and Provincial Government

As part of aligning PC's work with government policy, PEPFAR funding will be used to enable the activity to work more closely with the NDOH national voluntary counseling and testing program and to continue working with the WHG program. PC will support the NDOH by providing TA to the department in terms of planning for scale-up of effective components and assisting in identifying key policy barriers in implementing integrated HIV and reproductive health services. Target groups for this activity include national and provincial CT program staff as well as other NDOH staff under the HIV prevention, treatment, care and support program. This activity will assist the South Africa PEPFAR program to reach its goal in both care and treatment by strengthening the continuum of care with the particular Population Council emphasis on designing sustainable programs and service improvements.

ACTIVITY 4: Creating Conditions for Scale-up and Capacity Building

An evaluation of the effectiveness of integrating HIV into FP services will be completed. Funds will be used to develop and modify evaluation tools, train field workers, and to collect and analyze data. In addition, seminars will be conducted with relevant stakeholders to encourage information dissemination and use. At these seminars, innovative interventions on how to increase CT uptake will be discussed, as well as how to continue strengthening the continuum of care and support for HIV-infected individuals. This activity will assist the South Africa PEPFAR program to reach its goal in both care and treatment by strengthening the continuum of care.

Activity Narrative:

ACTIVITY 5: Promoting couples' HIV counseling and testing through FBOs and churches

FY 2008 funds will be used to continue to work with couples with expansion to include faith-based interventions emphasizing couple CT. The emphasis will be on increasing uptake of couples for HIV voluntary counseling and testing (CHCT). Through CHCT, couples can learn their HIV status together as a unit. When partners test separately as individuals, disclosure rates are low, and there is no planning for risk reduction. CHCT is an effective prevention intervention; it facilitates disclosure and allows the couple to jointly plan for risk reduction. However, CHCT is underutilized. Demand for CHCT is low for a number of reasons including high stigma, belief that monogamy is safe, gender inequalities between husband and wife, and lack of knowledge about the benefits of CT or where it can be obtained. Additionally, few counseling and testing sites provide appropriate CHCT or provide support for discordant couples, and few healthcare providers are trained in CHCT. In other words, health centers tend not to be very couple-friendly for HIV testing. Therefore, a faith-based CHCT may have to take advantage of being able to provide a more couple-friendly environment that facilitates couples testing. Church leaders and counselors have been unofficially involved with facilitating disclosure among couples in their congregation. Therefore, church leaders can be used to promote CHCT.

The proposed evaluation will be designed to determine the effectiveness of a faith-based intervention in increasing uptake of couples HIV counseling and testing and document how it can be implemented by FBOs and churches.

Appropriate influential church member couples will be used to promote and encourage CHCT through church interventions. This will be supplemented with congregation-wide messages on couple testing. This will be implemented in 10 churches in Alice (Eastern Cape), where CT is available at the existing FBO-run hospice. Five churches will be selected as non-intervention churches and data will be collected and compared with the intervention churches.

In-depth interviews with male and female church members who are married or cohabiting will be conducted in order to understand the facilitators of and barriers to couples counseling and testing. The findings about their relationships and their perceptions and attitudes about CHCT will guide the intervention and couples' counseling sessions to appeal to couples to attend CHCT. To support CHCT, a faith-based intervention will be appropriately designed to meet the needs of HIV discordant couples. This intervention will focus on assisting couples develop a long-term plan to help reduce the chances of HIV transmission to the negative partner and help the HIV-positive partner live positively. This study will accomplish all this in a period of two years.

9.3 Number of individuals trained in counseling and testing according to national and international standards	198	False
9.4 Number of individuals who received counseling and testing for HIV and received their test results (excluding TB)	N/A	True

Indirect Targets

Integrating Counseling and testing into FP: The Population Council is working in collaboration with the National Department of Health (NDOH) and in North West province (NWDOH), to strengthen the overall CT uptake rates in 48 facilities. The NDOH and NWDOH are actually providing the CT services; however, the Population Council is having a significant indirect impact on the increasing uptake and quality of services through ongoing training, mentoring, job aides, and monitoring of the implementation through site visits. Population Council supports 24 intervention clinics in the NW.

Promoting couples' HIV counseling and testing through FBOs and churches: Fifty church leaders, five from each of the participating churches, will receive training on HIV/AIDS and the importance of couple's counseling and testing. After this training the church leaders will conduct workshops in their churches with couples, people in partnership and youth.

Activity System ID: 13706

Activity Narrative: SUMMARY:

CARE serves as an umbrella grant making mechanism for the Centers for Disease Control and Prevention (CDC). CARE's responsibility is the financial oversight of the grant, including review of the financial reports and on-site assessment of the supporting documentation.

ACTIVITY 1:

CARE is responsible for the contractual arrangements of the sub-grants with CDC/Atlanta. These arrangements include application for funding for implementation of activities by the sub-grantees that have been approved by CDC South Africa, in support of PEPFAR goals. CARE will prepare all supplemental and continuation applications, and ensures that progress reports are received by the sub-grantees. CDC activity managers will be responsible for the technical review of the sub-grantees, and thus their targets for the CT program.

ACTIVITY 2:

CARE is responsible for financial oversight of the sub-grants. This activity entails the review of financial reports submitted by the grantees on quarterly or semi-annual basis. CARE will also conduct on-site assessments of supporting documents to ensure compliance to contract. These assessments will be conducted on every six months. CARE will also ensure that progress reports are received from sub–grantees, and are approved by the activity managers of CDC South Africa on a quarterly/semi-annual basis, prior to the disbursement of continuation funding.

Table 3.3.09: Activities by Funding Mechansim

Mechanism ID: 190.08
Mechanism: N/A
Prime Partner: Aurum Health Research
USG Agency: HHS/Centers for Disease Control & Prevention
Funding Source: GHCS (State)
Program Area: Counseling and Testing
Budget Code: HVCT
Program Area Code: 09
Activity ID: 2915.08
Planned Funds: $1,340,000
Activity System ID: 13686

Activity Narrative: SUMMARY:

The Aurum program provides HIV counseling and testing (CT) for patients in private general practitioner (GP) practices and non-governmental sites. Where Aurum provides support in the public sector, the voluntary counseling and testing (CT) human resources and commodities are provided by the South African government. Emphasis areas include human resources, commodity procurement and quality assurance. The primary target populations are people living with HIV (PLHIV), HIV-infected children, prisoners, homeless people and street youth. The SME Project will continue and expand counseling and testing services offered to SME employees, their partners and dependents through fixed and mobile sites located within targeted workplaces, mobile clinics and sites located within taxi ranks.

BACKGROUND:

Aurum Institute for Health Research (Aurum) is a not-for-profit, public benefit organization that is committed to improving the health of disadvantaged individuals and communities through transformational research (the research programs are not PEPFAR-funded), management of TB and HIV programs and provision of HIV testing, treatment and care. The main focus of the Aurum program in the public, private and non-governmental sector is to provide HIV care and treatment to a large number of persons in a cost-effective standardized manner ensuring a high quality of counseling, patient care and patient monitoring. The model is centrally coordinated and designed to be implemented on a large scale in peripheral sites that are resource-constrained and lacking basic resources such as HIV specialists, information technology (IT) infrastructure, and laboratory and pharmacy capacity. Aurum has established a centralized system of support which includes (1) training of all levels of healthcare workers to ensure capacity building of clinicians to manage patients in resource limited settings with remote HIV specialist support; (2) providing and maintaining guidelines for HIV preventive therapy (including INH and cotrimoxazole), treatment of adults and children, prevention of mother-to-child transmission and CT; (3) providing clinical and administrative support through site visits by staff involved in psychological support, training, clinical support and monitoring data management systems; and (4) maintaining a centralized distribution of medication and laboratory testing. This program will supplement the South African government's antiretroviral rollout and therefore the program adheres to national guidelines and protocols. This is an ongoing program funded by PEPFAR since October 2004. It is a facility-based program in which Aurum works with general practitioners, a faith-based organization (FBO) and within the public sector. In addition the SME Project will expand its services to three additional fixed sites and two additional mobile clinics within Gauteng, Mpumalanga and Limpopo.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Establishing Capacity for CT

This activity will take place in two primary health clinics and two prison clinics. This activity will include the provision of and training of staff in these clinics as well as provision of running expenses for these clinics.

ACTIVITY 2: Counseling and Testing

HIV counseling and testing is conducted at selected GP sites, primary health centers and mobile units. The counseling and testing includes pre- and post -test counseling and rapid finger prick testing with a screening and a confirmatory test. Provision has been made for the mobile units.

ACTIVITY 3: Quality Control of HIV Testing

External Quality control is done at Aurum CT sites. Specimens are supplied on a monthly basis to the CT sites and each staff member on site tests these. This is reported to Aurum by Thistle. Feedback on these results is given at the quarterly refresher training.

ACTIVITY 4: Training on Voluntary Counseling and Testing

A five-day course is given to all new personnel involved in CT. In addition, an annual meeting is held and new findings, discussions on counseling, running of support groups are covered. Training includes a focus on stigma and discrimination.

ACTIVITY 5: Data Management

All encounters are recorded on a standardized form and then captured onto a centralized database that is used for reporting.

ACTIVITY 6: Supply and Distribution of Testing Kits

Kits are ordered using a form that is faxed to, and authorized at, Aurum. The supplier then delivers the kits to the sites.

ACTIVITY 7: Marketing and Promotion

Educational pamphlets and campaigns are provided. Various methods are being used to market and encourage counseling and testing. Some sites (MES and Aurum Klerksdorp) run CT campaigns over short periods of time. Other sites run activities on commemorative days such as Valentine's Day and World AIDS Day. Marketing material is developed locally by the site according to their needs.

ACTIVITY 8: Expansion of Counseling and Testing in SME Sector
Activities in FY08 will include the expansion of counseling and testing services to additional sites in SMES in Witbank Central Business District and Polokwane Central Business District. In addition an additional fixed site will be established in partnership with the City of Johannesburg. This will enable market traders, taxi drivers, commuters and SME employees and their dependents to access counseling and testing. Partnerships will continue to be to be developed with individual SMEs to provide counseling and testing onsite, within occupational health clinics where they exist or within Aurum's mobile vehicles. Additional staff

Activity Narrative: will be hired and trained to provide these services. In addition, occupational health staff will also be trained and supplied with testing kits. As yet there remain restrictions of the use of rapid test kits by persons not registered with the Health Professions Council but in the event of a change in the regulations, Aurum will be in apposition to test and equip a number of lay counselors to also perform rapid testing.

Aurum will contribute to the PEPFAR 2-7-10 goals by promoting and providing counseling and testing services to allow for entry into HIV care and treatment programs.

Table 3.3.09: Activities by Funding Mechansim

Mechanism ID: 2790.08 **Mechanism:** N/A

Prime Partner: Catholic Relief Services

USG Agency: HHS/Health Resources Services Administration

Funding Source: GHCS (State)

Program Area: Counseling and Testing

Budget Code: HVCT

Program Area Code: 09

Activity ID: 3308.08

Planned Funds: $291,000

Activity System ID: 13712

Activity Narrative: SUMMARY:

Catholic Relief Services (CRS) activities are implemented to support provision of counseling and testing (CT) under the comprehensive antiretroviral treatment (ART) program carried out by Catholic Relief Services (CRS) in 25 field sites in 8 provinces in South Africa. The program aims to establish the HIV status of as many residents of the catchments area of each site as possible, with a view to determine their CD4 counts, so that they can be placed on ART as soon as necessary. Major emphasis is placed on community mobilization/participation, with minor emphasis given to the development of network/linkages/referral systems, development of human resources and training. Specific target populations include the general population, people affected by HIV and AIDS, nurses and other healthcare workers.

BACKGROUND:

AIDS Relief (the Consortium led by Catholic Relief Services) received Track 1 funding in 2004 to rapidly scale-up ART in nine countries, including South Africa. In FY 2005, FY 2006 and FY 2007, PEPFAR funding was received to support central funding, with continued funding applied for under COP 2008. The activity is implemented through two major in-country partners, Southern African Catholic Bishops' Conference (SACBC) and the Institute for Youth Development South Africa (IYD-SA).

All sites operate under the terms of a Memorandum of Understanding (MOU) with the provincial Department of Health (DOH) in which they operate, observing the national and provincial protocols. Many patients present themselves for CD4 tests and/or ART after having undergone CT at the South African Government (SAG) clinic.

Contrary to initial expectations, the most difficult issue has been ensuring that men benefit from the CT activities offered. It is mostly women who undergo CT at the field sites. At each field site, home-based caregivers, who are based in their communities, are vigorously recruiting men to undergo CT. A problem experienced by all treatment programs in South Africa is the reluctance of males to present themselves for treatment. CRS sites attempt to overcome this by encouraging females to attend adherence sessions with their partners. Once the participation of males has been secured in this way, they are encouraged to undergo CT and/or CD4 testing.

ACTIVITIES AND EXPECTED RESULTS:

With funding provided in FY 2008 AIDSRelief will continue implementing the activities in support of South African national ARV rollout. Of the 25 existing field sites, activated in program year 1 (March 2004 - March 2005), two have transferred all their ART patients into the SAG rollout, and have ceased providing treatment, and two new field sites have been activated in the same period of FY 2007 to replace them..

ACTIVITY 1: Support for SAG Rollout

Two new field sites have been activated in FY 2007 period to enroll additional ART patients in support of the SAG rollout plan. Utilizing technical assistance from AIDSRelief staff members and South African experts, ongoing support and guidance will be provided to sites in the form of appropriate refresher medical training courses, patient tracking and reporting, monitoring and evaluation mechanisms and other necessary support.

At each field site, staff are trained in counseling techniques, including the provider-initiated testing and counseling (PITC) in support of the HIV & AIDS and STI National Strategic Plan, 2007-2011. Trained nurses are employed at each site, and they are able to perform rapid tests. Those patients who are identified as HIV-infected undergo CD4 and viral load tests. If their CD4 count is below 200, they commence with ART. The home-based caregivers provide care to large numbers of patients, many of them not necessarily people living with HIV. The caregivers are trained to be aware of possible symptoms that might be AIDS-related (for example, weight loss or persistent diarrhea). Where a caregiver suspects that illness might be AIDS-related they give the patients appropriate counseling and advise them to be tested.

In sites with onsite medical services, counseling and testing will be provided by trained nurses and counselors, though the majority of patients in the AIDSRelief program receive free counseling and testing in public sector facilities. Commodity procurement (test kits) is provided for by Department of Health.

All activities will continue to be implemented in close collaboration with the South African Government's HIV and AIDS Unit and the respective provincial authorities to ensure coordination and information sharing, thus directly contributing to the success of the South African Government's own rollout and the goals of PEPFAR. These activities are also aimed at successful integration of AIDSRelief activities into those implemented by the South African Government, thus ensuring long-term sustainability.

FY 2008 COP activities include the provision of PITC for all patients visiting the partner treatment sites, as well as family-oriented CT which will try to include all members of a family of the person currently on ART. These activities are in line with the efforts to encourage testing for HIV for increased number of people, while leaving them the option of refusing the testing if they feel they should not have it. Application of rapid tests of a non-blood nature, are being considered as one of the tools in the implementation of the program, along with PCR testing for children younger than 12 months. It is hoped that the increased rate of voluntary testing for HIV and AIDS will assist additional people who are in need of treatment across the program.

Table 3.3.09: Activities by Funding Mechansim

Mechanism ID: 255.08

Mechanism: TASC2: Intergrated Primary Health Care Project

Prime Partner: Management Sciences for Health

USG Agency: U.S. Agency for International Development

Funding Source: GHCS (State)

Budget Code: HVCT

Activity ID: 2951.08

Activity System ID: 14000

Program Area: Counseling and Testing

Program Area Code: 09

Planned Funds: $339,500

Activity Narrative: SUMMARY:

Management Sciences for Health/Integrated Primary Health Care Project (IPHC) in collaboration with the National Department of Health (NDOH) will support the provision and referral of basic care and support to those who have tested HIV positive in 80 public health facilities (hospitals and clinics) in eight districts and five provinces (Eastern Cape, Mpumalanga, KwaZulu-Natal, Limpopo and North West). This activity will support HIV voluntary counseling and testing (CT) services for men, women, and youth with specific focus on out-of-school youth in facilities supported by IPHC. IPHC will prioritize the provision of these services to men, as this needs improvement. The primary emphasis area is quality assurance and supportive supervision, additional emphasis on training and the development of networks/linkages/referrals. This activity also aims to test pregnant women and facilitate access to prevention of mother-to-child transmission (PMTCT) and antiretroviral (ARV) services. The target population is secondary school students, adults, family planning clients, pregnant women, nurses, and other healthcare workers.

In FY 2008, IPHC will align its activities with the recently launched HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011 (NSP). IPHC will work with 80 public health facilities to make CT widely accessible and available and implement provider-initiated testing and counseling (PITC) in public health facilities as recommended in the NSP.

BACKGROUND:

CT is the building block for all HIV and AIDS programs and it is an important activity in all IPHC-supported facilities. This activity is a continuation of activities initiated in the FY 2007. IPHC directly supports all activities and works closely with counterparts from the health departments at district and provincial levels to increase the number of service outlets that make counseling and testing (CT) widely available. Activities will include training of healthcare providers (professional and non-professional) on CT, couple counseling, and methods of integrating PITC into primary healthcare services such as tuberculosis (TB), sexually transmitted infections (STI), antenatal care (ANC) and family planning (FP). There will be a special emphasis on expansion of CT services to both in- and out-of-school youth. IPHC has trained Clinic Youth Mentors on HIV and AIDS so they can work closely with the health facility personnel to encourage other youths who come to the health facilities to be tested for HIV. Youth mentors motivate other youths to take up the test as part of the “Know Your Status Campaign”. Once youth agree to test, they are referred to the professional nurses in the health facilities who do the actual counseling and testing.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Training

IPHC Project will train 300 healthcare providers (professional and lay) in CT skills in FY 2008. There is a high staff turnover in the rural project sites. New professional nurses who come into the system each year are not trained in CT. Most training institutions do not include CT in the pre-qualification curriculum of professional nurses, which creates a need for CT at the beginning of each year. The project will use training material developed by the NDOH. The training will enhance the quality of CT provided to clients through mentoring supervision and by increasing the number of health facility staff that can provide CT. IPHC will build the capacity of health providers to go beyond CT by supporting post-prevention services that include the formation of pre- and post-test clubs to support those that have tested HIV negative and to encourage a reduction in risky behavior among clients that test HIV positive. Clients that have tested HIV positive will be encouraged to join a support group to focus on maintaining their health and referred to treatment and care for CD4 count testing and staging.

ACTIVITY 2: Increasing CT among Youth

IPHC recently started a program aimed at training Clinic Youth Mentors in HIV and AIDS. The Mentors are 18-23 year olds who are placed at the health facilities. They work with other clinic staff to encourage other youth who visit the facilities to accept CT and other services. They also visit schools, give talks to other youth on the advantages of testing, and motivate young people to test for HIV, so they will know their status. IPHC places one male and one female in each facility. The male Clinic Youth Mentors are critical in motivating other male youth to use CT. Using USAID child survival and family planning funds, the Clinic Youth Mentors have been trained to provide counseling and to encourage those who come to the facilities for FP, STI and ANC to have an HIV test. IPHC will implement the Clinic Mentor Program in the health facilities they are working in, and special attention will be given to the skills and attitudes of healthcare providers to ensure that the facility staff support the youth. This will be done through training on interpersonal relationships, and building an understanding of how cultural and social differences affect the youth's access to health services. Training of youth from the communities and their work with in- and out-of-school youth will increase community awareness. IPHC will facilitate community mobilization, networking and establishment of linkages between community structures, health facilities and universities to ensure greater community participation. Establishment of support groups to ensure greater participation of people living with HIV (PLHIV) will increase access to CT through community awareness and reduction of stigma and discrimination.

ACTIVITY 3: Improving the Quality of CT

This activity will focus on continuous improvement in the quality of the CT services provided at the 80 facilities that IPHC supports. Evidence from IPHC-supported facilities indicates that a large number of ANC clients are not tested for HIV. Various factors affect the quality of CT; these include the training of the CT providers, the physical settings in the facilities as well as burnout in the counselors. IPHC will provide ongoing supportive supervision by building human capacity, address staff burnout and shortages to ensure an improved quality of services at district level. Supervision and mentoring will focus primarily on clinic supervisors and program managers, thus building their capacity to mentor and supervise other healthcare providers. IPHC will also train the members of the HIV, AIDS, STI and TB (HAST) committee, clinic committees and hospital boards to monitor and support the provision of these services. IPHC will support district facilities to ensure that quality data management processes are put in place.

FY 2008 COP activities will be expanded to include:

Activity Narrative: - Advocate for psychiatric nurses and psychologist in the district health system to facilitate debriefing session of the counselors.
- Administer the District STI Clinic Assessment (DISCA) tool in all supported facilities to improve STI management and also increase CT service to STI clients.
- Directly observe and monitor CT sessions in order to make relevant inputs to improve quality of the counseling provided.
- Promote CT in hospital maternity sections and family planning clinics.
- Increase the integration of CT package in ANC.
- Increase provider-initiated testing and counseling to all STI and TB clients treated more than 90% per supported facility.
- Increase male CT uptake by involving the Men As Partners program in selected facilities.

IPHC will contribute to the PEPFAR goals of providing care to 10 million HIV-affected people, and ultimately will assist in meeting PEPFAR's goal of providing treatment to HIV-affected people. In addition, these IPHC activities will address the priority area of increased linkages between CT services and health systems networks as laid out in the USG Five-Year Strategy for South Africa.

Funding Source:	GHCS (State)	**Program Area:**	Counseling and Testing
Budget Code:	HVCT	**Program Area Code:**	09

Activity ID: 3021.08

Planned Funds: $582,000

Activity System ID: 13979

Activity Narrative: SUMMARY:

Humana People to People (Humana) implements an HIV prevention program called Total Control of the Epidemic (TCE). TCE's voluntary counseling and testing (CT) program focuses on (a) providing counseling and testing (CT) to household members during home visits; (b) training lay counselors; (c) supporting South African Government (SAG) services through human resources; (d) piloting mobile testing; and (e) following up with household members to ensure that counseling and testing took place. The major emphasis area of the CT program is community mobilization/participation, while minor emphasis areas are development of network/linkages/referral systems and training. Key target populations are men, women, pregnant women, discordant couples, migrants, community leaders, and traditional healers.

BACKGROUND:

Humana first launched TCE in Zimbabwe in 2000, and since then, TCE has been implemented in eight countries in southern Africa reaching a population of five million people. This program trains community members as Field Officers (FOs) to utilize a person-to-person campaign methodology to reach every single household within the project target area with a comprehensive HIV and AIDS program that includes prevention, CT, and palliative care. Humana received its first PEPFAR funding in July 2005. By FY 2007 Humana was managing five PEPFAR-funded TCE areas in the province of Mpumalanga and one TCE area in Limpopo province. With FY 2007 funding, Humana will add palliative care activities to its program. Humana has previously implemented care programs with TCE and other community programs in South Africa. Furthermore, Humana is, at present, implementing the TRIO program, a public-private partnership with Johnson & Johnson that provides support for people on antiretroviral treatment in Limpopo and Gauteng. Lessons learned from this program and from similar activities in Botswana will be applied to activities. Humana works in partnership with the SAG, and the Ehlanzeni and Mopani District Municipalities are major partners of the program contributing with significant counterpart support. Humana's program has received a number of awards, including the 2003 Stars of Africa Award (in partnership with Johnson & Johnson) for best Corporate Social Investment Program within Health/HIV/AIDS in South Africa. In 2008, TCE will expand its outreach activities with funds from the Global Fund through the South African National Council on AIDS (SANAC).

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Human Capacity Development

TCE will increase the capacity of services for CT in the target areas by establishing two CT sites. TCE will train two nurses and six counselors for each site. The nurses and counselors will all receive a once-off training on CT and thereafter they provided with quarterly training on data management, referrals and linkages and other refresher courses. Counselors will be trained in accordance with SAG policy and guidelines. In addition, TCE will support the salaries of retired private sector nurses to provide testing services.

ACTIVITY 2: CT Promotion and Support

CT sites will actively target couples and encourage them to go for counseling and testing as a strategy for reaching both women and men. The sites will also actively seek to test children of HIV-infected people. The TCE Field Officers will mobilize and refer clients to the CT sites. In addition, TCE encourages the FOs and community volunteers (Passionates) to know their own status and thereby become good role models to other members of their community. The FOs are trained as lay-counselors and will follow-up with people after testing and offer them the necessary ongoing support, either through referral to existing services or by establishing their own support systems, e.g. Positive Living Clubs and support groups.

ACTIVITY 3: CT Services

Based on previous experience, TCE has identified a need for increased access to CT in the areas where TCE operates. Since 2005, Humana collaborated with loveLife, a South African NGO, to run a CT center from the TCE offices at Bushbuckridge in Limpopo province. Negotiations are taking place with the District Department of Health for TCE to start its own site and to work at public CT sites. In July 2007 Humana obtained permission to start CT in Mopani District. Humana will have established two CT sites in FY 2007, and these will be maintained in FY 2008. The CT sites together with the home-based care program will be administered under a sub-program called Hope, which will continue to service each area after the three-year TCE campaign ends.

ACTIVITY 4: Mobile Testing

Experience in the field has shown that many people cannot spare the time or money to visit their local CT site. Experience in other TCE programs has demonstrated that mobile testing in communities has increased the number of people tested. TCE is at present in negotiation with the District Department of Health about mobile testing. Humana will carry out mobile testing from the two sites, both designed to ensure confidentiality, at places in the communities to increase the accessibility to testing. These sites could be established at a school, youth club, church or any other public site. In FY 2007, Humana will explore possibilities of doing home-based testing. TCE is already carrying out home-based testing in Zambia and Mozambique, where FOs are legally permitted to test.

ACTIVITY 5: Linkages With Sectors and Initiatives

In addition to running its own sites, TCE mobilizes community members to go for testing at public CT sites, educates pregnant women about PMTCT, and makes referrals to antenatal clinics. Other TCE collaborative activities include:
(a) working with PEPFAR partners and SAG hospitals to facilitate access to antiretroviral treatment and related services such as support groups;
(b) conducting TCE-run activities for palliative care, which may absorb some of the needs identified by the FOs during their door-to-door-campaign or at TCE's CT sites;
(c) Strengtheing a partnership with the TB sub-directorate in the Ehlanzeni and Mopani districts, as FOs are

Activity Narrative: trained to raise awareness about TB, make referrals to clinics and collect sputum;
(d) cooperating with SAG departments including the Department of Social Development to ensure that orphans and vulnerable children (OVC) and people living with HIV who are identified through household visits are able to access social grants;and
(e) working with the Department of Education to ensure children and youth access education and receive information and education on HIV and AIDS.

These activities will contribute to the PEPFAR goal of providing care to 10 million HIV-affected individuals through an increased number of people being tested and knowing their status resulting in fewer infections; reduction of stigma as a result of more people knowing their status; higher gender equity through counseling (individuals/couples); increased lifespan due to timely treatment of opportunistic infections, positive living, monitoring of CD4 counts and entry to treatment programs before developing AIDS; and strengthened linkages between services offered by government and other organizations

Mechanism ID:	4755.08	**Mechanism:**	N/A
Prime Partner:	Mpilonhle	**USG Agency:**	U.S. Agency for International Development
Funding Source:	GHCS (State)	**Program Area:**	Counseling and Testing
Budget Code:	HVCT	**Program Area Code:**	09
Activity ID:	8247.08	**Planned Funds:**	$250,000
Activity System ID:	14030		

Activity Narrative: SUMMARY:

Mpilonhle is a new South African community-based organization (CBO). It was registered in 2007 with the South African Directorate Non-Profit Organisations. Mpilonhle is dedicated to improving the health and well-being of adolescents in high schools in Umkhanyakude District Municipality, KwaZulu-Natal through its "Mpilonhle Mobile Health and Education Project". Operations will begin in late 2007 with a single counseling and testing (CT) mobile unit funded by Oprah's Angel Network, and later, will expand with two further mobile units funded by PEPFAR. The organization is currently recruiting and employing staff, which is expected to grow to 40. Staff will be based in the Mpilonhle office in Mtubatuba in KwaZulu-Natal.

Mpilonhle's counseling and testing (CT) activities include (1) schools-based health screening, and (2) community-based health screening. These services will be delivered through mobile clinics and mobile computer laboratory facilities to 12 secondary schools and 24 community (non-school) sites at Umkhanyakude District in rural KwaZulu-Natal province.

Emphasis areas include gender, human capacity development, and strategic information. Target populations include adolescents aged 10-24 years and adults.

BACKGROUND:

This is a new activity that will be implemented by the prime partner, Mpilonhle, a newly established non-governmental organization (NGO). The program has broad support from district and provincial South African government leadership. PEPFAR funds will be used to establish the infrastructure, to purchase mobile vans, equipment and operational costs to run the program. Mpilonhle will implement activities in Umkhanyakude District, the poorest and most rural district in KwaZulu-Natal province, and one with high HIV prevalence. Activities will take place in 12 representative rural secondary schools that are affected by physical remoteness, poor health conditions, and inadequate resources, and in 24 community (non-school) sites. Partners include the Department of Education, the South African Democratic Teachers' Union, district health services, and district and municipal leadership.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Schools-based Health Screening

A health counselor will provide secondary school students with (a) an annual individualized health screening that includes CT, screening and referral for common health problems; (b) counseling or referral to further services for prevention of mother-to-child transmission (PMTCT), antiretroviral treatment (ART), TB and psychosocial support; and (c) referral to a social worker for assistance with accessing government grants and support for people living with HIV (PLHIV). School principals, local Department of Education officials, district and municipal mayors and focus groups of teachers and students have expressed the community's acceptance of schools-based CT.

ACTIVITY 2: Community-Based Health Screenings

This activity will be conducted by health counselors at 24 community-based sites outside schools. Community-based health screenings will consist of a core of HIV preventive services including individualized CT; personalized ABC counseling, and condom provision to sexually active individuals; referrals to other community-based services for PMTCT, ART, TB and psychosocial support; referrals to a social worker for assistance with accessing government grants and support for orphans and vulnerable children (OVC) or PLHIV; general health screening and referral for care and other services as required; basic computer training to community members; and group HIV and health education sessions.

ACTIVITY 3: Mobile Facilities

These counseling activities will be provided through mobile facilities. Each mobile facility will consist of a paired-up mobile clinic and mobile computer laboratory, staffed by one primary care nurse, four health counselors, one health educator, and one computer educator. Each mobile facility will visit a participating secondary school one week per month for eight months per year. This will allow each mobile facility to serve four secondary schools per school year. The project will have three mobile facilities, allowing Mpilonhle to serve 12 secondary schools in total. Each participating secondary school has an average of 800 students, and will offer the first three activities described above. Six of the 12 schools have been pre-selected.

ACTIVITY 4: Counseling and Testing

CT will be conducted using South African Government (SAG) approved algorithms, test kits and guidelines and procedures. Health counselors will be trained in SAG-approved CT programs and will use SAG-approved HIV CT protocols. External Quality Assurance methods will be used to check the service quality. Health screening will use an Electronic Medical Record (EMR) system implemented on handheld computers, programmed with health screening guidelines, algorithms, and series of questions that must be followed by the counselors. These will save individual screening results into a medical record. EMRs facilitate collection of timely, high quality and easily analyzable data. EMRs also contribute to quality control by minimizing missing data, and by enforcing and monitoring conformity to protocols and guidelines. The data collected by the EMR system will include indicators of acceptance of pre-test counseling, testing, results, post-test counseling, data on HIV status, and on sexual behavior.

Persons who are HIV-infected will be referred to the program nurse for further evaluation, including CD4 testing, which will be done at Department of Health laboratories. People who meet initial screening criteria for antiretroviral treatment (ART) will be referred to the Hlabisa Health sub-district ART program at one of the DOH clinics. Persons screened for TB will also be referred for TB management at district clinics.

ACTIVITY 5: Human Capacity Development

Sustainability of activities is facilitated by building human capacity in remote rural areas. Mpilonhle will maximize the capacities and skills of relatively abundant lay health workers to enable them to perform

Activity Narrative: critical yet currently scarce services such as HIV counseling, health screening and personalized risk assessment, and health education. This skills development in lay health workers will shift the burden of these activities away from relatively scarce professional health workers like nurses and doctors. Mpilonhle will build the technical expertise and capacities of lay health workers through rigorous training and regular refresher courses and through the technological support provided by the information technology components of the program. Sustainability is facilitated by political commitment from district and municipal governments, and the local Department of Education to scaling-up and to fund-raising in support of such scaling-up.

These activities will contribute to PEPFAR 2-7-10 goals of promoting counseling and testing for HIV among secondary school students and adults in the general population.

Activity ID:	3100.08	**Planned Funds:**	$773,000
Activity System ID:	14266		

Activity Narrative: SUMMARY:

The approach taken by the Perinatal HIV Research Unit (PHRU) is one of comprehensive, high quality care and support for people living with HIV (PLHIV). PHRU will use PEPFAR funds to promote voluntary counseling and testing (CT) through HIV prevention workshops and health promotion activities, and to pregnant women at PMTCT to increase uptake of CT for HIV. In particular, services will be promoted to men in an effort to increase gender equality in HIV and AIDS programs and make them available to adolescents as part of a prevention program. The major emphasis area is human resources; minor areas include local organization capacity development, community mobilization/participation, and information, education, and communication. The target populations are the general population with a focus on men and adolescents.

BACKGROUND:

This CT program is an ongoing activity operated in partnership with a local non-governmental organization, HIVSA, and other CT organizations in Soweto (Gauteng). The program will be expanded to rural Limpopo and Mpumalanga. Women have mainly accessed HIV services in Soweto and this project aims to improve gender equity in these services. In June 2005, the IMBIZO project, which broadens access to HIV and AIDS information, was established. This project was designed to enhance male involvement in counseling and testing and other health services. IMBIZO drop-in centers operate five days a week and are located close to areas where men congregate and are easily accessible. The concept of the IMBIZO program is one designed by men for men and evolved from research that indicated that men preferred to be counseled by men at locations away from the primary healthcare clinics. Within the project, marginalized communities such as men who have sex with men are encouraged to access CT. A focus of this program is to reduce stigma associated with HIV, to encourage disclosure, to support partners and family members with HIV and to promote active engagement with HIV services. A program promoting IMBIZO to partners of pregnant women is being run in the antenatal clinics, with the aim of increasing male involvement in PMTCT and fatherhood. Reduction of violence and coercion, also main components of IMBIZO, is a major focus of the program. Outreach activities take place in prisons, workplaces, hostels, sports matches and other places where men congregate. PHRU offers a couple counseling service called "Tshwarisanang" through external foundation funding and all other PHRU CT services can refer to them.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: IMBIZO - Men's Health Centers

Male IMBIZO centers are funded by PEPFAR. The project receives approximately 300 drop-in clients and performs approximately 140 CT each month. A male registered nurse manages the program. Clients are referred to local clinics for HIV services and treatment. Stigma decreases men's uptake of CT services and innovative strategies to increase men using CT are being developed. At-risk male populations such as men who have sex with men, migrants, and prisoners are focus populations. This program will expand to rural Mpumalanga provinces. Information on TB, PMTCT, HIV services, prevention, nutrition, etc., is available. Clients are counseled on prevention and condoms are distributed. Support is given to clients to encourage disclosure, to decrease stigma, to mitigate domestic violence, and to provide support to partners. To increase male support of PMTCT programs, pamphlets have been designed for male partners of pregnant women that explain PMTCT, encourage active involvement in fatherhood, and encourage men to access the IMBIZO centers and to go for CT. Outreach activities take place regularly with community organizations, workplace programs, and health services. Mobile CT is used to take CT to communities that do not have easy access to healthcare services. A focus of this program is to reduce stigma, increase male involvement in all services relating to HIV thus increasing gender equity. U.S.-volunteers will support the rural program.

ACTIVITY 2: Adolescents

Adolescents have special healthcare needs which they are often reluctant to address; some of these are sexuality, pregnancy, drug and alcohol abuse, sexually transmitted infections (STI), gender and mental health issues, coercion, violence, transgenerational sex and abuse. They are at high risk of contacting HIV and other STIs. Through a proposed specialized adolescent clinic PHRU will address these needs with FY 2007 PEPFAR funding by offering comprehensive counseling and care services that are youth-friendly, confidential and empowering to clients so that they may make informed and responsible healthcare choices, including being empowered to abstain and delay sexual debut. Through CT, education and counseling, PHRU will increase awareness of HIV. The clinic in Soweto will be based close to places to where adolescents congregate. Services will comprise CT and confidential and free care; information, education and counseling on sexual and reproductive health; health information; counseling and appropriate referral for violence abuse and mental health issues; contraceptive information and counseling on individual choices; STI information, including information on effective prevention; and syndromic management of STIs. PEPFAR funds will be used to establish and staff this project.

ACTIVITY 3: CT Plus

In the Western Cape a mobile CT program providing counseling and testing, point of care CD4 counts, TB screening and referral into care and ART services programs will be supported. The Western Cape has very high TB prevalence. This program will provide CT to underserved populations.

ACTIVITY 4: Couple Counseling

PEPFAR funds will be used to expand an existing couple counseling program operating at the PHRU in Soweto. Specialized counseling for couples has proven to be effective for preventing further infection particularly in discordant couples. In many programs lay counselors do not have sufficient expertise to counsel couples and therefore a referral service is essential.

ACTIVITY 5: Farm Workers

A CT activity linked to care and ART for farm workers in the Westcoast winelands region of the Western Cape will be expanded to other districts in the region. The male CT program will expand to target all men including men who have sex with men and other vulnerable male groups in Soweto (Gauteng) and

Activity Narrative: Bushbuckridge (Mpumalanga).

These activities will contribute to the PEPFAR 2-7-10 goals by increasing access to and improving quality of CT services, particularly to hard-to-reach populations of men and adolescents in urban and rural districts in South Africa.

Table 3.3.09: Activities by Funding Mechansim

Mechanism ID: 1071.08
Mechanism: N/A
Prime Partner: US Peace Corps
USG Agency: Peace Corps
Funding Source: GHCS (State)
Program Area: Counseling and Testing
Budget Code: HVCT
Program Area Code: 09
Activity ID: 3798.08
Planned Funds: $20,000
Activity System ID: 13928

Activity Narrative: SUMMARY:

Peace Corps Volunteers (PCVs), who work in civil society organizations (CSOs) that focus on counseling and testing services, are assigned to the Community HIV/AIDS Outreach Project (CHOP). PEPFAR funds will be used to train these CHOP PCVs and their counterparts in (a) organizational capacity building, i.e. strengthening organizational and human capacity; and (b) promoting counseling and testing, particularly among youth. PCVs in this program area do not provide pre- and post-counseling service but are involved mainly in local organization capacity development, helping their host CSOs improve their systems and practices to motivate youth to use counseling and testing services. The primary target populations for these interventions are CSO employees, community citizens, volunteers, and traditional, religious and business leaders. PCVs will be placed in the rural areas of North West, Limpopo, Mpumalanga and KwaZulu-Natal provinces. Funds requested in FY 2008 will cover the costs of training PCVs and their counterparts and, through the Volunteer Activity Support and Training (VAST) mechanism, the training of CSO employees and community volunteers involved in promoting counseling and testing.

BACKGROUND:

To date, the program in South Africa has relied primarily on PEPFAR-funded PCVs assigned to the (previous) non-governmental (NGO) capacity-building project. Although the FY 2007 program still utilizes PEPFAR-funded PCVs, beginning in FY 2008 there will be no PEPFAR-funded PCVs and instead it is anticipated that one to four CHOP PCVs will assist CSOs with a significant need to improve their CT capacity in reaching out to youth.

ACTIVITY 1:

As noted in the prevention program area, approximately 100 PCVs and 100 counterparts will receive training in HIV prevention in FY 2008. They will deliver life skills sessions in schools and the community, using and developing peer educators in the process. One to four CHOP PCVs will respond to their host CSO wishes to strengthen their CT capacity. Through the PEPFAR VAST mechanism, these PCVs will be able to pilot activities that will increase the number of youth who will avail themselves of counseling and testing services. The CHOP PCVs will contribute to this program area by uniquely providing American citizen assistance in rural communities. Their activities are also closely aligned to the South African government strategies in each of the provinces in which PCVs work.

NOTE: PCVs involved in this program area are part of the population of PCVs who are required to participate in Activities 2, 3, and 4 described in the Prevention program area.

Mechanism: N/A

Prime Partner: Tuberculosis Care Association

USG Agency: HHS/Centers for Disease Control & Prevention

Funding Source: GHCS (State)

Program Area: Counseling and Testing

Budget Code: HVCT

Program Area Code: 09

Activity ID: 13838.08

Planned Funds: $500,000

Activity System ID: 13838

Activity Narrative: SUMMARY:

This project will increase access to HIV voluntary counseling and testing (CT) in non-clinical sites and in facilities with a large number of TB cases. Two mobile services and fixed non-clinical sites in easily accessible areas such as taxi ranks and shopping areas will provide CT services. TBCA will also assist the district in training and supervising counselors in clinical sites. Target populations include the general population, at risk populations, the business community, discordant couples, pregnant women and orphans and vulnerable children.

BACKGROUND:

TB Care Association (TBCA) has been providing community-based counseling, emergency material relief, and support, and TB treatment support in the Western Cape since 1992. Provision of non-clinical CT and counseling mentorship are new initiatives that will be conducted in collaboration with the Department of Health. Women are at higher risk for HIV infection. The provision of CT will therefore benefit women who test HIV positive and will access care and support. Men utilize health services less than women and will therefore benefit from the provision of CT in non-clinical CT sites. TBCA is exploring the possibility of expanding activities to the Northern Cape province.

ACTIVITIES AND EXPECTED RESULTS

ACTIVITY 1: Non-clinical Counseling and Testing

TBCA will hold consultations will be held with key stakeholders from government, non-governmental organizations, community-based organizations and the private sector, to identify sites in which to establish new services or strengthen existing services for HIV counseling and testing. The West Coast Winelands District has suggested that non-clinical CT sites should be established in the taxi ranks in Malmesbury, Saldanha and Vredenburg. Additionally, two mobile CT teams will provide services in underserved rural and peri-urban areas and in private sector workplaces such as farms and factories. In small towns, mobile CT teams will conduct door-to-door community-based CT. A "100% cover" campaign will be piloted. This campaign aims to counsel and test all the population over 14 years and to promote 100% condom use. PEPFAR funds will be used to purchase two vehicles for the mobile CT teams.

Counseling and testing teams will be recruited, hired and trained in collaboration with NGOs that are already providing CT services in the area. Each team will include two lay counselors, one nurse counselor (who will also do the HIV testing) and a community mobilizer funded by PEPFAR. Five CT teams will be hired and trained in the first year of the project.

Gender equity in HIV and AIDS programs will be addressed through the provision of non-clinical CT that will increase access to men. The education provided by the community mobilizer and the risk reduction counseling will help to change male norms and behaviors and reduce violence and coercion. As more people access CT, it is hoped that there will be more discussion of HIV in communities and that stigma and discrimination towards people living with HIV will decrease.

The community mobilizer will provide education on HIV prevention (abstinence, being faithful, using condoms), the benefits of knowing your HIV status, TB and STI symptoms and the importance of being treated for TB and STIs. Couples will be encouraged to go for counseling together. The community mobilizer will also distribute condoms.

Counseling and testing will be provided according to national and international standards. Counseling will focus on personalized risk assessment and risk reduction. Correct condom use will be demonstrated and condoms, procured by the Department of Health will be dispensed. HIV testing will be informed, voluntary and consented. Rapid test kits will be provided by the National Department of Health (NDOH).

Any individual who agrees to HIV counseling and testing will also be screened for tuberculosis and sexually transmitted infections (see TB/HIV Program Area). If symptoms are present, they will be referred to the nearest clinic/hospital where further investigations and/or treatment will be available. All HIV-positive clients will be referred for HIV clinical care and support services and will be counselled on preventing transmission with a specific focus on discordant couples. The CT register will have additional columns to indicate if clients have TB or STI symptoms as well as a column to determine if the patient presents at the health facility to which they are referred.

PEPFAR funds will be used to employ one data capturer for each supported health facility to assist with recording laboratory results and to trace people with positive TB smears to ensure that they are initiated on treatment. The data capturer will also be responsible for informing the CT teams and community health workers if referred patients attend the facilities to which they have been referred.

ACTIVITY 2: Training and Supervision of Counselors

PEPFAR funds will be used to hire a CT Coordinator to train, mentor and supervise the CT teams. Training will comply with national guidelines and will be conducted in collaboration with National Department of Health and the AIDS Training Information and Counseling Centre (ATICC). Additional training will be provided on couple counseling for concordant and discordant couples, counseling for youth, and counseling to address substance abuse and domestic violence. The CT Coordinator will also visit clinical CT sites to provide mentorship and technical support, focusing on TB treatment facilities. The five CT teams, consisting of five nurse counselors, ten lay counselors and five community mobilizers, will be trained. Additionally, one counselor in each of the 11 facilities will be trained, mentored and supervized. In health facilities, routine counseling and testing will be offered to pregnant women and patients with TB or sexually transmitted infections.

ACTIVITY 3: Measuring Costs and Assessing Cost-effectiveness of Non-Clinical HIV Counseling and Testing

Activity Narrative: To assess the affordability of the interventions, a cost-effectiveness analysis will be done through a sub-contract with the Health Economics Unit of the University of Cape Town. The cost per person post-test counseled will be measured and the cost per HIV infection averted will be estimated for non-clinical HIV counseling and testing compared to standard HIV counseling and testing. The opportunity costs of adding TB and STI screening during pre-test counseling will be measured.

The project aims to counsel and test 10,000 people the first year. These results contribute to the PEPFAR 2 -7-10 goals by improving access to and quality of CT services in order to identify HIV-infected persons and increase the number of persons receiving ARV services.

Activity System ID:	13834		

Activity Narrative: SUMMARY:

St. Mary's Hospital in Durban, KwaZulu-Natal will implement extensive counseling and testing services in the hospital as well as in the community to encourage patients' referral to the hospital for antiretroviral treatment (ART). The activities will encompass human resources, consumables and asset procurement. The emphasis area of this activity is to provide counseling and testing to the family unit and communities and in particular, there will be a focus on couple counseling at the prevention of mother-to-child transmission (PMTCT) program. This is in line with the goals of the HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011 to reduce the impact of HIV and AIDS on individuals, families, communities and society and with the ultimate aim to reduce the number of new infections. The target group for this activity is the general population and pregnant mothers; partners of pregnant mothers, children from prior pregnancies and extended families of HIV infected individuals. There is also a focus on men in the workplace as counseling and testing and referral to St. Mary's Hospital for treatment has been offered to industries surrounding St. Mary's Hospital.

BACKGROUND:

This is a new program activity funded in FY 2008, although St. Mary's has received previous PEPFAR funding as a sub-partner to another PEPFAR partner, Catholic Relief Services. This activity will enhance the PMTCT, palliative, treatment and care programs that were funded by PEPFAR in FY 2007. The program is supported by the South African government as St. Mary's Hospital has a service level agreement with the provincial Department of Health and the Hospital is in partnership with the District Office of the Department of Health to provide HIV and AIDS training to all clinical staff over the next two years.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Dedicated Counselors in the Hospital Setting Providing HIV Testing and Counseling

The overall objective of this activity is to routinely counsel and test as many patients as possible in the hospital setting. Patients and extended family members will be encouraged to be tested and continuously be re-tested in order to refer to the care and treatment programs if appropriate. The goal will be to counsel and test all patients attending the facility whether or not the patient has symptoms of HIV and regardless of the patient's reason for attending the facility. In addition, the focus will also be on encouraging those that are negative to remain negative. This will be addressed through extensive counseling and the need for a change in behavior if necessary. All areas of the hospital will be targeted both inpatient and outpatient areas. In particular, the PMTCT program will encourage the counseling and testing of couples and members of the family unit. A provider-initiated testing and counseling (PITC) approach has been adopted as the preferred method of counseling and testing throughout the facility.
There is an integrated approach to the treatment of TB and HIV at the facility. This will ensure that all TB patients will be routinely tested for HIV, and all newly diagnosed HIV-infected clients at the facility will be screened for TB (via the Catholic Relief Service funding).

A group of thirteen counselors will be in the wards, outpatient section and the primary healthcare clinic, which is an integrated clinic setting that addresses TB, hypertension, diabetes, antenatal services, primary health services and PMTCT. Approximately 2 000 patients make use of this facility on a monthly basis. In order to maximize the goals of this activity it is important to have counselors spread throughout the facility. The counselors will be trained and continuously updated through the treatment program activity area to ensure that patients will make informed decisions. Government counseling and testing protocols will be adhered to. The expected results of this activity is to (a) create a culture in which all people regularly seek counseling and testing and re-counseling and testing on an ongoing basis for HIV; (b) provide HIV and AIDS care and treatment to those who require this treatment, and particularly addressing the referral and access to treatment programs; and (c) provide accurate clinical information to health care workers when treating patients.

ACTIVITY 2: Community Mobilization/Outreach

A vehicle will be purchased and a team of two counselors and a nurse will be tasked to work with the 19 referral clinics to St. Mary's Hospital and the primary healthcare clinic to provide mobile HIV counseling and testing. The primary goal of the activity is to encourage regular counseling and testing in the clinics; and counseling and testing for family members in a home setting. This activity will be an extension of the PMTCT program. The community mobilization of testing and counseling will extend to a large industrial community that surrounds St. Mary's Hospital. A team of counselors will primarily target men in the workplace and offer testing and counseling to all, and treatment to those who require treatment.

Currently a local radio media campaign exists (not a St. Mary's Hospital funded activity) that encourages industry to establish a culture of ongoing testing and counseling in the workplace; and support and referral to treatment sites for those that require treatment. St. Mary's activities will support this initiative. The outreach counseling team will also address loss to follow-up and counseling and testing of partners of pregnant mothers and extended family members of the pregnant mother. The expected results of this activity is to (a) address couple counseling and testing but in a home-based program which has shown to reduce HIV transmission in sero-discordant couples; (b) address referral links for care and treatment to St. Mary's Hospital from referral clinics and home-based settings; and (c) address the culture of counseling and testing in the community.

These activities contribute directly to the overall PEPFAR objectives of 2-7-10 as HIV-infected people will be identified, appropriately treated, cared for and supported. Family members affected will benefit directly from counseling and support within the hospital environment as well as within the community setting during home visits.

Activity ID: 7907.08

Planned Funds: $204,670

Activity System ID: 14009

Activity Narrative: SUMMARY:

McCord Hospital and Zoe Life (McCord/Zoe Life) aim to increase capacity to expand integrated counseling and testing (CT) services within the framework of a comprehensive HIV care and treatment program in seven sites: four municipal clinics and three non-governmental organizations (NGOs). Capacity will be developed by (a) training voluntary lay counselors at the NGOs to provide best-practice services; (b) mentorship of NGO and municipal counselors and clinical staff to provide integrated, provider-initiated CT services; and (c) strengthening continuity of care post-CT through referral of HIV-infected clients by counselors to the HIV care and treatment services. The emphasis areas are the development of referral systems between vertical programs, human resource support, development of a training curriculum aimed at CT of children, strengthening the local organizational capacity to increase CT services, quality improvement, supportive supervision, and in-service training of staff. Specific target populations are the general population, refugees and internally displaced persons (through the KHWEZI AIDS Project in central Durban), and workers within the business community. Counseling and testing will be provided in French and Swahili in the KHWEZI AIDS project to reach refugees and asylum seekers from Central and West Africa who currently reside in the Durban area.

McCord Hospital receives funding for prevention of mother-to-child transmission (PMTCT) and antiretroviral treatment (ART) treatment through the Elizabeth Glaser Pediatric AIDS Foundation (EGPAF). This program described here focuses on strengthening the capacity of public sector facilities, and it is distinct from the hospital-based program funded by EGPAF.

BACKGROUND:

Counseling and testing is the entry point to prevention, care, treatment and support of HIV-infected persons. If access to care and treatment is to be accelerated, then access to CT should be aggressively pursued. In KwaZulu-Natal, lay counselors in municipal and local health authorities have traditionally provided a stand-alone vertical service to persons requesting HIV testing. Uptake of CT services has largely been a result of the PMTCT program, with referral from other programs (sexually transmitted infections (STI) and tuberculosis (TB)) and self-referral contributing a small percentage to the uptake of CT. In the NGO setting, patients are largely referred for CT from community health workers who suspect advanced HIV disease. Thus, apart from PMTCT where CT is provider-initiated, clients who are already symptomatic with AIDS and who require a definitive diagnosis and ARV treatment request the bulk of CT services.

The emphasis of this new project would be to shift the trend of voluntary counseling and testing (CT) to a universal, provider-initiated opt-out service designed to increase uptake of services and to promote early diagnosis of HIV while patients are still well enough to access wellness and health promotion services. This project would also emphasize increasing opportunities to counsel and test children. In addition to increasing uptake of CT, this project seeks to ensure that clients who learn of their HIV status will be seamlessly integrated into care, support and treatment services. Lastly, this project seeks to take CT into the business community to workers who would not otherwise have an opportunity to be counseled and tested. The KwaZulu-Natal Department of Health (KZNDOH) supports these activities. Activities within the municipal clinics will be undertaken with the support of the eThekwini (Durban) Municipality. Gender issues will be addressed by taking CT services into the business community, where many employed men have no access to services. In addition, counselors will proactively encourage partners of women tested in PMTCT services to access testing. Where possible, the technical support team will investigate the possibilities of extended hours of CT services to include weekends or evenings.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Training

McCord/Zoe Life will work with three NGOs currently providing psychosocial support to HIV-infected clients in their communities using voluntary lay counselors. These voluntary lay counselors have been trained by a variety of organizations. In order to standardize the quality of counseling which will be offered through this project, McCord will train all participating lay counselors. Training will be conducted over 10 days according to the South African national counseling guidelines (minimum standard). Lay counselors employed by the four municipal clinics will have benefited from the 10-day training course as a pre-employment requirement and will not require further training in CT. Staff from all seven sites will be trained in CT of children to increase confidence and skill in this area. Counselors will be trained to conduct pre- and post-test counseling with caregivers and children where appropriate. Clinical staff will be trained in testing of children, which includes skills to draw blood from small children or babies. This is currently a barrier to widespread testing of small children outside of a hospital setting. Counselors who have not already had exposure to training in couple counseling will be trained and urged to encourage partner or family attendance at clinic or NGO activities with the view of encouraging testing and other palliative care services.

In addition, staff will be trained and supported to provide family centered counseling aimed at increasing retention and improving case finding within families. Also, training will be provided to increase skills to counsel and test children and adolescents in both the clinical and community/educational settings.

ACTIVITY 2: Workshop in Provider-Initiated Counseling and Testing Within a Multidisciplinary Team

All staff who participate in this project will attend a preparatory workshop on the concept, advantages and implementation challenges of provider-initiated or opt-out CT services. During this workshop, the seven sites will be assisted in formulating an approach to implementing provider-initiated CT or opt-out counseling as an augmentation to their current services, which would include PMTCT, STI, TB, children's clinic, immunization services. Staff will be assisted to include lay counselors into a multidisciplinary team that will span across vertical programs. Staff will be assisted to develop referral systems that are effective and ensure continuity of care between CT, HIV care and treatment and the other programs. Special attention will be paid to increasing confidence in counseling and testing of children.

ACTIVITY 3: Technical Support to Implement Provider-Initiated or Opt-Out CT

All sites will be supported technically to implement provider-initiated or opt-out CT through weekly

Activity Narrative: mentorship of counselors and clinical staff, facilitation of multidisciplinary and inter-program referrals, and problem solving. McCord/Zoe Life will assist sites to strengthen monitoring and evaluation systems linked to CT. Information relating to the implementation of CT services will be reviewed and fed back to staff at the sites for ongoing quality control and problem solving. Counselor mentors will monitor quality of counseling, assist with complex cases and strengthen referrals. Clinical support will be given to staff that require assistance with testing of children.

ACTIVITY 4: Human Resource Augmentation

In sites where uptake of CT exceeds the staff capacity, PEPFAR-funded counselors will be employed to increase capacity whilst the organization motivates for increasing human resources from the KZNDOH or from other funding sources.

ACTIVITY 5: Mobile CT

Mobile counseling and testing services will be offered to at risk populations or difficult to reach populations such as unemployed, migrant or displaced peoples. These services will be provided as an outreach service linked to the current sites. Sites' staff will be used to link population at risk or in difficulty with appropriate services.

ACTIVITY 6: Increase CT for OVC

Linkages with educational facilities and facilities housing orphans and vulnerable children will be established and counseling and testing services will be offered to these facilities, either on site, or in conjunction with the Zoe-Life/McCord sites, in addition to linkages with care and treatment services.

The McCord Hospital/Zoe Life activities contribute to the 2-7-10 PEPFAR goals and the USG South Africa Five-Year Strategic Plan by strengthening the public sector and expanding access to care and treatment.

Activity ID:	2991.08	**Planned Funds:**	$1,697,500

Activity System ID: 13956

Activity Narrative: SUMMARY:

Johns Hopkins University Center for Communication Programs (JHU/CCP) coordinates the work of 20 South African partners and provides technical assistance and capacity building to provide counseling and testing (CT) using both mobile and fixed services through local NGOs and tertiary institutions. These services will be promoted through the Mindset Health channel to both healthcare workers and patients. Key areas of male norms and behaviors, partner limitation, correct and consistent condom usage, substance and alcohol abuse, reducing violence and coercion and stigma and discrimination, form an integral part of the CT interventions. The target populations for this activity are secondary school learners, university students, patients in health care centers, celebrities and their fans, people living with HIV (PLHIV), out-of-school youth, men who have sex with men (MSM), community leaders and healthcare providers. The major emphasis areas are community mobilization and participation, and information, education and communication, with additional emphasis on local capacity building across all activities. Findings from a qualitative study on multiple concurrent partnerships and the National HIV and AIDS Communication Survey, carried out in early 2006, will help focus on community perceptions of CT and help to determine perceived needs in respect to CT communication interventions.

BACKGROUND:

This is the fourth year that JHU/CCP has undertaken counseling and testing activities. Eighteen of the 20 partner organizations work across all nine provinces of South Africa utilizing mass media and interpersonal communication strategies in a variety of social settings aimed at creating a broad national social movement that promotes counseling and testing as part of the broader national HIV prevention, treatment and care strategy. Testing is promoted through mobile clinics and fixed sites operated by four partners and in partnership with the public health system and other partners such as New Start. Counseling addresses issues related to male norms and behaviors, violence and coercion, stigma and discrimination, alcohol and substance abuse, and correct and consistent condom usage. All organizations carry out prevention with positive living activities as part of their post-test counseling with HIV-infected individuals.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Social Mobilization for Testing

DramAidE, The Valley Trust, Lesedi Lechabile, Mothusimpilo, and Matchboxology support and promote CT services targeting men, women, youth and the broader community at 85 mobile and fixed testing sites. DramAidE's HIV positive Health Promoters (HPs) mobilizes tertiary students in 23 tertiary institutions across South Africa to undergo CT. The Valley Trust (TVT), based in KwaZulu-Natal (KZN), promotes CT through community outreach and mobilization activities targeting adult men and women in the rural areas of KwaZulu-Natal at its 15 mobile and one fixed CT site. TVT promotes CT with youth aged 14 years and older through its school Anti-AIDS clubs, and among adult men and women through community events and traditional ceremonies, workplaces, taverns and faith based organizations.

Dance4Life promotes CT among youth older than 14 using dance, drama and drumming as part of their prevention activities covering schools in the Eastern Cape, Western Cape, KwaZulu-Natal and Free State provinces. Lesedi Lechabile and Mothusimpilo promote CT through activities undertaken at their mobile and fixed sites to vulnerable women, youth and men in the mining areas of the Free State and the North West.

LifeLine promotes CT with workers in small and medium enterprises and farm workers in informal settlements/rural areas in Gauteng, Free State, Northern Cape, Limpopo and Mpumalanga. This activity is undertaken in partnership with the Small Business Association, farm owners and farm workers' unions.

Lighthouse, working in 13 informal settlements in the Madibeng District of the North West province, promotes CT through its school Anti-AIDS club activities. The project encourages adult men, women and out-of-school youth to undergo CT through their door-to-door campaigns and at community events, traditional ceremonies, and gathering places like taverns and taxi ranks.

Matchboxology (MB) in partnership with the South African Professional Footballers Union (SAPFU) and the Premier Soccer League (PSL) places 16 wellness coaches in 16 Premier Soccer League Clubs to mobilize professional footballers and their fans to undergo CT. MB is a private sector firm that is responsible for the Levis Red for Life Campaign that mobilizes celebrities around HIV.

Sonke Gender Justice (SGJ) will expand the number of men's clubs in Mpumalanga, North West and Northern Cape to mobilize men participating in their male clubs to undergo CT. SGJ receives funding from the Western Cape provincial government, the National Office on the Status of Women, a independent foundations and United Nations agencies.

The PEPFAR partner, Department of Correctional Services (DCS), will expand their program from the Limpopo and North West provinces to include Gauteng and the Northern Cape. The program with DCS uses the TshaTsha TV drama series, to train their peer educators (PEs) to promote CT.

A "to be determined" (TBD) faith-based organization (FBO) will work with faith-based leaders to promote CT to their communities.

A TBD partner will work with the indigenous communities living in the Northern Cape (the San and the Khoi) to to promote CT as part of a broader effort to promote HIV prevention amongst this community.

A TBD partner will work with men who have sex with men (MSM), including male sex workers, to mobilize this community to increase HIV prevention efforts including CT as part of a broader HIV prevention effort targeting MSM in South Africa.

A TBD partner will work with cellular telephone providers in South Africa to utilize cellular technology to encourage celebrities and other key personalities, through SMS technology, to participate in cellular and on-line chat forums to promote CT.

Activity Narrative: ACTIVITY 2: Promoting CT in Health Centers

The Mindset Health Channel (MHC) broadcasts information to 400 health clinics. Patients in waiting rooms are targeted with information on CT and HIV. The channel provides training and technical information to healthcare workers (HCWs) using a multimedia approach that combines video, print and computer-based interactive multimedia. Training on current CT guidelines (including strong linkages to HIV care and services) are included. Mindset will also develop a video on provider-initiated testing and counseling (PITC). The video will inform patients that the facility has a PITC policy and that the provider will test them for HIV unless the patient refuses.

Community Health Media Trust (CHMT) works with MHC and with other community-based organizations through its 92 Treatment Literacy and Prevention Practitioners (TLPPs). Seventy-two TLPPs are funded by PEPFAR and 20 by the National Department of Health (NDOH). All TLPPs encourage CT in health centers as an entry point into treatment while reinforcing HIV prevention to those who test negative.

ACTIVITY 3: Mass Media in Support of Community Mobilization

ABC Ulwazi produces a radio talk show series tailored to 60 different community radio stations with a special emphasis on voluntary counseling and testing. Listeners' Associations formed by local citizens have facilitators' guides to carry out community outreach interventions that mobilize local communities around voluntary counseling and testing and encourage them to know their HIV status.

The South African Broadcasting Corporation plays a key support role by co-funding two TV programs with radio (nine local language stations) and by providing web support. Trailblazers, a community health show, will air 13 episodes highlighting individuals that provide models of positive behaviors for others to emulate. A second season of a 26-episode TV drama deals with contextual issues relating to social and cultural norms that inhibit and/or support positive male norms and behaviors, including positive examples that promote counseling and testing and living positively. Radio talk shows follow both programs, providing additional information and stimulating community participation.

MB and the South African Football Players' Union (SAFPU) and the Premier Soccer League (PSL) will mobilize South African football players to be positive role models and to undergo public counseling and HIV testing. Players will be encourage to promote messages relating to counseling and testing through in the build up to the 2010 Football World Cup in South Africa.

JHU/CCP's work supports the vision outlined in the USG Five-Year Strategy for South Africa for expanding CT services. CT is a critical entry point into an entire range of HIV services, including identifying HIV-infected individuals for ART. These activities substantially contribute to the PEPFAR goal of providing 2 million people with treatment and averting 7 million new HIV infections. It also supports the HIV & AIDS and STI Strategic Plan for South Africa's priority of establishing a national culture in which all people in South Africa regularly seek voluntary counseling and testing. Establishing regular CT as a norm will contribute towards reducing the number of HIV infections by 50% by 2011 and ensure that 80% of people living with and affected by HIV have access to appropriate care and support and treatment.

Targets

Target	Target Value	Not Applicable
Indirect number of service outlets providing counseling and testing	N/A	True
Indirect number of individuals who received counseling and testing	200,000	False
Indirect number of individuals trained in counseling and testing	N/A	True
Number of clients receiving a referral for post test care and support services	N/A	True
Number of clients screened for TB	N/A	True
9.1 Number of service outlets providing counseling and testing according to national and international standards	60	False
9.3 Number of individuals trained in counseling and testing according to national and international standards	20,000	False
9.4 Number of individuals who received counseling and testing for HIV and received their test results (excluding TB)	60,000	False

Indirect Targets

Number of individuals reached with interventions that highlight counseling and testing were calculated based on the existing interpersonal and community mobilization programs being undertaken by partners and projected in relation to increased financial and human resources that enables an expansion of existing programs. These include through school Anti-AIDS Clubs, facilitated discussions within clinical settings, door-to-door discussions, workplaces, community events, listener associations and workshops. Mindset is indirectly impacting the national counseling and testing program by reaching patients in the waiting room with educational broadcasts about the benefits of CT, and where it can be accessed. These broadcasts are shown at 400 sites across South Africa. The impact of the broadcasts are reviewed based on ongoing surveys and monitoring done by Mindset and other partners.

Activity System ID: 14021

Activity Narrative: SUMMARY:

Within this program area, the Medical Research Council (MRC) supports two activities directed by different project directors. The first project focuses on capacity building for organizations to support HIV counseling and testing among high-risk populations while the second project integrates HIV counseling and testing into TB control services. The major emphasis area for these activities is the development of networks, linkages, and referral systems between outreach workers, non-governmental and community-based organizations (NGOs, CBOs), and healthcare service providers. Minor emphasis areas include community mobilization/participation; information, education, and communication; linkages with other sectors and initiatives; local organization capacity development; policy and guidance; quality assurance, quality improvement, and supportive supervision; strategic information; and training. Primary target populations are high-risk vulnerable populations, (including injecting drug users (IDUs), sex workers, and men who have sex with men (MSM)), and organizations that provide service to these populations. This project is consistent with the revised South African National Drug Master Plan and will provide guidance on how the South African Government can translate strategies into action. Across all activities, sustainability is addressed by linking HIV counseling and testing, care and support services for vulnerable populations, developing the capacity of existing programs, creating synergy across organization and service provider networks, providing quality assurance and refresher trainings, and enhancing data management systems. The project will focus on (a) increasing gender equity in HIV and AIDS programs, reducing violence, increasing women's access to income and productive resources; and (2) reducing stigma and discrimination associated with HIV status and vulnerable populations.

BACKGROUND:

In FY 2005, PEPFAR supported the MRC to conduct a rapid assessment of drug use and HIV risk among IDUs, sex workers, and MSM in Cape Town, Durban, and Pretoria. In FY 2006, PEPFAR supported the convening of public and private partners, stakeholders, and organizations serving the target populations to develop recommendations, based on the findings of the rapid assessment. In FY 2007, the MRC, in collaboration with a consortium of organizations and provincial governments, is well positioned to implement interventions to reduce high-risk drug use and sexual behaviors and increase access to and utilization of services.

The MRC initiated a best-practice approach to integrated TB/HIV care with FY 2004 PEFAR funding. The project aims to improve access to HIV care and treatment for tuberculosis (TB) patients by strengthening the role of TB services as an entry point for delivery of HIV and AIDS care, and by expanding TB screening to people living with HIV (PLHIV). TB patients and PLHIV are the key target populations and include pregnant women (referred to PMTCT services) and children (receiving antiretroviral treatment (ART) if indicated). Activities in the established sites will continue in FY 2008. The best-practice approach will also be expanded to additional sites in FY 2008. The new sites are characterized by extreme poverty, poor health infrastructure, cross-border migration, and limited healthcare access. Meeting the challenges of an integrated TB/HIV approach in such settings will be specifically addressed as will strengthening of down-referral capacity in existing sites. The MRC and sub-partners, World Vision and the Foundation for Professional Development, implement activities.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Linking Community-based Outreach to HIV Services among Injecting and Non-Injecting Drug Users, Drug-Using MSM, and Drug-Using Women Engaged in Sex Work

Three separate activities focusing on the target groups (IDUs, CSWs, and MSM) are consolidated into one activity description as they share similar components.

A major finding of the rapid assessment indicates a lack of linkages and coordination of drug abuse treatment and HIV services. The focus of this activity is developing the capacity of NGOs and CBOs and other HIV and drug service organizations serving IDUs, sex workers, and MSM to implement interventions targeting high-risk drug use and sexual behaviors and to increase their access to and utilization of services. Specifically, this activity will support the formalization of consortia linking drug abuse treatment and HIV service delivery organizations in Cape Town, Durban, and Pretoria/Johannesburg. This activity will develop the capacity and skills among the consortia for the provision of comprehensive HIV and AIDS programs tailored for drug users and adapted to the local epidemic. Components will include community-based outreach, risk reduction counseling, and access and referral to HIV counseling and testing, substance abuse, and other HIV care and treatment services. Individuals reached by outreach efforts will be linked with tailored HIV counseling, testing, treatment, and other support services. Service providers will be cross-trained to respond to issues of violence, drug abuse and HIV, including issues of sensitivity, confidentiality and stigma related to vulnerable populations. To facilitate integration among drug and HIV services, a system for referrals from counseling and testing to other services will be established in the consortia to ensure HIV-infected and HIV-negative clients are linked to appropriate prevention, care, and treatment services (e.g., antiretroviral treatment, PMTCT, palliative care, STI and tuberculosis treatment, substance abuse treatment, and transitional services including job skills and income generation activities).

ACTIVITY 2: Managing, Monitoring and Rapidly Evaluating Links and Coordination of Drug Treatment and HIV Services for Drug Using Populations

Activity Narrative:

In preparation for activities in FY 2007, the MRC will conduct formative key informant and focus group interviews to ensure interventions are aligned with the current local epidemic and adapt existing training manuals for community-based outreach. This activity will support the MRC in the management, oversight, monitoring, and evaluation of the three activities summarized under Activity 1. The MRC will regularly monitor all aspects of the activities, including ensuring that sub-partners coordinate provision of trainings by local AIDS training centers. The MRC will establish a system for collecting data on targets on an ongoing basis. The MRC will rapidly evaluate Activity 1 to determine the relative effectiveness of the interventions to reduce high-risk drug use and sexual behaviors and increase access and utilization of services among the three target populations.

Plans for this project will build upon FY 2005 and 2006 PEPFAR investments and lessons learned from the implementation of the interventions in FY 2007. In FY 2008, the MRC will continue to refine the interventions and rapidly scale them up to reach other provinces and underserved populations.

Results contribute to PEPFAR 2-7-10 goals by preventing infections and increasing uptake of voluntary counseling and testing (VCT) among vulnerable drug using populations to know their status and be appropriately referred to treatment services. Results are aligned with South Africa goals to scale up programs that serve IDUs, MSM, and sex workers; integrate VCT into other healthcare delivery and by decreasing stigma and discrimination; and increase VCT services links with referrals to health systems networks.

ACTIVITY 3: Best-Practice Model

The MRC will support implementation of a best-practice model of integrated TB/HIV care in sites providing TB and HIV services. This approach involves: (1) clinical management (counseling and testing, ART, management of adverse drug effects, STI management, preventive therapy); (2) nursing care (TB screening, patient education, treatment adherence, HIV prevention); (3) integrated TB/HIV information, education and communication; (4) nutrition intervention; and (5) palliative care and support. Activities include site renovation to meet South African accreditation requirements for ARV rollout, site and supervisory staff training, hiring key personnel, development of patient educational materials, commodities procurement, and establishment of appropriate referral links, including those with governmental ARV sites to ensure continuity of care. MRC will monitor CT practices, strengths, and weaknesses of TB/HIV referral systems, human resources and conventional TB treatment outcomes. The MRC will implement ongoing quality assessments through onsite supervision and external quality assurance mechanisms such as checklists. Regular feedback meetings will be held with the provincial team as well as project staff to identify potential problems and to facilitate corrective action. Stigma around HIV, AIDS and TB is specifically addressed through counseling, patient education and targeted interventions such as peer group counseling and advocacy campaigns.

The current counseling and testing model incorporates both VCT and provider-initiated testing and counseling. The preferred model is determined by provincial guidelines regarding voluntary or provider initiated counseling and testing. Counseling and testing is a vital component of the integrated TB/HIV model as it is the point of entry into the project. Other counseling activities also include group counseling with TB patients, group counseling in health care facility waiting areas, ARV adherence counseling, and community outreach counseling.

Planned Funds: $224,000

Activity Narrative: SUMMARY:

Medical Care Development International - South Africa (MCDI-SA) is a U.S.-based private voluntary organization (PVO) that is registered as a Section 21 company or non-governmental organization (NGO) in South Africa. MCDI-SA has been successfully implementing community public health and social support projects in KwaZulu Natal, South Africa, since 1995. Prior to PEPFAR support, projects focused on traditional Child Survival (CS) interventions, reducing HIV through prevention among youth and adolescents, assisting with counseling and testing (CT) and prevention of mother-to-child transmission (PMTCT) site establishment, strengthening the government healthcare system's provision of services to and creating support groups for HIV-infected and TB-affected individuals, and supporting other health-related community-based initiatives.

Building on its USAID child survival program, MCDI-SA will use PEPFAR funding to carry out activities to support the KwaZulu-Natal Department of Health's (KZNDOH) efforts to improve and increase use of the CT services. These activities consist of three components: (a) training local health workers to provide comprehensive counseling and testing services; (b) strengthening the capacity of HIV support groups for networking with CT centers and communities for the reduction of stigma and discrimination; and (c) incorporating community-based, youth-focused, home-based care, outreach and other approaches to promote CT uptake. Target populations children under 5 years, children aged 5-9, adolescents aged 15-24, and adults 25 and over, people living with HIV (PLHIV), and orphans and vulnerable children. The major emphasis areas include gender-related issues (addressing male norms and behaviors, increasing gender equity in HIV and AIDS programs, increasing women's access to income and productive resources, increasing women's legal rights, and reducing violence and coercion), human capacity development (training and retention strategy), local organization capacity building, and child survival and safe motherhood wraparound programs.

BACKGROUND:

This project will expand on and strengthen activities that MCDI-SA has been working on in KwaZulu-Natal (KZN) for the last 10 years through funding from USAID's Health and Child Survival Grants Program. CT will be promoted by (1) training health workers and lay counselors to provide pre-test counseling and CT services for youth and adults in HIV and STI prevention; (2) promoting CT through community outreach, education and advocacy; (3) strengthening the capacity of HIV support groups to become eligible for registration as cooperatives; (4) training HIV support groups to promote HIV counseling and testing in CT and PMTCT sites and in communities with an emphasis on reducing stigma and discrimination; and (5) establishing youth clubs for girls and boys in-school and out-of-school for promotion of CT. Partners include the KZNDOH, The Valley Trust (TVT), the National Association of People Living with HIV and AIDS (NAPWA) and Community Health Committees (CHC).

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Training Healthcare Workers

MCDI-SA will continue to improve the capacity of local health workers to provide quality CT services and to educate the community on the importance of CT in preventing HIV transmission and as an entry point for treatment and care. A core team of sub-district trainers will be trained on CT, home based-care, anti-retroviral (ARV) and TB treatment adherence. In turn, they will train facility nurses on National Department of Health (NDOH) CT and TB/HIV protocols, so that each primary healthcare facility will have at least two nurses trained on current NDOH CT and TB-HIV protocols. This activity will also include training on provider -initiated testing and counseling (PITC).

ACTIVITY 2: Establishing and Strengthening Support Groups

MCDI-SA has demonstrated that the provision of easy access to HIV and AIDS support groups is one key way of combating stigma and discrimination in health facilities and in communities. Existing support groups in Ndwedwe sub-district will be strengthened to become eligible for registration as cooperatives. Sub-districts will work closely with other organizations in a self-sustainable and self-sufficient entity. MCDI-SA will also identify viable CT and PMTCT sites in other sub-districts of Ilembe District to establish additional HIV and AIDS support groups, with the goal of strengthening their capacity to become sustainable registered cooperatives. Support groups members will receive training and education on counseling and advocacy.

ACTIVITY 3: Information, Education and Communication

A mobile education unit, staffed by two trained HIV-infected individuals from NAPWA's support groups, will travel to tribal authorities to conduct information and education campaigns at, and in close proximity to, CT sites. This will assist to (1) raise knowledge and awareness about CT services for HIV, STIs and TB patients; and (2) explain how stigma, discrimination and sexual abuse are undermining the health and well-being of their families, friends and neighbors. MCDI-SA will enlist and train members from community church groups, traditional healers, and traditional leaders to participate in these information, education and communication campaigns. Based on successful workshops conducted in Ndwedwe sub-district as part of a previous project, MCDI-SA will hold additional workshops for influential community members to educate them on CT services and the harmful effects of stigma and discrimination. Support group members will be included in the training to discuss their own experiences with stigma and discrimination and the benefits of using CT services.

ACTIVITY 4: HBC Facility Patient Liaison

Qualified home-based caregivers (HBCs) will be trained by MCDI-SA and placed in each of the seven government hospitals and community health centers in the district to act as a liaison between CT, TB and ARV patients and to educate and counsel TB/HIV clients and suspects in cross-testing, treatment literacy and family directly observed treatment (DOT) support. The liaisons will increase the quality of services provided to patients while facilitating provision of education and counseling services in facilities with high patient headcounts and inadequate staffing.

Activity Narrative:

ACTIVITY 5: Facility CT Service Quality Assessments

Using an assessment tool developed in conjunction with the Ilembe District Department of Health under the current TB/HIV service integration project, MCDI-SA will conduct annual assessments of CT services at the facility level. Each assessment will evaluate the quality of service provision in terms of number, training and tenure of personnel; adequacy of physical space, supplies and equipment; integration with antenatal care, PMTCT, and TB services; consistency of recording and reporting; and other key service points in compliance with NDOH CT guidelines. Results and recommendations will be discussed on site with the service providers and will be compiled and presented to the Ilembe District Health Management Team. Department of Health CT program managers will be trained to use the assessment tool and will be provided with electronic copies of the tool for their ongoing use.

These activities contribute to the PEPFAR 2-7-10 goals by improving access to, and quality of counseling and testing services in order to identify HIV-infected persons and to increase the number of persons receiving antiretroviral services.

9.3 Number of individuals trained in counseling and testing according to national and international standards	50	False
9.4 Number of individuals who received counseling and testing for HIV and received their test results (excluding TB)	5,300	False

Indirect Targets

Although MCDI-SA is directly reaching CT clients, indirect support will be provided to the overall Ilembe District PTMCT program. Project activities done to support ongoing South African NDOH services include the following: (1) training of all facility nurses on CT protocols that will provide sustainable benefits to all pregnant community members; (2) implementation of CT service quality assurance through comprehensive PMTCT facility service assessments and on-site mentoring of facility staff for improvement; (3) provision of a CT quality assurance tool to the DOH for continued use and of training on its use; and (4) an education outreach program for the benefit of HIV.

Table 3.3.09: Activities by Funding Mechansim

Mechanism ID:	4749.08	**Mechanism:**	N/A
Prime Partner:	Ingwavuma Orphan Care	**USG Agency:**	U.S. Agency for International Development
Funding Source:	GHCS (State)	**Program Area:**	Counseling and Testing
Budget Code:	HVCT	**Program Area Code:**	09
Activity ID:	13988.08	**Planned Funds:**	$100,000
Activity System ID:	13988		

Activity Narrative: SUMMARY:

Expansion of Ingwavuma Orphan Care's current counseling and testing (CT) project consists of recruiting and training a dedicated mobile team to provide counseling and testing, specifically targeting youth. The home-based care staff will continue to provide CT to their clients and clients' families, with task shifting from nursing staff to lay counselors.

BACKGROUND:

Ingwavuma Orphan Care (IOC) started to offer counseling and testing to its palliative care clients and their families in April 2007. The National Department of Health and nursing staff train lay caregivers to provide pre- and post-test counseling to their clients in their homes, while the nurses and doctors carry out the test at the clients' homes when they next visit. The project has found that many male clients are reluctant to go to local clinics or the hospital for HIV testing, but are willing to be tested in their own home, so this program helps to address gender equality in HIV programs. Home testing also increases the uptake of couple testing and testing children of HIV-infected clients.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Home-based Counseling and Testing Services for Home-Based Care Clients

Counseling and testing services will be integrated with the home-based care project. The lay caregivers will counsel clients and their families and recommend testing for anyone who has not yet been tested. They will then offer testing and post-test counseling at the clients' homes. The IOC will train caregivers to administer the HIV tests as part of a task-shifting strategy. Nurses will supervise and monitor their activities. HIV-infected clients can immediately be referred into IOC's home care service and support groups that are run by the organization. The nurses can then take blood to check CD4 counts, which will be transported to the local hospital. The nurses will undertake quality assurance monitoring. High-risk negative clients will be referred to existing programs such as loveLife. This activity also works to increase the local organization capacity through training of staff and employment of skilled personnel.

ACTIVITY 2: Mobile Counseling and Testing Unit Targeting Youth

IOC will set up a CT mobile team consisting of two trained HIV counselors and an assistant. The team will work from a vehicle with a trailer. The counselors will provide CT, and the IOC medical staff will monitor their work. These services will be publicized through the extensive existing community links IOC has with high schools and areas where youth congregate, such as near water points and outside informal drinking dens. Many of the targeted girls are involved in transactional sex for food or other favors. The emphasis is on targeting adolescents in a youth-friendly way. However, anyone who wishes to be tested will be welcome to use the service.

The team will set up three tents with chairs and tables at a selected site such as a high school. The team is equipped with a music system and DVD projector with which to play music and show DVDs relating to HIV and abstinence. One tent will house leaflets, information about HIV and other youth-relevant material. The HIV counselors will work in the other two tents.

Once a group has gathered, people will be encouraged to go for free testing to know their status. In the tents the counselors will perform confidential pre-test counseling, testing and post-test counseling. Finger prick tests are used. As per government protocol, the serial testing algorithm should be used, as opposed to parallel testing. Those who test positive are encouraged to go to the clinic or hospital for CD4 counts. Those who test negative are provided post-test counseling and referred to youth programs such as loveLife.

Table 3.3.09: Activities by Funding Mechansim

Mechanism ID:	4753.08	**Mechanism:**	N/A
Prime Partner:	LifeLine North West - Rustenburg Centre	**USG Agency:**	U.S. Agency for International Development
Funding Source:	GHCS (State)	**Program Area:**	Counseling and Testing
Budget Code:	HVCT	**Program Area Code:**	09
Activity ID:	8255.08	**Planned Funds:**	$200,000
Activity System ID:	13992		

Activity Narrative: SUMMARY:

This project benefits from contributions from other donors such as Anglo Platinum Mines, which has committed to three-years of cost sharing. In particular, they are funding a vehicle that will used in the mining areas, and covering traveling costs and stipends for a nurse and driver. Through the mobile unit operation, counselors and nurses provide counseling and testing services. Willing clients receive a group HIV information session, individual pre-test counseling, followed by a rapid test with an accompanying verifying test, finally a post-test counseling session with further referrals, if necessary. Counseling and testing sessions occur at designated hot spots where the mobile unit is operating and follows strict policies of informed consent and confidentiality. This project also includes couple counseling and testing.

Target populations include men and women, boys and girls, discordant couples, pregnant women, persons living with HIV, young people who are sexually active, mobile populations and people who engage in transactional sex but who do not identify as persons in sex work. Though they are not targeted directly, the project hopes to reach out to most-at-risk populations including sex workers, truck drivers, and mobile populations, by targeting the general population.

Relationships formed with local government and municipal departments will assist to ensure the continuity of the project. Equipment purchased for the project in the first year will not need to be replaced for many years. Salaries and other costs can be sustained through increased corporate training and workplace programs that garner substantial revenue for LifeLine.

BACKGROUND:

LifeLine Rustenburg is a non-governmental, non-profit, community based organization, affiliated to LifeLine Southern Africa, and to LifeLine International. Affiliation is awarded annually based on maintenance of standards, adherence to policy and procedures and acceptable performance in areas of service. LifeLine Rustenburg has been operational since 1991. The organization serves an area of approximately 200 kilometers radius. LifeLine Rustenberg works closely with the National Office, who are informed about projects and services run by LifeLine Rustenburg. Bi-annual consultative meetings are held and LifeLine Rustenburg submits quarterly reports to the main office.

LifeLine focuses on counseling and crisis intervention services, provision of life skills and personal development training, capacity building for less established community-based organizations (CBOs), voluntary counseling and testing (VCT), and HIV prevention. To date, the organization has implemented a community counselor project (CCP) that provides counselors to 150 health facilities in Bojanala (in partnership with North West Department of Health). LifeLine Rustenburg has also established a non-medical CT site, provided 24-hour counseling service via a national counseling line, and trained staff at numerous other organizations. Future plans for the project is to place counselors at all health facilities, supply mobile (outreach) CT, support and care to HIV persons and other affected persons, and to provide HIV prevention services to rural and other under-served communities throughout the Bojanala District of the North West province. Care and support activities will be provided through ongoing partnerships with other CBOs and FBOs with expertise in these areas.

During the COP 2007 period, LifeLine Rustenburg used PEPFAR funds to establish a mobile CT operation. The mobile unit and counselors at public health facilities provide CT services throughout the Bojanala District of the North West province. The target groups for the abstinence and being faithful (AB) prevention messages are males and females, 10 years and older, located in the identified hot spots in the province. A hot spot is defined as an area that has a high rate of traffic of vulnerable persons; for example, taxi ranks and the mining hostels. The LifeLine hot spots are currently located in the Bojanala region, and one hot spot has been identified in each sub-district. PEPFAR FY 2007 enabled LifeLine to work in seven such hotspots, although the target for FY 2008 is 12 hot spots.

ACTIVITIES AND EXPECTED RESULTS:

LifeLine will continue to provide accessible CT services that promote increased knowledge of personal HIV status. This service will facilitate access to care and support for HIV-infected and affected individuals. This Mobile CT Unit seeks to ensure the public has easy access to necessary information, counseling and testing, and prompt referrals for other relevant services. CT services offered are: pre-counseling group information sessions; individual or couple pre-test counseling inclusive of informed consent; testing and confirmatory testing, where necessary; and finally individual or couple post-test counseling sessions with required referrals. Mobile units will be used to improve access in hard to reach communities. CT services will also be available at the LifeLine centre for neighboring communities. Four nurses and 12 counselors conduct counseling and testing services through two mobile units that service 12 hot spots. All people who test positive are referred to treatment and care services.

Through CT, access to services for men and women will improve and gender issues are addressed accordingly. Statistics show that more women undergo CT at public health facilities. Pre- and post-test counseling sessions enable test-takers to examine their gender role as individuals and are encouraged to outline a plan of action for behavior change to prevent HIV infection.

Human capacity development activities through preliminary and ongoing training ensure sustainability. This ensures that the services are of the high quality and provided by competent staff. LifeLine will report to the National Department of Health on its activities and will comply with South African legislation in carrying out its services.

Funding Source:	GHCS (State)	**Program Area:**	Counseling and Testing
Budget Code:	HVCT	**Program Area Code:**	09
Activity ID:	3032.08	**Planned Funds:**	$630,500
Activity System ID:	14038		

Activity Narrative: SUMMARY:

PEPFAR funds will be used by the Department of Correctional Services (DCS) to increase the uptake of members in HIV counseling and testing (CT) services in correctional centers as well as in other places of work. The major emphasis area for this program will be awareness raising and accessing CT services, with minor emphasis placed on mobilizing the incarcerated community and encouraging their participation; information, education and communication; logistics; and strategic information. Target populations will include offenders and DCS members (men and women of reproductive age, including people living with HIV (PLHIV)), and most at-risk populations (e.g., men who have sex with men, injecting drug users). To increase capacity, DCS will train nurses, social workers, psychologists, and spiritual care workers in counseling and testing.

BACKGROUND:

This is an ongoing activity intended to initiate the establishment of voluntary counseling and testing (VCT) in correctional centers. According to the National Department of Health protocols, only nurses can be trained to give the rapid test. Social workers, psychologists, spiritual care workers and nurses, will be trained in pre- and post-test counseling. Other professionals will play a role in the delivery of pre-, post-, and ongoing counseling, which nursing personnel will be unable to do because of time constraints.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Counseling and Testing DCS members

Voluntary counseling and testing services will be made accessible to all DCS staff members at each correctional center and where possible at other places of work (e.g., offices, etc). Employee Assistance Practitioners (EAPs) will run campaigns in correctional facilities focusing on staff members and encouraging them to be tested for HIV. In facilities where the correctional center clinics are not suitable to offer the testing service, the EAP will collaborate with local NGOs to provide the CT services. Couple counseling will also be strongly encouraged and the service will be made available to all DCS staff.

In order to ensure that CT services are enhanced and encouraged among members, a number of 24 regional CT roll-out campaigns will be held (at least four per region). The number of members who have undergone CT is not known at this point in time as members are making use of external healthcare providers (private doctors or health facilities) if they want to test for HIV.

ACTIVITY 2: CT Services for Offenders

With FY 2006 funds, nurses, social workers and psychologists working in prisons were trained in CT. Each correctional facility will have confidential CT services. Peer educators will be used to encourage offenders to use CT, as well as conduct other health campaigns in prisons. One-hundred and twenty CT roll-out campaigns will be held in 120 correctional centers, especially targeting those centers where CT sites have not yet been established.

These activities will contribute to both 7 million infections averted and 10 million people in care by promoting and providing testing and counseling as an entry point for prevention, care, support and management of HIV and AIDS.

Prime Partner:	National Department of Health, South Africa	**USG Agency:**	HHS/Centers for Disease Control & Prevention
Funding Source:	GHCS (State)	**Program Area:**	Counseling and Testing
Budget Code:	HVCT	**Program Area Code:**	09
Activity ID:	3046.08	**Planned Funds:**	$1,568,323
Activity System ID:	14060		

Activity Narrative: The aim of this project is to provide technical assistance to the National Department of Health (NDOH) and provincial health departments to ensure expansion and strengthening of CT services in all nine provinces. Target populations for these activities include host country government, healthcare workers, and community healthcare workers. PEPFAR funds will be used to employ two full-time CT technical advisors to be placed at NDOH. The technical advisors will assist with the coordination of CT activities, enhance capacity of NDOH CT staff by providing support for the NDOH annual CT technical meeting, and to support the implementation of provider-initiated testing and counseling (PITC) in five public facilities sites per province.

BACKGROUND:

The goal of the National CT program is to ensure the universal access to HIV counseling and testing. The purpose of this project is to provide technical assistance to NDOH by funding two CT technical advisors to work within the NDOH on all aspects of the program. Responsibilities of the technical advisors include focusing particularly on development of national guidelines on PITC and the training of healthcare providers. The technical advisors will also monitor the implementation of PITC in all provinces. They will also assist in the development and implementation of quality assurance guidelines around HIV testing.

The project will also support capacity building of healthcare workers and community healthcare workers, development and implementation of provincial CT specific operational plans, strengthening of national and provincial reporting systems, coordination of the national CT steering committee meeting, development of a monitoring and evaluation system for early infant diagnosis and strengthening service delivery through the implementation of systems strengthening activities.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Technical Assistance to NDOH

Technical assistance to NDOH will be conducted by two technical advisors. Although both will engage with NDOH regularly, one of the advisors, who will be a locally employed staff person, will work at the National program. Specific technical assistance to the national CT program will be around capacity building for all cadres of healthcare workers, monitoring and evaluation, the development of protocols and guidelines, and the implementation of PITC in all nine provinces.

The responsibility of the technical advisors will include support for the provision of quality HIV testing which will require (a) the development and implementation of quality assurance guidelines on HIV testing; (b) standardization of national quality assurance guidelines; and (c) supervision of quality training for all CT coordinators, laboratory technicians and nurses who conduct HIV testing.

Support will also be provided for the accreditation of non-medical CT facilities according to the NDOH requirements as well as the revision of all current training materials relating to CT.

In addition, PEPFAR funds will support skills enhancement of current NDOH and provincial staff by providing support for the national CT technical meeting and attendance of NDOH CT staff at the International HIV and AIDS meeting.

This program will contribute to 2-7-10 goals by ensuring the implementation of quality CT services and increasing access to CT services.

9.3 Number of individuals trained in counseling and testing according to national and international standards	300	False
9.4 Number of individuals who received counseling and testing for HIV and received their test results (excluding TB)	N/A	True

Indirect Targets

The September 2008 CT target was estimated by reviewing the ART targets for each year over a five year period in order to reach 500,000 persons on ART by September 2009. Over the past 3 years, approximately 19 people were tested for HIV per every one person placed on ART. Therefore, the 2008 and 2009 CT target is estimated to be 2,036,000 for each year.

Significant support is provided to the NDOH to increase CT uptake. This includes training, development of policies and guidelines and other technical assistance. These activities are described in the activity narrative.

Table 3.3.09: Activities by Funding Mechansim

Mechanism ID:	7279.08	**Mechanism:**	N/A
Prime Partner:	African Medical and Research Foundation	**USG Agency:**	HHS/Centers for Disease Control & Prevention
Funding Source:	GHCS (State)	**Program Area:**	Counseling and Testing
Budget Code:	HVCT	**Program Area Code:**	09
Activity ID:	15872.08	**Planned Funds:**	$455,000
Activity System ID:	15872		

Activity Narrative: SUMMARY

The African Medical and Research Foundation (AMREF) aims to address the need to strengthen voluntary counseling and testing (VCT) services in partnership with the Eastern Cape Department of Health. The project is comprised of a series of coordinated interventions that aim to achieve two main outcomes: (1) assess and build the capacity of the selected CT sites in the Eastern Cape Province (Amatole, Chris Hani and Ukhahlamba districts) and, (2) strengthen the integration and coordination of HIV and TB services in selected facilities in the same areas. The target population includes health professionals working in CT and TB services, lay councilors, DOTS supporters, traditional leaders and local communities. AMREF will emphasize the strengthening of CT services and co-ordination of CT and TB services to enable increased access to and quality of CT services.

BACKGROUND:

AMREF will strengthen the current TBCT initiative. Working in partnership with key government and non-governmental- and community-based organizations at the provincial, district and municipality levels, AMREF will use PEPFAR funds to strengthen and improve the quality HIV counseling, testing, support and care services and will ensure that effective referral is taking place. The project also aims to improve community communication and reduce stigma surrounding TB and HIV co-infection through developing communication materials and strategies with the full participation of community members and relevant partners.

ACTIVITIES AND EXPECTED RESULTS

AMREF SA has collaborated with the Eastern Cape Department of Health in developing this proposal in response to the urgent need for strengthening the current CT program. This activity includes developing comprehensive training programs; continual mentoring of trainees by local partners; developing and strengthening sustainable systems for quality CT services; strengthening referral systems; improving CT and TB co-ordination; and increasing demand for CT services. In the third year of the project, AMREF will expand the program area and focus its activities to assessment of CT services, capacity building through training and mentoring support, and monitoring of the referral system. FY 2008 activities will focus on selected training for service providers in expansion areas, social mobilization, reduction of stigma and discrimination, social marketing for CT, mentoring, and technical support to retained FY 2006 and FY 2007 facilities. AMREF will continue with mentoring and monitoring referral systems and skills application in delivering quality services.

ACTIVITY 1: Operations Research

AMREF will expand its program from 70 to 176 facilities, where 106 additional facilities will fall under the Buffalo City local service area (LSA), based on discussions with the Eastern Cape Department of Health. In line with FY 2006 approach, AMREF will further test and disseminate "best practice" models through operations research aimed at assessing the capacity of health workers and quality of CT services and integration with TB services in expansion area. AMREF will document lessons learned and generate evidence on approaches and strategies that have the greatest positive impact on CT services in terms of improving access to appropriate and quality services and cross referrals between CT and TB services. PEPFAR funds will be used to roll out a monitoring system for tracking and analysis of CT services and to build capacity of health workers to increase coordination between CT and TB services which can be used to inform policy makers at all levels.

ACTIVITY 2: Capacity Building

The expansion will include expanded coverage into Buffalo City (based on preliminary discussions with ECDOH) where only 11 facilities are supported with FY 2006 and FY 2007 funds. An additional 106 facilities will be supported (showing a 251% increase from 70 facilities supported with FY 2006 and FY 2007 funds to the proposed 176 sites). AMREF will facilitate effective planning and coordination, through workshops, mentoring, on-site support and training programs to improve the overall quality of service provision for CT in the expansion LSAs. Capacity building will focus on the critical weaknesses that have been identified by the provincial and district DOH of the Eastern Cape and NGO partners at the local level. This activity includes improving the knowledge and skills of CT and TB service providers and NGO partners. Capacity building activities will focus on developing skills to refer and support CT services effectively; and use of a functional recording system to follow-up and monitor delivery of and demand for CT services at local service areas (i.e. facility levels). Health professionals from 106 additional facilities will be trained in counseling and testing according to national and international standards. Capacity building assistance to strengthen data collection, management and organizational systems will be included in the AMREF agreement with Centers for Disease Control and Prevention (CDC). In line with South African National Strategic Plan (2007 to 2011), AMREF will strengthen the capacity of facilities to implement provider-initiated testing and counseling, especially among TB patients. AMREF will retain current districts (Chris Hani, Amatole, and Ukhahlamba) in FY2008. Under the retained facilities, AMREF will use the FY 2008 funds to (a) support facilities in establishing a Counselors Support System/Forum aimed at reducing burn out of counselors and helping improve the quality of counseling services offered to clients; and (b) strengthen district HAST Committees through capacity building (training) and mentoring using supported LSAs as mentor sites for a district model of CT-TB integration.

ACTIVITY 3 - Referral Systems

AMREF will institutionalize the use of systems and tools for cross referrals from CT and TB services. AMREF will work in collaboration with service providers in establishing referral systems to promote screening of TB patients for HIV and screening of CT clients for TB. This will enable accurate data and monitoring of the number of HIV infected clients that are undergoing screening for TB. AMREF will also expand referral systems to include expansion sites. Through local partnerships and networks, AMREF will advocate for CT policy change through engagement of policy makers with the aim of strengthening of CT-TB integration and provision of facilitating provider-initiated TC.

ACTIVITY 4: Community Mobilization

Activity Narrative:

AMREF will facilitate community mobilization for testing through further support of social marketing campaigns using mass media messages and inter-personal communication. Information, Education and Communication (IEC) materials developed with FY 200820082008 funds will be disseminated through community members and service providers. Youth advocates will be engaged to discuss issues around testing with their peers. Messages will also inform people of service provision and assist in facilitating linkages between prevention, testing, treatment, care and support services. Social marketing will focus on Community-led information education communication (IEC) material development and dissemination. Youth advocate training and support for peer education and mobilization for prevention and testing.Strengthening of existing attempts to promote couples counseling and Behavior Change Communication (BCC) through mass media messages (radio, community talks) and inter-personal communication. Training for NGOs, CBOs, FBOs and traditional healers, leaders and other community stakeholders (HBC, CCW, CHWs etc) in community mobilization, BCC, IEC material development, and support to assist them facilitate access to testing for community members. It is estimated that 310,104 people are infected with HIV in the four targeted LSAs and approximately 2.9% access CT (NDOH, 2006).

AMREF will assist PEPFAR in reaching the vision outlined in the South African Five Year Strategy by increasing access to care and treatment through the improvement of health services to deliver quality CT for local communities and improved CT/TB coordination and by strengthening and improving the quality of CT programs through implementation, evaluation and replication of best practices in the area of CT programming. AMREF activities will contribute to the PEPFAR 2-7-10 goals by ensuring community involvement and increased capacity and referral for CT programs.

Funding Source: GHCS (State)
Program Area: Counseling and Testing
Budget Code: HVCT
Program Area Code: 09
Activity ID: 15941.08
Planned Funds: $250,000
Activity System ID: 15941

Activity Narrative: SUMMARY:

Pathfinder/Planned Parenthood Association of South Africa (PPASA) will train PPASA nurses and public sector service providers from four existing clinics and the public sector facilities in the PPASA clinic catchments areas to provide youth-friendly voluntary counseling and testing (CT) services to young people ages 15-24. This project will train nurses on pre- and post-test counseling, testing procedures and record keeping related to CT. A comprehensive community-based behavior change communication (BCC) and social mobilization strategy involving youth networks and community groups will promote CT and access to care and treatment services. The emphasis areas for these activities are human capacity development and local organizational capacity development. Specific target populations include young people between the ages of 15-24 years.

BACKGROUND:

All activities related to this project will be initiated in FY 2008. The objective under this program area is to improve access to and utilization of CT by youth by strengthening the capacity of PPASA youth-friendly clinics to provide CT services in four clinics. All activities will be implemented by PPASA and services will be made available in PPASA youth clinics in KwaZulu-Natal, Gauteng, North West, and the Eastern Cape. CT is both a preventive service, to provide information and support for those who are negative, as well as an entry point to care and support services for those who test positive. CT is a necessary component of comprehensive HIV and AIDS services and further provides the opportunity to screen for other opportunistic infections, such as TB and STIs. High HIV prevalence among young people indicates that there remains a significant unmet need for care and support services. In order to meet the needs of these youth, quality youth-friendly CT services must be available and age-appropriate, ensuring that services adhere to basic rights for privacy and confidentiality and that there are adequate staff and facilities to ensure real access.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Training of Providers and Social Mobilization

Pathfinder/PPASA propose to train PPASA nurses and public sector service providers from six existing clinics and the public sector facilities in the PPASA clinic catchments areas to provide youth-friendly CT services which will emphasize elements such as respect for youth, confidentiality and privacy for young people ages 15-24. This project will provide refresher training for nurses on pre- and post-test counseling, testing procedures and record keeping.

ACTIVITY 2: Behavior Change Communication

A comprehensive community-based BCC and social mobilization strategy involving youth networks and community groups will promote CT, and access to care and treatment services. The BCC and social marketing interventions will focus on barriers that influence youths' willingness to seek services, particularly misinformation about benefits, perceptions about poor confidentiality and provider bias, and stigma and discrimination in the community and in the facilities. The BCC strategy implemented through community clinics and peer educators will promote the availability of youth-friendly, confidential CT services. Emphasis will shift from the transmission of information to dialogue, debate, and negotiation on issues that resonate with youth and members of the community. In order to support acceptability, young people and communities should know that youth-friendly CT services offer confidentiality and psychological support before and after testing. CT clients will be encouraged to recruit their peers to be tested. Dialogue, debates, and other communication activities through print and audio-visual materials will inform young people about the importance of CT. These materials will be disseminated through youth networks, community groups, clubs etc.

ACTIVITY 3: CT Service Provision to Youth

As a starting point, the project will conduct thorough HIV and AIDS clinical care needs assessment of clinics and upgrade facilities as needed. During general visits to the clinic, providers will offer CT to all clients, and provide crucial information on STIs and HIV and AIDS. Counselors will stress the importance of testing for clients and their partners, provide information on use of condoms for dual protection against STIs/HIV and pregnancy, and discuss primary and secondary abstinence and being mutually faithful in relationships. Service providers will conduct post-test counseling with all clients, as per South African Government standards, and will provide referrals to other adolescent sexual and reproductive health (ASRH) services and care and support services within a facility, as needed. All young people testing positive will be referred and offered enrolment in the clinic's ambulatory care program. Youth testing positive for HIV will also be referred to community resources, such as community home-based care (CHBC) programs. The project will also establish linkages with CT, prevention of mother-to-child transmission and antiretroviral treatment national programs so that youth-friendly sites are under national programs.

Young men and women differ in the decision-making that leads to the use of CT services. Males tend to seek testing independently of others, in part because they fear isolation and abandonment by their peers, who are likely to consider this an example of "male weakness." Young women usually feel compelled to discuss testing with their partners, friends or relatives before accessing the service, thereby creating a potential access barrier since they might be discouraged from taking an HIV test. To increase access to testing, attention to gender issues will be improved in health providers' training, as well as in routine activities and promotion of CT services carried out by peer educators.

These results contribute to the PEPFAR 2-7-10 goals by improving access to and quality of CT services for young people.

Activity ID:	16012.08	**Planned Funds:**	$100,000
Activity System ID:	16012		

Activity Narrative: SUMMARY:

In March 2007, the Greater Nelspruit Rape Intervention Project (GRIP) established a walk-in HIV voluntary counseling and testing site at its headquarters in Nelspruit, Mpumalanga. A professional nurse was appointed to offer free HIV counseling and testing (CT) and awareness to any community member who visits the site. The nurse is also involved in creating awareness on HIV and AIDS throughout the business community in Nelspruit. Individuals who test negative are given guidance and information on how to prevent the transmission of HIV. Through this CT site, GRIP promotes CT through advertising and community mobilization campaigns. The professional nurse follows up and links clients into referral systems to ensure they receive appropriate and timely care and treatment services. GRIP will use FY 2008 funds to appoint a second nurse who will offer CT to the community. This will involve counseling and testing of survivors and vulnerable children in their homes, and will include providing guidance, advice and assistance, where necessary. The community nurse will work with a team of counselors to provide in-depth individualized counseling tailored to survivors' needs. The team will reach out to survivors in areas where there is inadequate numbers of healthcare workers and poor transportation infrastructure. The emphasis areas are gender and workplace programs.

BACKGROUND:

GRIP was initiated by volunteers and established in 2000. GRIP started by offering services to all rape and sexually assaulted survivors. GRIP seeks to empower all women, men and children through the process of preventative education, counseling and testing, post traumatic care, advocacy and lobbying. Due to the link between rape and HIV/AIDS, GRIP is now also focusing on HIV prevention and Voluntary counseling and testing.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: HIV Counseling and Testing at the Walk-in Facility

The GRIP non-medical walk -in site offers CT, information on HIV and AIDS, and HIV-related referral services. The referral system focuses on active follow-up, tracking of clients, and linking HIV-infected clients with prevention, care and treatment services. Clients who test negative for HIV are linked to other prevention services. The walk-in facility operates from the GRIP Head Office. The professional nurse conducts voluntary testing on any community member that wishes to know his/her status in a private and confidential yet comfortable and friendly room. The rapid finger prick test is used and test results are immediate. A follow-up test is done to confirm the original results. People who receive HIV testing in this site will receive pre-test counseling to prepare for the implications of the test, and post-test counseling in order to deal with the emotions regarding the result.

ACTIVITY 2: Community-based Counseling and Testing

The community nurse will be responsible for HIV counseling and testing to survivors of rape or sexually assault, and who may be at risk for being infected with HIV. The community nurse’s duties are distinct from those of the Walk-in-Facility nurse’s duties. The community nurse will travel to survivors’ homes in rural areas where there is limited infrastructure and no public transport. Testing and counseling will be conducted in the familiarity and safety of the survivors’ own homes. The rapid finger prick test will be used and if a survivor tests positive, a follow-up blood test and CD4 count will be taken. Each survivor has individual needs and each survivor who tests positive will be monitored while the professional nurse will ensure follow-up tests and medication.

The community nurse will be accompanied by the survivor's counselor on home visits. The counselor will be there to provide additional support and guidance if the test is positive. The community nurse will conduct home visits to all survivors and offer HIV counseling and testing, whenever it is needed. GRIP will also assist those infected with HIV to adopt positive lifestyles and offer entry into treatment programs, when needed. Through this intervention, GRIP aims at empowering the community with information on HIV and AIDS and the opportunity to know their status.

ACTIVITY 3: Corporate Testing and Awareness Raising

GRIP also assists in debunking myths and "instant cures" by providing correct and factual information on appropriate lifestyle changes. This activity is supported by language-relevant booklets and facilitating access to relevant treatment programs. Beyond the suffering HIV imposes on individuals and their families, the epidemic is profoundly affecting the social and economic fabric of societies and is affecting the most productive segment of the labor force. Therefore, GRIP would like to reach out to the corporate sector that includes businesses and the farming community. GRIP will offer employees HIV testing, information, preventative talks and referral to immediate counseling if tested positive. The methods to be used in this activity will be very interactive and participatory, and attendance of participants should be seen as part of work obligations. Some of the activities will include assessments of high-risk behaviors, information about transmission, support to vulnerable young women, information on the effects of the virus and emotions thereof and information on prevention and management of HIV infection.

Table 3.3.09: Activities by Funding Mechansim

Mechanism ID:	7315.08	**Mechanism:**	Care UGM
Prime Partner:	Scientific Medical Research	**USG Agency:**	HHS/Centers for Disease Control & Prevention
Funding Source:	GHCS (State)	**Program Area:**	Counseling and Testing
Budget Code:	HVCT	**Program Area Code:**	09
Activity ID:	16022.08	**Planned Funds:**	$1,000,000
Activity System ID:	16022		

Activity Narrative: SUMMARY:

Scientific Medical Research is developing an innovative monitoring and evaluation program that (a) assesses the quality and impact of HIV programs in the public sector; (b) generates regular feedback to the programs and donors; and (c) aims to improve the quality of service to the communities and program implementing institutions through appropriate feedback mechanisms.

BACKGROUND:

This program is a continuation of a Tucker Strategy supplementary PEPFAR funding proposal which commenced on 1 December 2006 for the initiation of this novel comprehensive assessment mechanism. Funds used for the initial set-up phase are allocated to the employment of a small core of appropriately qualified persons to drive the establishment of this process, and to a relatively small consumables budget.

The response to the HIV epidemic in South Africa is expanding, as public and private institutions scale up their efforts to prevent new infections, as well as care for and treat those who are already HIV-infected. These programs are either self-funded or funded by external agencies such as PEPFAR. The quality of HIV services, however, varies dramatically in both public and private sectors. Many people only have access to a limited package of prevention measures and/or counseling and testing (CT), while others have access to a comprehensive package of education, prevention and care including antiretroviral treatment. Even where CT (and other) services exist, the impact and quality of services varies substantially.

There is currently no agency that assists both public sector funding agencies and implementing institutions to make objective, external evaluations of the quality of workplace-based HIV programs, and use that information in a positive way to improve the quality of care offered. A gold standard by which they can assess the HIV-related activities will tend motivate towards more and better corporate interventions. In the absence of adequate external review and quality assessment of HIV programs, both donors' and implementing institutions' management are unable to monitor the successes and failures of the programs, and where required, institute appropriate changes to improve the quality of the programs.

Scientific Medical Research is an independent organization that has no ties any HIV services providers. Its staff will comprise a mixture of skilled staff able to develop the systems for this organization as well as staff with the ability to assess/audit medical programs. The company is "black empowered," in keeping with the aims of the South African Healthcare Charter.

ACTIVITIES AND EXPECTED RESULTS:

In the initial 12 months of this project, Scientific Medical Research will carry out three activities.

ACTIVITY 1:

A small core of appropriately qualified persons will be employed and trained to drive this process. Staff will attend relevant monitoring and evaluation courses and conferences.

ACTIVITY 2:

In consultation with CDC Pretoria staff, program assessment methodology will be piloted, initially at two sites. The pilot will be followed by review and where necessary, modification of the assessment methodology. Additional sites will be assessed as advised by CDC.

ACTIVITY 3:

Scientific Medical Research will establish appropriately designed databases to manage the program assessment activities. FY 2008 COP activities will be expanded to include: (1) expanding monitoring at additional CT sites as identified by CDC, Pretoria; (2) developing monitoring modules for care and treatment; (3) monitoring at care an treatment sites, as identified by CDC, Pretoria; and (4) assessing feasibility of (in consultation with CDC Pretoria) expanding the Comprehensive HIV and AIDS Quality Assurance (CHAQA) monitoring model to other program areas and sharing with other countries.

These results contribute to the PEPFAR 2-7-10 goals by strengthening the ability of local institutions to implement programs efficiently, especially improved quality assurance and leadership through evaluation of national prevention, care and treatment efforts.

Program Area: Counseling and Testing

Budget Code: HVCT

Program Area Code: 09

Activity ID: 8215.08

Planned Funds: $300,000

Activity System ID: 16003

Activity Narrative: SUMMARY:

This activity supports expansion of routine provider-initiated HIV counseling and testing (CT) through appropriately augmented CT activities (to be decided) for sexually transmitted infection (STI) patients. The activity will be conducted in primary care clinics in Gauteng province and, as applicable, other provinces, in collaboration with local Departments of Health. The prime partner, the STI Research Centre (STIRC) of the National Institute for Communicable Diseases (NICD) in South Africa will work closely with CDC/Division of STD Prevention to provide technical expertise and activity oversight, and with CDC staff in South Africa and local partners to ensure activities are consistent with local and national policies on HIV CT.

ACTIVITIES AND EXPECTED RESULTS:

Target populations are adolescents and young adults (15-24) and older adults (> 24 yrs) with STIs, and will include other vulnerable groups who come for STI care at primary care clinics (e.g., clients of sex workers and their partners). Specific ongoing activities on which PEPFAR funds will be used will be decided under consultation with CDC staff in South Africa. The results of this activity contribute directly to all PEPFAR goals through prevention of new HIV infections, and identification of new HIV infections through increased testing -- thus allowing referral to HIV clinical care and (as applicable) HIV treatment.

Table 3.3.09: Activities by Funding Mechansim

Mechanism ID:	478.08	**Mechanism:**	N/A
Prime Partner:	Hospice and Palliative Care Assn. Of South Africa	**USG Agency:**	U.S. Agency for International Development
Funding Source:	GHCS (State)	**Program Area:**	Counseling and Testing
Budget Code:	HVCT	**Program Area Code:**	09
Activity ID:	16864.08	**Planned Funds:**	$97,000
Activity System ID:	16864		

Activity Narrative: SUMMARY:

The Hospice and Palliative Care Association of South Africa (HPCA) currently has 75 member hospices throughout South Africa (SA), each an independent legal entity. The Mission of HPCA is to provide and enhance the provision of sustainable, accessible, quality palliative care. PEPFAR funds will strengthen the capacity of member hospices and other governmental and non-governmental organizations to provide quality services to HIV-infected persons.

BACKGROUND:

HPCA strengthens existing services and develops new services through direct funding to member hospices to promote accessibility and availability of palliative care in SA, including work with religious leaders and member hospices that are faith-based organizations. HPCA personnel at national, provincial and district levels continue to provide the infrastructure and coordination to develop and strengthen palliative care programs within member hospices, the formal healthcare sector, and NGOs. Improved collaboration between HPCA and National Department of Health (NDOH) is a key objective, aimed at optimum utilization of scarce palliative care resources. FY 2006 funding has allowed the training of 7,108 trainees from October 2006 to July 2007. The major focus of FY 2008 funding will be to train and support staff from identified hospices to integrate counseling and testing (CT) into their services as a pilot program. The program will focus on training and supporting hospice staff to provide CT services to patients and their families.

ACTIVITY 1: Pilot Site Project

PEPFAR funding in FY 2008 will enable HPCA to select four pilot sites in four provinces to integrate CT into their patient services. The funds will be used to employ a professional nurse at each of these four sites, to pay related overheads and to provide the necessary equipment and rapid test kits. Information brochures will be produced for distribution at these four hospice sites and wherever else appropriate. After completing the pilot project, HPCA will extend these CT services to all member hospices and sites. Within these four hospice sites, CT will also be provided to families in homes as part of the home-based care program.

ACTIVITY 2: CT Training

Specific counseling and rapid testing training will be provided to these four, and other hospice professional nurses, who will be certified after having received the required training. If necessary, lay counselors will also receive specialized training to alleviate the burden on the clinical staff. Additional training will be provided on couple counseling and testing. Home-based caregivers (HBCs) will be trained to identify potential HIV patients in the community or family members and neighbors of patients. Those identified will be encouraged and referred to the hospice for CT. The HBCs will also receive training on antiretroviral treatment support and the importance of treatment adherence. The four professional nurses will also be trained in supervision skills, as they will be supervising the HBCs involved in supporting this pilot project.

ACTIVITY 3: Client Services

The target population for CT will be patients, their families, and neighbors. The objective is to identify those in most need of HIV treatment at the earliest opportunity. Confidentiality will be maintained through a professional approach. The pilot hospices will have stocks of high quality CT rapid test kits and external quality control measures around rapid testing will be implemented. Free tests will be offered, in a medical setting at these sites, by trained and certified staff to all patients and their families or neighbors who present with conditions that might suggest underlying HIV disease. Specially trained personnel will provide appropriate pre- and post-test counseling in all cases. HIV-infected patients will be routinely referred for TB testing, and to antiretroviral (ARV) clinics for CD4 counts and ARV treatment. Ongoing counseling and referrals for medical care will be available to those who test HIV positive. HPCA personnel will facilitate ARV treatment support for enhanced adherence to antiretroviral drugs. Trained home-based caregivers will provide enhanced treatment support and patients will be referred to support groups. Those who test HIV negative will be encouraged to maintain their negative status though educating them about prevention, and how to protect themselves and their partners.

It has been shown that CT reduces the transmission of HIV from infected individuals to their partners. Hospice site staff will be trained in the importance of targeting men, and on couple counseling and testing. Disclosure remains voluntary, but HIV-infected patients will be encouraged to disclose their HIV status to their partners and families when they feel safe to do so. Couple counseling will help to address this issue. The four professional nurses at each site will supervise home-based caregivers who will be providing information and support on CT in the communities.

ACTIVITY 4: Liaison with ARV Clinics and the Department of Health

The four pilot sites will improve liaison with local ARV clinics and the Department of Health to optimize CT in that region. Patients will be referred to HIV support and advocacy groups.

Funding Source:	GHCS (State)	**Program Area:**	Counseling and Testing
Budget Code:	HVCT	**Program Area Code:**	09
Activity ID:	19510.08	**Planned Funds:**	$522,000
Activity System ID:	19510		

Activity Narrative: SUMMARY:

Salesian Missions will conduct a voluntary counseling and testing (VCT) Life Choices project serving youth and adults in the Western Cape.

BACKGROUND:

The vision of Life Choices is to reach youth with a culturally accepted abstinence and be faithful (AB) message early in their lives and to support the maintenance of positive behavior changes during adolescence and adulthood through the involvement of community mentors, informed parents, and organized peer groups. Life Choices has also networked with an established organization in order to use their mobile VCT in the project's targeted High Schools. However, Life Choices' capacity to carry out VCT services is much higher than the numbers its' partner organization has been able to meet. As a part of the successful education and peer training programs, the belief of normalization and importance of testing has been made a norm with all the youth, thereby creating an unprecedented demand. This program hopes to meet the demand created within youth to know their status, and to take advantage of Life Choices' vast network within the Western Cape area and implement VCT with youth in the Western Cape area (rural and urban) via a mobile VCT unit.

ACTIVITIES AND EXPECTED RESULTS:

The main goals of this project are to: 1) increase access to youth friendly VCT by youths and young couples 15-24 years in high schools; 2) increase access to mobile VCT during the weekend in churches and; 3) build an indigenous, sustainable response to the national HIV epidemic in South Africa through a rapid expansion of innovative, culturally appropriate, high-quality, youth friendly HIV/AIDS VCT services.

Salesian Missions will expand VCT services to youth by: 1) integrating VCT into Life Choices; 2) offering high schools and churches in the Western Cape Province with access to mobile VCT services; 3) improving the quality of youth friendly VCT services at existing VCT sites through training and mentoring of service providers and other clinic staff; 4) increase community mobilization within schools and churches via peer educators, educators, parents and community leaders; and 5) offering psychological support and counseling for onward care and support services to clients diagnosed as HIV infected.

Expanding CT services contribute towards the PEPFAR 2-7-10 goals.

Table 3.3.09: Activities by Funding Mechansim

Mechanism ID: 8708.08
Mechanism: N/A
Prime Partner: JHPIEGO SA
USG Agency: HHS/Centers for Disease Control & Prevention
Funding Source: GHCS (State)
Program Area: Counseling and Testing
Budget Code: HVCT
Program Area Code: 09
Activity ID: 19511.08
Planned Funds: $522,000
Activity System ID: 19511

Activity Narrative: SUMMARY:
The focus of this project is the implementation of confidential counseling and testing (CT) in the workplace and will link CT with other interventions such as prevention, treatment and support systems. Emphasis areas will be CT service delivery, development of HIV policies in the workplace, training, prevention messages, quality assurance and supportive supervision, and capacity building, Target groups will include women and men of reproductive age, management and trade union members in the work environment.
BACKGROUND:
Under this project JHPIEGO will assist individual companies to create a conducive environment for confidentialand voluntary counseling and testing. JHPIEGO will do this by addressing management, unions and employees though the provision of basic but thourough HIV and AIDS information; providing assistance in the reduction of stigma and discrimination and the impact of HIV and AIDS in the workplace; and supporting VCT services.
ACTIVITIES AND EXPECTED RESULTS:
JHPIEGO will institute confidential counseling and testing services in the workforce in both private and public institutions. JHPIEGO will design workplace HIV and AIDS programs that respond to individual companies' needs and fulfill the goals of this project. Management, union members, individual employees, and family members will be targeted. JHPIEGO will work to ensure that confidential counseling and rapid testing services focusing on risk reduction, will be accessible to all workers and their partners in selected sites. JHPIEGO will also incorporate stigma reduction strategies and issues of sexual violence and prevention for positives. The expected results under this objective are: 1) Workplace HIV and AIDS policies developed and disseminated; 2) Counseling and testing sites established and running; 3) Stigma surrounding HIV and AIDS reduced in and out of the workplace; 4) Prevention message dissemination strategies developed and sustained; 5) Peer education programs developed and sustained and;6) Establish linkages to care, treatment and other interventions.
Throughout the life of this project, JHPIEGO will implement the GIPA(Greater Involvement of People living with HIV and AIDS) principles as appropriate; the GIPA principle supports the substantive involvement and inclusion of people living with HIV and AIDS in all aspects of project design, implementation and monitoring.

These activities will directly support PEPFAR 2-7-10 goals.

Funding Source: GHCS (State)
Program Area: Counseling and Testing
Budget Code: HVCT
Program Area Code: 09
Activity ID: 19514.08
Planned Funds: $368,000
Activity System ID: 19514

Activity Narrative: SUMMARY:

SABCOHA program PEPFAR funds will be used to identify HIV-infected individuals as noted in the Vendor Chain and BizAIDS programs below. VCT is used as a prevention mechanism to promote abstinence, be faithful and to use condoms, as well as an entry-point in to ARV treatment. It is also an essential tool for fighting stigma and discrimination. The major area of emphasis is Workplace Programs. Minor areas of emphasis include Community Mobilization/Participation, and Information, Education and communication.. Specific target populations include Male and Female adults, Truckers, and the Business Community.

ACTIVITIES AND EXPECTED RESULTS:

Activity 1: Vendor Chain
Vendor Chain Management – the businesses that have been offered capacity building though the development of a workplace - will be offered VCT during the second phase of the programme. VCT will be offered to all employees of participating businesses.

Activity 2: BizAIDS
BizAIDS activities will ensure that VCT is provided in a training workshop setting.

Activity 3: SABCOHA will use the contracted Disease Management service provider for the provision of counseling and testing.
Linkages with other services providers and public hospitals will be explored to maximize the manner in which the intervention can reach the target group effectively and efficiently, as need arises.

The counseling and testing interventions will be conducted by a sub-partner and that will facilitate the implementation of VCT services to communities that would not otherwise be able to access testing. The. FY 2008 funding will ensure that employed populations have access to counseling and testing services in the workplace. SABCOHA will primarily use On-site VCT and provide counseling and testing at the site of the SME. All sites will be inspected for suitability for testing: e.g. privacy for employees, accessibility, hygiene. A communication campaign informing employees about the testing date is undertaken before the testing dates. Such communication is linked into the prevention ABC education. Prior and on the date of testing, the eligible individuals undergo an education session which includes motivational messaging on the benefits and procedures of HIV testing.
Information on organizations which provide support will be given to the employees. Referrals for HIV positive individuals will be done for PreHAART and treatment related services, which will be offered by an contracted Treatment service provider.

SABCOHA's VCT activities will contribute to the PEPFAR 2-7-10 goals by identifying HIV-infected individuals for care, treatment and preventing infection in those who are HIV-negative. This will contribute to the PEPFAR vision outlined in the Five-Year Strategy for South Africa by expanding access to, and availability and quality of VCT services.

Program Area Code: 09

Activity ID: 19515.08

Planned Funds: $386,000

Activity System ID: 19515

Activity Narrative: INTEGRATED ACTIVITY FLAG:

Activities are linked to others described in ARV Drugs, ARV Services, and Other Prevention. This is a follow-on activity to the American Center for International Labor Solidarity.

BACKGROUND:

the FY 2007 PEPFAR funding corporative agreement has enabled the Tshepang Trust to start testing workplace employees together with their immediate dependents. In the FY 2007 period and going into the FY 2008, the Trust is focusing on utilizing general practitioners (GPs) to do routine counseling and testing in their consulting rooms. The Trust although it had a slow start for the FY 2007 period, is gaining momentum with testing both in GPs rooms and in workplaces through partnerships with other VCT entities, is currently testing on average 500 individuals per month and the number is rising as the program becomes known with the assistance of the SA Medical Association in alerting its members on the program.

The emphasis area for this workplace activity is testing for early detection. The target population for this initiative is men and women of reproductive age working in SMEs, the healthcare and education sector including their partners and dependents. This includes managers, worker representatives and workers, educators and other individuals working in the education sector and healthcare workers working in the public healthcare sector particularly in areas where Tshepang currently has public private partnerships with some of Gauteng's public ARV sites.

With funding from PEPFAR, these workplace programs will conduct HIV awareness and testing sessions for both employers and employees on the basic facts of HIV transmission, prevention, and impact of HIV and AIDS on the industry.

This activity will directly contribute to PEPFAR's goal of preventing 7 million new infections and treating more than 10 million infected persons. These activities support the USG Five-Year Strategy for South Africa by expanding and improving quality workplace HIV and AIDS prevention programs and are also in line with the SA National Strategic Plan.

ACTIVITIES AND EXPECTED RESULTS:

This activity will provide access to VCT services for employees, their partners and their dependents through referrals to general practitioner (GP) sites and aso workplace wellness facilities. These GPs will provide counseling and testing and initiation into treatment.
These accomplishments will directly contribute to the realization of PEPFAR's goal to prevent 7 million new infections and provide care for 10 million people infected with HIV. These accomplishments also support the prevention, care and treatment goals laid out in the USG Five-Year Strategy for South Africa.

Budget Code:	HVCT	**Program Area Code:**	09
Activity ID:	19516.08	**Planned Funds:**	$450,000
Activity System ID:	19516		

Activity Narrative: SUMMARY:

The voluntary counseling and testing (VCT) activity is a component of integrated service delivery activities through the training of peer education and lay counselors in the workplace; and relates to activities in prevention/abstinence and being faithful as well as condom distribution and sexually transmitted infection program. This activity is a component of a comprehensive prevention education, care and treatment program and activities are described in AB, Policy Analysis and Systems Strengthening, and Condoms and Other Prevention. With an estimate of 12.3 million learners in South Africa, served by 386,600 teachers and more than 26,000 schools managing a response to HIV and AIDS across the education sector requires a comprehensive and substantial effort. Efforts must include a focus on both learners and educators if the impact of HIV is to be mitigated; and it must be recognized that any efforts focused on learners via the education sector cannot succeed without educators also being addressed. The Education Labour Relations Council (ELRC) will implement a comprehensive HIV and AIDS workplace program for the education sector of South Africa.

BACKGROUND:

ELRC is a statutory council which serves the South African education sector nationwide and is comprised of the public sector, the national and provincial departments of education, the private sector and teacher unions representing all primary and secondary public school educators. The ELRC works as an interface between the Department of Education (DOE) and labor organizations for labor peace and a vision of contributing towards the transformation and development of a quality South African public education system. A 2005 Health of Our Educators Report found that 50% of all teacher attrition is linked to complications of HIV and AIDS, resulting in 4000 teachers being lost each year due to AIDS. The general prevalence rate among educators was found to closely parallel that of the national population with an estimate of 12.7% of all DOE employed educators living with HIV. Based on the findings of this report and with FY 2007 and FY 2008 PEPFAR funding ELRC will implement a country-wide project in all 9 South African provinces to educators living with and affected by HIV and AIDS. The target group for this project is teachers, including those living with HIV or those who have family members living with HIV. This is a workplace intervention with minor emphasis areas in information, education and communication, community mobilization, and the development of linkages and networks. A particular focus of this project is the greater involvement of people with AIDS. ELRC will work with HIV positive teachers to ensure they can serve as role models to fellow teachers and to learners.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Training Master Trainers and Lay Counselors

Master trainers and lay counselors will receive training on rapid test protocols and VCT. The Master trainers will be responsible for training lay counselors within their educational sector unions as well as increasing the demand for and acceptance of VCT services.

ACTIVITY 2: VCT Services

This activity will provide access to VCT services for teachers and their families. Services will include training, support and supervision of counselors. Peer educators within the education sector will promote HIV counseling and testing as a strategy to prevent HIV. The peer educator will also raise awareness about local community VCT Centers to increase the uptake and accessibility of counseling and testing. For those who test positive, trained lay counselors will offer counseling on how to live with HIV, as well as strategies to mitigate stigma and discrimination in the workplace and education sector.

ACTIVITY 3: Fostering linkages to treatment, care and support

ELRC will work with the implementing education sector unions providing VCT to ensure that linkages with treatment, care and support services are established. ELRC will ensure, via the implementation of a tracking system that all educators testing positive will be provided with referrals as needed. In addition, lay counselors will work with the union to track educations who have been referred and to ensure that they receive the services that they have been referred for. ELRC will develop a comprehensive provincial-based directory of services. This directory will be geared towards educators and their families and will be distributed via the union structures.

These accomplishments will directly contribute to the realization of PEPFAR's goal to prevent 7 million new infections and provide care for 10 million people infected with HIV. These accomplishments also support the prevention, care and treatment goals laid out in the USG Five-Year Strategy for South Africa.

Planned Funds: $450,000
Activity System ID: 19517

Activity Narrative: SUMMARY:

South African Democratic Teachers Union (SADTU) will expand counseling and testing services for teachers, learners and their workplace community in three provinces and refer them for care and treatments services.

BACKGROUND:

The HIV and AIDS pandemic has created workplace environments that are not conducive to quality teaching and learning for both educators and learners alike. The school as a workplace is plagued by high levels of stigma. This often results in educators suffering silently and becoming victims of the pandemic despite high perceptions of knowledge of HIV and AIDS. As a result many educators do not have the courage and support in the workplace to go for voluntary counseling and testing, since knowing your status is not publicly encouraged. Consequently most educators discover they are HIV positive when they start showing symptomatic illnesses that do not respond to medications. By this time their CD4 counts are usually low and they can no longer function optimally at their schools with compromised health. The SADTU project aims to reduce the impact of HIV and AIDS by focusing on preventing transmission of HIV for teachers and caring for orphans and vulnerable children in the workplace. The SADTU will implement routine access to VCT services in its events making it possible for union members to participate in VCT without having to go to clinics or health centers. Partnerships are already in place with local public clinics and mobile clinics. Any union member testing positive will be referred to the partner health facility for treatment, care and support services. At each of the health facilities the SADTU project will support 2 additional community health workers trained in local languages to assist in fast tracking union members who have been identified as HIV positive at union events.

ACTIVITITES AND EXPECTED RESULTS:

Activity 1: Training of community health workers

17 community health care workers will be trained as lay counselors for VCT. They will be placed at partner clinics in each of the three provinces. They will also offer VCT at union events and those who test positive will be referred to treatment, care and support services at the referral clinics. Pregnant women will be referred for PMTCT.

Activity 2: Workplace counseling and testing

At any SADTU event taking place, union members will have the opportunity to access VCT. VCT will be conducted using the national protocol for testing. Community health care workers will be trained to conduct VCT, and make appropriate referrals to treatment, care and support services. In order to ensure that referrals are made, SADTU has established partnerships with health facilities in each of the districts/regions where SADTU activities will take place.

Activity 3: AIDS Ambassadors

The SADTU project subscribes to the “greater involvement of people with AIDS” principle. As a result the project supports people living with HIV to engage in project planning of union events and the participation in HIV testing campaigns. These AIDS Ambassadors have a great impact on union events, including on workshops aimed at encouraging union members to participate in VCT.

The SADTU project contributes to the PEPFAR 2-7-10 goals and objectives by encouraging educators and union members to participate in VCT activities being conducted at union events. This ensures that more union members are aware of their HIV status early, and can be referred to treatment, care and support services timely.

Table 3.3.09: Activities by Funding Mechansim

Mechanism ID:	9630.08	**Mechanism:**	N/A
Prime Partner:	Catholic Medical Mission Board	**USG Agency:**	HHS/Centers for Disease Control & Prevention
Funding Source:	GHCS (State)	**Program Area:**	Counseling and Testing
Budget Code:	HVCT	**Program Area Code:**	09
Activity ID:	22317.08	**Planned Funds:**	$500,000
Activity System ID:	22317		

Activity Narrative: Summary:
The Catholic Medical Mission Board, Inc. (CMMB) is a new PEPFAR partner selected for funding in August 2008 (but not yet funded – the CDC is currently processing the paperwork to award a cooperative agreement).

Background:
CMMB is a consortium member of the Track 1 Catholic Relief Services (CRS) AidsRelief program, providing HIV care and treatment. The program selected for funding through the 2008 APS is distinct from the CRS program.

CMMB will implement a community-based men's counseling and testing (CT) program named Men Taking Action, modeled after a similar program introduced and scaled-up by CMMB with support from PEPFAR in Zambia, and builds upon the organization's history of collaborations with the Southern Africa Catholic Bishops' Conference (SACBC) and other local Catholic organizations. The program is proposed in response to the shortcomings of current testing approaches to capture and engage men and directly addresses the APS counseling and testing priority areas of instituting alternative family-focused testing methods and utilizing home-based CT.

Activities and Expected Results:
The objective of Men Taking Action is to increase the number of adult men (18-49) counseled and tested through community-based approaches that increase acceptability and access, with focus on men in rural, underserved areas. The program uses a two-pronged approach to counseling and testing men:

Activity 1: Utilize home-based care networks of CMMB's diocesan partners to reach male family members, counsel and test men at their homes. CMMB will strengthen the training of the home-based care workers assigned to the home to carry out CT with the men.

Activity 2: Perform Parish-based testing and counseling of men incorporating and make available counseling and testing to men during their regular meeting and programs. The parish and church group pre-testing events will be carried out by trained men educators, incorporating testing into health, men's responsibilities, and faith.

Both approaches utilize lay community workers who will be trained in administering rapid testing and counseling. At a secondary and related level, men will be invited to participate actively in a long-term program to engage them as (i) leaders of the household (linking families to care & prevention services), (ii) vehicles of their own health future (repeated counseling & testing and prevention behavior-change messages), and (iii) community leaders in the mitigation of HIV/AIDS. Because Men Taking Action is fundamentally a community-based activity, it is expected that testing men through this program will increase overall uptake of services for counseling and testing in families and communities.

Men Taking Action serves the PEPFAR counseling and testing goals through the following actions over five-year life of the project:

a) Offering community-based testing (pre-test counseling) and information to 200,911 men.
b) Training 637 community-based counselors (home-based care workers and nurses) to South Africa standards in HIV pre and post-test counseling and testing
c) Testing and counseling 125,661 men, and providing them with key male-focused messages
d) All men who test positive will be referred to treatment and support as well as screened for TB; also, all men reached by the program will be linked into integrated community support groups.

The program will be implemented over five years, with the first year (FY 2008 funding) rolled out in the Eastern Cape Province, and expanded in FY 2009 to KwaZulu-Natal, Limpopo, and Northern Cape.

Men Taking Action will utilize and train lay counselors on using oral rapid testing throughout its partners, with the exception of where government partnerships will direct the program otherwise (such as in the Eastern Cape, where CMMB has entered into a partnership to utilize finger-prick testing and use retired nurses in the first year). The Men Taking Action program has been built with gender-based approaches and mechanisms to target rural areas specifically at the core of its objectives and implementation mechanisms. The program will include a "knowledge, attitudes and practices survey" (KAP) of men in target communities at baseline, mid-term and the final year of the program. CMMB will utilize findings of the KAP to develop curricula for home-based care testing staff, support group leadership and participants in the program.

Activity Narrative: BACKGROUND

The overall objective of the Ripfumelo project is to reduce HIV vulnerability of farm workers in various districts of South Africa by implementing a coordinated, evidenced-based and focused HIV and AIDS prevention and care program. Building on experiences and lessons learnt from IOM pilot projects in the southern Africa, the Ripfumelo project aims to provide sustainable prevention and care services to farm workers by building the technical capacity of local implementing partners (IPs); strengthening partnerships among and with local, provincial, and national governmental agencies; promoting public/private partnerships; and developing a network of stakeholders working specifically on HIV-related issues within the commercial agriculture sector.

The overall anticipated results of the project are a reduction in the HIV incidence in the targeted areas, and a mitigation of the impact of AIDS on farm workers and their families and communities. The project will build particularly on experiences and lessons learned from the ongoing IOM prevention and care project which has been implemented in Hoedspruit, Mopani District, Limpopo Province since 2005. The Ripfumelo project will strengthen the existing intervention in Hoedspruit and target additional seasonal, temporary, and permanent farm workers, whether South African or foreign, documented or undocumented, in the commercial agricultural areas of Hectorspruit/Malelane (Lowveld, Mpumalanga), Makhado/Musina (Vhembe, Limpopo), and Tzaneen (Mopani, Limpopo). The project will initially target approximately 20,000 farm workers on about 120 commercial farms.

Activity Narrative: SUMMARY:

The goal of this project is to improve and expand the counseling and testing services provided to victims of rape and sexual violence by upgrading and expanding a network of Thuthuzela Care Centers (TCCs) nationwide. These multi-disciplinary centers provide comprehensive services to women and children rape or assault survivors, including post-exposure prophylaxis (PEP), HIV and AIDS counseling and testing, and referral to HIV care and treatment services. These centers also assist girls and boys who are increasingly becoming victims or perpetrators of rape. The major emphasis area is training and network/linkages/referral with minor emphasis areas on commodity procurement, linkages with other sectors and initiatives, and local organizational capacity development. Target populations will include infants, girls, boys, men, women, doctors, nurses and pharmacist as well as the TCC core team. Commodities to be procured include rape kits, medical equipment, and comfort kits.

BACKGROUND:

This project is a continuation of work supported through PEPFAR funds in FY 2006 and FY 2007. These funds were used to evaluate and upgrade existing TCCs in keeping with the National Department of Health's (NDOH) National Management Guidelines for the Care of Rape Victims. In FY 2008, this project will focus on maintaining established TCCs and on opening new ones in provinces where they do not currently exist or in other locations where need is identified. This activity is linked to the USAID Governing Justly and Democratically (GJD) office's program that supports the Sexual Offences and Community Affairs (SOCA) Unit of the National Prosecuting Authority (NPA) of the Department of Justice and Constitutional Development (DoJCD) in its endeavor to eradicate all forms of gender-based and sexual violence against women and children, especially the crime of rape. The DoJCD/NPA/SOCA Unit has responded to the ongoing problem of sexual offences, and specifically rape, by seeking to upgrade and expand the TCC network from 10 to 80 TCCs nationwide. The TCCs are a bold approach to rape prevention, care and treatment for victims of sexual violence and assault involving the health, justice, and civil society sectors in this endeavor. This project will advance the Women's Justice and Empowerment Presidential Initiative (WJEI) which seeks to upgrade or establish at least 30 TCCs to help the SAG achieve its goal of 80 TCCs nationwide. Victims of rape benefit from TCC assistance because the survivor can obtain all of the required services needed at a single location. These services include medical assistance, access to justice through with the local police and prosecutors, and access to counselors, testing, and emergency support services. Most TCCs are located in hospitals or near healthcare facilities where there is a growing recognition of the links between violence against women or children and HIV. The risk of HIV infection is a very real possibility with rape. Perpetrators seldom use condoms, placing the vast majority of women and children who are victims of this crime at risk.

The TCC Model: The TCC has developed a specific model aimed at protecting rape victims. When rape victims arrive at the police station, they are removed from the crowds to a quiet room where the police officer can take a statement. Thereafter, victims are transported to the nearest TCC where they are welcomed by a site coordinator. A dedicated nurse or doctor is summoned to conduct the forensic medical exam. The Victim Assistance Officer (VAO) and the doctor or nurse on duty explain the procedures and help the victim understand why consent forms must be signed. The police detective on call is summoned and assigned to the case. Case managers are responsible for coordinating sexual offence cases and assist the victim to understand what information the police investigator needs to investigate the crime. If the victim decides to pursue charges, the case manager opens a file and tracks the status of the victim's case. The victim is then referred to a local non-governmental or community-based organization for follow-on care and treatment services and support, as appropriate, throughout the legal process. However, an audit conducted by Research Triangle Institute (RTI) using FY 2006 PEPFAR funds found that the ten of the existing TCCs are not 100% compliant with this model (the highest score was 87.5% compliance). Consequently, FY 2008 funds will be used to upgrade current TCCs as well as making new ones operational and compliant with the model.

Activity 1: Strengthening Counseling and Testing Services in the TCCs

Using FY 2008 PEPFAR funds, a partner TBD will continue to support DOJCD/NPA/SOCAâ€™s efforts to improve the quality of counselling and testing (CT) provided to victims of rape and sexual assault. The emphasis is on women and children rape victims. The TCCs will offer CT services to victims as part of an integrated package of assistance provided by the TCC Core Team, which includes medical officers (doctors, nurses and pharmacists), a Victim Assistance Officer (VOA) and a Site Coordinator who will be trained on how to provide CT services as part of a multidisciplinary team. This activity will provide victims of rape or sexual assault with access to HIV prevention and care services including elements of the preventive care package, on-site psychosocial support, and stigma reduction strategies for PLHIV. This includes counseling and referring for HIV testing services, disclosure support, basic screening for pain and HIV-related conditions such as opportunistic infections, HIV prevention messaging and access to condoms, referrals for the clinical monitoring and care that includes antiretroviral treatment, opportunistic infection prevention and treatment (including cotrimoxazole prophylaxis), TB care, nutritional care and appropriate child survival and child care interventions. Rape victims who test positive for HIV will be given appropriate counseling and will be referred to the nearest government treatment site for further counseling, care, and antiretroviral treatment when necessary. Strategies to reduce stigma directed towards PLHIV will be integrated in partnership with the TCC VOA. Outcomes include improved access to HIV and AIDS care, counseling and testing as well as stigma reduction and strategies to prevent the further spread of the disease.

This project will be sustainable beyond the provision of PEPFAR funds, as the government will continue to support the TCC system and incorporate operating funds for the TCCs system in the national budget. This project will assist PEPFAR to meet its goal of providing CT to 10 million HIV-infected individuals and their families.

Table 3.3.09: Activities by Funding Mechansim

Mechanism ID: 9227.08

Mechanism: N/A

Prime Partner: AgriAIDS

USG Agency: U.S. Agency for International Development

Funding Source: GHCS (State)

Program Area: Counseling and Testing

Budget Code: HVCT

Program Area Code: 09

Activity ID: 21169.08

Planned Funds: $159,684

Activity System ID: 21169

Activity Narrative: The purpose of AgriAids is to address the practical & manageable aspects of HIV/AIDS on farm level, both emerging farmers as well as commercial farmers: improving access to VCT, care – and treatment for farm workers through innovative new partnerships and existing health care facilities. AgriAids has built up an expanding network within the agricultural sector over the last 3 years, building up a "skills bank" and knowledge base on issues such as awareness, stigma, treatment, advocacy, etc. The rationale of AgriAids is to address the micro-level impact of HIV/AIDS on farm workers, which in turn will prevent the macro-level impacts from taking effect. AgriAids acts as the "spider in the web" which connects farms in need of services with supplying organisations. In this sense AgriAids will act as a "broker" between farms and service providers, using its existing network but also through identifying and setting up new partnerships.

In 2004, AgriAids came into life in order to address this regional problem: reducing the direct effects of HIV/AIDS on farm workers. This requires intervention on two levels (as explained in this proposal):
- Direct: facilitating rapid access to information, VCT, medical care – and ART for farm workers
- Indirect: lobbying the commercial agricultural sector to start viewing HIV/AIDS as an "occupational health threat" and encourage CSR spending on care – an treatment programmes on farm level

A great deal of interaction is also called for with Government (notably Dept of Health & Agriculture), since the plight of the farm worker is not high enough on the policy agenda.

The key strategy of AgriAids is to identify relevant medical service providers which can be linked to farms in need. AgriAids will act as a "broker" between farms and service providers, using its existing network but also through identifying and setting up new partnerships. This will result in an increase of farm workers accessing VCT, care – and treatment. This approach has proven its viability recently: AgriAids partnered with FPD since 2007 and several farm workers in the Brits area (North West) is now enrolled in the project and the demand is already growing from other farms. FPD will be a key partner, since they support a large number of public ART sites. AgriAids will therefore support the SA Government's National Strategic HIV/AIDS plan, since it will create a demand for ART services in rural areas, but also facilitate access on behalf of those who have traditionally been "sidestepped" by the healthcare system.

Some key outcomes of this project will be:
? Increase in farm workers accessing IEC campaigns on HIV/AIDS
? Increase in farm owners implementing HIV/Aids workplace policies, prevention and management plans on farms
? Increase in health-seeking behaviour of farm workers
? Increase in NGO's making farm workers target groups
? Increase intervention from Dept of Health & Agriculture to mitigate the impact of the disease
? Increase in condom distribution and usage on farms
? Increase in female condom distribution and usage on farms
? Decrease in multiple concurrent sexual partners on farms
? Decrease in new infections
? Increase in number of farm workers/managers/owners doing VCT, starting ART and receiving care & support
? Increase in organisations (public, private, NGO's, commercial, etc) adopting a common strategy, with specific focus on Dept of Agriculture
? Creation of a replicable model for decentralized rural healthcare in a workplace setting

These indicators point towards the fact that the project activities will look at HIV/AIDS holistically, and that activities will include workplace interventions, gender training, AIDS awareness, VCT, care – and ART.

Table 3.3.09: Activities by Funding Mechansim

Mechanism ID: 7279.08
Mechanism: N/A
Prime Partner: African Medical and Research Foundation
USG Agency: HHS/Centers for Disease Control & Prevention
Funding Source: GHCS (State)
Program Area: Counseling and Testing
Budget Code: HVCT
Program Area Code: 09
Activity ID: 19509.08
Planned Funds: $522,000
Activity System ID: 19509

Activity Narrative: SUMMARY:

African Medical Research Foundation (AMREF) will employ three key strategies: 1) Implement social marketing and stigma reduction strategies; 2) Health system strengthening (training and mentoring including sub-granting and support); and 3) Community partnerships. The project will tap into previously developed and tested AMREF training curricula, partnerships with government and community counseling and testing (CT) providers. The project will expand CT coverage by both improving and ensuring quality, accessibility, appropriateness and convenience of services and developing targeted social marketing campaigns to improve CT uptake.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: NGO VCT Assessment

AMREF will map NGO VCT sites surrounding selected facilities; assess the service in terms of confidentiality practices, compliance with quality assurance methods for rapid testing, accessibility, quality, utilization of VCT services, data management; and client awareness/perceptions of local communities of VCT services and facilities. AMREF will assess clients' referral sources, perceptions, opening hours of and waiting times at the VCT service; application of existing policies and guidelines on VCT related services; and audit the structural conditions of VCT facilities. AMREF will assess the extent to which TB staff from health facilities are testing TB patients for HIV and monitoring the CD4 count of TB patients. With the aim of expanding access to VCT services, AMREF will review the relationship between NGOs offering (or seeking to offer) VCT and the Department of Health, specifically to understand the role that NGOs can play in expansion of VCT services.

ACTIVITY 2: Social Marketing and Stigma Reduction

Key activities include: 1) Desktop review of VCT social marketing activities (Government, CBOs, etc); consultation at all levels (national to district); assessment of knowledge, attitudes and perceptions (KAP) about HIV/AIDS and VCT within local targeted communities; 2) Design and develop information, education, and communication materials; (3) Build capacity of local stakeholders in order to fight stigma; 4) Social marketing campaign and facilitation of access to wider sources of care and support for people living with HIV; and 5) Conduct monitoring and evaluation (M&E) and documentation of best practices.

ACTIVITY 3. Health Systems Strengthening

Activities will focus on building the capacity of VCT services through training and mentoring to improve quality, confidentially, equity, access and demand for services and strengthen coordination between VCT and TB services. The program will also strengthen the capacity of health service staff at VCT and TB clinics to monitor and evaluate and keep accurate records of patients and services.

AMREF will train and mentor 30 VCT staff at selected VCT centers in HIV counseling and testing according to national and/or international standards; support TB and HIV linkages, TB symptoms and referral to TB testing; improve VCT service management and mentoring for clinic staff. To strengthen quality assurance AMREF will train 60 mentors in mentoring and coaching VCT staff and will develop a mentoring system to ensure that VCT testing staff are mobilising and referring. AMREF will strengthen the district health information systems (DHIS) and improve providers' ability to collect and analyze data, document results, and use data effectively in health service planning and management. AMREF will train 60 government HIV/AIDS STI and TB (HAST) committee members in M&E for comprehensive care.

AMREF will train 30 CBO carers, managers and nurses in ARV literacy; strengthen and support HAST committees to encourage networking and collaborative service provision between TB and HIV/AIDS services; mobilise and motivate TB patients for HIV testing and vice versa. AMREF will develop a referral system, tools and guidelines for health professionals, local NGOs/CBOS, primary health care and community service providers, in collaboration with VCT and TB nurses; and will monitor the implementation of the referral system.

Funding Source:	GHCS (State)	**Program Area:**	Counseling and Testing
Budget Code:	HVCT	**Program Area Code:**	09
Activity ID:	19512.08	**Planned Funds:**	$522,000
Activity System ID:	19512		

Activity Narrative: The Montefiore Medical Center aims to eliminate missed opportunities to test youth by building the capacity of youth-serving clinics and STI clinics to more routinely provide CT using the ACTS model. ACTS (Assess, Consent, Test and Support) is a program of rapid, simplified counseling and testing (CT) that effectively scales up provider-initiated counseling and testing (PICT).

BACKGROUND:

Engaging young people in HIV counseling and testing, prevention and care is one of the most important strategies for reducing the burden of HIV and AIDS in South Africa. Unfortunately, thousands of opportunities to achieve these goals are missed every day when vulnerable South African youth seek a variety of health care services but are not offered HIV counseling and testing (CT). By reducing pre-test counseling sessions to five minutes or less, ACTS allows nurses to incorporate CT into the other clinical services they provide, such as sexually transmitted infection (STI) care and family planning and promotes immediate follow-up and linkage to care. This frees up lay counselors via task shifting to provide more intensive counseling and support services to HIV-infected youth.

ACTIVITIES AND EXPECTED RESULTS:

Using ACTS, this program will focus initially on maximizing CT services in high-prevalence youth clinics, starting with STI clients and expanding to family planning clients. TB screening will also be introduced. The ACTS program will then broaden its activities to other health care facilities and community organizations. The ACTS team will engage each new site, develop an implementation and monitoring plan and train all relevant health care providers in CT, collect PEPFAR indicators, provide quality assurance monitoring and initial HIV care. During the five year cooperative agreement, this model will be continuously refined and successively implemented in high prevalence communities and sites throughout South Africa starting in the Western Cape and Mpumalanga.

In FY20 08, the team will continue to refine the ACTS services in two youth clinics in Khayelitsha . A monitoring and evaluation plan will be developed that includes PEPFAR indicators. A quality assurance plan will evaluate linkage to care among newly diagnosed HI-infected youth. A Project Director will be hired and trained and locations in Mpumalanga or other Province will be chosen as well as additional clinical and community sites in the Western Cape. The goal is for this partner to test 20,000 youth for HIV and link them to prevention, link 2000-4000 HIV-infected youth to improved care, screen at least 100 youth for TB,

train 180 nurses, lay counselors and peer educators to implement the ACTS CT protocol, and establish 15 new CT outlets. The integration of local staff and partners in the operation and monitoring of this program to scale-up routine testing will ensure local ownership and sustainability.

These activities will contribute towards meeting PEPFAR's 2-7-10 goals.

Planned Funds: $522,000

Activity System ID: 19513

Activity Narrative: SUMMARY:

The Academy for Educational Development (AED) in partnership with South African Council on Alcoholism and Drug Dependence (SANCA) and Lifeline along with a host of collaborators, seek to build on its success under the community voluntary counseling and testing program previous funded by PEPFAR. AED will collaborate with some of the same organizations and networks providing a mix of training along with several strategic testing events seeking to capture clients who may visit service outlets. The program will be implemented in four provinces.

BACKGROUND:

AED proposes to build upon a previous program to expand counseling and testing (CT) in South Africa that was funded by PEPFAR until FY 2006.

ACTIVITIES AND EXPECTED RESULTS:

Activity 1: Outreach and HIV testing

This activity will be implemented through enhancing current CT sites and creating selected new sites, especially in organizations with proven outreach to at-risk and underserved populations. AED will work with Lifeline and align its activities with the its workplace prevention program to hold testing days at selected worksites. AED will also support linkages to SANCA' s home visiting counselors with CT counselors to support family testing. SANCA clients who have alcohol and drug dependency problem will all be offered HIV testing by their counselors and this will be extended to their family members.

AED will hold testing events at locations frequented by youth and adolescents. Prior these events AED will conduct community campaigns targeting youth and adolescents.

Activity 2: Training

AED will train staff from SANCA who work with high risk populations on HIV counseling and testing. Refresher courses will be held for all other counselors. Counselors will be trained on couple HIV counseling and testing.

All of the above activities will contribute towards meeting PEPFAR's 2-7-10 goals.

Activity Narrative: The Solidarity Center, in cooperation with a consortium of partners, proposes to implement a five-year HIV prevention initiative in South Africa called “Be Faithful, Be Tested, Be Union.” The Solidarity Center’s project partners are Engender Health and four of South Africa’s largest and most influential unions. These unions are the National Union of Metalworkers of South Africa (NUMSA), the Police and Prisons Civil Rights Union (POPCRU), Health and Other Service Personnel Trade Union of South Africa (HOSPERSA), and the Congress of South African Trade Unions–Western Cape (COSATU-Western Cape). Over five years, activities will be implemented in five provinces—Gauteng, Limpopo, and KwaZulu-Natal, Western Cape and Eastern Cape.
This project focuses on prevention, concentrates on workplaces, and enlists unions, businesses, and communities. The project will assist four large and influential South African unions, and the workplaces and communities in which their members labor and live, to achieve wide-reaching HIV prevention outcomes.
The project will address four critical HIV-related areas: counseling and testing, gender norm transformation, workplace policy development and implementation, and increased institutional HIV-related capacity through targeted technical assistance.
The main objective of this activity is to prevent HIV transmission through safe and healthy sexual behavior in HIV-infected and uninfected individuals by expanding counseling and testing (CT) within and through worksites and worker participation.

USG Agency: HHS/Centers for Disease Control & Prevention

Funding Source: GHCS (State)

Program Area: Counseling and Testing

Budget Code: HVCT

Program Area Code: 09

Activity ID: 22494.08

Planned Funds: $250,000

Activity System ID: 22494

Activity Narrative: Summary of Proposed Activities:

LifeLine North West Mafikeng Centre seeks to implement a mobile HIV counseling & testing unit, in the Central and Bophirima districts of the North West Province, building on the experience of our Rustenburg affiliate that operates in the Bojanala District of the North West Province. LifeLine Rustenburg is currently funded by PEPFAR (2007) to implement the mobile VCT service in the Bojanala District.

The project addresses U.S.Government's HIV/AIDS objectives in South Africa by:

1) Improving access to and providing HIV counseling & testing services, 2) Implementing HIV prevention activities by promoting the ABCs of prevention, abstinence, being faithful, sexual behavioral change within the context of cultural norms, and correct and consistent male or female condom use, and 3) Improving the quality of life of those infected and affected by HIV & AIDS..

Geographic Reach: Central & Bophirima Districts

The administration and management of the project is based at the LifeLine centre in Mafikeng while the mobile units will service ten identified sites in the Central and Bophirima Districts, five in each Districts.Bophirima is rural while Central is a mixture of urban and rural communities, 20% of the provincial population (3.8M) reside in Central while 18% live in Bophirima however, Bophirima is the largest district and the population is very dispersed.

Target Populations

The identified sites will be locations which are not adequately served by clinics and in which high barriers to individuals' learning their HIV status remain. The sites identified are villages and farming communities that are far from clinics and/or are generally serviced by mobile clinics intermittently. Population will everyone, however more specifically farm workers, youth and the overall rural population.

Proposed Contribution to the HIV and AIDS and STI Strategic Plan for South Africa (2007 -2011) and Operational Plan for Comprehensive HIV and AIDS Care, Treatment and Management for South Africa

The project contributes the strategic and operational plans through promotion of ; HIV Counseling and Testing; care and support for HIV infected individuals and their families.

The project activities fall into three categories that are strongly interconnected in their implementation and objectives. Firstly, a wide array of HIV prevention & marketing activities are designed to increase the uptake of services, disseminate factual, comprehensive information on HIV&AIDS, and encourage behavior that prevents HIV transmission. Secondly, the work of the mobile unit includes conducting HIV testing & counseling at designated identified sites in the two districts, five per district. Lastly, LifeLine activities involve intensive human & organizational capacity development, both within LifeLine and through activities with six CBOs/FBOs with an additional two to be added in the second year.

HTXD - ARV Drugs

Program Area: HIV/AIDS Treatment/ARV Drugs

Budget Code: HTXD

Program Area Code: 10

Total Planned Funding for Program Area: $42,986,329

Percent of Total Funding Planned for Drug Procurement	68.8%
Amount of Funding Planned for Pediatric AIDS	$2,865,137
Estimated PEPFAR contribution in dollars	$2,910,000
Estimated local PPP contribution in dollars	$867,227

Program Area Context:

South Africa's Operational Plan for Comprehensive HIV and AIDS Care, Management and Treatment (Comprehensive Plan), approved by the South African Cabinet in November 2003, guides the rollout of HIV and AIDS care and treatment throughout the public sector in South Africa. The South African Government (SAG) has taken bold leadership in the introduction of antiretroviral treatment (ART) through a five-year phased nationwide equitable rollout program. The goals of this plan are reiterated in the new South African HIV and AIDS and STI National Strategic Plan, 2007-2011 (NSP). The Department of Health has allocated approximately US$272 million to the implementation of the Comprehensive Plan, mainly through conditional grants to the nine provinces. This US$272 million is for the entire package of services, including counseling and testing, palliative care, prevention, prevention of mother-to-child HIV transmission, ARV drugs, laboratory services, consultations, staffing, community outreach, and all related HIV and AIDS services related support. According to the NSP, the total financial need for funding for ART alone in 2008 is US$453 million. The USG is thus ideally positioned to support the implementation of the NSP. The FY 2008 USG budget to support ART in South Africa is US$262 million.

The USG ensures that all local policies, guidelines and processes are adhered to, including the SAG requirement of accreditation for facilities to provide ART services through a formal SAG process. The SAG has established standard treatment guidelines and protocols, and uses an extensive process to review and register ARV drugs through the Medicines Control Council (MCC), which includes several generic ARV drugs. Due to these stringent controls, parallel importation is not within the SAG policy.

Currently, of the 51 generic ARV drug formulations that have been approved by the FDA and can be purchased with PEPFAR funding, there are only nineteen that are also registered by the MCC and can be purchased in South Africa with PEPFAR funding – eleven of which are first line drugs (as per the SAG national guidelines). However, as most of the treatment partners work in public health facilities, drugs are provided by the SAG, and not purchased with PEPFAR funding, allowing resources to be directed to other important treatment-related activities such as training, community mobilization, and human capacity development. Since there are a limited number of PEPFAR partners that procure ARV drugs, most individual partner budgets are not negatively impacted by the availability of generic drugs that can be purchased. In addition, many PEPFAR treatment partners access branded drugs through access pricing mechanisms, resulting in further savings.

Outside of the public sector, PEPFAR funding supports NGO partners to expand treatment to specific target groups, including people with TB, men, and people in workplace settings. Another important focus extends ARV treatment through general practitioners at community clinic sites, especially in rural communities, increasing access beyond the current SAG accredited rollout sites. The USG has also developed innovative partnerships with the private sector to provide ART. Some of the private sector partnerships also include public-private partnerships between industry and the South African government. Some of these NGO and private partners either obtain (at no cost) or procure their drugs through provincial health departments.

In FY 2008, there will be an emphasis on creating capacity at the primary healthcare level to initiate and manage patients on ART. This would also require the strengthening of drug distribution and storage systems at this level.

South Africa has a strong private pharmaceutical industry. The USG in South Africa does not manage the procurement of drugs and commodities centrally; these arrangements are made directly by PEPFAR treatment partners. Those PEPFAR partners that do purchase ARV drugs obtain them through monthly procurements from reliable private pharmaceutical distributors. Drugs are pre-packaged individually for each patient and delivered to the relevant site. Emergency deliveries can be made in 24 hours. Some of the treatment partners may utilize the Partnership for Supply Chain Management (PFSCM) in FY 2008 to streamline procurement and distribution.

In addition to supporting implementing partners, the USG supports the ARV rollout by strengthening drug distribution and monitoring systems through logistics management, patient information, drug supply and training. The National Department of Health awards centralized tenders for all ARV drugs procured by provinces. There were no reported stock-outs of antiretroviral drugs in FY 2007, though there were distribution problems due to a month-long public sector strike, which included the public health sector. Despite this, the SAG's emphasis on strengthening key delivery systems (with PEPFAR assistance) continues to improve distribution systems and overall effective drug management capacity. If stock-outs were to occur in PEPFAR programs in FY 2008 that obtain drugs through the SAG, private sector pharmaceutical suppliers are positioned and ready to provide the necessary back-up supplies.

The first-line regimen for ART in South Africa is stavudine (d4T), lamivudine (3TC) and either efavirenz or nevirapine. Most patients are still on the first-line regimen. Switches are mainly due to side-effects, adverse reactions, and sub-optimal regimens used in the private sector prior to the national treatment guidelines. Stavudine accounts for the highest number of adverse reactions to ART, mainly lactic acidosis. The international evidence that shows the efficacy of alternatives to stavudine is monitored by the USG. Some PEPFAR partners are assisting the SAG in the review of guidelines, and thus it is expected that in FY 2008 the first-line regimen may change.

The USG also provides critical on-site assistance through its partners at public sector facilities aimed at strengthening and improving the quality of logistics, recording, and ordering systems to ensure proper management of drugs and other commodities required for treatment. These activities will continue and expand in FY 2008.

The achievements and targets for ART are found in the ARV Services section of the COP.

There are no other donors that provide service delivery support for the provision of antiretroviral treatment, though DFID/United Kingdom provides support to the SAG in strengthening drug delivery systems. The USG and DFID/United Kingdom are collaborating to ensure there is no duplication of effort. The Global Fund supports ARV treatment in the Western Cape and KwaZulu-Natal provinces, and one Emergency Plan partner, CAPRISA, receives Global Fund support for the purchase of ARV drugs.

Activity System ID:	19520		

Activity Narrative: INTEGRATED ACTIVITY FLAG:

Activities are linked to others described in Counseling and Testing, and ARV Services. This is a follow-on activity to the American Center for International Labor Solidarity.

SUMMARY:

This activity is a follow-on to the partnership with the American Center for International Labor Solidarity to treat South African educators and their spouses and dependents through the Prevention, Care and Treatment Access Program. This activity as part of the COP between PEPFAR and Tshepang has been expanded to include individuals in the SMME and Healthcare Sector. With FY 2007 PEPFAR funding, the USG issued an Annual Program Statement to solicit partners to provide comprehensive testing, care and treatment services in a workplace setting. The HIV and AIDS TREATMENT activity includes, doctor consultations, ARVs, related medications e.g. for minor opportunistic infections for a 1,000 patients.

BACKGROUND:

Whilst business has become somewhat more responsive to the needs of its employees to encourage testing for early detection and treatment of its employees to encourage testing for early detection and treatment of its employees in larger corporations, the reality is that there are still very low levels of counseling and testing in the workplace. Employees still do not trust that by enrolling in workplace HIV programs, they will not be discriminated against. The situation is worse in the small medium enterprises (SMEs) because unlike big corporations, SMEs are failing to follow the lead of their counterparts in providing counseling and testing services to their work force. As a result, SMEs need assistance in providing and developing a workplace response to HIV and AIDS.

The Tshepang Trust (also known as Tshepang) is the South African Medical Association (SAMA)'s HIV/AIDS program initiated to bridge the gap in medical resources using private general practitioners (GPs) in the public private partnership model in order to assist the South African government fight against HIV/AIDS. SAMA has more than 5000 private medical practitioners in the private practice trained in HIV clinical management. Tshepang has been in existence since June 2003 and is a registered local non governmental organization (ngo) operating as a trust under Section 21 of the South African Companies Act. This is a workplace program targeting small medium enterprises (SMMEs) employees, their partners and dependents using general practitioners and their consulting rooms as sites. For this initiative Tshepang trust is in the process of forming collaborative relationships with two South African corporate companies to establish a HIV and AIDS workplace program. In addition to this initiative, Tshepang will work with the healthcare sector, targeting personnel in hospitals and clinics within the Gauteng area. Lastly, Tshepang will continue to provide services to educators who received services under the Solidarity Center program which is ending in December 2007. Tshepang Trust currently has strong evidence of leadership support from the South African Government through a public private partnership with the Gauteng provincial department of health to enhance the scale up of HIV counseling and testing (CT) and treatment in Gauteng's ARV sites. Tshepang currently serves under serviced rural areas in South Africa utilizing general practitioners who are located mostly in rural areas. Using this model, Tshepang has developed a public-private partnership between SMEs where employees and their dependents can access private general practitioners in areas close to where they are employed without fear of discrimination of being absent from work. In addition all of the general practitioners are within reach of the targeted audiences and are local and indigenous and therefore able to relate to the target population according to their culture and in local languages. The geographical coverage area for this project is national. The emphasis area for this workplace activity is development of networks, linkages, referral systems. The target population for this initiative is men and women of reproductive age working in SMEs, healthcare and education sectors, their partners and dependents. This includes factory workers, teachers working in the education sector and healthcare workers working in the public healthcare sector. The major emphasis area for this activity will be commodity procurement as is ARVs and medication for minor opportunistic infections and side effects, with minor emphasis placed on development of network/linkages/referral systems.

ACTIVITIES AND EXPECTED RESULTS:

Through a public-private partnership among workplaces, NGOs and government, participating workplace programs will employ the services of doctors to provide antiretroviral therapy (ART) to workers who qualify for treatment. The doctors will be trained in HIV and AIDS clinical management and will have experience in drug purchasing, ART and PMTCT treatment and surveillance. The doctors will perform a clinical examination and staging, including taking blood for CD4 testing. A viral load test will be done before the start of treatment. An adherence counselor will be assigned to each patient and will be responsible for the continued home-based support and monitoring of the patient's condition. The counselor will also liaise with the doctor. The treatment services will utilize South African Department of Health standards and guidelines. All patients will receive their drugs from the doctors' offices. The doctor will ensure that the delivery system keeps stock of and is able to deliver antiretroviral therapy medications to any physical address. Special care will be taken to ensure that patient confidentiality is not compromised.

By providing comprehensive ARV services, including patient eligibility testing and drug procurement, workplace HIV prevention programs will provide HIV-infected workers in small and medium enterprises in the health and education sector with care and treatment.

These activities will directly contribute to the PEPFAR goal of providing comprehensive HIV and AIDS care to ten million people and ARV treatment to two million people. These activities will also support the care and treatment objectives laid out in the USG Five-Year Plan for South Africa.

Funding Source:	GHCS (State)	**Program Area:**	HIV/AIDS Treatment/ARV Drugs
Budget Code:	HTXD	**Program Area Code:**	10
Activity ID:	17721.08	**Planned Funds:**	$1,000,000
Activity System ID:	17721		

Activity Narrative: SUMMARY:

This activity will support antiretroviral (ARV) drug procurement for approximately 1325 South African National Defense Force (SANDF) personnel and family members that were previously receiving ARVs via a collaborative clinical trial with the SANDF, HHS/NIH/NIAID, and US DoD. The clinical trial with approximately 1200 participants currently on therapy was initiated in 2004 and will be terminated in early 2008. This PEPFAR funding will ensure continued ARV therapy for these individuals as they are transitioned from the clinical trial to HIV treatment and care still provided through Phidisa clinics and service delivery personnel. There will also be continued accruement of an estimated additional 475 patients on ART in these clinical care programs, as they are identified from a natural history cohort. This is a very high priority for the SANDF and the South African Military Health Service (SAMHS) and all ART will be prescribed and managed according to South African Government national guidelines.

PEPFAR funds allocated to ARV Drugs under this activity will be used by HHS/NIH/NIAID to procure and distribute ARV drugs to the six existing SAMHS clinical sites to continue coverage for 1200 patients. The ARVs will be purchased using a fully-functional, effective, existing infrastructure and logistics strategy set up by NIAID via a contractor, Science Applications International Corporation (SAIC). This method of ARV drug procurement and supply chain management is strongly preferred by SAMHS. Under this system, the ARVs are delivered and stocked in the SAMHS depot and distributed to the six clinical sites, as requested by the site pharmacists based on stock levels and needs. The process is carefully monitored and has been effectively used for four years.

BACKGROUND:

Project Phidisa initiated Protocol II, a randomized clinical trial, in January 2004 at the request of the SANDF, with the support of the US Ambassador to South Africa, and the US DoD. In addition to answering scientific questions important to South Africa, including a comparison on efficacy and toxicity of South African MOH ART regimens, this protocol also helped SAMHS provide access to ARVs for SANDF personnel and their family members. Through Phidisa and the implementation of this protocol, capacity to deliver ART has been developed in all three military hospitals and three rural military sick bays. Approximately 1800 SANDF personnel and their family members have been randomized to one of four ART regimens over the past four years. Drug procurement procedures which were established by HHS/NIHNIAID and US DoD, via SAIC, have been well integrated into the six military base hospitals and clinics and are working effectively. It is the aim of this PEPFAR activity to maintain continuity of the ARV drug supply chain, which has been well integrated with the military clinical sites and which has been specifically requested by the SANDF/SAMHS, one of the key PEPFAR South African Government partners.

ACTIVITIES AND EXPECTED RESULTS:

Activity 1: Procurement and delivery to ART

PEPFAR funds will be used to support treatment for 1200 SANDF personnel and family members living with HIV with continued accruement of patients at all six sites. This will be conducted within South African Government Guidelines, and through the appropriate leadership of the SAMHS. The Head of Pharmaceutical Services of the SAMHS in coordination with NIH, SAIC, and the Military Health Base Depot (MHBD) acquire and stock drugs at the MHBD, for secure distribution at the six clinical sites. The clinical pharmacist at each site is responsible for ensuring adequate supplies of ARVs at the site, including monitoring of expiration dates of the ARV stock. ARV orders are issued on SAMHS approved forms, which are forwarded to the SAMHS main ordering Pharmacy. These are automatically transmitted to the MHBD, and subsequently activated by the SAMHS pharmacy personnel. Documentation processes have been established to maintain records of ARV supply and demand.

These activities will contribute to the number of persons receiving treatment and care in the military, and support the PEPFAR 2-7-10 goals.

Table 3.3.10: Activities by Funding Mechansim

Mechanism ID: 8683.08 **Mechanism:** N/A

Prime Partner: South African Business Coalition on HIV and AIDS **USG Agency:** HHS/Centers for Disease Control & Prevention

Funding Source: GHCS (State)

Program Area: HIV/AIDS Treatment/ARV Drugs

Budget Code: HTXD

Program Area Code: 10

Activity ID: 19519.08

Planned Funds: $565,000

Activity System ID: 19519

Activity Narrative: SABCOHA, will have identified a treatment partner to assist in the implementation of the treatment component of the program.

The treatment component of this SABCOHA initiative will initially be implemented in at least three provinces namely: Gauteng, Mpumalanga and KwaZulu Natal. The SABCOHA Vendor Chain and BizAIDS counseling and testing (CT) programs will identify HIV-infected individuals will be referred into ARV treatment (ART) services. The major area of emphasis is commodity procurement. The minor areas of emphasis include Development of Network/Linkages/Referral Systems and Training. The primary target group for these activities are men and women of reproductive age who are employed in small, medium enterprises, truck drivers, factory workers.

The Vendor Chain and BizAIDS components of the existing SABCOHA program will begin a CT component that will identify HIV-positive individuals. These individuals will have access to Treatment/ARV Drug network.

ACTIVITIES AND EXPECTED RESULTS:

Activity 1: Procuring and Supplying ARV Drugs
SABCOHA will be responsible for establishing systems to procure and supply ARV Drugs for its treatment sites and ensure that there are no drug stock-outs on any drugs despite global shortages in stavudine and lamivudine. PEPFAR funds will be used for the procurement and distribution of ARV drugs to HIV positive individuals who are unable to access government facilities by ensuring that they are provided via a network of trained general practitioners. A system will be set up where the ARV prescriptions are forwarded to a pharmacy, which handles all the procurement, logistical and pharmaceutical management, dispensing and distribution of ARVs for this project. The drugs will then be delivered to the treatment sites via an independent courier company on a weekly basis. Treatment sites receive batches of drugs for multiple patients with drugs labeled and dispensed on a patient-named basis. Drugs are then securely stored at the side and dispensed to the patient on a monthly basis. Where sites are able to harness the capacity of a pharmacist, direct procurement will be facilitated.

SABCOHA's activities in this program area directly contributing to the 2-7-10 goal of ensuring access to treatment for two million people. SABCOHA will support the PEPFAR vision outlined in the Five-Year Strategy for South Africa by expanding access to ART services for this program's target audience, building capacity for ART service delivery and increasing the demand for an acceptance of ARV treatment.

Table 3.3.10: Activities by Funding Mechansim

Mechanism ID: 4616.08

Mechanism: N/A

Prime Partner: CARE International

USG Agency: HHS/Centers for Disease Control & Prevention

Funding Source: GHCS (State)

Program Area: HIV/AIDS Treatment/ARV Drugs

Budget Code: HTXD

Program Area Code: 10

Activity ID: 19522.08

Planned Funds: $69,410

Activity System ID: 19522

Activity Narrative: SUMMARY:

CARE serves as an umbrella grant making mechanism for the Centers of Disease Control. CARE has been an umbrella grants mechanism since FY 2006. CARE's primary responsibility is for the financial oversight of the grant which includes review of the financial reports and on-site assessment of the supporting documentation. CARE does not provide programmatic level technical assistance to the sub-grantees. Technical assistance and programmatic over-site is provided by CDC activity managers. The specific activities that CARE is responsible are listed below. CARE will oversee the sub-grant to UKZN CAPRISA.

ACTIVITIES AND EXPECTED RESULTS

ACTIVITY 1: Contractual Responsibilities

CARE is responsible for the contractual arrangements of the sub-grants with CDC South Africa. These arrangements include application for funding for implementation of activities by the sub-grantees that have been approved by CDC South Africa to meet the PEPFAR goals. CARE will prepare all supplemental and continuation application, and ensure that progress reports are received by the sub-grantees. CDC activity managers will be responsible for the technical review of the sub-grantees; thus targets met by the sub-grantees for the PMTCT program will not be assigned to CARE.

ACTIVITY 2: Financial Oversight

CARE is responsible for the financial oversight of the sub-grants. This activity includes the review of financial reports submitted by the grantees on quarterly/6-monthly basis; and on-site assessment of the supporting documents to ensure compliance with the contract. These on-site assessments will be conducted on a 6-monthly basis. CARE will also ensure progress reports are received from the sub-grantees and approved by the activity managers of CDC South Africa on a quarterly/6-monthly basis prior to the disbursement of continuation funding.

Although these activities do not directly contribute to the overall PEPFAR goals and objectives, the Umbrella Grants Mechanism ensure that PEPFAR support can be given to small and medium-sized organizations, enabling them to facilitate the achievement of the PEPFAR 2-7-10 goals.

Budget Code: HTXD

Program Area Code: 10

Activity ID: 16090.08

Planned Funds: $363,750

Activity System ID: 16090

Activity Narrative: SUMMARY:

Currently, the USG PEPFAR Task Force supports institutional capacity building of indigenous organizations that implement PEPFAR programs through four competitively selected Umbrella Grants Mechanisms: Pact, the Academy for Educational Development (AED), Family Health International (FHI) and Right to Care (RTC). The main purposes of these new umbrella organizations are to (1) facilitate further scale-up of HIV treatment services; and (2) to develop indigenous capability, thus creating a more sustainable program. The major emphasis area is local organizational capacity development. Primary target populations are indigenous organizations, including non-governmental organizations (NGOs), faith-based organizations (FBOs), and community-based organizations (CBOs).

BACKGROUND:

Since 2004, USAID has been obligating funds through umbrella grants to partners and sub-partners in South Africa who are playing a valuable role in the response to HIV and AIDS, and particularly in the area of antiretroviral treatment services. Through this UGM, FHI is responsible for managing sub-grants to at least ten sub-partners (all of whom submit their own FY 2008 COP entries). FHI will not directly implement program activities, but rather act as a grants management partner to manage and mentor sub-recipients who, in turn, carry out the assistance programs. Thus, FHI utilizes a small percentage of overall funds for administrative purposes, with the remainder used for technical assistance and management support.

The USG closely collaborates and coordinates with the South African Government (SAG) in supporting PEPFAR partners through the umbrella grant mechanism. Although some of the partners work closely with various SAG departments at national and/or local (i.e. provincial and district) levels, the umbrella grant's primary interface with the SAG is through the Senior Management Team, which includes key staff from USAID, National Departments of Health and Social Development (NDOH, DOSD), and representatives from the provincial departments.

Under this UGM with FHI, it is possible that sub-partners will be providing ARV drugs for HIV-infected individuals. The final details of this is not available, as all of the new sub-partners have not yet been identified.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Grants Management

Under this UGM, FHI will award and administer grants to partners selected through the PEPFAR Annual Program Statement (APS) competitive process to implement HIV and AIDS activities, potentially including treatment activities. This may involve an array of related activities including award and administration of grants, monitoring of grant progress, meeting reporting requirements, and grant closeout. As relevant, FHI will monitor antiretroviral drug provision program implementation and adherence to financial regulations. This can involve provision of technical assistance to partners on project development and implementation, financial management, monitoring and evaluation, and reporting.

ACTIVITY 2: Monitoring and Evaluation and Reporting

This umbrella mechanism also includes a provision for support to partners providing ARV drugs in monitoring and evaluation, in order to strengthen measurement of the implementation and impact of program activities. Monitoring and evaluation support for ARV services partners include measurement of program progress, provision of feedback for accountability and quality, and implementation of information management systems. In addition, the umbrella mechanism will provide supportive supervision to provide guidance, monitoring, mentoring and oversight through site visits, technical assistance, and performance evaluation.

The umbrella grant mechanisms will contribute to the PEPFAR goals of providing treatment to 2 million HIV-infected people; preventing 7 million HIV infections; and providing care to 10 million people, including orphans and vulnerable children.

Funding Source: GHCS (State) **Program Area:** HIV/AIDS Treatment/ARV Drugs

Budget Code: HTXD **Program Area Code:** 10

Activity ID: 7935.08 **Planned Funds:** $0

Activity System ID: 14257

Activity Narrative: PEPFAR funds were allocated to the Supply Chain Management Systems (SCMS) Project to supporting PEPFAR partners in strengthening secure, reliable, cost-effective and sustainable supply chains that procure and deliver high quality antiretroviral drugs (ARVs) and related commodities to meet the care and treatment needs of people living with HIV. This activity will continue in FY 2008, but since SCMS funding is still available in the Working Capital Fund, this activity will now be a TBD SCMS. In this way, PEPFAR SA will be able to spend down the unspent FY 2007 SCMS funds first, and then allocate funding to SCMS as needed through the reprogramming process.

Therefore there is no need to fund this activity with FY 2008 COP funds at this time, but TBD SCMS funds may be used at a later date

Mechanism ID: 6155.08
Mechanism: UGM
Prime Partner: Pact, Inc.
USG Agency: U.S. Agency for International Development
Funding Source: GHCS (State)
Program Area: HIV/AIDS Treatment/ARV Drugs
Budget Code: HTXD
Program Area Code: 10
Activity ID: 12410.08
Planned Funds: $485,000
Activity System ID: 14255

Activity Narrative: SUMMARY:

Currently, the USG PEPFAR Task Force supports institutional capacity building of indigenous organizations that implement PEPFAR programs through four competitively selected Umbrella Grants Mechanisms: Pact, the Academy for Educational Development (AED), Family Health International (FHI) and Right to Care (RTC). The main purposes of these new umbrella organizations are to (1) facilitate further scale-up of HIV treatment services; and (2) to develop indigenous capability, thus creating a more sustainable program. The major emphasis area is local organizational capacity development. Primary target populations are indigenous organizations, including non-governmental organizations (NGOs), faith-based organizations (FBOs), and community-based organizations (CBOs).

As an Umbrella Grants Management (UGM) partner, Pact supports institutional capacity building, technical assistance and grants administration for indigenous organizations that implement PEPFAR programs. Pact's primary goal is to build sustainable institutional capacity and increase the effectiveness of local partners to achieve expanded and high quality services. Primary target audiences include non-governmental, faith-based, and private voluntary organizations, Pact's major emphasis is the enhancement of local sub-partner capacity through the development and implementation of documented organizational systems and procedures and human capacity development at management and operational levels.

BACKGROUND:

Since 2004, Pact has facilitated the efficient flow of grant funds during the rapid scale-up of the PEPFAR South Africa program. Pact provides PEPFAR funding and assistance to over 30 PEPFAR sub-partners in South Africa, all playing valuable roles in the fight against HIV and AIDS.

The sub-partners procure USG and South African Government (SAG) approved antiretroviral drugs (ARVs) through supply chain vendors and oversee their distribution to government treatment facilities and accredited private providers. Partners also work closely with providers to develop drug tracking and monitoring systems to facilitate correct and accurate patient uptake, treatment management, and referral. Additional services in support of ARV drug distribution include lab testing, adherence support, patient counseling, telemedicine and quality assurance monitoring. Partners also equip government clinics and hospitals with the human resources including doctors, nurses, pharmacists, and counselors. In addition, these programs provide specialized training addressing appropriate delivery of ART services and the provision of holistic HIV care. Pact has contributed to the 2-7-10 PEFPAR goals through support to 2 partners providing ARV drugs to over 1,000 HIV-infected, uninsured individuals in treatment sites throughout South Africa.

Partners work closely with and in the SAG provincial, municipal and district facilities to facilitate the seamless transfer of patients in and out of public and private networks of care. As a result, their programs continue to grow tremendously in both reach and complexity. This scale-up will require strong financial, monitoring and evaluation, and management systems to accommodate the growth in reach and maximize sustainability. With FY 2008 funding, Pact will continue to provide capacity-building support through training and mentoring to further develop and strengthen partner organizations. Pact will also facilitate the sharing of these systems between emerging and well-established partners and reinforce the use of data and reporting for decision making.

ACTIVITY 1: Grant Management

Pact conducts a participatory assessment of each partner organization and collaboratively develops an organizational capacity building strategy that details planned interventions. These assessment results also inform Pact of what type of assistance is urgently to ensure that the organizations comply with USAID rules and regulations (with emphasis on financial and procurement management).

Prior to the signing of grant agreements, Pact provides extensive assistance to organizations in developing comprehensive program design documents that accurately reflect planned activities and clearly articulate defined goals and objectives. Further assistance is provided in costing program activities and developing a detailed budget that is consistent with program objectives. Pact assists partners in developing realistic cost share levels and emphasizes the sustainability aspect of this requirement. After the signing of the agreement, Pact works with each partner in developing a very detailed annual work plan that includes specific activities to be implemented, timelines, budgeted amounts, target beneficiaries and projected reach. The ability to clearly articulate program goals and activities and develop realistic budgets greatly enhances the ability of partner organizations to diversify their funding base and ensure sustainability.

ACTIVITY 2: Human Capacity and NGO Development

Pact has developed a customized training series to orient new partners and their sub-partners. The training series includes basic and advanced grants and sub-grant management which addresses USAID rules and regulations, good governance and minimum financial management standards. Monitoring and evaluation courses cover basic principles of monitoring and evaluation and PEPFAR data requirements as well as internal data quality assurance. Refresher courses are also offered throughout program implementation. Pact also ensures that ongoing, intensive onsite training and mentoring is provided to sub-partners. On a quarterly basis, Pact assesses the level and type of assistance required by each organization and develops a site visit plan that ensures that the necessary support is delivered to each sub-partner. Pact organizes and supports technical consultation meetings for the sharing of best practices and lessons learned among PEPFAR and non-PEPFAR partners. As required, technical assistance from select regional and international providers is sourced to assist partners in improving their technical capacity.

ACTIVITY 3: Monitoring and Evaluation

Pact SA assists each grantee in developing a results framework that tracks success against both PEPFAR program and organizational indicators. Pact further assists sub-partners in the development of monitoring, evaluation and reporting (MER) plans and systems. Participation in a five-day M&E training is mandatory for all partners prior to full implementation. Pact provides additional M&E assistance to all partners in the following areas: review and development of effective data collection, analysis and reporting tools; setting

Activity Narrative: realistic and achievable targets; establishing and strengthening data quality management systems, conducting internal data quality audits and verifying and validating sub-partner data submissions.

ACTIVITY 4: Program and Financial Monitoring

Pact recognizes the importance of monitoring sub-partner program progress and early identification and resolution of implementation issues. Pact has frequent and regular contact with sub-partners and if technical/programmatic gaps or problems are identified, ensures that issues are promptly addressed and resolved.

In addition to monitoring program progress, Pact closely monitors sub-partner financial management and ensures that grants funds are utilized only for activities approved under PEPFAR funding. All partners submit monthly financial reports that that detail and document expenditures. Pact finance staff visit partners every quarter to audit program expenses and accompanying documentation, compliance with USAID rules (including branding requirements) and cost share.

ACTIVITY 5: Technical Assistance

Pact will provide and manage direct technical assistance in prevention, care and support strategies for all sub-grantees. Pact technical staff will conduct assessments and provide consultation and training on the development and implementation of programs and services. In addition, sub-grantees will be supported with guidance and ongoing assistance on the design and delivery of partner HIV and AIDS curricula, training modules and publications. Pact will also work closely with partners to ensure the effective incorporation and strengthening of nutrition and food security, protection services, gender mainstreaming, and human capacity development in existing programs.

USG Agency: U.S. Agency for International Development

Funding Source: GHCS (State)

Program Area: HIV/AIDS Treatment/ARV Drugs

Budget Code: HTXD

Program Area Code: 10

Activity ID: 3087.08

Planned Funds: $2,328,000

Activity System ID: 14004

Activity Narrative: SUMMARY:

With FY 2008 PEPFAR funds, Management Sciences for Health's (MSH) Strengthening Pharmaceutical Services (SPS) project will continue and expand activities already underway in South Africa to support the effective management of antiretroviral (ARV) medicines. SPS will continue to influence drug provision positively by improving estimation of needs for ARV, opportunistic infection (OI), and sexually transmitted infection (STI) drugs; implementing systems to support drug supply management activities and to monitor drug availability at the institution and district levels; and developing a highly skilled pool of pharmacy personnel to manage them. The objective is also to strengthen the use of Drug Supply Management Information for government facilities at all levels. The emphasis areas are human capacity development, and wraparound programs. Target populations include National AIDS Control Programme staff, other national and provincial Department of Health (DOH) staff, nurses, pharmacists and pharmacist assistants. Opportunities for collaboration with the Partnership for Supply Chain Management will be explored.

BACKGROUND:

Since FY 2004, RPM Plus has been working in close collaboration with the National Department of Health (NDOH) Pharmaceutical Policy and Planning unit, and provincial and local government pharmaceutical services to support the delivery of pharmaceutical services at all levels (national, provincial, district, and institutional). The following activities are a continuation of the activities initiated since FY 2004. Systems and models for drug supply management have been developed and tested. In FY 2008, SPS will continue the implementation of these systems on a larger scale and will monitor the impact on the delivery of antiretroviral treatment (ART) at accredited sites (including down referral and primary healthcare sites). These activities have received the full support of the NDOH Pharmaceutical Policy and Planning unit and the Provincial Pharmaceutical Services. The Department of Correctional Services has requested SPS support in strengthening the delivery of pharmacy services.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Drug Supply Management Information System

RPM Plus developed an integrated, computerized drug supply management information system (RxSolution) to assist hospital, community health center and district level pharmacy personnel to manage drug supply activities from hospital bulk stores to the patients through satellite pharmacies (outpatient and inpatient), wards and down referral clinics. This supports the management of purchase orders, inventory, issues to clients (satellite pharmacies, wards, and primary healthcare (PHC) clinics), and budgets. It also supports the management of patient records, prescriptions and quantities dispensed directly to the patient or through down referral sites. Data links with electronic patient registers have been implemented. The RxSolution system is currently used in five provinces (Eastern Cape, Mpumalanga, Gauteng, North West and Free State) at government and local government sites. In the Eastern Cape alone, the existing sites have contributed to the treatment of 15,000 patients. RxSolution is used at hospitals to support the down-referral of patients to a primary healthcare institution, typically patients on chronic medication or stabilized ARV patients. The main objectives are to reduce the burden on the hospital and decrease the cost for the patient. Some of the ARV sites using RxSolution have shown great improvement in the management of their supplies for ART and non-ART medicines. As a result, more ART-accredited sites (hospitals, wellness centers) have requested to use this system. As SPS scales up, different approaches will be used to ensure adequate support and maintenance. In the Free State, the government has hired a pharmacist/IT manager to support RxSolution. SPS will develop an interface between RxSolution and the new provincial warehouse management system. This application is expected to be deployed to additional sites and other provinces. During FY 2007 SPS is expected to develop an interface between RxSolution and Therapy Edge, used by Right to Care, and pilot it at Right to Care (and other) ART sites. This activity is done in collaboration with the Supply Chain Management System (SCMS) Project. Additional joint sites will be identified during FY 2008. RxSolution is currently used in over 100 sites throughout South Africa, Swaziland and Lesotho with RPM Plus/SPS support.

The SPS system goes beyond ARV management. All medicines used at the facilities can be tracked, including drugs for TB and opportunistic infections, as well as any other type of commodity (medical supplies, lab reagents, etc.). The dispensing module of the system allows providers to monitor any lab test (and results) performed for any type of patient. It also allows tracking loss-to-follow-up, defaulters, etc. Lastly, the system is also able to monitor adherence to treatment. Treatment can be classified as first line and/or second line, and can be referenced by the International Statistical Classification of Diseases and Related Health Problems, 10th Revision (ICD-10) as well. All this information should assist in monitoring the overall program and identifying any trends (including prescribed regimen vs. standard regimen). Overall the system can thus provide a mix of logistic (availability, consumption, expenditures) and clinical (treatment, treatment outcomes, use, and disease and prescribing patterns) data.

ACTIVITY 2: Support National/Provincial Quantification

SPS is constantly improving and developing new models to estimate and monitor drug needs using morbidity and consumption data. These models are specifically tailored to the South African National Standard Treatment Guidelines (STGs) for HIV and AIDS, STIs, OIs, other priority diseases and post-exposure prophylaxis (PEP). RPM Plus has trained provincial staff responsible for the submission of provincial estimates, provincial pharmaceutical warehouse managers and pharmacists responsible for the procurement of ARVs and medicines used for the treatment of OIs and STIs at the institutional level (hospital, community health center and district). In FY 2008, training in quantifying ARV-related drug requirements will continue through national and provincial workshops. These workshops provide an opportunity to establish a national network to discuss and report consumption trends and issues, to maintain a dialogue with representatives from the pharmaceutical industry and to prepare reports for the National Comprehensive Care, Management and Treatment of HIV and AIDS forum. Training in quantification needs to be an ongoing function, especially in the public sector in South Africa where community service pharmacists are often in charge of the ARV pharmacy for their year of service, then leave the public sector for the private sector without plans for succession. The quantification models will be shared with the SCMS and joint training workshops will be conducted for PEPFAR partners.

Activity Narrative: ACTIVITY 3: Data for Decision Making

With FY 2008 PEPFAR funding, SPS will continue the training of pharmacy personnel in using their data for decision making to ensure that the increasing demand for medicines required for the care and treatment of HIV and AIDS and other related programs is met, and to monitor national drug supply management indicators. This also provides an opportunity to strengthen the working relationship between pharmacists and other program managers. Individuals from the Provincial Pharmaceutical Services and from the National Pharmaceutical Policy and Planning unit will be trained. SPS will assist provinces with the national reporting system. All the activities above will indirectly support all HIV-infected clients who will be receiving care and treatment at government ARV accredited sites through the improvement of the delivery of pharmaceutical services.

These activities support PEPFAR 2-7-10 goals as well as the vision outlined in South Africa's Five-Year Strategy by facilitating the national ARV rollout.

Table 3.3.10: Activities by Funding Mechansim

Mechanism ID: 257.08 **Mechanism:** N/A

Prime Partner: Medical Research Council of South Africa

Funding Source: GHCS (State)

Budget Code: HTXD

Activity ID: 2954.08

Activity System ID: 14022

USG Agency: HHS/Centers for Disease Control & Prevention

Program Area: HIV/AIDS Treatment/ARV Drugs

Program Area Code: 10

Planned Funds: $1,164,000

Activity Narrative: SUMMARY:

The Medical Research Council (MRC) will support a comprehensive best-practice approach to integrated TB/HIV care that will improve access to HIV care (counseling and testing, care and treatment, screening, referral, pharmaceuticals) for TB patients. This activity will also promote TB screening (and eventual TB treatment as required) among patients attending HIV clinics, with particular reference to provision of antiretroviral drugs (ARVs) to TB patients meeting eligibility criteria according to the South Africa HIV treatment guidelines. Activities are focused in five provinces of South Africa. The major emphasis area is human capacity development and strategic information.

BACKGROUND:

A best-practice approach to integrated TB/HIV care was initiated by the MRC with FY 2004 PEPFAR funding. Early activities included a systematic description of barriers faced by TB patients co-infected with HIV in an accredited ARV site, and the development and implementation of a best-practice model in FY 2005. Preliminary results from the model site confirmed the benefits of an integrated TB/HIV approach, reflected in a drastic reduction in patient mortality, improved quality of life of TB patients with HIV and prolonged survival. Results also confirm the safety and efficacy of dual regimens, showing that ART can safely be instituted within the first month of TB treatment.

Expansion of the best-practice approach to two additional sites in different geographical settings was started in FY 2006 based on lessons learned in the start-up sites, including essential human resource needs, the importance of negotiated partnerships with departments of health (DOH), and the challenges posed by dual stigma. Activities in the existing sites will continue in FY 2008, with expansion to additional sites in remote rural settings where active TB screening among people living with HIV (PLHIV) will be implemented. These sites are characterized by extreme poverty, poor health infrastructure, cross border migration and limited health care access for patients. The challenges of novel solutions for treatment delivery in such settings will be specifically addressed, as will strengthening of systems for treatment adherence. Activities are implemented directly by MRC and by contracted sub-partners World Vision and the Foundation for Professional Development (a PEPFAR partner).

ACTIVITIES AND EXPECTED RESULTS:

Activities include commodity procurement, logistics, distribution, pharmaceutical management, and cost of ARV drugs to confirmed TB patients meeting South African government (SAG) ARV enrollment criteria. Provider-initiated HIV counseling and testing will be offered to all patients and those qualifying for ART identified as quickly as possible. Initiation of ART will be based on CD4 counts and on SAG policies. Patients (including children) with a CD4 count < 200 will be eligible for ARV initiation after one month of conventional TB treatment, while those with a CD4 count < 50 will be fast-tracked for immediate ART initiation based on clinical status.

ARV drugs will be procured according to projected estimates based on HIV prevalence and the estimated proportion of patients eligible for ART. As per the USG PEPFAR Task Team requirement, only generic drugs approved by the SA Medicines Control Council (MCC) and the US Food and Drug Administration (FDA) will be used.

Referral links to an accredited ART site will be established for each TB patient initiated on ARVs in the participating sites in order to allow seamless transition and ART access upon discharge. Sites that are not yet accredited for ART rollout will be assisted to acquire DOH accreditation, which will ensure the necessary continuity of care. Activities will be directed towards eliminating bottlenecks in ART provision (particularly human resource capacity), addressing weaknesses and limitations in down-referral systems, documenting and managing drug adverse effects, and monitoring of treatment adherence.

Integration of TB and HIV services will facilitate quick and seamless patient access to ARV drugs, thereby decreasing patient morbidity and mortality. Review of HIV counseling and testing practices, strengths and weaknesses of TB/HIV referral systems, human resource analyses, treatment adherence, drug adverse effects and conventional TB treatment outcomes in patients on dual therapy will be recorded. TB patients and PLHIV constitute the principal target populations and include pregnant women (referred to PMTCT services) and children (receiving ARVs if indicated).

Ongoing quality assessment and quality improvement will be implemented through on-site supervision and external quality assurance mechanisms such as checklists. Regular feedback meetings will be held with project staff to identify potential problems and rapidly facilitate corrective action. Results from the project will facilitate evidence-based policy formulation on expansion of integrated TB/HIV care while increasing and improving access to ART for eligible TB patients. TB services in South Africa will in future form a vital link to accredited government ARV sites. This project will contribute to strengthening of the role of TB services as point of delivery of ARVs, by ensuring that human, financial and infrastructure needs for comprehensive TB/HIV programs are met through equitable allocation of scarce resources and through analyses of cost-effectiveness and cost-benefit.

Funding will be used to support sites to implement the pharmaceutical elements of the best-practice approach to integrated TB/HIV care, including drug distribution and supply chain logistics to meet SA accreditation requirements for ARV rollout, site staff training, pharmaceutical management to maintain MCC and FDA quality standards, and the cost of ARVs. Where applicable, sites will be prepared to comply with the requirements of accreditation for ART in order to ensure continuity of care.

The MRC activities contribute to the 2-7-10 PEPFAR goals and the USG South Africa 5-year Strategic Plan by integrating TB and HIV services and expanding access to care and treatment.

Table 3.3.10: Activities by Funding Mechansim

Mechanism ID:	4625.08	**Mechanism:**	N/A
Prime Partner:	McCord Hospital	**USG Agency:**	HHS/Centers for Disease Control & Prevention
Funding Source:	GHCS (State)	**Program Area:**	HIV/AIDS Treatment/ARV Drugs
Budget Code:	HTXD	**Program Area Code:**	10
Activity ID:	7908.08	**Planned Funds:**	$591,000

Activity System ID: 14010

Activity Narrative: SUMMARY:

McCord Hospital and its implementing partner, Zoe Life (McCord/Zoe Life) will support and provide technical assistance in the delivery of antiretroviral drugs (ARVs) to patients at seven sites - four municipal clinics and three non-governmental organizations (NGOs). The activity will also extend to participating industry sites for workers without medical insurance in Durban, KwaZulu-Natal.

The emphasis areas are human capacity development, local organization capacity building, and workplace programs. The primary target populations are the general population, refugees and asylum seekers, and business community. Refugees and asylum seekers are an important target group, as they cannot access free antiretroviral treatment in the public sector.

McCord Hospital receives funding for prevention of mother-to-child transmission (PMTCT) and antiretroviral treatment (ART) through the Elizabeth Glaser Pediatric AIDS Foundation (EGPAF). The program described here focuses on strengthening the capacity of public sector and NGO facilities, and it is distinct from the hospital-based program funded by EGPAF. Note: EGPAF will also be supporting a similar program in three Department of Health (DOH) clinics in the northern sub-district of Durban.

BACKGROUND:

This new project will be implemented by the McCord/Zoe Life team in partnership with the eThekwini Municipality (Durban), three NGOs and private sector sites, to decentralize antiretroviral treatment (ART) provision to primary healthcare settings. Stable patients initiated on ART at local hospitals will be referred to the above sites for ongoing follow-up and for monthly ART dispensing. New stable patients will be initiated on ART at the decentralized sites and continue follow-up and ART dispensing at these sites.

McCord Hospital currently dispenses ART to approximately 2,000 patients, and has now become an accredited site with the KwaZulu-Natal Department of Health (KZNDOH), which will ensure long-term sustainability of ARV drug supplies. The KZNDOH is committed to increasing the number of patients provided with ART in the province. The project described here to support public sector and NGO sites is supported by the metropolitan and provincial health departments. KZNDOH ARV guidelines will be used in the provision of ARVs wherever appropriate. Gender issues will be addressed through increasing access to ART in workers (assuming most are men) in a workplace program, and by ensuring that a family-centered treatment approach is offered to partners and family members of index patients via access to couple counseling, community-based referrals, provider-initiated palliative care for partners and active case management of families. The project will also increase access to ART for refugees.

There will be links between ARV use data and laboratory and clinical data for overall program improvement.

ACTIVITES AND EXPECTED RESULTS:

ACTIVITY 1: Site Accreditation

McCord/Zoe Life will support a process of site accreditation at four metropolitan clinics through negotiation with the metropolitan and provincial health departments to ensure sustainability and ongoing provision of ART drugs to these sites. Once the sites are accredited, they would be able to access ARV's through the KZNDOH.

ACTIVITY 2: Accreditation Guidelines

McCord/Zoe Life will assist the KZNDOH to develop accreditation guidelines for NGOs and workplace programs to ensure ongoing provision of ART to these sites.

ACTIVITY 3: ART to Decentralized Sites

This activity will support and strengthen systems on site to provide ART efficiently at decentralized sites. This will be done through meetings with various stakeholders, particularly the provincial and district pharmaceutical services, to look at the logistics and processes required to supply ARVs sustainably to community-based sites.

The McCord hospital pharmacy currently manages the ART supply chain for more than 2,000 patients. This project will hire staff to expand this service to decentralized sites and to strengthen current systems. ARVs will be selected from national regimens according to trends from previous forecasting. Drugs will be procured, stored and regulated by the McCord Hospital Dispensary which is registered as a hospital pharmacy, where necessary. Systems will be developed to procure ARVs for the municipal clinics from their nearest ARV initiating hospital (RK Khan). As McCord Hospital is accredited with the KZNDOH, ARVs will be ordered from and supplied by the central Department of Health Pharmacy. Two month's buffer stock is stored.

All drugs received by the pharmacist will be stored in the McCord Hospital dispensary under the care of the pharmacists who adhere to good pharmacy practice conditions. Drugs will be ordered twice a month. Systems are in place to select, procure, store, track and distribute the drugs privately from alternative sources if there are stock-outs. Monitoring of purchases and distribution is done both manually and electronically. If stock-outs (less than five days) occur, stock will be purchased from an alternative source.

Discussions will be held with the DOH pharmaceutical services as well as the local DOH District office to evaluate the logistics required for ARVs to be supplied to clinics from DOH facilities - from either the closest district hospital or a community health center, following the same process by which other chronic drugs are supplied.

A PEPFAR-funded pharmacist will liaise with the pharmacists at municipal, NGO and industry sites to forecast ARV needs on a weekly basis. ARVs will be prepackaged for the decentralized sites and delivered weekly to each site. Pediatric formulations will also be delivered to sites weekly. The McCord/Zoe Life team will provide technical support to ensure that onsite storage and dispensing systems are in place before

Activity Narrative: ARVs are dispensed. Scripts will be written by dispensing nurses at the decentralized sites and kept in a register in the pharmacy. In clinics without a pharmacy, drugs will be stored in a secure cupboard. A register of scripts and drugs dispensed will be maintained at each clinic by a senior dispensing nurse. Records will be captured in the logistics database on a weekly basis. Excess or expired medicines are disposed of through a waste management company.

Sustainability is addressed at provincial level through accreditation of municipal sites and development of accreditation policies for NGO and corporate sites.

Human capacity development is strengthened through technical support and mentorship of pharmacists and senior nursing staff at the sites to improve logistics management regarding ARV supply. Staff will be trained in monitoring and evaluation to strengthen the efficiency of the systems, and to optimize tracking of missed drug pick up, liaising with the multidisciplinary team who will follow up these clients.

The McCord Hospital/Zoe Life activities contribute to the 2-7-10 PEPFAR goals and the USG South Africa Five-Year Strategic Plan by strengthening the public sector and expanding access to care and treatment.

With FY08 reprogramming funding, EGPAF will provide support to the national Department of Health and 3 provinces (KwaZulu-Natal, North West and Free State) in training and mentoring of health workers to implement the new (2008) PMTCT dual therapy guidelines. Tools to measure compliance to these new guidelines are being developed and will be rolled out to facilities in the three targeted provinces, and beyond.

Table 3.3.10: Activities by Funding Mechansim

Mechanism ID: 2792.08

Mechanism: Track 1

Prime Partner: Catholic Relief Services

USG Agency: HHS/Health Resources Services Administration

Funding Source: Central GHCS (State)

Program Area: HIV/AIDS Treatment/ARV Drugs

Budget Code: HTXD

Program Area Code: 10

Activity ID: 3287.08

Planned Funds: $3,191,217

Activity System ID: 13715

Activity Narrative: AIDSRelief implements a comprehensive HIV care and treatment program in South Africa that is funded with Track 1 central funding, as well as South Africa COP funding. The activities do not differ across the funding mechanisms, and this entry is thus a repeat of the South Africa COP entry.

SUMMARY:

Activities are implemented to support procurement of antiretroviral (ARV) drugs under the comprehensive ART program carried out by Catholic Relief Services (CRS) in 25 sites. Coverage extends to eight provinces in South Africa (excluding the Western Cape). The emphasis areas are human capacity development and local organization capacity building. The target population includes people affected by HIV and AIDS as well as higher risk populations such as migrant workers and refugees.

BACKGROUND:

AIDSRelief (the Consortium led by Catholic Relief Services) received Track 1 funding in FY 2004 to rapidly scale-up antiretroviral therapy (ART) in nine countries, including South Africa. Since FY 2005, in-country funding has supplemented Track 1 funding, and this will continue in FY 2008. The activity is implemented through two major in-country partners, Southern African Catholic Bishops' Conference (SACBC) and the Institute for Youth Development South Africa (IYD-SA).

ACTIVITIES AND EXPECTED RESULTS:

With funding provided in FY 2008, AIDSRelief will continue implementing the activities in support of the South African Government (SAG) national ART rollout. In the interest of maximizing available funds the focus will be placed on strengthening the existing sites' provision of services rather than on assessing and activating new sites. Utilizing technical assistance from AIDSRelief staff members and South African experts, ongoing support and guidance will be provided to sites in the form of appropriate refresher medical training courses, patient tracking and reporting, monitoring and evaluation mechanisms and other necessary support.

ARV drugs are provided to all qualifying HIV patients who present at the sites, irrespective of their age, gender, nationality, religious or political beliefs. The access to non-South Africans is particularly significant, as the public sector rollout program is restricted to South African and legal refugees and asylum seekers. However, South Africa has a large displaced population, including economic migrants who do not have South African identity documentation. Historically, about 90% of adults and 10% of children with HIV have been receiving ARV drugs through the 25 partner sites.

ARV drugs purchased will be used by the 25 sites to treat ARV patients through clinic-based and home-based activities aimed at optimizing quality of life for HIV-infected clients and their families. For most of the 25 sites, ARV drugs are currently being purchased centrally through a Johannesburg-based pharmaceutical company, and delivered via courier to the field sites monthly on a patient-named basis. CRS is billed once a month for all site deliveries after verification of drugs delivered to each site. The opportunity of accessing preferential cost drugs is being utilized through cooperation with GlaxoSmithKline where available. Although the AIDSRelief sites have not experienced stock-outs in significant volume, they have been experienced on a limited number of occasions. Efforts to address or prevent such occurrences in the future include substitution by a more expensive drug on stock (all approved by the appropriate regulatory authorities of the host country and the donor).

Generic medications purchased comply with the USG PEPFAR Task Force requirement of FDA approval as well as approval from the Medicines Control Council of South Africa.

All activities will continue to be implemented in close collaboration with the South African Government's HIV and AIDS Unit and the respective provincial authorities to ensure coordination and information sharing, directly contributing to the success of the South African Government's own rollout and the goals of the President's Emergency Plan. These activities are also aimed at successful integration of AIDSRelief activities into those implemented by the South African Government, thus ensuring long-term sustainability.

All sites operate in terms of a Memorandum of Understanding (MOU) with the provincial Department of Health in which they operate, observing the national and provincial treatment protocols. There is a concerted effort at each site to ensure sustainability by either having the SAG provide antiretroviral drugs, or by down referring stable patients in to the public primary healthcare clinics after providing training for the SAG clinic staff. St. Mary's Hospital, which accounts for more than a third of patient numbers, has already been accredited as a SAG rollout site. Sinosizo is receiving drugs from Department of Health due to its status as a down-referral clinic for Stanger Hospital. At Centocow and Bethal, all patients are already receiving drugs through the SAG rollout.

In terms of the actual drug procurement, AIDSRelief in South Africa has a centralized procurement system of ARV drugs, which already provides the economies of scale in terms of drug pricing to the extent possible (outside of the SAG-mandated single exit price). This centralized procurement system buys drugs in volume, and keeps sufficient stock levels to supply the AIDSRelief sites with drugs and ensure no stock-outs occur. The centralized procurement system also manages losses due to expiry of the drugs, and ensures compliance with FDA and MCC (Medicines Control Council of South Africa) requirements. Each patient has their 6-month repeat prescription originally assigned by the doctor and then dispensed by the pharmaceutical supplier, which is revised where necessary (in line with SAG guidelines).

In terms of monitoring of the program, the majority of the AIDSRelief sites are utilizing the centrally-based laboratory services provider Toga (a PEPFAR prime partner) that conducts blood tests (CD4, viral load etc.) for the sits, using the courier service available in country to deliver the blood samples, and reporting back to the sites on the results through either e-mail or an online electronic reporting system setup by the Laboratory services provider.

Due to good existing infrastructure in South Africa, AIDSRelief sites are able to perform viral load and CD4 tests once every 6 weeks, to monitor the treatment progress and possible failure on the individual patient level. These analyses are conducted by each of the AIDSRelief sites, using the data provided by the

Activity Narrative: Laboratory services provider, as part of the clinical management of the patients. The majority of the AIDSRelief sites also use hand-held lactate meters (provided for free by the Laboratory services provider) to screen for hyperlactatemia, which is the most common severe side effect of patients who have been on treatment for prolonged periods of time.

Feedback on program level of the progress and viral suppression is regularly provided by a clinical expert at the Desmond Tutu HIV Foundation, using the laboratory data provided by Toga Labs on patients whose blood was tested through their facilities.

FY 2008 COP activities will be expanded to include increased collaboration with the SAG to ensure long-term sustainability of the program, through different arrangements which vary from one Province to another. These include the transfer of "stable" patients (on ART for 6 months or longer) to public sector health facilities, and then enrolling additional patients at the AIDSRelief partner site. Other options include provision of free ARV and OI drugs and laboratory tests for SAG-accredited facilities run by AIDSRelief, or those that are physically located on SAG-owned premises, thus allowing them to receive free drugs or services. As in the case above, this allows the AIDSRelief sites to enroll additional patients on ART. Other examples include provision of ARV drugs by the SAG, and home-based care and support and adherence follow-up by the AIDSRelief-run partner site. All the different models of collaboration are individually discussed with the provinces where the partner sites operate, and largely depend on specific needs and operating environment of each treatment site and SAG authorities, but are designed to ultimately allow long-term sustainability and success of the program.

This activity will directly contribute to the goal of 2 million individuals on treatment of the PEPFAR 2-7-10 goals.

Mechanism ID:	193.08	**Mechanism:**	N/A
Prime Partner:	Elizabeth Glaser Pediatric AIDS Foundation	**USG Agency:**	HHS/Centers for Disease Control & Prevention
Funding Source:	GHCS (State)	**Program Area:**	HIV/AIDS Treatment/ARV Drugs
Budget Code:	HTXD	**Program Area Code:**	10
Activity ID:	3806.08	**Planned Funds:**	$455,000
Activity System ID:	13766		

Activity Narrative: SUMMARY:

The Elizabeth Glaser Pediatric AIDS Foundation (EGPAF) will support all of its care and treatment partners by increasing access to antiretroviral treatment (ART) and care for those that need it. The emphasis areas for this activity are renovation, human capacity development and strategic information. Primary populations include infants, men and women, people living with HIV (PLHIV), and public and private healthcare providers. The geographic focus is on KwaZulu-Natal, Free State, Gauteng and North West.

BACKGROUND:

The long-term goal of the EGPAF care and treatment program in South Africa is to increase life expectancy among HIV-infected persons. This will be achieved through an intensive focus on increasing access to care and treatment services as well as the service utilization (demand). To achieve these goals and objectives, project Help Expand ART (HEART) will expand the geographic coverage of services during FY 2008. HEART/South Africa is part of a larger worldwide initiative by EGPAF to support care and treatment services, and receives both Track 1 and in-country PEPFAR funding. The program has maintained a focus on integrating PMTCT services so as to provide a family-centered model of care that includes access to treatment for HIV-infected pregnant women, couple counseling, partner testing and screening for TB.

EGPAF utilizes PEPFAR resources to complement activities carried out by the KwaZulu-Natal Department of Health (KZNDOH) and private partners, such as faith-based organizations (FBOs) and other non-governmental organizations (NGOs). These resources are utilized to fund staff, infrastructure, drugs, laboratory testing and provide technical support. EGPAF will identify gaps in the program at the individual site level and implement activities to address the needs. The intent is to facilitate national and provincial plans and work together with the government and other partners to ultimately transition programs to South African government (SAG) support.

EGPAF will provide TA to strengthen quality improvement (QI) by developing or reinforcing Standard Operating Procedures (SOP) and ensuring mentoring and ongoing supervision. HAART regimens used will follow national guidelines. Patient monitoring will be based on immunological, clinical and virological responses to HAART. These responses will be checked against the drug protocols and adherence guidelines used, to dictate the most appropriate change in treatment regimen.

EGPAF has a partnership with a private NGO, the AIDS Health Care Foundation (AHF); this is a cost-sharing relationship (drugs and staff) to support the AHF care and treatment program. In addition, McCord Hospital, a faith-based organization, is a sub-grantee of EGPAF. The EGPAF partnership with the Department of Health (DOH) includes support for human capacity development, infrastructure rehabilitation and technical support for sites in KwaZulu-Natal.

The existing sites are:
(1) McCord Hospital, Durban;
(2) AHF (Ithembalabantu Clinic), Umlazi, Durban;
(3) KZNDOH, Pietermaritzburg Up/Down referral program (Edendale Hospital and four referral clinics, Northdale Hospital and five referral clinics); and
(4) KZNDOH, Vryheid Hospital plus three referral clinics, Benedictine Hospital and three referral clinics, and Edumbe Community Health Centre (CHC) plus one referral clinic, in Zululand District

The partnership with the Department of Health (DOH) has been expanded to the rest of Zululand district, the whole Free State province, to Ramotshere Moiloa (Zeerust) and Tswaing (Delareyville) sub-districts in the North West, and the Eastern Ekurhuleni and Lesedi sub-districts in Gauteng.

ACTIVIES AND EXPECTED RESULTS:

ACTIVITY 1: ARV Drug Procurement

ARV drug procurement will be undertaken for one Track 1 partner (McCord Hospital) and for one in-country partner, AIDS Health Care Foundation. All DOH sites use the DOH ARV drug procurement systems. Generic medications purchased comply with the USG PEPFAR Task Force requirement of FDA approval as well as approval from the Medicines Control Council of South Africa.

ACTIVITY 2: Pharmacy

McCord and AHF are both national DOH accredited ARV sites, and each have a dedicated pharmacist for the HIV and AIDS treatment program. This has resulted in uninterrupted supply of antiretrovirals and individualized adherence counseling to the increasing number of patients.

Systems are in place to select, procure, store, track and distribute the drugs privately. Drugs can be sourced at short notice from private suppliers. McCord Hospital has two purchasing systems currently in operation. These include:

(1) Rolling Forecast System - GlaxoSmithKline access program drugs, that are purchased monthly according to a three-month committed, and nine-month open forecast updated monthly. This forecast is determined by the program batching systems.

(2) Demand Dependant System - 24 hour order to delivery system based on demand and maintained with minimum and maximum stock levels.

Monitoring of purchases and distribution is done both manually and electronically (Pro-Clin and Trakhealth Systems) and produce statistical and detailed reports. If stock-outs (less than five days) occur, stock can be purchased from an alternative source.

As the AHF/Ithembalabantu clinic is a national DOH accredited ARV site, the KZNDOH provides the clinic with two full-time counselors specializing in counseling and testing. AHF Ithembalabantu clinic has an onsite pharmacy, and the clinic has the capacity to serve all of its clients pharmacy needs. AHF has developed

Activity Narrative: pharmaceutical and health commodities management systems to ensure a sustainable supply of ARVs and other relevant supplies.

The clinical and psychosocial support staff at the Ithembalabantu clinic uses a locally developed, highly effective treatment education and adherence program that has resulted in outstanding, sustained rates of therapy success. Treatment adherence and education classes, social service support and counseling, as well as skills development and capacity building classes are all provided onsite. Medication adherence training and support is given before clients begin ART. Adherence counseling is also monitored by self-reporting, pill counting, and follow-up with patients, dedicated family members or friends.

The EGPAF drug procurement program contributes to the PEPFAR 2-7-10 goals by ensuring adequate supply of ARV drugs for patients in treatment.

Funding Source: GHCS (State)

Program Area: HIV/AIDS Treatment/ARV Drugs

Budget Code: HTXD

Program Area Code: 10

Activity ID: 3331.08

Planned Funds: $6,305,000

Activity System ID: 14267

Activity Narrative: SUMMARY:

The approach taken by the Perinatal HIV Research Unit (PHRU) is one of comprehensive, high-quality care and support for people living with HIV (PLHIV). The PHRU will use FY 2008 funds to continue to provide high-quality holistic antiretroviral treatment (ART) and psychosocial support in Gauteng, rural Limpopo and Mpumalanga, and Western Cape. These funds will contribute towards antiretroviral (ARV) drugs and services. Clients are provided with ART, pre-treatment literacy, adherence counseling and adherence support groups. Linkages from CT, PMTCT, basic care and support will be strengthened. The emphasis areas are human capacity development and local organization capacity building. The family-centered approach targets HIV-infected adults, children and infants.

BACKGROUND:

Since 1998 the PHRU has provided comprehensive treatment, care and support to people living with HIV (PLHIV). The PHRU has received funding from PEPFAR since 2004 to support ART services in Gauteng, rural Limpopo and Mpumalanga, and Western Cape provinces. PHRU directly purchases ARVs with PEPFAR funds and has demonstrated the ability to rapidly scale up treatment. PHRU has adopted a family-centered approach and clients are encouraged to bring partners and other family members for testing and treatment. Of patients supported by the PHRU, about one-third is supported through PEPFAR-funded ARV drugs. PHRU is expanding activities to directly support scale-up at government ART sites and support down referral systems. PHRU works with the provincial health departments to ensure safe transfer for the participants to ongoing care within the South African Government (SAG) rollout program to ensure sustainability. PHRU works only in government facilities, where government takes the lead in all aspects of the program. The PHRU together with government counterparts identify gaps that will slow down implementation according to national and provincial guidelines. Upon request from the facility, PHRU provides support through a Memorandum of Understanding to fill the gaps and work towards the provincial financing of related activities. PHRU supports, trains and mentors healthcare workers involved in the management, care and treatment of HIV-infected individuals. All programs follow national guidelines for ARV treatment. Training is adequately and broadly proclaimed by provincial government through training programs that are approved by the province and adhere to all guidelines and standards of the national government. Quality assurance, client retention, monitoring and evaluation form an integral part of the program. PHRU provides regular training for professional and lay staff on ART issues such as adherence, medical treatment, and appropriate regimens.

All sites have psychosocial support programs which provide community-based assistance, support groups and education covering issues such as basic HIV and AIDS information, HIV services, HIV treatment, treatment literacy, adherence, TB, positive living, nutrition, prevention, opportunistic infections and TB. The comprehensive care approach leads to stigma reduction, increased disclosure, and improved adherence to ART.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Adults, Soweto

Funding from PEPFAR supports adults on treatment in the family-centered PMTCT program. The adult treatment program is ongoing and drugs are purchased for patients at the PHRU clinic based at Chris Hani Baragwanath Hospital (Bara). The program provides treatment, monitoring and support for adults who meet the SAG guidelines for treatment. HIVSA, an NGO partner, provides treatment literacy and adherence support. This activity will be continued and expanded with FY 2008 funds.

ACTIVITY 2: Pregnant Women, Soweto

This program was started in the maternity section at Bara in July 2005 by PHRU in partnership with the Department of Obstetrics and Gynecology. In Soweto 8,000 pregnant women annually are identified as positive with an estimated 1,600 needing treatment. Following SAG guidelines, pregnant women who are eligible for treatment are offered HAART. In order to fast-track women onto treatment, PHRU is training and mentoring the doctors and nurses. The program is being expanded to other ART sites in the area with FY 2008 funds. HIVSA, an NGO partner, will continue to provide treatment literacy and adherence support.

ACTIVITY 3: Children, Soweto

The PHRU clinic identifies HIV-infected children who need treatment through PMTCT and children of adults who are already on treatment. This activity will continue and will be strengthened through additional counselors with FY 2008 funds. As part of a comprehensive family-centered approach, children are put onto treatment following SAG treatment guidelines with ARVs purchased by PHRU according to USG and SAG guidelines. ARV drugs for children are supplied through the PHRU pharmacy system. Staff is trained on an ongoing basis in pediatric ARV provision.

ACTIVITY 4: Franchise, Gauteng

This program targets uninsured workers in densely populated areas in Johannesburg. ARVs are made available and affordable through a franchising scheme, and supplied free of charge or at a significantly discounted rate to patients unable to purchase their own medication. Those who can afford to pay for all or a portion of their drugs are expected to do so. ARV drugs are procured and supplied within the service by trained providers. This program provides a stand-alone ART full service clinic in downtown Johannesburg and provides lessons learned about demand for ART outside the public sector, willingness and ability to pay for services, and the cost-effectiveness of this model of delivery.

ACTIVITY 5: Sub-partners

A number of partners in the Western Cape have been identified and are supported to provide ARV treatment. Most of these partners receive ARV drugs from the Department of Health and PEPFAR funds are provided to support the services to expand and develop down-referral systems. Pediatric treatment is a priority. It is likely that additional partners will be identified to enable increased access to treatment.

Activity Narrative: These activities will contribute substantially to the PEPFAR 2-7-10 goals of providing ARV treatment to two million people.

Prime Partner: Catholic Relief Services **USG Agency:** HHS/Health Resources Services Administration

Funding Source: GHCS (State)

Program Area: HIV/AIDS Treatment/ARV Drugs

Budget Code: HTXD

Program Area Code: 10

Activity ID: 3309.08

Planned Funds: $7,760,000

Activity System ID: 13713

Activity Narrative: SUMMARY:

Activities support procurement of antiretroviral (ARV) drugs under the comprehensive ART program carried out by Catholic Relief Services (CRS) in 25 sites. Coverage extends to eight provinces in South Africa (excluding the Western Cape). The emphasis areas are human capacity development and local organization capacity building. The target population includes people affected by HIV and AIDS as well as higher risk populations such as migrant workers and refugees.

BACKGROUND:

AIDSRelief (the Consortium led by Catholic Relief Services) received Track 1 funding in FY 2004 to rapidly scale-up antiretroviral therapy (ART) in nine countries, including South Africa. Since FY 2005, in-country funding has supplemented Track 1 funding, and this will continue in FY 2008. The activity is implemented through two major in-country partners, Southern African Catholic Bishops' Conference (SACBC) and the Institute for Youth Development South Africa (IYD-SA).

ACTIVITIES AND EXPECTED RESULTS:

With funding provided in FY 2008, AIDSRelief will continue implementing the activities in support of the South African Government (SAG) national ART rollout. In the interest of maximizing available funds the focus will be placed on strengthening the existing sites' provision of services rather than on assessing and activating new sites. Utilizing technical assistance from AIDSRelief staff members and South African experts, ongoing support and guidance will be provided to sites in the form of appropriate refresher medical training courses, patient tracking and reporting, monitoring and evaluation mechanisms and other necessary support.

ARV drugs are provided to all qualifying HIV patients who present at the sites, irrespective of their age, gender, nationality, religious or political beliefs. The access to non-South Africans is particularly significant, as the public sector rollout program is restricted to South African and legal refugees and asylum seekers. However, South Africa has a large displaced population, including economic migrants who do not have South African identity documentation. Historically, about 90% of adults and 10% of children with HIV have been receiving ARV drugs through the 25 partner sites.

ARV drugs purchased will be used by the 25 sites to treat ARV patients through clinic-based and home-based activities aimed at optimizing quality of life for HIV-infected clients and their families. For most of the 25 sites, ARV drugs are currently being purchased centrally through a Johannesburg-based pharmaceutical company, and delivered via courier to the field sites monthly on a patient-named basis. CRS is billed once a month for all site deliveries after verification of drugs delivered to each site. The opportunity of accessing preferential cost drugs is being utilized through cooperation with GlaxoSmithKline where available. Although the AIDSRelief sites have not experienced stock-outs in significant volume, they have been experienced on a limited number of occasions. Efforts to address or prevent such occurrences in the future include substitution by a more expensive drug on stock (all approved by the appropriate regulatory authorities of the host country and the donor).

Generic medications purchased comply with the USG PEPFAR Task Force requirement of FDA approval as well as approval from the Medicines Control Council of South Africa.

All activities will continue to be implemented in close collaboration with the SAG’s HIV and AIDS Unit and the respective provincial authorities to ensure coordination and information sharing, directly contributing to the success of the SAG's own rollout and the goals of PEPFAR. These activities are also aimed at successful integration of AIDSRelief activities into those implemented by the government, thus ensuring long-term sustainability.

All sites operate in terms of a Memorandum of Understanding with the provincial Department of Health in which they operate, observing the national and provincial treatment protocols. There is a concerted effort at each site to ensure sustainability by either having the SAG provide antiretroviral drugs, or by down referring stable patients in to the public primary healthcare clinics after providing training for the SAG clinic staff. St. Mary's Hospital, which accounts for more than a third of patient numbers, has already been accredited as a SAG rollout site. Sinosizo is receiving drugs from Department of Health due to its status as a down-referral clinic for Stanger Hospital. At Centocow and Bethal, all patients are already receiving drugs through the SAG rollout.

In terms of the actual drug procurement, AIDSRelief in South Africa has a centralized procurement system of ARV drugs, which already provides the economies of scale in terms of drug pricing to the extent possible (outside of the SAG-mandated single exit price). This centralized procurement system buys drugs in volume, and keeps sufficient stock levels to supply the AIDSRelief sites with drugs and ensure no stock-outs occur. The centralized procurement system also manages losses due to expiry of the drugs, and ensures compliance with FDA and MCC (Medicines Control Council of South Africa) requirements. Each patient has their 6-month repeat prescription originally assigned by the doctor and then dispensed by the pharmaceutical supplier, which is revised where necessary (in line with SAG guidelines).

In terms of monitoring of the program, the majority of the AIDSRelief sites are utilizing the centrally-based laboratory services provider Toga (a PEPFAR prime partner) that conducts blood tests (CD4, viral load etc.) for the sits, using the courier service available in country to deliver the blood samples, and reporting back to the sites on the results through either e-mail or an online electronic reporting system setup by the Laboratory services provider.

Due to good existing infrastructure in South Africa, AIDSRelief sites are able to perform viral load and CD4 tests once every six weeks, to monitor the treatment progress and possible failure on the individual patient level. These analyses are conducted by each of the AIDSRelief sites, using the data provided by the Laboratory services provider, as part of the clinical management of the patients. The majority of the AIDSRelief sites also use hand-held lactate meters (provided for free by the laboratory services provider) to screen for hyperlactatemia, which is the most common severe side effect of patients who have been on treatment for prolonged periods of time.

Activity Narrative:

Feedback on program level of the progress and viral suppression is regularly provided by a clinical expert at the Desmond Tutu HIV Foundation, using the laboratory data provided by Toga Labs on patients whose blood was tested through their facilities.

FY 2008 COP activities will be expanded to include increased collaboration with the SAG to ensure long-term sustainability of the program, through different arrangements that vary from one province to another. These include the transfer of "stable" patients (on ART for 6 months or longer) to public sector health facilities, and then enrolling additional patients at the AIDSRelief partner site. Other options include provision of free ARV and opportunistic infections drugs and laboratory tests for SAG-accredited facilities run by AIDSRelief, or those that are physically located on SAG-owned premises, thus allowing them to receive free drugs or services. As in the case above, this allows the AIDSRelief sites to enroll additional patients on ART. Other examples include provision of ARV drugs by the SAG, and home-based care and support and adherence follow-up by the AIDSRelief-run partner site. All the different models of collaboration are individually discussed with the provinces where the partner sites operate, and largely depend on specific needs and operating environment of each treatment site and SAG authorities, but are designed to ultimately allow long-term sustainability and success of the program.

This activity will directly contribute to the goal of 2 million individuals on treatment of the PEPFAR 2-7-10 goals.

Table 3.3.10: Activities by Funding Mechansim

Mechanism ID: 190.08
Mechanism: N/A
Prime Partner: Aurum Health Research
USG Agency: HHS/Centers for Disease Control & Prevention
Funding Source: GHCS (State)
Program Area: HIV/AIDS Treatment/ARV Drugs
Budget Code: HTXD
Program Area Code: 10
Activity ID: 2913.08
Planned Funds: $3,651,000
Activity System ID: 13687

Activity Narrative: SUMMARY:

Aurum Health Research (Aurum) will use FY 2008 PEPFAR funding to continue an ongoing clinical program that works through general practitioners and community clinics throughout the country, and to expand the program to three public hospitals in the Eastern Cape, North West and Gauteng provinces. The emphasis areas for this activity are human capacity development, local organization capacity building, and strategic information. Target populations include infants, children and youth; adults, including men and women of childbearing age; and people living with HIV (PLHIV), including HIV-infected pregnant women, infants and children.

BACKGROUND:

The focus of the Aurum program in the public, private, and non-governmental sector is to provide HIV care and treatment to a large number of persons in a cost-effective standardized manner ensuring a high quality of counseling, patient care and patient monitoring. The model is centrally coordinated and implemented on a large scale in peripheral sites that are resource-constrained and lacking in HIV specialists, information technology (IT) infrastructure, and laboratory and pharmacy capacity. Aurum achieves this by having a centralized system of support which includes the following: (1) training of all levels of healthcare workers to ensure capacity building of clinicians to be able to manage patients in resource-poor settings with remote HIV specialist support; (2) provision and maintenance of guidelines for HIV preventive therapy (including INH and cotrimoxazole), treatment of adults and children, prevention of mother-to-child transmission and voluntary counseling and testing; (3) clinical and administrative support through site visits by staff involved in psychological support, training, clinical support and monitoring data management system; and (4) centralized distribution of medication and laboratory testing.

The S Buys group (a private company) is responsible for the centralized procurement and distribution of antiretroviral and preventive therapy. Negotiations with research-based pharmaceutical companies have ensured that GlaxoSmithKline (GSK) drugs are available at access prices and members of the community without medical insurance are able to access these medications.

ACTIVITIES AND EXPECTED RESULTS:

PEPFAR funds will be used in this program area to purchase, store and distribute ARV drugs. Patients who are medically eligible for, but cannot afford, antiretroviral therapy will receive the drugs at no cost from enrolled sites. The drugs will be prescribed using the South African Government's (SAG) eligibility criteria and drug regimens. Generic medications purchased comply with the USG PEPFAR Task Force requirement of U.S. Federal Drug Administration approval as well as approval from the Medicines Control Council of South Africa.

The pharmacy plan comprises:

(1) Warehousing and stock control of drugs: A computerized system of stock control will ensure an audit trail and batching abilities from the warehouse to patients.
(2) National distribution of medication: Through a courier service, S Buys is able to distribute medication anywhere in South Africa within 24 hours of receiving the request. ARV drugs are dispensed centrally on a monthly basis, and Aurum has not experienced any stock-outs.
(3) Named patient dispensing: Dispensing centrally at the pharmacy ensures that medication is controlled and it facilitates a strict audit trail to the patient.
(4) S Buys pharmacy has in place stock control, pricing based on volume purchasing (where possible) and has a process for checking compliance with ART guidelines.
(5) Integration with the Aurum Health Research (AHR) Project: This integration will help ensure adherence to protocols, as well as communication between pharmacists and AHR. It will also allow for the integration of data from drug dispensing sites.
(5) Aurum is working with sub-partners to ensure Department of Health accreditation for a number of sites, allowing drugs to be provided by the government. A number of sites have already been accredited.
(6) Aurum will participate in the training of professional nurses in pharmacy skills.

Aurum's activities in ARV drugs contribute to the 2-7-10 PEPFAR goal of 2 million people receiving antiretroviral treatment.

Table 3.3.10: Activities by Funding Mechansim

Mechanism ID: 2797.08

Mechanism: N/A

Prime Partner: Columbia University Mailman School of Public Health

USG Agency: HHS/Centers for Disease Control & Prevention

Funding Source: GHCS (State)

Program Area: HIV/AIDS Treatment/ARV Drugs

Budget Code: HTXD

Program Area Code: 10

Activity ID: 3318.08

Planned Funds: $1,067,000

Activity System ID: 13734

Activity Narrative: SUMMARY:

Columbia University (Columbia), in collaboration with the Eastern Cape Health Department (ECDOH) will support antiretroviral (ARV) drug purchase for two treatment sites and support commodity supply chain-related training, and logistics for 34 current antiretroviral treatment (ART) service delivery sites in the Eastern Cape and two new ART sites in KwaZulu-Natal (KZN). Major emphasis is given to human capacity development, local organization capacity building, and strategic information. The target population will include infants, children and youth, men and women (including pregnant women) and people living with HIV (PLHIV).

BACKGROUND:

Columbia and the ECDOH will continue to support procurement and distribution of needed ARV drugs using PEPFAR FY 2008 funds. In FY 2006 Columbia formed a partnership with the United Nations Children's Fund (UNICEF) to procure ARV drugs from local pharmaceutical companies that are licensed by the South African Medicines Control Council (MCC). These drugs are distributed to two non-governmental organizations, Ikhwezi Lokusa Wellness Center (Ikhwezi) in East London and the Cato Manor Community Health Center in Durban. Columbia purchases generic medications that are in compliance with the USG PEPFAR Task Force requirement for both U.S. Federal Drug Administration and Medicines Control Council (MCC) approval. Columbia provides technical assistance to improve HIV-related pharmacy practices in 34 public health facilities. In these 34 public sector sites, the relevant provincial department of health provides all required HIV drugs.

In FY 2007 Columbia provided support for pharmaceutical services in the Qaukeni local service area in the Eastern Cape and Sisonke districts in KZN. One of the challenges encountered while providing this essential support is the regular stock-out of drugs such as cotrimoxazole. As a result Columbia provided in-service trainings for pharmacists and pharmacy assistants on drug stock management, In addition, Columbia purchased copies of the South Africa Medicines Formulary and the Daily Drug Use for 30 clinics in the same catchment area. Columbia also distributed copies of the Essential Drug List for use in these clinics.

Similar pharmaceutical services support is carried out in Port Elizabeth and this activity will continue into FY 2008.

ACTIVITIES AND EXPECTED RESULTS:
Specific areas of programmatic focus include:

(1) Technical support for ARV stock management and distribution at the pharmacy depot (in Port Elizabeth) and public ART sites. Activities include:
(a) Train pharmacists and pharmacist assistants in ARV stock management.
(b) Support the implementation of a province-endorsed pharmacy tracking tool to prevent ARV drug stock-outs at health facilities.
(c) Support the province-endorsed training of pharmacist assistants at identified health facilities.

(2) Purchase and distribute ARV drugs for Ikhwezi Lokusa Wellness Center and Cato Manor community health clinic. In FY 2006, Columbia initiated discussions with the ECDOH to propose that the ARV drug procurement and distribution for Ikhwezi is managed by the ECDOH. In FY 2007, the ECDOH and Ikhwezi developed an Memorandum of Understanding which will be signed before the end of FY 2007. The ECDOH organized for Ikhwezi to be part of the Pfizer Diflucan donation program and currently patients with cryptococcoal meningitis and esophageal candidiasis can obtain free Diflucan for this initiative. Similar discussions with the KwaZulu-Natal Health Department (KZNDOH) are anticipated in FY 2008 and are expected to begin for the Cato Manor community health clinic in Durban.

(3) Utilization of ARV drug pharmacy practice to improve clinical management. In a bid to improve ARV prescribing practices in the Ikhwezi and Cato HIV treatment services, Columbia in FY2007 and FY2008, will ensure that information generated that best describes and linkages between prescribed ARV drug regimen and clinical outcomes and laboratory indicators is disseminated to the clinicians in these 2 facilities.

Columbia will continue collaborating with the South African Department of Health in support of ARV procurement mechanisms to ensure uninterrupted ARV supply at Columbia-supported sites. The specific quantities of ARV drugs that would be needed will take into consideration relevant medical conditions (TB, adverse drug reactions). Columbia will continue to strengthen the ARV drug distribution system by providing technical assistance at designated pharmacy depots to coordinate distribution of ARVs with the NDOH, as well as participate in furthering the ARV quality assurances activity initiatives as developed by the NDOH.

In the Eastern Cape a public-private partnership consortium outsourced by the ECDOH will manage the Department of Health pharmacy depots. Therefore Columbia will not be providing ongoing assistance at the Mthatha Depot effective 2008. However, Columbia will continue to provide technical assistance for Pharmaceutical services in all SAG supported health services.

By providing ARV drugs and related services, Columbia's activities will contribute to the PEPFAR goal of providing treatment to 2 million people. These activities will also support efforts to meet HIV and AIDS care and support objectives outlined in the USG Five-Year strategy for South Africa.

Activity System ID: 13744

Activity Narrative: SUMMARY:

The Foundation for Professional Development's (FPD) treatment activities focus on building public and private sector capacity to deliver safe, effective and affordable antiretroviral therapy (ART). PEPFAR funds will be used to procure ARVs and other drugs to support the expansion of faith-based organization (FBO) treatment services in Pretoria (Gauteng province), one facility in the inner city and one in a nearby township. Services will be expanded at the Pretoria Inner-City Clinic (PICC) in collaboration with a faith-based coalition, the Tshwane Leadership Foundation and at Leratong Hospice. Both sites have been developed by the not-for-profit private sector, and antiretroviral drugs will only be provided to residents who cannot access public sector treatment for specific reasons. The Leratong Hospice will begin providing ART through PEPFAR funding in 2007. For all of the Gauteng Department of Health (GDOH) facilities assisted by FPD other than the PICC and Leratong Hospice, drugs are provided through the South African Government's (SAG) ART roll-out program. The emphasis areas are construction/renovation, gender, human capacity development (HCD) and local organization capacity building. Target populations for the activities include the general population and people living with HIV (PLHIV). FPD will consider using the Partnership for Supply Chain Management to assist with the procurement of drugs.

BACKGROUND:

FPD is a South African private institution of higher education working exclusively in the health sector in Southern Africa. Previous PEPFAR funding has allowed the training of thousands of healthcare professionals and supported the provision of ART to thousands of PLHIV in South Africa. It provides assistance to over 25 large public sector ART roll-out facilities. Although the SAG has a robust ARV roll-out program, it is not universally accessible. This project provides ART and related services to vulnerable groups living in the inner-city of Pretoria and in one of the surrounding townships who cannot afford private care and do not have access to public sector care due to factors such as long waiting lists, inability to pay minimum public sector user fees, fear of discrimination, and stigma.

Started with FY 2006 funding, this project partners FPD in a strategic alliance with the Tshwane Leadership Foundation and the Leratong Hospice who operate clinics that do not provide ARVs. Both partners are FBOs that currently provide social welfare services to PLHIV in the city, including hospice care. FY 2006 funds were used at one of these facilities to serve as a rapid initiation and stabilization site for patients whose lives are at risk due to long waiting lists. Negotiations are currently underway with the GDOH to have these clinics accredited as down referral sites for the major ART clinics at Tshwane District Hospital and Kalafong Hospital (both already supported by FPD). Every effort is made at all facilities to reduce stigma through staff training, one-to-one counseling, and counseling for families and support groups. Sustainability is partially addressed through the public-private partnership (PPP) with the Tshwane Leadership Foundation. This organization brings together a large number of churches in the city and has access to additional funding sources to support the project. In addition, the government supports all drugs and labs. It is only at one clinic where FPD provides drugs. FPD is working on getting this clinic accredited so that the provincial government will supply the drugs. FPD is also working with government to transfer responsibility for salaries when positions are filled.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Procurement and Distribution of Drugs

These sites provide an integrated ART service including treatment, palliative care, wellness programs and psychosocial support for adults and children, and income generation schemes for women. The sites have a minimum target of 10% of patients who will be children. PEPFAR funds will be used for the procurement and distribution of ARV drugs for the PICC and the Leratong Hospice, supporting the salaries of necessary doctors, nurses, pharmacists, social workers, counselors, and administrative staff. This project has a close working relationship with an FBO consortium that supports the community of the inner-city and it is envisaged that they will provide palliative care services and psychosocial support. Subject to needs assessments, PEPFAR funds may be used to address minor infrastructure needs. Technical assistance and systems strengthening will be provided for forecasting drug needs, procurement, storage, and related data systems.

ACTIVITY 2: Human Capacity Development

Human capacity development is promoted by requiring all clinical staff at the three sites to attend mandatory training. Training for staff at these sites will include training on supply chain management to ensure proper procurement and related systems. The pharmacist that will supervise dispensing at all sites will also receive refresher training. As part of the overall FPD program, FPD training ensures a cadre of skilled healthcare practitioners able to provide care to PLHIV. Healthcare workers are trained in various courses, including clinical management of AIDS and TB, counseling and testing, palliative care, adherence and workplace AIDS programs using a proven short-course training methodology. PLHIV form part of the faculty to help with stigma reduction among participants and to articulate the needs of PLHIV. To maintain knowledge, an alumni program including regular continuing medical education (CME) opportunities, meetings, journals, newsletters and mentorship has been developed. This program provides alumni with membership in a relevant professional association (Southern African HIV Clinicians Society). FPD's public-private partnership (PPP) with Eskom (large power and utility company) and Discovery Health (private health insurance company) also financially support this training. All staff at the three PEPFAR-funded facilities will access all of the training opportunities.

ACTIVITY 3: Quality Assurance/Supportive Supervision

Quality assurance mechanisms developed through a strategic alliance with JHPIEGO will be expanded to these sites. These quality assurance mechanisms allow clinic staff to rate all aspects of service delivery from drug procurement to patient care. This process will lead to continuous improvement of quality and will be rated once a year by an external consultant. In addition, monitoring of CD4 counts, viral loads, and resistance testing are part of the monitoring system.

This project will contribute to PEPFAR's 2-7-10 goals by expanding access to ART services for adults and

Activity Narrative: children, by building capacity for ART service delivery including the provision of ARVs, and increasing the demand for and acceptance of ARV treatment.

Table 3.3.10: Activities by Funding Mechansim

Mechanism ID:	416.08	**Mechanism:**	N/A
Prime Partner:	Broadreach	**USG Agency:**	U.S. Agency for International Development
Funding Source:	GHCS (State)	**Program Area:**	HIV/AIDS Treatment/ARV Drugs
Budget Code:	HTXD	**Program Area Code:**	10
Activity ID:	3133.08	**Planned Funds:**	$737,200
Activity System ID:	13696		

Activity Narrative: SUMMARY:

BroadReach Healthcare's (BRHC) antiretroviral (ARV) drug activities include drug procurement and distribution, training for health professionals on drugs, supporting pharmacy staff salaries, training patients, quality assurance (QA), and data management. BRHC's emphasis areas are human capacity development, local organization capacity building, and strategic information. Primary target populations include children, adolescents, adults, pregnant women, and people living with HIV (PLHIV).

BACKGROUND:

PEPFAR funds support BRHC initiatives that provide HIV and AIDS clinical management, care and support services to HIV-infected individuals in areas where the South African Government's (SAG) rollout has not yet been implemented and assists ART rollout in the public sector. The BRHC PEPFAR program began in May 2005 and now operates across five provinces. An additional province will be added in FY 2008. BRHC is supporting approximately 5,000 individuals directly with care and treatment and 15,000 indirectly. BRHC taps private sector health professionals to provide comprehensive care and treatment, fostering capacity building initiatives within the public health system, and supporting community-based programs. BRHC leverages PLHIV support programs to identify and assist with treatment literacy, adherence support and ongoing community mobilization, prevention education activities, and positive living initiatives. BRHC also works to build capacity in public health facilities, focusing efforts on human capacity development (HCD) activities, including clinical didactic training, clinical mentorships, patient training and operational assistance training. BRHC is expanding its provision of staff and infrastructure support to SAG facilities. Finally, BRHC is expanding its involvement in the design of scaleable down referral models in partnership with faith-based organizations (FBOs), community-based organizations (CBOs), and public-private partnerships (PPPs).

ACTIVITIES AND EXPECTED RESULTS:

The primary goal of this program area is to ensure that new patients are started on antiretroviral treatment (ART) when clinically qualified, and enrolled patients continue to receive high-quality care and support. Monitoring of CD4 counts, viral loads, and resistance testing are part of the monitoring system. For continued program sustainability, BRHC continues to work on the transference of costs to government, and already in the North West province, the provincial government provides all drugs.

ACTIVITY 1: Drug Procurement and Distribution

BRHC will continue commodity procurement of ARVs through its supply chain vendors including its courier-based pharmacy partners. BRHC will oversee the delivery of drugs to the accredited community-based providers. In some instances, the community-based providers will be paid a capitated rate per patient and those providers will be procuring drugs according to PEPFAR standards and national guidelines. BRHC will negotiate best available pricing for USG and SAG approved ARV drugs. Community-based providers are trained in drug forecasting, procurement and supply chain management.

BRHC partners with a private mail order pharmacy provider, Pharmacy Direct (PD), in its procurement and distribution efforts for the BRHC general practitioners (GP) network. Pharmacy Direct liaises directly with the BRHC GP network to manage patient prescriptions, dosing, medicine delivery and pick-up of returned medicines. In partnership with Pharmacy Direct, BRHC manages patient adherence through monitoring of medicine collection and regular data reports.

ACTIVITY 2: Human Capacity Development (HCD)

BRHC will continue to provide comprehensive HIV and AIDS training to its network of providers including doctors, nurses, pharmacists and other healthcare professionals through a variety of initiatives including remote decision support, telemedicine, web-based training, didactic training, and clinical mentoring from experienced HIV and AIDS clinicians. Topics include drug supply chain logistics, operational improvements for drug management, tracking for expiration dates, comprehensive ART management, adherence, management of complications and side-effects, prevention and pediatric HIV management. BRHC-supported human capacity development activities, such as training and clinical mentoring, will also take place within SAG facilities.

ACTIVITY 3: Support to SAG

BRHC will support capacity development for drug procurement and pharmaceutical management at partner SAG facilities. BRHC has conducted a needs assessment that examined the operational processes for drug procurement, forecasting, stock management, and dispensing, and has used this assessment to streamline its supply chain management.

ACTIVITY 4: Quality Assurance/Quality Improvement

BRHC maintains a close relationship with its drug procurement and distribution client. The client provides regular feedback and reports to BRHC regarding delivery problems, missed medicine pick-ups, and collects all unused medicines. Drug distribution, pick-up, and returns data is collected and maintained in the BRHC program database. This data feeds into numerous reports including doctor-specific feedback reports and patient exception reports.

This activity facilitates the ARV service delivery component of the project, which contributes directly to the PEPFAR 2-7-10 goal of two million people receiving treatment. BRHC will contribute to PEPFAR's vision outlined in the Five-Year Strategy for South Africa by expanding access to ART services for adults and children, building capacity for ART service delivery, and increasing the demand for and acceptance of ARV treatment.

Activity ID: 12408.08 **Planned Funds:** $436,500

Activity System ID: 13364

Activity Narrative: SUMMARY:

Currently, the USG PEPFAR Task Force supports institutional capacity building of indigenous organizations that implement PEPFAR programs through four competitively selected Umbrella Grants Mechanisms: Pact, the Academy for Educational Development (AED), Family Health International (FHI), and Right to Care (RTC). The main purposes of these new umbrella organizations are to (1) facilitate further scale-up of HIV treatment services; and (2) develop indigenous capability, thus creating a more sustainable program. The major emphasis area is local organizational capacity development. Primary target populations are indigenous organizations, including non-governmental organizations (NGOs), faith-based organizations (FBOs), and community-based organizations (CBOs).

As an Umbrella Grants Management (UGM) partner, Academy for Education Development (AED) supports institutional capacity building, technical assistance (TA), and grants administration for indigenous organizations that implement PEPFAR programs. These partners and sub-partners consist of indigenous NGOs, FBOs, and CBOs that were selected through the Inter-Agency PEPFAR Annual Program Statement (APS) and have met the criteria for full and open competition. The main functions of the UGM program are: (1) to facilitate further scale-up of HIV and AIDS care services and (2) to develop indigenous capability, thus creating a more sustainable program. The emphasis areas are human capacity development, local organization capacity building, and strategic information.

BACKGROUND:

AED has extensive experience managing grants programs on behalf of USAID with PEPFAR funds. Prior to award of the UGM under the South African APS, AED was already managing grant programs funded with PEFPAR dollars in Ghana and Honduras, and providing TA and capacity building to PEPFAR partners on palliative care and OVC work in Mozambique and Kenya. In addition, AED has been sourced as USAID's exclusive partner for capacity building to the 23 NGOs funded under the PEPFAR Round One New Partners Initiative. As such, AED is well experienced in providing TA and capacity building on the broad array of technical areas related to PEPFAR programs, monitoring and evaluation, organizational development and finance management. In addition, AED has also been a key PEPFAR implementing partner in South Africa, and is thoroughly familiar with working on HIV and AIDS programs within this context.

As a UGM partner, AED will not directly implement program activities, but rather act as a grants administrator, technical assistance provider, and mentor for sub-recipients, who in turn carry out the assistance programs. AED closely collaborates and coordinates with the South African Government (SAG) in supporting PEPFAR partners through the umbrella grant mechanism. Although some of the partners work closely with various SAG Departments, AED's primary interface with the SAG is through the Senior Management Team (SMT), which includes key staff from USAID, National Departments of Health and Social Development, and representatives from the provincial departments. Under AED, between 6 and 11 indigenous partners will be supported via sub-grants and technical assistance, some of whom implement treatment-related activities. Under the umbrella grant mechanism the reach of sub-grantees for treatment is expected to be substantially expanded, which includes the purchase of antiretroviral drugs, drugs for treating opportunistic infections, treatment of symptom and pain management, and other treatment-related commodities (e.g. test kits).

ACTIVITY 1: Grants Management

AED will award and administer grants to partners selected through the South Africa PEPFAR APS competitive process to implement treatment activities. This involves an array of related activities including award and administration of grants, monitoring of grant progress, meeting reporting requirements, financial oversight, ensuring compliance with USG regulations, and grant closeout. AED will monitor treatment partners' program implementation and adherence to financial regulations. This involves provision of extensive technical assistance to partners on project development and implementation, financial management, monitoring and evaluation, and reporting.

ACTIVITY 2: Capacity Building

AED will support institutional capacity building of indigenous organizations. (Capacity building activities are defined as activities that strengthen the skills of indigenous organizations to implement HIV and AIDS programs efficiently, with diminishing reliance on internationally-based technical assistance and support.) AED will support activities to improve the financial management, program management, quality assurance, strategic information (M&E) and reporting, and leadership and coordination of partner organizations implementing treatment activities.

ACTIVITY 3: Monitoring and Evaluation (& Reporting)

AED will provide support to treatment partners on monitoring and evaluation, in order to strengthen measurement of the implementation and impact of program activities, an eventual achievement of PEPFAR goals. In addition, AED will provide supportive supervision to provide guidance, monitoring, mentoring and oversight through site visits, technical assistance, and performance evaluation. The management of service delivery programs under this project will contribute to the PEPFAR goals to provide treatment to 2 million HIV-infected people; prevent 7 million HIV infections; and provide care to 10 million people infected by HIV and AIDS, including orphans and vulnerable children.

Program Area Code: 10

Activity ID: 3298.08

Planned Funds: $2,910,000

Activity System ID: 13772

Activity Narrative: SUMMARY:

HIVCare will use FY 2008 PEPFAR funds to work with the Free State Department of Health (FSDOH) to provide antiretroviral treatment in a private health facility to patients who do not have medical insurance and who are referred from the public sector waiting lists for treatment. The Medicross Medical Centre, a well-equipped private primary healthcare center, provides the main resource base and in conjunction with thirteen other sites, will provide an effective means of properly distributing ART to patients who are either referred from public sector facilities or who access the site by word of mouth. The emphasis areas for this program will be human capacity development and local organization capacity building. The target population includes men and women; families (including infants and children) of those infected and affected, factory workers and other employed persons, and government employees - specifically teachers, nurses and other health workers (who do not have medical insurance). A further specific population that will be targeted will be secondary school children. The most significant target group is those persons that cannot access services in the public health system.

All treatment administered is done in strict accordance with South African Government (SAG) guidelines and with due regard to the need to transfer the patients back to SAG facilities when feasible. Additional attention will be given to the screening and treatment of TB among the patients attending the program. The linkage with the youth center will ensure that HIVCare reaches a larger proportion of younger persons, specifically adolescents aged 10-14 and 15-24. This focus on the youth should further encourage involvement with street youth and it is anticipated that the program will be marketed among NGOs working with street youth as a testing and treatment site.

BACKGROUND:

PEPFAR funding for the HIVCare project commenced in June 2005. The main thrust of the activity was to match the FSDOH with private-sector partners (in this case Netcare, the largest private sector health provider in South Africa) in order to build private sector capacity and to absorb some of the burden from public sector facilities. Many FSDOH centers have waiting lists of people for ARV treatment. Patients from these waiting lists who meet the eligibility criteria for this program are referred from these public sector clinics to one of the four primary health centers in Bloemfontein and one in Welkom for treatment. The FSDOH is a collaborating partner in this public-private partnership, and they have commited incorporate HIVCare patients into existing FSDOH treatment sites on cessation of PEPFAR funds. An intermediate project that is underway is the credentialing by the FSDOH of the HIVCare sites so that ARV medication can be drawn from state supplies. This will dramatically reduce the requirement for external purchases.

ACTIVITIES AND EXPECTED RESULTS:

Drugs and other commodities used in the treatment process are procured through the Netcare purchasing system, the single largest purchaser of medical supplies outside of the South African government. The drugs, specifically regulated in terms of South African legislation, are distributed to treatment centers via the Netcare pharmacies in Bloemfontein and Welkom and are dispensed to patients by qualified pharmacy staff. All medication issued to patients is done on presentation of a prescription issued by the treating physician. All other products are purchased within the procurement system of Netcare and some products are specially packaged for the program. Maximum use is made of volume discounts where possible although current SA legislation makes this problematic in respect of medicines. The Netcare purchasing department continually receives pricing updates from all major suppliers and all purchases are subject to competition amongst said approved suppliers. All antiretroviral drugs procured are in line with national treatment guidelines, and generic drugs purchased are FDA-approved and registered by the Medicines Control Council. All medication and supplements are stored off site and delivered either daily or weekly as required. Due to the availability of medicines, a month’s buffer stock is available at any time while two months stock of other products is maintained. Due to space limitations within the clinic itself, large deliveries are impossible and smaller frequent deliveries are made. Medication is delivered to the clinic weekly.

HIVCare also includes a parcel of nutritional supplements with the medication to improve treatment efficacy. The supplements provide a single fortified meal per day for each of the indigent patients on ART and aids in the absorption of the medication. Patients are assessed based upon their body mass index and general condition. The benchmark weight among patients starting ART at the center is just 55 kg (-5.2). In previous years the nutritional supplements were obtained with private funds, but in FY 2008, these will be purchased with PEPFAR funds in line with the Food and Nutrition guidance.

The program is subject to regular management review through the Netcare management and the medical director. This forms a crucial aspect of continuous improvement as practiced by the company. Both clinics are equipped with software specifically designed to monitor and manage patients. This program, coupled with individual patient folders, follows the specifications, definitions and classifications listed in the WHO 2006 patient monitoring guidelines for HIV care and antiretroviral therapy. The list of collected data includes demographic information, family status (partners, children and their HIV status when known), treatment supervisor details, clinical relevant information (symptoms, opportunistic infections, staging, TB status, family planning method or pregnancy status, weight, and height) and laboratory results. All of the abovementioned indicators as well as prophylaxis and antiretroviral treatments, starting dates, interruptions, reasons, side effects and severity are recorded. These data form the basis of internal management reports used to improve systems.

The existing program is small and makes use of existing infrastructure and skills. Training focuses on skills enhancement takes the form of mentorship and on-the-job development. Formal training is restricted to addressing identified skills gaps.

The following procedures are followed to ensure the optimal follow-up for the patient: (a) scripts are written by the doctor (full-time HIV trained doctor); (b) scripts are delivered to the designated pharmacy; (b) drugs are prepared, labeled, named and packed for each patient; (c) parcels are sent back and stored at the clinic, pending collection; and then (d) treatment is dispensed to the patient after consultation and recording patient adherence, side-effects (if any) and weight in the patient folder. These details are captured using the software described above.

Activity Narrative: The software allows the clinic staff to monitor any relevant information as side-effects, complications, opportunistic infections, TB statistics, etc.. Clinic management reports are distributed to the local treating doctor as well as to the medical director. Procedures are in place to address matters arising with staff in the form of corrective action and training.

By providing comprehensive ARV services to patients and promoting ARV services to a large population of underserved people living with HIV (people without private insurance) and school-going children, HIVCare is contributing to the PEPFAR goals of placing 2 million people on ARV treatment and providing care for 10 million others who are infected with HIV. These activities also support care and treatment objectives outlined in the USG Five-Year Strategy for South Africa by expanding public-private partnerships and expanding care to an underserved population.

Table 3.3.10: Activities by Funding Mechansim

Mechanism ID:	271.08	**Mechanism:**	N/A
Prime Partner:	Right To Care, South Africa	**USG Agency:**	U.S. Agency for International Development
Funding Source:	GHCS (State)	**Program Area:**	HIV/AIDS Treatment/ARV Drugs
Budget Code:	HTXD	**Program Area Code:**	10
Activity ID:	2974.08	**Planned Funds:**	$1,173,000
Activity System ID:	13796		

Activity Narrative: SUMMARY:

Right to Care (RTC) will use FY 2008 PEPFAR funds to procure and distribute antiretroviral (ARV) drugs to partner antiretroviral treatment (ART) sites and programs in five provinces to expand ART for eligible HIV-infected individuals. Funds are used to procure ARV drugs used in non-governmental and faith-based organizations (NGOs, FBOs), and remote treatment sites. RTC will continue to refer HIV-infected individuals identified through counseling and testing (CT), care, and support services, when indicated, into ART services. The emphasis areas are human capacity development, renovation, and local organization capacity building. Populations to be targeted include people living with HIV (PLHIV) and pharmacists.

BACKGROUND:

Since 2005 PEPFAR funds have been used for human capacity development and for consultant and sessional salaries for employees that augment NGO clinics and government sites. Pharmacists are employed at each site as it grows and as numbers of patients on treatment rise above 500. RTC will continue ARV drug activities, which have been PEPFAR-funded since 2004, when RTC began supporting the purchase of ARV drugs for patients treated through NGOs, FBOs, and the Clinical HIV Research Unit (CHRU). Pharmaceutical procurement and supply is managed by Rightmed Pharmacy, an independent pharmacy established that meet the South African pharmacy regulations.

ACTIVITIES AND EXPECTED RESULTS:

With FY 2008 funding, RTC will consolidate and expand its existing activities, building on past successes in procuring and supplying ARV drugs to its treatment sites/programs. RTC sites have had no stock-outs to date on any drugs despite global shortages in stavudine and lamivudine. All RTC-supported government sites receive drugs through internal government systems.

PEPFAR funds will continue to be used for the procurement and distribution of ARV drugs via Rightmed Pharmacy for the current NGO and FBO clinics as well as for the Thusong program. The Thusong program provides ART to those unable to access care through Department of Health (DOH) sites. ARV scripts are forwarded to Rightmed, which handles all the procurement, logistical and pharmaceutical management, dispensing and distribution of ARVs. The drugs are delivered to the treatment sites via an independent courier company on a weekly basis. Treatment sites receive batches of drugs for multiple patients, with drugs labeled and dispensed on a patient-named basis. Drugs are then securely stored at the site and dispensed to the patient on a monthly basis. Where sites are able to harness the capacity of a pharmacist, direct procurement is facilitated. Sub-awards for clinics will also include funding for pharmacy staff.

Following DOH accreditation of the NGO and FBO clinics, the South African government will take over the costs of the drugs and labs. RTC will re-channel funds that were allocated to ARVs and labs to supporting additional staff, human capacity development and minor infrastructure adjustments. Additional staff, including dieticians and social workers, may be hired to meet the full staff complement for an accredited ARV clinic as defined by government. RTC is working with each site to ensure that the South African government takes responsibility for these salaries at accredited sites as soon as feasible. With government taking over the cost of ARVs, and the increased number of pharmacists receiving training, sustainability is addressed. The provision of additional staff that are trained and the clinical space adjustments will contribute to the improvement of quality treatment outcomes.

In FY 2008, RTC will use PEPFAR funds for direct salary support for pharmacists and pharmacy assistants at government treatment sites to enhance the widespread and sustainable availability of ARV drug services. Subject to needs assessments, PEPFAR funds may be used to upgrade infrastructure and equipment needs at government sites and at NGO and FBO clinics. RTC will also expand the current pharmacist expertise in pediatric care and procurement. Expertise from Rightmed Pharmacy will be used in training and mentorship at various government and NGO sites.

In FY 2008, RTC will procure and supply ARV drugs to RTC-supported treatment programs and sites, directly contributing to the 2-7-10 goal of two million people treated. RTC will support the PEPFAR vision outlined in the Five-Year Strategy for South Africa by expanding access to ART services for adults and children, building capacity for ART service delivery, and increasing the demand for and acceptance of ARV treatment.

Funding Source:	GHCS (State)	**Program Area:**	HIV/AIDS Treatment/ARV Drugs

Budget Code: HTXD

Program Area Code: 10

Activity ID: 3073.08

Planned Funds: $1,906,300

Activity System ID: 13859

Activity Narrative: The activities listed below are intended to be competed and awarded to a follow on partner to UKZN CAPRISA since that award is ending in FY 07.

SUMMARY:

Activities are carried out to continue the provision of antiretroviral drugs to patients already initiated on treatment and to expand access to treatment to additional patients at two established treatment sites in KwaZulu-Natal. The emphasis area is human capacity development. The target population is people living with HIV (PLHIV). Pediatric services will be introduced at the Vulindlela site to move to a family-centered approach to delivering HIV care.

BACKGROUND:

The Centre for the AIDS Program of Research in South Africa (CAPRISA) was established in 2002 as a not-for-profit AIDS research organization by five major partner institutions: University of KwaZulu-Natal, University of Cape Town, University of Western Cape, National Institute for Communicable Diseases, and Columbia University. The headquarters of CAPRISA are located at the University of KwaZulu-Natal. The PEPFAR-funded CAPRISA AIDS Treatment (CAT) program was initially started as a supplemental effort to deal with the large volume of HIV-infected clients that were screened out of CAPRISA's other research studies. The current CAT program provides an integrated package of prevention and treatment services and provides an innovative method of providing ART by integrating TB and HIV care. The CAPRISA eThekwini clinical research site is attached to the Prince Cyril Zulu communicable disease clinic, a large local government clinic providing free diagnosis and treatment of sexually transmitted infections and TB. The antiretroviral treatment (ART) provision at this clinic integrates TB and HIV care into the existing TB directly observed therapy (DOT) programs. This allows for the opportunity to initiate HIV care and ART for patients identified as HIV infected during TB treatment as well as to be able to continue such management for those who develop TB during HIV treatment.

The CAPRISA Vulindlela clinical research site is a rural facility located about 150 km west of Durban, KwaZulu-Natal. The Vulindlela district is home to about half a million residents whose main access to health care is at seven primary health care (PHC) clinics that provide comprehensive services. The CAT program at Vulindlela is an entirely rural nurse-driven service with doctors available for the initial eligibility assessment and management of suboptimal ART efficacy and for advice regarding OI management and referral.

ACTIVITIES AND EXPECTED RESULTS:

At the eThekwini/Prince Zulu site, all patients in the CAT program with CD4 counts less than 200 see a clinician monthly for clinical and laboratory follow-up. These patients are initiated on ART following a clinical and laboratory safety assessment, and three or more intensive sessions of adherence support counseling. At the eThekwini site, a once daily regimen is used, as per South African treatment guidelines and protocols.This, however, excludes drugs used for contraception, Diflucan, the treatment of TB and drugs used for the outpatient management of OIs, as these are procured from the adjacent eThekweni and Mafakhatini clinic at the respective sites.

In Vulindlela, the first-line regime includes: Lamivudine, Stavudine and NVP and second-line therapy includes: EFV, AZT, 3TC and ABC. PEPFAR funds are used for the purchase of these drugs. The senior research pharmacist, based at the CAPRISA offices in Durban, places all ARV drug orders. Bulk stocks are received at the central CAPRISA pharmacy in Durban and then distributed to the sites as appropriate. The senior research pharmacist ensures that sufficient study product is always on hand for at least two months' anticipated usage.

At the eThekweni clinic, the first-line therapy used is 3TC, ddI, and Efavirenz. The most common second-line regimen is Kaletra, ABC, and ZDV. The first-line regimen was chosen for its suitability to be co-administered with TB drugs, as well as its ability to be dosed once daily. Thus far, more than 90% of the eThekweni CAT patients are on first-line therapy, with approximately 95% still adherent to the program.

At each monthly visit, the pharmacist does a pill count of all unused medication returns and conducts a real-time assessment of adherence to treatment with each patient. The pharmacist’s assessment of adherence at the time may generate additional adherence support counseling of the patient. This pharmacy data may be linked to clinical data such as viral load and resistance testing and may trigger review of existing regimen choices.

Pharmacy records in the form of repeat treatment cards also maintain a detailed chronological log of all non-ARVs prescribed to the participant and may be linked to regimens to inform healthcare workers on the range of side-effects to medication.

The pharmacy maintains a system that allows early tracking of potential defaulters by alerting the tracking department of non-arrivals to the pharmacy for pill collection. The first alert occurs on the day of the scheduled visit if missed and is verified with the trackers for resolution by the end of each week. This indicator also allows for the identification of patients too ill to come into the clinic. A missed visit for pill collection identified by the pharmacy works successfully and allows the program to intervene outside the boundaries of the clinic to ensure that the patients receive the appropriate care when they need it.

As trained pharmacists are a scarce resource in South Africa, pharmacy assistants have been recruited and employed to assist with the large volumes of treatment patients presenting with scripts each day. Tasks that are usually done by pharmacists have been shifted to the pharmacy assistants resulting in an overall increased efficiency in service delivery.

Currently the ARV procurement system meets the needs of the program and purchases are obtained commercially via wholesalers at the SEP (single exit price) or directly from the company (access pricing e.g. Glaxo-SmithKline). Technical assistance will be sought to further strengthen these systems and maintain the optimal stock levels for the duration of the treatment program.

Activity Narrative: Training and human capacity building: The scale-up of the ART care and treatment program over the past three years in CAPRISA has been unprecedented. The CAT program is producing a skilled cadre of health care workers specializing in the management of HIV and HIV-TB co-infection. These skills range from scaling up voluntary counseling and testing services to monitoring responses to ARVs.

Meetings have been held with representatives from the KwaZulu-Natal Department of Health and there is a commitment to engage in discussion about the integration of services between CAPRISA and the DOH, particularly in the poorly resourced Vulindlela area in the Inadi District. The first steps have been initiated by preparation of the CAPRISA Vulindlela site for accreditation by the DOH. Accreditation as an ARV rollout site is the only way to down refer stable patients into the DOH structures. Accreditation of the Vulindlela site also has the ripple effect of the upgrading and staffing of the clinics in the surrounding areas so that the down referral system is effective and sustainable.

These results contribute to the PEPFAR 2-7-10 goals by ensuring that there is an uninterrupted supply of drugs for persons initiated on ART.

HTXS - ARV Services

Program Area:	HIV/AIDS Treatment/ARV Services
Budget Code:	HTXS
Program Area Code:	11

Total Planned Funding for Program Area: $202,328,221

Amount of Funding Planned for Pediatric AIDS	$34,547,274
Estimated PEPFAR contribution in dollars	$3,414,000
Estimated local PPP contribution in dollars	$19,577,697
Estimated PEPFAR dollars spent on food	$97,000
Estimation of other dollars leveraged in FY 2008 for food	$0

Program Area Context:

The 2003 South Africa Government (SAG) Comprehensive Plan for HIV and AIDS Care, Management and Treatment (Comprehensive Plan) provides a blueprint for universal access to antiretroviral treatment (ART) over a five-year implementation period (2004 – 2009), and the USG contribution to this goal. The goals of this plan are reiterated in the new South African HIV and AIDS and STI National Strategic Plan, 2007-2011 (NSP). The Department of Health has allocated approximately $272 million USD to the implementation of the Comprehensive Plan, mainly through conditional grants to the provinces. According to the NSP, the total financial need for funding for ART in 2008 is $453 million USD, which indicates a gap of $181 million USD. The USG is ideally positioned to support the implementation of the NSP by ensuring equitable access to quality HIV care and treatment through support to the SAG by PEPFAR-funded partners.

South Africa has a generalized mature HIV epidemic, and HIV care and treatment services are required across the entire population, though population-based data has shown that the highest burden of HIV is in urban and peri-urban areas. The 2006 antenatal HIV seroprevalence survey data also provided additional information on district-level prevalence rates. The USG utilizes this information to direct its assistance to these areas, especially to ensure equitable access to ART for lower-density rural populations.

A key element in the Comprehensive Plan is to strengthen public healthcare capacity to deliver integrated HIV and AIDS services. Only 13.7% of South Africans have access to medical insurance, and thus the major focus of the PEPFAR program is on the public sector. Of the 26 partners directly supporting ART, all work in the public sector, with most supporting programs in the private and/or NGO sector.

From April 2004 through March 2007, the SAG has treated more than 270,000 individuals in the public sector, including 27,000 children. Private sector clinics and doctors, and NGOs, are treating an estimated additional 50,000 individuals. The USG expects to meet its FY 2008 direct target of 382,011 individuals receiving treatment through support to public sector, faith-based organizations, non-governmental organizations and private sector programs. The NSP goal is to have ~1.6 million people on treatment by the end of 2011.

The capacity to deliver pediatric ART services varies significantly, although additional funding in FY 2007 has been devoted to improving access to pediatric ART, especially through training activities and technical assistance. PEPFAR partners continue their efforts to reach a pediatric target of 15% of the total treatment population by the end of FY 2008. In FY 2007, 11% of all patients on treatment were children (up from 9% in FY 2006). In FY 2008 the pediatric treatment target is 11%. In addition to the training activities, emphasis in FY 2008 is placed on early diagnosis for infants and children, the referral of children from PMTCT programs to treatment services to better integrate HIV and AIDS services, onsite mentorship, and on linkages between OVC programs and pediatric treatment programs. Based on OGAC guidance, partners are also incorporating nutrition support, especially for children.

The key priorities for the USG in FY 2008 are: (1) human capacity development, especially at primary healthcare level; (2) strengthening down and up-referral systems; (3) improving pediatric HIV care and treatment; (4) encouraging counseling and testing (CT) earlier for adults and children (including the use of PCR and dried blood spot technologies); (5) ensuring that all HIV-infected clients are screened for TB; (6) continuing to strengthen the integration of treatment programs within other health interventions (e.g. PMTCT and reproductive health); and (7) reducing both loss to initiation of treatment of people that test HIV positive, and loss-to-follow-up once on treatment.

The NSP contains strategies for initiating and managing patients on ART at the primary healthcare level. A key focus in FY 2008 is to build capacity at clinics to initiate ART, and only referring patients with complications to the secondary hospital level. There is a key policy change regarding ART initiation guidelines. See comments box below.

The USG is committed to assisting the SAG to enhance the capacity of the public healthcare system and to increase the number of South Africans receiving care and treatment, drawing on evidence and experience, using SAG policies and guidelines. Specifically, the USG program will strengthen comprehensive high quality care for HIV-infected people by: (1) scaling up existing effective programs and best practice models in the public, private and NGO sectors; (2) providing direct treatment services through prime partners and their sub-partners; (3) increasing the capacity of the SAG to develop, manage and evaluate treatment programs, including recruiting additional health staff, training and mentoring health workers, improving information systems, conducting public health evaluations, and service infrastructure assistance; (4) increasing demand for and acceptance of ARV treatment through community mobilization; (5) ensuring integration of ART programs within palliative care, TB, reproductive health, STI and PMTCT services; and (6) assisting in the accreditation of facilities for ART initiation. The collective effort of all USG treatment partners has resulted in ARV care and treatment services available at over 350 sites in all 9 provinces of South Africa. Services are available at health facilities and mobile outreach systems, to improve quality, ensure equity and provide accessibility.

Key linkages are made with prevention programs (especially prevention with positives), wellness programs, which provide ongoing support for patients once they have tested positive for HIV, including opportunistic infection management, cotrimoxazole prophylaxis, and prevention with HIV-infected individuals. Wellness programs are linked to strong community programs, notably home-based care networks that extend care from the facility level to the home. The safe water and bednet elements of the standard package of care are not applicable in South Africa, as the SAG has significant programs to address these areas of need. Malaria control efforts in the small section of the country that is affected by malaria are funded by the SAG and the Global Fund.

The SAG has instituted routine CD4 testing as part of CT to maximize identification of treatment-eligible individuals. In addition, the USG and several partners are working with the SAG on improving early infant and child diagnosis and effective pediatric treatment. The laboratory services network in South Africa is well developed, and allows for the effective monitoring of patients once on ART as per the standard treatment guidelines.

Support for communications programs to improve demand for treatment and to improve treatment literacy remains an important focus in FY 2008. Special challenges that are being addressed are health-seeking behavior among men and youth, and strengthening prevention messages, especially on concurrent relationships. Treatment literacy is also a key focus.

The USG has also developed innovative partnerships with the private sector to provide ART. Some of the private sector partnerships also include public-private partnerships between industry and the South African government.

Proposed activities include such innovative approaches as: strengthening primary healthcare capacity to manage patients on ART in community-based settings; the utilization of multiple network models to improve diagnosis of adults and children; care for those who are positive but not yet requiring treatment; high quality treatment with strong treatment adherence components and strong referral systems, with specific efforts in FY 2008 to strengthen tracing of patients and reducing the number of people lost both to initiation of treatment after testing positive, and lost-to-follow-up after treatment initiation; improving the efficiency of support functions for treatment programs including community support and clinical training and mentoring, patient information systems, logistic support for pharmacies; and public-private partnerships to deliver ARV services at workplace settings, and through private practitioners in remote areas serving the uninsured. In FY 2008, funding has also been provided to treatment partners to strengthen TB screening and diagnosis.

In addition, the USG will focus in FY 2008 on implementing the recommendations from the 2007 review by the Adult Treatment Technical Working Group, including additional assistance to the SAG on accrediting facilities to provide ART, especially clinics; ensure greater geographic consolidation; and scaling up efforts to ensure equitable access to ART.

In FY 2007, the USG competitively selected additional partners to provide care and treatment services, with 26 partners providing direct treatment support in FY 2008. There will be a competitive process to award funding for those contracts and cooperative agreements ending in FY 2008, which may include new partners. This is aimed at supporting the NSP goal of 1.6 million people on ART by December 2011.

Major donors (Ireland, DFID/United Kingdom, European Union and the Netherlands) contribute to treatment-related services, such as mass media communication campaigns, home-based care programs, and policy development in the National Department of Health, but the USG is the only donor funding direct ART services. The Global Fund provides funding for treatment programs to the provincial health departments in two provinces; KwaZulu-Natal and the Western Cape. The USG meets with the major donors several times per year to discuss activities, explore collaborations, and minimize duplication of effort.

Program Area Downstream Targets:

11.1 Number of service outlets providing antiretroviral therapy	1256
11.2 Number of individuals newly initiating antiretroviral therapy during the reporting period	175553
11.3 Number of individuals who ever received antiretroviral therapy by the end of the reporting period	480272
11.4 Number of individuals receiving antiretroviral therapy by the end of the reporting period	382011
11.5 Total number of health workers trained to deliver ART services, according to national and/or international standards	32119

Custom Targets:

Activity Narrative: The activities listed below are intended to be competed and awarded to a follow on partner to UKZN CAPRISA since that award is ending in FY 07.

SUMMARY:

Activities are carried out with FY 2008 funding to continue the provision of HIV care and antiretroviral treatment (ART) services to patients already initiated on treatment and to expand access to treatment at two established treatment sites in KwaZulu-Natal. The major emphasis area is human capacity development and local organization capacity building. The target population is people living with HIV (PLHIV). Pediatric services will be introduced at our Vulindlela site to create a shift to a family centered approach to delivering HIV and AIDS care.

BACKGROUND:

CAPRISA was established in 2002 as a not-for-profit AIDS research organization by five major partner institutions; University of KwaZulu-Natal, University of Cape Town, University of Western Cape, National Institute for Communicable Diseases, and Columbia University. The headquarters of CAPRISA are at the University of KwaZulu-Natal. The PEPFAR-funded CAPRISA AIDS Treatment (CAT) Program was initially started as a supplemental effort to deal with the large volume of HIV-infected adult clients that were screened out of CAPRISA's other research studies. The current CAT Program provides an integrated package of prevention and treatment services and provides an innovative method of providing ART by integrating TB and HIV care. The CAT program operates from two facilities: CAPRISA eThekwini Clinical Research Site and Vulindlela clinical research site.

The CAPRISA eThekwini Clinical Research Site, is an urban facility attached to the Prince Cyril Zulu Communicable Disease Clinic (CDC) which is a large local government clinic providing free diagnosis and treatment of STIs and TB.. The ART provision at the CAPRISA eThekwini clinical research site integrates TB and HIV care into the existing TB directly observed therapy (DOT) programs. This allows for the opportunity to initiate HIV care and ART for patients identified as HIV infected during TB treatment as well as to be able to continue such management for those who develop TB during HIV treatment.

The CAPRISA Vulindlela clinical research site is a rural facility located about 150 km west of Durban, KwaZulu-Natal. The Vulindlela district is home to about half a million residents whose main access to health care is at seven primary healthcare clinics that provide comprehensive services. The CAT Program at Vulindlela is an entirely rural nurse-driven service with doctors available for the initial eligibility assessment and for advice and referral.

Those with CD4 counts under 50 are identified and followed up with home visits by PEPFAR-supported nurse aides and community health workers, The clinic is open Monday to Friday and is operated by 2 full-time and one part-time doctor, 4 nurses, 3 counselors, a pharmacy assistant and a full-time pharmacist. Patients from throughout the greater Umgungundlovu district are referred to the Vulindlela CAT program for HIV treatment and care. Regular meetings (imbizos) between the Vulindlela treatment site personnel and leaders in the local community occur, which enhances community participation, acceptance and utilization of the HIV treatment service. CAPRISA has worked closely and has established strong links with TAI, a community-based organization that assists the Vulindlela CAT program with the provision of trained community educators who do peer education and adherence motivation among our patients, home visits, as the implementation of our nutrition program. TAI is also actively involved with care and support of the extended families, including orphans and vulnerable children, of the program clients.

ACTIVITIES AND EXPECTED RESULTS:

The eThekweni CAT Programme has established strong referral networks with surrounding tertiary level DOH facilities for the management of sick and complicated patients requiring tertiary level admission and management. The CAT program provides the ongoing HIV care in partnership with these facilities while co-morbid conditions are being managed, until patients are stabilized and get discharged back to the facility.

CAT patients diagnosed with MDR/XDR TB are fast-tracked for admission to the local MDR hospital, the King George V Hospital. Patients admitted to this facility are visited, and have their ART medicines delivered, by a CAPRISA nurse. Once these patients are stabilized, and deemed non-infectious, they are transported to the CAPRISA facility for follow-up visits. CAT patients that are receiving standard TB therapy, are referred to one of the step-down TB hospitals in the community, and again are visited, and have their ART medicines delivered, by a CAPRISA nurse.

Discussions with the DOH ART Program Manager around the transitioning of eThekweni CAT patients have occurred, and processes are being developed together with the local district office to transition patients who have completed more than 24 months with the CAT program to DOH facilities.

Patients at Vulindlela are referred from the Mafakhatini primary healthcare clinic, research programs (including the non-PEPFAR funded microbicide trial, adolescent cohort, community-based VCT Project) and community referrals (community health workers, community advocates and 30 youth peer-educators). The CAT program in Vulindlela will address issues of stigma and discrimination and is linked to an Oxfam-funded project which addresses stigma and discrimination in the community. The CAT program provides support for disclosing to family members and assists patients in obtaining disability grants. CAPRISA has an extensive community program which supports and facilitates community involvement and informed participation for all CAPRISA projects. Comprehensive services are provided to HIV-infected participants where appropriate. This includes pre- and post-test counseling for HIV infection, treatment and adherence education and support, implementation of ARV treatment, prophylaxis for opportunistic infections, and management of OIs, adverse and serious adverse events. These are done at the clinic and through appropriate referral channels when needed. Only adolescents 14 years or older are targeted. Currently no HIV-related services are offered by CAPRISA to a pediatric population.

Preparations for DOH accreditation visit are at an advanced stage, for the Vulindlela site being accredited as an ART Initiation site. The visit by DOH is expected to take place in August 2007. With the accreditation in place, surrounding public primary health care (PHC) clinics will be scaled up to offer chronic care to

Activity Narrative: stable patients on ART. The Vulindlela CAT program will then commence transitioning stable patients to the PHC facilities. Discussions have been ongoing with the KwaZulu-Natal ARV manager and the DOH District Office to facilitate the smooth transition of patients. It is anticipated that five patients per week will be transitioned which will not overburden the receiving facilities, and the initial patients transitioned will be those from areas with an existing ART roll-out. Transitioned patients will be followed up 6-12 monthly, to ensure successful transitioning.

EXPECTED RESULTS:

ART will be expanded in FY 2008 at both the eThekwini and Vulindlela sites. CAPRISA does not anticipate having to expand the space or staff at these facilities to reach the FY 2008 targets. Laboratory services will continue to be performed at the CAPRISA Laboratory. It was anticipated that by October 2006, patients will start to be transitioned to the Department of Health at a rate of approximately 20 per month from each site and new patients will be enrolled to maintain a steady cohort, however this process has been delayed and these figures have yet to be finalized.

These results contribute to the PEPFAR 2-7-10 goals by increasing the number of newly initiated patients on antiretroviral therapy.

Table 3.3.11: Activities by Funding Mechansim

Mechanism ID: 274.08

Mechanism: Masibambisane 1

Prime Partner: South African Military Health Service

USG Agency: Department of Defense

Funding Source: GHCS (State)

Program Area: HIV/AIDS Treatment/ARV Services

Budget Code: HTXS

Program Area Code: 11

Activity ID: 3339.08

Planned Funds: $125,000

Activity System ID: 13828

Activity Narrative: SUMMARY:

The South African Department of Defence (SADOD) has an existing HIV and AIDS program that includes antiretroviral treatment (ART) services. FY 2008 funds will be used to improve and expand ART and related services. The main emphasis area is human capacity development. The main target is people living with HIV (PLHIV) in the military and their families.

BACKGROUND:

This activity commenced in FY 2005 with PEPFAR funding and was mostly focused on the preparation of pharmacies at the first rollout sites for ART, supplementing SADOD funding for the phased rollout of ART in the military. Six ART sites have been accredited with the aid of PEPFAR funding, and further funding will be utilized towards addressing human resource deficiencies that delay implementation of ART at these sites. FY 2008 activities will focus on the acquisition of commodities in support of ART, laboratory costs associated with ART, continued human resource support and activities that encourage adherence. Limited uptake of current ART services may be addressed through a media campaign to educate members and dependants on ART. To date only two of the six accredited ART sites are operational due to staffing issues, and thus FY 2008 funding is focused on addressing the needs of the four sites that are accredited, but not operational.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1:

Training of personnel to strengthen management systems, improve the quality of service through training of healthcare workers in ARV service provision.

ACTIVITY 2:

Continued development, modification, and printing of media, including posters and pamphlets, towards the provision of information and education on ART to members of the SADOD and their dependants.

ACTIVITY 3:

Interventions aimed at increasing treatment adherence by utilizing, and adapting, where necessary, available adherence tools.

ACTIVITY 4:

A needs assessment will be conducted at the four focus ART sites to determine gaps in staffing, and a plan to address these gaps will be developed and implemented by SADOD, with some support from PEPFAR funding.

ACTIVITY 5: To ensure quality monitoring and evaluation, the SADOD will implement the HIV and AIDS database developed in FY 2006 in order to capture all relevant patient data for tracking and reporting purposes at the four focus ART sites.

These activities will contribute to the number of persons receiving treatment and care in the military, and support the PEPFAR 2-7-10 goals.

Mechanism ID:	4632.08	**Mechanism:**	N/A
Prime Partner:	South African Clothing & Textile Workers' Union	**USG Agency:**	HHS/Centers for Disease Control & Prevention
Funding Source:	GHCS (State)	**Program Area:**	HIV/AIDS Treatment/ARV Services
Budget Code:	HTXS	**Program Area Code:**	11
Activity ID:	7934.08	**Planned Funds:**	$450,000
Activity System ID:	13820		

Activity Narrative: SUMMARY:

The Southern African Clothing and Textile Workers Union (SACTWU) has a comprehensive HIV program that has received PEPFAR funding in the past through a sub-agreement with the Solidarity Center. In FY 2007, SACTWU received direct PEPFAR funding for prevention, care and treatment activities, with the prevention and care program focused in five provinces: KwaZulu-Natal, Western Cape, Gauteng, Eastern Cape and Free State. The treatment program is currently limited to KwaZulu-Natal, but will add activities in Free State and Western Cape in FY 2008. The emphasis areas are gender, human capacity development, local organization capacity building, and workplace programs. The target population of the overall program is factory workers.

BACKGROUND:

The Southern African Clothing and Textile Workers Union is South Africa's largest trade union supporting textile and clothing workers. It also supports footwear, leather and retail workers. Hence, SACTWU members form part of the employed population. SACTWU has a membership of approximately 110,000 members nationally, of which 66 percent is female.

The SACTWU AIDS Project is a national program that provides services in five provinces. The SACTWU AIDS Project was initiated in 1998 and developed a national comprehensive program. It has matured over the years to the point where it now has a well-structured comprehensive training program, provides in-house voluntary and counseling services, provides access to a social worker in KwaZulu-Natal, runs income-generating workshops, provides a primary package of care through the voluntary and counseling testing service, and provides home-based care through its regional nurses and a home-based care network in KwaZulu-Natal.

SACTWU initiated a pilot antiretroviral therapy program in the KwaZulu-Natal province as a public-private partnership (PPP) with the Department of Health in FY 2007. SACTWU utilizes South African government protocols. SACTWU has designed confidentiality protocols as well as client care flowcharts, and is working closely with the King Edward VIII Hospital in Durban to ensure a formal confidential referral system via a public-private partnership.

ACTIVITIES AND EXPECTED RESULTS:

SACTWU will contract medical practitioners to provide treatment services as per the South African guidelines and eligibility criteria. Lay counselors or field workers will be employed (one per site) as well as one contracted social worker per site to serve as part of the multidisciplinary team. The long-term goal will be to develop a partnership with the public sector to replicate the model developed with the King Edward Hospital where the clients are prepared for initiation of treatment (which includes laboratory tests, and adherence counseling sessions), then referred to King Edward VIII Hospital for the initiation of treatment, and then down referred back to SACTWU once stable. The South African government will provide the antiretroviral drugs for the program. Patients will be identified for the program through the counseling and testing program, in one established site and two new rural sites in KwaZulu-Natal. In addition, patients will be referred from the existing SACTWU home-based care program, factories and the Bargaining Council Clinic in KwaZulu-Natal. In partnership with the Dream Centre in Durban, patients will have access to step-down care.

The aim in FY 2008 is to train shop-stewards and volunteers as home-based carers. This training will be done in collaboration with a Belgian-based trade union (ABVV), which supports the clothing, textile and leather sectors in Belgium. This is a long-standing cooperation relationship.

In FY 2008 this pilot will be expanded to two additional sites in KwaZulu-Natal. In addition to the two new sites in KwaZulu-Natal, SACTWU will also add a site in the Free State (a mobile clinic), and one in the Western Cape.

The services provided, beyond the standard counseling and testing, palliative care, and ART (as piloted in KwaZulu-Natal), will be expanded to include a pediatric ART component. This will be done by strengthening the family-centered approach to ensure that workers in the factories have the opportunity to bring their children for HIV care and treatment. In addition the new site in Western Cape will focus specifically on ensuring HIV care and treatment for TB patients (due to the high prevalence of TB in that area).

The SACTWU activities support the PEPFAR 2-7-10 goals.

Funding Source:	GHCS (State)	**Program Area:**	HIV/AIDS Treatment/ARV Services
Budget Code:	HTXS	**Program Area Code:**	11
Activity ID:	8242.08	**Planned Funds:**	$850,000
Activity System ID:	13768		

Activity Narrative: SUMMARY:

Health Science Academy (HSA) is a new FY 2007 PEPFAR partner. HSA will increase access and the availability of safe and effective drug treatment through human resource development, with a specific emphasis of pharmacists and pharmacist assistants. HSA aims to substantially increase the number of South African healthcare workers with the appropriate knowledge, skills and attitudes to support substantial rollout of antiretroviral treatment (ART). The major emphasis areas are human capacity development and local organization capacity building. The primary target population for this project is healthcare professionals, such as doctors, nurses, pharmacists and pharmacist assistants, as well as community-based healthcare workers and caregivers.

BACKGROUND:

HSA is a South African training institution, accredited with the South African Pharmacy Council, providing training in the pharmaceutical sector. HSA is a training provider to the National Department of Health (NDOH), provincial Departments of Health and the pharmacy profession in the private sector. PEPFAR funding will be utilized to scale up the existing HSA training activities. The project will be implemented on a national and provincial level, and will expand on the already existing relationship between HSA and the National Department of Health and respective provincial human resource departments. The proposed training programs have already been developed and this, in conjunction with the existing NDOH contracts, will allow the proposed training to be fast-tracked. In line with HSA's past practice, learners will be recruited with an emphasis on gender and racial representation and will give preference to women wanting to register for the national qualification, providing increased access to income for this group.

ACTIVITIES AND EXPECTED RESULTS:

The project will deal predominantly with the training of healthcare professionals in the public sector in order to increase capacity, enhance the skills of existing staff and increase the number of skilled staff available. In addition the project will also attempt to leverage existing private sector pharmacists in the provision of adherence counseling for patients on ART and expand the role of community workers. The overall goals of these training activities are: 1) increased ability in the public sector to dispense antiretroviral drugs (ARV); 2) increased access to HIV care and treatment; 3) increased capacity in the public sector to adequately manage the supply chain; and 4) improved adherence support in the provision of adherence counseling, monitoring and evaluation. The following training courses will be offered:

ACTIVITY 1: Adherence Counseling

This activity will increase the role of the pharmacist and pharmacist assistant in both the public and private sector with respect to counseling and monitoring of adherence to treatment regimens. The training is offered as a competency-based training course facilitated by a two day workshop. Workshops will be offered in each province and will be available to both the public and private sector (e.g. NGOs, FBOs, private clinics, etc.) providing HIV care and treatment services.

ACTIVITY 2: Supply Chain Management

This activity deals specifically with drug supply management and will improve the capacity of the public sector in providing access to safe and effective drug treatment through good distribution practices. The program will enhance the skill of existing staff in the public sector, such as nurses, pharmacists and other personnel involved in the procurement and supply of medicines. The course is offered as a competency-based training course facilitated by a two day workshop. Workshops will be offered in each province along with the option to do cascade training at a provincial level.

ACTIVITY 3: Dispensing

This activity deals with the provision of dispensing training for all authorized prescribes in the public sector as specified by the Medicines and Related Substances Control Act 101 of 1965. This is a distance learning program that will provide healthcare providers in under-serviced areas access to the training, specifically clinic nurses who require a dispensing license in order to dispense in ARV clinics. A half day orientation workshop is offered to nurses and doctors in the public sector who are registered in this course.

ACTIVITY 4: Pharmacist Assistants

This activity will train pharmacist assistants on a national qualification accredited by the South African Pharmacy Council, based on unit standards in line with the regulated scope of practice of a pharmacist's assistant. This activity will increase the pool of pharmacist assistants available to the public sector ART programs by training people living with HIV and other school leavers as pharmacist assistants. This activity requires that learners be employed in a pharmacy for on-the-job skills training and includes modular assessment of the learner. Workshops will be made available for groups requiring additional training or tutoring.

ACTIVITY 5: Community-Based Care for People Living with HIV

This activity will train a core group of community health workers as ancillary health workers offering community-based care for people living with HIV. Particular emphasis will be placed on extending the role of the community-based health worker with regard to pharmacological aspects of ART such as monitoring adverse effects and compliance. The training program provides a national certificate and comprises practical onsite skills training facilitated by workshops.

Study material for all the activities has been developed by leading experts in relevant specialties and the course content is continually updated and refined to meet the needs of the individuals being trained.

Health Sciences Academy will introduce two new courses from clent request: Comprehensive HIV and AIDS Care, Management and Treatment (CCMT) and Pharmacovigilance. In addition, further trainings will be given in supply chain management. These courses will have to be revised to meet the criteria of the

Activity Narrative: Council forHigher Education.

The above activities address the 2-7-10 PEPFAR goals by developing capacity with regard to supply chain logistics and pharmaceutical management to improve the quality of ART services.

Table 3.3.11: Activities by Funding Mechansim

Mechanism ID:	6134.08	**Mechanism:**	N/A
Prime Partner:	Toga Laboratories	**USG Agency:**	HHS/Centers for Disease Control & Prevention
Funding Source:	GHCS (State)	**Program Area:**	HIV/AIDS Treatment/ARV Services
Budget Code:	HTXS	**Program Area Code:**	11
Activity ID:	12329.08	**Planned Funds:**	$218,000
Activity System ID:	13841		

Activity Narrative: SUMMARY:

Toga Integrated HIV Solutions is a new PEPFAR partner awarded funding in July 2007. The aim of Toga is to establish a network of HIV monitoring laboratories and associated service access tools to resource constrained ARV treatment settings. This activity is focused specifically on building treatment and monitoring capacity by training healthcare professionals in HIV management, as well as providing systems for the monitoring of patients on antiretroviral therapy.

With FY 2008 funding, Toga will train doctors in the implementation of antiretroviral therapy (ART) (Kimera course in advanced ART), targeted at clinical support. This program area will emphasize training, with the target population being health care providers, in particular doctors (private and public). The training will follow National and PEPFAR guidelines. It is anticipated that this program area will twin with other PEPFAR partners. In this regard training will be coordinated so as to coincide with Togatainer deployment sites. Togatainers are movable, prefabricated laboratories, placed in settings that will allow for improved laboratory monitoring for the initiation and management of patients on ART. The selection of suitable settings is ongoing and tentative at the time of this submission, as funding has only been awarded in July 2007.

BACKGROUND:

The training activities of Toga, carried out by Kimera Solutions, a sub-program within the Toga umbrella organization, is an ongoing service and has been honed on the demand for rapid scale-up of clinical capacity. The course consists of a two-day workshop in conjunction with self-study material. Training activities will be aimed at senior healthcare professionals in the vicinity of Togatainer deployment sites. Once sites have been selected doctors will be invited to attend training courses. Continued clinical support will be provided subsequent to the training. The activities associated with training will be coordinated with interested health departments. It is anticipated that the training of doctors will enhance access to services for rural and peri-urban women and children.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Training

The training is targeted at healthcare professionals in the public and private/NGO sector, with the aim to provide healthcare professionals involved in the rollout of ARV treatment with a more advanced level of knowledge and insight into the treatment of HIV. The course covers the following dimensions of ART: starting ART, laboratory monitoring, treatment regimens, ART-associated adverse effects, changing treatment, adherence, tuberculosis, pregnancy, pediatrics, operational preparation, ART implementation and treatment success.

ACTIVITY 2: Clinical Support

The training of healthcare professionals is followed in programmatic sequence with clinical support. This component is of vital importance particularly at the initiation and in the early phases of an ART program rollout. The clinical support comprises an electronic decision support service, as well as a telephonic support line run by our clinical consultants. Clinical support is seen as an important educational reinforcement of the initial training.

ACTIVITY 3: White Rabbit (WR)

Toga will deploy 40 White Rabbit electronic requesting and reporting systems for use in conjunction with the laboratory service to produce cumulative patient reports on laboratory measurement. The WR system has been developed by Toga to integrate HIV disease measurement events over time against unique patient identity. The WR system is currently being deployed at selected PEPFAR partner sites. With direct funding, deployment will extend to clinics and general practitioners in the vicinity of each Togatainer (within a radius of approximately 30km to 50 km, depending on the setting). The activity will be coordinated by Toga with selected Togatainer placement sites, selected clinics and doctor's practices as well as interested local government structures.

Deployment of the WR electronic requesting and reporting system will entail: (a) A detailed site assessment to understand the site and patient workflow, including user information, training and technical requirements as well as existing patient numbering systems. Should a client not have a unique patient numbering system in place, advice and guidance is provided to establish a Primary Unique Patient Identifier (PUPI); (b) Provision of computer hardware where none exists or where hardware is of inadequate capacity; (c) Implementation of the WR system, which includes software and logistics support. The WR electronic requesting and reporting environment produces historically consolidated laboratory reports, enabling clinicians and other healthcare workers to assess the patient's laboratory measurement at a glance. The WR system integrates with the Toga laboratory information management system, allowing near real time access to patient results. The WR is considered a key enabler of the MeTRo (Measure To Roll Out) principle as a means of rolling out treatment capacity. In monitoring HIV-infected patients on treatment the availability of viral load test results at specific sites empowers other cadres of healthcare personnel to make management decisions. In patients who are well controlled on ARV therapy down referral to peripheral clinic are facilitated, thus decreasing the load on a central clinic or doctor. Should laboratory results of peripheral patients suggest up-referral this decision can be made by a nurse, based on a laboratory result. This fulfils an objective of the WHO down-referral strategy.

These activities support the 2-7-10 PEPFAR targets in South Africa.

Funding Source: GHCS (State)

Program Area: HIV/AIDS Treatment/ARV Services

Budget Code: HTXS

Program Area Code: 11

Activity ID: 3108.08

Planned Funds: $1,463,800

Activity System ID: 13875

Activity Narrative: SUMMARY:

Through training, mentoring and the introduction of quality assurance (QA) tools and approaches, URC/QAP will work with 65 South African Department of Health (DOH) antiretroviral therapy (ART) sites in 5 provinces (Eastern Cape, KwaZulu-Natal, Limpopo, Mpumalanga and North West) to improve provider and patient compliance with ART treatment guidelines and improve the delivery of quality ARV treatment services to HIV clients. The essential elements of QAP support include technical compliance with evidence-based norms and standards, interpersonal communication and counseling and increasing organizational efficiency. The emphasis area for this activity is human capacity development. The activity targets public and private health care workers, and people living with HIV (PLHIV).

BACKGROUND:

URC/QAP is currently training healthcare providers in 25 DOH ART service delivery sites in the use of QA tools and approaches for increasing compliance with ART guidelines. URC/QAP has developed a number of QA tools for healthcare facilities offering ART services. URC/QAP will increase the number of DOH ART-accredited facilities that it supports in the five provinces to improve the quality of care provided to all clients on ART. To strengthen HIV and AIDS services at facility level, URC/QAP plans to enhance community-based support for ART patients to ensure treatment adherence and active facility-based quality improvement using QA tools and approaches. In addition, URC/QAP will hire sessional medical staff in facilities in the 5 provinces to provide ART services. These providers will serve as mentors to DOH staff for six months to a year. This strategy will create local capacity to provide treatment services over time. URC/QAP will assist healthcare facilities to develop operational strategies to improve the care, treatment and follow-up of children and adolescents on ART. URC/QAP will also capacitate local community-based organizations (CBOs) and home-based care organizations (HBOs) to integrate QA tools and approaches for improved quality of their home-based case management and follow-up of ART patients.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Establish Facility-level Quality Improvement Teams

URC/QAP will work with provincial DOH facilities to identify a core team representing staff from ART and other service providers. Based on a review of better practices, the facility-based teams, with support from URC/QAP coordinators and other district staff, will be responsible for developing and implementing plans for improving the quality of ARV services as well as the continuum of care for patients on ART. Each facility team will be responsible for conducting periodic assessments to identify quality gaps in screening, treatment and follow-up of PLHIV on ARV treatment. These assessments will be used to design interventions for improving the quality of specific services. The assessments will use QAP-developed (based on the national guidelines) patient chart audits, patient-provider observations, interviews with providers, patients and care givers, among others.

URC/QAP will assist facility teams in developing and implementing strategic plans for expanding access to and improving the quality of ART services, in line with national guidelines. The key elements of the plan will include training, infection control and prevention, patient information, nutrition support and counseling, community involvement, follow-up system at treatment and other levels of care, use of data at facility level, and monitoring and evaluation of the program.

ACTIVITY 2: Training

Additional ART service providers and other staff will receive training in the provision of high quality ART services in FY 2008. URC/QAP will strengthen the supervision and support systems at community, facility, district and provincial levels. In addition, URC/QAP will provide job-aids/wall charts to improve compliance with clinical and counseling guidelines. URC/QAP will also work with facility staff, CBOs/HBOs and PLHIV associations to develop strategies for identification and referral of ARV defaulters as well as provision of treatment support to PLHIV on ART in their community, reducing loss of clients to follow-up. URC/QAP will visit each DOH facility/CBO/HBO at least twice a month to provide onsite mentoring and support to staff.

ACTIVITY 3: Human Capacity Development

URC/QAP will assist staff to provide family-centered and pediatric ART services. Within existing ART programs there is an identified need to strengthen pediatric ART care. In FY 2008, URC/QAP will expand these programs to ensure that ART accredited sites as well as sites providing follow-up care to pediatric and adult patients are capacitated to incorporate pediatric care and treatment into existing ART programs. Training will be provided to facility staff to ensure that ART programs are family-centered, enabling parents, children and other dependents to have access to HIV care and treatment services. In addition, emphasis will be placed on training facility staff to recognize the value of wellness programs for PLHIV, of which prevention with positives (PWP) is a key component. Wellness programs are essential to ensure that PLHIV not eligible or ready for ART are retained within the health system to enable regular follow-up and review of client ART eligibility. URC/QAP is developing linkages with these NDOH ART programs to target health facilities and HBO programs for adherence support. This process will continue in FY 2008, with expansion at QAP-supported facilities within all 5 priority provinces. Finally, URC/QAP will train facility and CBO/HBO staff in analyzing performance and quality indicators.

URC/QAP will recruit physicians and nurses to provide ART services at facilities in 5 provinces, this will increase the human capacity available at each facility and increase the number of HIV clients that are able to receive ART and other services. These providers will serve as mentors to local DOH clinical staff. This strategy will help in building capacity of local staff in providing ARV as well as high quality follow-up services.

URC/QAP will continue to train district and facility-level supervisors in QA methods and facilitative supervision techniques to improve the quality of ART services. URC/QAP has contributed to the development of the continuum of care for PLHIV policy document currently under development by the NDOH and will continue to support its development and implementation. URC/QAP will conduct quarterly assessments in each DOH facility, CBO, and HBO to assess compliance with national ART guidelines.

Activity Narrative:

ACTIVITY 4: Referrals and Linkages

URC/QAP will facilitate linkages to treatment for eligible PLHIV. All facility staff will be trained in national guideline compliance, QA methods specific to ART programs, and developing and implementing quality-specific improvement plans. These improvement plans include process redesign, integration of services, and enhancement of network development to improve referral patterns. URC/QAP has prioritized plans to strengthen the approach and referral of HIV-infected pregnant women and their infants from PMTCT programs to ART programs, with a well-functioning down referral system, and will continue to promote and expand these linkages. In addition, URC/QAP plans to strengthen linkages from OVC programs to routine maternal and child health services and ART programs. URC/QAP will also assist the DOH to scale-up best practices for ART referrals.

URC/QAP work contributes to the PEPFAR 2-7-10 goals by improving access to and quality of ART services.

11.4 Number of individuals receiving antiretroviral therapy by the end of the reporting period	6,000	False
11.5 Total number of health workers trained to deliver ART services, according to national and/or international standards	300	False

Indirect Targets

URC/QAP will ensure that both current and newly initiated clients receive quality clinical and counseling services. QAP conducts training with staff at facilities, as well as work with the district and provincial teams who support the staff. On-the job mentoring, job aids and support will be offered in the districts URC/QAP works in. Through training done at the facilities and strengthening of the district health teams, URC/QAP is indirectly contributing higher quality ARV service delivery. URC/QAP will begin to move into direct service delivery over the next few years by visiting each facility at least twice a month to provide on-the-job mentoring and support to healthcare staff.

Table 3.3.11: Activities by Funding Mechansim

Mechanism ID: 242.08 **Mechanism:** ACCESS

Prime Partner: JHPIEGO

Funding Source: GHCS (State)

Budget Code: HTXS

Activity ID: 2939.08

Activity System ID: 13781

USG Agency: U.S. Agency for International Development

Program Area: HIV/AIDS Treatment/ARV Services

Program Area Code: 11

Planned Funds: $4,293,000

Activity Narrative: This activity was approved in the FY 2007 COP, was funded with FY 2007 PEPFAR funds, and is included here to provide complete information for reviewers. The funding mechanism from field support to a local agreement for JHPIEGO is changing in October 2008 therefore a COP entry is being made to reflect this change in mechanism and activity number only. JHPIEGO activities under HTXS are expected to continue under the FY 2008 COP and funds are being requested in the new COP entry.

SUMMARY:

JHPIEGO's activities support efforts by the National Department of Health (NDOH) and public sector antiretroviral therapy (ART) sites in Gauteng to ensure access to and quality of ART services. The emphasis areas include human capacity and development (including task shifting for nurse managed ART services), and local organization capacity building. Specific target groups include people living with HIV (PLHIV).

BACKGROUND:

JHPIEGO has been working with the NDOH since FY 2004 to improve institutional capacity through training and dissemination of national HIV and ART guidelines and through support of a treatment technical advisor to the NDOH. In FY 06 and FY07, JHPIEGO partnered with the Foundation for Professional Development (FPD) (a PEPFAR-funded partner) to initiate a standards-based management and recognition approach for improving ART services. In FY 2008, JHPIEGO will continue to implement these interventions, aimed at improving access to and quality of HIV and AIDS service delivery. In FY 2007 JHPIEGO supported implementation of the NDOH's model for nurse-initiated and managed ART through an approach that will encourage a healthcare culture supportive of nurse-initiated and managed ART; a policy environment that will ensure that these frontline nurses have the training, funding, and ongoing support they require; and ensure that South African training institutions are strong partners in the efforts to achieve the ambitious targets set in the HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011 for increasing the proportion of adults and children started on ART by nurses. These activities will continue in FY 2008.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Performance Standards

Standards-based Management and Recognition (SBM-R) is a practical management approach for improving the performance, efficiency and quality of health services. It consists of the systematic utilization of performance standards as the basis for the implementing organization and related service delivery. Compliance with standards is recognized through formal mechanisms and is in line with NDOH standards and guidelines. In FY 2005 and FY 2006, JHPIEGO developed detailed performance standards for ART and introduced this process at four FPD-supported ART sites. Performance standards focused on twelve different areas of ART service delivery including pre-treatment, treatment commencement, and management of complications for both children and adults; pharmacy services; laboratory services; information, education and communication; health information systems; infrastructure; and human resources.

Based on the initial work by the South African Government in FY 2007, JHPIEGO will support scale-up of this process to other NDOH sites in the Northern Cape, especially those where ART will be integrated into primary healthcare services. JHPIEGO will coordinate with other PEPFAR treatment partners in the accreditation process. JHPIEGO will support scale-up of SBM-R for ART in the Gauteng province, or other provinces as requested by the NDOH. As a result of these interventions, access to and quality of ART services will improve for both children and adults.

ACTIVITY 2: Strengthening Nurse-Managed Antiretroviral Therapy and Comprehensive HIV and AIDS Services

In FY 2008, JHPIEGO will continue to support implementation of the NDOH's model for nurse-initiated and managed ART through an approach that will encourage a healthcare culture supportive of nurse-initiated and managed ART; a policy environment that will ensure that these frontline nurses have the training, funding, and ongoing support they require; and ensure that South African training institutions are strong partners in the efforts to achieve the ambitious targets set in the HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011 for increasing the proportion of adults and children started on ART by nurses.

JHPIEGO proposes strengthening both in-service and pre-service education with a focus on training nurses and providing on-going support to ensure their competency in day-to-day management of patients on ART and identification and referral of treatment complications from the health center to district hospital level. This will relieve the heavy client burden on tertiary ART institutions resulting in improved access for current clients and more clients getting on ART.

ACTIVITY 3: Expand Provincial and District Capacity of Accreditation and Site Readiness

In FY 2008, JHPIEGO will continue to work with the National Department of Health to build the capacity of the national, provincial and district teams to accredit sites. Activities will include adaptation of the accreditation tools for primary health care level, training and onsite mentoring of teams. JHPIEGO will also work with the sub-district level teams by providing support for implementation of site readiness plans and work with other USAID treatment partners to assist them in receiving ART accreditation for their sites.

These activities will indirectly contribute to the overall PEPFAR objectives by ensuring sustainability and quality of ART services. Technical experts working with NDOH will indirectly contribute to increased access to treatment services through site accreditation, and standards-based management of services will indirectly increase access due to improved quality of service. These activities contribute the PEPFAR goal of putting two million people on treatment, and support the USG/SA Five-Year Strategy by building capacity for ART service delivery.

Table 3.3.11: Activities by Funding Mechansim

Mechanism ID:	2808.08	**Mechanism:**	I-TECH
Prime Partner:	University of Washington	**USG Agency:**	HHS/Health Resources Services Administration
Funding Source:	GHCS (State)	**Program Area:**	HIV/AIDS Treatment/ARV Services
Budget Code:	HTXS	**Program Area Code:**	11
Activity ID:	3334.08	**Planned Funds:**	$2,455,000
Activity System ID:	13868		

Activity Narrative: SUMMARY:

I-TECH carries out activities to support the expansion of HIV and AIDS, tuberculosis (TB) and sexually transmitted infection (STI) care and treatment in the Eastern Cape (EC) through on-the-job clinical training/mentoring activities. The primary emphasis area for these activities is human capacity development; minor emphasis areas are strategic information and local organization capacity building. The primary target populations are doctors (public and private), pharmacists (public), and nurses (public)

BACKGROUND:

I-TECH has been working in the EC since 2003 to develop the capacity of clinicians in the care and treatment of HIV and AIDS, TB and STI. The activities described here were first funded by PEPFAR between FY 2004 and FY 2007. The EC Department of Health (ECDOH) specifically requested I-TECH to conduct on-the-job training and mentoring to augment didactic trainings conducted by the Eastern Cape Regional Training Centre (ECRTC) and other professional training organizations in the EC, as well as the placement of I-TECH mentors in the EC for longer periods of time (i.e., six to twelve months) to allow ongoing mentoring. Treatment/ARV Services activities were and will continue to be largely implemented by I-TECH's subcontractor, the University of California at San Diego (UCSD) Owen Clinic. I-TECH central office (Seattle) and South Africa country staff have and will continue to provide oversight and logistical support related to this activity.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Human Capacity Building and Program Sustainability: In-country Intensive Mentoring of the ECRTC Clinical Team

This activity continues the work begun in FY 2004 to mentor the EC RTC clinical teams in-country. FY 2008 PEPFAR funds will continue to support I-TECH's intensive mentoring model of the ECRTC's medical teams on a limited basis as the ECRTC medical teams' clinical care and mentoring capacities have improved. It is expected that up to three new RTC clinical team medical officers will be mentored by experienced ECRTC clinical team members and by year-round I-TECH UCSD mentors (see Activity 3). Specific activities for which FY 2008 PEPFAR funds will be used are itemized in Activity 2; Activity1 will occur simultaneously with Activity 2.

ACTIVITY 2: Human Capacity Building: Educational support of EC clinicians via in-country clinical training/mentoring and monitoring

In FY 2008 I-TECH and UCSD mentor teams will be placed in the EC year-round to mentor the two full-time I-TECH clinical mentors (see Activity 6 below), the I-TECH mentoring coordinator (see Activity 4), and health care workers (HCW) in EC clinics (includes clinics targeted and not targeted by the ECRTC in their FY 2008 plan). The I-TECH and UCSD mentor teams will include one to two clinical mentors: up to six infectious disease or HIV fellows spending a minimum of two months during each rotation, and up to six expert UCSD HIV faculty physicians, pharmacists or nurse practitioners spending a minimum of a month during each rotation. FY 2008 funds will support UCSD Owen Clinic administrative staff time, and the salaries, travel, lodging and expenses for the Owen Clinic mentor teams. I-TECH UCSD mentors and the Owen Clinic Director will visit the Mpumalanga regions to provide clinical mentoring (see Palliative Care; HIV/TB). Depending on the results of I-TECH's Limpopo Needs Assessment, clinical mentoring may be provided in this province (see Other Policy/Systems Strengthening). Up to six mentors are allocated for these two activities.

ACTIVITY 3: Sustainability: Mentorship Coordinator

This activity began in FY 2007 whereby PEPFAR funds were used to hire a local mentorship coordinator in the EC to plan and coordinate the in-country logistics and support for the UCSD clinical mentors, and provide clinical mentoring to Eastern Cape HCW. In FY 2008, funds will be used to pay the coordinator's salary and in-country travel expenses, as well as one trip to the UCSD Owen Clinic for intensive mentoring.

ACTIVITY 4: Human Capacity Building and Sustainability: Precepting senior level EC clinicians at the Owen Clinic

This activity began in FY 2004 whereby PEPFAR funds were used to support the air travel, lodging and per diem of committed EC clinicians to travel to the Owen Clinic for a two-week intensive training on systems of care and clinical management. The intent of this activity is to develop EC clinician leadership to champion HIV treatment issues through the further development of clinical skills, and increased knowledge of systems of care and quality improvement methodologies. FY 2008 funds will support the air travel, lodging and per diem to intensively train 2 ECRTC health care workers, the mentoring coordinator (see Activity 3), and the two full-time I-TECH South Africa doctors for two weeks each at the Owen Clinic on systems of care and clinical management issues (see Activity 6).

ACTIVITY 5: Human Capacity Building: Distance-based ongoing clinical consultation

This activity was first funded by PEPFAR in FY 2005. During UCSD/ECRTC trainings, EC clinicians are encouraged to contact the RTC team for clinical consultation as needed, who then forward the query and response to the UCSD Owen Clinical mentors for additional guidance before delivering their consultative advice. Achievements toward FY 2007 goals include the provision of 48 distance consultations to Eastern Cape HCW in the first months of FY 2007. In FY 2008, PEPFAR funds will support UCSD consultants' time (a portion of salaries) related to the time spent fielding consultations; estimated at five consults per week.

Activity 6: Human Capacity Building and Sustainability: Developing the treatment and mentoring capacity of two in-country clinical mentors

I-TECH's FY 2008 activities will be expanded to hire and mentor two doctors as full-time I-TECH mentors in the EC. Funds will be used to pay the doctors' salaries for twelve months and in-country travel expenses, as well as one trip each to the UCSD Owen Clinic for intensive mentoring.

Activity Narrative:

ACTIVITY 7:

Funds will be used to support pharmacovigilance capacity building. Health care workers will be trained on filling out the South African government forms for pharmacovigilance. Routine meetings will also be held with health care workers to highlight issues of data quality and interpretation of the data from the routine reporting for pharmacovigilance. The objective of this activity it to ultimately improve the quality of care that patients receive in public sector facilities.

By training a large cadre of healthcare workers to provide ARV services, I-TECH will contribute to the PEPFAR goal of providing treatment to 2 million people by increasing access to quality HIV/AIDS/TB/STI care and treatment.

Table 3.3.11: Activities by Funding Mechansim

Mechanism ID: 4763.08
Mechanism: N/A
Prime Partner: Xstrata Coal SA & Re-Action!
USG Agency: HHS/Centers for Disease Control & Prevention
Funding Source: GHCS (State)
Program Area: HIV/AIDS Treatment/ARV Services
Budget Code: HTXS
Program Area Code: 11
Activity ID: 8260.08
Planned Funds: $1,320,000
Activity System ID: 13911

Activity Narrative: SUMMARY:

Xstrata is a new PEPFAR partner, which received funding in FY 2007 for a public-private partnership with the Mpumalanga Department of Health (MPDOH). The implementing partner for this is Re-Action! Consulting (RAC). RAC will facilitate a co-investment partnership with Xstrata to provide support for strengthening targeted government clinic sites, continuing to improve access to basic preventive, clinical care and psychosocial support services in one district of Mpumalanga, extending into a second district during FY 2008. The project will build on a public-private mix model for strengthening HIV and TB service delivery that Xstrata and RAC has already begun to implement in the province with funding from Xstrata (dollar for dollar match with PEPFAR).

Xstrata and RAC will work through established partnerships with local government, MPDOH, community groups and private providers. Project deliverables have been defined in response to specific requests for assistance from the MPDOH. Major emphasis will be given to development of human capacity development, local organization capacity building and strategic information. The target populations are underserved communities of men, women and children and people living with HIV and AIDS in Nkangala District, extending to a second district during FY 2008, where Xstrata Alloys has its operations.

BACKGROUND:

Xstrata Coal is a subsidiary of a multi-national mining group committed to practical ways of achieving sustainable development and contributing to the health and social welfare of employees and their communities. The company employs 4,000 people at 11 mines (collieries) located within the socio-economically deprived Coal Powerbelt region of Mpumalanga. Xstrata Alloys has more than 10,000 employees with operations in 3 provinces (Mpumalanga, Limpopo, and North West) and Swaziland. This funding partnership enables scaling up the community extension component of Xstrata's comprehensive workplace HIV and AIDS program that is managed by RAC. The project is based on implementing a public-private mix service-strengthening model of capacitating government providers within primary care clinic sites to deliver HIV-related preventive, clinical and psychosocial care services. FY 2008 funding will allow continued support to sites established in FY2007 (working towards full site accreditation) and to expand the number of sites within two target districts. The scope of assistance is defined within a Memorandum of Understanding between Xstrata and the Mpumalanga Department of Health and Social Services (MPDOH), and responds to specific requests for support by the provincial department's HIV and AIDS Unit, as well as the district management teams. This fits within a broader range of interlinked corporate social investments being made by the Xstrata Group to support sustainable local development in these communities.

The project will provide technical assistance, health workforce capacity development, clinic infrastructure improvements, strengthening of pharmaceutical supply management systems and service monitoring for public sector primary care clinics to deliver quality HIV-related preventive and clinical care services. This will contribute to strengthening district-level primary health care service networks and district service management, with a strong focus on improving human resource capacity, including through training and deploying community outreach workers to deliver household-level services. The project works in partnership with other PEPFAR partners in the province to achieve synergies and avoid duplicating activities.

ACTIVITIES AND EXPECTED RESULTS:

Four activity areas will be implemented to strengthen and scale up antiretroviral treatment provision at government health care sites within two districts of Mpumalanga. Service improvement plans will be implemented at each site based on specific service strengthening needs that are identified and agreed with District Management Teams and facility managers. This will result in these clinics being accredited by the Department of Health as antiretroviral treatment sites (for 'down-referral' and/or treatment initiation) with stronger links to referral-level facilities. Referral linkages with antenatal clinic services will be improved to ensure continuing care of infected mothers and their children. Activities at Witbank Hospital will be coordinated with the Foundation for Professional Development (a PEPFAR partner).

Discussions are also underway with private companies to commence activities in the Northern Cape.

ACTIVITY 1: Strengthening primary health care and district hospital delivery of HIV-related treatment and related clinical care services

A multi-skilled RAC Service Strengthening Team will undertake a detailed situation analyses (together with the district management team) within each target sub-district to identify specific service strengthening needs and prioritize sites for accreditation/down-referral. Service improvement plans will be developed to systematically address these needs. Strong linkages will be created between these first-level sites and second-level facilities for appropriate referral of patients and 'down-referral' of treatment, where necessary. Services will be improved overall to ensure that HIV-infected adults and children attending these sites have access HIV-related treatment, care and support interventions and that these services are appropriately integrated into routine primary care services, so that service capacity is strengthened overall.

Physical upgrades to clinic infrastructure will be undertaken through Xstrata co-investment and essential equipment will be procured. Health information management systems and patient monitoring systems will be strengthened through in-service training, technical assistance and procurement of equipment where necessary.

Trained and supervised community outreach workers will be deployed to undertake household-level health risk assessments (with particularly emphasis on reaching women and children) and provide referrals for HIV treatment, treatment literacy, follow-up and adherence support within households and to recover treatment defaulters.

Health worker training needs will be addressed through suitable in-service training delivered in collaboration with other PEPFAR partners, based on national standards and integrated management approaches. Technical assistance and training will be provided to improve public sector human resource management capacity so that health workers can be more effectively recruited to fill vacant positions at these sites. Critical staff positions will be filled to ensure that HIV treatment services are not compromised. Appropriate

Activity Narrative: task-shifting will be encouraged.

ACTIVITY 2: Direct HIV care and antiretroviral treatment provision

A multi-disciplinary care team will continue scaling up delivery of chronic HIV care and treatment at the selected clinics in the province. MPDOH sites will be assisted with human resource capacity to deliver HIV services for patients initiated and already on antiretroviral treatment. Antiretroviral drugs to eligible community members at these sites will be provided by the MPDOH through a down-referral mechanism. Access to TB diagnosis and treatment will be improved at supported sites by implementing TB/HIV collaborative activities such as active HIV screening of TB patients for early ART initiation.

ACTIVITY 3: Community Support

Linkages with community-based service organizations (including faith-based organizations and non-governmental organizations) will be strengthened and all providers will be encouraged to participate in delivering their service tasks in more coordinated ways through the 'public-private mix' approach (which RAC will support district management teams to oversee). Peer support groups will be established at all sites and linkages to the community will be strengthened through community outreach services.

Community outreach workers will assist with patient retention in treatment programs by conducting home visits to assess why patients are defaulting on clinic visits and make appropriate referrals.

Sustainability of this activity area for ongoing support to deliver antiretroviral treatment is assured through the public-private partnership (PPP) between Xstrata and the Mpumalanga Department of Health.

By providing support for HIV treatment in underserved communities, Xstrata is contributing to the 2-7-10 PEPFAR goals.

With FY 2008 reprogramming funds, RAC will expand support for comprehensive HIV care and treatment services in an additional district in Mpumalanga (Gert Sibanda), and also expand the public-private mix model in 3 new provinces (Limpopo, North West and Northern Cape).

Table 3.3.11: Activities by Funding Mechansim

Mechanism ID:	271.08	**Mechanism:**	N/A
Prime Partner:	Right To Care, South Africa	**USG Agency:**	U.S. Agency for International Development
Funding Source:	GHCS (State)	**Program Area:**	HIV/AIDS Treatment/ARV Services
Budget Code:	HTXS	**Program Area Code:**	11
Activity ID:	9453.08	**Planned Funds:**	$29,554,000
Activity System ID:	13797		

Activity Narrative: SUMMARY:

Right to Care (RTC) will use FY 2008 PEPFAR funds to strengthen the capacity of healthcare providers to deliver ARV treatment (ART) services to eligible HIV-infected individuals in five provinces. Emphasis will be placed on increasing the number of HIV-infected children and pregnant women on ART. The emphasis areas are renovation, gender, human capacity development, and local organization capacity building. The primary target populations are people living with HIV (PLHIV), public and private healthcare providers.

BACKGROUND:

RTC's ARV Treatment (ART) services are a continuation of activities, which have been USG-funded since 2002. Originally initiated as a holistic education, testing, care and treatment program for the employed sector (called the Direct AIDS Intervention (DAI) program), RTC's ART activities have expanded their reach through a range of partnerships with government sites, private sector providers and NGO and FBO clinics and organizations. RTC is now reaching substantial numbers of people from predominantly vulnerable populations in five provinces. RTC's ART activities consists largely of support for the ART services of all of RTC's treatment partners, including its Thusong network of private practitioners, many government sites and NGO and FBO clinics and organizations. In addition, RTC itself implements the ART components of the DAI and other partnership workplace programs. ART training is conducted by RTC's Training Unit as well as by several sub-partners. With FY 2008 funding, RTC will expand its pediatric treatment, expand into a male-only clinic and increase its focus on reducing stigma and encouraging disclosure. RTC will consolidate and expand its support for government sites, NGO and FBO clinics and organizations and private sector programs, and build on past successes (over 22,500 people reached with ART by the third quarter of FY 2007).

ACTIVITIES AND EXPECTED RESULTS:

RTC will use PEPFAR funds to accelerate the implementation of the national rollout plan at government sites in partnership with the National Department of Health (NDOH). As the procurement of ARV drugs and lab services is undertaken by government in these sites, PEPFAR funds will be used to expand access to treatment. RTC has successfully negotiated for the NDOH to supply certain NGO and FBO sites with ARVs and laboratory services, freeing PEPFAR funds to support new treatment sites.

PEPFAR funds will be used for: (1) human capacity development and salaries (consultant and part-time healthcare workers) at all ART facilities: NGO and FBO clinics and organizations receive sub-awards for doctors, nurses, pharmacists and counselors, and a fee-for-service arrangement exists with the network of private sector service providers for the Thusong and private programs; (2) developing a training program for pharmacy assistants as human capacity development for the distribution of ARVs and HIV services; (3) addressing minor infrastructure needs where necessary at NGO, FBO and government sites, and to maintain RTC's mobile clinics; (4) NGO and FBO clinics use PEPFAR funds for the laboratory monitoring of HIV patients, as well as for the procurement of health commodities; and (5) covering the costs of labs for the new mobile clinic treatment program servicing remote communities in Mpumalanga, in collaboration with another PEPFAR-funded partner, FHI.

Down referral sites will be established with the Department of Health in Gauteng and Mpumalanga in FY 2007 for stable patients. Human capacity, minor infrastructure and training will be provided to these sites. A 'smart card' system is being developed with Therapy Edge and Supply Chain Management Service to track transfer of patient data.

RTC supports its ART providers by disseminating policies and guidelines and sharing best practices. Ongoing quality assurance and supportive supervision is undertaken by centralized treatment experts. RTC and several of its sub-partners will also provide training in ART services for health workers. In the delivery of medical ART services, doctors are given ongoing support in clinical decision-making, prescribing and case management by RTC's team of medical HIV experts, through RTC's Expert Treatment Program (ETP). The ETP management model enables primary healthcare providers to communicate directly with HIV experts. ETP uses a sophisticated web-based IT tool in the form of TherapyEdge, licensed to RTC, which enables the effective management of patients and includes a secure patient database. The Clinical Mentorship and Preceptorship Program (CMPP) will continue to enhance the provision of HIV care and clinical expertise across the intermediate levels of health care within the overburdened public healthcare system. Through human capacity development, increased numbers of people will receive care, support and treatment. The anticipated benefit of the mentorship program is the dissemination of training and knowledge gained by healthcare personnel in the urban academic site to rural and smaller sites around the country.

A new PPP, the AIDS Treatment Institute (ATI), is proposed with Vodacom and the DOH. Vodacom will provide all infrastructure requirements for a HIV care and treatment centre for indigent patients, with the DOH supplying all ARV and covering lab costs. PEPFAR funds will be used for training, human capacity development of necessary health care workers, and ongoing technical assistance. This clinic is targeted to provide treatment for 10,000 patients, care and support to 15,000 patients, CT to 40,000 individuals and prevention education to 100,000 in FY 2008. Vodacom, other private sector organizations and DOH will provide over 90% of support for this program, and PEPFAR funds will provide less than 10% of the PPP budget.

RTC will ensure that each ART patient at RTC-supported facilities receives a minimum package of ART services, including clinical and pathology monitoring, adherence counseling and support, and follow-up of defaulting ART patients. Adherence activities will include a focus on reducing stigma and encouraging disclosure in order to enhance drug compliance and to improve patient retention. Emphasis will be placed on increasing the number of HIV-infected children and pregnant women on ARVs according to the national treatment guidelines. Mobile clinics are used to bring ART services to farm workers and other vulnerable populations in rural areas of the Northern Cape and Mpumalanga.

To support the implementation of ART, adherence counseling and support is implemented through individual counseling, support groups and direct observed therapy, either clinic-based or community-based. In order to complement clinic staff, support is provided to at least one community-based care organization to partner with each treatment site. This team is tasked with monitoring patients' adherence, providing support

Activity Narrative: such as nutrition, wellness and welfare services, and providing home-based care services for those that are terminally ill. The team also provides referral services to clinics and in some cases, arranges transport or hospice services.

RTC anticipates opening a male-only clinic in partnership with the Clinical HIV Research Unit (CHRU) at Wits University. This clinic will focus on recruiting adult males from local industries dominated by males in the private sector as well as males from indigent populations. Patients in this clinic will receive ART services, clinical and pathology monitoring, with specific adherence and other support designed to meet the needs of men. Best practices on adherence and support as well as clinical care from this clinic will be shared with other RTC partners.

In FY 2008, RTC will contribute to increased patients on ART at various sites towards the PEPFAR treatment target of 2 million patients, and will train healthcare workers in ART services. RTC will support the PEPFAR vision outlined in the Five-Year Strategy for South Africa by expanding access to ART services for adults and children, building capacity for ART service delivery, and increasing the demand for and acceptance of ARV treatment.

Table 3.3.11: Activities by Funding Mechansim

Mechanism ID: 510.08

Mechanism: N/A

Prime Partner: Soul City

USG Agency: HHS/Centers for Disease Control & Prevention

Funding Source: GHCS (State)

Program Area: HIV/AIDS Treatment/ARV Services

Budget Code: HTXS

Program Area Code: 11

Activity ID: 3056.08

Planned Funds: $485,000

Activity System ID: 13812

Activity Narrative: SUMMARY:

Soul City is implementing a media and community-driven program to strengthen prevention, and increase awareness of and demand for HIV care and treatment services, including treatment literacy. There are two activities which target adults and children through training and community mobilization nationally. The emphasis areas gender, education, human capacity development and local organization capacity building.

BACKGROUND:

Soul City has received PEPFAR funding since FY 2005 to implement a comprehensive HIV and AIDS program that includes improving access to treatment and adherence counseling. Soul City has a long history of partnership with the South African Government (SAG), collaborating with the National Departments of Health (NDOH), Education (DOE), Social Development (DOSD), Transport, and Public Service and Administration, which includes financial support from NDOH, and potentially DOSD in the future. All Soul City interventions pay particular attention to addressing gender issues particularly those that are associated with driving the epidemic. These include power relations and gender violence. Violence reduction will be a particular focus of Soul City over the next five years as will those issues that promote violence such as substance abuse. There are 18 partner NGOs which currently implement training and community mobilization activities across the country.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Soul Buddyz Club

Based on the Soul Buddyz media intervention (described under Prevention), Soul Buddyz Club is a community mobilization intervention aimed at children, based mainly at schools and facilitated voluntarily by teachers. Children in the clubs learn about life skills covered in the Soul Buddyz series and are encouraged to do outreach work in their schools, families and communities. The content focus of the clubs is mainly on prevention, but the Clubs offer a major opportunity to educate children on all aspects of antiretroviral treatment. These children then become peer educators as well as being able to support people in their communities on treatment. PEPFAR funding will be used to support approximately 80 percent of this activity, with other donors funding the remaining 80%. This activity will be implemented in partnership with the DOE at both a national and provincial level. This activity contributes towards PEPFAR objectives by promoting treatment literacy and treatment compliance.

ACTIVITY 2: Information, Education and Communication (IEC) materials

This activity relates to information and training materials for use in facilitated learning settings, as well as the general public. Soul City develops flexible training materials in five local languages. These deal with all aspects of the epidemic, in particular prevention stressing AB as well as antiretroviral treatment (ART) support and support for home-based care and orphans and vulnerable children. These materials are used by 18 sub-partner NGOs in a cascade training model. Through this training, trainees are given the support and skills with which to become mobilizers in their community. More than 200 training sessions will be conducted in FY 2008 with an average of 30 people per session. Soul City has produced the following treatment literacy materials: a booklet for people newly on ART; a booklet for healthcare workers providing ART; and a booklet for people who are caring for children on ART. In FY 2008 these materials will be updated and translated into other languages if necessary. At least 500,000 copies of these materials will be distributed through Soul City's training partners and to facilities providing ART, including PEPFAR partners. These materials are also distributed to health facilities, through a partnership with the Department of Health.

PEPFAR funding will be used to support approximately 70 percent of this activity, with other donors funding the remaining 30%. This activity addresses gender, stigma and discrimination and education with particular attention to building the organizational capacity and sustainability of the implementing NGO sub-partners in the form of organizational and human resource development assistance. This activity contributes towards PEPFAR goals by promoting treatment literacy and treatment compliance.

The long-term sustainability of Soul City is being addressed through diversifying its funding sources as well as through the establishment of a broad-based empowerment company which can take ownership of shares and whose dividends will accrue to Soul City.

By providing clear and relevant messages regarding ARV treatment and adherence, Soul City's activities will have a direct and measurable impact on demand for and effective use of ARV treatment in South Africa. These achievements will contribute to the realization of the Emergency Plan's goal of treating 2 million people, and support the treatment goals outlined in the USG Five-Year Strategy for South Africa.

Mechanism ID:	2801.08	**Mechanism:**	N/A
Prime Partner:	HIVCARE	**USG Agency:**	HHS/Centers for Disease Control & Prevention
Funding Source:	GHCS (State)	**Program Area:**	HIV/AIDS Treatment/ARV Services
Budget Code:	HTXS	**Program Area Code:**	11

Activity ID: 3299.08

Planned Funds: $2,134,000

Activity System ID: 13773

Activity Narrative: SUMMARY:

HIVCare will use FY 2008 PEPFAR funds to work with the Free State Department of Health to provide antiretroviral treatment in a private health facility to patients who do not have medical insurance and who are referred from the public sector waiting lists for treatment. The Medicross Medical Centre, a well equipped private primary healthcare center, provides the main resource base and in conjunction with thirteen other sites, will provide an effective means of properly distributing ART to patients who are either referred from public sector facilities or who access the site by word of mouth. The emphasis areas for this program will be human capacity development and local organization capacity building. The target population includes men and women; families (including infants and children) of those infected and affected, factory workers and other employed persons, and government employees - specifically teachers, nurses and other health workers (who do not have medical insurance). A further specific population that will be targeted will be secondary school children. The most significant target group is those persons that cannot access services in the public health system.

All treatment administered is done in strict accordance with South African Government (SAG) guidelines and with due regard to the need to transfer the patients back to SAG facilities when feasible. Additional attention is to be given to the screening and treatment of TB amongst the patients attending the program. The linkage with the youth centre will ensure that we have a larger proportion of younger persons being attended to, specifically adolescents aged 10-14 and 15-24. This focus on the youth should further encourage some involvement with the street youth and it is anticipated that the program will be marketed amongst those NGOs working with the street youth as a testing and treatment site.

BACKGROUND:

PEPFAR funding for the HIVCare project commenced in June 2005. The main thrust of the activity was to match the Free State Department of Health (FSDOH) with partners from the private sector (in this case Netcare, the largest private sector health provider in South Africa) in order to build private sector capacity and absorb some of the burden from public sector facilities. Many FSDOH centers have waiting lists of people for ARV treatment. Patients from these waiting lists who meet the eligibility criteria for this program are referred from those public sector clinics to one of the four primary health centers in Bloemfontein and one in Welkom for treatment. The FSDOH is a collaborating partner in this public-private partnership.

ACTIVITIES AND EXPECTED RESULTS:

The HIVCare treatment sites will provide all medical services related to the delivery of HIV care and treatment. Management and coordination activities will be provided by HIVCare. The majority of patients will be referred from public clinics in the FSDOH network to the thirteen HIVCare centers based on the following criteria: (1) Clinical criteria (CD4 <200 cells/mm3 or WHO stage III or IV); (2) Inability to pay (lack of private insurance or state coverage) and (3) Overcrowding at referring clinic.

Among the non-medical criteria for enrollment (based on the SAG's Operational Plan for Comprehensive HIV and AIDS Care, Management and Treatment for South Africa and a request from the FSDOH), is that the patients have a stable point of contact to assure continued follow-up. HIVCare relies heavily on telephone access to ensure that patients keep scheduled physician visits, collect their medication, and respond to other questions.

Patients referred to the program receive PEPFAR-funded consultations and exams from HIVCare physicians, who will also order relevant tests and refer patients to expert specialists when necessary. The package of care also includes counseling and testing (for patients who do not know their status), adherence counseling, and access to therapeutic nutrition support as per the national guidelines and OGAC guidance. An initiative aimed at improving overall compliance and treatment efficacy is the distribution with the medication of a parcel of nutritional supplements. The supplements provide a single fortified meal per day for each of the indigent patients on ART and aids in the absorption of the medication. Patients are assessed based upon their BMI and general condition. Benchmark weight amongst patients starting ART at the center is just 55kg(-5.2). The patients that are on the waiting lists for ARV treatment at the public health facilities are offered the option of attending the HIVCare treatment sites. The patients that choose the HIVCare program present at the treatment center with a referral letter and other clinical notes (e.g. CD4 count) from the public health center. The patients meeting the clinical criteria are enrolled onto the program. Where patients present directly at the HIVCare treatment center and are found to be in need of TB treatment or treatment of an opportunistic infection requiring specialized treatment, hospitalization or investigative procedures, are referred to the local public facility for care. Similarly radiography and pathology for investigative procedures is provided by the public health facilities. This is based on the request from the FSDOH to provide only a limited range of services, and the HIVCare program is only meant to assist with the unmet demand at the public sector sites, rather than create a parallel health service delivery program. Due to this working relationship, referrals between the HIVCare sites and public sector sites are seamless. With regard to pregnant patients, they receive PMTCT drugs and information on its use prior to the birth event. Subsequent to this, the patient returns to the center to continue treatment and unless specifically rejected by the mother, infant formula is made available. Prophylaxis syrup is also made available to the infant until it is possible to perform the PCR test to determine the infant’s status.

Data is shared with the DOH on two levels. Firstly data on all new patients enrolled onto ART is provided by the pharmacy to the provincial authorities. Secondly a return is submitted to the National Department of Health, with a copy to the Provincial DOH, giving the data of all those on the program. In addition to this, a representative of HIVCare attends the monthly provincial task team meetings.

In addition, HIVCare will expand its existing project to target children as part of its continuum of care. This activity targets children between the ages of six and secondary school age through HIV awareness activities. Older children will be provided with access to HIV care and treatment, as well as psychosocial support services (in line with relevant South African laws and regulations pertaining to healthcare for minors). A teen center catering for the specific needs of this age group has been established and PEPFAR funding will be applied in continuing the treatment started in FY 2007. The funds will be specifically applied in providing ARV treatment to children and some prevention materials (including abstinence and being faithful) at a number of schools in order to expand awareness of HIV care and treatment services offered by

Activity Narrative: the program. The teen center will provide a testing service to local orphanages with treatment where not otherwise provided through SAG resources. Other referrals will be made by the FSDOH clinics in the area and through HIVCare's collaboration with other organizations, including the Anglican Church and Red Cross Society.

A number of support groups have been established aimed at involving the partners of the mainly female patients in the treatment process. These groups meet weekly and the aim is to promote support for the patients among their family members and also to get their partners to test and where necessary to join the treatment group. The Welkom area will include two treatment sites which should encourage a greater proportion of male patients into the program as a result of the number of large mines in close proximity and their use of migrant, mainly male labor. Case managers employed by HIVCare provide psychosocial support, treatment management and compliance promotion. This individualized management approach will also include telephone support for patients and their families, information about the condition and its symptoms, nutrition advice and healthy living. Case managers actively assist patients to identify and utilize the family and community structures that may exist as well as providing information on other available support . A defaulter program exists that utilizes local resources - Home Based Carers - to follow up not compliant patients. The service is provided through the church and the Red Cross.

By providing comprehensive ARV services to patients and promoting ARV services for a large population of underserved people living with HIV, and who do not have private insurance) and school age children, HIVCare is contributing to the PEPFAR goals of placing 2 million people on ARV treatment and providing care for 10 million others who are infected with HIV. These activities also support care and treatment objectives outlined in the USG Five-Year Strategy for South Africa by expanding public-private partnerships and expanding care to an underserved population.

Table 3.3.11: Activities by Funding Mechansim

Mechanism ID:	5191.08	**Mechanism:**	N/A
Prime Partner:	Reproductive Health Research Unit, South Africa	**USG Agency:**	U.S. Agency for International Development
Funding Source:	GHCS (State)	**Program Area:**	HIV/AIDS Treatment/ARV Services
Budget Code:	HTXS	**Program Area Code:**	11
Activity ID:	9446.08	**Planned Funds:**	$22,022,260

Activity System ID: 13792

Activity Narrative: SUMMARY:

The Reproductive Health and HIV Research Unit's (RHRU) will provide ARV rollout support services with Department of Health (DOH) partners in over 30 facilities in 4 provinces. The emphasis areas are renovation, human capacity development, and wrap-around programs. Services target people living with HIV (PLHIV) and their families, including children, pregnant women, caregivers, doctors, nurses, traditional healers, and other healthcare workers.

BACKGROUND:

RHRU currently provides technical support to the South African Government (SAG) that includes the national ARV rollout. With PEPFAR funding since FY 2004, RHRU has provided regular onsite support, direct treatment, training and quality improvement to provincial departments of health (DOH) sites in Gauteng, North West, Limpopo and KwaZulu-Natal (KZN). RHRU will continue these activities as well as an inner city program in Johannesburg. Up and down treatment referral systems are being improved in all provinces. In addition, RHRU will continue the provision of counseling and testing (CT), palliative care, and prevention services. RHRU will develop service delivery models that can be replicated and expanded, and produces lessons learned to share with others.

An effective, sustainable ARV treatment (ART) program is founded on strong partnerships with local public sector treatment sites. The needs of each facility vary, and successful incorporation of ARV services at facilities requires a thorough facility-based situational analyses. RHRU's aim is to deliver decentralized HIV care or up and down referral between hospitals and related primary care clinics. ARV clients will be identified, screened, prepared and initiated on ARV treatment with access to future care at up or down referral sites. This system reduces congestion at primary treatment sites and improves patient access to care.

As of June 2007 RHRU-assisted sites were treating over 28,000 people with ART, and over 2,000 health providers had been trained in ART. RHRU will continue assistance in existing sites and expand services to several new sites. Pediatric support as well as ART for pregnant women will be expanded. In addition, RHRU will continue an HIV Maternal Health Outreach Service, and provide planning, training and technical assistance (TA) to two primary healthcare clinic (PHC) networks in Gauteng and KZN. This will enable these clinics to receive down-referred patients, and initiate new patients in selected sites. Nurse-based services will be promoted whenever feasible.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Treatment Support

Specialist HIV treatment teams will support urban and rural ARV sites for adults (including pregnant women) and pediatrics. They will provide TA to new sites, and will develop and facilitate referral networks. Teams include a doctor, nurse, management specialist and counselor and will rotate among a cluster of treatment facilities providing onsite training and management support. In most cases, these teams will be anchored at each site by a permanent quality improvement nurse and a patient tracker to reduce the number of patients lost-to-follow-up and lost to initiation. The continuum of care will be emphasized including: prevention, healthy lifestyle, responsible behavior, nutrition advice, opportunistic infection prevention/treatment, palliative care, and ART. Materials previously developed to educate healthcare workers and HIV clients about HIV care will be utilized. Outreach teams will provide ARV and referral clinics with TA on up and down referral models. The teams will assist local clinic staff to improve practice, integrate and expand services (including TB, see TB section), and maximize referral for CT, palliative care and ART. As part of this, clinic renovations and provision of park homes, to maximize quality service delivery, may be necessary in selected sites. RHRU will also explore the possibility of linking with the private health sector to access and refer indigent populations into public sector care through low salaried family members on basic medical aid plans. Furthermore, senior staff will provide TA to national and provincial government in the development of policies and guidelines. ARV treatment and HIV care for perinatal women will provide outreach in maternal services. Family-based and gender-specific services for underserved groups such as men and high-risk women will also continue to be expanded.

ACTIVITY 2: Human Capacity Development

Insufficient skills in HIV care and program management have been a barrier to scale-up of site support. RHRU will develop an internal site-based training program to enhance staff skills. RHRU also offers a structured program for young doctors interested in pursuing a career in HIV. All RHRU staff involved in the PEPFAR program will become skilled HIV clinicians and program implementers, benefiting the program in the short term, and improving the South African skill base in public health in the longer term.

RHRU will provide DOH staff in ARV sites with expert capacity and TA to develop models of effective service delivery using existing infrastructure and resources. It will emphasize clinical training and promotion of quality improvement techniques that can be applied by the DOH staff to develop local solutions to local problems. The teams will provide onsite support to clinical management, referral, patient flow and data management.

Through the PHC and decentralized care projects, RHRU will assist PHC sites to integrate HIV care into routine service delivery and will support sites with ARV accreditation if appropriate. Nurses will lead these services, with doctor support when necessary (task shifting). RHRU will conduct formal training courses including foundation courses in adult and pediatric ART for healthcare providers and traditional healers, and HIV management for nurses and doctors.

ACTIVITY 3: Pediatrics

RHRU and its partners will expand pediatric and services for young people to additional provinces based on a review of needs and requests from provincial authorities. The pediatric clinical support teams will rotate through DOH sites, capacitating and strengthening clinical skills, and supporting the development of referral networks. They will aid collaborations between healthcare facilities and local FBOs, NGOs and CBOs to

Activity Narrative: provide holistic care for children on ART. RHRU will play a pivotal role in initiating pediatric ARV services at facilities where no pediatric services exist. Innovative methods of improving pediatric and adolescent adherence to ART will be investigated.

The National Adolescent Friendly Clinic Initiative (NAFCI) supports the public sector to provide quality services geared to youth, and are developing a referral system for HIV-infected adolescents to receive ongoing care and provision of ART. RHRU will support services at NAFCI sites in proximity to HIV treatment facilities in Soweto.

ACTIVITY 4: Referral Networks

RHRU will provide training, mentoring, management support and consultants across 4 provinces, to assist DOH ART sites with referral processes. This includes increasing referral capacity at secondary sites to channel and monitor stable patients at peripheral sites closer to patient's homes. This mechanism will reduce congestion at primary sites, enable clinics to see more patients, reduce patient transportation costs and increase adherence. RHRU will aid capacity development and training of local organizations, as well as develop linkages, referral systems, human resources, information, education and communication (IEC), needs assessments, policy and guidelines and strategic information.

ACTIVITY 5: Nutrition

RHRU will support several ART sites including TB hospitals in Johannesburg and Durban by employing dieticians to provide TA, coordinate supplies of nutritional supplements from the district health office to facilities for pediatric and TB/HIV-infected clients, provide nutrition information and counseling support and develop IEC materials. RHRU will provide TA to national and provincial DOH about appropriate nutrition interventions at different stages of disease in people infected with HIV and TB.

ACTIVITY 6: Monitoring and Evaluation

In FY 2008, RHRU will continue to undertake M&E activities to inform and develop quality HIV care.

These activities directly contribute to PEPFAR's goal of 2 million people on treatment. RHRU will support the South Africa 5 year strategy by expanding access to HIV services, improving ARV service delivery, and increasing the demand for and acceptance of ART.

Activity ID:	12332.08	**Planned Funds:**	$2,808,500

Activity System ID: 13365

Activity Narrative: SUMMARY:

As an Umbrella Grants Management (UGM) partner, Academy for Education Development (AED) supports institutional capacity building, technical assistance and grants administration for indigenous organizations that implement PEPFAR programs. These partners and sub-partners consist of indigenous NGOs, FBOs, and CBOs that were selected through the Inter-Agency PEPFAR Annual Program Statement (APS) and have met the criteria for full and open competition. The main functions of the UGM program are: 1) to facilitate further scale-up of HIV and AIDS care services and (2) to develop indigenous capability, thus creating a more sustainable program. The emphasis area is Human Capacity Development, Local Organization Capacity Building and Strategic Information, and the primary target populations are local organizations.

BACKGROUND:

AED has extensive experience managing grant's programs on behalf of USAID with PEPFAR funds. Prior to award of the UGM under the South Africa APS, AED was already managing grant programs funded with PEFPAR dollars in Ghana and Honduras, and providing TA and capacity building to PEPFAR partners on palliative care and OVC work in Mozambique and Kenya. In addition, AED has been sourced as USAID's exclusive partner for capacity building to the 23 NGOs funded under the PEPFAR Round One New Partners Initiative. As such, AED is well experienced in providing TA and capacity building on the broad array of technical areas related to PEPFAR programs, monitoring and evaluation, organizational development and finance management. In addition, AED has also been a key PEPFAR implementing partner in South Africa and is thoroughly familiar with working on HIV and AIDS program within that context.

As a UGM partner, AED will not directly implement program activities, but rather act as a grants administrator, technical assistance provider, and mentor for sub-recipients, who in turn carry out the assistance programs. AED closely collaborates and coordinates with the South African Government (SAG) in supporting PEPFAR partners through the umbrella grant mechanism. Although some of the partners work closely with various SAG Departments, AED's primary interface with the SAG is through the Senior Management Team (SMT), which includes key staff from USAID, National Departments of Health and Social Development, and representatives from the provincial departments. Under AED, between 6 and 11 indigenous partners will be supported via sub-grants and technical assistance. One or more of these may provide treatment services.

Treatment programs include patient uptake, counseling and testing, doctor consultations, laboratory testing, treatment management, adherence support, patient counseling, and quality assurance monitoring. The treatment partners work in both the public and private sector. Partners equip government clinics and hospitals with human resources (doctors, nurses, pharmacists, and counselors), management systems and community mobilization and outreach. Partners assist with infrastructure renovations when required. These programs also offer specialized training to improve the clinical, management, and leadership of health professionals to deliver ART services. Treatment partners engage private doctors, traditional healers, church groups, and people living with HIV to extend and enhance HIV care and treatment.

ACTIVITIES AND EXPECTED RESULTS:

Institutional capacity building of local organizations is a key feature of the umbrella grant mechanism and is designed to promote the sustainability of HIV and AIDS treatment programs.

ACTIVITY 1: Grants Management

AED will award and administer grants to partners selected through the PEPFAR APS competitive process to implement HIV and AIDS activities, including treatment activities. This involves an array of related activities including award and administration of grants, monitoring of grant progress, meeting reporting requirements, financial oversight, ensuring compliance with USG regulations and grant closeout. AED will monitor ARV services program implementation and adherence to financial regulations. This involves provision of extensive technical assistance to partners on project development and implementation, financial management, monitoring and evaluation, and reporting.

ACTIVITY 2: Capacity Building

AED will support institutional capacity building of indigenous organizations. (Capacity building activities are defined as activities that strengthen the skills of indigenous organizations to implement HIV and AIDS programs efficiently, with diminishing reliance on internationally-based technical assistance and support) AED will support activities to improve the financial management, program management, quality assurance, strategic information (M&E) and reporting, and leadership and coordination of partner organizations implementing treatment activities.

ACTIVITY 3: Monitoring and Evaluation and Reporting

AED will provide support to partners providing ARV services in monitoring and evaluation, in order to strengthen measurement of the implementation and impact of program activities. M&E support for ARV services partners include: measurement of program progress; provision of feedback for accountability and quality; and implementation of information management systems. In addition, AED will provide supportive supervision to provide guidance, monitoring, mentoring and oversight through site visits, technical assistance, and performance evaluation.

The management of service delivery programs under this project will contribute to the PEPFAR goals of providing treatment to 2 million HIV-infected people; preventing 7 million HIV infections; and providing care to 10 million people, including orphans and vulnerable children.

Funding Source: GHCS (State)

Program Area: HIV/AIDS Treatment/ARV Services

Budget Code: HTXS

Program Area Code: 11

Activity ID: 2997.08

Planned Funds: $2,619,000

Activity System ID: 13371

Activity Narrative: SUMMARY:

The Africa Centre Hlabisa antiretroviral treatment (ACHART) program aims to deliver safe, efficient, equitable and sustainable ART to all who need it in the Hlabisa district through the district health department, rural KwaZulu-Natal. The target population for the treatment program is people living with HIV (PLHIV), HIV-infected pregnant women and HIV-infected infants and children. The emphasis area of this program is human capacity development, renovation, and local organization capacity building.

BACKGROUND:

The ACHART Program is a partnership between the KwaZulu-Natal (KZN) Department of Health (DOH) and the Africa Centre, a population research department of the University of KwaZulu-Natal. The DOH program is based in Hlabisa sub-district, and provides health care to 220,000 people at a government hospital and 14 fixed peripheral clinics. The ACHART Program is embedded in the DOH antiretroviral therapy rollout where the Africa Centre and KZNDOH work to complement each other's abilities and resources in providing ART. The Africa Centre has expertise in infectious diseases and management that are not available at the district DOH. In addition to clinical staff and infrastructure, the district DOH provides the necessary drugs and laboratory testing for effective rollout.

With FY 2008 funds the Africa Centre will continue to support the provision of ART and expand its support for the KZNDOH. Increased attention will be given to address gender issues (especially reaching men) and to promote the ART services among men and children.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Support to South African Government (SAG)

The ART program is jointly run by the KZNDOH and Africa Centre. The Africa Centre contributes human resources and co-finances facility needs and supplies. The Africa Centre supports the KZNDOH with strategic planning and the implementation of the SAG National Strategic Plan 2007-2011 for HIV & AIDS and STI. This includes the establishment of an up and down referral system that ensures that HIV-infected people are treated at the optimal level of care at each stage of the disease. The Africa Centre support further extends to operating the supply chain of drugs from the central pharmacy to the peripheral clinics and the transport of blood samples from the peripheral clinics to the central laboratories. In addition to this, Africa Centre also supports the monitoring and evaluation of the ART program and the development of management and treatment algorithms.

With FY 2008 funding, additional support will include park-homes (inexpensive portable prefab long-lasting structures) which will be set up in peripheral clinics where patient load exceeds facility capacity. Operational assistance will be in the form of funding to support training of staff, transport, logistics, IT support and administrative assistance to smaller peripheral clinics.

ACTIVITY 2: ARV Treatment

The Africa Centre will continue to support the expansion of the ART program at Hlabisa hospital and the 14 KZNDOH clinics. ARV treatment is following the DOH guidelines. Patients with stage IV disease or CD4 count <200 are eligible for treatment. After the necessary baseline investigations (blood tests, screening for TB) have been performed, the patients are initiated for treatment in 14 government clinics and the hospital.

Through CT, TB and the mobile ART and palliative care programs, the Africa Centre will work to increase uptake of ART among targeted communities. Africa Centre's goal is to test babies at 6 weeks after delivery and get them on treatment if required. Mobile teams of nurses and counselors will provide ART in the clinics, and community mobilization activities will be used to enhance community awareness and uptake of services. The Africa Centre will investigate the best possible way to roll out ART in the mobile clinics, which are serving the population. The mobile team will twin with the DOH mobile clinic team, and visit the service points together.

In FY 2008, additional mobile teams will visit clinics bi-weekly to provide onsite training, assess complicated patients, and do quality assurance checks. This process will institute a continuous process of quality improvement. Data capturers, supervised by the M&E officer, will move with these teams to capture data from the clinics. A doctor will join the mobile team to initiate patients on ART at smaller clinics and assist with treatment of side-effects and adverse events. All patients will be trained in prevention of HIV transmission and the importance of treatment adherence. Prophylaxis against common opportunistic infections includes cotrimoxazole prophylaxis in all patients with CD4 count under 200. Data from these activities will be monitored to ensure that clients receive comprehensive services and that all eligible individuals are put on prophylaxis at the earliest opportunity.

Two mobile teams of the DOH are tracking TB patients who don't pick up their treatment. Africa Centre will integrate the tracking of TB patients by forming two more teams. With that support all four teams are then able to track TB and HIV patients, thus preventing duplication of tracking and expanding the coverage of both groups of patients.

ACTIVITY 3: Human Capacity Development

KZNDOH and Africa Centre counselors and nurses who work on the program will receive training on HIV and ART. The baseline course is based on the KZNDOH curriculum and comprises four sessions of three hours each, covering basics of HIV and ART; follow-up of patients, assimilation of a follow-up, and practical work with a patient (including blood taking for CD4 counts and viral loads). Counselors, nurses and physicians will receive additional training, emphasizing side-effects and second-line treatment to treat patients with therapeutic failure of first-line therapy. The program will finance a diploma course for a pharmacy assistant to assist with a satellite dispensing service at the clinics to support the KZNDOH pharmacist at Hlabisa Hospital. This trainee was recruited locally in June 2007. Doctors and nurses working on the ART program will attend the AIDS Certification Course, run by another PEPFAR partner, the Foundation for Professional Development. Due to the shortage of staff in the clinics and due to the

Activity Narrative: increasing number of patients and increasing workload, additional staffing in clinics and hospital will be provided.

ACTIVITY 4: Human Resources

Africa Centre staff provides clinical care alongside KZNDOH staff in the clinics in order to support the ongoing ART program and to facilitate skills transfer to build sustainability. The sustainability of the program largely depends on availability of skilled staff, which is difficult to attract to this rural area. The Africa Centre is continuously working on recruiting physicians and pharmacists. In FY 2008, Africa Centre staff in the ART program will be increased including nurses, HIV trainers, HIV counselors, doctors, social workers, 1 pharmacist, 1 dietician, M&E officers and data capturers. All staff are mentored and supervised by Africa Centre staff.

ACTIVITY 5: Surveillance Systems

The Africa Centre will establish clinic-based ART drug resistance surveillance. In order to choose the best second-line therapy, information about the drug resistance in the case of first-line therapy is needed. Routine ARV drug resistance testing is not part of the South African treatment plan. Including drug resistance testing in the ACHART program will directly benefit the patients. The findings may benefit other sites in resource-limited settings. If the Africa Centre finds that most treatment failures are due to resistance against stavudine (and not lamivudine or nevirapine), the overall quality of choice of second-line drugs may be improved without genetic drug resistance testing. PEPFAR funding will finance laboratory equipment and transport costs to set up ART drug resistance surveillance.

ACTIVITY 6: Quality Improvement

In June 2007 a team for Quality Management was introduced in all the clinics. This group provides leadership and support centrally and to the clinics. In FY 2008 this group will increase capacity to identify, develop and implement quality improvement interventions internal to the program as well as for identified problems at the sites being supported.

ACTIVITY 7: Systems Development

With increased funding the Monitoring Evaluation and Reporting systems will be further strengthened to support the internal and external data needs of the program. The existing databases will be reviewed and, if appropriate, adapted, and staff will be trained. Additional staff will be needed to cope with the increased number of data to be collected and used for improvement of the program.

ACTIVITY 8: HIV Awareness
Health education has to be prioritized in the sub-district. The knowledge about ART and other health issues must be improved. Initial analyses of Africa Centre data shows that a huge number of people don't know about ART and a large number of those who know about ART don't know where to get treatment. In July 2007 Africa Centre approached the Amakhosi (the highest traditional leaders in the area after the king) to involve them in the response to HIV. In this area traditional leaders are playing a major role. Billboards at different places will be placed with messages from the Amakhosi concerning testing and treatment. The improvement of this knowledge regarding testing and treatment will contribute to PEPFAR'S goals to increase the community access to ART services.

Africa Centre contributes to PEPFAR's 2-7-10 goals for South Africa by increasing community access to ART services by facilitating scale up of the SA Government efforts.

Funding Source:	GHCS (State)	**Program Area:**	HIV/AIDS Treatment/ARV Services
Budget Code:	HTXS	**Program Area Code:**	11

Activity ID: 2908.08

Planned Funds: $285,000

Activity System ID: 13380

Activity Narrative: SUMMARY:

Africare's Injongo Yethu Project will continue to support increased quality of, and access to antiretroviral therapy (ART) for adults and pediatrics, providing support for an electronic patient register, improvement of treatment readiness and high-quality patient management. Hewu Hospital, Fort Beaufort Hospital and Victoria Hospital will be assisted. Major emphasis is on building local organization capacity with minor emphasis on training, strategic information and human resources. Human capacity development is focused on doctors, nurses, local traditional healers and data management personnel. Implementation of the basic care package will carry through to treatment sites in addition to care and support.

BACKGROUND:

This is an ongoing activity supporting treatment readiness and follow-up at Hewu Hospital and Sada community health center. The referral rate from Hewu Hospital to Frontier Hospital for initiation of antiretroviral treatment (ART) has increased. Challenges have included inadequate recording systems, incomplete reporting, absence of a treatment readiness program in Hewu, and limited documentation of client care and progress. Hewu Hospital has not yet been accredited, but is imminent. The treatment support is linked to community-based activities that address HIV and AIDS, care and treatment awareness and reduce stigma. Traditional healers and faith leaders provide spiritual support. The electronic patient register is in process with Columbia University, described in the Basic Health Care and Support section of the COP.

ACTIVITIES AND EXPECTED RESULTS:

Support for treatment emphasizes the management of patient care and services within public sector facilities in Eastern Cape. Tools and onsite support will put mechanisms in place that will facilitate treatment availability, quality, and service management.

ACTIVITY 1: Support Hewu Hospital in Establishing ARV Service

With support from the Eastern Cape Department of Health (ECDOH), the Africare team will design a supportive strategic and operational planning process for the Hewu Hospital Wellness Centre and ARV service that will assist the hospital in identifying the resources required to provide ARV services, including staffing, drugs, guides and tools, equipment and furnishings. Support will be provided for the completion of the wellness centre establishment as needed in term of filing systems, data management staff and equipment, communication systems and temporary staff.

ACTIVITY 2: Development of an Electronic Patient Register

With another PEPFAR partner in the Eastern Cape, Columbia University, the project has worked with the health information systems program to develop and implement an electronic patient register and record for adult and pediatric patients on ARVs. Funding is supporting the adaptation of an open-source, tested software and ensure that it includes all essential elements of information required locally and can link easily with the existing health and hospital information systems. Africare's support will focus on the linking individual patient data to the district health information system (DHIS) and HIV service management reporting. Training and implementation support will be provided initially to Hewu Hospital, Frontier Hospital and Fort Beaufort and Victoria Hospital, along with Sada Community Health Center. Training will be provided for data capturers, health workers and service managers to us the information for client ART case management.

ACTIVITY 3: Strengthen the Process of Treatment Readiness Patient Education

Support will be provided to identify and implement local best practices identified the Eastern Cape. ARV readiness workshops will be conducted to improve quality of care at each hospital and referral sites (approximately 15 clinics). A model ARV readiness patient education program will be adapted for these supported facilities.

ACTIVITY 4: Continuing Professional Development

Access to continuing education on HIV disease management, ARV initiation and support, and drug supply management will be facilitated, using existing training providers and programs. Continuing education seminars for doctors, nurses and pharmacists will improve competence in evidence-based HIV and ARV management through onsite mentoring of health workers. In-service training for nurses to support ART will continue. Data and case management review meetings will be supported bi-monthly. Through an institutional collaborating partner and/or identified mentors, medical and surgical inpatient doctors in each hospital will be mentored in identifying and appropriately managing HIV patients in the general wards. Training on pediatric HIV management will be implemented through onsite clinical mentoring for neonatal HIV management and management of pediatric cases, and follow-up to promote early identification of infants and children needing ARVs. In addition, general practitioners working in these facilities part-time will be trained basic pediatric ARV care. Integration of TB and HIV care will be supported with training on TB and HIV co-management.

ACTIVITY 5: Pilot for Utilizing Traditional Healers for Treatment Support

Traditional healers have expressed interest in becoming an integral part of client referral for treatment and support of the client when on ARVs. A pilot group of traditional healers will be trained as ART aides that will assist patients to adhere to treatment.

ACTIVITY 6: Addressing Barriers to Optimal ARV Services Utilization at Frontier and Hewu Hospitals

With data that will be available from the ARV software, case and service statistics reviews will be conducted 6-monthly, using client data (defaulter rates, treatment adherence rates, common ART side-effects experienced, reasons for discontinuation, and CD4 counts at ART initiation) to monitor access to and utilization of services, as well as patient outcomes. A transport voucher system will be developed to support

Activity Narrative: patients who decline ART because they are unable to afford the cost of transport to Frontier Hospital. This system will be developed and implemented for adult patients from Hewu while awaiting accreditation, and for pediatric clients until plans to decentralize pediatric care to Hewu are implemented. FY 2008 funds will support the cost of transport and management of the documentation system.

FY 2008 Activities will also include:
- A shift in hospital sites to prevent overlap with other PEPFAR partners. Fort Beaufort and Victoria Hospitals in Nkonkobe LSA (Amathole District), Port Alfred Hospital in Makana LSA (Cacadu District) and possibly Cofimvaba and Settler's Hospitals. Assignments will be finalized through working with the Province and PEPFAR team.

- Deployment of doctors seconded part-time to each hospital to help alleviate staffing pressures and to ensure implementation of best practices and to help initiate ARVs in Primary Health Care sites as determined by the DOH

- Deployment (and training, as necessary) of Pharmacy Assistants to hospitals where dispensing is a key constraint to scaling up the volume of ARV patients.

- Support Group training in ARV literacy education for new HIV positive members

By supporting ARV service delivery programs, Africare will contribute to the realization of the PEPFAR 2-7-10 goal of treating two million people with ART. These activities will also support efforts to meet the treatment objectives outlined in the USG Five-Year Strategy for South Africa.

Budget Code:	HTXS	**Program Area Code:**	11

Activity ID: 3006.08

Planned Funds: $14,326,000

Activity System ID: 13697

Activity Narrative: SUMMARY:

BroadReach Healthcare's (BRHC) antiretroviral (ARV) services activities include training for health professionals, management support, laboratory support, quality assurance, and community outreach. BRHC's emphasis areas are human capacity development, local organization capacity building, and strategic information. Primary target populations include children, adolescents, adults, pregnant women, and people living with HIV (PLHIV).

BACKGROUND:
PEPFAR funds support BRHC initiatives that provide HIV and AIDS clinical management, care and support services to HIV-infected individuals in areas where the SAG rollout has not yet been implemented and assists ART rollout in the public sector. The BRHC PEPFAR program began in May 2005 and now operates across 5 provinces. Activities will expand to a sixth province in FY 2008. BRHC is supporting approximately 5000 individuals directly with care and treatment and 15,000 indirectly. BRHC taps private sector health professionals to provide comprehensive care and treatment, fostering capacity-building initiatives within the public health system, and supporting community-based programs. BRHC leverages PLHIV support programs to identify and assist with treatment literacy, adherence support and ongoing community mobilization, prevention education activities, and positive living initiatives. BRHC also works to build capacity in public health facilities, focusing efforts on human capacity development (HCD) activities, including clinical didactic training, clinical mentorships, patient training and operational assistance training. BRHC is expanding its provision of staff and infrastructure support to SAG facilities. Finally, BRHC is expanding its involvement in the design of scaleable down referral models in partnership with faith-based organizations (FBOs), community-based organizations (CBOs), and public-private partnerships (PPPs).

ACTIVITIES AND EXPECTED RESULTS:

To ensure that new patients are started on ART when clinically qualified and enrolled patients continue to receive quality care and support, BRHC will carry out the following activities:

ACTIVITY 1: Clinical Services

BRHC patients will be treated in accordance with national guidelines by ensuring that all elements for effective treatment are provided in a coordinated manner. This includes addressing issues of human resources, provision of technical expertise, training, information, education and communication (IEC), community mobilization, laboratory and testing, drug logistics, equipment and supplies, physical space, M&E, and other cross-cutting support functions such as budgeting, finance, policy, and planning support. Patients see doctors regularly, and will receive laboratory tests, HIV and AIDS education, adherence support, counseling, cotrimoxazole prophylaxis and linkage to other support and wellness (including prevention) services. Patient nutrition and wellness needs will be assisted by local FBOs and NGOs (e.g. food parcels). BRHC supports patients through the private sector until those patients can access treatment through public services. BRHC continues to expand its support to strengthening services in the public sector.

ACTIVITY 2: Human Capacity Development (HCD)

BRHC will provide comprehensive HIV and AIDS training to its network of providers including doctors, nurses, pharmacists and other healthcare professionals through a variety of initiatives including remote decision support, telemedicine, web-based training, didactic training, and clinical mentoring from experienced clinicians. Comprehensive HIV and AIDS training for health professionals include ART management, tuberculosis (TB), adherence, management of complications and side-effects, prevention, and pediatric HIV management. BRHC human capacity development activities, such as training and clinical mentoring, will also take place within SAG facilities. BRHC will continue to train patients and support group facilitators on topics including HIV and AIDS, ART, adherence, living positively, and accessing psychosocial support in communities. The BRHC adherence program supports patients by providing features such as treatment buddies, support groups, cell phone message reminders, a patient call center and adherence counseling.

ACTIVITY 3: Support to SAG

BRHC will conduct an initial needs assessment at each new SAG partner facility. The assessments will identify problems that impact overall capacity and efficiency. Solutions for each institution include recruitment and salary support for doctors, nurses, and pharmacy staff. BRHC will also work with the site to motivate for the creation of permanent posts where needed and ensure that BRHC/PEPFAR supported staff are incorporated into subsequent site budgets to ensure a sustainable staffing solution. BRHC general practitioners provide part-time services at SAG facilities, and train SAG staff in HIV care and treatment and related management. Other support may include infrastructure, such as refurbishment, equipment and supplies procurement. Finally, BRHC will build on its existing public-private partnership (PPP) model with SAG and Daimler Chrysler in East London and develop new PPPs to further involve private companies in supporting small business employees and dependents in communities where they operate.

ACTIVITY 4: Referrals and Linkages

Support systems for treatment will be provided by strengthening referral networks between the public and private sectors, including referring stable patients back to the SAG ARV program, and support to local clinics to facilitate SAG up and down referral. Finally, BRHC will continue to expand its linkages with CBOs in order to refer patients in need of food and other community services.

ACTIVITY 5: Quality Assurance/Quality Improvement (QA/QI)

Recognizing the critical role of M&E in a successful treatment program, BRHC QA/QI activities include regular internal data and systems audits, collection of patient-level surveillance data, exception reports, doctor-specific feedback report, and doctor decision-making support. The BRHC adherence program monitors patient adherence through monitoring of drug pick-up information, clinical reports, self-reported adherence, and pill counts. BRHC will also work with SAG facilities to improve data management and

Activity Narrative: medical records systems.

ACTIVITY 6: Pediatric care and treatment

BRHC will expand pediatric enrollment using a family-centered approach. BRHC will encourage testing of families/households, using patients already enrolled in the BRHC program as the index case and point of entry into the household. By recruiting eligible family members, BRHC will enroll greater numbers, including children, into the program. Finally, the family-centered approach will allow BRHC to link an entire household to a single doctor in order to facilitate doctor visits and drug pick ups.

All BRHC activities articulated in the FY07 COP will be scaled up significantly in FY08 through its partnerships with 15 SAG hospital systems (which include hospitals and affiliated community health centers (CHC) and primary health care clinics (PHCs).

All of the above activities will serve to greatly enhance sites' ability to enroll significantly greater numbers of patients onto ARV treatment.

These activities directly contribute to the PEPFAR 2-7-10 goals by increasing the number of people receiving ARVs, improving access to HIV services, and increasing the capacity of local organizations.

Indirect Targets

In addition to its own treatment program, BroadReach indirectly supports patients who are provided care and support through the Aid for AIDS care and treatment program, as well as indirect support provided via capacity building initiatives. Aid for AIDS is a private sector program providing workplace HIV programs for major companies in South Africa. Through BroadReach support to Aid for AIDS, all patients benefit from enhanced education, support, and monitoring. This is in addition to the South African Government rollout. BroadReach also supports a direct care and treatment program.

Activity Narrative: TYPE OF STUDY: Continuing

PROJECT TITLE: Economic and social outcomes of HIV and AIDS treatment.

NAME OF LOCAL CO-INVESTIGATOR: Dr. Ian Sanne, Clinical HIV Research Unit, University of the Witwatersrand; Ms. Mpefe Ketlhapile, Health Economics Research Office, Wits Health Consortium.

TIME AND BUDGET SUMMARY:
Year of activity: Year 4
Year started: 2005 (PEPFAR funding since COP 07)
Expected year of completion: 2010
Budget received to date: $100,000 (in COP 07)
Additional budget requested in FY 2008: $150,000

PROJECT DESCRIPTION: Boston University (BU) and its local partner, the Health Economics Research Office (HERO), will use FY 2008 funds to continue an ongoing evaluation of the social and economic outcomes and sustainability of antiretroviral therapy (ART) in South Africa. Follow up of the existing patient cohort will be extended to a minimum of three years, with some patients reaching four years of follow up. Results will be used to improve treatment outcomes and enhance patient-level sustainability of treatment. The target populations for this PHE are adults, people living with HIV, policy makers, program managers, clinicians, treatment facilities, and USG staff.

EVALUATION QUESTION: The evaluation question for this PHE is “What are the social and economic consequences of HIV and AIDS treatment for individual adult patients over the first four years of ART?” Little is known about how treatment affects non-clinical indicators such as employment status, household cohesion, quality of life, costs incurred to obtain treatment, and related impacts on patients and their households. This information is needed to ensure that receiving ART is socially and economically, as well as medically, sustainable for African patients and to estimate the overall benefits of treatment expansion.

PROGRAMMATIC IMPORTANCE: While the medical effectiveness of ART in suppressing viral replication and restoring immune function is well established, little is known about the impact of treatment of HIV and AIDS on the economic and social welfare of African patients. In particular, it is not known if treatment will offset the impact of untreated AIDS on labor productivity, family stability, quality of life, and other indicators of social and economic development and treatment sustainability. In FY 2005, BU and HERO launched an evaluation of the economic and social outcomes of treatment for adult South Africans receiving care from three PEPFAR-supported treatment sites. In FY 2008, this evaluation will be continued for a fourth year, allowing examination of longer term outcomes essential to treatment sustainability.

The expected result of this activity is rigorous empirical information available about the non-clinical outcomes of treatment for South African patients treated through PEPFAR and South African government treatment initiatives. If patients are shown to be able to resume their normal activities, find and retain jobs, maintain family stability, and improve quality of life, support for long-term provision of treatment and expansion of current programs will be strengthened. Analysis of the characteristics of patients for whom outcomes are less successful will also help improve treatment program design and patient support efforts.

PROJECT DESCRIPTION/ METHODS: This evaluation is a prospective cohort study using data from patient interviews and medical records. Patients enrolled in the cohort are interviewed at intervals of 3-6 months, depending on the patient's status, during routine clinic visits using a questionnaire focusing on family stability, ability to work and/or perform other normal activities, quality of life, adherence, costs of obtaining treatment, and sources of income. This information is then linked to biomedical indicators of treatment outcomes (e.g. CD4 count) from patients’ medical records and analyzed longitudinally.

Over the course of FY 2005 and FY 2006, 618 ART patients and 451 pre-ART patients were enrolled in the study and completed baseline and follow-up questionnaires. By the end of the FY 2007 funding period, all of these patients will have been followed for a minimum of 2 years, and some for more than 3 years. In FY 2008 no new patients will be added, but because the impact of treatment on patients' welfare will change over time, following the current patients for an additional year will generate valuable information about the sustainability of treatment beyond the initial two years. Almost all of the pre-ART patients will have initiated ART by FY 2008, allowing a pre- and post-treatment comparison for this group.

POPULATION OF INTEREST/GEOGRAPHIC AREA: The population of interest is all adult pre-ART and ART patients in South Africa, as represented by the patients at the study sites. The study sites are located in Gauteng and Mpumalanga Provinces.

STATUS OF STUDY/PROGRESS TO DATE: The study is progressing on schedule. Follow-up interviews and data analysis are ongoing.

LESSONS LEARNED: Analysis of baseline and initial longitudinal data show significant improvements in ART patients’ ability to carry out their normal activities, quality of life, job performance, and other indicators.

The baseline results of this evaluation have been presented widely. Abstracts have been presented at the 2006 International AIDS Conference in Toronto and the 2006 HIV Implementers’ Meeting in Durban. A paper about the costs to patients of obtaining treatment has been published in the South African Medical Journal, and two other manuscripts are currently under review by international journals. Data are now being used for a pooled analysis of treatment outcomes being conducted by a collaboration of researchers from throughout South Africa.

INFORMATION DISSEMINATION PLAN: The results of this evaluation will be disseminated as widely as possible in South Africa and other resource-constrained countries, where information regarding non-clinical outcomes of treatment are very limited or absent all together. Results will be presented as a priority to the study sites and to the provincial and national Departments of Health in South Africa. Reports will be made available for rapid dissemination on the BU and International AIDS Economics Association (IAEN) websites. Finally, results will be presented at relevant conferences in South Africa and internationally, and journal manuscripts will be submitted for publication as new findings become available.

Activity Narrative:

ACTIVITIES: In FY 2008, follow-up interviews representing data collection rounds 5-8 will be conducted with the full cohort, medical record data will be extracted, and an analysis covering the period from pre-ART to 3 years on treatment will be completed.

BUDGET JUSTIFICATION FOR FY 2008 MONIES (USD):

Salaries/ fringe benefits: $ 112,000
Equipment: $ 3,000
Supplies: $ 5,000
Travel: $ 18,000
Participant Incentives: $ 2,000
Laboratory Testing: $ -
Other: $ 10,000
Total: $ 150,000

The majority of funds (75% of the total) will be used for salaries and benefits for study staff, including the principal investigator/lead economist, field director, data manager, statistical analyst, and interviewers. Travel (12% of the total) will include local transport for the study team and limited international and domestic travel for Boston and Johannesburg based investigators. Approximately 2 computers will be purchased for data entry and analysis (equipment, 3%). Supplies will include general office supplies, computer supplies, and photocopying of data collection instruments (<1%). Small gifts (e.g. t-shirts) will be purchased as tokens of appreciation for study subjects (1%). Finally, other expenses including office space and communications will account for 7% of the total.

Funding Source: GHCS (State)
Program Area: HIV/AIDS Treatment/ARV Services
Budget Code: HTXS
Program Area Code: 11
Activity ID: 2930.08
Planned Funds: $24,705,000
Activity System ID: 13745

Activity Narrative: SUMMARY:

The Foundation for Professional Development (FPD) program supports the public sector expansion of access to comprehensive HIV and AIDS care by focusing on provision of care, and through human capacity development (HCD). Activities supporting improved and expanded service delivery in public sector ART clinics include the provision of staff, clinical and management training, equipment, technical assistance, mentoring, and refurbishment of facilities. Additional HCD activities include an international volunteer and an intern program. The emphasis areas for these activities are Human Capacity Development, Local Organization Capacity Building and Workplace Programs. Target populations for the activities include people living with HIV (PLHIV) and the Business Community. The activities also target most at risk populations.

BACKGROUND:

FPD is a South African private institution of higher education working exclusively in the health sector in Southern Africa. Since FY 2005, FPD has supported treatment for thousands of PLHIV and training for thousands of healthcare providers and managers delivering ART and related services. Coordination with provincial Departments of Health (DOH) takes place through Memorandums of Understanding (MOUs). FPD provides substantial assistance initially to public sector facilities and works towards a diminished role over time, working towards sustainability at the sites. Sub-agreements are used for supporting a national HIV consumer line (HIV 911). Gender issues are embedded in all aspects of the project and include collecting gender specific data in treatment programs, linkages with NGOs working in the gender field, counseling and testing (CT) services that specifically focus on couple counseling, domestic violence and abuse detection.

Other issues addressed by this project are: 1) Male norms and behaviors that are addressed in the counseling provided at ART sites. All staff actively work towards reducing violence and coercion by identifying victims of violence; 2) stigma and discrimination is addressed in counseling and training programs; and 3) volunteers, including Peace Corps volunteers, will be involved at treatment sites.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Support to Government ARV Clinics

PEPFAR funds are used to respond to requests from provincial DOH to support South African Government (SAG) ART sites through temporarily seconding clinical and administrative staff, providing equipment, refurbishment and technical assistance. The FPD-supported staff play a critical role in service delivery and have been able to reduce waiting times to less than a week at most facilities. FPD works with each public sector site to determine the number of staff needed, and the timeframe for transferring them into SAG employment. Most sites provide an integrated system of treatment and prevention, including CT and wellness services. These services emphasize adherence and promote ART services among referral clinics (TB, STI & Family Planning). All sites are also linked to a system of dedicated tracers who follow-up on any patients who drop out of treatment to determine reasons and where possible try to encourage patients to return to treatment. All sites are pediatric treatment sites and a minimum target is set at 10% of patients. FPD's support to SAG ARV clinics will expand substantially to include increased numbers of patients.

ACTIVITY 2: Human Capacity Development (HCD)/Clinical Training

This activity ensures a cadre of skilled healthcare practitioners able to provide care to PLHIV. Healthcare workers will be trained in various courses (clinical management of AIDS and TB, CT, palliative care, adherence and workplace AIDS programs) using a proven short-course training methodology that provides training close to where participants work. PLHIV form part of the faculty to help with stigma reduction among participants and to articulate the needs of PLHIV. To update knowledge, an alumni program including regular continuing medical education (CME) opportunities, meetings, journals, newsletters and mentorship has been developed. This program provides alumni with membership in a relevant professional association, the Southern African HIV Clinicians Society. Eskom (large power and utility company) and Discovery Health (large health insurance company) are in a PPP with FPD to financially support this training.

Training takes place in all provinces for both public and civil society organizations. For public sector training such training is coordinated with relevant human resources departments.

ACTIVITY 3: HCD/Management Training

This activity addresses the severe shortage of skilled managers within the public, NGO and FBO sector to manage rapid scale-up of AIDS care through a one year management training program, offered in association with Yale University, designed to develop local organizational capacity. Students are recruited through a competitive scholarship program and graduates are enrolled with the SA Institute of Healthcare Managers to provide them access to alumni services. Quality assurance mechanisms for Activities 2 and 3 are those currently prescribed by the Council for Higher Education for SA Universities. Impact studies and participant surveys and external impact assessments are also conducted on a regular basis to assess relevance quality and impact. Results of these surveys are used to make revisions to the management training program. The management training program will be expanded in FY 2008 to introduce a lower level operational management course geared at clinic rather than program managers. A need for such training has been identified during the past two years of management training that has shown that the skills needed at the clinic manager level is much more operational rather than strategic, the current management training program does not meet the specific need of this more junior level managers.

ACTIVITY 4: HCD/Internship Program

There is a growing need for rapid expansion of the development of human capacity to support ARV treatment programs. Based on the success of the current internship program that improves the skills of graduate students by partnering them with implementing PEPFAR partners or public sector institutions, FPD will continue to support a formalized HCD Program. FPD is well placed for this activity as training and HCD activities are FPD's core business. The USG PEPFAR Task Force is developing a more robust HCD

Activity Narrative: strategy, and this activity will contribute to that strategy. FPD will coordinate with universities and other institutions to recruit interns and will mentor both the intern and the recipient organization to ensure that interns are optimally utilized to promote treatment initiatives.

ACTIVITY 5: HCD/Placement Project

This activity further expands FPD's role in HCD in the public sector by providing a user-friendly recruitment mechanism that attempts to meet severe shortages of healthcare workers in the public sector by recruiting local and internationally qualified professionals against public sector funded vacancies, on both a remunerated and voluntary basis. Support provided includes matching applicants with vacancies, fast-tracking the registration of international participants and mentoring international recruits. Atlantic Philanthropies, a charitable organization, funded the startup of this activity in 2006 through a public-private partnership (PPP) with FPD.

ACTIVITY 6: HCD/Call Center/Clinical mentoring support

The call center will provide access for healthcare workers to infectious disease specialists, pediatricians and clinical pharmacologists through a toll-free line for queries related to treatment and post-exposure prophylaxis. This call centre closely cooperates with the HIV 911 Call Centre that handles consumer queries for referral to AIDS service organizations in both the public and the civil society sectors.

FPD will contribute to the PEPFAR 2-7-10 goals by expanding access to ART services for adults and children, building capacity for ART service delivery, and increasing the demand for and acceptance of ARV treatment.

Activity System ID: 13735

Activity Narrative: SUMMARY:

Activities are carried out in FY 2008 to support implementation and expansion of comprehensive HIV treatment and care primarily through human resources and infrastructure development, technical assistance and training and community education and support, primarily in public sector facilities in the Eastern Cape, Free State (new geographic focus area) and KwaZulu-Natal (KZN). Columbia University will support these activities by using funds for human capacity development, local organization capacity building, and strategic information. The degree of activity effort will vary in each site, but the emphasis areas will be addressed in all sites. The target population will include infants, children and youth, men and women (including pregnant women) and people living with HIV (PLHIV). Columbia will continue to support the recruitment of doctors, nurses, pharmacists and pharmacist assistants.

BACKGROUND:

Columbia University (Columbia), with PEPFAR funds, began supporting comprehensive HIV care and treatment activities in FY 2004. Health facilities were initially identified in the Eastern Cape and in FY 2006, due to new boundary demarcations and additional PEPFAR funds, Columbia started providing similar assistance in KZN. In FY 2006, in response to provincial HIV care and treatment priorities, Columbia began strengthening the down referral of services from hospitals to primary health clinics. This resulted in a total of 36 health facilities receiving technical and financial support from Columbia, including public hospitals, community health centers, primary health clinics and a non-governmental wellness center. In FY 2007 an additional two health facilities in KZN received technical and financial assistance for HIV care and treatment services.

ACTIVITIES AND EXPECTED RESULTS:

All activities are in line with South African government (SAG) policies and protocols, and activities will be undertaken to create sustainable comprehensive HIV care and treatment programs, and primarily include six programmatic areas:

ACTIVITY 1: Support Recruitment and Placement of Health Staff

Since FY 2005 Columbia has been involved in the recruitment of staff to support the HIV comprehensive program at health facilities. High staff attrition rates of Department of Health (DOH) recruited personnel have been a challenge in guaranteeing a steady enrolment of eligible PLHIV into care and treatment. Columbia will continue to support the recruitment of doctors, nurses, pharmacists and pharmacist assistants through existing partnerships with University of Fort Hare, Nelson Mandela Bay Metropolitan Municipality, Ikhwezi Lokusa Wellness Center, University of KwaZulu-Natal Cato Manor, and the Foundation for Professional Development (FPD). Columbia supported the recruitment and placement of approximately 15 doctors, 30 nurses (registered and enrolled nurses), 4 pharmacists, 7 pharmacist assistants and 15 trainee pharmacist assistants. These health personnel provide direct patient care in the hospitals and clinics including: clinical assessment, screening for tuberculosis (TB) and antiretroviral treatment (ART) eligibility, opportunistic infections (OI) diagnosis and management, offering OI prophylaxis and treatment, and ART. The health providers also develop patient treatment plans as part of the multidisciplinary team in the health facility; and assist patients to access relevant SAG social grants.

ACTIVITY 2: Training and Clinical Mentoring

Columbia has established a partnership with FPD to provide ARV didactic training in all supported health facilities. A second partnership with Stellenbosch University assists the rural health facility staff (St. Patrick's, Holy Cross and Rietvlei hospitals and their referral clinics), with the management of patients on ART by conducting case discussions on a monthly basis. Columbia has clinical advisors as part of its South African team consisting of nurse mentors, and medical officers who provide day-to-day clinical guidance on the management of patients on ART.

ACTIVITY 3: Strengthen ART Down and Up Referral Linkages Between Hospitals and Primary Healthcare Clinics

In the early phases of the ART program, all patients are evaluated and initiated on therapy at hospital level. Within three to six months of providing support to the hospital-based ART program, designated referral clinics are integrated into the services. In the rural health facilities, a small team of health providers, usually comprising of a medical officer, professional nurse and peer educator, travel to the primary healthcare clinics (PHC) to screen patients for OIs and to determine suitability for ART. This approach has enabled expansion of ART services at PHC level and has resulted in improving and increasing access to treatment. The team of health providers has also developed capacity of the onsite health providers and the goal is to have the onsite DOH health staff eventually provide the full package of HIV care and treatment services. In FY 2008, Columbia will continue to support linkages with the public clinics and the development of a more sustainable system of service provision.

ACTIVITY 4: HIV Care and Treatment Information System

Columbia will continue to support the implementation of a provincial information system that captures information regarding HIV palliative care and ART. Activities in FY 2008 will include:

(a) Continued implementation of facility paper-based ART registers that capture both adult and pediatric ART indicators.

(b) In collaboration with the Eastern Cape Department of Health (ECDOH) and other partners in the Eastern Cape, support the development and implementation of standardized individualized patient records for use at health facilities that incorporates information on client ART use.

(c) Implement an ART software system. In FY 2007, Columbia in partnership with Africare (a PEPFAR partner) and Health Information System Program (HISP) customized and developed ART software that captures and collates HIV and AIDS program data. This is being adapted for data entry, and installation is

Activity Narrative: expected before the end of FY 2007. The system is being piloted at three health facilities in East London. In FY 2008, after assessing results from the pilot sites, Columbia will engage the ECDOH in discussion on how the module could be added into the existing District Health Information System to efficiently generate reports on the HIV program, and thereafter implemented at more ART services outlets.

In addition, in 2007 Columbia begun a new partnership with Disease Management system (DMS) - a patient -centered health management information system (HMIS) that operates at the patient level of care to assist health care professionals initially at 4 identified Columbia supported health facilities in Port Elizabeth to provide comprehensive care management of people living with HIV, as well as providing management information for relevant stakeholders. In FY 2008, with lessons learned from the implementation of this system, Columbia in partnership with ECDOH proposes to extend the use of this information system in all HIV and ART service delivery points, where feasible. In addition, by FY 2008, Columbia will support the implementation of similar program activities (as specified above) in newly identified health facilities in the Free State (to be determined).

d. In an effort to improve and monitor quality of activities being implemented, Columbia in FY 2007 developed a standard operating procedure (SOP) for data quality. Dissemination and use of this SOP is currently underway in all Columbia-supported facilities. In FY2008, Columbia plans to recruit a quality assurance officer who will be responsible to monitor quality of implemented activities from both a data and program perspective.

ACTIVITY 5: Improve Retention into Care and Treatment and Reduce Loss-to-Follow-Up

In FY 2006/7 Columbia begun implementing strategies to establish and mitigate the losses to follow-up in the HIV program. In the supported sites in East London, dedicated staff were hired to assist tracing and re-introducing patients lost-to-follow-up. In partnership with the Buffalo City Municipality and the ECDOH, Columbia has created an external referrals director for HIV and AIDS services for the East London environs. With the lessons learned in this initial work of tracing patients in HIV care and treatment and the development of the referral directory, Columbia plans to initiate similar support across all supported facilities in FY 2008. In addition, Columbia is developing Adherence and Social Support Unit guidelines to standardize procedures used across supported health facilities. Dissemination of these guidelines will take place in early 2008.

ACTIVITY 6: Improve and Increase Enrollment of Infants and Children into HIV Chronic Care and Treatment

In the Eastern Cape, pediatric ART enrollment is centralized at the regional and tertiary facilities, where pediatricians are heavily involved in the care and treatment of children and infants and decentralization of pediatric ART services to PHCs that are providing ART for adults has been very slow. In FY 2007 services of pediatricians were retained to train and/or mentor health staff at the facilities to improve pediatric HIV care and treatment, and this will continue in FY 2008. In addition, Columbia will continue to take advantage of the established partnership with Stellenbosch-Tygerberg to train nurses and doctors in pediatric HIV care and treatment. Recruitment for a pediatrician to spearhead all pediatric HIV activities in the Eastern Cape, KZN and Free Sate is currently ongoing.

By providing support for ARV services in the public sector and two NGO sites, Columbia's activities will contribute to the realization of the PEPFAR goal of providing care to 2 million people.

Budget Code: HTXS

Program Area Code: 11

Activity ID: 3290.08

Planned Funds: $4,446,000

Activity System ID: 13738

Activity Narrative: Columbia University implements a comprehensive HIV care and treatment program in South Africa that is funded with Track 1 central funding, as well as South Africa COP funding. The activities do not differ across the funding mechanisms, and this entry is thus a repeat of the South Africa COP entry. All targets are reflected in the South Africa COP entry.

SUMMARY:
Activities are carried out in FY 2008 to support implementation and expansion of comprehensive HIV treatment and care primarily through human resources and infrastructure development, technical assistance and training and community education and support, primarily in public sector facilities in the Eastern Cape, Free State (new geographic focus area) and KwaZulu-Natal. Columbia University will support these activities by using funds for human capacity development, local organization capacity building, and strategic information. The degree of activity effort will vary in each site, but all emphasis areas will be addressed in all sites. The target population will include infants, children and youth, men and women (including pregnant women) and people living with HIV (PLHIV). Columbia will continue to support the recruitment of doctors, nurses, pharmacists and pharmacist assistants.

BACKGROUND:
Columbia University (Columbia), with PEPFAR funds, began supporting comprehensive HIV care and treatment activities in FY 2004. Health facilities were initially identified in the Eastern Cape and in FY 2006, due to new boundary demarcations and additional PEPFAR funds, Columbia started providing similar assistance in KwaZulu-Natal. In FY 2006, in response to provincial HIV care and treatment priorities, Columbia began strengthening the down referral of services from hospitals to primary health clinics. This resulted in a total of 36 health facilities receiving technical and financial support from Columbia, including public hospitals, community health centers, primary health clinics and a non-governmental wellness center. In FY 2007 an additional two health facilities in KwaZulu-Natal (East Griqualand Usher Memorial Hospital and the Kokstad Community Clinic) received technical and financial assistance for HIV care and treatment services.

ACTIVITIES AND EXPECTED RESULTS:
All activities are in line with South African government (SAG) policies and protocols, and activities will be undertaken to create sustainable comprehensive HIV care and treatment programs, and primarily include four programmatic areas:

ACTIVITY 1: Support Recruitment and Placement of Health Staff
Since FY 2005 Columbia has been involved in the recruitment of staff to support the HIV comprehensive program at health facilities. High staff attrition rates of Department of Health (DOH) recruited personnel have been a challenge in guaranteeing a steady enrolment of eligible PLHIV into care and treatment. Columbia will continue to support the recruitment of doctors, nurses, pharmacists and pharmacist assistants through existing partnerships with University of Fort Hare, Nelson Mandela Bay Metropolitan Municipality, Ikhwezi Lokusa Wellness Center, University of KwaZulu-Natal Cato Manor, and the Foundation for Professional Development. Columbia supported the recruitment and placement of approximately 15 doctors, 30 nurses (registered and enrolled nurses), 4 pharmacists and 7 pharmacist assistants and 15 trainee pharmacist assistants. These health personnel provide direct patient care in the hospitals and clinics including: clinical assessment, screening for tuberculosis (TB) and antiretroviral treatment (ART) eligibility, opportunistic infections (OI) diagnosis and management, and offering OI prophylaxis and treatment, and ART. The health providers also develop patient treatment plans as part of the multidisciplinary team in the health facility; and assist patients to access relevant SAG social grants.

ACTIVITY 2: Training and Clinical Mentoring
Columbia has established a partnership with the Foundation for Professional Development to provide ARV didactic training in all supported health facilities. A second partnership with Stellenbosch University assists the rural health facility staff (St. Patrick's, Holy Cross and Rietvlei hospitals and their referral clinics), with the management of patients on ART by conducting case discussions on a monthly basis. Columbia has clinical advisors as part of its South African team consisting of nurse mentors, and medical officers who provide day-to-day clinical guidance on the management of patients on ART.

ACTIVITY 3: Strengthen ART Down and Up Referral Linkages Between Hospitals and Primary Healthcare Clinics
In the early phases of the ART program, all patients are evaluated and initiated on therapy at hospital level. Within three to six months of providing support to the hospital-based ART program, designated referral clinics are integrated into the services. In the rural health facilities, a small team of health providers, usually comprising of a medical officer, professional nurse and peer educator, travel to the primary healthcare clinics (PHC) to screen patients for OIs and to determine suitability for ART. This approach has enabled expansion of ART services at PHC level and has resulted in improving and increasing access to treatment. The team of health providers has also developed capacity of the onsite health providers and the goal is to have the onsite DOH health staff eventually provide the full package of HIV care and treatment services. In FY 2008, Columbia will continue to support linkages with the public clinics and the development of a more sustainable system of service provision.

ACTIVITY 4: HIV Care and Treatment Information System
Columbia will continue to support the implementation of a provincial information system that captures information regarding HIV palliative care and ART. Activities in FY 2008 will include:

a. Continued implementation of facility paper-based ART registers that capture both adult and pediatric ART indicators.

b. In collaboration with the Eastern Cape Department of Health (ECDOH) and other partners in the Eastern Cape, support the development and implementation of standardized individualized patient records for use at health facilities that incorporates information on client ART use.

c. Implement an ART software system. In FY 2007, Columbia in partnership with Africare (a PEPFAR partner) and Health Information System Program (HISP) customized and developed ART software that captures and collates HIV and AIDS program data. This ART database is being adapted for data entry, and installation is expected before end of FY 2007. The system is being piloted at three health facilities in East

Activity Narrative: London: Frere, Cecilia Makiwane and Duncan Day Village hospitals. In FY 2008, after assessing results from the pilot sites, Columbia will engage the ECDOH in discussion on how the module could be added into the existing District Health Information System to efficiently generate reports on the HIV program, and thereafter implemented at more ART services outlets.

In addition, in 2007 Columbia begun a new partnership with Disease Management system (DMS) - a patient -centered health management information system (HMIS) that operates at the patient level of care to assist health care professionals initially at 4 identified Columbia supported health facilities in Port Elizabeth (Livingstone, KwaZakhele Day Hospital, Motherwell clinic and Chatty clinic) to provide comprehensive care management of people living with HIV, as well as providing management information for relevant stakeholders. In FY 2008, with lessons learned from the implementation of this system, Columbia in partnership with ECDOH proposes to extend the use of this information system in all HIV and ART service delivery points, where feasible. In addition, by FY 2008, Columbia will support the implementation of similar program activities (as specified above) in newly identified health facilities in the Free State (to be determined).

By providing support for ARV services in the public sector and two NGO sites, Columbia's activities will contribute to the realization of the PEPFAR goal of providing care to 2 million people. These activities will also support efforts to meet HIV and AIDS care and support objectives outlined in the USG Five-Year Strategy for South Africa.

Table 3.3.11: Activities by Funding Mechansim

Mechanism ID: 190.08

Mechanism: N/A

Prime Partner: Aurum Health Research

USG Agency: HHS/Centers for Disease Control & Prevention

Funding Source: GHCS (State)

Program Area: HIV/AIDS Treatment/ARV Services

Budget Code: HTXS

Program Area Code: 11

Activity ID: 2912.08

Planned Funds: $11,661,000

Activity System ID: 13688

Activity Narrative: SUMMARY:

This activity provides support services at public facilities providing antiretroviral therapy as part of the national ARV rollout and HIV care and treatment at primary health centers, clinical trial sites and general practitioner (GP) practices. ART is provided in accordance with the National Department of Health (NDOH) guidelines. The emphasis areas are renovation, human capacity development, and local organization capacity building. The primary target populations are people affected by HIV and AIDS, HIV-infected children, prisoners, homeless people and street youth.

BACKGROUND:

This is an ongoing activity funded since FY 2004, providing access to HIV care and treatment in the public, private and NGO sector. This activity takes place in the following NDOH ARV sites: (1) Madwaleni Hospital, Eastern Cape; (2) Tshepong Hospital, North West; and (3) Chris Hani-Baragwanath Hospital, Gauteng. In addition Aurum intends to provide ARV services in FY 2008 to sites added in FY 2007: (4) Ermelo Hospital, Mpumalanga, and (5) Thembisa Hospital, Gauteng. In FY 2008, Aurum intends to provide support to a further two public sector hospitals. Aurum plans to provide support for down-referral in the following areas: North West Province (Kanana clinic), Limpopo Province (Mathe-bathe clinic), Madwaleni-linked primary health centers, Gauteng down-referral program and Northern Cape (Danielskuil clinic).

A number of sub-partners are involved in implementation of this activity:

1. Faranani Network is described in the Basic Health Care and Support activity and this network supports treatment of people without medical insurance in general practitioner (GP) sites.

2. Reaction Consulting is based in the Mpumalanga Area. This is a public-private partnership with X-Strata which provides the clinics. This organization received direct PEPFAR funding in FY 2007.

3. MES Impilo, a faith-based organization based in Hillbrow, Johannesburg, functions as a home-based care center for the homeless population of Hillbrow, including street youth.

4. Medical Research Council (MRC) site based in KwaZulu-Natal, provides HIV services to prevention trial participants (microbicides, diaphragms) who are found on screening to be HIV-infected.

5. De Beers Consolidated Diamond Mines has developed a public-private partnership in the town of Danielskuil, Northern Cape where contractors and partners of employees are treated for HIV.

In addition, new sub-partners are envisaged as follows:

8. Department of Correctional Services: Aurum will provide support for HIV services including HIV counseling, laboratory monitoring and preventive therapy in two correctional facilities - the Johannesburg Correctional Facility and one other facility. The drug and laboratory costs would be funded by the South Africa Government (SAG).

Additional sub-partners involved in the implementation of central activities include:

9. S Buys will be involved with procurement, dispensing and distribution of medications and will provide pharmacy support at the Chris Hani-Baragwanath Hospital.

10. Toga Laboratories will assist with laboratory testing. Toga has negotiated with Bayer to secure reduced pricing for viral load testing for the Aurum program. Toga is piloting a new initiative to place point-of-care lactate tests at some of Aurum facilities to facilitate early recognition of ART adverse events.

11. Kimera Solutions will provide specialist HIV clinical support to doctors in the form of training and onsite mentoring with regular site visits.

ACTIVITIES AND EXPECTED RESULTS:
The program activities include:

ACTIVITY 1: Wellness of HIV-infected Individuals

Human resources, laboratory monitoring and counseling services for patients who are enrolled into HIV care are included (described in other sections of the COP). Aurum provides a continuum of care from provision of counseling, preventive therapy and preparation for ART. In some sites (MRC, Reaction) patients are referred to public health facilities for initiation of ART.

ACTIVITY 2: Provision of ARVs to Children

Provision of ARVs to children is a recent focus of the program. Aurum has partnered with Wits Paediatrics (sub-partner of Reproductive Health Research Unit) to provide training for two Aurum clinicians. These clinicians attend a pediatric clinic once a week to gain experience in pediatric care. This will help capacitate Aurum to provide ARV services at pediatric units. Aurum is actively encouraging partners to provide services to children and have provided for HIV PCR testing for children in this COP. One of the Aurum GPs is involved in routine treatment of orphans and vulnerable children and has enrolled onto the Aurum program as a provider. Also, Metro Evangelical Services and Caritas Care Centre have a few orphans enrolled onto their hospice. We will attempt to expand to other partners who provide care to orphans and vulnerable children.

ACTIVITY 3: M&E

M&E is a central component of the Aurum program. Every patient contact is recorded on a standardized form and a unique patient identifier is allocated by the central Aurum office. The information is then couriered or faxed to the central office where the data is captured in a database. Monitoring visits take place at the sites to ensure adherence to guidelines and completeness of data collection. Quarterly reports are

Activity Narrative: produced for all stakeholders. Aurum also provides a data management system for the Adult ARV clinic at Chris Hani-Baragwanath and Tshepong hospital in North West program. This system will also be implemented at Thembisa hospital.

Provision of laboratory services is per a standardized schedule of follow-up in accordance with SAG guidelines.

The program started in March 2005 and has established 60 treatment sites where about 7000 patients are receiving ART and 80% achieve virological success at 6 months.

Aurum will contribute to the PEPFAR 2-7-10 goals by providing quality HIV care and treatment services in the public, private and NGO sector.

Funding Source: GHCS (State)

Program Area: HIV/AIDS Treatment/ARV Services

Budget Code: HTXS

Program Area Code: 11

Activity ID: 3288.08

Planned Funds: $4,179,000

Activity System ID: 13714

Activity Narrative: SUMMARY:

Activities are implemented to support provision of quality ARV services under the comprehensive antiretroviral treatment (ART) program carried out by Catholic Relief Services (CRS) in 25 sites in 8 provinces in South Africa. Major emphasis will be on human capacity development and local organization capacity building. The target population includes people affected by HIV and AIDS as well as higher risk populations such as migrant workers and refugees.

BACKGROUND:

AIDSRelief (the Consortium led by Catholic Relief Services) has received Track 1 funding since FY 2004 to rapidly scale up antiretroviral therapy (ART) in 9 countries, including South Africa. Since FY 2005, South Africa in-country funding was received to supplement central funding. The activity is implemented through two major in-country partners, Southern African Catholic Bishops' Conference (SACBC) and Institute for Youth Development South Africa (IYD-SA).

ACTIVITIES AND EXPECTED RESULTS:

With funding provided in FY 2008 AIDSRelief will continue implementing the activities in support of the South African Government (SAG) national ARV rollout. In the interest of maximizing available funds the focus will be on strengthening the existing sites providing services rather than on assessing and activating new sites. Utilizing technical assistance from AIDSRelief staff members and South African experts, ongoing support and guidance will be provided to sites in form of appropriate refresher medical training courses, patient tracking and reporting, monitoring and evaluation mechanisms and other necessary support.

ARV services will be provided through the 25 sites to ARV patients through clinic-based and home-based activities to optimize quality of life for HIV-infected clients and their families. All the relevant healthcare providers and administrative support staff at the sites will be trained to implement the ART program, using government-approved training curricula. Staff who have already received initial training will undergo refresher courses (either in-house or external), coupled with exchange of training courses and materials between sites with active support from the local training provider, Kimera training center. Treatment adherence training is provided to all patients who are enrolled on the ART program.

In most sites home-based care networks will follow up and support patients. This follow-up is conducted through direct visits to patients through the extensive home-based care outreach at the SACBC sites, while IYD-SA sites follow up through means of telephonic contact in most cases. In case the patient cannot be reached, a "treatment buddy" is contacted to inquire the whereabouts of the patients who did not come back for the monthly drug package. Inevitably, some patients become lost-to-follow-up in spite of all the efforts to locate them, due to migrating populations and illegal immigrants served by the program. This number currently stands at less than 4% of the patients ever enrolled on the program.

Each site ensures that HIV-infected patients are screened for tuberculosis (TB) prior to placing them on antiretroviral treatment, and are referred to TB treatment if they tested positive. Screening and testing for TB is conducted in a number of different ways, and these testing methods are specific to each site. While screening is conducted by a medical professional at each of the sites, in most cases patients are referred to the nearby SAG medical facility for TB testing and are only enrolled in antiretroviral treatment once they have completed two months of TB treatment, or have been found not to have active TB.

PEPFAR funding will also be used to support laboratory services, which are outsourced to a private provider, Toga Laboratories (a new PEPFAR partner since FY 2007). A courier service collects blood that is drawn at each site, and delivers these samples to the laboratories. Results are e-mailed or faxed back to the site within 48 hours of the laboratory receiving the blood samples.

The program is designed to improve each site's capacity to implement the national ART program in the long -term, and to strengthen clinical, administrative, financial and strategic information systems. Sites will be assisted in developing appropriate policies and protocols and in setting up sound financial and strategic information systems. Each site will also develop a unique community mobilization plan for the ART program and implement it in collaboration with relevant community organizations and leaders. Many of the sites are already involved in HIV and AIDS community mobilization activities and these will be linked to ART services. These lessons learned will be of value to other partners working in the non-governmental organization (NGO) sector.

All activities will continue to be implemented in close collaboration with the Department of Health HIV and AIDS Unit and the respective provincial authorities to ensure coordination and information sharing, and this will directly contribute to the success of the SAG's own rollout and the goals of PEPFAR. These activities are also aimed at successful integration of AIDSRelief activities with those implemented by the South African Government, thus ensuring long-term sustainability.

All sites operate under the terms of a Memorandum of Understanding (MOU) with the provincial Department of Health in which they operate, observing the national and provincial treatment protocols. There is a concerted effort at each site to ensure sustainability by having the SAG provide antiretroviral drugs, or by down referring stable patients into the SAG's primary healthcare clinics after providing training for the SAG clinic staff. St. Mary's Hospital, which accounts for more than a third of patient numbers, has already been accredited as a SAG rollout site. Sinosizo receives drugs from the National Department of Health due to its status as a down referral clinic for Stanger Hospital, and at a further two sites, Centocow and Bethal, all patients already receive drugs via the SAG rollout. Monthly statistics are shared with the South African National Department of Health, as well as with relevant provincial health departments in provinces where AIDSRelief implements the program.

There is a concerted effort to include men and children in the program, and all sites have specific plans to increase enrolment, including couple counseling and using a family-based approach. Although there is no specific PMTCT program, eligible pregnant women are provided with triple therapy to ensure maximum viral suppression to prevent the transmission to the baby. Newborn babies are provided with monotherapy after birth. AIDSRelief sites are encouraged to provide babies with cotrimoxazole after 4-6 weeks of life, and

Activity Narrative: PCR testing is conducted when relevant. Mothers are encouraged to use safe feeding practices as appropriate to individual circumstances. Most sites have clinic-based gardens to assist with nutrition programs, and several sites provide nutrition supplements, as per South African treatment guidelines. All sites provide ART access to non-South Africans, including refugees. Some of the AIDSRelief sites also receive PEPFAR and other funding through different sources for the provision of OVC care. The overlapping of these services provides OVC with access to both care and treatment services provided under the program.

In terms of the continuous qualitative review of the program, the annual clinical evaluation is done on available patient data by two South African ART experts, who not only evaluate the data within the program but also compare it to other large resource-limited programs, such as the program in Khayelitsha.

Even though prevention is not a specific program activity of the overall program, it is promoted through provision of information to patients regarding HIV and prevention of spreading the virus (prevention for positives). Secondly, skills training is provided to vulnerable populations, empowering them to make safer choices about their lives. Additionally, AB messages are shared with the target population, as well as accurate information regarding condoms is provided.

The CRS treatment program supports the PEPFAR goal of treating 2 million people with antiretroviral drugs.

Budget Code: HTXS

Program Area Code: 11

Activity ID: 7861.08

Planned Funds: $970,000

Activity System ID: 14273

Activity Narrative: SUMMARY:

ARV services are being rolled out in a phased approach in South Africa, however, barriers to accessing treatment remain at the community and health facility level, particularly for children and OVC. Data from public sector sites also reveal that counseling and testing (CT) is not acting as an effective entry point for treatment, care and support services due to poor linkages and referral systems. The Population Council (PC) will address issues concerning accessing treatment through 3 key activities with an emphasis on linkage and referral networks. The emphasis areas are human capacity development, local organization capacity building and wraparound (health).

BACKGROUND:

Over the past two years, the PC has worked closely with projects that specifically seek to increase access to antiretroviral treatment (ART) through different entry points at health facilities. Data from three separate projects show that major barriers still exist. A recent study showed that HIV-infected children in communities do not have access to ART for several reasons, including limited availability of PMTCT interventions, the limited number of facilities offering treatment, caregivers' ignorance of the HIV status of children, and a lack of programs addressing access to ART. Group discussions with caregivers and OVC service providers, as part of an elderly caregivers intervention, showed that the caregivers had very little knowledge and information on ART for children as well as relevant prevention issues. Data from public sector sites in North West province reveal that once tested for HIV, few clients are referred for assessment, treatment, wellness, or care and support services. Thus CT is not acting as an effective entry point for these services. This activity area addresses the strengthening of three key entry points to ART delivery. The following interventions are ongoing and will be expanded.

ACTIVITY 1: Access to Integrated Family Planning (FP) and ARV Services

The integrated FP and ART service provision will be consolidated at both FP services as well as in ART and other HIV related services in three sub-districts in North West Province. Training and technical assistance will be provided to ARV and FP providers, district program management staff, lay counselors and health informatics personnel. Training content will include the rationale for integration, proficiency in using various integration job aides, referral and linkages, documentation, recordkeeping and loss-to-follow-up. Where feasible support will be provided to strengthen the health facility based intervention to include the establishment of support groups for HIV positive clients on ART. The National Department of Health (NDOH) will be provided with technical assistance to inform the development of a strategy and inform guidelines for the integration of ART and FP. Particular attention will be given to ART and FP services for youth. Target groups for this activity include NDOH program managers and other implementing agencies. The third strategy in this activity will focus on addressing stress and burnout amongst providers of ART and CT, including providers of post-rape services in North West Province. The PC will work with providers and a psychologist to structure and initiate mechanisms to introduce peer education and support for ART, CT and sexual assault services providers. This activity will inform the development of materials for debriefing providers working in HIV related services.

ACTIVITY 2: Expanding Access to ARV Services through the Family-Centered Approach (FCA)

The family-centered approach is currently being tested at three centers; Tapologo group of health facilities, Royal Bafokeng (both in North West province) and Cecilia Makiwane in East London (Eastern Cape province). The FCA involves recruiting family members, specifically children, to access CT and subsequently, treatment services at health facilities. Identification and contact with primary patients will be made at CT and PMTCT sites and through immunization and child health programs. Support to improve CT as an entry point to care and treatment services is the focus of this activity.

ACTIVITY 3: Expanding OVC Treatment Access

Based on earlier work conducted on the elderly and caregivers in the Eastern Cape, and work by NGOs focusing on orphans and vulnerable children (OVCs), FY 2008 funds will be used to conduct the following interventions: (a) develop the capacity of OVC service providers to engage in relevant ART related services (e.g. referral to HIV testing, ART and TB services); (b) Develop and implement training for caregivers that combines information on obtaining HIV treatment (e.g., treatment literacy, side-effects, nutrition, adherence, how to access ART facilities) and provide care and support with HIV prevention and life skills for OVC. The HIV prevention and life skills components will focus on the ABC prevention strategy. The caregiver training will be designed to provide regular support to the caregivers and to address the psychosocial needs of the caregivers; (c) Develop referral networks and linkages between caregivers and service providers in the community to increase HIV testing, ART services and HIV related care for OVC. Concerns around disclosure of HIV status of children and counter stigma faced by infected children and affected caregivers and families will be addressed.

These activities support the PEPFAR 2-7-10 goals.

Activity ID:	3283.08	**Planned Funds:**	$5,820,000
Activity System ID:	13348		

Activity Narrative: SUMMARY:

ARK's focus is to provide ART and accompanying support to HIV-infected caregivers of children, their spouses, and children. Primary emphasis areas are renovation, human capacity development, and local organization capacity building. Target populations include OVC, people living with HIV (PLHIV), HIV-infected pregnant women, HIV-affected families, and caregivers.

BACKGROUND:

ARK is a charity organization whose mission is to facilitate and support delivery of accessible and sustainable comprehensive treatment, care and support services to children and their caregivers in communities affected by HIV and AIDS. In partnership with the KwaZulu-Natal Department of Health (KZNDOH), ARK, as the implementing partner, has established an antiretroviral treatment program in government primary health facilities and hospitals. Specifically, ARK works with the KZNDOH to identify sites and areas for capacity building, including human resources, modest infrastructure support, and organizational capacity development. PEPFAR funding has enabled ARK to successfully enroll over 15,000 patients in ART in KZN. FY 2008 funding will enable ARK to provide ARV treatment to existing and new patients, strengthen the infrastructure of the ARV delivery system in targeted sites, provide human resources, and build local institutional capacity to deliver ARV services. ARK provides treatment in accordance with national treatment guidelines.

ACTIVITIES & EXPECTED RESULTS:

ARK's primary objective is to keep mothers alive to continue caring for their children. The primary caregiver's continued survival and potential ability to earn a living while receiving ARV treatment will have a substantial impact on the extended family.

ACTIVITY 1: Support to KwaZulu-Natal Department of Health

ARK works with the KZNDOH to develop the necessary processes and systems to manage the ARV program, to ensure that the model created is scaleable, sustainable and replicable elsewhere. Capacity-building is site specific. Upon identification of a site, an analysis of the needs of each site will be done with respect to staffing (doctors, nurses, pharmacists and pharmacy assistants), clinical equipment, management systems, patient advocacy and temporary structures. The most pressing requirements are met in order to speed up the ability of patients to receive treatment. Where necessary ARK provides support in the ARV site and pharmacy accreditation process.

ARK's ARV program focuses on a network of clinics operating within a district, in order to create a sustainable and efficient system that supports the continuum of care and up and down referral. While patients are being assessed for treatment, a community health worker (CHW) from ARK's palliative care program is allocated to the patient. This CHW will conduct a pre-treatment home visit and will provide ongoing support to the patient and his/her family. Should a patient be non-adherent or lost-to-follow-up, the CHW will investigate the reasons for this, acting as the link between the patient and the clinic. ARK facilitates the integration process for ART, TB, other palliative care, and maternal HIV services.

ACTIVITY 2: Human Resources

ARK conducts a thorough needs analysis of human resource capacity prior to initiating support to the treatment program at each site. Once it has been determined that KZNDOH has budgeted for the identified posts needed within a period of three years, ARK recruits all the necessary medical staff required for the successful rollout of ART. The staff recruited vary from site to site but include doctors, nurses, pharmacists and pharmacy assistants. In addition ARK employs data capturers for monitoring and evaluation of the program.

ACTIVITY 3: Family-Centered Treatment Services

Although ARK's primary goal is to provide ARV service support to primary caregivers with children, ARK assists in the treatment of all HIV-infected adults and children requiring ART at ARK sites in KZN. All patients considered for ART need to meet both medical and psychosocial criteria before starting therapy. The psychosocial criteria are designed to ensure that the patient is prepared and ready to adhere to ART. All patients being assessed undergo a treatment literacy program and are educated about positive living. Patients are encouraged to motivate their partners/spouses to get tested and, if necessary, enter the treatment program. Although ARK's treatment target population is predominantly mothers and children, increased attention is being given to encourage and increase male partner (and men in general) participation. ARK-employed doctors and nurses are responsible for treatment management, patient consultations and the treatment of opportunistic and sexually transmitted infections. Pharmacists are responsible for the dispensing of medication.

ACTIVITY 4: Pediatrics

HIV-infected parents and caregivers will be encouraged and educated by the medical staff to get their children tested and to enter the treatment program where indicated. Staff in the local midwifery and obstetric units will be trained to refer HIV-infected mothers and their babies to the ARK ART program, ensuring access to full ART services when indicated. All at-risk infected infants with HIV diagnosis confirmed by PCR will be monitored, and have immediate access to ARVs and related services including the preventive package of care. Children identified through ARK's OVC program (also PEPFAR-funded) will be referred to the clinic by community care workers and social workers.

ACTIVITY 5: Human Capacity Development

Key staff are provided with a two week orientation training which covers all aspects of ARK's ARV program areas including employee policies and procedures, onsite mentorship from experienced ARK staff, and an introduction to key performance areas. The areas covered in training include: ARV treatment guidelines for adults and children, adherence, opportunistic and sexually transmitted infections as well as the value of

Activity Narrative: community access, adherence and refresher on prevention, including prevention for HIV-infected people. Staff are invited and encouraged to attend formal training offered by external providers including other PEPFAR partners such as the Foundation for Professional Development (FPD).

ACTIVITY 6: Reporting and Quality Assurance/Improvement

ARK provides computers and employs data capturers at all sites. Data is captured from patient folders and transferred to ARK's data center, allowing for ongoing evaluation and outcome analysis. Adherence rates, death rates and loss-to-follow-up are closely monitored. Quarterly updates are provided to the KZNDOH and information is used within the clinics to strengthen service delivery. To ensure high standards and quality of care in line with the national guidelines, all ARK staff are provided onsite, on-the-job training. This is followed up with regular onsite mentorship and site evaluation by ARK's national executive and provincial management teams. Informal training sessions are conducted quarterly by national staff. Staff are also encouraged to attend formal external training courses offered by FPD.

These activities contribute to PEPFAR's 2-7-10 goals by increasing the number of South Africans on treatment.

Table 3.3.11: Activities by Funding Mechansim

Mechanism ID:	1066.08	**Mechanism:**	PHRU
Prime Partner:	Wits Health Consortium, Perinatal HIV Research Unit	**USG Agency:**	U.S. Agency for International Development
Funding Source:	GHCS (State)	**Program Area:**	HIV/AIDS Treatment/ARV Services
Budget Code:	HTXS	**Program Area Code:**	11
Activity ID:	3101.08	**Planned Funds:**	$11,185,000
Activity System ID:	14268		

Activity Narrative: SUMMARY:

The Perinatal HIV Research Unit (PHRU) provides comprehensive care and support for people living with HIV (PLHIV). PHRU will use PEPFAR funds to provide high quality, holistic ARV treatment and psychosocial support in Soweto (Gauteng), rural Limpopo and Mpumalanga, and the Western Cape. PHRU will also use PEPFAR funds to provide personnel and ARV drugs for these services. Clients are provided with ART, pre-treatment literacy, adherence counseling and access to adherence support groups. Linkages from CT, PMTCT, and palliative care will be strengthened. The emphasis areas for ARV services are renovation, gender, human capacity development, local organization capacity building, and TB. A family-centered approach targets HIV-infected adults and children.

BACKGROUND:

Since 1998 PHRU has provided comprehensive treatment, care and support to PLHIV. Since 2004, PEPFAR funding has supported ARV treatment and South African Government (SAG) ART sites in Gauteng, rural Limpopo and Mpumalanga provinces, and the Western Cape. PHRU purchases ARVs and provides treatment for adults and children. PHRU's family-centered approach encourages clients to bring partners and other family members for testing and treatment. PHRU is expanding activities to scale up government ART sites and to investigate down referral systems. With FY 2008 funds, PHRU will work with provincial health departments to ensure safe transfer of participants to ongoing care within the SAG rollout program. PHRU will support, train and mentor healthcare workers involved in the management, care and treatment of HIV-infected individuals. All programs follow national guidelines for ART. PHRU provides regular training on ART issues such as adherence, medical treatment, and appropriate regimens. A NGO partner, HIVSA, provides all sites with psychosocial support programs providing community-based support, support groups and education. They cover issues such as basic HIV and AIDS information, HIV services and treatment, treatment literacy, adherence, TB, positive living, nutrition, prevention, opportunistic infections and TB. The comprehensive care approach leads to stigma reduction, increased disclosure, and improved adherence to ART. Throughout the comprehensive program, PHRU has established a continuous set of assessment functions to improve the quality of care at ART service sites.

ACTIVITIES AND EXPECTED RESULTS:
All of the activities described in this section will be continued and expanded with FY 2008 funds.

ACTIVITY 1: Adults, Soweto

Funding from PEPFAR supports women on treatment in the family-centered PMTCT program. The program is ongoing and provides treatment, monitoring and support for adults who meet SAG guidelines for treatment. HIVSA provides treatment literacy and adherence support.

ACTIVITY 2: Pregnant Women, Soweto

This program has been initiated in the maternity section at Bara in July 2005 by PHRU in partnership with the Department of Obstetrics and Gynecology. In Soweto 8,000 pregnant women are identified annually as HIV-infected, with around 1,600 needing treatment. Following SAG guidelines, pregnant women eligible for treatment are offered HAART. In order to fast-track women onto treatment, PHRU is training and mentoring doctors and nurses. The program is being expanded to other ART sites in the area through FY 2008 funds. HIVSA provides treatment literacy and adherence support.

ACTIVITY 3: Children, Soweto

The PHRU identifies HIV-infected children who need treatment through PMTCT and children of adults who are already on treatment. As part of a comprehensive family-centered approach, these children are put onto treatment following SAG treatment guidelines with ARVs purchased by PHRU according to USG and SAG guidelines. Staff is trained on an ongoing basis in pediatric ART.

ACTIVITY 4: Rural Mpumalanga and Limpopo

At Tintswalo Hospital, Limpopo, in partnership with Rural AIDS Development Action Research Program (RADAR), adults and children are identified as needing treatment in the palliative care and PMTCT programs. RADAR supports the ART site at this hospital, as well as Mapulaneng hospital, and is assisting other sites for ART accreditation. Human capacity building is fundamental to sustainability of the program and PHRU provides staff, training and mentoring existing treatment staff. HIVSA offers district-wide support in the primary care clinics that includes treatment literacy, adherence counseling and group support for these clients.

ACTIVITY 5: Tzaneen, Limpopo

PHRU in partnership with the University of Limpopo is supporting the Limpopo Department of Health wellness program operating in the district's primary healthcare clinics. Currently clients are referred to the ART sites including Letaba hospital and CN Phatudi hospital. Through Choice, a local NGO, clients are provided with a treatment readiness program, referred to rollout sites when they become eligible for treatment and given adherence support. Due to vast distances to the hospitals, clients on ART are supported in local primary care clinics.

ACTIVITY 6: Franchise, Gauteng

This program targets uninsured workers in densely populated areas in Johannesburg. ARVs are made available and affordable through a franchising scheme, and supplied free of charge or at significantly discounted rates to patients unable to purchase their own medication. ARV drugs are procured and supplied within the service by trained providers. This program provides a stand-alone ART full service clinic in Johannesburg and provides lessons learned about demand for ART outside the public sector, willingness and ability to pay for services, and the cost-effectiveness of this model of delivery.

ACTIVITY 7: Western Cape

Activity Narrative:

A number of partners and SAG ART sites have been identified in the Western Cape that need support to scale up their activities. These include the Desmond Tutu HIV/AIDS Foundation, the University of Cape Town and Stellenbosch University. These partners are supporting SAG ART sites and provide training, mentoring and support. Many ART sites in tertiary hospitals are reaching capacity and the PHRU is establishing innovative down referral mechanisms.

In FY 2008, all activities will expand. Additional partners are likely to be identified in order to increase access to treatment. A specific emphasis will be placed on pediatric treatment. In addition, tracing and tracking programs will be implemented to ensure retention in care. Renovations will be made as necessary per facility. Training for all categories of health workers and task shifting strategies will be implemented in FY 2008. Task shifting focuses on the effective utilization of existing staffing skills.

These activities will contribute substantially to the PEPFAR 2-7-10 goal of providing ARV treatment to two million people by supporting SAG treatment sites.

Funding Source:	GHCS (State)	**Program Area:**	HIV/AIDS Treatment/ARV Services
Budget Code:	HTXS	**Program Area Code:**	11

Activity ID: 2948.08

Planned Funds: $588,000

Activity System ID: 14001

Activity Narrative: SUMMARY:

Management Sciences for Health/Integrated Primary Health Care Project (IPHC) in collaboration with the National Department of Health (NDOH) will support the provision of ART services to those who have tested positive in 15 hospitals and 35 feeder clinics in 8 districts in 5 provinces (Eastern Cape, Mpumalanga, KwaZulu-Natal, Limpopo and North West). IPHC will assist the districts in implementing the National Department of Health Operational Plan for Comprehensive HIV and AIDS Care, Management and Treatment for South Africa (Comprehensive Plan) by assisting designated sites to meet the ARV accreditation requirements. IPHC will mentor and support the management team at facility and district level to implement the ARV program in accordance with the norms and standards of the Comprehensive Plan to increase access to ARV therapy through increased number of service points for providing ARV services. IPHC will build on its success of supporting accredited facilities and will continue to support others within the same district through the accreditation process. Integration of the ARV program into the routine primary health care (PHC) services will also be a key focal area to ensure that client adherence to ARV therapy is improved.

The emphasis area is human capacity development. The target population will be men and women (of reproductive age), family planning clients, pregnant women (including HIV-infected women), people living with HIV (PLHIV), affected families and caregivers of orphaned and vulnerable children (OVC), and healthcare providers (nurses) and other healthcare workers.

BACKGROUND:

This is an ongoing activity continuing from FY 2007. IPHC will continue to support the districts to address the increasing demand for ARVs in South Africa. IPHC will support health facilities in providing a continuum of care through the primary, secondary and tertiary level. This will be done by strengthening the ARV program at hospital level, improving referral to feeder clinics of the hospitals and strengthening community support for those patients on ARV, through direct referrals Community Based Organizations (CBOs) that are working with the facilities. The ARV program will be integrated with other HIV and AIDS services as well as PHC services to ensure sustainability. IPHC will continue to increase the number of accredited sites that are able to provide clients with ARV treatment. Working in 5 different provinces, the project will share good practices and lessons learnt from one site to the other. This will facilitate rapid start-up and fast-track accreditation of new sites. Staff training will include training of pharmacists, pharmacy assistants and professional nurses on drug management, staging and drug adherence strategies. Training will include monitoring drug interactions, ongoing counseling and support for adherence and well-being, as well as down-referral to community networks and home-based care service providers. IPHC will ensure adherence to the NDOH policy and drug protocols through supportive supervision and onsite mentoring. IPHC will visit each facility at least twice a month to provide onsite mentoring and support to facility staff. Using an assessment tool developed by the project, IPHC will assess ARV programs in terms of leadership for sustainability of the program, staff capacity, availability and management of ARV of drugs, laboratory services for CD4 count testing and viral load assessment, and the comprehensiveness of the care provided; including community involvement in the program. This will facilitate the improvement of staff skills in providing quality clinical and counseling services.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Supporting the ARV Accreditation Process

IPHC will support the districts by preparing designated sites for the accreditation process; working with the DOH site ARV task team to develop an ARV implementation plan for the site; training of healthcare providers in assessment and screening of patients for ARV therapy; screening for and treatment of opportunistic infections, adherence counseling, and nutrition counseling; training of community health workers as treatment supporters, on nutrition counseling, and adherence counseling; training healthcare providers to recognize adverse drug events and assist districts to develop an algorithm for continuum of care from counseling and testing to treatment, care and support and preparing healthcare providers at clinic level to assess clients for ARV; and implementing patient readiness program for ARV therapy. This process, guided by the SAG accreditation strategy, will result in an increased number of eligible clients on ARV therapy, and increased capacity of healthcare workers trained in the delivery of ARV services.

ACTIVITY 2: Linkages and Referrals

IPHC will facilitate linkages and referrals with other institutions such as TB hospitals, hospice and other home-based care services to ensure clients are also screened for ARV treatment and are referred to the appropriate service delivery point for ARV initiation and follow-up. Activities will include: conducting an assessment of referral systems between public and private sector and community-based initiatives; determining possible gaps in the referral system, developing referral systems with the various stakeholders; training service providers in other sectors; training service providers in follow-up care; and ongoing monitoring of the patient on ARV therapy. The result will be functional integration of ARV services with other health services within the district.

ACTIVITY 3: Mentoring

IPHC is currently supporting the accredited sites by visiting the sites twice a month, using the assessment tool to identify the strengths and weaknesses of each program. An intervention program to improve the services is developed with the ARV team that includes hospital doctors, pharmacists, pharmacy assistants, laboratory technicians, professional nurses and the leadership of the hospital. In addition IPHC will focus on improving the quality of care provided. Using the Supervisors Manual, IPHC will review the quality of care provided to all patients on ARVs as well as the quality of the PMTCT program and the ongoing counseling provided to patients on ARVs. With the aim of increasing the number of HIV positive patients who are accessing Family Planning service, IPHC will use an in-depth assessment tool to ensure that all ARV sites meet the minimum requirements for providing FP to clients, including the availability of different contraceptive methods and adherence to standards and protocols.

The IPHC activities contribute to the PEPFAR 2-7-10 goals.

Budget Code: HTXS **Program Area Code:** 11

Activity ID: 2917.08 **Planned Funds:** $5,510,000

Activity System ID: 13767

Activity Narrative: BACKGROUND:

The long-term goal of the EGPAF care and treatment program in South Africa is to increase life expectancy amongst HIV-infected persons by increasing access to care and treatment services and service utilization. Primary emphasis areas are human capacity development and expansion of services through training and task shifting, local organization capacity building, development of infrastructure, policy and guidelines, and strategic information. Primary populations to be targeted include infants, men and women, pregnant women, people living with HIV (PLHIV), and public and private healthcare providers.

Project Help Expand ART (HEART) will expand geographic coverage of services in FY 2008. HEART/South Africa is part of a larger worldwide initiative by EGPAF to support care and treatment services, and receives both Track 1 and in-country PEPFAR funding. The program's focus is on integrating PMTCT services to provide a family-centered model of care that includes access to treatment for HIV-infected pregnant women, couple counseling, partner testing and screening for TB.

EGPAF utilizes PEPFAR resources to complement those of the KwaZulu-Natal (KZN) Department of Health (DOH) and private partners, such as faith-based organizations (FBOs) and other non-governmental organizations (NGOs). These resources fund staff, infrastructure, drugs, laboratory testing and provide technical support. EGPAF will identify gaps in the program at the site level and implement activities to address the needs. The intent is to facilitate national and provincial plans and work with the government and partners to transition programs to South Africa government (SAG) support.

EGPAF has a partnership with a private NGO, the AIDS Health Care Foundation (AHF); this is a cost-sharing relationship (drugs and staff) to support the AHF care and treatment program. McCord Hospital, a faith-based organization, is a sub-grantee of EGPAF. The EGPAF partnership with the DOH includes support for human capacity development, infrastructure rehabilitation and technical support for sites in KZN.

The existing sites are:

(1) McCord Hospital, Durban
(2) AHF (Ithembalabantu Clinic), Umlazi, Durban
(3) KZNDOH, Pietermaritzburg Up/Down-referral program (Edendale Hospital and four referral clinics, Northdale Hospital and five referral clinics),
(4) KZNDOH, Vryheid Hospital plus three referral clinics, Benedictine Hospital and three referral clinics, and Edumbe Community Health Centre (CHC) plus one referral clinic, in Zululand District.

This partnership with the DOH will be expanded to the whole Free State province, to Ramotshere Moiloa (Zeerust) and Tswaing (Delareyville) sub-districts in the North West, to all of the Umgungundlovu and Zululand districts in KZN, and the Eastern Ekurhuleni and Lesedi sub-districts in Gauteng.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Human Capacity Development

EGPAF will support training of healthcare providers on the following:

1. Screening and treatment of TB/HIV and opportunistic infections, ART in pregnancy, and referral systems (between PMTCT and ART);
2. Supporting systems to improve access to care and treatment of children (including early infant diagnosis);
3. Capacity building at sites for implementation and management of the comprehensive care, management and treatment support program;
4. M&E;
5. Project management; and
6. Funding health workers to complete a HIV and AIDS Diploma at the University of KwaZulu-Natal.

In addition EGPAF will provide technical assistance for the creation of outreach programs to build capacity at primary healthcare (PHC) clinics for downward and upward referral in order to maintain patients on ART, initiate new patients on therapy, and decongest treatment sites that have reached capacity.

ACTIVITY 2: Down Referral Process

The KwaZulu-Natal Health Department (KZNDOH) started providing comprehensive care and treatment services to HIV-infected patients in May 2004 at hospital level. PHC clinics will be capacitated so that they are able to manage stable patients on ART referred down from the hospitals or community health centers (CHCs), and also up refer those that are eligible for initiation of ART to hospital or CHCs that are ARV accredited sites.

The KZNDOH aims to make ART accessible to all by expanding and strengthening existing HIV and AIDS care and treatment service delivery. A number of CHCs have been accredited by the national and provincial health departments and will initiate ART. The PHC clinics conduct rapid HIV testing, CD4 testing and provide the first, second and third adherence counseling sessions, which is also done at CHC and hospital level, and then refer patients to accredited CHCs or hospitals for initiation. The KZNDOH has identified the Pietermaritzburg and Zululand Districts as areas needing immediate support as they are poorly resourced with high HIV seroprevalence rates. The KZNDOH has requested that EGPAF support be extended to these districts. The districts have identified clinics where stable patients on treatment can be referred to continue ART management.

ACTIVITY 3: Pediatric Care and Treatment

EGPAF's goal is to ensure that 10 percent of all patients on treatment are children, which has not been achieved in the Zululand district. To strengthen pediatric HIV care and treatment, EGPAF will provide training on early infant diagnosis, pediatric HIV clinical staging and diagnosis and ART in children, in addition to provision of staff, strengthening the linkages between PMTCT and care and treatment.

Activity Narrative: The Edendale and Northdale pediatric HIV clinic has the largest cohort of pediatrics in the province on ART. The hospital down refers stable patients to the care of the PHC clinics to free up space for new pediatric patients.

EGPAF aims to:

1. Increase the rate of down referral of stable children on ART;
2. Increase the up referral of new eligible children for initiation of therapy; and
3. Improve linkages between PMTCT programs and care and treatment programs.

EGPAF will provide financial and technical support to eight PHC clinics in the catchment area of the Edendale and Northdale hospital in Pietermaritzburg, thus capacitating them to: (1) receive and manage transferred stable pediatric patients on ART from the pediatric HIV clinic; and (2) provide screening and preparation of eligible HIV-infected patients at three PHC facilities for up referral and initiation of ART at Edendale Hospital Pediatric HIV clinic. The same approach will be applied as we expand to other provinces, namely Free State, North West and Gauteng Provinces.

ACTIVITY 4: Counseling and Testing (CT)

The focus of this activity will be on strengthening comprehensive HIV and AIDS care and treatment services using a family-centered approach to increase access to CT, by fast-tracking TB, STI, and family planning patients to CT; to integrate PMTCT with HIV and AIDS care and treatment; to improve referral of eligible pregnant mothers, partners, family members, and HIV-infected infants and children to treatment sites; to screen for opportunistic infections. With this focus, EGPAF will increase pediatric care and treatment, couple counseling, partner testing, and testing for siblings. For patients who test HIV positive and are not yet eligible for ART, they will be retained through wellness clinics, support groups, patient tracking, etc. The overall goal is to expand coverage of HIV and AIDS care and treatment services to reach mothers, partners and children who would not otherwise have access to these services.

The increase in funding in FY 2008 will be used to expand EGPAF program activities viz. human capacity development, down-referral process, pediatric care and treatment as well as counseling and testing activities to the Free State, North West and Gauteng Province. In addition, EGPAF will strengthen M&E systems at all levels of service delivery.

The activities contribute to the PEPFAR 2-7-10 goals.

With FY 2008 reprogramming funds, EGPAF will provide additional support to the Free State and North West Department of Health (Bojanala District) to provide integrated HIV, TB, PMTCT and HIV care and treatment services. This will include a focus on strengthening the down-referral program in both provinces.

Table 3.3.11: Activities by Funding Mechansim

Mechanism ID: 2255.08

Mechanism: track 1

Prime Partner: Elizabeth Glaser Pediatric AIDS Foundation

USG Agency: HHS/Centers for Disease Control & Prevention

Funding Source: Central GHCS (State)

Program Area: HIV/AIDS Treatment/ARV Services

Budget Code: HTXS

Program Area Code: 11

Activity ID: 3296.08

Planned Funds: $5,283,351

Activity System ID: 13769

Activity Narrative: Elizabeth Glaser Pediatric AIDS Foundation implements a comprehensive HIV care and treatment program in South Africa that is funded with Track 1 central funding, as well as South Africa COP funding. The activities do not differ across the funding mechanisms, and this entry is thus a repeat of the South Africa COP entry. All targets are reflected in the South Africa COP entry.

BACKGROUND:

The long-term goal of the EGPAF care and treatment program in South Africa is to increase life expectancy amongst HIV-infected persons by increasing access to care and treatment services and service utilization. Primary emphasis areas are human capacity development and expansion of services through training and task shifting, local organization capacity building, development of infrastructure, policy and guidelines, and strategic information. Primary populations to be targeted include infants, men and women, pregnant women, people living with HIV (PLHIV), and public and private healthcare providers.

Project Help Expand ART (HEART) will expand geographic coverage of services in FY 2008. HEART/South Africa is part of a larger worldwide initiative by EGPAF to support care and treatment services, and receives both Track 1 and in-country PEPFAR funding. The program's focus is on integrating PMTCT services to provide a family-centered model of care that includes access to treatment for HIV-infected pregnant women, couple counseling, partner testing and screening for TB.

EGPAF utilizes PEPFAR resources to complement those of the KwaZulu-Natal (KZN) Department of Health (DOH) and private partners, such as faith-based organizations (FBOs) and other non-governmental organizations (NGOs). These resources fund staff, infrastructure, drugs, laboratory testing and provide technical support. EGPAF will identify gaps in the program at the site level and implement activities to address the needs. The intent is to facilitate national and provincial plans and work with the government and partners to transition programs to South Africa government (SAG) support.

EGPAF has a partnership with a private NGO, the AIDS Health Care Foundation (AHF); this is a cost-sharing relationship (drugs and staff) to support the AHF care and treatment program. McCord Hospital, a faith-based organization, is a sub-grantee of EGPAF. The EGPAF partnership with the DOH includes support for human capacity development, infrastructure rehabilitation and technical support for sites in KZN.

The existing sites are:

(1) McCord Hospital, Durban;
(2) AHF (Ithembalabantu Clinic), Umlazi, Durban;
(3) KZN DOH, Pietermaritzburg Up/Down-referral program (Edendale Hospital and four referral clinics, Northdale Hospital and five referral clinics); and
(4) KZN DOH, Vryheid Hospital plus three referral clinics, Benedictine Hospital and three referral clinics, and Edumbe Community Health Centre (CHC) plus one referral clinic, in Zululand District.

This partnership with the DOH will be expanded to the whole Free State province, to Ramotshere Moiloa (Zeerust) and Tswaing (Delareyville) sub-districts in the North West, to all of the Umgungundlovu and Zululand districts in KZN, and the Eastern Ekurhuleni and Lesedi sub-districts in Gauteng.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Human Capacity Development

EGPAF will support training of healthcare providers on the following:

1. Screening and treatment of TB/HIV and opportunistic infections, ART in pregnancy, and referral systems (between PMTCT and ART);
2. Supporting systems to improve access to care and treatment of children (including early infant diagnosis);
3. Capacity building at sites for implementation and management of the comprehensive care, management and treatment support program;
4. M&E;
5. Project management; and
6. Funding health workers to complete a HIV and AIDS Diploma at the University of KwaZulu-Natal.

In addition EGPAF will provide technical assistance for the creation of outreach programs to build capacity at primary healthcare (PHC) clinics for downward and upward referral in order to maintain patients on ART, initiate new patients on therapy, and decongest treatment sites that have reached capacity.

ACTIVITY 2: Down Referral Process

The KwaZulu-Natal Health Department (KZNDOH) started providing comprehensive care and treatment services to HIV-infected patients in May 2004 at hospital level. PHC clinics will be capacitated so that they are able to manage stable patients on ART referred down from the hospitals or community health centers (CHCs), and also up refer those that are eligible for initiation of ART to hospital or CHCs that are ARV accredited sites.

The KZNDOH aims to make ART accessible to all by expanding and strengthening existing HIV and AIDS care and treatment service delivery. A number of CHCs have been accredited by the national and provincial health departments and will initiate ART. The PHC clinics conduct rapid HIV testing, CD4 testing and provide the first, second and third adherence counseling sessions, which is also done at CHC and hospital level, and then refer patients to accredited CHCs or hospitals for initiation. The KZNDOH has identified the Pietermaritzburg and Zululand Districts as areas needing immediate support as they are poorly resourced with high HIV seroprevalence rates. The KZNDOH has requested that EGPAF support be extended to these districts. The districts have identified clinics where stable patients on treatment can be referred to continue ART management.

ACTIVITY 3: Pediatric Care and Treatment

Activity Narrative: EGPAF's goal is to ensure that 10 percent of all patients on treatment are children, which has not been achieved in the Zululand district. To strengthen pediatric HIV care and treatment, EGPAF will provide training on early infant diagnosis, pediatric HIV clinical staging and diagnosis and ART in children, in addition to provision of staff, strengthening the linkages between PMTCT and care and treatment.

The Edendale and Northdale pediatric HIV clinic has the largest cohort of pediatrics in the province on ART. The hospital down refers stable patients to the care of the PHC clinics to free up space for new pediatric patients.

EGPAF aims to:

1. Increase the rate of down referral of stable children on ART;
2. Increase the up referral of new eligible children for initiation of therapy; and
3. Improve linkages between PMTCT programs and care and treatment programs.

EGPAF will provide financial and technical support to eight PHC clinics in the catchment area of the Edendale and Northdale hospital in Pietermaritzburg, thus capacitating them to: (1) receive and manage transferred stable pediatric patients on ART from the pediatric HIV clinic; and (2) provide screening and preparation of eligible HIV-infected patients at three PHC facilities for up referral and initiation of ART at Edendale Hospital Pediatric HIV clinic. The same approach will be applied as we expand to other provinces, namely Free State, North West and Gauteng Provinces.

ACTIVITY 4: Counseling and Testing (CT)

The focus will be strengthening comprehensive HIV and AIDS care and treatment services using a family-centered approach to increase access to CT, by fast-tracking TB, STI, and family planning patients to CT; to integrate PMTCT with HIV and AIDS care and treatment; to improve referral of eligible pregnant mothers, partners, family members, and HIV-infected infants and children to treatment sites; to screen for opportunistic infections. With this focus, EGPAF will increase pediatric care and treatment, couple counseling, partner testing, and testing for siblings. For patients who test HIV positive and are not yet eligible for ART, they will be retained through wellness clinics, support groups, patient tracking, etc. The overall goal is to expand coverage of HIV and AIDS care and treatment services to reach mothers, partners and children who would not otherwise have access to these services.

The increase in funding in FY 2008 will be used to expand EGPAF program activities viz. human capacity development, down-referral process, pediatric care and treatment as well as counseling and testing activities to the Free State, North West and Gauteng Province. In addition, EGPAF will strengthen M&E systems at all levels of service delivery.

The activities contribute to the PEPFAR 2-7-10 goals.

Budget Code: HTXS

Program Area Code: 11

Activity ID: 12341.08

Planned Funds: $1,164,000

Activity System ID: 13741

Activity Narrative: This is a new activity in FY 2008.

SUMMARY:

Columbia University is a Track 1 care and treatment partner in South Africa, implementing site-level activities in the Eastern Cape and KwaZulu-Natal with CDC funding. Since FY 2007, Columbia University's office in Western Cape has received funding from USAID to support treatment partners in Limpopo, North West, Gauteng, Mpumalanga and Western Cape to improve linkages with prevention of mother-to-child transmission (PMTCT) and pediatric antiretroviral treatment (ART). This is achieved by providing technical assistance, training, and mentoring in public and non-governmental (NGO) facilities. The emphasis areas are human capacity development and local organization capacity building.

FY 2008 funds will support the continuation and expansion of the South-to-South Partnership for Comprehensive Pediatric HIV/AIDS Care and Treatment Training Initiative (S2S), a pediatric HIV and AIDS training program implemented in partnership with Tygerberg Children's Hospital and the Stellenbosch University in the Western Cape. The S2S program's experience and materials will support the activities within this initiative.

BACKGROUND:

Columbia University's International Center for AIDS Care and Treatment Program (ICAP) supports sites to build provider and system capacity with a focus on continuous quality improvement. Poor facility systems/services design, lack of patient scheduling systems, inefficient provider placement/scheduling and irregular supervision by senior management continue to weaken already stressed HIV services. ICAP's site level support is dynamic and continuously customized to consider site attributes and existing resources.

While the technical support and capacity-building activities vary according to site attribute, all sites benefit from ICAP support, including assistance to (1) jointly develop or revise existing site specific work plans to outline action steps on how to achieve PMTCT and pediatric ART goals, including setting site specific benchmarks and targets (in close collaboration with USAID-SA partners); (2) leverage and maximize efficiency of existing site and regional human and commodity resources; (3) deliver a quality package of PMTCT and family-centered HIV services to clients; (4) implement active referrals and linkage systems; (e) operate efficiently with an integrated approach to caring for the HIV-infected pregnant woman/mother and her family; (5) facilitate and lead site level system improvements that improve quality of care, support optimal patient flow, and decreases patient wait time; and (6) initiate a multidisciplinary approach to service delivery.

Site level systems improvement and skills-building activities will be conducted routinely on an individual and group basis to introduce new competencies and activities as well as to reinforce specific areas of need with emphasis on the skills providers' and teams' need for appropriate care of families. All improvement activities are conducted on the site level and are generally targeted towards rapidly enhancing site performance and strengthening program implementation and include a blend of didactic, modeling, clinical implementation/preceptorship, negotiation and case study activities. ICAP will support stakeholders to (1) assess and identify missing service components, performance gaps, and systems failures to providing quality care and treatment services; (2) identify action steps and activities to support root causes of problems; and (3) support the management team to monitor the resulting affect and ensure positive enabling factors to improve or initiate that service component.

ACTIVITY 1: On-site Skills Building, Task Shifting and Clinical Mentoring

The critical conduits for system implementation are the healthcare workers. ICAP will work with site staff and partners to implement a supportive supervision model that combines capacity-building elements such as (1) supportive and regular on-site presence; (2) on-site dynamic skills-building events that directly link to implementation and program improvement such as (a) clinical mentoring and modeling to promote the rapid application of in-service learning to the clinical settings and to improve the quality of clinical care and patient outcomes; and (b) on-the-job training to provide necessary knowledge and hands-on practice of skills needed to perform job tasks; and (3) structured training interventions that employ multiple skills building and transfer of learning strategies to reinforce and emphasize key PMTCT and pediatric ART content. Training interventions include instructional (didactic) activities that include case-based learning, group-discussions, problem solving exercises; one-on-one and small team clinical mentoring activities (across/within cadre) with responsive/dynamic coaching and modeling activities; and case study activities.

ACTIVITY 2: Utilize a Multidisciplinary Approach

ICAP will promote the strengthening of a comprehensive approach to patient care at each facility. This includes instituting distinct clinical reasoning skills among cadres, emphasizing collaborative decision making and recognizing the important contributions of all members of the team. Activities to support this will include routine and regular management meetings to discuss service delivery and patient cases, onsite skills building activities and implementation workshops.

ACTIVITY 3: Performance Support

ICAP will provide technical support to partners and site staff to develop content for simple tools, resources, and performance aids that will help providers to correctly perform tasks and make decisions. This includes the development of protocols, decision trees, flip charts and posters for clinical and counseling related services.

ACTIVITY 4: Improve Service Quality and Standards of Care

ICAP will support the adaptation and implementation of a simple standards of care (SOC) tool designed to help the staff rapidly monitor the quality and depth of PMTCT, pediatric and adult ART services being offered at a facility level. ICAP will do so in collaboration with facility staff and partners.

The approaches noted above will be applied to focus areas outlined below.

Activity Narrative:

(1) Prioritizing ART for eligible pregnant woman: ICAP will build on existing PMTCT services to ensure that all HIV-infected pregnant women are assessed for ART eligibility. Eligible women will be fast-tracked to initiate ART regardless of point of entry. Depending on site attributes, ICAP will work with sites and partners to ensure the following: (a) HIV-infected pregnant women receive CD4 testing the same day they receive their HIV test results; (b) women accessing maternal and child health (MCH) services initiate ART at the nearest ART site and be given coordinated visits to ensure that both MCH and HIV and AIDS needs are met; and (c) development of additional service models that increase access to care and treatment services for families including family days at care and treatment clinics, weekend and afternoon care and treatment clinics.

(2) HIV-infected women of childbearing age and their partners: ICAP will continue to strengthen the quality of the clinical and psychosocial services available to HIV-infected women of childbearing age and males (especially partners) enrolled in care and treatment services. This includes supporting facilities to offer services and referrals to counsel HIV-infected women and partners intending to become pregnant.

(3) Ongoing support for PMTCT clients on ART: ICAP will support sites to improve clinical management of pregnant women and families on ART. The support will include assessing (a) clients for treatment failure; (b) ARV contraindication and adverse reaction; and (c) administration of appropriate drug substitution or regimen change.

(4) Psychosocial and Adherence Support (P&AS): Quality adherence and psychosocial support is the cornerstone of successful HIV care and treatment services and having healthier HIV-infected pregnant woman. ICAP will provide individual P&AS through (a) developing and routine implementation of psychosocial assessments to assess ART readiness during pregnancy and post-natal period; and (b) establishing support groups at sites to initiate or strengthen support groups for PMTCT clients. ICAP will also strengthen the roles of the Implementation Team to support P&AS programs. The Implementation Team will include pharmacists and nurses. This activity aims to ensure that facility staff understand the roles and responsibilities of each cadre and acquire the necessary skills to provide those services as part of the multidisciplinary team.

(5) Patient Follow-up: ICAP will develop a mechanism to track and trace patients that have discontinued services or missed appointments. Specifically, this includes (a) setting up a system for tracking no-shows and discontinuers; (b) implementing a follow-up system to reach out to clients soon after they fail to return to the clinic; and (c) developing strong linkages with community-based organizations and community health workers to support patients who have discontinued services.

Table 3.3.11: Activities by Funding Mechansim

Mechanism ID: 2792.08

Mechanism: Track 1

Prime Partner: Catholic Relief Services

USG Agency: HHS/Health Resources Services Administration

Funding Source: Central GHCS (State)

Program Area: HIV/AIDS Treatment/ARV Services

Budget Code: HTXS

Program Area Code: 11

Activity ID: 3286.08

Planned Funds: $4,372,523

Activity System ID: 13716

Activity Narrative: AIDSRelief implements a comprehensive HIV care and treatment program in South Africa that is funded with Track 1 central funding, as well as South Africa COP funding. The activities do not differ across the funding mechanisms, and this entry is thus a repeat of the South Africa COP entry. All targets are reflected in the South Africa COP entry.

SUMMARY:

Activities are implemented to support provision of quality ARV services under the comprehensive antiretroviral treatment (ART) program carried out by Catholic Relief Services (CRS) in 25 sites in 8 provinces in South Africa. Major emphasis will be on human capacity development and local organization capacity building. The target population includes people affected by HIV and AIDS as well as higher risk populations such as migrant workers and refugees.

BACKGROUND:

AIDSRelief (the Consortium led by Catholic Relief Services) has received Track 1 funding since FY 2004 to rapidly scale up antiretroviral therapy (ART) in 9 countries, including South Africa. Since FY 2005, South Africa in-country funding was received to supplement central funding. The activity is implemented through two major in-country partners, Southern African Catholic Bishops' Conference (SACBC) and Institute for Youth Development South Africa (IYD-SA).

ACTIVITIES AND EXPECTED RESULTS:

With funding provided in FY 2008 AIDSRelief will continue implementing the activities in support of the South African Government (SAG) national ARV rollout. In the interest of maximizing available funds the focus will be on strengthening the existing sites providing services rather than on assessing and activating new sites. Utilizing technical assistance from AIDSRelief staff members and South African experts, ongoing support and guidance will be provided to sites in form of appropriate refresher medical training courses, patient tracking and reporting, monitoring and evaluation mechanisms and other necessary support.

ARV services will be provided through the 25 sites to ARV patients through clinic-based and home-based activities to optimize quality of life for HIV-infected clients and their families. All the relevant healthcare providers and administrative support staff at the sites will be trained to implement the ART program, using government-approved training curricula. Staff who have already received initial training will undergo refresher courses (either in-house or external), coupled with exchange of training courses and materials between sites with active support from the local training provider, Kimera training center. Treatment adherence training is provided to all patients who are enrolled on the ART program.

In most sites home-based care networks will follow up and support patients. This follow-up is conducted through direct visits to patients through the extensive home-based care outreach at the SACBC sites, while IYD-SA sites follow up through means of telephonic contact in most cases. In case the patient cannot be reached, a "treatment buddy" is contacted to inquire the whereabouts of the patients who did not come back for the monthly drug package. Inevitably, some patients become lost-to-follow-up in spite of all the efforts to locate them, due to migrating populations and illegal immigrants served by the program. This number currently stands at less than 4% of the patients ever enrolled on the program.

Each site ensures that HIV-infected patients are screened for tuberculosis (TB) prior to placing them on antiretroviral treatment, and are referred to TB treatment if they tested positive. Screening and testing for TB is conducted in a number of different ways, and these testing methods are specific to each site. While screening is conducted by a medical professional at each of the sites, in most cases patients are referred to the nearby SAG medical facility for TB testing and are only enrolled in antiretroviral treatment once they have completed two months of TB treatment, or have been found not to have active TB.

PEPFAR funding will also be used to support laboratory services, which are outsourced to a private provider, Toga Laboratories (a new PEPFAR partner since FY 2007). A courier service collects blood that is drawn at each site, and delivers these samples to the laboratories. Results are e-mailed or faxed back to the site within 48 hours of the laboratory receiving the blood samples.

The program is designed to improve each site's capacity to implement the national ART program in the long -term, and to strengthen clinical, administrative, financial and strategic information systems. Sites will be assisted in developing appropriate policies and protocols and in setting up sound financial and strategic information systems. Each site will also develop a unique community mobilization plan for the ART program and implement it in collaboration with relevant community organizations and leaders. Many of the sites are already involved in HIV and AIDS community mobilization activities and these will be linked to ART services. These lessons learned will be of value to other partners working in the non-governmental organization (NGO) sector.

All activities will continue to be implemented in close collaboration with the Department of Health HIV and AIDS Unit and the respective provincial authorities to ensure coordination and information sharing, and this will directly contribute to the success of the SAG's own rollout and the goals of PEPFAR. These activities are also aimed at successful integration of AIDSRelief activities with those implemented by the South African Government, thus ensuring long-term sustainability.

All sites operate under the terms of a Memorandum of Understanding (MOU) with the provincial Department of Health in which they operate, observing the national and provincial treatment protocols. There is a concerted effort at each site to ensure sustainability by having the SAG provide antiretroviral drugs, or by down referring stable patients into the SAG's primary healthcare clinics after providing training for the SAG clinic staff. St. Mary's Hospital, which accounts for more than a third of patient numbers, has already been accredited as a SAG rollout site. Sinosizo receives drugs from the National Department of Health due to its status as a down referral clinic for Stanger Hospital, and at a further two sites, Centocow and Bethal, all patients already receive drugs via the SAG rollout. Monthly statistics are shared with the South African National Department of Health, as well as with relevant provincial health departments in provinces where AIDSRelief implements the program.

Activity Narrative: There is a concerted effort to include men and children in the program, and all sites have specific plans to increase enrolment, including couple counseling and using a family-based approach. Although there is no specific PMTCT program, eligible pregnant women are provided with triple therapy to ensure maximum viral suppression to prevent the transmission to the baby. Newborn babies are provided with monotherapy after birth. AIDSRelief sites are encouraged to provide babies with cotrimoxazole after 4-6 weeks of life, and PCR testing is conducted when relevant. Mothers are encouraged to use safe feeding practices as appropriate to individual circumstances. Most sites have clinic-based gardens to assist with nutrition programs, and several sites provide nutrition supplements, as per South African treatment guidelines. All sites provide ART access to non-South Africans, including refugees. Some of the AIDSRelief sites also receive PEPFAR and other funding through different sources for the provision of OVC care. The overlapping of these services provides OVC with access to both care and treatment services provided under the program.

In terms of the continuous qualitative review of the program, the annual clinical evaluation is done on available patient data by two South African ART experts, who not only evaluate the data within the program but also compare it to other large resource-limited programs, such as the program in Khayelitsha.

Even though prevention is not a specific program activity of the overall program, it is promoted through provision of information to patients regarding HIV and prevention of spreading the virus (prevention for positives). Secondly, skills training is provided to vulnerable populations, empowering them to make safer choices about their lives. Additionally, AB messages are shared with the target population, as well as accurate information regarding condoms is provided.

The CRS treatment program supports the PEPFAR goal of treating 2 million people with antiretroviral drugs.

Table 3.3.11: Activities by Funding Mechansim

Mechanism ID: 224.08

Mechanism: CTR

Prime Partner: Family Health International

USG Agency: U.S. Agency for International Development

Funding Source: GHCS (State)

Program Area: HIV/AIDS Treatment/ARV Services

Budget Code: HTXS

Program Area Code: 11

Activity ID: 2927.08

Planned Funds: $970,000

Activity System ID: 13725

Activity Narrative: This activity was approved in the FY 2007 COP, was funded with FY 2007 PEPFAR funds, and is included here to provide complete information for reviewers. The funding mechanism from field support to a local agreement for Family Health International (FHI) is changing in October 2008 therefore a COP entry is being made to reflect this change in mechanism and activity number only. FHI activities under HTXS are expected to continue under the FY 2008 COP and funds are being requested in the new COP entry.

This is a new activity in FY 2008.

SUMMARY:

Family Health International (FHI) will use FY 2008 funding to continue to expand access to integrated services for HIV-infected and affected individuals in home-based care (HBC) programs by strengthening the linkages between HBC and counseling and testing (CT) through establishing additional mobile clinics in underserved areas in Mpumalanga and KwaZulu-Natal provinces. FHI will work with the Departments of Health as well as PEPFAR partners, Project Support Association of Southern Africa (PSASA), Right to Care (RTC), and BroadReach, and will refer patients in need of antiretroviral treatment (ART) to government-accredited institutions for ART initiation. The emphasis areas for the following activities are in-service training, local organization capacity building, and health-related wraparound programs in family planning, safe motherhood, and tuberculosis. Target populations addressed are people living with HIV and AIDS and men and women of reproductive age.

BACKGROUND:

In response to requests from the national and provincial Departments of Health and Social Development, FHI has been strengthening the linkages between home-based care (HBC), counseling and testing (CT), TB, antiretroviral treatment (ART) and family planning (FP) services for comprehensive treatment, care and support. This project addresses the need to establish formal referral and follow-up mechanisms for CT and ART and other essential healthcare services, such as FP, in HBC programs where clients are often in need of ART. Experience suggests that improved access to ARV services in South Africa is improving the health status of many HIV-infected individuals, leading to a return of libido and sexual activity, and this also requires careful decisions about their sexual and reproductive health. Tighter links between palliative care (PC), TB, CT, ARV and FP services, in particular, afford men and women the opportunity to improve their overall quality of health through integrated services. FHI is creating and strengthening functional referral mechanisms between CT, HBC, ARV and FP service programs in Mpumalanga and KwaZulu-Natal in collaboration with PSASA and the South African Council of Churches (SACC) HBC programs. To date, over 500 new clients have initiated ARVs through the program referral network. Access to ART is still a major constraint in these rural programs. PSASA's and SACC's HBC programs typically reach out to low-resource, isolated communities where HIV service needs are high and transport to services is prohibitively expensive.

In FY 2006, FHI and its partners established a mobile clinic to provide better access to CT, diagnosis/treatment of sexually transmitted infections (STI), ARV services, and FP. These integrated mobile services target HBC caregivers, clients and their families, as well as the surrounding communities. Additional units are being added in FY 2007 to reach those who reside in remote, underserved areas in Mpumalanga and KwaZulu-Natal. This will enable project partners to cover a larger geographical area and meet the needs of more HBC clients and family members.

ACTIVITIES AND EXPECTED RESULTS:

In close collaboration with the Mpumalanga and KwaZulu-Natal Departments of Health (DOH), PSASA, SACC, RTC and BroadReach, FHI will expand access to quality integrated services for infected and affected individuals in HBC programs through a continuation of the project and through continued support to four mobile service units to provide CT, ARV services, STI screening and FP services in rural, underserved areas. PSASA and SACC will provide basic care and support services and refer clients for services offered by the mobile clinics and provide follow-up and ART adherence at the HBC level. Nearby DOH facilities will process lab work for CD4 counts and place clients on ARVs according to clinical protocols. Specifically FHI will continue to (1) support the four mobile clinics that were established in FY 2006 and 2007, based in Mpumalanga and in KwaZulu-Natal; (2) serve remote HBC sites in Mpumalanga and KwaZulu-Natal of which the program participants and immediate community will have access to the mobile clinics; (3) hire and supervise local mobile clinic staff (professional nurse and one counselor in each mobile clinic) to provide CT, STI and FP services and ARV referrals as it is anticipated that patients' treatment by the mobile clinic staff will be transferred to public sector sites as soon as these sites have the necessary capacity; (4) train four professional nurses and four counselors to oversee the quality of CT, ARV screening, TB screening and treatment, STI testing and treatment, FP services and counseling; (5) train four professional nurses and four counselors on couple counseling and gender awareness, and ensure it is staffed by qualified health professionals; (6) work with HBC volunteers in mobile clinic service sites to provide referrals for CT, TB, STI, FP and ARV referrals services; (7) conduct outreach to HBC projects and communities through IEC materials and household visits; and (8) use the mobile clinics to transport clients to doctors or facilities for urgent care.

FHI will leverage resources from partners and the DOH for all commodities. FHI will support a Management Information System to collect service and referral data relating to all patients. A monitoring and evaluation specialist, who will be hired to spearhead this effort in FY 2007, will continue to be supported in FY 2008. Also, in FY 2008, COP activities will be expanded to train approximately 40 government officials (10 per mobile support unit) on maintenance and management. All activities will be implemented closely with local partners with an aim towards bolstering capacity to take ownership of the mobile clinics by September 2009. These activities will contribute to the PEPFAR 2-7-10 goals by increasing the number of people receiving ARV treatment.

11.4 Number of individuals receiving antiretroviral therapy by the end of the reporting period	N/A	True
11.5 Total number of health workers trained to deliver ART services, according to national and/or international standards	8	False

Indirect Targets

FHI will indirectly support ARV services in their services areas in Mpumalanga and KwaZulu-Natal. PEPFAR treatment partners, Broadreach and Right to Care will directly be providing ART to clients in the program, however, FHI, through their sub-partner PSASA, will be providing a critical referral system through their home-based care program, as well as monitoring of adherence, opportunistic infections and drug interactions. It is a synergy that has proven effective and FHIs is providing a valuable indirect contribution to the overall ART program.

Mechanism ID:	4760.08	**Mechanism:**	N/A
Prime Partner:	St. Mary's Hospital	**USG Agency:**	HHS/Centers for Disease Control & Prevention
Funding Source:	GHCS (State)	**Program Area:**	HIV/AIDS Treatment/ARV Services
Budget Code:	HTXS	**Program Area Code:**	11
Activity ID:	8264.08	**Planned Funds:**	$1,552,000
Activity System ID:	13833		

Activity Narrative: SUMMARY:

The proposed St. Mary's Hospital project addresses comprehensive and holistic HIV care and treatment, including antiretroviral treatment (ART) within a hospital setting, with a large focus on training at a community clinic level to ensure that stable patients, once down-referred from the hospital can be treated on a continuous basis at a community level. The major emphasis area for this project is human capacity and the development thereof both in the community as well as in the hospital. The expansion plans for FY 2008 is to provide holistic treatment and care to patients that are experiencing side-effects of ART as well as babies born to mothers that are HIV infected (described elsewhere in the COP). The care and treatment is extended to the rehabilitation department for adults and children. Some focus will be on community participation, national media campaigns addressing preventative educational messages in partnership with other donors (also described elsewhere in the COP), linkages with other sectors, and the capacity development of local organizations. The primary target populations will be the general population, people affected by HIV and AIDS, discordant couples in special populations, the community, the South African Government (SAG), healthcare providers and other groups, pregnant women and children, partners of pregnant women and people infected with HIV and on treatment as well as children with rehabilitation needs that were born to HIV infected mothers.

BACKGROUND:

Since 2003 St. Mary's hospital has successfully implemented an ART program based on holistic and comprehensive treatment of HIV and AIDS patients. This program was funded through another PEPFAR partner, Catholic Relief Services (CRS) as part of their Track 1 program. Since FY 2005, the USG has added additional funding to St. Mary's Hospital to focus on pregnant women.

Successful treatment of HIV and AIDS requires that patients maintain adherence to medication, incorporating overall wellbeing, including nutrition. The early stages of the treatment program allowed St. Mary's to maintain an average adherence rate of around 90%, which was largely due to a patient-centered model of care. However as the patient numbers have increased St. Mary's has realized that there is a greater need to provide patient support both in the community and to the community clinics. St. Mary's will aggressively address loss-to-follow-up, and ensure a more efficient down referral process of patients from the hospital setting to the community clinics. In the district that St. Mary's serves, it is estimated that 25,000 patients require immediate treatment. Just over 2,500 patients are currently in HIV care and just over 2,200 patients are on antiretroviral treatment at the hospital.

It has been noted that many patients on treatment are experiencing neurological side-effects to treatment that require services associated with rehabilitation both on an inpatient and outpatient basis. In addition there is a need to provide rehabilitation support to HIV infected patients that are experiencing complications due to opportunistic infections. It is estimated that 60% of the patients attended to by the rehabilitation department are HIV infected and require extensive rehabilitation support. The hospital delivers approximately 500 babies per month and many of these babies are to HIV infected mothers resulting in the need for rehabilitation services to mother and infant at a ward and outpatients level. Follow-up is provided to the mother and child upon discharge from the hospital at weekly support clinics held at the PHC facility.

ACTIVITIES AND EXPECTED RESULTS:

Activity 1: Human Resource Capacity Training.

As an accredited SAG antiretroviral (ARV) rollout site and as an extension of the service level agreement the Hospital has with the Department of Health, St. Mary's will contribute to the success of the SAG ARV rollout plan through this project. The funding allows St. Mary's to continue to initiate patients on ART, and once stable, down refer them to the community clinics in the area. St. Mary's will assist with the training of health workers at clinic level to facilitate this. St. Mary's has identified local partners as well as the World Health Organization's Integrated Management of Adult Illnesses (IMAI) training toolkit as a vehicle for training. The toolkit makes use of people living with HIV (PLHIV) as expert trainers which are directly aligned to the success of St. Mary's ART program. All three sites within St. Mary's Hospital strongly emphasize human capacity development. Within the entire Hospital setting (including the three ART sites) patients who have tested HIV positive but whose CD4 counts and staging preclude them from treatment form part of a wellness program. Opportunistic infections are treated at every point of care, and service and nutrition interventions are made, as per SAG protocols and guidelines. Social support services, which may take the form of social grants in accordance with the SAG guidelines, are also initiated as appropriate, providing patients with access to financial resources.

The community clinics surrounding St. Mary's are linked into St. Mary's via the referral patterns already established. The implementing organization will be St. Mary's Hospital and local partners will be recruited to assist with the WHO ART training modules. Gender issues will be addressed throughout the project as well as stigma and discrimination, twinning, the use of US-based volunteers from a training perspective, as stated in the palliative care section. Gender equity will become an increased focus as women are provided with resources (grants, nutrition) and capacitated to become self-sufficient. Through a partnership with the Treatment Action Campaign (TAC) male norms and behaviors will be addressed directly through patient education, encouraging prevention, 'know your status', and promoting family values. A comprehensive nutrition program will be implemented to boost immunity with the patient cohort which will be the responsibility of the dietician employed at St. Mary's Hospital, and is supported via a partnership with the KwaZulu-Natal Department of Health (DOH). As an accredited ARV rollout site this is a vital component to the success of the treatment program. A patient follow-up program, funded as part of the CRS activity treatment program, makes use of therapeutic counselors (TCs) in the community to support patients from St. Mary's Hospital. As the patient numbers have increased, St. Mary's acknowledges that additional human resources are required for patient follow-up and support activities. The current treatment activity program addresses the need to make use of TCs based in the community referral clinics, to help capacitate the clinics to offer support to all patients in the community. This will be part of the clinic strengthening activity plan. It is envisioned that the TCs will mentor community health care workers to ensure the long-term sustainability of ARV treatment in communities.

Activity 2: Pediatric Treatment.

Activity Narrative:

As stated previously, St. Mary's is a DOH accredited ARV rollout site and the partnership will be enhanced and expanded through the additional PEPFAR funding. Within the antenatal clinic, patients who have received PMTCT are followed up post-delivery and if clinically appropriate, placed on antiretroviral treatment. This is a seamless program which also places the children of HIV-infected mothers on ART if clinically appropriate. The program also provides education and nutrition support in partnership with the KwaZulu-Natal DOH. Pediatric HIV care is strengthened through early testing and diagnosis. The hospital has secured the services of a volunteer pediatrician from Harvard Medical School twice a week. The pediatrician will treat HIV infected children in-hospital and manage children as outpatients from the PHC facility. The pediatrician will also mentor clinical staff in the facility. The main challenge is polymerase chain reaction (PCR) testing and follow-up in this area, given that 19 clinics are being supported in the process. St. Mary's currently has a relationship with Toga Laboratories (a PEPFAR partner) and it is envisioned that counselors visiting clinics will refer patients requiring PCRs to the hospital's PMTCT program so that tests can be conducted through Toga Laboratories.

Activity 3: Rehabilitation Services.

The rehabilitation department consists of a physiotherapy department (inclusive of a speech therapist) and an occupational therapy department with a small community outreach service. Care and treatment will be provided to those in and outpatients experiencing ARV side-effects, primarily related to neurological conditions; and care and treatment to HIV infected inpatients that are severely disabled, who have had strokes or heart attacks. Rehabilitation support is also required to babies experiencing developmental delays born to HIV infected mothers. The areas of care will be at an inpatient hospital level and primary health care (PHC) level as an outpatient service. Many babies born in hospital are referred to the PHC facility for follow-up, and a clinic treatment day is held for babies experiencing developmental delays. Weekly outreach treatment, education and support clinics are offered to one of the larger referral clinics in the district as well as to children in an orphans and vulnerable children partner program.

By strengthening the down-referral system, providing technical assistance to the public sector, and providing supportive treatment for patients on ARVs and affected by HIV and AIDS; St. Mary's hospital is contributing to the PEPFAR 2-7-10 goals.

Activity ID:	13839.08	**Planned Funds:**	$910,000
Activity System ID:	13839		

Activity Narrative: This is a new activity in FY 2008.

SUMMARY:

TB Care Association (TBCA) will support care and treatment services at three hospital-based clinics and eight primary health clinics (PHC). Training and mentoring on topics to ensure provision of quality care will be provided: clinical care, social support, monitoring & evaluation, and health system support. Referral systems, including community adherence support and coordination of services between hospital and PHC, will be strengthened through human resource, capacity development and programmatic support. People infected and affected by HIV, including healthcare providers will be the beneficiaries of this PEPFAR-supported program.

BACKGROUND:

TBCA has been providing community-based counseling, emergency material relief, and support, and TB treatment support in the Western Cape since 1992. Support for HIV care and treatment services in the West Coast Winelands is a new initiative. Training and mentoring activities will be done in collaboration with the Department of Health (DOH). Support has been requested by the Western Cape province and all program activities will occur within public health facilities. Essential drugs and ARVs will be procured through DOH, and the National Health Laboratory Service (NHLS), through the DOH, will provide laboratory services. The Western Cape has identified the West Coast Winelands as a district that would benefit from technical assistance because the burden of TB with HIV co-infection is high. In Malmesbury, clinical support will be provided at Swartland Hospital (ART site) and Dorp and West Bank clinics. In Saldanha, clinical support will be provided in Dorp and Diaz Ville clinics. In Vredenburg, clinical support will be provided in Vredenburg Hospital (ART site) and Dorp and Hannah Coetzee clinics. In Atlantis, clinical support will be provided in Wesfleur Hospital (ART site) and Saxon Sea and Protea Park clinics. In summary, three hospitals and eight clinics will be supported in the Western Cape province. TBCA is exploring the possibility of expanding activities to the Northern Cape province.

ACTIVITIES AND EXPECTED RESULTS

ACTIVITY 1: Integration of Services and Quality Assurance

The first activity is human capacity development, focusing on integration of the HIV program into primary healthcare services, including pediatrics. Under the guidance of the clinical coordinator, two TBCA-employed nurse mentors with extensive experience in HIV care and treatment will work closely with the DOH to identify training/mentoring needs. DOH clinicians will be trained through didactic and mentoring sessions, on topics including identification and counseling of victims of abuse, reducing stigma, clinical management of patients, integration of services, and clinical management of TB and HIV. HIV testing, care and treatment will be strengthened by ensuring all clinicians involved in patient care (doctors, nurses, pharmacists) in all areas of patient care services (outpatient services, pediatrics, TB, family planning, antenatal services) are clinically competent in managing HIV-infected clients. A quality assurance program will be implemented through support of the DOH multi-disciplinary team meetings, provision of clinical updates and in-service mentoring, and introduction of a formal routine chart review, in collaboration with clinic managers. National and provincial standards of care and guidelines will be followed. TBCA will work closely with DOH to facilitate coordination of services among the three hospitals and their affiliated clinics, anticipating provision of ART at clinic level by end of FY 2008. Systems support will be provided as needs are identified (e.g., down-referral of drugs, strengthening of patient referrals). Ten percent of the budget will be spent on promoting pediatric services.

ACTIVITY 2: Community Mobilization Related to Care and Treatment

The second activity is to strengthen community involvement in HIV care and treatment services through outreach services provided by community health workers (CHW). In consultation with the DOH, TBCA will employ one community team leader and ten CHWs for each clinical site supported. The Western Cape province has plans to expand CHW programs, therefore sustainability will be addressed. TBCA will train the CHWs on priority health issues so that they are multi-skilled to provide integrated community care. The role of the CHWs will be to promote information, education, communication (IEC) in the communities they serve. IEC activities aim to increase awareness of the availability of comprehensive HIV services; tp promote HIV prevention, including prevention with positives; to ensure family-centered care through referrals of family members affected by HIV; and to ensure community-level follow-up of patients who have not returned for routine care (in collaboration with M&E). Existing community groups will be encouraged to participate, and through collaboration with existing home-based care programs, community-based wellness programs will encourage patients to seek routine care. Peer counseling and education provided by the CHWs will target male behaviors. The team leaders and TBCA-employed nurse mentors who supervise them will facilitate links with social development programs, nutritional support programs, and other governmental and non-governmental services.

ACTIVITY 3: Strengthening Clinical Services through Monitoring and Evaluation (M&E) Support

The final activity is to assist with monitoring and evaluation of the national comprehensive HIV care and treatment program at supported sites. TBCA will employ a data capturer at each site to assist with TB/HIV reporting. Coordination of M&E with clinical services will ensure prompt follow-up of patients enrolled in care who do not return to clinic. Data collection will be facilitated through provision of computers to each clinic. Training needs related to capturing quality data will be identified and addressed. Gender equity in the HIV program will be revealed through collection of data showing breakdown of women and men receiving prevention, care and treatment services. The data capturers will liaise with community team leaders to follow up patients referred from TBCA-supported voluntary counseling and testing sites that tested HIV positive as well as those who have TB or STI symptoms.

These results contribute to the PEPFAR 2-7-10 goals by improving access to care and treatment services, thereby increasing the number of persons receiving ARV services.

Funding Source: GHCS (State)

Program Area: HIV/AIDS Treatment/ARV Services

Budget Code: HTXS

Program Area Code: 11

Activity ID: 7909.08

Planned Funds: $570,360

Activity System ID: 14011

Activity Narrative: SUMMARY:

McCord Hospital and its implementing partner, Zoe Life (McCord/Zoe Life) will support and provide technical assistance in the delivery of antiretroviral (ARV) services. The McCord Hospital/Zoe Life activities of this program area relate to strengthening capacity at four municipal clinics and three non-governmental organizations (NGOs) to provide comprehensive antiretroviral treatment (ART) services in a primary healthcare setting as part of a decentralization plan. A mobile service will provide ART to infected workers as part of a workplace program. Emphasis areas are development of referrals across vertical programs (CT, PMTCT, TB/HIV), community programs and to secondary and tertiary facilities; local organization capacity building (major emphasis); quality assurance, improvement and supportive supervision; strategic information; training; and workplace programs. The primary target populations are the general population, people affected by HIV and AIDS, refugees and the private sector (workers without health insurance).

McCord Hospital receives funding for PMTCT and ARV treatment through the Elizabeth Glaser Pediatric AIDS Foundation (EGPAF). This program described here focuses on strengthening the capacity of public sector facilities, and it is distinct from the hospital-based program funded by EGPAF.

BACKGROUND:

There are a number of constraints to the rapid rollout of ART in the public sector. This is largely due to the lack of human and infrastructural resources, and that ART is generally offered at secondary or tertiary care level. McCord Hospital has over 2,000 patients on ART, and it is not sustainable to continue the follow-up of stable patients at this or any other hospital. This new activity will be implemented by the McCord/Zoe Life team in partnership with the eThekwini Municipality (Durban), three NGOs and participating corporate bodies. The project will build capacity at primary health care (PHC) level to continue follow-up of down referred stable patients on ART (initiated at hospital level) and to increase skill at PHC level to provide ART services (including initiation of ART in patients who are stable). This project is supported by metropolitan and provincial health departments. Provincial ART guidelines are followed. Gender issues will be addressed through increasing access to ART in workers (assuming most are men) in a workplace program, and by ensuring that a family-centered treatment approach is offered to partners and family members via access to couple counseling, community-based referrals, provider-initiated palliative care for partners and active case management of families.

ACTIVITES AND EXPECTED RESULTS:

ACTIVITY 1: Site Accreditation

This activity will support site accreditation at four metropolitan clinics through negotiation with metropolitan and provincial health departments to ensure sustainability and ongoing provision of staff and commodities for ART services.

ACTIVITY 2: Human Capacity Development

Nurse-led multidisciplinary teams at each site will be trained to provide comprehensive ARV services at clinics. Training will include adult and pediatric clinical services, psychosocial support/adherence counseling, pharmacy management and monitoring and evaluation (M&E). Teams will initially be trained to follow up down referred patients on ART, and will later be supervised to initiate stable clients on ART. Counselors will be trained to provide routine focused HIV prevention counseling to clients on ART. This will also be included in routine treatment readiness training for patients. Staff will be trained to provide services with a French/Swahili interpreter to increase access to refugees/asylum seekers.

ACTIVITY 3: Pharmacy Systems
Pharmacy systems will be strengthened to support drug chain management. Commodity procurement will be largely the responsibility of the provincial government, and McCord Hospital has been accredited as a KwaZulu-Natal Department of Health (KZNDOH) site, with the result that decentralized ARV service sites will also fall under the KZNDOH. Provision of ARV drugs, test kits and labs will be supplied by the DOH as a cost-share.

ACTIVITY 4: Technical Support

These activities will build capacity through technical support, mentorship and supervision to implement a comprehensive care and treatment program. This project will provide experienced staff to each site on a weekly basis to ensure that ARV services are seamlessly linked with wellness services, TB/HIV and PMTCT to strengthen continuity of care and patient retention. This will be supported by development of referral tools and regular M&E feedback with problem solving support.

ACTIVITY 5: Pediatric ART

McCord/Zoe Life will provide technical support to increase provision of ART to children. Staff from the municipal and NGO sites will attend a preparatory workshop in which an approach to increasing pediatric services will be formulated. Technical support will be offered to integrate ARV services into current vertical services such as PMTCT, TB, children's clinic, immunization services and community-based psychosocial services. Staff will be encouraged to implement routine testing of children, and assistance will be given to develop effective systems which ensure referral of infected children to voluntary counseling and testing, HIV care, and other programs.

ACTIVITY 6: Referrals

McCord/Zoe Life will assist in strengthening referrals and linkages by establishing a system of up referral for specialized or hospital-based care, and down referral from any accredited ARV site to the municipal clinics and NGO sites for patients living in the area; and establish referrals for workers receiving ART (workplace program).

ACTIVITY 7: Adherence

Activity Narrative:

A strong community-based family-centered adherence component with existing and new role-players for continuity of care between facility and community will be developed. Where possible, treatment readiness and adherence support programs will be decentralized further into community facilities.

ACTIVITY 8: M&E

The project will develop and implement a model of M&E that can be integrated into, as well as strengthen the current data collection systems for partners across both community and vertical programs and up to the secondary and tertiary level. This will improve quality, ensure a multidisciplinary continuum of care and manage referral pathways.

ACTIVITY 9: Staff Programs

Partnerships will be developed to provide ARV services to employees who do not have access to medical insurance.

Sustainability at the municipal clinic sites is addressed by assisting sites to become accredited with the KZNDOH. This project will build human capacity to effectively manage the program without ongoing technical assistance. NGO sites will be assisted to build infrastructure and referral networks to ensure sustainability of services. The long-term plan for the NGO sites is to build strong relationships with nearby clinics where clinical capacity can be increased to take over clinical aspects of decentralized ART. These institutions will be included in FY 2008 funding to become accredited sites. NGOs will be assisted to source other funding. The workplace services will be co-funded by industry. Where possible, corporate occupational health clinics will be assisted to become accredited KZNDOH sites.

New activities in FY 2008 are:

1. Linkages with educational facilities and facilities housing orphans or vulnerable children will be established and counseling and testing services will be offered to these facilities in addition to linkages with care and treatment services. Children found to be HIV infected at these sites will either be referred to nearby treatment centers (either PEPFAR funded sites or referral sites, dependant on the severity of illness).

2. Staff at educational or facilities housing orphans or vulnerable children will be trained in basic ARV care principles so that they will eventually be able to provide ongoing adherence support and monitor side-effects with appropriate referrals.

3. Staff at sites will be trained in family counseling techniques. This counseling approach encourages participation of all family members including men (partners and fathers) and will assist counselors to involve men in both decision making and caring processes. Where possible, counseling will be offered at times that are suitable for employed men

4. Patient retention will be strengthened through strong patient tracking systems, community-based adherence support, psychosocial support services which offer a comprehensive range of services, child friendly sites which encourage ongoing participation with the services, and linkages with community based organizations which offer other services which may appeal to patients, such as art/drama, nutrition support, income generation.

The McCord Hospital activities contribute to the 2-7-10 PEPFAR goals and the USG South Africa Five-Year Strategic Plan by strengthening the public sector and expanding access to care and treatment.

Budget Code: HTXS

Program Area Code: 11

Activity ID: 3274.08

Planned Funds: $3,400,000

Activity System ID: 13957

Activity Narrative: SUMMARY:

Johns Hopkins University Center for Communication Programs (JHU/CCP) coordinates the work of 20 South African partners and provides technical assistance and capacity building to mobilize and educate communities and clinicians about ARV treatment. The focus is on pre-treatment literacy, adherence, counseling, and training clinicians through distance learning. Target populations for this activity are adult men and women (including pregnant women) living with HIV (PLHIV), discordant couples, volunteers, public health workers, and community-based, faith-based and non-governmental organizations. The emphasis areas for this activity are human capacity development, local organization capacity building and gender. Findings from the National HIV and AIDS Communication Survey, carried out in early 2006, help focus on community perceptions of treatment-related messages, their perceived needs for treatment literacy and the amount of social capital invested in providing assistance in better understanding treatment and its uptake. The survey provided a valuable baseline to further develop present communication interventions on treatment.

BACKGROUND:

The JHU/CCP initiatives are in their third year, following successful programming and ongoing partnerships in providing pre-treatment training, adherence counseling and clinician training. Twelve of the 20 partners that JHU/CCP works with across South Africa are engaged in supporting work relating to pre-treatment training and adherence counseling for people living with HIV. This intervention mobilizes communities around treatment literacy and builds community preparedness by reaching several million people. Mindset uses its onsite access to clinicians to build their capacity to deliver ART services in line with national protocols. Treatment literacy includes pre-treatment training and adherence messages for persons on treatment, treatment support education for families and individuals supporting those on treatment, and ART preparedness education for communities and individuals who anticipate initiating treatment. Other issues covered include prevention with positives with emphasis on discordant couples.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Community Mobilization

Community mobilization activities are implemented by a variety of partners. Community Health Media Trust (CHMT), with PEPFAR funding, has developed a series of video and print materials for people affected by and living with HIV, their caregivers and communities. PEPFAR funding assists CHMT in the community rollout of these materials through group sessions and workshops. CHMT has 92 Treatment Literacy and Prevention Practitioners (TLPPs), (72 funded by PEPFAR and 20 by the National Department of Health (NDoH)), that train and mentor community-based organizations to use their treatment literacy materials to provide pre-treatment training and adherence counseling to PLHIV. This intervention has received NDOH accreditation. Treatment literacy practitioners also work with PLHIV on treatment literacy issues that are broadcast through Mindset's patient channel at 400 health facilities.

The seven hours of treatment literacy videos developed by CHMT and Mindset for the public channel are a major part of the support materials for the TLPPs (in addition to the materials developed previously by CHMT). The materials also cover prevention with positives, male norms and behavior, and stigma and discrimination.

The Valley Trust, as part of their rollout of antiretroviral treatment (ART), has a treatment literacy program supported by the CHMT developed materials and their TLPPs. The Valley Trust also incorporates treatment literacy into its workplace based program being undertaken in small and medium enterprises in several communities in KwaZulu-Natal.

LifeLine works with small business associations as well as farmers and farm workers' associations in areas surrounding one informal settlement in the Gauteng, Limpopo, Northern Cape, and Mpumalanga provinces, to develop workplace programs, including prevention for positives, pre-treatment training and adherence counseling. These programs focus on treatment preparedness and adherence for HIV-infected persons and their treatment supporters (treatment buddies).

The Mindset Health Channel (MHC) provides information directly into health facilities, targeting patients in waiting rooms with general information, and healthcare providers with technical and training information. To broadcast current and accurate information on ARV treatment, JHU/CCP continues its collaboration with MHC in more than 400 health facilities. Existing material will be revised and updated, including treatment videos, web content and print materials in up to five languages for healthcare workers at these sites. Materials developed through previous PEPFAR funding are also updated as national guidelines and protocols change. CHMT treatment literacy practitioners spend half their time with patients in ARV rollout and downstream referral sites that have the MHC.

Both Mindset and CHMT material have been developed through public-private partnerships including business (MTN, Liberty Foundation and Sunday Times) as well as assistance from government and parastatals (e.g. NDOH, and the national broadcaster, South African Broadcasting Corporation (SABC)).

DramAidE utilizes HIV positive Health Promoters in 23 tertiary institutions in South Africa to undertake treatment literacy, including pre-treatment training and adherence counseling for tertiary students living with HIV, using the treatment literacy series developed by CHMT. They work closely with government treatment sites to fast-track students to initiate treatment early on.

Lesedi Lechabile and Mothusimpilo train their peer educators in treatment literacy using the treatment literacy series developed by CHMT that addresses pre-treatment training and adherence counseling, targeting vulnerable women and mine workers in the mining districts of North West and the Free State provinces.

Lighthouse Foundation trains its peer educators and community facilitators to work in the 13 informal settlements in the Madibeng District of the North West province. Training incorporates treatment literacy, including pre-treatment training and adherence counseling, based on the treatment literacy series

Activity Narrative: developed by CHMT. These topics are included in their community outreach activities, comprising door to door campaigns and HIV support groups.

Sonke Gender Justice undertakes treatment literacy, including pre-treatment training and adherence counseling with people living with HIV in the areas surrounding the men's clubs that are to be expanded in North West, Northern Cape and Limpopo provinces.

Matchboxology (MB), in partnership with the South African Professional Footballers Union and the Professional Soccer League (PSL), provides treatment literacy training to football players who are living with HIV including pre-treatment counseling and pre-adherence counseling. MB works closely with treatment centers so that they can fast-track players to initiate treatment early on. Footballers will be mobilized to promote treatment literacy in interaction with their supporters and as part of their social responsibility.

A partner, to be identified, will undertake treatment literacy, including prevention with positives, pre-treatment training and adherence counseling in the areas of northern KwaZulu-Natal using the materials developed by CHMT as part of their community outreach activities with people living with HIV.

ACTIVITY 2: Media Support for Community Mobilization

ABC Ulwazi produces a radio talk show series tailored to 60 community radio stations. Special emphasis is on pre-treatment training and adherence counseling. Each episode ends with a summary and clear messages on the topic discussed. Listeners' Associations formed by local citizens have facilitators' guides to carry out community outreach interventions related to the series themes.

SABC continues the theme of treatment through two programs: Trailblazers, a 13 episode TV series highlighting success stories including best practices in this area; and a second season of a 26 episode adult TV drama series. Both TV programs are accompanied by radio talk shows (on 9 local language stations) as well as web-based content. The storylines include a focus on treatment and prevention for positives.

JHU/CCP contributes towards meeting the vision outlined in the USG PEPFAR Task Force Five-Year Strategy for South Africa by providing quality treatment literacy education to health providers, their patients and communities. In addition JHU/CCP builds capacity of other organizations to utilize treatment literacy materials to support work with people living with HIV on positive prevention and treatment literacy. By training individuals to deliver quality ARV services and reaching South Africans with correct treatment literacy messages, this activity contributes to the PEPFAR goal of putting two million HIV-infected people on treatment. This activity also contributes towards achieving the National Strategic Plan of South Africa 2007 - 2011 target of ensuring that more than 80% of people living with HIV and their families are provided with an appropriate package of treatment, care and support.

11.4 Number of individuals receiving antiretroviral therapy by the end of the reporting period	N/A	True
11.5 Total number of health workers trained to deliver ART services, according to national and/or international standards	12,000	False

Indirect Targets

JHU/CCP and its partners are engaged in mobilizing communities (women and men) around treatment literacy through using interpersonal communication including community mobilization through activities such as household visits, structured community events and activities and discussions in clinics. These included health centers and mobile clinics that visit hard to reach areas and under-serviced communities such as informal settlements and deep rural areas, tertiary campuses and workplaces. As part of its efforts to strengthen the health delivery system, a study will be undertaken to examine the extent to which task shifting the care and support for people living with HIV (PLHIV) within clinical settings and tertiary institutions contributes towards improved care and support for PLHIV.

Table 3.3.11: Activities by Funding Mechansim

Mechanism ID: 257.08
Mechanism: N/A
Prime Partner: Medical Research Council of South Africa
USG Agency: HHS/Centers for Disease Control & Prevention
Funding Source: GHCS (State)
Program Area: HIV/AIDS Treatment/ARV Services
Budget Code: HTXS
Program Area Code: 11
Activity ID: 2953.08
Planned Funds: $2,019,540
Activity System ID: 14023

Activity Narrative: SUMMARY:

This activity is carried out to support a comprehensive best-practice approach to integrated TB/HIV care, that will improve access to HIV care (counseling and testing, care and treatment, screening, referral, pharmaceuticals) for TB patients, and promoting TB screening (and eventual TB treatment as required) among patients attending HIV clinics, with particular reference in this activity to provision of ARV drugs to TB patients meeting eligibility criteria according to the South Africa HIV treatment guidelines. Activities are focused in five provinces of South Africa. The major emphasis area is human capacity development and strategic information.

BACKGROUND:

A best-practice approach to integrated TB/HIV care was initiated by the Medical Research Council (MRC) with FY 2004 PEPFAR funding. Early activities included a systematic description of barriers faced by TB patients co-infected with HIV in an accredited ARV site, and the development and implementation of a best-practice model in FY 2005. Preliminary results from the model site confirmed the benefits of an integrated TB/HIV approach, reflected in a drastic reduction in patient mortality, improved quality of life of TB patients with HIV and prolonged survival. Results also confirm the safety and efficacy of dual regimens, showing that ART can safely be instituted within the first month of TB treatment.

Expansion of the best-practice approach to two additional sites in different geographical settings was started in FY 2006 based on lessons learned in the start-up sites, including essential human resource needs, the importance of negotiated partnerships with departments of health (DOH), and the challenges posed by dual stigma. Activities in the existing sites will continue in FY 2008, with expansion to additional sites in remote rural settings where active TB screening among people living with HIV (PLHIV) will be implemented. These sites are characterized by extreme poverty, poor health infrastructure, cross border migration and limited health care access for patients. The challenges of novel solutions for treatment delivery in such settings will be specifically addressed, as will strengthening of systems for treatment adherence. Activities are implemented directly by MRC and by contracted sub-partners World Vision and the Foundation for Professional Development (a PEPFAR partner).

ACTIVITIES AND EXPECTED RESULTS:

Activities include provider-initiated HIV counseling and testing, TB screening by symptoms and sputum investigations, referral to appropriate services (PMTCT, STI, partner-counseling) and enrollment in relevant HIV care and treatment programs. The MRC will support sites to implement a best-practice model of integrated TB/HIV care. This approach involves: (1) clinical management (CT, antiretroviral treatment (ART), management of drug adverse effects, STI management, preventive therapy); (2) nursing care (TB screening, patient education, treatment adherence, HIV prevention); (3) integrated TB/HIV information, education and communication; (4) nutrition intervention; and (5) palliative HIV and AIDS care and support.

Activities include renovation of the sites to meet South African accreditation requirements for ART rollout, site staff training, supervisory staff training to maintain quality standards, hiring of key personnel, development of patient educational material, procurement of the required commodities, and establishment of appropriate referral links, including those with governmental ARV sites to ensure continuity. The MRC will monitor CT practices, strengths and weaknesses of TB/HIV referral systems, human resource analyses, and conventional TB treatment outcomes.

The MRC will implement ongoing quality assessment through onsite supervision and external quality assurance mechanisms such as utilization of checklists. Regular feedback meetings will be held with project staff to identify potential problems and to facilitate corrective action.

Stigma around HIV and AIDS and TB is specifically addressed through patient education and targeted intervention strategies such as peer group counseling and advocacy campaigns.

Results from the project will facilitate evidence-based policy formulation on expansion of integrated TB/HIV care and will help to increase and improve access to HIV care of co-infected TB patients and increasing TB case finding among PLHIV. Implementation of lessons learned in the model-based best-practice approach will facilitate rapid identification of systems and operational needs and will allow for corrective action. Analysis of the strengths and weaknesses of an expanded approach to integrated TB/HIV management will facilitate national scale-up of comprehensive programs for patients with dual infection.

TB services in SA will in future form a vital link to accredited public sector ARV sites. This project will strengthen TB services as point of delivery of ART, by ensuring that human, financial and infrastructure needs for comprehensive TB/HIV programs are met through equitable allocation of scarce resources and through analyses of cost-effectiveness and cost-benefit. Increased TB case-finding in HIV settings is a crucial component of disease control, yet largely lacking in routine health services.

In FY 2007 the project evaluated strategies for active TB case finding in vulnerable populations and assessed its implications for TB and HIV control programs. In 2008 the project will implement and continue to evaluate these strategies across sites. Activities will be directed towards eliminating bottlenecks in ART provision (particularly those due to human resource capacity), addressing weaknesses and limitations in down referral systems, documenting and managing drug adverse effects, and monitoring of treatment adherence. Integration of TB and HIV services will be a prime focus, to facilitate quick and seamless patient access to ARV drugs, thereby decreasing patient morbidity and mortality.

Funding will also be used to implement an integrated electronic patient information system at the different sites to support routine data collection, to facilitate patient referral and to allow data transfer to the national routine TB recording and reporting system, which is now integrating HIV testing and service data.

The MRC activities contribute to the 2-7-10 PEPFAR goals and the USG South Africa Five-Year Strategic Plan by integrating TB and HIV services and expanding access to care and treatment.

Table 3.3.11: Activities by Funding Mechansim

Mechanism ID:	486.08	**Mechanism:**	N/A
Prime Partner:	National Department of Correctional Services, South Africa	**USG Agency:**	HHS/Centers for Disease Control & Prevention
Funding Source:	GHCS (State)	**Program Area:**	HIV/AIDS Treatment/ARV Services
Budget Code:	HTXS	**Program Area Code:**	11
Activity ID:	4526.08	**Planned Funds:**	$203,700

Activity System ID: 14039

Activity Narrative: SUMMARY:

FY 2008 PEPFAR funds will be used by the Department of Correctional Services (DCS) to establish and accredit six more antiretroviral (ARV) treatment sites which will facilitate the comprehensive management of HIV and AIDS. These six new sites, in addition to the nine already accredited, will ensure that there is one accredited ARV treatment site per province. The major emphasis area for this program will be human capacity development. The target population will include men and women offenders, people living with HIV (PLHIV) and their caregivers, and several most at-risk populations (e.g., men who have sex with men, injection drug users and tattooing with contaminated instruments).

BACKGROUND:

DCS currently has nine correctional centers that have been accredited as antiretroviral treatment (ART) sites (Grootvlei Correctional Center in the Free State/Northern Cape Region, Pietermaritzburg Correctional Centre and Qalakabusha Correctional Centre in KwaZulu-Natal Region, Kimberley, Groenpunt and Kroonstad Correctional Centres in Free State/Northern Cape Region, St. Albans Correctional Centre in Eastern Cape Region and Johannesburg Correctional Centre in Gauteng Region). Other than the nine accredited ART centers, the DCS refers offenders to Department of Health public health facilities to access ART. This program will encourage the establishment and accreditation to improve access for incarcerated populations.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Training of Personnel as ARV Project Managers

FY 2008 PEPFAR funds will be utilized to train DCS personnel as ART project managers. Training will include management of ART services, plan development, budget planning, information and other management systems. The trained personnel will ensure adequate facility and resource management of ART service, in accordance with South African ART guidelines. At this point in time staff members are just being trained to provide services to offenders.

ACTIVITY 2: Procurement of Information, Education and Communication Material

DCS will procure ART educational material that will be utilized during treatment literacy campaigns. The educational material will be distributed to all correctional centers and the utilization thereof will be monitored and recorded by the management area and correctional center coordinators. In addition to the distribution of pamphlets, there will be treatment literacy education to enhance the understanding of adherence to the offenders.

This activity contributes to the PEPFAR objective 2-7-10 by providing information on treatment to offenders, and thereby increasing capacity to effectively provide HIV care and treatment services. These activities are not at the site level but are more system strengthening activities and constitute what is considered 'indirect' support within the Correctional Services facilities. Therefore there are no direct targets for numbers of people reached.

Table 3.3.11: Activities by Funding Mechansim

Mechanism ID:	588.08	**Mechanism:**	Strengthening Pharmaceutical Systems
Prime Partner:	Management Sciences for Health	**USG Agency:**	U.S. Agency for International Development
Funding Source:	GHCS (State)	**Program Area:**	HIV/AIDS Treatment/ARV Services
Budget Code:	HTXS	**Program Area Code:**	11
Activity ID:	3088.08	**Planned Funds:**	$2,328,000
Activity System ID:	14005		

Activity Narrative: SUMMARY:

Management Sciences for Health's (MSH) Strengthening Pharmaceutical Services (SPS) project will support the South African Government's (SAG) Operational Plan for Comprehensive HIV and AIDS Care, Management and Treatment (CCMT). SPS improves the reliable provision of ARV services and other related services; support monitors progress towards compliance with pharmaceutical legislation and ARV accreditation requirements for provincial health facilities; trains pharmacists and pharmacist assistants in basic principles of HIV and AIDS management; trains health personnel in conducting medicine use evaluations, using adherence to antiretroviral treatment (ART) measurement tools; supports the review of national standard treatment guidelines (STGs) for HIV and AIDS, TB, STI and other diseases; strengthens the provincial implementation of pharmaceutical therapeutic committees and medicine information centers; and strengthens pharmacovigilance reporting. The emphasis areas are human capacity development and wraparound programs. Target populations include National AIDS Control Program staff, policy makers, public and private health care workers (especially pharmacists), people living with HIV (PLHIV) and their families, OVC and the general population of children, youth and adults. SPS will work in all nine provinces to support national, provincial and local government pharmaceutical services as well as the Department of Correctional Services. Opportunities for collaboration with the Supply Chain Management System (SCMS) Project will be explored.

BACKGROUND:

Since FY 2004, RPM Plus has been working in close collaboration with the National Department of Health Pharmaceutical Policy and Planning (NDOH-PPP) Unit, and provincial and local government pharmaceutical services to support the delivery of pharmaceutical services at all levels. The following activities are a continuation of the activities initiated since FY 2004. Systems and models have been developed and tested. In FY 2008, SPS will continue the implementation of these on a larger scale and monitor the impact on the delivery of ART at accredited sites. These activities have received the full support of the NDOH-PPP unit and the provincial pharmaceutical services.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Pharmaceutical Services Delivery

Since 2004 RPM Plus has provided assistance to all provinces in monitoring progress towards compliance with the SAG legislative requirements that relate to the delivery of pharmaceutical services as well as the applicable standards for the accreditation of health institutions (hospitals, community health centers) to provide ART. This activity addresses issues related to infrastructure, human resources, equipment and systems. Thus far activities have included the development of a monitoring tool and the conducting of reviews in the provinces and Metros. A national workshop was held in 2007 which was attended by representatives of all provinces, the national office, local governments and correctional services. In FY 2008 the work will continue with the focus being on strengthening pharmaceutical services within the legislative framework. Activities will include assistance with the development of policies and procedures at all levels, development and implementation of models of service delivery to support the provision of quality service to patients with HIV and AIDS, TB and other diseases, capacity building in the areas of governance, pharmaceutical care and monitoring and evaluation of pharmaceutical service delivery.

ACTIVITY 2: Pharmacovigilance

The CCMT recognizes the importance of strengthening pharmacovigilance measures to ensure the safe and effective use of ARVs and other medicines used in HIV and AIDS patients. The identification, diagnosis, management and reporting of HIV medication-related adverse effects are critical. RPM Plus has worked with the national and provincial health departments and other key stakeholders to develop training materials to meet this need. SPS will conduct training programs to build capacity by providing skills and knowledge to HIV and AIDS program managers and the Medicine Regulatory Authority (MRA) on the principles of public health pharmacovigilance and the safety of antiretroviral agents. In addition, SPS will assist and advise facility-based HIV and AIDS programs on the planning and implementation of pharmacovigilance surveillance activities, with subsequent follow-up at the provincial and national levels; support scientific research relating to key drug safety issues identified in the region; assist in the communication of information obtained from pharmacovigilance systems and research managed by the national and local HIV and AIDS programs; and establish networks linking pharmacovigilance programs in the region with each other in order to encourage information exchange and skills transfer.

ACTIVITY 3: ART Adherence

Since August 2005, RPM Plus has been working in collaboration with the national and Eastern Cape HIV and AIDS units and other key stakeholders to improve treatment outcomes and prevent resistance to ARVs through the development of ART adherence measurement tools and determining best practices. Following the successful development and piloting of an adherence assessment tool the National Department of Health requested RPM to roll out the tool in May 2007. Clinical staff (doctors, nurses and pharmacists) will be trained by SPS in providing: patient education on HIV, AIDS and ART; provider education on HIV, AIDS and ART; psychological and social screening of patients to assess readiness for treatment; and support services to facilitate resolution of barriers to adherence. These efforts will also contribute to the overall strengthening of the health system as medication adherence monitoring and support measures are generic tools that may be applied to settings providing treatment for other chronic diseases. In the long-term the goal is to develop a network of expertise and facilities, and establish South Africa as a Regional Pharmaceutical Technical Collaboration Centre (RPTCC) for ARV adherence-related matters.

ACTIVITY 4: STGs and Rational Drug Use

The revised edition of the South Africa adult and pediatric STGs for the hospital level has just been published. These STGs include new chapters on HIV and AIDS care and treatment. SPS will assist the NDOH in reviewing these STGs and the primary health care EDL on an ongoing basis, and the provinces in promoting these new STGs. SPS will also conduct provincial workshops on rational drug use; strengthen provincial, district and institutional pharmaceutical and therapeutic committees (PTCs); assist with the

Activity Narrative: development of provincial formularies; train staff in basic principles of pharmacy economics and the use of evidence-based principles for drug selection; and implement provincial medicines information centers. Through these activities SPS will also assist the NDOH in reviewing their infection control policies and guidelines.

ACTIVITY 5: Down Referral and Integration of Services

There is a need to scale-up access to ART. One strategy of the NDOH is to down refer stabilized patients on ART to their nearest primary health care (PHC) facility. The other long-term approach is to initiate the treatment at PHC level. SPS will support these two critical initiatives by assisting in the development, implementation and strengthening of down referral systems as well as the integration of the provision of ART with the supply of medicine for other conditions treated at PHC level. RPM Plus has included a down referral module in their integrated drug supply management system (RxSolution).

ACTIVITY 6: Training of Pharmacy Personnel from ART sites (and others)
There is an urgent need to build capacity among pharmacy personnel to manage patients on ARVs. The anticipated deployment of the National AIDS treatment program at PHC level, make this activity a priority. RPM Plus has developed a 5-day HIV and AIDS training program specifically for Pharmacists and Pharmacist's Assistants. This training program is being accredited by the South African Pharmacy Council. In FY 2006 over 1200 health personnel have been trained. SPS will expand this program to PHC Level Pharmacy personnel and to other counterparts such as Correctional Services.

ACTIVITY 7: Technical Assistance to Local Counterparts

Since its inception in 2003, RPM Plus has been requested on a regular basis by government (e.g. Medicines Control Council) and non-government organizations (e.g. the South African Pharmacy Council, the South African Qualifications Authority) to provide ad hoc technical assistance for a wide range of services such as the development of staffing norms for pharmaceutical services, accreditation of facilities, development of standards of pharmacy practice, the review/revision of the scope of practice and competency standards for persons involved in the provision of pharmaceutical services, implementation of legislation to reduce the price of medicine and improve medicine availability to communities, (including ARVs and medicine used in the treatment of co-morbidities) and the development and implementation of public-private partnership service level agreements. In FY 2008 SPS will continue to provide technical assistance in these areas as well as other emerging issues such as pharmacy care and monitoring and evaluation.

All these activities will build South African capacity and support the improvement of health services. This will contribute to the achievement the overall PEPFAR goals of reaching 10 million people with care and 2 million with treatment.

Target	Target Value	Not Applicable
Indirect number of ART service outlets providing treatment	N/A	True
Indirect number of individuals receiving treatment at ART sites	350,000	False
Indirect number of current clients receiving continuous ART for more than 12 months at ART sites	N/A	True
11.1 Number of service outlets providing antiretroviral therapy	30	False
11.2 Number of individuals newly initiating antiretroviral therapy during the reporting period	15,000	False
11.3 Number of individuals who ever received antiretroviral therapy by the end of the reporting period	50,000	False
11.4 Number of individuals receiving antiretroviral therapy by the end of the reporting period	42,000	False
11.5 Total number of health workers trained to deliver ART services, according to national and/or international standards	1,800	False

Indirect Targets

SPS reaches people on ART indirectly through training of health care workers. This reach will depend on the progress made by the South African Government in implementing the National HIV and AIDS Comprehensive Treatment and Care Plan. This program is expected to grow substantially. In addition SPS will expand its activities to new counterparts such Correctional Services and other local government authorities (e.g. Nelson Mandela Metropole Municipality). The broadened activities under SPS will strengthen pharmaceutical service delivery at all levels, resulting in improved quality of care to all patients.

Activity ID: 12337.08

Activity System ID: 14256

USG Agency: U.S. Agency for International Development

Program Area: HIV/AIDS Treatment/ARV Services

Program Area Code: 11

Planned Funds: $2,140,000

Activity Narrative: SUMMARY:

Currently, the USG PEPFAR Task Force supports institutional capacity building of indigenous organizations that implement PEPFAR programs through four competitively selected Umbrella Grants Mechanisms: Pact, the Academy for Educational Development (AED), Family Health International (FHI) and Right to Care (RTC). The main purposes of these new umbrella organizations are to: (1) facilitate further scale-up of HIV treatment services; and (2) to develop indigenous capability, thus creating a more sustainable program. The major emphasis area is local organizational capacity development. Primary target populations are indigenous organizations, including non-governmental organizations (NGOs), faith-based organizations (FBOs), and community-based organizations (CBOs).

Pact's primary goal is to build sustainable institutional capacity and increase the effectiveness of local partners to achieve expanded and high quality services. Primary target include Non-Governmental Organizations (NGOs), Private Voluntary Organizations (PVOs), and Faith-Based Organizations (FBOs). Pact's major emphasis is the enhancement of local sub-partner capacity through the development and implementation of documented organizational systems and procedures and human capacity development at management and operational levels.

BACKGROUND:

Since 2004, Pact has facilitated the efficient flow of grant funds during the rapid scale-up of the PEPFAR South Africa program. Pact provides PEPFAR funding and assistance to over 30 PEPFAR sub-partners in South Africa playing valuable roles in the fight against HIV and AIDS.

The sub-partners procure USG and SAG approved ARVs through supply chain vendors and oversee their distribution to government treatment facilities and accredited private providers. Partners also work closely with providers to develop drug tracking and monitoring systems to facilitate correct and accurate patient uptake, treatment management, and referral. Additional services in support of ARV drug distribution include lab testing, adherence support, patient counseling, telemedicine and quality assurance monitoring. Partners also equip government clinics and hospitals with the human resources including doctors, nurses, pharmacists and counselors. In addition, these programs provide specialized training addressing appropriate delivery of ART services and the provision of holistic HIV care. Pact has contributed to the 2-7-10 PEFPAR goals through support to 2 partners providing ARV drugs to over 1,000 HIV positive, uninsured individuals in treatment sites throughout South Africa.

Partners work closely with and in the SAG provincial, municipal and district facilities to facilitate the seamless transfer of patients in and out of public and private networks of care. As a result, their programs continue to grow tremendously in both reach and complexity. This scale-up will require strong financial, monitoring and evaluation, and management systems to accommodate the growth in reach and maximize sustainability. With FY 2008 funding, Pact will continue to provide capacity building support through training and mentoring necessary to further develop and strengthen partner organizations. Pact will also facilitate the sharing of these systems between emerging and well-established partners and reinforce the use of data and reporting for decision making.

ACTIVITY 1: Grant Management

Pact conducts a participatory assessment of each partner organization and collaboratively develops an organizational capacity building strategy that details planned interventions. These assessment results also inform Pact of what type of assistance must be provided urgently in order to ensure that the organizations comply with USAID rules and regulations (with emphasis on financial and procurement management).

Prior to the signing of grant agreements, Pact provides extensive assistance to organizations in developing comprehensive program design documents that accurately reflect planned activities and clearly articulate defined goals and objectives. Further assistance is provided in costing program activities and developing a detailed budget that is consistent with program objectives. Pact assists partners in developing realistic cost share levels and emphasizes the sustainability aspect of this requirement. After the signing of the agreement, Pact works with each partner in developing a very detailed annual work plan that includes specific activities to be implemented, timelines, budgeted amounts, target beneficiaries and projected reach. The ability to clearly articulate program goals and activities and develop realistic budgets greatly enhances the ability of partner organizations to diversify their funding base and ensure sustainability.

ACTIVITY 2: Human Capacity and NGO Development

Pact has developed a customized training series to orient new partners and their sub-partners. The training series includes basic and advanced grants and sub-grant management which addresses USAID rules and regulations, good governance and minimum financial management standards. Monitoring and evaluation courses cover basic principles of monitoring and evaluation and PEPFAR data requirements as well as internal data quality assurance. Refresher courses are also offered throughout program implementation. Pact also ensures that ongoing, intensive onsite training and mentoring is provided to sub-partners. On a quarterly basis, Pact assesses the level and type of assistance required by each organization and develops a site visit plan that ensures that the necessary support is delivered to each sub-partner. Pact organizes and supports technical consultation meetings for the sharing of best practices and lessons learned among PEPFAR and non-PEPFAR partners. As required, technical assistance from select regional and international providers is sourced to assist partners in improving their technical capacity.

ACTIVITY 3: Monitoring and Evaluation

Pact SA assists each grantee in developing a results framework that tracks success against both PEPFAR program and organizational indicators. Pact further assists sub-partners in the development of monitoring, evaluation and reporting (MER) plans and systems. Participation in a five day M&E training is mandatory for all partners prior to full implementation. Pact provides additional M&E assistance to all partners in the following areas: review and development of effective data collection, analysis and reporting tools; setting realistic and achievable targets; establishing and strengthening data quality management systems, conducting internal data quality audits and verifying and validating sub-partner data submissions.

Activity Narrative:

ACTIVITY 4: Program and Financial Monitoring

Pact recognizes the importance of monitoring sub-partner program progress and early identification and resolution of implementation issues. Pact has frequent and regular contact with sub-partners and if technical/programmatic gaps or problems are identified, ensures that issues are promptly addressed and resolved.

In addition to monitoring program progress, Pact closely monitors sub-partner financial management and ensures that grants funds are utilized only for activities approved under PEPFAR funding. All partners submit monthly financial reports that that detail and document expenditures. Pact finance staff visit partners every quarter to audit program expenses and accompanying documentation, compliance with USAID rules (including branding requirements) and cost share.

ACTIVITY 5: Technical Assistance

Pact will provide and manage direct technical assistance in prevention, care and support strategies for all sub-grantees. Pact technical staff will conduct assessments and provide consultation and training on the development and implementation of programs and services. In addition, sub-grantees will be supported with guidance and ongoing assistance on the design and delivery of partner HIV and AIDS curricula, training modules and publications. Pact will also work closely with partners to ensure the effective incorporation and strengthening of nutrition and food security, protection services, gender mainstreaming, and human capacity development in existing programs.

Program Area: HIV/AIDS Treatment/ARV Services

Budget Code: HTXS

Program Area Code: 11

Activity ID: 8107.08

Planned Funds: $0

Activity System ID: 14258

Activity Narrative: PEPFAR funds were allocated to the Supply Chain Management Systems (SCMS) Project to strengthen ARV patient information and reporting capabilities utilizing STAT (Secure Technology Advancing Treatment), a system based on biometric fingerprinting to ensure data verification and smartcards as a mobile, patient-retained medical record. This activity will continue in FY 2008, but since SCMS funding is still available in the Working Capital Fund, this activity will now be a TBD SCMS. In this way, PEPFAR SA will be able to spend down the unspent FY 2007 SCMS funds first, and then allocate funding to SCMS as needed through the reprogramming process.

Therefore there is no need to fund this activity with FY 2008 COP funds at this time, but TBD SCMS funds may be used at a later date.

Table 3.3.11: Activities by Funding Mechansim

Mechanism ID:	500.08	**Mechanism:**	CDC Support - with CARE UGM
Prime Partner:	National Department of Health, South Africa	**USG Agency:**	HHS/Centers for Disease Control & Prevention
Funding Source:	GHCS (State)	**Program Area:**	HIV/AIDS Treatment/ARV Services
Budget Code:	HTXS	**Program Area Code:**	11
Activity ID:	3282.08	**Planned Funds:**	$873,000
Activity System ID:	14061		

Activity Narrative: SUMMARY:

PEPFAR funding is set aside to support the National Department of Health (NDOH) in the implementation of the Comprehensive Plan for HIV and AIDS Care, Management and Treatment, by providing financial and technical assistance to ensure greater access to antiretroviral treatment (ART).

BACKGROUND:
This is an ongoing activity in support of the National Department of Health, and has received PEPFAR funding since FY 2005. The activities are implemented by CDC staff supporting the National Department of Health, and will, when necessary, involve contracting out services.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: CDC Staff Member Costs

Staff and travel costs for a locally hired CDC staff member to provide support to the National Department of Health (including the nine provincial health departments) when required in the implementation of the Comprehensive Plan. This includes site visits to PEPFAR-supported treatment sites, and regular provincial consultations with PEPFAR partners working within a specific province to ensure coordination and integration with the South African Government (SAG).

ACTIVITY 2: Meetings with Stakeholders

At least six meetings will be held with external stakeholders, including those organizations supported by PEPFAR. These meetings are held to discuss new developments in ART, program progress, implementation challenges, and creating new partnerships. Provincial coordinators for ART programs are involved in these meetings (national meetings). In addition meetings are held at provincial level to strengthen coordination at local level by mapping service provision at district level, determine gaps, and direct support.

ACTIVITY 3: Communication Materials

FY 2008 funds will be used to develop and distribute communication and marketing materials to the nine provincial management teams and PEPFAR partners relating to ART. This will focus specifically on job aids to ensure patients are properly managed once they test HIV positive. It also includes the distribution of technical materials to strengthen the five priority areas: human capacity development; pediatric HIV care and treatment; scaling up HIV counseling and testing; TB/HIV integration; and initiating ART at primary health care level.

ACTIVITY 4: Training

FY 2008 PEPFAR funds will be used for training meetings as requested by the National Department of Health, including training in the integrated management of childhood illnesses (IMCI) with a focus on pediatric ART.

ACTIVITY 5: Longitudinal Surveillance

FY 2008 funding will be used to support the National Department of Health effort to implement longitudinal surveillance (in previous COPs referred to as LSTEP). This activity will supplement Department of Health funding for surveillance. The sample will include both PEPFAR and non-PEPFAR supported sites to ensure representivity. This will include a retrospective sample cohort of persons on treatment with 6- and 12-month outcome data, and the ongoing monitoring of those still on therapy (at 6-month intervals), and a prospective cohort, which will collect information on a sample of people newly initiating ART and tracking the individuals over a period of time at 6-month intervals.

ACTIVITY 6: Monitoring and Evaluation

PEPFAR funds will be used to provide support to the Department of Health in the design and implementation of standardized pre-ART and ART registers. This activity will also include the training of data capturers to strengthen the collection of ART data at facility level.

These activities contribute to the implementation of the 2-7-10 PEPFAR goals by strengthening the capacity of the National Department of Health and the nine provincial health departments to implement the Comprehensive Plan, and ensure improved access to treatment.

Program Area Code: 11

Activity ID: 7963.08

Planned Funds: $1,164,000

Activity System ID: 14052

Activity Narrative: SUMMARY:

The Eastern Cape Regional Training Center (ECRTC) will use FY 2008 funds in the Eastern Cape to strengthen the capacity of healthcare workers (HCW), facility managers, social workers, doctors, nurses, lay counselors and community health workers (CHW); prepare new sites for accreditation; and provide mentoring to strengthen the provision of quality antiretroviral treatment (ART). Activities in this program area will expand by recruiting an extra centrally based physician and pharmacist to strengthen the existing teams and continue supporting the original 2 hospitals and 11 clinics in Mthatha. Three training, mentoring and support teams from ECRTC will be strengthened by recruiting an additional 2 clinical training officers, and will each continue to support a facility and its referral clinics for a period of four months to initially evaluate the treatment services training needs and provide targeted didactic training, ongoing mentoring and coaching by performance improvement officers on a continuous basis using standardized procedures manual and tools, when the lead training teams have moved on. The creation of a learning network will expand community support groups where PWAs will be trained to implement a basic HIV and AIDS care package including ART. The emphasis areas are human capacity development and local organization capacity building.

BACKGROUND:

The ECRTC was established through a service agreement between the prime partner Eastern Cape Department of Health (ECDOH) and Walter Sisulu University (WSU) to provide ongoing training for quality improvement in HIV care and treatment programs.

The function of the ECRTC has been to develop accredited training modules and care protocols for different categories of health workers based on National Department of Health guidelines. ECRTC has demonstrated and evaluated the HIV, TB and STI best practices continuum of prevention, care and treatment model in selected facilities, providing direct patient care and the opportunity for HCW to receive practical training. ECRTC provides technical assistance to the ECDOH regarding the expansion of its HIV intervention programs, and supports hospital and clinic site readiness for accreditation to provide comprehensive HIV care and treatment.

The primary target populations are the facility managers, doctors, nurses, social workers, lay counselors, CBO staff and community health workers.

During the past three years ECDOH has introduced a comprehensive HIV care and treatment program. After workshops alone HCW were unable to implement programs. A number of patients have been started on ART at hospital level, but there is a gap in preparing primary clinics to continue supporting patients (down-referral). Many eligible patients are started late on ARVs which results in poor outcomes. There is limited awareness and skill among clinics to enable early diagnosis and entry into the care system. There are known drug-drug interactions in patients with co-treatment of ARVs and other drugs and a number of side-effects and complications are beginning to emerge. There is a need to provide facility-level mentoring support from more experienced clinicians.

The ECRTC has been working with provincial ART managers in developing and disseminating care protocols and will be providing support and working closely with the district and facility managers in introducing the process to increase skills capacity to improve the quality of HIV treatment.

ACTIVITIES AND EXPECTED RESULTS:

In FY 2008 ECRTC activities will continue to address the following activities: training; local organization capacity development; quality assurance; and supportive performance improvement supervision. Funding will be used to enhance the ECRTC strategy of training, preparation of new facilities for accreditation as ARV sites, and providing clinical mentoring to selected sites but also building patient Information management and training. ECRTC will use funds to employ and support administration and logistics of a comprehensive care training team consisting of a clinical director, three doctors, three nurse clinicians and three administrative assistants (for three teams), one each placed at the three satellite sites (Mthatha, Port Elizabeth, and East London). Each team will provide dedicated support to three district hospital sites and their referral clinics for a period of four months, and then move to the next three sites for the next four months, completing three cycles a year.

ECRTC will use funds to employ a research and M&E manager, information systems officer and a central information officer supporting the 3 teams and continued facility/clinics records management and reporting capacity building. The M&E team be responsible for monitoring and evaluation of all ECRTC activities, through accurate measurement of results, designing M&E tools for the teams/clinics and knowledge database maintenance The activity will address the priority areas of human capacity development, improving skills of a care team at facilities (doctors, nurses, managers, social workers, health promoters and CHW) through targeted didactic training, case discussions and mentoring in assessing, initiation, follow-up and monitoring of patients on ARVs while considering and reviewing relevant local system issues. Ongoing support will continue with telephone consultations after the four months. ECRTC will train and mentor 35 facilitators from 7 NGOs who will cascade the training of a comprehensive curriculum for community health workers to include ART.

ECRTC training and mentoring will address data collection, maintaining accurate records, feedback and usage through quality improvement cycles to address early presentation, follow-up of patients for adherence, complications and pharmacovigilance.

Training of facility staff, a CBO and community health workers will emphasize follow-up and tracking mothers from the PMTCT program to enable PCR screening, early detection and referral of children into the care and treatment programs.

The primary objective of the project is sustainable, targeted human capacity development for the HCWs. ECRTC staff will also continue to develop and improve their knowledge and skills by having weekly academic discussions, attending relevant conferences and ongoing mentoring from local experts and visiting experts through collaboration with partners I-TECH and the Owen Clinic.

Activity Narrative:

In the past twelve months with PEPFAR funds, ECRTC has developed protocols and models which have been introduced in the province as new sites are supported for accreditation. More than 27 treatment sites have been supported for accreditation and the ECRTC will continue to support accreditation of new sites in FY 2008. A system of improvement cycles has been introduced. A pharmacovigilance program has been piloted in two hospitals and nine clinics, which highlighted a number of complications as well as drug-related problems, which will be addressed through the training and mentoring program.

This activity contributes to the PEPFAR objective 2-7-10 by increasing the capacity of the public sector to effectively provide HIV care and treatment services. These activities are not at the site level but are more system strengthening activities and constitute what is considered 'indirect' support in the Eastern Cape province. Therefore there are no direct targets for numbers of people reached.

Activity System ID:	16091		

Activity Narrative: This is a new activity in FY 2008.

SUMMARY:

Currently, the USG PEPFAR Task Force supports institutional capacity building of indigenous organizations that implement PEPFAR programs through four competitively selected Umbrella Grants Mechanisms: Pact, the Academy for Educational Development (AED), Family Health International (FHI) and Right to Care (RTC). The main purposes of these new umbrella organizations are to (1) facilitate further scale-up of HIV treatment services; and (2) to develop indigenous capability, thus creating a more sustainable program. The major emphasis area is local organizational capacity development. Primary target populations are indigenous organizations, including non-governmental organizations (NGOs), faith-based organizations (FBOs), and community-based organizations (CBOs).

BACKGROUND:

Since 2004, USAID has been obligating funds through umbrella grants to partners and sub-partners in South Africa who are playing a valuable role in the fight against HIV and AIDS, including ARV treatment services. Through this UGM, FHI is responsible for managing sub-grants to at least ten sub-partners (all of whom submit their own FY 2008 COP entries). FHI will not directly implement program activities, but rather act as a grants management partner to manage and mentor sub-recipients who, in turn, carry out the assistance programs. Thus, FHI utilizes a small percentage of overall funds for administrative purposes, with the remainder used for technical assistance and management support.

The USG closely collaborates and coordinates with the South African Government (SAG) in supporting PEPFAR partners through the umbrella grant mechanism. Although some of the partners work closely with various SAG Departments at national and/or local (i.e. provincial and district) levels, the umbrella grant's primary interface with the SAG is through the Senior Management Team, which includes key staff from USAID, National Departments of Health and Social Development (NDOH, DOSD), and representatives from the provincial departments.

Under this UGM with FHI, it is possible that sub-partners will be providing ARV services for HIV-infected individuals, including patient uptake, counseling and testing, doctor consultations, laboratory testing, treatment management, adherence support, patient counseling, telemedicine, and quality assurance monitoring. The final details of this are not available, as all of the new sub-partners have not yet been identified.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Grants Management

Under this UGM, FHI will award and administer grants to partners selected through the PEPFAR APS competitive process to implement HIV and AIDS activities, potentially including treatment activities. This may involve an array of related activities including award and administration of grants, monitoring of grant progress, meeting reporting requirements, and grant closeout. As relevant, FHI will monitor ARV services provision program implementation and adherence to financial regulations. This can involve provision of technical assistance to partners on project development and implementation, financial management, monitoring and evaluation, and reporting.

ACTIVITY 2: Monitoring and Evaluation and Reporting

This umbrella mechanism also includes a provision for support to partners providing ARV services in monitoring and evaluation, in order to strengthen measurement of the implementation and impact of program activities. Monitoring and Evaluation support for ARV services partners include measurement of program progress; provision of feedback for accountability and quality; and implementation of information management systems. In addition, the umbrella mechanism will provide supportive supervision to provide guidance, monitoring, mentoring and oversight through site visits, technical assistance, and performance evaluation.

The umbrella grant mechanisms will contribute to the PEPFAR goals of providing treatment to 2 million HIV-infected people; preventing 7 million HIV infections; and providing care to 10 million people, including orphans and vulnerable children.

Activity Narrative: TYPE OF STUDY: Continuing.

TITLE OF STUDY: Identifying Optimal Models of HIV Care and Treatment in the Eastern Cape.

TIME AND MONEY SUMMARY: The International Center for AIDS Care and Treatment Programs at Columbia University's Mailman School of Public Health (Columbia-ICAP) is using PEPFAR FY 2006 funds for this study. This study will take place over 24 months. Activities for this PHE started in FY 2007 and are expected to be completed in early 2009. No additional funding is requested for completion. No funding has been leveraged/contributed from other sources.

LOCAL CO-INVESTIGATOR: Coceka Noguduka, Eastern Cape Department of Health (ECDOH), HIV/AIDS Directorate.

PROJECT DESCRIPTION: The main objective of this protocol is to combine and analyze de-identified data that are collected as part of routine service delivery on patients receiving HIV care and treatment at sites support by the Department of Health and Columbia University-ICAP.These sites are primarily located in the Eastern Cape Province, South Africa. Combined data will be used to assess and to better understand the relationship among individual-level factors, site- and program-level factors and HIV care and treatment outcomes. The results from this protocol will aid the interpretation of observed differences in key outcomes across sites as suggested by the aggregate care and treatment indicators.

This study was undertaken with the following objectives:

(1) Assess the degree of variation in patient outcomes across HIV care and treatment delivery sites, independent of differences in the characteristics of patient-level factors across sites. Firstly, data on pre-antiretroviral treatment (ART) patients will be assessed to compare the risk of loss to follow-up (LTF), ART initiation among eligible patients, and survival across sites before and after controlling for patient-level factors (age, sex, stage of disease, baseline CD4). Secondly, data on patients on ART will be assessed to compare the risk of LTF and survival among patients on ART across sites, before and after controlling for patient-level factors (age, sex, stage of disease, baseline CD4); and the changes in viral load, body weight and CD4 counts after ART initiation across sites before and after controlling for patient-level factors (age, sex, stage of disease, baseline CD4).

(2) Identify site-level and contextual factors that are associated with HIV care and treatment outcomes, after adjusting for patient-level factors. This second objective includes (a) assessing the degree to which individual macro-level factors (defined above) are associated with the patient outcomes listed in each objective above; (b) combining macro-level factors into composite scores to assess whether programs with more comprehensive services have more favorable patient outcomes than those with less comprehensive services; and (c) examining whether patients enrolled in family-focused care and treatment programs have better survival than patients in conventional care and treatment programs due to earlier initiation of ART.

(3) Determine the cost and clinical benefits associated with modifying specific site-level and contextual factors that influence HIV care and treatment outcomes. This objective includes (a) assessing the costs and clinical benefits associated with introducing macro-level factors found to be important; and (b) determining the cost effectiveness of introducing an optimal package of site-level service features.

This study will utilize a retrospective and prospective cohort design based upon secondary analysis of existing, routinely collected, de-identified, service delivery data. It will also include an analysis of cost-effectiveness. Currently, data on patients from each site supported by Columbia University-ICAP are collected in the form of paper-based registers, clinic health patient cards, and flow sheets. These data are to be transferred to an electronic database scheduled to be implemented in mid-late 2007. This protocol involves analysis of these data from the electronic database. De-identified baseline and follow-up clinical data from all patients ever enrolled in HIV care and treatment at 10 sites from the start of each site's HIV program will be abstracted from the database on a monthly basis. All data collected from patients since the time of enrollment in care will be included. Data from site-level assessments performed routinely every 6 months will also be included. The site-level characteristics data, including resources for costing of program components will be merged with patient data to determine the relationship between individual-level factors, macro-level factors, and HIV care outcomes. Patients are routinely followed according to the National Antiretroviral Treatment Guidelines (SA National Department of Health), which include visits every six months for pre-ART patients and every month for ART patients.

STATUS OF STUDY/PROGRESS TO DATE: In FY 2007, meetings took place between site leaders and Columbia University-ICAP. In addition, the final protocols were developed in collaboration with site facility staff, Columbia University-ICAP and CDC. Proposals were submitted for in-country Institutional Review Board (IRB) review to University of Fort Hare and Walter Susulu University for ECDOH clearance. Some study staff have been recruited and hired and in FY 2008 the full complement of staff will be realized. Data collection will begin after local IRB and Columbia University IRB approval has been granted.

INFORMATION DISSEMINATION PLAN: Results from this study will be disseminated in site level presentations and reports to participating sites, ECDOH, other Columbia University programs, and USG/CDC.

ACTIVITIES: Planned FY 2008 activities include finalizing data collection, conducting data analysis and widely disseminating findings.

Activity System ID: 16322

Activity Narrative: TYPE OF STUDY: Continuing

TITLE OF STUDY: Understanding ARV Treatment Initiation among Clinically Eligible Patients Receiving Pre-ART Care for HIV Infection in the Eastern Cape, South Africa.

TIME AND MONEY SUMMARY: The International Center for AIDS Care and Treatment Programs at Columbia University's Mailman School of Public Health (Columbia-ICAP) is using PEPFAR FY 2006 funds for this study. This study will take place over 24 months. Activities for this PHE started in FY 2007 and are expected to be completed in early 2009. No additional funding is requested for completion. No funding has been leveraged/contributed from other sources.

LOCAL CO-INVESTIGATOR: Coceka Noguduka, Eastern Cape Department of Health (ECDOH), HIV/AIDS Directorate.

PROJECT DESCRIPTION: Columbia-ICAP is currently supporting HIV care and treatment activities in 42 ART service points in the Eastern Cape province of South Africa. As of December 31, 2006, it is estimated that 50% of patients across all ICAP-supported sites are clinically eligible but have not yet initiated ART. In some cases, the number of eligible patients not receiving ART actually exceeds those on ART. The reasons for this anomaly are probably complex and manifold and are as yet unknown. Columbia-ICAP proposes to systematically identify and intervene upon key factors that enable or prevent those who enroll in HIV care and are deemed clinically eligible for ART, yet do not initiate ART within two months of being clinically eligible for ART. The primary objective of this study is to identify enablers and barriers to treatment initiation amongst clinically eligible patients already receiving pre-ART care for HIV infection. The evaluation will assess (a) the role of patient-related factors (e.g., disease stage, TB co-infection) in delaying treatment initiation; (b) the perceived role of facility- and provider-related factors in delaying treatment initiation; and (c) the role of the federal social disability grant in deferred treatment initiation.

A multiphase descriptive analysis and case-control study design will be used. Cases are defined as persons enrolled into HIV care who meet clinical ART eligibility criteria yet have not initiated ART within two months from date of eligibility. Controls are defined as persons enrolled into HIV care that meet eligibility criteria and have initiated ART within two months of the date of eligibility. Cases and controls will be matched on the date of eligibility (~ one month) during Phase 1. Site-level, provider-level, and patient-level enablers and barriers to treatment will serve as the exposures to be compared among the matched cases and controls. Patient registers will be used as a sampling frame from which a sample, stratified by site and eligibility period, will be selected. Given that participation is sought from those who have discontinued from the program, a ratio of 2-1 controls per case will be sampled.

The study duration is 24 months and consists of four phases:
Phase I (three months) includes a retrospective review and analysis of pre-ART and ART register data at each facility.
Phase II (three months) involves final classification of cases and controls by medical chart review for a sample of patients at each facility.
Phase III (three months) consists of focus group discussions with patients to gain a better understanding of the different enablers and barriers to ART initiation.
Phase IV (eight months) is comprised of a survey of cases and controls through structured face-to-face interviews.

POPULATION OF INTEREST: Survey population include men and women = 18 years of age, clinically eligible for ART, and enrolled at facilities supported by Columbia-ICAP.

SAMPLE SIZE:
Phase I: Data on 5,700 patients enrolled in HIV care at study sites since January 2005 will be abstracted from paper-based clinic pre-ART and ART registers.
Phase II: Medical records will be reviewed in reverse chronological order to the register in order to classify 100 patients as cases and 200 patients as matched controls per site.
Phase III: Up to 70 participants will be recruited for 9 focus group discussions at 2 to 3 clinic sites.
Phase IV: A sample of patients confirmed as either cases or controls in Phase II will be recruited for individual patient interviews as part of the case-control investigation.

STATUS OF STUDY/PROGRESS TO DATE: In FY 2007, meetings took place between site leaders and Columbia University-ICAP. In addition, the final protocols were developed in collaboration with site facility staff, Columbia University-ICAP and CDC. Proposals were submitted for in-country Institutional Review Board (IRB) review to University of Fort Hare and Walter Susulu University for ECDOH clearance. Some study staff have been recruited and hired and in FY 2008 the full complement of staff will be realized. Data collection will begin after local IRB and Columbia University IRB approval has been granted.

INFORMATION DISSEMINATION PLAN: Results from this study will be disseminated in site level presentations and reports to participating sites, ECDOH, other Columbia University programs, and USG/CDC.

ACTIVITIES: Planned FY 2008 activities include finalizing data collection, conducting data analysis and widely disseminating findings.

Activity Narrative: TYPE OF STUDY: Continuing

TITLE OF STUDY: Assessing the effectiveness, acceptability, replicability and cost benefit of a peer educator program to improve long-term adherence to antiretroviral treatment (ART) among adults receiving HIV care and treatment in the Eastern Cape, South Africa.

TIME AND MONEY SUMMARY: The International Center for AIDS Care and Treatment Programs at Columbia University's Mailman School of Public Health (Columbia-ICAP) is using PEPFAR FY 2006 funds for this study. This study will take place over 24 months. Activities for this PHE started in FY 2007 and are expected to be completed in early 2009. No additional funding is requested for completion. No funding has been leveraged/contributed from other sources.

LOCAL CO-INVESTIGATOR: Ebrahim Hoosain, Manager, Public Health Surveillance Unit, Nelson Mandela Metropolitan Municipality.

PROJECT DESCRIPTION: Columbia-ICAP is currently supporting HIV care and treatment services in 42 sites in the Eastern Cape and KwaZulu-Natal provinces. As of December 2006, over 36,000 patients had been enrolled in care, including 20,000 who had initiated ART. Adherence support for patients on ART is provided on an individual basis by clinicians during routine clinic visits, as well as by pharmacists when patients return for medication refills, although the extent and quality of this support varies. In some sites, a range of informal providers also provides adherence support as part of broader hospital-, community- and/or home-based services they support. The study aims to assess the effectiveness of a site-level peer-based adherence support program, identify factors associated with sub-optimal adherence, determine the acceptability of a peer-based adherence support program, and estimate the costs and clinics benefits of a peer-based adherence support program. A separate sample pre-post design will be used to assess the impact of a peer-based adherence support program. Adherence interviews with a sub-set of patients enrolled in pre- and post-program implementation cohorts, focus group discussions (FGDs) with a sub-set of the patients interviewed, and data abstraction of routinely collected immunological and virological data for all patients (i.e. those enrolled and not enrolled in the cohorts) before and after the program implementation will be conducted.

The study will run for approximately 24 months. Interviews with a retrospective cohort of patients who initiated ART before the implementation of the peer-based adherence support program (i.e. pre-program cohort), FGDs with a sub-set of patients interviewed, and data abstraction for all of the pre-program patients will begin in January 2008 and run for about 3 months. The peer educator (PE) program will be initiated in April 2008 and run continuously for the duration of the study and, depending on the study results, potentially after the study end. Interviews with a prospective cohort of patients initiating ART after the implementation of the peer-based adherence support program (i.e. post-program cohort), FGDs with a sub-set of patients interviewed, and data abstraction for all of the post-program patients will begin in April 2008 and run for about 9 months.

Pre-program cohort: At each of the study sites, a retrospective pre-program cohort consisting of a sample of ART-naïve patients who started ART in the previous 11-13 months relative to a specified baseline time will be identified and enrolled in the study. A single interview will be done approximately 12 months after the pre -program cohort participants initiated ART.

Post-program cohort: A post-program cohort consisting of a sample of ART-naïve patients starting ART after the beginning of the peer program will be recruited prospectively in the first 3 months following the baseline. Each participant in the post-program cohort will be followed for 12 months after ART initiation and interviewed 6 and 12 months after ART initiation (3 interviews in total).

The proportion of patients 100% adherent at 12 months after ART initiation will be compared in the pre- and post-program cohorts to estimate the effectiveness of the peer-based program. In both cohorts, factors associated with sub-optimal adherence will also be examined. Interim analyses will also be conducted at the end of Year 1 and in mid-Year 2.

Focus group discussions (FGDs) with a convenience sample of patients participating in the pre- and post-program cohorts will be conducted to learn about their experiences taking ART and to probe further into barriers and facilitators of ART adherence. Data collected in the FGDs with the pre-program implementation cohort will also serve to refine the PE adherence support program. The FGDs conducted with post-program cohort members will be done after their 12-month interview and thus will address the acceptability of the PE program as per Study Objective 4. Additionally, the FGDs will allow the researchers to gather information on other potential benefits of the PE program, beyond those related to adherence. At each site, about 2 FGDs with 6-8 participations per FGD will be conducted both before and after the implementation of the PE program at each site, for a total of 8 FGDs. Where possible, FGDs will be limited to individuals of the same sex and age (e.g. <30 and =30 years) who started ART roughly at the same time.

A final approach to assess the impact of the program at the site level will entail abstraction from patient charts of the following data elements that are routinely captured on all ART patients:
(a) routinely collected baseline, 6 and 12-month CD4 cell count measures;
(b) routinely collected baseline, 6 and 12-month viral load measures;
(c) pharmacy refill data; and
(d) number of scheduled and missed visits within the first 12 months after ART initiation.

Each of these measures will be abstracted for both the pre- and post-program cohort members and non-cohort members (i.e. patients who initiated ART during the specified pre- and post-program cohort periods but are not enrolled in the cohorts). The socio-demographic characteristics of cohort and non-cohort members will be compared to assess the potential impact of participation bias in the cohorts. Median change in CD4 cell count and viral load 12 months after ART initiation will be compared for the patients enrolled in a study cohort (i.e. pre-program cohort vs. post-program cohort) and for those not enrolled in a study cohort (i.e. all patients not exposed to program vs. all patients exposed to program). Similarly, the proportion of patients obtaining ART refills in a timely manner will be compared for the patients enrolled in a study cohort (i.e. pre-program cohort vs. post-program cohort) and for those not enrolled in a study cohort (i.e. all patients not exposed to program vs. all patients exposed to program). Abstracting and analyzing

Activity Narrative: data for non-cohort members will allow us to obtain more valid clinical outcome data given the potential for selection bias when recruiting individuals into the cohorts.

STATUS OF STUDY/PROGRESS TO DATE: In FY 2007, meetings took place between site leaders and Columbia University-ICAP. In addition, the final protocols were developed in collaboration with site facility staff, Columbia University-ICAP and CDC. Proposals were submitted for in-country Institutional Review Board (IRB) review to University of Fort Hare and Walter Sisulu University for ECDOH clearance. Some study staff have been recruited and hired and in FY 2008 the full complement of staff will be realized. Data collection will begin after local IRB and Columbia University IRB approval has been granted.

INFORMATION DISSEMINATION PLAN: Results from this study will be disseminated in site level presentations and reports to participating sites, ECDOH, other Columbia University programs, and USG/CDC.

ACTIVITIES: Planned FY 2008 activities include finalizing data collection, conducting data analysis and widely disseminating findings.

Activity ID:	15943.08	**Planned Funds:**	$250,000
Activity System ID:	15943		

Activity Narrative: This is a new activity in FY 2008.

SUMMARY:

Pathfinder/Planned Parenthood Association of South Africa (PPASA) is a new PEPFAR partner (starting in FY 2008) that will expand access to youth-friendly ARV service delivery, including diagnosis and treatment of opportunistic infections and administration and monitoring of ART. Providers will help young clients become treatment literate and young people beginning ART will be linked to youth community home-based care (CHBC) activists to provide ongoing support for adherence. The emphasis areas for these activities are human capacity development, gender and local organizational capacity development. Specific target populations include young people between the ages of 15-24 years. All activities will be implemented by PPASA and services will be made available in PPASA youth clinics in KwaZulu-Natal, Gauteng, North West, and the Eastern Cape. All activities related to this project will be initiated in FY 2008.

BACKGROUND:

This project aims to relieve the over-burdened, understaffed hospitals by (1) providing care and support services through the PPASA youth clinics, and by (2) building the capacity of more PPASA service providers to offer HIV and AIDS care and treatment services. This initiative proposes to provide expanded, comprehensive HIV and AIDS clinical care and linkages to young people at four existing Youth-Friendly Services (YFS) sites. All the sites currently provide quality YFS, including treatment of sexually transmitted infections (STIs), which will continue in this project. For youth receiving ART, youth-friendly service providers will facilitate monitoring of illness stages with CD4 counts, adherence and drug resistance. Providers will help young clients become treatment literate, and young people beginning ART will be linked to youth CHBC activists for DOTS.

ACTIVITY 1: Training of Health Care Providers on Youth-Friendly HIV and AIDS Care and Treatment

Nurses from the PPASA youth clinics will be trained in HIV and AIDS care and support including treatment of opportunistic infections and ART. To avoid creating parallel training programs, the project will form linkages with the existing Department of Health (DOH) training programs.

ACTIVITY 2: ART Service Delivery for Youth

The project will conduct a thorough HIV and AIDS clinical care needs assessment of YFS clinics with the DOH and will equip clinics to offer services as needed (for example, partitioning and equipping additional treatment rooms). Regular counseling sessions and check-ups at the youth-friendly clinic will be encouraged for all youth living with HIV and AIDS. Counseling sessions will address psychosocial issues around coping with HIV and AIDS, including the person's conception and understanding of her/his illness and stage of illness; cultural beliefs around HIV and AIDS; other services utilized by the patient (e.g., traditional medicine); the client's living situation, support systems, and financial needs; occupational and legal concerns; and stigma (both self-stigma and perceived stigma of others). Young clients will be counseled on "living positively" with HIV and AIDS. For youth receiving ART, youth-friendly service providers will facilitate monitoring of illness stages, adherence and drug resistance. Providers will help young clients become treatment literate and those beginning ART will be linked to youth CHBC activists for DOTS. Young clients living with HIV and AIDS will be encouraged to visit the YFS clinic regularly and will also be linked to support groups and encouraged to become regular members. The project will also establish linkages between youth-friendly service points and referral hospitals and laboratories, as well as other referral facilities. In addition, service provider monthly supervision meetings will be conducted to follow up the providers to ensure that youth friendly approach is being practiced and also to avoid burnout. Periodic refresh trainings will also be conducted for the providers.

Adherence support groups, where young people can exchange experiences and solutions, will be conducted at each of the four clinics. They will focus on: difficulties in taking ARVs (pills, frequency, time charts, food); difficulties in adhering to the services (tests, distance, financial resources and others); presentation and discussion of side effects of the drugs used; discussion on secondary prevention and reproductive counseling; the impact of stigma and discrimination and coping strategies; and nutrition and positive living. The project will assist these groups in building linkages with CHBC, income-generating activities (IGA), and nutrition support.

ACTIVITY 3: Addressing Gender Issues

Service providers will receive training on gender issues related to young men and women's sexuality and sexual rights so they feel comfortable when accessing HIV and AIDS services. Training will include sound gender-based communication skills valued by youth of both sexes, such as confidentiality and an open-minded approach to questions instead of making pre-conceived judgments. Additional gender differences to be addressed include: sexually active young women and/or girls living with HIV must not be stigmatized by health providers who blame them for being too young to seek services. Because of their social and biological vulnerability to STIs and HIV, young women account for more new HIV infections than young men in South Africa - and thus are proportionately in greater need of care and support services. Yet, they are often denied access due to power differentials, financial constraints, lack of education, and/or stigma. Special care will be taken to provide youth-friendly, gender-sensitive services to these young people, including counseling, partner involvement and testing and stigma reduction. Efforts will be made to ensure that the number of male and female clients seeking HIV and AIDS care and treatment services is proportionate with the number in need, based on prevalence studies and VCT service statistics for young males and females. The female community peer educators will play an important role in this case, and equal numbers of male and female the peer educators will be recruited. In addition, peer educators will be encouraged to increase their participation in public events. Pathfinder's experience in Mozambique has shown that it is useful to recruit a group of girls who were friends before and that involvement of the parents during the process of recruitment and training will increase peer education participation and retention.

ACTIVITY 4: Behavior Change Communication and Social Mobilization

The project will also train youth CHBC activists and key individuals on advocacy for the availability of ART

Activity Narrative: drugs for all PLHIV, and especially for youth. Printed materials will be adapted to increase the demand for YFS and VCT and support treatment, such as a diary for young clients to record treatment protocols, dosages and side effects, as well as clinic appointments.

These results contribute to the PEPFAR 2-7-10 goals by improving access to and quality of HIV/AIDS services and care for young people.

Program Area: HIV/AIDS Treatment/ARV Services

Budget Code: HTXS

Program Area Code: 11

Activity ID: 15944.08

Planned Funds: $500,000

Activity System ID: 15944

Activity Narrative: This is a new activity in FY 2008.

SUMMARY:

Currently, the USG PEPFAR Task Force supports institutional capacity building of indigenous organizations that implement PEPFAR programs through four competitively selected Umbrella Grants Mechanisms: Pact, the Academy for Educational Development (AED), Family Health International (FHI) and Right to Care (RTC). The main purposes of these new umbrella organizations are to (1) facilitate further scale up of HIV treatment services; and (2) to develop indigenous capability, thus creating a more sustainable program. The major emphasis area is local organizational capacity development. Primary target populations are indigenous organizations, including non-governmental organizations (NGOs), faith-based organizations (FBOs), and community-based organizations (CBOs).

RTC will use PEPFAR funds to support one or more NGO treatment organizations through financial oversight, project management, human capacity development, training, mentorship programs, program development, strategic planning, and audit readiness. PEPFAR funds will support components of UGM within RTC, but the predominant focus will be on the pass through of funds to sub-grantee implementation.

BACKGROUND:

RTC currently supports 12 NGOs, and under the new UGM, additional organizations will be supported with FY 2008 funds. The following proposed activities are designed to support sub-grantee initiatives to implement the goals of PEPFAR and the South African Government's Comprehensive Plan. Over the last two years, RTC has developed an Umbrella Grants Management capacity while developing specific skill sets, competencies and capacity to support additional PEPFAR-funded organizations that will provide ARV services.

RTC will work with Sustainability Solutions Africa, a financial management company, to conduct pre-award assessments, and training in financial management and USAID regulatory compliance. RTC and the Clinical HIV Research Unit, an extension of the current RTC PEPFAR-funded program, will provide technical assistance in medical issues.

There are four main areas of activity:

ACTIVITY 1: Program Planning

Needs assessment, and program and budget planning are conducted regularly with new partners. Site visits take place alongside sub-grantee staff to evaluate capacity, human resources, facility planning, and approaches to treatment and care systematically. This evaluation helps sub-grantees meet determined targets and ensure quality of care. The experience of RTC clinicians and program staff is extended to sub-grantees to help develop proper planning and forecasting, and to facilitate organizational and program growth.

ACTIVITY 2: Finance

The RTC finance department has developed systems to assist with sub-grantees' compliance and capacity development to manage PEPFAR funds effectively. Support given to sub-grantees will include a complete range of financial management tools, such as pre-award audits, regular budget reviews, and close-out procedures. RTC currently meets with sub-grantees annually to align financial planning with programmatic planning.

Regular oversight and support is extended to all sub-grantees, and monthly financial reports are required from sub-grantees. Periodic internal audits are conducted at the sites of all sub-grantees to establish the quality of financial management and asset control, and alignment with USAID financial management policies.

The RTC finance department has developed a state of the art financial software tool, which uses Business Intelligent Tools, to monitor and track all sub-grantee transactions against budget projections for modeling and cash flow. This integrated program will allow for responsible management of budgets at all sites.

ACTIVITY 3: Monitoring, Evaluation and Reporting

RTC's monitoring, evaluation & reporting (MER) system (standards, systems, procedures and tools) is established, documented and regularly updated. The system is based on best practices and quality criteria in the programmatic areas of ARV treatment, HIV care and support, HIV/TB, counseling and testing, outreach and training.

All sub-grantees will be provided with the support, training and technical assistance necessary to meet USAID reporting requirements effectively. This includes data quality assessments (DQAs).

ACTIVITY 4: Technical Support

The Clinical HIV Research Unit will provide additional technical assistance on treatment issues to new sub-grantees. Clinicians employed by NGOs will also be able to participate in the mentorship program that will include doctor training and regular rounds at the Helen Joseph Hospital.

RTC will train NGOs on established policies and procedures that meet the requirements of the South African labor laws as well as the USAID regulations.

RCT has had extensive experience in working on a variety of infrastructure projects, and the organization has developed collective expertise in proper clinic flow and effective interior space design in care and treatment sites, as well as in TB clinics. RCT staff will be able to advise sub-grantees on any infrastructure developments.

Activity Narrative: The training department within RTC has trained healthcare professionals at all levels within the various clinics and care organizations. Training will continue with doctors, nurses, social workers and counselors, as well as with traditional healers, community members, and non-health staff members. This training will continue to support new sub-grantees in increasing their expertise and capacity.

RTC's relationship with the Department of Health will continue to grow, to ensure that the response is in line with the strategic priorities for South Africa will ensure sustainability, and hopefully the program will be transferred to the South African government on completion of PEPFAR.

RTC aims to capacitate organizations who currently have inadequate programs and management systems. Training and support will be provided to all sub-grantees so that they will be able to manage their programs independently by the end of the training period. RTC plans to provide financial reporting systems, management standard operating procedures, human resources policies and procedures, clinical guidelines, and monitoring evaluation systems that will ensure sustainability beyond RTC support.

Activity System ID:	16505		

Activity Narrative: TYPE OF STUDY: Continuing.

PROJECT TITLE: Costs and Cost-Effectiveness of Adult Treatment Delivery. This evaluation is also conducted with PEPFAR support in Kenya and Zambia.

NAME OF LOCAL CO-INVESTIGATOR: Dr. Ian Sanne, Clinical HIV Research Unit, University of the Witwatersrand; Mr. Lawrence Long, Health Economics Research Office, Wits Health Consortium.

TIME AND BUDGET SUMMARY: This is the fourth year of this study. The evaluation started in FY 2006 and is expected to be completed in 2010. A total of $520,000 has been received to date.

PROJECT DESCRIPTION: Boston University (BU) and the Health Economics Research Office (HERO), will use FY 2008 funds to expand an ongoing analysis of cost and cost-effectiveness of models of treatment delivery in South Africa. The number of sites will be increased to strengthen understanding of differences among delivery models, and an initial set of pediatric treatment sites will be analyzed. Results will be used to inform planning by the USG and South African Government and improve treatment delivery.

EVALUATION QUESTION: The evaluation question is “What is the cost per adult and pediatric patient treated and per patient in care and responding to ART 12 and 24 months after initiation under different models of treatment delivery in South Africa? Little is known about the relative costs of different ART delivery models in South Africa or the relationship between resource utilization and patient outcomes, and there is no information about the costs of pediatric treatment. Such information required to make program scale-up more efficient, estimate budgetary needs, and ensure sustainability.

PROGRAMMATIC IMPORTANCE: To achieve South Africa’s goals for treatment of AIDS, ART must be delivered in a wide range of settings and at multiple levels of the healthcare system. The characteristics of the treatment facility (setting, type, sector, size, etc.) and of the patients treated (socioeconomic level, condition at initial visit, etc.) are likely to affect the patient outcomes and costs incurred. BU was requested in FY 2005-07 to examine cost and cost-effectiveness of alternative models of treatment delivery in South Africa. The original methodology considered only the first 12 months following treatment eligibility and included relatively small sample sizes. Initial results have raised new questions requiring larger samples and longer periods of follow-up. Questions include the cost per successful outcome in years 3 and 4 following treatment eligibility; costs for subsets of patients, such as those who initiate treatment with very low CD4 counts or who switch to second-line regimens during the first year; cost-effectiveness of treatment delivery models launched after the original study sites were chosen; and costs of pediatric sites. In FY 2008, the methodology will be amended and number of study sites and sample sizes increased to address these issues and to generate more detailed information about the relationships between resource utilization (costs) and patient outcomes. The methodology will be adapted to analyze pediatric treatment delivery models.

The expected results of this activity are accurate and detailed estimates of the costs of delivering treatment and achieving successful and sustainable outcomes across a wide range of settings and types of patients. This information will assist the South African Government, PEPFAR, and other donors to estimate future resource needs, increase efficiency among providers, and target future investments toward the most cost-effective models of delivery.

PROJECT DESCRIPTION/METHODS:

Summary: BU and HERO developed the methodology used in this evaluation. The aim of the study is an estimate of the average cost to place a patient in care and response to ART 12 or 24 months after initiation at each study site. At each site, the study team selects a random sample of patients and conducts a retrospective medical record review. Unit cost estimates provided by site management are used to estimate the average cost per patient treated and average cost to produce a patient who remains in care and responds to treatment.

Data collection: The evaluation relies on retrospective data routinely collected by treatment programs to generate information about models of treatment delivery that are successfully treating the largest number of patients at the lowest cost, important characteristics of delivery systems, and whether patient medical outcomes are affected by the model and cost of treatment delivery. Data collected from medical records include all resources used by the site to treat the sampled patients during the specified study period (drugs, lab tests, outpatient visits, inpatient days, support services, infrastructure and other fixed costs) and patient status (in care or not), available laboratory test results (CD4, viral load, etc.), and clinical condition (presence or absence of any AIDS-defining conditions) at the end of the study period.

Data analysis: Each patient is assigned to one of three outcome categories: (1) in care and responding; (2) in care but not responding; and (3) no longer in care (died or lost to follow up). The specific measure of cost -effectiveness being used is "cost to retain a patient in care and responding to therapy," with “responding” defined as an undetectable viral load, incremental increase in CD4 count, and/or absence of serious clinical conditions. Both costs and outcomes are estimated at the 12-month and 24-month points following medical eligibility for treatment under South African national guidelines. The algorithm used for assigning outcome categories takes into account the varying types of information available for each patient, making the approach widely applicable to diverse treatment sites.

Sites and samples: Between 2005 and 2007, analysis was completed at approximately 10 ART sites representing various models of delivery. The models and sites represent the most promising or common approaches to large-scale treatment delivery in urban and rural areas, and in the public and private sectors. In FY 2008, approximately 5 adult and 3 pediatric treatment sites will be added to the study, and cost estimates for up to 48 months of follow up will be made. The current sample size for the study is 200 patients per site and treatment duration cohort; this will be adjusted as needed to provide information about sub-populations.

POPULATION OF INTEREST/GEOGRAPHIC AREA: The population of interest is all adult and pediatric ART patients in South Africa. The study will be national in geographic scope, with a nationally representative sample of sites selected.

Activity Narrative:

STATUS OF STUDY/PROGRESS TO DATE: The study is progressing on schedule. The protocol for the study has been approved by the ethics committees of the University of the Witwatersrand and Boston University, data collection instruments and analysis models have been developed and refined, and the study team has been trained. Analysis has been completed for five sites and is underway at the sixth; discussions with the next two proposed sites are also underway.

LESSONS LEARNED: Results from the first five study sites have shown that both costs and outcomes vary among treatment sites and delivery models, but the magnitude of the differences is generally modest. When costs and outcomes are taken into account, the differences are magnified, leading to quite different cost-effectiveness estimates. The initial results have been presented widely and a manuscript is under review for journal publication. Abstracts have been accepted and oral presentations made at the 2007 World Congress of the International Health Economics Association (IHEA) in Copenhagen; the 2007 HIV Implementers' Meeting in Kigali; and the 2006 HIV Implementers' Meeting in Durban.

INFORMATION DISSEMINATION PLAN: The results of this evaluation will be disseminated widely in South Africa and other resource-constrained countries, where information regarding treatment delivery model costs and outcomes are very limited or absent. After internal data/results verification and review, results will be presented to provincial and national Departments of Health in South Africa. Reports will posted on the BU and International AIDS Economics Association (IAEN) websites. Results will be presented at conferences in South Africa and internationally, and journal manuscripts will be submitted for publication as new findings become available. This evaluation is conducted with PEPFAR support in Kenya and Zambia, and results from South Africa will be included in a multi-country comparison of the costs, outcomes, and cost-effectiveness of treatment delivery models.

FY 2008 ACTIVITIES: In FY 2008, the methodology for analysis of pediatric sites will be developed and methodology for adult sites will be amended. Analysis will be completed for approximately five additional adult and three pediatric treatment sites, and cost estimates for up to 48 months of follow up will be made. In addition, results from South Africa will be compared to those from Zambia and Kenya.

BUDGET JUSTIFICATION FOR FY 2008 MONIES (USD):
Salaries/ fringe benefits: $203,898
Equipment: $5,230
Supplies: $1,221
Travel: $63,727
Participant Incentives: $ -
Laboratory Testing: $ -
Other: $25,924
Total: $300,000

Sixty-eight percent of funds will be used for staff salaries. Staff consists of PI/lead economist, field director, data manager, statistical analyst data collectors. Travel will include local transport for the study team and international and domestic travel for Boston- and Johannesburg-based investigators. Three laptop computers will be purchased for field data entry and analysis. Office supplies and photocopying of data collection instruments will comprise less than 1% of the budget. Other expenses including office space and communications will account for 9% of the total.

Program Area: HIV/AIDS Treatment/ARV Services
Budget Code: HTXS
Program Area Code: 11
Activity ID: 19524.08
Planned Funds: $67,871
Activity System ID: 19524
Activity Narrative: SUMMARY:

CARE serves as an umbrella grant making mechanism for the Centers of Disease Control. CARE has been an umbrella grants mechanism since FY 2006. CARE's primary responsibility is for the financial oversight of the grant which includes review of the financial reports and on-site assessment of the supporting documentation. CARE does not provide programmatic level technical assistance to the sub-grantees. Technical assistance and programmatic over-site is provided by CDC activity managers. The specific activities that CARE is responsible are listed below. CARE will oversee the sub-grant to UKZN CAPRISA.

ACTIVITIES AND EXPECTED RESULTS

ACTIVITY 1: Contractual Responsibilities

CARE is responsible for the contractual arrangements of the sub-grants with CDC South Africa. These arrangements include application for funding for implementation of activities by the sub-grantees that have been approved by CDC South Africa to meet the PEPFAR goals. CARE will prepare all supplemental and continuation application, and ensure that progress reports are received by the sub-grantees. CDC activity managers will be responsible for the technical review of the sub-grantees; thus targets met by the sub-grantees for the PMTCT program will not be assigned to CARE.

ACTIVITY 2: Financial Oversight

CARE is responsible for the financial oversight of the sub-grants. This activity includes the review of financial reports submitted by the grantees on quarterly/6-monthly basis; and on-site assessment of the supporting documents to ensure compliance with the contract. These on-site assessments will be conducted on a 6-monthly basis. CARE will also ensure progress reports are received from the sub-grantees and approved by the activity managers of CDC South Africa on a quarterly/6-monthly basis prior to the disbursement of continuation funding.

Although these activities do not directly contribute to the overall PEPFAR goals and objectives, the Umbrella Grants Mechanism ensure that PEPFAR support can be given to small and medium-sized organizations, enabling them to facilitate the achievement of the PEPFAR 2-7-10 goals.

Budget Code: HTXS
Program Area Code: 11
Activity ID: 19525.08
Planned Funds: $395,000
Activity System ID: 19525

Activity Narrative: The Vendor Chain and BizAIDS components of the existing SABCOHA program will begin a CT component that will identify HIV-positive individuals. Through its counseling and testing program, SABCOHA will work with the existing infrastructure, and ensure that newly identified HIV-positive individuals will take advantage of the holistic education, testing, and treatment program for the employed sector.

Once an HIV-positive individual has been identified, it is the aim of the Vendor chain program to ensure adequate transition to care. Most of the HIV-positive individuals will be referred to one of the 440 established South African Department of Health (DoH) comprehensive care management and treatment sites as well as any other sites identified throughout the country. It is critical however that adequate referral is undertaken. To enable the referral, a specific referral path to a treatment site, adequate and close to the testing site is identified before testing. Patients tested HIV-positive are referred with the DoH or any other identified site's accepted referral information. In additional the CD4 count performed at the time of testing is referred to the treatment site. By referring most patients to government sites this program will leverage the available funding, infrastructure, personnel, ART and laboratory testing from Government. SABCOHA estimates that it will provide Pre-HAART services to approximately 2,100 people in the first year.

For SABCOHA-identified HIV-positive individuals who do not live or work near one of the established DOH sites, SABCOHA will establish a network of private general practitioners who can provide treatment, care and support services to the employed population with no access to health care insurance. SABCOHA estimates that (in the first year) of this initiative approximately 190 patients will use the general practitioner network.

ACTIVITIES AND EXPECTED RESULTS:

Activity1: Expansion of treatment services
SABCOHA will use FY 2008 PEPFAR funds to accelerate the implementation of the national rollout plan at government sites in partnership with the National Department of Health (NDOH).

All of the HIV-positive patients will be maintained through a model that enables primary healthcare providers to communicate directly with HIV experts.

SABCOHA will ensure that each ART patient at a SABCOHA supported facilities receives a minimum package of ART services, including clinical and pathology monitoring, and adherence counseling. There will be follow-up of all defaulting patients. Adherence activities will include a focus on reducing stigma and encouraging disclosure in order to enhance drug compliance and to improve patient retention.

Providing comprehensive treatment services in a workplace setting will contribute to the PEPFAR 2-7-10 goals. These activities will also support the care and treatment objectives laid out in the USG Five-Year Plan for South Africa.

Activity Narrative: INTEGRATED ACTIVITY FLAG:

SUMMARY:

This activity is on services rended in order to make the provision and access to ARVS possible for the 1,000 individuals targeted for FY 2007. This activity includes doctor consultations for existing and new patients on ARVs, patient on a wellness program and laboratory services.

This activity is a follow-on to the partnership with the American Center for International Labor Solidarity. With FY 2007 PEPFAR funding, the USG issued an Annual Program Statement to solicit partners to provide comprehensive prevention, care and treatment services in a workplace setting. Tshepang Trust was selected as one of the partners to continue implementing HIV and AIDS workplace intervention. Treatment will continue to be provided to workers and their dependents living with HIV in selected small to medium enterprises (SMEs) in the health and education sector. Care and support for HIV-infected workers will be provided through wellness programs in workplaces and through referrals to community-based organizations.

BACKGROUND:

Whilst business has become somewhat more responsive to the needs of its employees to encourage testing for early detection and treatment of its employees to encourage testing for early detection and treatment of its employees in larger corporations, the reality is that there are still very low levels of counseling and testing in the workplace. Employees still do not trust that by enrolling in workplace HIV programs, they will not be discriminated against. The situation is worse in the small medium enterprises (SMEs) because unlike big corporations, SMEs are failing to follow the lead of their counterparts in providing counseling and testing services to their work force. As a result, SMEs need assistance in providing and developing a workplace response to HIV and AIDS.

The Tshepang Trust (also known as Tshepang) is the South African Medical Association (SAMA)'s HIV/AIDS program initiated to bridge the gap in medical resources using private general practitioners (GPs) in the public private partnership model in order to assist the South African government fight against HIV/AIDS. SAMA has more than 5000 private medical practitioners in the private practice trained in HIV clinical management. Tshepang has been in existence since June 2003 and is a registered local non governmental organization (ngo) operating as a trust under Section 21 of the South African Companies Act. This is a workplace program targeting small medium enterprises (SMEs) employees, their partners and dependents using general practitioners and their consulting rooms as sites. For this initiative Tshepang trust is in the process of forming collaborative relationships with two South African corporate companies to establish a HIV and AIDS workplace program. In addition to this initiative, Tshepang will work with the healthcare sector, targeting personnel in hospitals and clinics within the Gauteng area. Tshepang Trust currently has strong evidence of leadership support from the South African Government through a public private partnership with the Gauteng provincial department of health to enhance the scale up of HIV counseling and testing (CT) and treatment in Gauteng's ARV sites. Tshepang currently serves under serviced rural areas in South Africa utilizing general practitioners who are located mostly in rural areas. Using this model, Tshepang has developed a public-private partnership between SMEs where employees and their dependents can access private GPs in areas close to where they are employed without fear of discrimination of being absent from work. In addition all of the general practitioners are within reach of the targeted audiences and are local and indigenous and therefore able to relate to the target population according to their culture and in local languages. The geographical coverage area for this project is KwaZulu-Natal, Mpumalanga, and Eastern Cape Province. The emphasis area for this workplace activity is development of networks, linkages, referral systems. The target population for this initiative is men and women of reproductive age working in SMEs, their partners and dependents. This includes factory workers, teachers working in the education sector and healthcare workers working in the public healthcare sector. The emphasis areas for this activity will be information, education, communication and development of network/linkages/referral systems.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: GP Network Model

Through a public-private partnership among workplaces, NGOs and government, participating workplace programs will employ the services of doctors to provide antiretroviral therapy (ART) to workers who qualify for treatment. The doctors will continue with refresher course training in HIV and AIDS clinical management and will have experience in drug purchasing, ART and PMTCT treatment and surveillance. The doctors will perform a clinical examination and staging, including taking blood for CD4 testing of patients. A viral load test will be done before the start of treatment. The treatment services will utilize South African Department of Health standards and guidelines. All patients will receive their drugs from the doctors' rooms. The Tshepang Trust will through its contracted dispensing and delivery service provider ensure that the delivery system keeps stock of and is able to deliver antiretroviral therapy medications to any physical address. Special care will be taken to ensure that patient confidentiality is not compromised.

By providing comprehensive ARV services, including patient eligibility testing and drug procurement, workplace HIV prevention programs will provide HIV-infected workers in small and medium enterprises in the health and education sector with care and treatment.

ACTIVITY 2: Treatment advocacy campaign

FY 2007 funding will be utilised to provide treatment literacy materials and information on treatment services available in the respective targeted areas. This may include links for patients to a toll free support line. Information on how to access testing and treatment services will be disseminated through SMEs, hospitals and the teachers' and healthcare workers' unions.

ACTIVITY 3: Providing ART services

Workers who are HIV-infected and require ART will be able to access these services through the Tshepang

Activity Narrative: Trust. All workers will receive a unique identifier which will be used for tracking and monitoring the treatment services and protect the identity of the patient. The Tshepang Trust contracted GPs will provide the range of ART initiation services, including all relevant laboratory testing, and adherence counseling. The identified treatment partners will use South African Government treatment guidelines and protocols. About 150 individuals who are not working from the Orange Farm community will be included as part of the 500 existing patients on treatment.

ACTIVITY 4: Monitoring and reporting

The treatment partner will track all relevant patient data for monitoring and reporting purposes.

Providing comprehensive treatment services in a workplace setting will contribute to the PEPFAR 2-7-10 goals. These activities will also support the care and treatment objectives laid out in the USG Five-Year Plan for South Africa.

Budget Code:	HTXS	**Program Area Code:**	11
Activity ID:	17720.08	**Planned Funds:**	$2,000,000
Activity System ID:	17720		

Activity Narrative: SUMMARY:

This activity will continue antiretroviral therapy (ART) for approximately 1200 South African National Defense Force (SANDF) personnel and family members that were previously receiving ART via a collaborative clinical trial with SANDF, HHS/NIH/NIAID, and US DoD. The Phidisa clinical trial with approximately 1325 participants on therapy was initiated in 2004 and will be terminated in early 2008. PEPFAR funding will ensure continued ARV therapy for these individuals as they are transitioned from the clinical trial to HIV treatment and care still provided through Phidisa clinics and service delivery professionals. There will also be continued accruement of patients on ART. These patients will be on ART regimens consistent with the national guidelines, with research collection. A priority for the South African Military Health Service (SAMHS) is maintaining the human capacity that has been developed, and the ARV services logistics established in the six clinical trial/patient management sites. The existing staff and mechanism for ARV services support that have been built into these 6 SAMHS clinical sites will be retained with anticipated accommodation into the SAMHS ART program as it gains capacity in two or three years. Therefore, the major emphasis of this activity is responding to SAMHS to support the recruitment, training and provision of human resources, including the physicians, nurses, and pharmacists. Minor areas are commodity procurement (ARVs) and quality assurance. The main targets for the ARV treatment intervention are SANDF personnel, their spouses and family members who are living with HIV.

BACKGROUND:

Project Phidisa initiated Protocol II, a randomized clinical trial, in January 2004 at the request of SANDF with the support of the US Ambassador to South Africa and the US DoD. In addition to answering scientific questions important to South Africa, including a comparison on efficacy and toxicity of South African Government ART regimens, this protocol also helped SAMHS provide access to ARVs for SANDF personnel and their family members. Through Phidisa and implementation of this protocol capacity to deliver ART has been developed in all three military hospitals and at three rural military sick bays. Approximately 1800 SANDF personnel and their family members have been randomized to one of four ART regimens over the past four years. Civilian South African health care personnel, including physicians, nurses, pharmacists, and clinical administrative support personnel have been recruited, trained, and retained to augment a core of SAMHS military health care personnel. The clinical trial sites and staff were the only ART capacity within the SAMHS through 2005 and were critical to SAMHS being able to expand ARV care with PEPFAR support over the last two years. Building on Phidisa's foundation, the SAMHS ARV roll out has generated additional intrinsic capacity, which now includes different clinical sites. Due to unanticipated slower endpoint accrual, NIH/NIAID, SANDF, and US DoD came to an agreement to terminate the trial and to mine existing data for scientific results. A very high priority for SAMHS is to maintain HIV care and treatment for Phidisa-recruited participants, and to maintain the infrastructure and human resources that have been developed. Medical staff recruitment can be particularly challenging for the SANDF, with additional screenings and delays due to military policies. These shortages have been overcome with employment by civilians through an indigenous NGO, Charisma, which has been able to comply with SANDF screenings and policies. ARV clinics have been successfully manned, with integration of the Charisma staff with the SAMHS clinical personnel. These six clinical sites will remain a training site for the SAMHS ARV-rollout clinical staff.

Additionally, since 2004, Lancet Laboratory has provided laboratory support and performed virological, immunological, serological, and safety laboratory tests and procedures under the certification by South African National Accreditation System (SANAS).

ACTIVITIES AND EXPECTED RESULTS:

Activity 1: Retention of clinical staff and capacity at the six ART sites

PEPFAR funds will support five physicians, 7 full time and 1 part-time pharmacists, nine nurses, and a part time laboratory technician. Recruitment of these clinical personnel has been done in close coordination with the SAMHS in order to appropriately hire staff in accordance with the South African military guidelines so that these individuals can be transitioned into SAMHS uniformed or SAMHS civilian personnel. This process, has complicated the hiring process for Charisma, and it is acknowledged that the transition to South African military support is lengthy (1 - 2 years), however directly addresses building indigenous SAMHS HIV treatment and care capacity. PEPFAR funds will support periodic training of staff in clinical management and quality assurance.

Activity 2: Patient Care

Patients will be prescribed drugs according to South African Government guidelines. Regular scheduled follow-up is crucial for patients receiving ART, in order to assess responses to treatment as well as to detect side effects. Procurement of laboratory support for ART management will be provided through Lancet, through Science Applications International Corporation (SAIC). Assessment of responses to ART will include measurement of immunologic status (CD4+ count) and virologic response (viral load), every six months or with treatment failure. This information is critical to detect treatment success or failure. In the cases where patients' CD4 count has risen to > 200 cells/mm3 for more than three months, prophylaxis against Pneumocystis jerovici pneumonia can be discontinued.

Lancet also performs courier services for all clinical samples from the six SAMHS sites, also has carried out all laboratory data reporting, arranged courier service for all clinical samples from all six sites, and maintained a sample, certified, repository, besides has historical database of all results.

These activities will contribute to the number of persons receiving treatment and care in the military, and support the PEPFAR 2-7-10 goals.

Activity Narrative: BACKGROUND

The overall project goal of the project is to increase access and availability of safe and effective treatment of HIV and AIDS in the uninsured population (disadvantaged communities) of South Africa. The strategy to achieve this goal focuses on Human Capacity Development through activities that are designed to strengthen the AIDS leadership and HR management at the district (delivery) level to deal with all aspects of improved AIDS service delivery.

To date efforts to develop AIDS management and leadership in South Africa has focused on providing training which is an obvious first step to developing managerial competencies however not all managers are able to attend such training while others often are not aware of the fact that they do not have the required skills to effectively undertake their managerial tasks. This is understandable given that there has never been a culture of requiring management qualifications from health care managers in South Africa leading in effect to a system of amateur managers. The default health care manager in South Africa is a health care professional who has migrated into management (95% of AIDS managers surveyed in the University of Pretoria study referred to earlier met this profile).

This project is designed to supplement existing management training efforts, by various role players including PEPFAR partners that focus on providing management qualifications, and to create an alternative management development method that will develop management competencies of managers who cannot enroll for formal academic qualifications. This project will also establish, at the district level continues professional development structures that will serve all managers from the district be they from government or civil society with or with out management qualifications.

The project will engage in the following specific activities:

• Provide professional support services to qualified AIDS managers: the project will on an annual basis enroll 500 managers at a district level form both the public sector and civil society who have formal management qualification, and therefore qualify as SAIHCM members as members for a one year period. This will introduce them to a series of services customized to support the professional development of health care managers. These include: 1) a monthly health management journal; 2) access to the SAIHCM mentorship program; 3) an annual management conference and 4) regular newsletters via e-mail on health management issues and ethical issues 5) the annual top 25 health care leaders award (see annexure B for examples of these products). As part of this component, SAIHCM will do a survey to build a database of qualified health care managers in the country. It is anticipated that once managers have experienced the benefits of these services they or their employer will take over the payment of membership fees in the following years.

• Assess the training and development needs of AIDS managers: On annual basis to engage 500 managers who have not received formal management training and managers who received such training a long time ago in fifty Development Centre Events (DCE). This is an internally focused activity where the individual manager takes stock of his / her own learning styles, preferences, strengths, weaknesses and development needs. These events are a sophisticated means of identifying and developing competencies which individuals and teams require taking on new roles effectively. It provides an in-depth picture of an individual by gathering data form many sources during a three-day intensive event conducted by a skilled facilitator. The end result is that the management development needs of each participating health care managers is identified and converted in a personal development strategy that will include enrolling in formal courses, self study, selected reading and participating in peer learning events called Action Learning Sets (ALS).

• Establish in each district a forum for leadership development for AIDS managers. To establish 50 Action Learning Sets per annum at the level of the health district. These are structured facilitated learning events, taking place every two months, that managers attend. These sessions, of one-day duration, entail a continuous process of learning and reflection with the intention of collectively developing solutions to tangible problems. Learning is centered on the need to find solutions to a real problems faced by the managers in implementing AIDS projects. Learning is voluntary and learner driven, while individual development is as important as finding the solution to the problem. Action Learning is an approach to management development pioneered by Reg Revans . It is based on his premise that “there can be no learning without action and no sober and deliberate action without learning. Revans described learning as having two elements: namely traditional instruction and critical reflection or questioning insight. He maintained that learning equals programmed learning plus questioning insights. The Action Learning Set (ALS) is designed to support predominantly the critical reflection component of learning. ALS’s are learning group comprising 10-20 members including a facilitator. The set will meet one day every 6-8 weeks. Attendance and commitment creates a culture of mutual support and challenge. Groups normally have a facilitator whose main responsibility is helping the group create a culture that is supportive and challenging. SAIHCM will further provide ALS members with access to a mentor, who will be an AIDS manager that has a formal management qualification and who has received a complimentary SAIHCM membership on the basis of their willingness to fulfill this role. The supervision by a SAIHCM facilitator will only be required for the first six-month period. Once the ALS structures have been established they continue under an elected group leader as forums for continuous professional development, peer support, mechanism to improve morale and forums where collaboration between managers from both the public and the private sector can be promoted. SAIHCM will continuously monitor that the ALS remain active and actively support group leaders to ensure continuation. SAIHCM will on a two monthly basis interact with group leaders via a dedicated web based discussion forum and newsletter. The purpose of this interaction is to provide group leaders with subject matter for the bi-monthly meetings and share the hot topics for discussion identified by other districts. Annually group leaders will convene at the SAIHCM Conference. Articles produced by or relevant to the ALS’s will be published in the SAIHCM Journal to further share lessons learned with the broader health management community.

Implementation of this project will rely on developing partnerships with various role players at the district level involved in AIDS service delivery and capacity development.

• Training institutions: SAIHCM already has a close working relationship with the FPD a private institution of higher education, and a PEPFAR training partner. In this context SAIHCM provides alumni of PFD management training programs access to SAIHCM membership benefits. This relationship will be leveraged

Activity Narrative: to create a conduit to channel managers into sponsored formal clinical and managerial training courses offered by FPD. SAIHCM will also actively engage other PEPFAR partners who offer training, using the PEPFAR training catalogue with the same objective. Any AIDS manager who is a graduate from a formal training program such as those offered by FPD, will also be invited to attend the ALS's as a channel for them to engage in life-long learning.

• PEPFAR Partners and Civil Society AIDS Service organizations: SAIHCM will also at the district level engage PEPFAR partners and other AIDS service organizations form civil society to invite their managers to participate in the project. An added benefit of involving civil society leaders and managers is that it will create a forum where the district level leaders from both the public and the private sector will interact leading hopefully to increased public-private-partnerships.

• Provincial Government: SAIHCM will work in partnerships with the Human Resources Departments of the Provincial Departments of Health in the all provinces to develop the capacity of AIDS managers at the district level based on the outcomes of the DCE's and ALS's. The District Health Services competency framework, described below, will be used to assess managers during DCE's is one that was introduced in the pilot phase with full support of Provincial and National Health Department management. The Health Systems Framework will guide the project. All interventions will be aligned developing the competencies to implement this framework.

Program Area: HIV/AIDS Treatment/ARV Services

Budget Code: HTXS

Program Area Code: 11

Activity ID: 22322.08

Planned Funds: $100,000

Activity System ID: 22322

Activity Narrative: Summary:
The Institute for Youth Development South Africa (IYDSA) is a new PEPFAR partner selected for funding in August 2008 (but not yet funded – the CDC is currently processing the paperwork to award a cooperative agreement). However, IYDSA is a current sub-partner under the Track 1 Catholic Relief Services (CRS) program. In FY 2009 the Track 1 CRS program will transition, and IYDSA will become one of three local implementing partners that will have CRS funds and responsibilities transferred to it.

Background:
IYDSA is an indigenous South African organization providing care, treatment and support to people living with HIV in the Eastern Cape Province (EC). Within IYDSA, the care and treatment program is called Zisa Uncedo, which means 'bring help'. Reducing HIV infection and AIDS morbidity and mortality is the purpose of this program.

The IYDSA hub-and-spoke model includes main ART sites, extensions and satellite sites to ensure equitable access for the poor with minimum cost to themselves. This is achieved through a strategy that mobilizes clinical staff from major treatment sites to remote sites through an extensive outreach program.

There are three main treatment sites where all HIV care and ART are provided with a full staff complement (Doctor, Social Worker, Nurses, Pharmacist, and Dietician). IYDSA has established three extensions that are linked to an ART site. Remote satellites are located where there is a large concentration of enrolled patients. Here VCT is provided, with referral back to treatment and extension sites for ART initiation. The remote satellites are key to enabling 'access for all'

Initiation and preparation for effective treatment is a crucial first step, the better the preparation, the better the outcome. IYDSA strives to ensure that the treatment centers where people are initiated on ARV treatment has all the necessary skills to ensure patients are properly prepared before being initiated on HAART.

Once the patient is consistently taking their treatment and they have been stabilized, the best long-term solution is for them to collect their treatment close to where they live, at the same time receiving localized monitoring and support. It is with this as a philosophy that IYDSA works towards creating 'access for all' in the Eastern Cape.

Activities:
1) Provide access for all: Through the use of a this model IYDSA seeks to provide services at as many sites as possible to ensure access to treatment with minimum cost. The maximized use of resources, spreading scarce skills through a mobile staff strategy is cost and time efficient, supplemented by a high level of training for the primary health care (PHC) staff, who remain in the community.

2) Provide comprehensive HIV medical care to 18,384 HIV positive adults and children, and initiate and maintain 6,128 people on antiretroviral treatment: Zisa Uncedo will build on current treatment activities of IYDSA in South Africa, using the extensive capacity and current network of sites to rapidly scale up treatment numbers. Zisa Uncedo will include assessing site needs and readiness, capacity building of medical professionals and developing continuum of care mechanisms. This will establish community-based linkages and systems to support the continuity of care from the health facilities to the households.

3) Build Local capacity, enhancing sustainability: The resultant training of professionals located in rural areas increases the professional skills within these areas which may be accessed by people from these communities.

4) Enable people living with HIV and AIDS to lead healthy and productive lives: Ultimately care without an enabling environment increases dependence. Healthy productive lives are the result of empowering the individual. This is practiced throughout the program.

There are a number of organizations that IYDSA partners with, these include Government departments at various levels, local NGOs and faith-based organizations, as well as contracted service providers. The primary partners are 'The Pill Box', providing a complete Pharmaceutical Solution, and 'PEZ' who is responsible for all administration, development and maintenance of the Adherence Monitors component of the program.

HLAB - Laboratory Infrastructure

Program Area:	Laboratory Infrastructure
Budget Code:	HLAB
Program Area Code:	12

Total Planned Funding for Program Area: $12,877,750

Estimated PEPFAR contribution in dollars	$0
Estimated local PPP contribution in dollars	$0

Program Area Context:

In 2001 South Africa restructured its public sector medical laboratory services and created the National Health Laboratory System (NHLS), which is a parastatal organization. The NHLS is accountable to the National Department of Health (NDOH) through its Executive Board and is responsible for public sector laboratory service delivery. The NHLS also governs activities and provides funding to the National Institute of Communicable Diseases (NICD) to provide surveillance, research and programmatic operations, as well as funding to the National Institute of Occupational Health (NIOH) for policy development activities related to occupational health. The public service delivery arm of NHLS is comprised of approximately 260 laboratories, which include all provincial diagnostic pathology labs, tertiary level, secondary, and primary laboratories in all 9 provinces and their associated district hospital laboratories. Each district laboratory supports a network of local clinics where primary care services are provided.

In previous years PEPFAR has had limited collaboration with the NHLS and other private laboratory organizations. Instead, there has been considerable reliance on the NICD to carry out a majority of laboratory activities in the COP. Recognizing this shortcoming, significant measures have been proposed in the current COP to strengthen and advance collaboration with the NHLS in partnership with NICD. PEPFAR funds will be used to address gaps identified by the NDOH, NHLS, NIOH, and NICD to address laboratory-specific unmet needs and policy or administrative issues that impede full implementation of public laboratory programs in support of the National antiretroviral treatment (ART) rollout and the National TB Strategic Plan. Consistent with the priorities identified by the NDOH, and implemented by the NICD and NHLS, PEPFAR will continue to provide funding to assure the accuracy and quality of testing services in support of rapid scale-up of HIV testing and TB diagnostic capacity, and to build long-term sustainability of quality laboratory systems in South Africa. In addition, PEPFAR funds will be used to fund Toga Integrated HIV Solutions (Toga), a new PEPFAR partner that aims to establish a network of HIV monitoring laboratories and associated service access tools to resource constrained ART settings.

Toga is a private molecular diagnostics laboratory situated on the outskirts of Johannesburg. Toga provides molecular diagnostic support for AMPATH (National Pathology Support Services), and as such has become an integral part of the suite of pathology

services offered by that organization. Toga is a cohesive team consisting of clinical virologists, scientists, and technologists who have accumulated considerable experience in the field of molecular biology. Toga is a valuable resource that assists with laboratory and clinical management and is committed to driving access to molecular diagnostic testing for all South Africans.

With the continuing expansion of HIV and TB services within NHLS, and with significant increases in multidrug- and extensively drug-resistant TB (MDR and XDR-TB) cases within South Africa, additional support is required to strengthen HIV and TB diagnostic capacity and information management infrastructure. NHLS has responded to this need by planning to expand HIV diagnostics and treatment monitoring capabilities in all nine provinces. There are 46 CD4 laboratories in the 9 provinces within the NHLS system, but coverage within each health district is limited. There are only 13 laboratories in 5 provinces that are able to provide viral load testing, and only 8 laboratories in 5 provinces are able to provide infant PCR diagnostics. NHLS will expand services to provide at least one CD4 laboratory per health district, and ensure that viral load and infant PCR services are available in all 9 provinces. NHLS also recognizes their limited TB laboratory capacity due to high burden and inability to capture and report MDR and XTR-TB cases to NHLS and the National TB Program (NTP). There is an urgent need to provide increased access to TB culture and referral services, and to strengthen the management and reporting of MDR and XTR-TB cases, data mining activities, and surveillance analysis from the existing NHLS Data Warehouse (DISA). Finally, it is critical that data is integrated into the existing national Electronic TB Register (ETR.Net) surveillance system. The NHLS DISA system can be used to extract laboratory data from existing NHLS laboratory information systems and maybe used to import data into the ETR.net information system. The current system does require strengthening and NHLS is actively working to improve the capacity and utility associated with this system.

National policies and standards on infection control programs within laboratories are limited. The NIOH falls under the NHLS, and is given a mandate to develop policy for occupation health. PEPFAR funds will be used to promote an infection control network and to develop robust and manageable infection control policies. Collaboration with other PEPFAR partners will assist in the development of such policies and will lead to enhancement of existing infection control measures and implementation of national infection control standards for laboratory staff and other healthcare workers.

With the availability of significant technical and scientific resources within South Africa, NICD and NHLS are well placed to continue to provide regional laboratory support within Sub-Sahara Africa. Both organizations plan to expand and strengthen existing regional support mechanisms and to enhance collaboration with other PEPFAR-funded countries through the Regional Laboratory Training Center (RLTC). Expansion of services includes, but is not limited to, extending external quality assurance (EQA) programs, TB and HIV laboratory diagnostic technical support and services, regional HIV rapid testing kit evaluations, integrated TB/HIV training programs, and other HIV and TB related laboratory technical assistance.

During FY 2008 NICD will continue evaluating HIV incidence testing methodologies; using EQA to monitor PCR DNA testing of infants and of molecular testing associated with ART; providing quality assessment of HIV rapid test kits; assisting the NDOH in training the staff of nearly 4,000 VCT sites on proper HIV rapid testing procedures and quality management utilizing the WHO/CDC HIV Rapid Test training package; implementing an operational plan to scale up early HIV diagnosis in infants utilizing PCR testing of dry blood spots; assisting NICD in developing a national TB reference laboratory; and providing laboratory training for clinical laboratorians.

NICD will support important strategic information activities to help inform the decisions of policy makers and program officials regarding their HIV prevention and ART rollout programs. These activities include HIV-1 drug resistance transmission surveillance; sentinel surveillance of opportunistic bacterial and fungal pathogens in HIV-infected persons; microbiological etiological and antimicrobial resistance surveillance for sexually transmitted infections; provision of training for epidemiologists and laboratory workers; collection of trend data for HIV incidence; and HIV-1 drug resistance transmission surveillance. Detailed descriptions of these activities can be found in the Strategic Information section in the COP.

New collaborative NHLS and NICD activities aim to increase national coverage of HIV and TB diagnostics and treatment monitoring capabilities; ensure uniform quality assurance measures among laboratories; support activities to initiate new and strengthen existing EQA programs; strengthen laboratory reporting systems and specimen transport needs in support of rural clinics and laboratories; promote efforts to synchronize infection control activities in collaboration with the NIOH; investigate, assess, validate and implement new automated laboratory diagnostic equipment and high capacity instrumentation for high burden diagnostics and service delivery needs; and expand upon the regional support and collaboration with other PEPFAR-funded countries through the established RLTC.

Toga aims to increase national coverage of HIV diagnostics in remote rural areas by engaging local and provincial government. Toga has developed a Togatainer laboratory based on the MeTRo (Measure to Roll Out) principle as a means of rolling out treatment capacity and developing a near-real time laboratory information management system. Recognizing that laboratory services in the public sector are provided through regional centralized laboratories, with limited peripheral capacity for specialized testing (e.g. CD4 and viral load), Togatainer addresses the need for peripheral deployment of laboratory services. Toga will deploy three Togatainers capable of performing HIV and TB diagnostics, syphilis testing, and HIV disease monitoring.

Continued PEPFAR funding to NICD with combined support to NHLS, as well as Toga Integrated HIV Solutions will focus efforts to address existing gaps in laboratory testing outreach, penetration, and quality of overall services.

Program Area Downstream Targets:

12.1 Number of laboratories with capacity to perform 1) HIV tests and 2) CD4 tests and/or lymphocyte tests	72
12.2 Number of individuals trained in the provision of laboratory-related activities	619
12.3 Number of tests performed at USG-supported laboratories during the reporting period: 1) HIV testing, 2) TB diagnostics, 3) syphilis testing, and 4) HIV disease monitoring	5861914

Custom Targets:

Activity Narrative: SUMMARY:

Activities will be carried out to identify and address laboratory-specific unmet needs and national policy or administrative issues that impede full implementation of laboratory programs. Activities will increase national coverage of HIV and TB diagnostics and treatment monitoring capabilities; ensure uniform quality assurance measures among laboratories; support activities to initiate new and strengthen existing External Quality Assurance (EQA) programs; strengthen laboratory reporting systems and specimen transport needs in support of rural clinics and laboratories; promote efforts to synchronize infection control activities in collaboration with the National Institute of Occupation Health (NIOH); investigate, assess, and implement new automated laboratory diagnostic equipment and high capacity instrumentation for high burden diagnostics and service delivery needs; and to expand upon the regional support and collaboration with other PEPFAR-funded countries through the established Regional Laboratory Training Center (RLTC).

BACKGROUND:

In 2001, South Africa restructured its public sector medical laboratory services and created the National Health Laboratory System (NHLS), which is a parastatal. The NHLS is accountable to the National Department of Health (NDOH) through its Executive Board and is responsible for public sector laboratory service delivery. The NHLS also governs activities and provides funding to the National Institute of Communicable Diseases (NICD) to provide surveillance, research and programmatic operations, as well as funding to the NIOH for policy development activities related to occupational health. The service delivery arm of NHLS is comprised of approximately 260 laboratories, which include all provincial diagnostic pathology laboratories, tertiary level, secondary, and primary laboratories in all nine provinces and their associated district hospital laboratories. Each district laboratory supports a network of local clinics where primary care services are provided. These four regions encompass all laboratories throughout South Africa. Consistent with the priorities identified by the NDOH, and implemented by the NICD and NHLS, PEPFAR continues to provide funding to assure the accuracy and quality of testing services in support of rapid scale up of HIV testing, antiretroviral treatment (ART) rollout and TB diagnostic capacity, and to build long-term sustainability of quality laboratory systems in South Africa. Continued PEPFAR funding of NICD with combined support to NHLS, efforts will focus to address existing gaps in laboratory testing outreach, penetration, and quality of overall services.

ACTIVITIES AND EXPECTED RESULTS

ACTIVITY 1: EQA Programs

Activities will support measures to strengthen existing EQA and initiating new national proficiency testing programs for ongoing review, measuring clinical performance, reporting indicators, and disseminating performance reviews for action. Activities include decreasing the administrative burden of the existing EQA programs through the development of a web-based system or possible utilization of fax/scan technologies that will be used to monitoring performance of TB and HIV testing services. The current South Africa PEPFAR laboratory indicators now include the reporting of EQA service reach and overall performance in the areas of chemistry, hematology, CD4s, viral load, and infant PCR, TB smear, culture, and DST. By automating the current EQA monitoring system, real time EQA performance can be measured to provide a more robust and responsive EQA system. Currently, HIV rapid EQA services are limited to only one non-governmental organization (NGO) in South Africa, a significant shortcoming relating to assurances of quality testing services. To help detect shortcomings in performance and to improve assurances when reporting HIV rapid test results, a robust EQA system is a necessity. The proposed national HIV rapid testing EQA program will identify and provide a mechanism to quickly remedy deficiencies. This activity is currently an integrated component of the national rollout plan for the HIV Rapid Testing Quality Assurance Program with NICD, but to have an immediate impact, EQA services must be delivered in parallel with the training package. By providing such an EQA program, an assessment of the quality of HIV rapid testing services can be measured. Also as part of an effective TB EQA program, a TB National Rechecking program is also proposed. In light of the human resource limitations in providing such a program, activities will target vigorous investigations into the use of automated TB microscopy for diagnostic rechecking. Due to the significant volumes of slides that would be necessary to effectively provide such a service, automation of this particular task is a necessity.

ACTIVTY 2: Regional Laboratory Training Center (RLTC)

In most PEPFAR-funded countries, the quality and quantity of TB and HIV laboratory work is insufficient for effective diagnosis and disease control. With the availability of significant technical and scientific resources within South Africa, NICD and NHLS are well placed to continue to provide regional laboratory support within Sub-Saharan Africa. NICD and NHLS will expand and strengthen existing regional support mechanisms and enhance further collaboration with other PEPFAR-funded countries through the RLTC. Regional support will include the expansion of laboratory services and training initiatives to other African PEPFAR focus countries. Access to the RLTC will be available to all PEPFAR focus countries by allocating funds within their respective country COPs. Expansion of services includes, but is not limited to extending EQA programs, TB and HIV laboratory diagnostic technical support and services, regional HIV rapid testing kit evaluations, integrated TB/HIV training programs, and other HIV and TB laboratory technical assistance.

ACTIVTY 3: Infection Control Policy

With the National Institute of Occupation Health (NIOH) residing within the NHLS organizational structure, and with its mandate to develop policy for occupation health, activities will be leveraged to promote an infection control network and to develop infection control policies and safety training programs in TB and HIV laboratory safety. Collaboration with PEPFAR partners will assist in the development and will lead to enhancement of existing infection control policies and implementation of national infection control standards for all health care workers. Policies will provide the framework for training activities that will target improved general knowledge of infection control practices.

ACTIVTY 4: Information Management

NHLS currently maintains a large data warehouse that is used to extract laboratory data from existing NHLS

Activity Narrative: laboratory information systems. This system requires strengthening and NHLS is actively working to improve the capacity and utility associated with this system. Current laboratory reporting mechanisms, as well as patient enrolment systems into antiretroviral and DOTs treatment programs need information technology support and information bridges need to be created that currently do not exist. Activities will continue to build upon the rollout of viable communication methods in rural areas for laboratory data and to increase data turn-around-times. The currently proposed funds would be used, in partnership and through co-funding with NHLS, for the development of modular logistical and information management support systems as a means to address the current integration issues associated with the existing surveillance and health information systems.

ACTIVITY 5: Further Automation

In light of the significant burden of HIV and TB diagnostics, and the immediate staffing needs, activities will build upon COP 2007 efforts to include assessing existing, validating, and implementing new automated laboratory diagnostic equipment and high capacity instrumentation for TB and HIV. Activities will be carried out to increase laboratory through-put for infant PCR, viral load, and TB, to meet increased demand, as well as strengthening NHLS ability to improve diagnostic, reporting and surveillance activities. FY 2008 funds will be used, in partnership and through co-funding with NHLS, for the development and rollout of automated N-acetyl-l-cysteine (NALC) decontamination instrumentation and technologies, high throughput infant PCR, as well as other possible high throughput HIV automated technologies to meet current and future demands.

USG Agency: HHS/Centers for Disease Control & Prevention
Funding Source: GHCS (State)
Program Area: Laboratory Infrastructure
Budget Code: HLAB
Program Area Code: 12
Activity ID: 16285.08
Planned Funds: $191,000
Activity System ID: 16285

Activity Narrative: SUMMARY:

The Wits Pediatric HIV Clinics (WPHC) and the National Health Laboratory Service (NHLS) will use PEPFAR funds to expand a demonstration project that was implemented with FY 2006 and FY 2007 funding. The project aims at increasing access to early HIV diagnosis for infants, and developing guidelines for rollout of the project on a national level. This project was specifically requested by the Gauteng Department of Health (DOH), with strong support from the National Department of Health (NDOH) and its Prevention of Mother-to-Child Transmission (PMTCT) Early Diagnosis Committee. Local organization capacity building, in-service training and ongoing operational research validating suitable HIV assays will be the major emphasis areas for this program, with minor emphasis given to commodity procurement, development of networks, linkages, and referral systems (especially between immunization clinics, early infant diagnosis and treatment, care and support),and logistics. The primary target population will include HIV-exposed infants (birth to five years old) and infants who are not infected, and secondary target populations include lab workers, doctors, nurses, and South African government policy makers.

BACKGROUND:

Early infant diagnosis of HIV is vital for monitoring PMTCT programs and identifying HIV-infected children to receive care. Diagnosing HIV in children is more complex than in adults because of the interference of maternal HIV antibodies during infancy and ongoing exposure to the virus during breastfeeding. To date, HIV diagnostic services for children in low resource settings have been neglected and healthcare workers are not familiar with its theory or practice. About five million people in the country are HIV-infected and it is estimated that about 500,000 of these, which include 60,000 children, are in urgent need of antiretroviral (ARV) therapy. One frequently cited reason for so few children accessing treatment is the fact that mechanisms to diagnose infants early are not in place. Although NDOH guidelines have made provisions for early diagnosis with HIV DNA PCR, in most places this has not yet replaced the previous protocol of using HIV ELISA tests at 12-months of age. In reality, infants are not followed up and either die before accessing care or only present once they are already ill with their first HIV-related illness. Lack of early diagnosis for exposed infants and the integration of PMTCT services with services providing ARV drugs have been identified as keys to improving access to care for HIV-affected children and their families, and thereby increasing the number of HIV-infected people receiving treatment.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Technical Assistance and Scale Up of Early Infant Diagnosis

Using FY 2008 funding, this activity aims to assess the implementation challenges and develop guidelines to scale up early infant diagnosis for infants born in PMTCT programs. Technical assistance will be provided to the provinces to help facilitate the rollout of early infant diagnosis services. The Gauteng DOH, with strong support from NDOH and its PMTCT Early Diagnosis Committee specifically requested this project. Technical assistance will be provided to improve laboratory infrastructure to conduct early infant diagnosis and scale up these services around the province. Technical assistance will be provided to establish dried blood spot testing in all HIV DNA PCR laboratories; to make monthly PCR test statistics available, e.g., to "Concerned Pediatricians" to monitor progress; to optimize current and new HIV assays used; to update diagnostic algorithms for children in an evidence-based manner; and to establish a system for feedback from clinics for central monitoring, e.g., service issues, quality control, etc.

ACTIVITY 2: Capacity Building

In FY 2008, WPHC and NHLS will continue to facilitate training of clinic healthcare workers including nurses, doctors and laboratory technicians in the area of early infant diagnosis, and training content will be updated as practice evolves. The training will ensure that HIV-exposed infants that access immunization clinics at six weeks of age are offered PCR testing. Training will help facilitate an average increase in test volumes from 3,000 to 4,500 per month.

ACTIVITY 3: Linking the Expanded Program for Immunizations (EPI) at Primary Healthcare Clinics with Early Infant Diagnosis

In FY 2008, WHPC and NHLS will continue to explore systems to ensure primary health clinics (PHC) clinics act as entry points for HIV-affected children by identifying HIV-infected children (and other family members) for comprehensive HIV medical care including referral between PHC and hospital facilities.

The NHLS early infant diagnosis demonstration project directly contributes to PEPFAR's 2-7-10 goals by increasing the number of infants accessing treatment in Gauteng, and serving as a platform for expansion of early infant diagnosis programs throughout the country. These activities support the PEPFAR Five-Year Strategy for South Africa by supporting government efforts to improve quality of and access to care and treatment for HIV-infected children.

Activity Narrative: This activity was approved in the FY 2007 COP, is funded with FY 2007 PEPFAR funds, and is included here to provide complete information for reviewers. No FY 2008 funding is requested for this activity.

PEPFAR funds $200,000 were allocated to National Department of Health to strengthen laboratory services in the Eastern Cape Province. This activity was carried out by the Eastern Cape Regional Training Centre as part of their ARV program. This activity will however not be funded in FY08. The laboratory strengthening activities will continue under the NHLS contract.

Funding Source: GHCS (State)
Program Area: Laboratory Infrastructure
Budget Code: HLAB
Program Area Code: 12
Activity ID: 2959.08
Planned Funds: $2,885,750
Activity System ID: 14075

Activity Narrative: SUMMARY:

Laboratory infrastructure will be strengthened and enhanced in key areas to provide strategic information, develop policies and technologies, and improve monitoring of laboratory testing quality that will enhance access to diagnostic testing and enhance treatment. These activities will also focus on the strengthening of regional laboratory activities in Southern Africa. Other countries will be contributing their country funds to leverage services from NICD.

BACKGROUND:

As the burden of TB increases, the need for a National TB Reference Laboratory (NTBRL) becomes increasingly important. The National Health Laboratory Service (NHLS) is overburdened with routine diagnostic testing, affecting standards, and turnaround times for specimen processing. The NTBRL will play a pivotal role in improving routine TB laboratory services and drug-resistance surveillance. As HIV rapid test use increases, it is critical to ensure quality assurance and quality control (QA/QC) mechanisms and review of rapid test kits for efficacy. QA mechanisms must be equivalent to those in place in diagnostic labs. The proposed HIV rapid testing quality management system (QMS) will identify and remedy any deficiencies in CT centers. A program of technical audits will also provide accurate information regarding compliance with prescribed practice. There are also quality concerns with routine use of nucleic acid testing including assay sensitivity and specificity, contamination, clinical significance, variable isolation/amplification procedures, lack of robustness and standardization, lack of appropriate control material and regulations and policies. The activity is integrated as part of the program to increase access to CD4, viral load, and PCR testing. The development of improved practical methods for early infant HIV diagnosis is important for effective prevention of mother-to-child transmission (PMTCT) interventions and for improved clinical management of HIV-exposed infants. Expanded scientific and financial management is required given the expanded activities with and the increasing required reporting.

ACTIVITES AND EXPECTED RESULTS:

ACTIVITY 1:

The National Department of Health (NDOH) is represented on the NHLS board to provide strategic direction in endeavors of the NTBRL. On an operational level there is frequent contact between the National Tuberculosis Control Programme (NTCP) as well as the provincial departments. The NTBRL is always formally represented at quarterly NTP meetings, and meet frequently on an informal basis. The NTCP is represented at NTBRL meetings and provide direct input into data requirements for reporting and surveillance purposes. A national drug resistance surveillance (DRS) survey is currently planned for South Africa; this will be directly funded by the NTP.

The NTBRL will be integrated with NHLS service provision. Construction of a new laboratory began in 2007 for completion in early 2008 (not CDC funded). The NTBRL will (a) develop a quality assurance program for TB laboratories, including proficiency testing (PT) and a nationwide re-screening program as part of the NTCP; (b) characterize the mechanisms of drug resistance found in South African isolates; and (c) conduct laboratory investigations of drug-resistant outbreaks using molecular methods. The NTBRL will enhance the South African government's ability to respond to the growing TB epidemic among the HIV-infected by quality assuring routine testing to ensure that TB and MDR-TB cases are properly identified. This will also ensure that high quality surveillance systems are in place. The NTBRL will work with the Medical Research Council, WHO, CDC and other partners to implement rapid drug-resistance surveys to help characterize the extent of drug-resistance including XDR-TB.

ACTIVITY 2:

NICD will continue to evaluate the performance of rapid test kits and testing algorithms in the field and in the laboratory. In Phase 1, individual rapid test kits - and combinations of kits - are evaluated for sensitivity, specificity, positive predictive value and negative predictive value. Phase 2 assesses the field performance of rapid kits to inform scale-up. In FY 2006-07, NICD evaluated 42 rapid HIV test kits, and conducted field testing of three kits. The initial field trials will focus on the performance of the NDOH's recommended list of kits (n=5) since this requires testing at least 500 tests/per site (3 sites) and duration of at least 6-8 weeks per kit. Laboratory-based assessments will include approximately 10 kits annually. Post-marketing surveillance will also be included as part of the QA procedures. In addition, an assessment and quality control program will be expanded as part of the national strategy for quality control of HIV testing. Well-characterized panels will be sent to participating labs on a quarterly basis. The approach has been successfully tested in participating labs in the national antenatal survey, in 210 NHLS labs and 60 non-NHLS sites, including non-governmental vaccine sites.

ACTIVITY 3:

A counseling and testing QMS will be further refined first defining aspects required for such a system (i.e., proficiency panels, standard operating procedures, safety, piloting ELISA testing from DBS if appropriate) and then establishing laboratory and training capacity to implement it based on the initial piloting. Expected outcomes are to train public health sector and NGO counselors that perform rapid HIV testing to implement quality management of testing. The NICD and CDC have engaged key organizations including the NDOH and NGOs in the demonstration of the WHO/CDC training curriculum. The curriculum has been revised and is ready for piloting for 2007 and rollout in 2008.

ACTIVITY 4:

An EQA program will be implemented to monitor lab performance related to the ART program, including performance of the viral load assay as well as DNA PCR (standard and DBS) important for infant diagnosis. Currently 11 laboratories perform viral load testing, 5 provide DNA testing for infants and 45 labs are equipped CD4 testing. The ART program will expand to 16 NHLS laboratories in 2008 for viral load testing and 11 NHLS laboratories for DNA testing. The CD4 testing sites will expand to 58 sites. The NICD will monitor HIV testing performance and provide training in the use of EQA/IQC in the management of quality. Parallel program EQA for CD4 will be assisted though NHLS. The NICD intends to roll out an internal quality

Activity Narrative: control (IQC) program for real time monitoring of viral loads. To help detect weak spots in performance and improve reliability and confidence when reporting results, an EQA PT and internal quality control (IQC) program (as part of the QMS) will allow comparison and benchmarking. As a consequence of any negative PT findings, appropriate education in good lab practice and method utility will be conducted. Refurbishment of existing structures will be required to house the expanded activities.

ACTIVITY 5:

NICD will provide technical support to CDC to develop expert guidance on simplified early diagnosis tools and the use of DBS PCR testing. NICD will help develop program guidance, technical support and in-country and regional evaluations to implement an operational plan to scale up HIV diagnosis in infants. Progress includes automation for an infant diagnosis program at NHLS. The NICD supports the Lesotho and Swaziland's Ministries of Health in testing infants and intends to introduce further automation to improve service delivery. Specific activities include: provide expert lab consultation and participate in a CDC-organized early diagnosis workgroup; develop simplified laboratory standard operating procedures for standardized field application in resource-poor settings; test available specimens for test validation and optimization; provide training to selected labs and PEPFAR partners; and help develop and support a plan for implementation of improved methods for early diagnosis. By scaling up access to advanced PCR-based HIV testing assays for infants born to HIV-infected women, the NICD will improve the ability of pediatricians to assess and prescribe ART to prevent or treat infection in exposed infants.

ACTIVITY 6:

The NICD will expand the grant management administration (size and scope) to ensure that the activities fulfill PEPFAR objectives and reporting requirements. The management focus will be on financial management and grant activities for both laboratory infrastructure and strategic information. The staff complement will include two additional financial assistants to assist in ensuring correct procedures, collating financial reports and reporting the required mechanisms.

Activity Narrative: SUMMARY:

Toga Integrated HIV Solutions (Toga) is a new PEPFAR partner, awarded funding in July 2007. The project aims to establish a network of HIV monitoring laboratories and associated services in resource-constrained antiretroviral treatment (ART) settings.

Toga will use FY 2008 funds to deploy three Togatainer laboratories. These laboratories are mobile, prefabricated structures, ideally situated near ART clinics. The index unit has been operating in Gugulethu, Cape Town since March 2004. Three units are being deployed with FY07 funding. Many lessons were learned, including the importance of having staff that can multi-task, and work with minimum supervision. Communication technology is important, particularly in rural areas, and Toga has redesigned software and equipment to allow for light data transfer. Toga has also developed special redundancy technology. Each Togatainer will serve a sub-network of referrals White Rabbit electronic requesting and reporting systems.

BACKGROUND:

In South Africa, regional centralized laboratories serve the public sector, but these have limited capacity for specialized testing (e.g. CD4 and viral load). The private sector is served by centralized laboratories in Johannesburg, Cape Town and Pretoria with Stat-labs proximal to high patient, predominantly urban settings. The Togatainer addresses the need for peripheral deployment of laboratory services, specifically HIV treatment monitoring and utilizing a unique set of robust assays.

The Togatainer concept is based on the MeTRo (Measure To Roll Out) principle as a means of rolling out treatment capacity. The core output of a laboratory is information in the form of patient results. The chronic disease nature of HIV as well as the efficiencies that are attainable when structuring information appropriately is central to Toga's contribution. Patient data and results are consolidated in the laboratory information system to allow for cumulative reporting. This information can be used to down-refer patients in a structured way, thus relieving pressure on scarce clinical capacity. The general of viral load tests on site empowers healthcare staff to make appropriate management decisions. On-site viral load tests facilitate the down-referral of patients to peripheral clinics, thus decreasing the load on central clinics. This fulfils an objective of the WHO down-referral strategy.

Sustainable strategies must be cost effective. Experience and modeling suggests that the cost of testing peripherally can be done at a rate that is at least equal to a long distance logistical service structure to a central facility. However, even a cost per unit comparison may not reflect the real programmatic costs. Statistical variance on lost specimens/results in a small remote program may appear to have insignificant impact on patient care, but as programs expand, the impact of such variance will result in increased demand on other programmatic resources (staff, drugs, logistics), and on healthcare systems. South Africa's testing capacity (public and private) is estimated at 250,000 to 350,000 patients on treatment, most of whom are catered for by central facilities. Adding capacity to central facilities is expensive, and invariably results in increased service failure during renovations. Togatainer's modular approach to capacitating ARV treatment clinics is sustainable and capable of reaching treatment demands of South Africa. Adequate laboratory support will protect current first-line regimens by minimizing unnecessary switching to more costly second-line regimens.

Local and provincial government support will be garnered prior to the implementation of each Togatainer. Toga will be responsible for the implementation of all Togatainers, though local contractors may be used to assist with infrastructure development. Sustainability is addressed by employing and training medical technologists from the communities. As medical technology is the chosen profession of many females these Togatainers are likely to enhance female careers. The provision of on-site and quality laboratory services will enhance the standard of care to for rural and peri-urban women and children.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Togatainers

Three Togatainers capable of performing the tests for HIV, CD4 and lymphocyte, syphilis, and HIV disease monitoring will be deployed. Deployment includes preparing the site and laboratory infrastructure, sourcing equipment, testing, calibration and implementation. The Togatainers are low maintenance environments, with a focus on preventative maintenance. A Togatainer supply system has been set up to ensure the timely replenishment of laboratory reagents and consumables.

Ongoing activities will include training and supervision, as well as structured internal and external quality assurance programs. The selection of suitable sites is ongoing and tentative at the time of this submission, as funding has only been awarded in July 2007.

Staff retention may be a challenge. Staff that work in remote rural areas are often the only person in the laboratory. In addition to the regular monitoring, the program will rotate Togatainer technologists to a Toga central laboratory for ongoing development and training. Telephonic contact will be made on a regular basis. Togatainer technologists will report weekly in writing to the Peripheral Laboratory Manager. Computer access from the central laboratory to the site allows monitoring of turn-around times, workload, output, and quality. The peripheral manager will visit sites each quarter to evaluate staff performance. Toga will award bursaries to three final-year medical technology students, offering them the opportunity to work in a training environment after completion of the academic component of their course. All Toga medical technologists will receive a five-week training at Toga's training laboratory in Johannesburg.

This training will focus on virology, clinical pathology and infectious diseases. One-on-one courses are conducted in the laboratory, with a strong focus on practical skills development. The course includes quality control, workflow management, laboratory information management, materials management, laboratory administration and reporting of key performance indicators, viral load assay and techniques, CD4 assay and techniques, chemistry testing, hematology testing and service management.

ACTIVITY 2: Laboratory Monitoring

Activity Narrative: Toga expects to conduct HIV monitoring tests for 2,000 PEPFAR- funded patients at peripheral settings, and 1,000 non-PEPFAR funded patients by the end of the first year. Additional funding will be solicited from other NGOs, private companies, and government organizations. These tests include viral load, CD4 count, full blood count, aspartate aminotransferase (AST), alanine aminotransferase (ALT), and urea & electrolytes (U&E). Provision has been made for hand-held lactate testing devices.

Toga's White Rabbit electronic requesting and reporting system functions seamlessly with laboratory operations and is not dependant on uninterrupted internet connectivity. A key advantage of this system is the reporting of patient measurement in a historically consolidated way. This software caters to specific treatment needs based on individual treatment program parameters. Secure access is a controlled feature of the software. The White Rabbit software is a significant improvement on reporting efficiency as it is updated on a near-real time basis from the laboratory information management system. Data is stored on two independent SQL servers. Data is not accessible via the internet, thus reducing the risk of fraud and data corruption. The White Rabbit software is continually enhanced to improve and broaden functionality. The software ensures unique patient identification and data integrity, which results in improved in patient management and clinic efficiency and reduced costs.

Data communication technology (GPRS data cards or wireless local area networks) will be used where possible. The White Rabbit system includes a sample tracking facility. Each specimen container is robotically pre-labelled with a unique bar code that is electronically associated with each sample collection event and unique patient identifier. Toga provides on-site training.

South African reporting requires unalterable results. Consequently, results are electronically published as pathology reports, though data is electronically consolidated to enhance the usability of information. Reports may be electronically requested as event, graphical or tabular reports. Critical values will be available on the system as they become reported, supported by telephonic notification to clinical staff. Results are electronically reported once a pathologist has signed them off.

Toga will continue to work with the South African government to address long-term sustainability. Toga will engage with other donors, specifically in the private sector, to support Togatainers. Toga will remain involved in the training and technical support of laboratories, as well as the provision of support systems. Toga will collaborate with other NGOs and donors to ensure the sustainability of peripheralized laboratories. The organization currently provides laboratory and programmatic support to private sector organizations (Anglo Platinum, Anglo Gold, Anglo Coal, Gold Fields) and PEPFAR-funded NGOs (Southern African Catholic Bishops' Conference, Right to Care, Ndlovu Medical Centre and PHRU).

HVSI - Strategic Information

Program Area:	Strategic Information
Budget Code:	HVSI
Program Area Code:	13

Total Planned Funding for Program Area: $18,678,396

Estimated PEPFAR contribution in dollars	$0
Estimated local PPP contribution in dollars	$0

Program Area Context:

To date, the South Africa Strategic Information (SASI) team has comprised one monitoring and evaluation (M&E) Advisor each from CDC and USAID who both serve as the SI liaisons. Contractors, such as MEASURE Evaluation, support this core team as needed. An additional M&E Advisor is seconded to the National Department of Health (NDOH). Due to the increasing size of the PEPFAR portfolio, this team is expanding to include M&E assistants both at CDC and USAID, a health management information specialist (HMIS) based at CDC but whose scope of work is designed to support all USG agencies and partners, and a surveillance officer. The follow-on partner to the MEASURE Evaluation project should be awarded by December 2007. This new partner has an overall focus on M&E capacity development and on information management, of which a key dimension involves geographical information systems and related applications. The scope also includes training and providing technical assistance (TA) for PEPFAR partners and assisting with the development of training and data quality strategies.

The SASI team leads the planning for SI activities, all of which receive final inter-agency agreement. The SI Technical Working Group (TWG) consists of members from all USG agencies, and representation from other program areas is substantial. The SI TWG forms the basis for SI planning, and is the vehicle by which an inter-agency SI strategy is routinely monitored and updated.

The team has developed a web-based Data Warehouse for PEPFAR partners to submit their plans and reports. All USG partners use the same templates and reporting guidelines. Results for OGAC reports are jointly drafted by all USG agencies. Plans to expand the Data Warehouse to include South African national survey and surveillance results and mapping capability are ongoing.

Target Setting
The SASI team takes the lead in formulating and reviewing country targets. Details of how the targets are derived are provided in an appendix. Direct targets are a sum of partner targets. The USG Activity Manager and SI Advisor review each partner's targets to ensure that they are reasonable and achievable. South Africa's targets are based on the fiscal year to allow for monitoring progress towards targets. All partners report treatment activities using a customized version of the Track 1 treatment form on a quarterly basis by site; all other partners report on a semi-annual and annual basis.

The total targets for prevention of mother-to-child transmission and TB/HIV are based on national estimates to which PEPFAR contributes. The SASI team has not yet been able to report on an estimate of OVC served as a result of indirect support at the national level even though significant support is provided. Efforts will be made to attain an estimate in future reporting since the national OVC Management Information System (MIS) has not yet been implemented. The antiretroviral treatment target is based on the PEPFAR target for South Africa, which will likely be exceeded by September 2009. The counseling and testing (CT) target is estimated from the national trend of CT uptake, and this should increase with the plan for scale-up of provider-initiated CT. The palliative care target is difficult to measure since it is not collected at the national level as defined by OGAC. South Africa is exploring the possibility of estimating the national number of people reached with care by the lab data for CD4 counts.

Results Reporting
A local contractor routinely conducts Data Quality Assessment (DQA) to build partner capacity in improving their M&E systems and to ensure that the results reported to OGAC are valid and reliable. This has resulted in marked improvements both at partner and USG levels. The USG PEPFAR Task Force also plans to contract with an external organization to conduct more site visits to measure partner performance and to assess data quality. With the significant increase in the number of prime and sub-partners in South Africa, it is a challenge to conduct site visits and effectively monitor partner performance.

M&E is a priority in the HIV&AIDS and STI Strategic Plan for South Africa, 2006-2011 (NSP) and the USG will continue to respond to these needs by providing both direct funding and targeted TA to various South African Government (SAG) departments. In collaboration with the NDOH and other key stakeholders, the USG has contributed to the development of the NSP's M&E framework. In the future, the USG will aim to increase collaboration and harmonization of M&E systems, even though the latter is a challenge. There is a District Health Information System (DHIS) but not all provinces use it and the quality of the HIV and AIDS data that are collected is not always reliable. Data are included in the UNGASS report but timeliness and reliability of data reporting remain a concern.

Several SAG departments work independently of the NDOH on HIV and AIDS issues. While the USG embraces the goal of supporting one M&E system, it is often necessary to assist in building M&E systems within the different departments, taking care to assure integration whenever possible. In collaboration with other donors, the USG has supported efforts for the development of a national orphans and vulnerable children (OVC) management information system (MIS), as well as TA for an OVC M&E framework. The rollout of a national OVC M&E system has not yet been implemented; PEPFAR will continue to support this effort in FY 2008.

The Global Fund provides targeted support in South Africa; in the recent round, this support is primarily in HIV prevention. PEPFAR and Global Fund results have a minimum overlap.

The USG supports a comprehensive and systematic approach to partner capacity building in M&E. These activities include: (1) M&E workshops that assist partners in developing M&E plans; (2) the development of a data warehouse to assist USG and partners with the collection, reporting and analysis of data; (3) the DQA initiative; and (4) the establishment of an fellowship program to place recent master's degree South African graduates with partners in need of more intensive M&E TA. Significant progress has been made toward this goal - over 100 partners (350 people) attended a five-day M&E training and 42 partners participated in a DQA, both resulting in increased capacity to report and use program data effectively. In addition, the PEPFAR fellowship program will be expanded to other PEPFAR countries.

With increasing PEPFAR funding and number of partners in South Africa, it has become challenging to allocate time and resources to evaluate partner performance and use data effectively for program planning. The USG (with input from SAG counterparts) conducted an extensive partner evaluation in 2006. A follow-up partner evaluation is planned for 2008. This process aims to critically review partners' performance, their results, and quality of services and then provide feedback to partners to improve their programs. This will also feed into the budget decisions for next year's COP.

South Africa has set aside $4,000,000 for Public Health Evaluations (PHEs) to be determined at a later stage. In the next two months, the SASI team will lead an effort to review the current PHE portfolio, opportunities to engage in multi-country studies, and information gaps in key program areas. The funds will be reprogrammed reflecting a strategic plan for PHEs.

Surveillance and Surveys
Seroprevalence and behavioral surveillance activities in the general population are primarily supported through the National Institute for Communicable Diseases and the Human Sciences Research Council (HSRC) and surveillance for most-at-risk populations through the Medical Research Council and HSRC. These organizations and the South African government drive the process, while PEPFAR provides partial support for these surveys. Johns Hopkins University, in collaboration with several other USG partners, routinely implements a national communication survey to monitor trends in behavior in relation to media exposure. Surveys and surveillance activities are described in partner COPs and in the Planned Data Collection section. The SASI team has been instrumental in assisting with the design and implementation of several studies and surveillance activities.

The USG continues to provide TA for SI, including direct personnel support at the national and provincial health departments, development of surveillance systems and training to specific programmatic units within the NDOH. All PEPFAR partners are required to report their activities to the SAG. However, since the DHIS does not capture non-public sector activities, the SAG has not developed a standardized system by which partners can report their activities. The SASI team plans to work towards improving the inclusion of PEPFAR data in SAG M&E systems.

Management Information Systems (MIS)
The USG Task Force will place more emphasis on an MIS strategy in FY 2008. PEPFAR funds support information systems at the partner level, but to date the USG has not been prescriptive about the design and implementation of those systems. Many treatment partners have developed their own systems in the absence of a national or provincial MIS. A key priority is to improve the harmonization of such systems to ensure that they communicate with other systems at the facility level and that they efficiently feed into the DHIS. An MIS specialist will soon be hired and will lead an assessment of USG-supported MIS to devise an investment strategy in MIS and work towards aligning systems within PEPFAR-supported programs. The MIS specialist will also work closely with the South African government in this effort.

With the assistance of MEASURE Evaluation, PEPFAR partners have formed a task team to develop a standard MIS for OVC. These efforts will continue in FY 2008.

Program Area Downstream Targets:

13.1 Number of local organizations provided with technical assistance for strategic information activities	240
13.2 Number of individuals trained in strategic information (includes M&E, surveillance, and/or HMIS)	2334

Planned Funds: $50,000

Activity System ID: 13829

Activity Narrative: SUMMARY:

The Monitoring and Evaluation (M&E) plan for the South African National Defence Force (SANDF) Masibambisane program addresses all components necessary for a comprehensive M&E system for an HIV and AIDS program. One major component is the health management information system (HMIS), which was expanded during FY 2007 to encompass HIV and AIDS specific data. During FY 2008 the focus will be on enhancing the system by developing data collection tools, updating the software package to enable the efficient tracking of HIV and AIDS data, and training in M&E.

BACKGROUND:

The development of a more comprehensive M&E system for the Masibambisane program has been supported by PEPFAR since its inception in FY 2004. This plan has continued to develop over the past few years as the HIV and AIDS program continues to expand. The HMIS used by SANDF is quite robust; however, it has taken significant work to incorporate all relevant HIV and AIDS data that are required by PEPFAR, the National Department of Health and the SANDF program managers.

ACTIVITIES AND EXPECTED RESULTS:

During FY 2007 a total of 25 HIV and AIDS regional program managers were trained on M&E in order to strengthen reporting at the regional level. During FY 2008 this base of training will be enhanced in terms of quality as SANDF's Strategic Information (SI) requirements continue to expand.

Activity 1: Review development of data management system

In FY 2008 the SANDF SI team will review the ongoing development of the HIV program HMIS with the larger SANDF HMIS. Systems enhancements will be undertaken as per this review.

Activity 2: M&E and SI training

The focus of this activity is the continued SI training for SANDF staff and ensuring that all have internet and information technology access to improve reporting capability. It is important to note that internet and information technology access is extremely important in light of PEPFAR/South Africa's dependence upon a web-based reporting system for the quarterly, semi-annual, and annual reporting of results. To date SANDF has had difficulty meeting USG reporting deadlines due to connectivity constraints. Moreover, data quality is potentially compromised when results that should be reported electronically must first be manually transposed and then reported in an altered format. This SI activity will also include training of regional and unit level data collectors in data quality management and reporting. This is important because currently the extent to which SANDF data management systems are capable of aligning with the reporting requirements of PEPFAR is not consistent across data collection points, thus affecting reliability of reported results. An NGO (outside contractor) has conducted an initial consultation and is being considered as the contractor to implement a systems-wide data quality evaluation with associated training and mentoring.

Activity 3: Seroprevalence study

The partner will conduct an organizational seroprevalence study to determine an epidemiological baseline for impact measurement of the SANDF's HIV and AIDS program. The key step toward enabling a useful evaluation to occur during later years is the establishment of a robust baseline of seroprevalence within SA DOD populations. This baseline will be the main activity in this area during FY 2008.

Activity 4: Data Quality and Managerial Audits of M&E Systems

During FY 2008 a series of internal audits and site visits will be conducted in order to verify data, services, and facilities. These activities will enable the SANDF to report effectively the contribution of the Masibambisane program elements and targets that contribute to the overall PEPFAR objectives for prevention, care and treatment. Data obtained through the M&E plan as developed with the support of PEPFAR funding is utilized to determine successful program components and to identify program gaps to be addressed. The establishment of the data management system developed in FY 2006 is in the final testing stage, and gaps identified are being addressed.

Activity Narrative: SUMMARY:

The Child Healthcare Problem Identification Programme (ChIP) is a University of Pretoria prevention of mother-to-child transmission (PMTCT) monitoring project aimed at improving the quality of PMTCT service delivery. Using PEPFAR funds in FY 2005, FY 2006 and FY 2007, the foundations for ChIP were established. FY 2008 funding will be used to continue monitoring the impact of:
(1) properly managing HIV-infected pregnant women and their children;
(2) the intervention on perinatal and infant mortality; and
(3) cotrimoxazole prophylaxis, infant feeding choice and antiretroviral therapy on HIV-infected children.

The premise of ChIP is that through ongoing monitoring and analysis of data on child deaths, key indicators can be identified, which will provide health-care providers and policy makers with the necessary empirical basis from which to advocate for the design and implementation of improved quality of care strategies. In the long term, this approach should make a significant contribution toward reduced childhood mortality from HIV and other causes. The major emphasis of the work falls in Health Management Information Systems, with a lesser emphasis on monitoring, evaluation and reporting, as well as other strategic information (SI) activities. Target populations for the activity include infants and children, HIV-infected pregnant women, HIV -infected infants and children, policy makers, and public and private health-care workers.

BACKGROUND:

HIV infection has a major impact on fetal, infant and child mortality. The impact on fetuses is mostly indirect, resulting in pre-term delivery, growth restriction or infection; whereas, children younger than age 5 tend to die from the direct results of the HIV infection. The Perinatal Problem Identification Programme (PPIP) currently monitors perinatal mortality in South Africa. Prior to FY 2005, there was no routine collection of information on the causes of death in children, nor was there a methodology to determine the impact of PMTCT. With FY 2005 and FY 2006 PEPFAR funding, and in collaboration with the National Department of Health (NDOH), the PPIP system was updated to include fields for antiretroviral therapy (ART) during pregnancy and neonatal nevirapine administration. These updates will allow the NDOH to determine the uptake of antiretroviral treatment (ART) in children and the number of children dying from HIV-related infections, as well as provide an indirect proxy for the impact of PMTCT.

Health-care workers were trained to use the PPIP and ChIP monitoring systems. Analysis of the 2005 data from 26 sites indicated that only 65% of children who died had an HIV test and of these, 82% were exposed or infected. In addition, of the children who died, 49% did not receive appropriate cotrimoxazole prophylaxis, and only 15% of those children qualifying for ART received it. Although the purpose of ChIP is to monitor the causes of death in children, particularly as they relate to HIV, it also enables hospitals to identify preventable causes of death and identify strategies to address them. Health professionals from these sites were trained to use ChIP, and to understand how the data obtained from the program can feedback into improving the quality of health care for children. Because of this quality improvement feedback mechanism, ChIP has become a valuable tool that affects morbidity and mortality, and service delivery as a whole.

ACTIVITIES AND EXPECTED RESULTS:

Five activities will be carried out in this program area.

ACTIVITY 1: The Rollout and Training on ChIP

FY 2008 funding will be used to continue promoting, supporting, and expanding ChIP implementation across South Africa. This will include a national data sharing workshop and the development of training packages for 22 sites (12 established and 10 in-training sites). A minimum of two health professionals from each site will be trained, better ensuring sustainability. Sites will be monitored and evaluated annually to assess quality and sustainability, as well as to ensure that ChIP is used as a quality improvement mechanism. The project has established linkages with the national and provincial departments of health, and will continue to liaise with the NDOH.

ACTIVITY 2: Saving Children Report

With FY 2005, FY 2006 and FY 2007 funding, ChIP used data from the existing sites to develop three annual versions of the Saving Children Report. In FY 2008, data from established sites will be used to compile the fourth annual Saving Children Report. The target audience for the report is healthcare workers and policy makers. It is anticipated that the fourth report will be used to highlight gaps and challenges within child health service delivery, giving special attention to HIV, as well as to advocate for the implementation of recommendations aimed at improving quality of care for HIV-exposed and -infected infants and children. The reports will be disseminated at national and provincial level to ensure continued communication with the NDOH and to ensure further expansion of the project in FY 2009.

ACTIVITY 3: Strengthening Linkages

This activity focuses on strengthening the linkages between ChIP and PPIP sites to provide information on improving the quality of PMTCT service delivery. Data from the updated PPIP (which focuses on PMTCT compliance) will be analyzed and the impact of PMTCT at these sites will be assessed using ChIP data. Improved PMTCT service delivery will be achieved through feedback of this information to the department of health at facility, provincial and national levels.

FY 2008 activities will be expanded to include:

ACTIVITY 4: Setting up a ChIP Technical Task Team

During FY 2007 a ChIP Technical Task Team was established. The team is comprised of the ChIP Exco, a representative from each province, as well as one or two specialist members. The roles of the Task Teams are to provide provincial leadership (identify, train and support local sites, liaise with the Maternal, Child and Women's Health (MCWH) Unit and strengthen links with PPIP); to assist with planning of the national and provincial workshops; to contribute to the Saving Children report; and to provide general assistance to

Activity Narrative: the ChIP Exco.

ACTIVITY 5: Provincial Workshops to be Held During FY 2008

FY 2008 funding will be used to conduct provincial ChIP workshops in each of the nine provinces. Data will be presented and further training offered to strengthen sites and expand ChIP. These workshops will also provide healthcare workers with the opportunity to share quality improvement projects that were implemented as a result of the site specific and provincial data that can be abstracted from ChIP.

ChIP contributes to the PEPFAR goals by strengthening PMTCT information and monitoring systems, and ensuring a quality of care feedback mechanism aimed at improving quality of care for HIV-infected children. In addition, this project contributes to PEPFAR's 2-7-10 objectives by early identification of children born to HIV-infected mothers and linking them to appropriate treatment and care programs.

USG Agency: HHS/Centers for Disease Control & Prevention

Funding Source: GHCS (State)

Program Area: Strategic Information

Budget Code: HVSI

Program Area Code: 13

Activity ID: 3343.08

Planned Funds: $2,348,000

Activity System ID: 13972

Activity Narrative: SUMMARY:

The Human Sciences Research Council (HSRC) will use PEPFAR funding to support the South African national population-based HIV prevalence and behavioral risk survey in 2008. Data will be used to enhance national HIV and AIDS program indicators and to compare South Africa's HIV epidemic to the global pandemic. FY 2008 COP activities are expanded to include surveillance activities among most-at-risk populations (MARPs) including men who have sex with men (MSM), discordant couples, and refugees, as well as an evaluation of the impact of the national antiretroviral treatment (ART) rollout.

BACKGROUND:
The following section provides background for the listed activities.

1) The HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011 (NSP) assigns the HSRC the task of conducting national HIV prevalence and behavioral surveys every two to five years. The results of the previous two surveys have succeeded in drawing attention to gender inequalities in the HIV epidemic in South Africa. Preparatory activities will take place in 2007 and the fieldwork will begin in early 2008. The Nelson Mandela Foundation, the Nelson Mandela Children's Fund, the Swiss Agency for Development and Cooperation, and the HSRC funded the surveys conducted in 2002 and 2005. The HSRC received support from PEPFAR and the National Institute for Communicable Diseases to conduct HIV incidence testing on dried blood spot samples (using the BED assay) in the 2005 survey. HIV incidence could be estimated for the first time in a national population-based sample of the general population. HSRC plans to seek co-funders for the 2008 survey.

HSRC is considering a couples sub-study as part of the 2008 national household survey to obtain an estimate of the prevalence, patterns, and factors associated with discordant HIV serostatus among people in established sexual partnerships. This sub-study is contingent on mobilizing adequate funding and human resources, and devising a sampling strategy that does not compromise the main survey.

2) During the 1980s, the South African HIV epidemic was largely confined to MSM and people who had received contaminated blood products. The epidemic became generalized in the early 1990s, and attention shifted away from MSM. HIV prevention programs generally do not include messages or interventions targeting MSM. The gap in knowledge about HIV in MSM and services for this group is a priority area in the NSP.

3) Information on the number and characteristics of serodiscordant couples in South Africa, and the strategies they use to prevent HIV transmission to the uninfected partner, is lacking. As people in long-term partnerships tend to have unprotected sex, and the majority of people living with HIV (PLHIV) in South Africa are unaware of their status, it is probable that a substantial portion of new HIV infections are acquired from primary (as opposed to casual) sexual partners. The uninfected partners constitute an important but neglected MARP, and current HIV prevention programs do not address the needs of discordant couples.

4) Refugees face many challenges in accessing HIV prevention treatment and care services. Specific challenges include poverty, migration, a lack of social support, language barriers, xenophobia and discrimination. Political and economic upheaval in several African countries has led to dramatic increase in the number of refugees (both legal and illegal) in recent years. Although accurate statistics are unavailable, it is believed that South Africa has one of the largest refugee populations.

5) South Africa currently has the largest number of people receiving ART, as well as the largest number of people needing ART (but not currently receiving treatment). Since the national ART rollout in 2004, the number of people receiving ART has expanded rapidly, but falls short of the goal, in part because resource constraints have not been able to keep up with demand. Task shifting of treatment provision to less specialized health workers (nurses instead of doctors), and making use of primary health-care centers rather than hospitals have been used to try to meet the demand. One of the two key goals of the NSP is to ensure that 80% of those needing ART have access to ART by 2011. To date a number of evaluations of local programs and programs of specific providers (e.g. workplace programs provided by the Anglo group of companies) have been conducted, but there has been no broad-based national evaluation of the national ART program.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: 2008 HIV Prevalence Survey

HSRC will use PEPFAR funds to conduct the 2008 national population-based HIV prevalence survey in South Africa. The survey will include children, youth, and adults of all ages. The survey will include children under the age of two for the first time (UNICEF will partially fund this). A large portion of funding will be devoted to HIV antibody testing and other related tests at an accredited national laboratory. Funds will also be used to support the analysis and the publication of a report, scheduled for release on World AIDS Day. Results will be analyzed by gender, thus providing information for increasing gender equity in HIV and AIDS programs. In addition, HSRC will conduct a detailed risk assessment on a sample of youth, which will provide information on male norms and behaviors. Following the publication of the report, additional secondary analyses will be conducted including an assessment of trends using data from the 2002, 2005 and 2008 surveys. The 2008 survey will be the third survey to conduct population-based HIV surveillance combined with behavioral surveillance on a national level and this will provide new knowledge and will provide a benchmark for the M&E objectives of the NSP. In addition, qualitative methods (e.g. focus group discussions) may be used to collect in-depth information on select topics to provide a better understanding of the findings of the national household survey. Lastly, as part of the survey, HSV-2 behavioral questions and biologic markers will be obtained for seroprevalence, behavioral and demographic data on HSV-2 and HSV-2/HIV co-infection, allowing for the monitoring of trends, and for the development of the evidence base for improving HIV prevention programs and local and national guidelines and policies.

ACTIVITY 2: Surveillance of HIV and Risk Behavior Among MSM

HSRC will conduct an assessment of the prevalence of HIV and risk behavior among MSM. This activity will complement the surveillance information on the general population, and will provide strategic information

Activity Narrative: about MSM as identified in the NSP. This evaluation will be conducted in nine or ten large South African cities. MSM aged 18 years and older will be recruited by means of respondent-driven sampling (RDS). RDS is the best method of recruiting a representative (generalizable) sample of MSM because no sampling frame exists, and other methods are more prone to sampling bias. As RDS is only suitable for use in urban areas and no satisfactory method is known for recruiting MSM from rural areas, rural MSM will not be included. Participants will be tested anonymously for HIV, provided with voluntary counseling and testing and asked questions about sexual and other risk behavior using a structured questionnaire, based on the one used to collect demographic and behavioral surveillance information on youth and adults in the national household survey. Additional questions, specific to MSM will be added. Semi-structured interviews will be conducted with MSM recruited through gay organizations, including HIV-infected MSM, and key informants in order to assess the HIV prevention, treatment, care and support needs of MSM in South Africa. The results of this activity will help meet the objectives of the NSP and will be used to develop recommendations for addressing current program deficiencies and barriers to accessing services among MSM.

ACTIVITY 3: Surveillance of Discordant Couples and Assessment of HIV Prevention Strategies and Support Needs

This project aims to estimate the number of PLHIV whose primary sexual partner is HIV-negative, and to ascertain the demographic and social characteristics of discordant couples. HSRC will assess barriers and facilitators to disclosure of HIV-serostatus to one's primary partner, and strategies that discordant couples are using to prevent HIV transmission to the uninfected partner. A combination of qualitative and quantitative methods will be used, and interviews will be conducted with couples, as well as individual interviews with both HIV-infected and uninfected people. This activity will address an important gap in strategic information, as outlined above. The results will be used to raise awareness of discordant couples among the general population (including people who are unaware that they are in discordant partnerships) and among policymakers, and will inform the development of prevention programs for discordant couples.

ACTIVITY 4: Assessment of HIV and Risk Behavior Among Refugees

A small exploratory study will assess the prevalence of HIV and risk behavior among a sample of registered refugees. Refugees will be recruited using information from the UNHCR database. Methods of measuring HIV and risk behavior will be similar to those used in the national household survey. This activity may be expanded to include a larger number of refugees and illegal immigrants in subsequent years.

ACTIVITY 5: Assessment of the Impact of the National ART Roll-out

An evaluation will be conducted through a retrospective cohort study of a selection of patients from government-accredited ART sites in all provinces. Information will be collected through individual interviews with patients receiving ART and patientswho havediscontinued ART, and throughreviews of medicalrecords (includingthe records of personswho havedied).

Activity Narrative: SUMMARY:

The Foundation for Professional Development (FPD) program supports the expansion of access to comprehensive HIV and AIDS care by focusing on human capacity development (HCD). The project aims to develop human capacity in strategic information (SI) at AIDS service organizations by having master's degree fellows work for a six-month period on the monitoring and evaluation (M&E) systems of South African PEPFAR partners. The emphasis areas for this activity are strategic information and local organization capacity building. In FY 2008, this fellowship program has been offered to other PEPFAR countries whereby they can provide funds to support fellows who are recent graduates of South African universities but must return to their country of origin after they complete their coursework. This practicum experience with a South African PEPFAR partner will provide them with skills for future work in M&E when they return to their countries. FPD has also offered to teach other PEPFAR countries how to start a similar program in their country. This new activity aims to improve south-to-south capacity development.

BACKGROUND:

FPD is a South African private institution of higher education working exclusively in the health sector in Southern Africa. With PEPFAR funding, FPD supported treatment to thousands of people living with HIV (PLHIV) and training for thousands of healthcare providers and managers. This activity, started in FY 2006, supports the more formalized approach to human capacity development (HCD) needs in South Africa. It will be scaled up through the FPD given their ability to expand to all universities. FPD, as a nation-wide training institution, is well placed for implementation of this activity as training and other HCD activities are their core business and FPD has well-developed relationships with other academic institutions in the country. These relationships will create a conduit to recruit master's degree fellows from a variety of these institutions. FPD also provides training to various PEPFAR partners and other health service institutions. FPD will facilitate the placement of fellows with PEPFAR partners who need to strengthen their M&E capacity. With FY 2008 funding, FPD will support the expansion of access to comprehensive HIV and AIDS care by focusing on HCD. In addition to training and mentoring, this activity will close the gaps in capacity in a number of South African institutions implementing PEPFAR-funded activities. M&E expertise is lacking for many partners, who must develop systems and overall capacity to document progress toward implementation of the South African PEPFAR program. Emphasis will be placed on ensuring gender representation in the recruitment of fellows.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Human Capacity Development

The project is aimed at improving the skills of graduate students at masters degree level who have a specialization or interest in SI by partnering them with implementing PEPFAR partners or other related AIDS service organizations. The fellows who will provide M&E and SI assistance and support to these organizations will be recruited from South African universities that specialize in SI-related qualifications. Both the fellows and the organizations will be technically supported by FPD, university and USG M&E staff. In addition, an effort will be made to design projects that are of interest to the fellow, so both the organization and the fellow will benefit.

ACTIVITY 2: Local Organization Capacity Development

The project further supports the ability of such organizations to engage in SI activities by providing them with a fellow with specialized knowledge in SI related disciplines. The aim of the fellowship is not just to do reports for the organization, but also to provide technical assistance in the development and maintenance of M&E systems. It is required that the organization accepting the fellow has a full-time M&E Officer, so the systems built during the fellowship are sustainable. Funding will be utilized to appoint a dedicated project manager, pay stipends and transport costs for fellows and to allow FPD to coordinate with various universities and recipient organizations with regard to recruitment, placement and evaluation of the program. The sustainability component of this project revolves around the premise that some of the recipient organizations will recruit the fellows at the end of their placement period. It is also expected that fellows will have effected a substantial improvement in the strategic information capacity of the recipient organization during their placement and that this improvement will be maintained after their departure.

FPD will contribute to the PEPFAR 2-7-10 goals by developing the capacity of organizations to expand access to antiretroviral therapy services for adults and children, building capacity for monitoring ART service delivery.

Activity ID:	3031.08	**Planned Funds:**	$145,500
Activity System ID:	14040		

Activity Narrative: SUMMARY:

PEPFAR funds will be used by the Department of Correctional Services (DCS) to host a National HIV and AIDS Conference in Correctional Services. The activity will focus on reviewing the progress of implementing Comprehensive HIV and AIDS Programs for offenders and members, monitoring the implementation of policies and on enhancing management involvement to strengthen the commitment and interventions. The conference will be utilized to share best practices but also to evaluate the Department's goals and objectives in line with the HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011 (NSP). It is important that consultative discussions, through a conference, take place to ensure that new developments in the field of HIV and AIDS are addressed and included in the mainstreaming of HIV and AIDS programs and services at DCS. The major emphasis areas are monitoring, evaluation, and reporting, and the minor emphasis areas are other strategic information (SI) activities. The activity primarily targets DCS members, offenders, external stakeholders and other Southern African countries.

BACKGROUND:

The implementation of comprehensive HIV and AIDS programs and services has been prioritized by the DCS. To ensure that implementation is taking place at an operational level, it is imperative to involve management at all levels to discuss and outline future endeavors pertaining to HIV and AIDS programs in the regions. In FY 2005, funding was allocated to host a National Conference on HIV and AIDS in the DCS. However, due to various internal strategic challenges within the Department, it was proposed that the conference be postponed to a later date. Holding the conference during 2009 will add value towards the Department's objective to evaluate its progress with the implementation of HIV and AIDS programs and services for offenders and members.

Monitoring and evaluation are ongoing activities aimed at ascertaining levels of compliance to policies, procedures, and programs in correctional centers. The DCS has developed monitoring and evaluation tools for HIV and AIDS programs. These tools will be implemented at all levels to determine compliance to policies and procedures, the interpretation of these policies, as well as the status of the implementation of the Comprehensive HIV and AIDS programs. All management and center coordinators received training in 2005 for similar purposes and this was useful.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Hosting of a National Conference on HIV and AIDS in the Department of Correctional Services

The Department hopes to host a National Conference where best practices will be shared and the Comprehensive HIV and AIDS Program for members and offenders be reviewed in line with the objectives of the NSP. This conference will bring together internal and external stakeholders from around the country as well as from other Southern African countries.

ACTIVITY 2: Monitoring and Evaluation (M&E)

M&E will be conducted using observational visits at various levels within the DCS to monitor the progress and quality of program implementation. Regular progress reports will be submitted in terms of the South African Public Finance Management Act. These will be used to collect ongoing data which will be analyzed and fed back into the programs. Evaluation has been planned, but has not yet begun. These activities will begin once the departmental M&E framework is approved.

All activities are in support of the USG South Africa Five-Year Strategy and in line with the South African Government's policies, and contribute to PEPFAR's 2-7-10 goals by monitoring and providing data for evaluation purposes on the effective rollout of HIV programs within the DCS.

Table 3.3.13: Activities by Funding Mechansim

Mechanism ID: 257.08
Mechanism: N/A
Prime Partner: Medical Research Council of South Africa
USG Agency: HHS/Centers for Disease Control & Prevention
Funding Source: GHCS (State)
Program Area: Strategic Information
Budget Code: HVSI
Program Area Code: 13
Activity ID: 8044.08
Planned Funds: $1,050,000

Activity System ID: 14024

Activity Narrative: SUMMARY:

This Medical Research Council of South Africa's project focuses on improving the performance of HIV services in the public health sector. This will be achieved through a mixture of directly strengthening HIV prevention services through interventions at the clinic level such as improving prevention activities. It will also provide important new surveillance data on high-risk groups and increase the capacity of managers to use data for decision-making.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Strengthening Health Information Systems

With FY 2006 and FY 2007 funds the Medical Research Council (MRC), in collaboration with Western Cape Department of Health (WCDOH), have engaged with senior and district level managers to empower them to use data for decision making. Managers have assessed primary health care (including TB/HIV) information systems. Important changes in the way that data are collected and used have been made. Management teams now regularly analyze routine data to measure performance of programs. To date these activities have been conducted in select districts in the Western Cape province, but with FY 2008 funds this activity will expand to cover the entire province. The MRC will consolidate the lessons learnt in strengthening health information systems, and this will be used to support the expansion of a comprehensive TB/HIV program including implementing changes in responsibilities for data collection and analysis. The organization will produce a series of user-friendly guides and manuals to allow replication of the process of assessing and improving information and monitoring systems in other provinces. The MRC is currently in negotiation with the KwaZulu-Natal provincial government where a similar process of audit and quality improvement will be implemented. Technical support to other provinces in using the materials and tools will be provided on an ad hoc basis and as requested.

ACTIVITY 2: Respondent Driven Sampling (RDS) Surveys

With FY 2006 and FY 2007 funds, the MRC in collaboration with the WCDOH conducted two surveys using RDS to gather behavioral and epidemiological surveillance data. These surveys capture high-risk groups that have been missed by other surveillance methods. Specifically, these groups include men who have multiple younger female partners and women who have multiple older male sex partners. The information gathered from these surveys is used to guide the development of HIV prevention activities, especially those targeting male norms and behaviors. With FY 2008 funds, the MRC will provide training and technical support to allow the replication of RDS surveys in other parts of the country. Partner organizations that have the capacity to perform surveys in other provinces such as KwaZulu-Natal and Gauteng will be trained and supported to conduct RDS surveys and to perform the appropriate analysis. The MRC will also continue to conduct surveys in the Western Cape in particular to evaluate interventions with men and women who have multiple partners.

ACTIVITY 3: Implementation of Male Intervention the Western Cape

Following the findings of the RDS survey in 2006 that found very high levels of risky sexual behaviors among a large network of peri-urban men, the WCDOH requested the MRC to assist them in designing, managing and evaluating an intervention specifically targeting older men who have multiple younger female sexual partners. The intervention will be aimed at shifting the social norms around multiple, concurrent partners and increasing the availability and use of condoms. In the first year of the intervention the MRC will complete the design of the intervention, gain permission from the relevant authorities and stakeholders, recruit and train facilitators, and pilot the intervention. The intervention will based upon the peer opinion leader approach in peri-urban setting. The intervention will build upon the RDS methodology to recruit men who have characteristics of peer opinion and then work with them to model HIV safer attitudes and behaviors.

ACTIVITY 4: Evaluation of a Prevention with Positives Intervention

With FY 2007 funds the MRC in collaboration with WCDOH and Human Sciences Research Council has developed an intervention to reduce high-risk sexual behavior among people living with HIV (PLHIV) and in particular among those who are on antiretroviral treatment (ART). The intervention is based upon two interventions that have been previously used in the United States: Healthy Relationships, and Options for Health. The former intervention is based on small support groups of PLHIV and typically builds on existing support groups where they already exist while the latter is health-provider driven and builds upon existing opportunities created during one-on-one clinical consultations by PLHIV receiving care and treatment. The MRC will measure its effectiveness by measuring self-reported behavior changes and recording changes in incidence of sexually transmitted diseases. In the second year of the intervention the MRC will aim to reach all clinical settings that are providing ART in the Western Cape.

ACTIVITY 5: Strategic Information (SI) Activities Requested by the South African Government

The MRC will use a portion of the FY 2008 funds to conduct Strategic Information activities at the request of provincial or national Departments of Health. The MRC has a close working relationship with the South African Government and frequently receive requests for technical assistance in areas such as those described in Activities 1 and 2. These exact activities have not yet been determined but the MRC will work closely with the SAG as such opportunities for collaboration arise.

These activities described in this section are in line with the South African Government's priorities and those described in the PEPFAR South Africa Five-Year Strategy.

Budget Code: HVSI

Activity ID: 2987.08

Activity System ID: 13958

Program Area: Strategic Information

Program Area Code: 13

Planned Funds: $776,000

Activity Narrative: SUMMARY:

Johns Hopkins University/Center for Communication Programs (JHU/CCP) coordinates the work of 20 South African partners and provides technical assistance and capacity building in communication activities to prevent HIV, provide care and support, and increase treatment adherence and support. JHU/CCP also undertakes program evaluation that aims to ensure that all communication activities undertaken by JHU/CCP are responsive to emerging issues and the changing dynamics of the epidemic within the South African context. The National HIV and AIDS Communication Survey, carried out in early 2006, serves as a baseline for comparing overall PEPFAR and South African Government (SAG) communication goals and objectives with a follow-up survey planned for 2008.

BACKGROUND:

JHU/CCP led the undertaking of the National HIV and AIDS Communication Survey in 2006 in partnership with the National Department of Health (NDOH) through Khomanani, Soul City, Health and Development Africa (HDA) and the Centre for AIDS Research and Evaluation (CADRE). The key objectives of this survey were to develop an understanding of the overall HIV and AIDS communication environment; understand communication gaps to inform future communication interventions; and determine the reach and complementarities of national communication campaigns and their contribution to individual level responses. This survey found that 87% of all South Africans were reached with messages dedicated to HIV prevention and living with HIV and AIDS by means of television and radio programs.

In response to the identification of multiple concurrent partnerships as a risky behavior that fuels the epidemic, JHU/CCP undertook a small qualitative study that aimed to unpack the underlying reasons for multiple concurrent partnerships within a hyper-endemic scenario and the manner in which communication can be mobilized to bring about behavioral and social changes. JHU/CCP provides technical support to its partners to undertake programmatic evaluations that enable partners to align their activities to the needs of the communities so that it is responsive to behavioral risk factors and key drivers of the epidemic within communities. This ensures that programs are evidence based and continually respond to the changing nature of the epidemic.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Strategic Partner Evaluations

In line with the HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011 (NSP), all project activities should be evaluated so that they are responsive to the needs of the communities that they service. JHU/CCP works with all 20 partners to evaluate their programs in consultation with evaluation experts that at the same time provides these organizations with the necessary skills and capacity to undertake their own strategic information activities as part of their ongoing project design and implementation.

In particular JHU/CCP supports the Community Health Media Trust (CHMT) to undertake an evaluation of the impact of their Treatment Literacy and Prevention Practitioners (TLPPs) in providing care and support to people living with HIV within public health clinics and the extent to which this task shifting contributes towards improved care and support for patients living with HIV and non-HIV patients as well as investigate their impact on prevention behaviors. The findings of this study will be used to engage national and provincial health authorities on the manner in TLPPs can be used to task shift from health care workers and provide optimal support to people living with HIV.

DramAidE employs young people living with HIV to act as Health Promoters on the campuses of tertiary academic institutions. The study will examine the extent to which these Health Promoters have impacted on the health and wellbeing of students and on the overall HIV policy and program being undertaken in tertiary institutions. This study will be used to advocate with tertiary institutions for the integration of Health Promoters as an integral component of their response to HIV.

ACTIVITY 2: Dissemination Workshops

HU/CCP will undertake the second National HIV and AIDS Communication Survey in follow-up to the first survey in conducted in 2006. This survey will provide in-depth information about the communication environment in South Africa as well as estimates of the separate and joint impact of various communication interventions. The results of the study will be used to measure progress on program goals and to inform future strategic planning for communication activities. In FY 2008, the main focus will be on the dissemination of the findings through a series of workshops to more than 300 key policy and decision makers throughout the country. The purpose of these workshops is to build national and local consensus on the impact of communication interventions on HIV prevention, care and support, what has been achieved through communication interventions and which program areas interventions need to be strengthened. In addition, the findings from the 2008 survey will be compared to those from the 2006 survey to assess changes in norms and behavior and the impact of various communication interventions.

Findings from the survey and discussion and processing of the findings in the dissemination workshops are, taken together, effective ways to incorporate the role of most-at-risk populations and other populations that contribute to the variation in the HIV and AIDS epidemic in South Africa. This is specifically where the tick boxes in the tables on the following pages are relevant.

This activity will assist in making communication interventions across the different program areas more effective by providing key data for decision making. This will contribute to the overall global PEPFAR goal of averting 7 million new infections.

Activity 3: Capacity Building for Strategic Information

JHU/CCP partners will work with the University of KwaZulu-Natal, Centre for Cultural and Media Studies to build the capacity of young South Africans in designing, implementing and monitoring strategic communication interventions. This program capacitates students to undertake research that examines the impact of communication interventions in relation to international standards.

Activity Narrative: A media partner (partner to be determined) will work with South African media institutions including journalists and editors to build their capacity in understanding, analyzing and reporting on HIV and AIDS strategic information to improve media reporting on the state of the epidemic in South Africa.

Planned Funds: $1,800,000

Activity System ID: 13981

Activity Narrative: SUMMARY:

The South Africa PEPFAR program works with over 100 prime partners, who in turn work with over 300 sub-partners and 350 service delivery sites, to implement HIV and AIDS activities across South Africa. This immense level of effort poses a significant challenge to the USG in efficiently monitoring and evaluating programs (mainly because there is no single source from which to obtain PEPFAR data) and in building monitoring and evaluation (M&E) capacity among partners. Khulisa helps to address these challenges through a web-based data warehouse (DW) and through on-going independent Data Quality Assessments (DQA) of PEPFAR partners' data management systems. Both the DW and DQA activities prioritize M&E capacity building among PEPFAR/South Africa partners.

This project addresses the emphasis areas of Health Management Information Systems, monitoring, evaluation and reporting, as well as USG database and reporting systems. The main target populations are the USG and PEPFAR prime partners, sub-partners, and sites in all nine provinces.

BACKGROUND:

Khulisa Management Services is a South African-based consulting firm offering quality management and technical services to development projects throughout Africa. With PEPFAR funding, Khulisa has implemented both the DW and DQA activities since FY 2005. With FY 2006 funding, Khulisa conducted DQAs of 26 PEPFAR partners and provided data quality training for USG staff and partners. This exercise provided invaluable feedback on risks to data quality regarding reported PEPFAR data, and also sought to build M&E capacity and improve data management systems (DMS) among PEPFAR partners. These DQAs were more collaborative than traditional audits, allowing partners to receive advice on how to improve practices. The proposed DQAs will continue to build partners' understanding and capacity in M&E systems, as well as improve the overall quality of data they report.

Since October 2004, Khulisa has provided web-based data warehousing services to PEPFAR through a sub-grant through John Snow Inc. (JSI) funded through the MEASURE Evaluation project. The DW has transformed a paper-based COP planning and reporting system to a more efficient web-based system with data integrity. The DW has undergone continuous revisions to address the changing needs of PEPFAR. The proposed project activities will further support the DW and develop a sustainable and replicable system.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1 - Data Quality Assessments (DQAs)

The DQAs are designed as a three-phased approach, using standardized tools based on USAID and other internationally accepted standards. At each phase, the risks to data quality are identified prompting a dialogue between the assessor and the partner about how to improve systems, resolve problems, and resolve data quality risks. The findings of each phase, with associated recommendations, are reported in detail to both the USG and the partner. In addition, the USG receives a summary report for each phase. A plan for technical assistance is developed between the partner and the USG.

Phase 1: Phase 1 assessments are conducted with a new group of partners as identified by the USG Task Force. In this phase, the partner's Data Management System (DMS) and associated processes and procedures are examined through a self-evaluation, followed by a review of the DMS by the Khulisa assessor. The main objective is to prepare the partner for Phase 2 and familiarize them with the DQA process.

Phase 2: Phase 2 involves validation and verification of reported data. The assessor uses two selected indicators (from source) and tracks it through the partner's DMS to evaluate the reported data for validity, reliability, timeliness, precision and integrity. In the process of conducting Phase 2 the assessor derives scores for several dimensions of data quality; these scores are interpreted in the context of data quality risks. Any identified risks are reported to the partner and the USG with recommendations for corrective action. Partners with high risk scores are issued compliance notes indicating data management and quality practices that could be improved in specific ways. The compliance notes also provide recommendations for resolving practices that contribute to compromised data quality of reported results.

Phase 3: Phase 3 is the follow-up visit which is only done with those partners who received a compliance note based on a high risk score in Phase 2. The assessor re-examines the data quality issues found during Phase 2 and assesses whether the corrective action taken by the partners reduces the risks that were outlined. When the assessor and partner achieve consensus on the corrective action, the compliance note is considered closed. This final visit also serves as an additional opportunity for the partner to receive technical assistance from the assessor on data quality practices.

ACTIVITY 2: Data Warehouse (DW)

The DW project is an ambitious and unique activity, and has proven to be a useful tool for PEPFAR reporting and planning. During the last two years, Khulisa built a web-based DW that is password-protected, through which implementing partners can electronically submit both narrative and quantitative information on progress towards their expected results as well as their plan for the forthcoming fiscal year. The DW also allows the USG Task Force to verify submitted data, make adjustments for partner double counts, and to maintain an audit trail by tracking changes made to data.

Over the last three years, substantial progress has been made in developing a PEPFAR reporting system. Multiple tests were performed on the system, which brought about numerous adjustments to improve efficiency and effectiveness. Feedback has been positive so far and USG staff and partners have now become more "fluent" in using the system. Last year, in addition to the reporting side of the DW, a planning side has been added to electronically capture information for the COP, enabling the USG to better manage the large amount of COP data through version control. An online "track changes" function has been added this year to assist activity managers with their final COP edits.

Activity Narrative:

Currently, the DW captures progress reports (quarterly, annual and semi-annual) and COP data; provides tools for managing budgets and targets through online, editable grids; provides a tool for the removal of double counting; tracks data changes through audit trails; and extracts indicator data, sub-partner and site information.

In FY 2008, Khulisa will continue to maintain and host the DW, with a focus on expanding features for better use and analysis of program data at the partner level. Specifically, the project will:

-- Continue improving the currently active functions for even greater ease of use by partners and USG staff.

-- Further extend the extraction and reporting capacity for indicator data, sub-partner and site information, status information and trend data. The extensions will focus on online graphical representation of data including maps. Manually-produced maps are already a significant aspect of data use and their availability online, in real time will improve the usage of this data.

-- Further improve partner-level data usage and data quality through site-level data capture for partners (other than the treatment partners who currently do so). Site-level capture will be started for partners who request it, starting with Orphans and Vulnerable Children partners and likely followed by Counseling and Testing partners.

EXPECTED RESULTS:

These two activities will allow the USG Task Force to make better, data-driven programming and planning decisions at the macro level, as well as assist partners develop and utilize more effective M&E systems. The sustainable impact of the system will be the partner's ability to make better programming and planning decisions for their own programs based on accurate and reliable data.

This activity will assist the entire PEPFAR program achieve its goals through effective M&E of partner achievements in meeting South Africa's portion of the 2-7-10 goals.

Program Area: Strategic Information
Budget Code: HVSI
Program Area Code: 13
Activity ID: 2958.08
Planned Funds: $3,835,438
Activity System ID: 14076

Activity Narrative: SUMMARY:

The National Institute for Communicable Diseases (NICD) will use PEPFAR funds to (1) enhance existing national and provincial surveillance by extending sentinel surveillance of opportunistic bacterial and fungal pathogens in HIV-infected individuals; (2) conduct microbiological, etiological and antimicrobial resistance surveillance for sexually transmitted infections (STIs) in five population groups in Gauteng; (3) develop a program to assist national efforts in communicable disease surveillance by providing appropriate training for epidemiologists and laboratory workers; (4) collect trend data for HIV incidence in the evaluation of the BED assay and the validation of the assay in general populations; and (5) conduct HIV-1 drug resistance testing in drug-naive and drug-treated persons.

BACKGROUND:

(1) AIDS-related opportunistic infection (OI) surveillance was initiated with CDC funding by establishing laboratory-based surveillance for cryptococcosis in Gauteng province in 2002 and enhancing surveillance for bacterial OI in 2003. FY 2006 funds were used to expand enhanced surveillance for bacterial OI and cryptococcosis to all nine provinces and to introduce laboratory-based surveillance for pneumocystis carinii pneumonia (PCP). This system will continue to document the effect that the introduction of antiretroviral treatment (ART) has on the incidence of opportunistic diseases.

(2) Sexually transmitted infections (STIs) remain a major co-factor in acquiring and transmitting HIV infection. An ongoing surveillance program for STIs is essential to provide appropriate management information at all levels of the health service. These data are critical for monitoring the effectiveness of syndromic management algorithms and for measuring the impact of STI interventions on HIV prevention. However, syndromic management of STIs does not allow for surveillance of either disease etiology or of antimicrobial resistance. Rising levels of antimicrobial resistance in gonococci and the high prevalence of herpes as a cause of genital ulceration are cause for concern and may accelerate HIV transmission. Microbiological surveillance activities will focus on STI microbiological surveillance in Gauteng. Data from these projects will inform national and local HIV and STI policy development.

(3) There is an increasing need for public health professionals to receive training in integrated public health practice. The South African Field Epidemiology and Laboratory Training Program (SAFELTP), modeled on CDC's Epidemic Intelligence Service, is a training and service program intended to build capacity in applied epidemiology and public health laboratory practice.

(4) The National Department of Health (NDOH) has set a 50% reduction in new infections by 2011. Incidence testing is critical for targeted planning and measuring the effect of HIV prevention programs. HIV incidence measures are required to understand the dynamics of the epidemic and to make decisions about interventions to prevent infections.

(5) With expanded program to provide treatment there is the concomitant risk of increased circulation and transmission of drug resistant strains of HIV. Given the limited drug regimens it is important to perform surveillance to inform on decisions of drug regimen changes at both a local and regional level.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: OI Surveillance (GERMS-SA)

Enhanced OI surveillance will be continued by collecting clinical case data at sentinel hospitals, capturing and analyzing clinical data centrally, and characterizing pathogens with regard to susceptibility, serotypes/groups, and subspecies. This activity will also focus on training, site visits for feedback to clinical and laboratory staff, maintaining the national laboratory surveillance network, and conducting annual meetings for collaborators to discuss results, surveillance objectives, and the inclusion of new diseases/syndromes as national priorities change.

ACTIVITY 2: STI Microbiological Surveillance

STI surveillance will take place among five groups including township youth, HIV-infected symptomatic patients, pregnant women living with HIV, STI patients attending private health providers and STI patients attending public health-care facilities. Youth and STI clinic attendees will be encouraged to test for HIV using VCT delivered at the same time as STI testing. STIs are strongly linked to HIV transmission and effective STI management reduces HIV transmission. NICD will implement the project in collaboration with local health departments (STI medicines), Mothusimpilo, a youth NGO, treatment and antenatal clinics for people living with HIV, primary healthcare and private practitioner clinics in Johannesburg and Carletonville. STI screening results will be used to determine prevalence of STIs in each population, to inform STI syndromic management guidelines through provision of information on syndrome etiology and resistance of gonorrhea to current first-line antimicrobial therapy. Thirty healthcare workers will be trained on the importance of STI management to prevent HIV transmission.

ACTIVITY 3: SAFELTP

The NICD will continue to work with the NDOH, the University of Pretoria and the CDC to run the SAFELTP in South Africa. SAFELTP activities include (a) identifying skills and performance gaps; (b) creating an action plan for faculty and curriculum development; and (c) training in epidemiology, laboratory, and public health practice. In FY 2008 the SAFELTP will undertake the following training activities: (a) The 2007 SAFELTP cohort (10 students) will complete their first year of applied field epidemiology training in 2007 and continue with their second year in 2008. NICD will enroll another 10 - 12 students for their first year as SAFELTP residents in 2008. This is a two-year Masters' of Public Health (MPH) accredited course run in conjunction with the NDOH, the National Health Laboratory Service (NHLS), NICD and the University of Pretoria's School of Health Systems and Public Health. At the end of the two years the students will have produced a portfolio of epidemiological projects including two or more outbreak investigation reports, an evaluation of a surveillance system, an analysis of an exciting data set and a research report. Field placements of the residents will be in the provincial Departments of Health and the NHLS. The University will award them an MPH on satisfactory completion of the course. One hundred and fifty laboratory

Activity Narrative: personnel were trained in a one-day quality assurance (QA) course offered in peripheral venues to promote quality of hematology and chemistry testing in support of the antiretroviral program. The NICD will monitor the progress and implementation based on the course work and problem-solving exercises in conjunction with the NHLS QA. Training segues with the Laboratory Information program. Ten residents, nearing the end of their first year of SAFELTP residency training, have completed field activities in eight provinces and will complete their training in 2008. Ten new residents will be enrolled in 2008. A five-day TB course for provincial TB Coordinators, HIV Coordinators and Laboratory focal persons (n=9) will take place in 2008.

ACTIVITY 4: Incidence Testing

Measuring incidence in cross-sectional population surveys can help avoid the complexities associated with surveillance systems or with inferring incidence from prevalence. In the context of expanding ART programs it will become more difficult to interpret HIV prevalence survey data, and more valuable to have HIV incidence estimates as an additional data source. The BED assay will be used to evaluate HIV-1 serology positive specimens from the 2005-2007 antenatal care seroprevalence surveys. The total specimen number will increase to less than 10,000 based on the expanded survey numbers to 1,400 clinic sites. The NICD will also measure the specificity of the BED, estimate the sensitivity of the BED and determine HIV-1 incidence in different general populations in collaboration with PEPFAR-funded partners. The assay will be applied to a large population-based HIV surveillance program conducted by the Africa Centre (a PEPFAR partner located in KwaZulu-Natal) and the planned Human Sciences Research Council's population survey in 2008. Additional incidence tests and empirically derived correction factors will be applied to determine the suitability of the BED assay.

ACTIVITY 5 HIV-1 Drug Resistance

The HIV-1 drug resistance project started in 2003 will continue to monitor for the emergence of drug resistance in the community (transmitted resistance). This project is based on the WHO Threshold Survey using samples collected from the NDOH's Annual Antenatal Survey (ANSUR). This is important to determine the choice of regimen and to identify high levels of resistance for further investigation. Resistance testing will be performed on patients receiving and failing treatment to determine resistance to current first- and second-line drug regimens. This forms part of the South African Treatment and Resistance Network (SATuRN). NICD plans to link with the epidemiology division to study Early Warning Indicators for resistance at the program level. Other methodologies for resistance surveillance will be evaluated, including the use of dried blood spots (DBS) for resistance testing and assays for measuring phenotypic drug resistance.

These NICD's activities contribute to PEPFAR's goals of preventing 7 million new infections and treating 2 million people by improving surveillance and building capacity to inform policy and to facilitate program management. These activities support the prevention and treatment goals in the USG Strategy for South Africa.

Table 3.3.13: Activities by Funding Mechansim

Mechanism ID: 500.08

Mechanism: CDC Support - with CARE UGM

Prime Partner: National Department of Health, South Africa

USG Agency: HHS/Centers for Disease Control & Prevention

Funding Source: GHCS (State)

Budget Code: HVSI

Activity ID: 3044.08

Activity System ID: 14062

Program Area: Strategic Information

Program Area Code: 13

Planned Funds: $3,213,058

Activity Narrative: SUMMARY:

PEPFAR funds will support the National Department of Health (NDOH) to implement M&E activities in HIV and AIDS programs. The major emphasis area for this program is the development of health management information systems, with minor emphasis on improving information technology and communication infrastructure, M&E and reporting, and proposed staff for Strategic Information (SI). Target populations include South African policy makers, members of the National AIDS Control Programme, and other staff in the NDOH. Activities described in this COP entry have been requested by the national or provincial Departments of Health.

BACKGROUND:

The NDOH lacks trained M&E personnel for specialized information gathering and management tasks. Data on disease surveillance and HIV and AIDS service uptake are often not up to standard or not transmitted in a timely manner, negatively affecting the NDOH's ability to analyze epidemiological trends effectively. CDC has provided technical support for M&E since 2003, including developing standard indicators, policies and guidelines, and training tools. Funds will be used to expand the NDOH's M&E activities, especially its human capacity development at the national and provincial levels.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Training

Funds will be used to conduct orientation sessions on M&E for HIV and AIDS program staff. The sessions will focus on new and existing M&E officers, and will inform staff of the importance of M&E in measuring the effects of the HIV epidemic. Staff will be trained to use the District Health Information System (DHIS), an electronic database that tracks disease and health indicators, and trained to use relatively more sophisticated M&E techniques for program planning. HIV and AIDS program staff will be trained in data management techniques. This activity is ongoing and in the past year has primarily focused on improving data in the PMTCT program.

ACTIVITY 2: Staff

There are four SI positions included in this COP entry.
(1) An M&E Advisor, who is seconded to the NDOH HIV and AIDS Directorate, will continue to provide technical assistance to the NDOH and provincial health departments to support data use and analysis efforts at the NDOH.
(2) An M&E Advisor based at the CDC office will continue to work closely with the NDOH and with PEPFAR partners, on management information systems, data issues, and activities with the Western Cape Department of Health.
(3) A Management Information Systems (MIS) specialist, who has recently been hired, will conduct an assessment of USG-supported MIS.
(4) An M&E Assistant will soon be hired to improve the data analysis of PEPFAR data and assist in providing feedback to partners and the South African Government (SAG) about PEPFAR activities. The USG is currently engaging with the provincial departments of health to improve collaboration and communication about PEPFAR-funded activities. This position will assist in facilitating these activities in the future.

Additional funds will be used to support SI staff as per recommendations from the Staffing for Results exercise.

ACTIVITY 3: Support to the SAG

Relations between the United States and South Africa are steadily improving. In an effort to continue to strengthen this relationship, funds have been budgeted for technical assistance that the national and provincial Departments of Health frequently request on an ad hoc basis. Examples include technical assistance to the KwaZulu-Natal Premier's Office for improving data quality and data use in the province and assistance with conducting a Data Quality Assessment of the TB/HIV data management system in the NDOH.

ACTIVITY 4: Strengthening Management Information Systems

The South Africa PEPFAR Task Force is prioritizing the harmonization and coordination of MIS within PEPFAR-supported partners and with the South African Government M&E systems. The USG recognizes that as PEPFAR programs are scaling up, there is a need for a a more strategic plan for developing and implementing systems that focus on patient care, community-based care, and managing aggregated data. The new USG HMIS staff person will develop an investment strategy in MIS and work towards aligning or improving communication between systems. He will provide support to partners, especially those working in the public sector, and will provide technical assistance to the NDOH for harmonization of health systems and to the Department of Social Development on an MIS for orphans and vulnerable children.

Improving the NDOH's ability to collect, process and utilize SI will directly contribute to improvements in HIV and AIDS service delivery by having the information available for decision-making purposes. These improvements, in turn, will have a positive impact on South Africa's ability to prevent new infections, care for patients living with HIV, and to provide treatment for those with AIDS, in support of PEPFAR's goals. These efforts also support the USG Five-Year Strategy for South Africa by building capacity within the South African government.

Activity System ID: 14054

Activity Narrative: This activity was approved in the FY 2007 COP, is funded with FY 2007 PEPFAR funds, and is included here to provide complete information for reviewers. No FY 2008 funding is requested for this activity.

PEPFAR funds were allocated to support the NDOH on M&E activities that the NDOH is collaborating with provinces throughout the country. The support to the NDOH was in terms of employing M&E officers at nine provinces as a means of strengthening the existing M&E structures. None of the M&E officers were employed ay the provincial level. Therefore the funds amounting to $445,000 that were aimed at supporting the NDOH on M&E have been carried over to 08FY. The NDOH is contemplating on having the M&E officers in all provinces during the 08 FY.

An amount of $620,000 from the CoAg has also been carried over to the 08FY. These funds will be used to funds AB activities that the NDOH in partnership with NGOs and FBOs are executing through the country.

Therefore there is no need to continue funding this activity with FY 2008 COP funds.

Program Area Code: 13

Activity ID: 3017.08

Planned Funds: $121,250

Activity System ID: 15076

Activity Narrative: SUMMARY

The Health Policy Initiative (HPI) will carry out capacity building activities and provide technical support to ensure improved national and provincial level financial planning and effective resource allocation for HIV and AIDS. The target populations are host county government workers at national and provincial levels, with a specific focus on AIDS Control Program staff; and the emphasis area for this activity is other strategic information (SI) activities, to include healthcare financing and local organization capacity development.

BACKGROUND

HPI has significant expertise in providing assistance to governments and donors in planning and allocating future resources to manage national HIV and AIDS programs. This is an ongoing activity in South Africa, first initiated in 2001 with the collaboration of the National Department of Health (NDOH) and several other government departments. Since 2004, the activities were funded by PEPFAR and included provision of technical assistance and training for staff at the Health Financing and Economics Unit (HFEU) of the NDOH in applying the GOALS model. The GOALS model is a computer model designed to support HIV and AIDS planning by linking expenditure on specific program interventions to coverage of the population in need and to program goals, such as infections averted and deaths averted. HPI will continue to support the NDOH in preparing resource allocation and human capacity building plans to implement the NDOH's HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011 (NSP) effectively. HPI has made it a priority to strengthen the capacity of provincial governments to cost their Provincial Strategic Plans and to align it with the NSP. HPI will provide technical assistance to all nine provinces and use information from the COP or other sources to identify gaps in budget allocations and providing information on what set of interventions can most effectively contribute to achieving the South Africa prevention and treatment targets.

ACTIVITIES AND EXPECTED RESULTS

ACTIVITY 1. Resource Allocation.

In this phase, financial staff from the NDOH HIV and AIDS, Comprehensive Care, Support and Treatment Unit, will form part of the national training team to roll this intervention out further to the provinces. Training and technical assistance will be provided to national trainers to conduct national and provincial training for technical working group members on resource allocation, the use of data for decision making to prepare for HIV and AIDS human capacity needs, programming and financing of the NSP. Financial staff from the HIV and AIDS Care and Support Unit will also be trained to use the GOALS model and to teach staff at the provincial level on the use of the GOALS resource model to design programs, and to allocate financial and human resources. HPI staff will follow-up throughout the year with the HIV and AIDS, Care and Support trainers to provide additional capacity building.

This activity will contribute substantially towards meeting the vision outlined in the USG Five-Year Strategy for South Africa. It will contribute to reaching the goal of averting 7 million infections through improved planning and resource allocation.

Program Area: Strategic Information
Budget Code: HVSI
Program Area Code: 13
Activity ID: 19708.08
Planned Funds: $3,201,000
Activity System ID: 21161

Activity Narrative: SUMMARY:

This partner will provide a broad program of technical assistance and other targeted project support to improve the quality, availability and use of Strategic Information (SI) in South Africa. The SI activity will contribute to strengthening programs, improving accountability and reporting, and information sharing within PEPFAR partners.

BACKGROUND:

MEASURE Evaluation supported this activity in FY 2005 and FY 2006. The MEASURE activities will be recompeted in FY 2007 and it is anticipated that the same partner will continue these activities in FY 2008. The goal of this activity is to improve the collection, analysis, and use of SI in planning, policy-making, management, monitoring, and evaluation of the South Africa PEPFAR program.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Partner Capacity Building

This partner will work to strengthen the capacity of PEPFAR implementing partners to monitor and evaluate their programs. The PEPFAR South Africa approach is multi-faceted and includes the following activities:
(1) M&E capacity building workshops: The five-day basic M&E workshop will be offered to PEPFAR partners three times a year.
(2) M&E workshops on specific topics: There is increasing interest among PEPFAR partners for more specialized M&E training on such topics as data analysis, qualitative methods and research and evaluation methods for program improvement. Trainings will be implemented in collaboration with a local South Africa partner.
(3) Partner-specific workshops: There are a number of large partners (or primes who have many sub-partners or sites) that want to deepen their M&E capacity. FY 2008 funds will be used to conduct partner-specific workshops to respond to this need.
(4) Technical Assistance: Individual M&E technical assistance will be provided to PEPFAR implementing partners as needed.

ACTIVITY 2: Collaboration with USG/South Africa (USG/SA) SI team

This partner will work closely with the USG/SA SI team on the development and implementation of SI systems for the PEPFAR program. Specific activities include:
(1) South Africa Strategic Information Manual: Update and disseminate a compendium of information and procedures to support PEPFAR.
(2) Partner M&E Meetings: Coordinate and facilitate partner meetings.
(3) Ongoing collaboration: Support collaboration among PEPFAR partners given the growing data and reporting demands of PEPFAR.

ACTIVITY 3: Increased demand, availability and utilization of SI

This partner will utilize multiple strategies for increasing the demand, availability and utilization of SI in South Africa by both USG and South African partners. In November 2004 MEASURE Evaluation contracted with Khulisa Management Services to develop the Data Warehouse (DW). Initially Khulisa focused on developing the PEPFAR reporting system, but in the future Khulisa plans to make the DW more useful for partners and USG staff. This partner will develop ways to improve data management and data use by supporting a database that stores and provides easily extractable information received from PEPFAR partners in South Africa.

These activities contribute to the overall goals of PEPFAR at both a local and global levels by providing valuable information for decision making.

Mechanism ID: 242.08
Mechanism: ACCESS
Prime Partner: JHPIEGO
USG Agency: U.S. Agency for International Development
Funding Source: GHCS (State)
Program Area: Strategic Information
Budget Code: HVSI
Program Area Code: 13
Activity ID: 21089.08
Planned Funds: $242,500
Activity System ID: 21089

Activity Narrative: SUMMARY:

JHPIEGO will continue (a) conducting monitoring and evaluation (M&E) training in PMTCT for staff from the National Department of Health (NDOH) and provinces; and (b) implementing and expansion of the training information monitoring system (TIMS). In addition, JHPIEGO will also strengthen PMTCT supervision skills for provincial and district PMTCT program managers.

ACTIVITY 1: Monitoring and Evaluation

Since FY 2004, JHPIEGO has provided technical assistance in strengthening PMTCT M&E and has trained approximately 250 HIV and AIDS program managers and coordinators from the NDOH and eight provincial departments of health in M&E fundamentals. In FY 2007, JHPIEGO provided intensive on-site supervision and follow-up to targeted sites in the Northern Cape using a supervision tool outlining PMTCT M&E standards. JHPIEGO assisted facility-based health-care workers to implement interventions to improve M&E capacity. Technical assistance focused on interventions such as record keeping, interpretation of data and reporting. JHPIEGO encouraged facilities to use the M&E performance tool as an internal method for supervising their effectiveness for M&E. PEPFAR funding will be used to support technical assistance costs (M&E expert consultants) to facilitate this process at the site level. The activities will continue in FY 2008 and will be expanded to additional sites.

ACTIVITY 2: Training Information Monitoring System (TIMS)

Building on the expansion of TIMS in FY 2007 to the National PMTCT Unit, Northern Cape, and North West provinces, JHPIEGO will continue to support TIMS in FY 2008 by providing technical assistance with intermittent troubleshooting to the provinces and exploring web-based TIMS. As a result of this activity, the NDOH PMTCT and TB units and three regional training centers in Gauteng, Mpumalanga and Limpopo will be able to capture training data on both national and provincial levels. This data will permit them to assess their progress and ongoing needs for capacity building. TIMS allows program planners to determine where training needs are greatest and prioritize their investment of training resources accordingly.

ACTIVITY 3: Training in PMTCT Supervision

As partners under the USAID Population and Health Integrated Assistance project, JHPIEGO developed and implemented supervision training for reproductive health supervisors in Kenya, Malawi and Ethiopia. In FY 2008 JHPIEGO proposes to address training-related PMTCT supervision problems through the adaptation and implementation of the supervision learning package. Supervision is an essential intervention to maintain the performance of the healthcare provider, and improved supervision is unanimously recognized as important for the delivery of quality HIV and AIDS services. The supervisor plays a critical role in ensuring that members of the community receive quality healthcare services. To perform effectively, the supervisor not only needs to acquire the knowledge and skills to do the job, but needs to work in an environment that will allow the supervisor to have a positive effect on the quality of services. Most health professionals charged with supervision responsibilities in the PMTCT program lack the full range of knowledge and skills to perform their job effectively. Most supervisors are limited in this capacity because they have received not received training in this area or any support or reference materials on supervision. In addition to a lack of knowledge and skills, other causes of poor performance include: insufficient funds for transportation, lack of supervision tools (to be addressed in part through the development of the supervision learning package), infrequent supervision visits and inadequate national supervision guidelines. To maximize the effect of the training interventions, it is essential that these other causes of poor performance be addressed concurrently with the training of supervisors.

These activities will indirectly contribute to the overall PEPFAR objectives, as supervision will indirectly increase access due to improved quality of service.

OHPS - Other/Policy Analysis and Sys Strengthening

Program Area:	Other/Policy Analysis and System Strengthening
Budget Code:	OHPS
Program Area Code:	14

Total Planned Funding for Program Area: $11,593,216

Estimated PEPFAR contribution in dollars	$0
Estimated local PPP contribution in dollars	$0

Program Area Context:

The challenges of HIV and AIDS are compounded by the need to strengthen the health workforce and associated systems in South Africa to sustain the capacity and skills to deliver HIV/AIDS prevention, treatment and care services. According to the 2006 National Human Resource for Health Plan (HRH), there are 67 doctors per 100,000 people where 62.3% of general practitioners work in the private sector. In many public sector clinics and hospitals, the vacancy rate averages 31% with increases in 2007 due to the long public health sector strikes. The new HIV & AIDS and STI Strategic Plan for South Africa, 2007-2001 promotes increased access to HIV and AIDS management including the provision of ART at primary health care level. The program policies are comprehensive but implementation is slow and the need to strengthen the capacity of health-care managers and providers looms large.

Not only is the human resource strained by the increasing workload due to HIV and AIDS, but health care workers are also suffering themselves from HIV infections and family members living with the disease. It has been estimated that approximately 16% of health care workers in South Africa are HIV-infected and many have members of their household suffering from HIV and/or opportunistic infections. In FY 2008, USG CT programs will target health care workers at government sites to ensure they know their status, and treatment and care programs will extend to health professions. HIV and AIDS have been cited as one of the leading causes for nurses to leave the public health care sector. Nurses in particular have high attrition rates in the health system and there is significant stigma preventing them from seeking treatment and care. It is imperative for PEPFAR to support new health workforce's HIV workplace programs through public sector and professional councils.

The PEPFAR program in South Africa will continue to address policy analysis and capacity strengthening in FY 2008 through an expansion of mechanisms and activities that focus on (1) in-service and pre-service training; (2) task-shifting and support for new care-providing personnel; (3) workforce planning and management; (4) quality assurance and performance standards; (5) retention, incentives, recruitment and staffing; (6) public-private partnerships; (7) strengthening leadership and policy and; (8) reducing stigma and gender inequalities. Many of the above activities under policy analysis and systems strengthening activities relate to specific program areas and are included in those sections of the FY 2008 COP. All initiatives are consistent with South Africa's National HIV and AIDS Strategy, and the HIV & AIDS and STI Strategic Plan for South Africa, 2007-2001 and its policies related to human resource management.

The USG will emphasize the cross-cutting areas of HCD and sustainability in the transition to PEPFAR II, and will hire an HCD technical advisor. For each partner, the USG requires a sustainability plan and focus on reduction of stigma and discrimination. Gender inequalities and aggressive sexual behaviors, including violence, drive the spread of HIV in South Africa and therefore the USG incorporated gender as an overarching strategy in most programs.

There are significant efforts to provide training to healthcare providers. Current USG partners are focusing on supervision skills training, job aids, counselor tools, monitoring, coaching and clinical preceptorship programs to ensure training impacts are sustained. In FY 2008, the USG South Africa program will encourage partners to promote best practices and innovative approaches that include on-the-job training, supervision follow-up, and quality assurance mechanisms, including nationally accredited curriculums. Pre-service programs will be aligned with task analysis assessments tied to the health needs of South Africans and capacitate those training institutions to produce a South African qualified workforce.

The USG team in South Africa will allocate FY 2008 funds for a joint APS focusing on task-shifting to meet current demands on the system. This activity will focus on: (1) assessment of tasks performed by a variety of health care practitioners (doctors, nurses, pharmacists) at primary health care levels comparing this with the current prescribed scope of practice for these categories and the need/demand within the health care system; and (2) making recommendations for other categories/levels of health-care workers with a prescribed scope of practice. This activity will be carried out in collaboration with the NDOH and the professional councils with a special focus on nurses since they bear the brunt of burden. This work will also include the development of job descriptions and job competency requirements for all categories of health-care workers in the health system.

Workforce planning and management systems are weak in the national and provincial level. There is a national payroll system sitting within the Public Service Administration but there is not an adequate human resource information system to track health workers. With DFID support, the USG will look into potential assistance to improve the health workforce data to plan and manage staff. Management training is a large gap at all levels of the government and private systems in South Africa. In FY 2008, the USG program will increase the management and leadership capabilities of the new HIV/AIDS managers and the provincial and district HR managers.

A performance-based management and quality assurance system is needed in South Africa for tracking service delivery standards and helping to provide equitable career structure for health workers. Standards-based management is a practical management approach for improving performance, efficiency and quality of health services. In FY 2008, the USG will explore potential expansion into the development of a performance improvement and QA system for NDOH sites; and continue to expand the Nursing Capacity Building project enhancing leadership skills, networks and resources for nurses. With the additional FY 2008 funding, the new Quality Monitoring and Assessment Program will assist the USG team to assess adherence to SAG and PEPFAR clinical and administrative policies.

The NDOH currently has in place a rural incentive scheme, based on monetary incentives. The HRH plan clearly states the need to review retention policies, look at successes, develop award/recognition policies and attract back professionals who have left South Africa. USG does provide incentives and salary support to NDOH, NGOs, FBOs, and CBOs at HIV/AIDS service sites, including support for nurses' salaries, auxiliary staff, lay counselors and community caregivers. Around 20,500 staff in the government, private and civil society sectors are supported directly by South Africa's PEPFAR funds.

USG will continue to support a placement program to assist government recruitment of medical professionals to meet the severe shortage of workers. Locally and internationally qualified health-care professionals on both remunerated and voluntary bases are recruited against vacancies in the public sector, fast-tracking them through the recruitment process, ensuring adequate site support and incentives (see Foundation for Professional Development).

The USG uses its many links to businesses in South Africa to promote the expansion of initiatives to reach the private sector workforce. These efforts focus on integrated workplace programs, private services linked within OVC programs, as well as private sector provision of HIV services of prevention, counseling and testing, and treatment for employees. PEPFAR South Africa pilots best practices on a small scale at the provincial or district level with plans to replicate nationally. This has proven to be an effective mechanism for moving the NDOH forward in issuing revised policy and expanding private sector partnerships.

A significant focus of South Africa's PEPFAR program addresses institutional capacity issues by building the capacity of local NGOs, FBOs and CBOs. The goal is to build institutional capacity to increase the effectiveness and capacity of these partners to achieve expanded and quality services while strengthening the management of their financial and human resources. Pact, Care and the Ambassador's Small Grants Program include formal training, on-site mentoring, improved monitoring and evaluation systems, good governance and resource mobilization.

The USG program is collaborating with other donors in this program area to maximize support for human capacity building, workplace policy development, public-private partnerships and organizational capacity building among NGOs working in HIV/AIDS. The USG PEPFAR team is an active member of the South African Government's HIV Donor Coordination Forum, which is a theme group for bilateral and multi-lateral donors working towards effecting a coordinated and coherent response to the developmental challenges that HIV and AIDS poses to South Africa. The team will look into FY 2008 efforts to help strengthen the management structures of GFATM in South Africa through the new HCD position. UNDP supports Southern Africa Capacity Initiative, while World Bank and UNAIDS support GFATM and the National AIDS Commission capacity building. GFATM grants are disbursed to the same programs and grantees as some USG PEPFAR support. DFID is working with the government on implementation of its HRH plan with additional health systems support from the government of Belgium. Many donors and civil society groups address stigma and discrimination within their HIV/AIDS programs. In addition to industry and labor organizations, other donors involved in HIV workplace policies are GTZ, DFID and Irish AID. The EU also supports capacity development of NGOs/CBOs, and many donors and civil society groups address stigma and discrimination within their HIV and AIDS programs.

Program Area Downstream Targets:

14.1 Number of local organizations provided with technical assistance for HIV-related policy development	371
14.2 Number of local organizations provided with technical assistance for HIV-related institutional capacity building	387
14.3 Number of individuals trained in HIV-related policy development	6987
14.4 Number of individuals trained in HIV-related institutional capacity building	10240
14.5 Number of individuals trained in HIV-related stigma and discrimination reduction	9080
14.6 Number of individuals trained in HIV-related community mobilization for prevention, care and/or treatment	14904

Activity ID:	21634.08	**Planned Funds:**	$250,000
Activity System ID:	21634		

Activity Narrative: SUMMARY:
MEDUNSA will work in collaboration with CDC to conduct a training needs assessment and take stock of training and skills transfer that have been implemented to date under the USG South Africa PEPFAR program.

BACKGROUND:
USING FY 2007 funding, MENDUSA will work with CDC, South Africa to conduct a training assessment. The objectives of the assessment include auditing the training programs funded by CDC, assessing the extent to which the training has impacted on service delivery, and assessing the extent to which task-shifting has occurred from higher to lower levels of workers because of training. The assessment will be conducted in all nine provinces of South Africa. The target population for this activity is USG staff and USG staff in country, as the finding of the assessment will be used to provide input into training programs being implemented by partners and will help direct future funding in the area of human capacity building. The primary emphasis are for this activity is local organization capacity building, strategic information and a minor emphasis area is training with a focus on task shifting.

ACTIVITIES AND EXPECTED RESULTS
ACTIVITY 1: AUDITING TRAINING
Using FY 2007funding, MEDUNSA will conduct an audit of all PEPAR funded training. The assessment will be initiated with organizations implementing training for community health care workers and lay counselors. MEDUNSA will contact PEPFAR partners to solicit information on their training programs and will develop a catalogue of training being offered through the PEPFAR program. This catalogue will enable USG to identify gaps in training activities for community health care workers and lay counselors as well as duplication of efforts. The catalogue will be used to strengthen the PEPFAR programs in the area of training for this cadre of health care workers.
Activity 2: ASSESSING THE EXTENT TO WHICH TRAINING HAS IMPACTED SERVICE DELIVRY
Based on the finding of the training audit, MEDUNSA will conduct formative work looking at the impact of training on service delivery. To do this, they will work with health facilities to determine what the training needs are and assess whether the training being implemented by partner organizations addresses this need. This will be done by examining training curriculum and comparing what is in the training to the training needs of the health facilities for community health care workers and lay counselors.

Activity 3: BASIC PROGRAM EVALUATION
Medunsa will conduct a Basic Program Evaluation of the Home-based Care programs support by CDC with PEPFAR funds in South Africa. The aims of the program evaluation are as follows evaluate the training received by home-based carers supported by our partners in terms of quality of training, methods of training, training curriculum used, mentoring of carers to implement the skills they have learnt. Evaluate to what extent task shifting has taken place from nurses at primary health care clinics to home based carers. Evaluation of the tasks carried out by home based carers supported by our partners

This activity contributes to PEPFAR 2-7-10 goals and objectives by strengthening human capacity development.

Activity System ID:	21635		

Activity Narrative: SUMMARY:
In FY 2008, the MRC will use PEPFAR funding to engage in formative work that will lead to specific interventions in the future. This formative work includes developing service quality measures (SQMs) to improve the quality of drug treatment services especially in areas such as access to services (including HIV related services such as VCT), barriers to HIV and drug service use, quality of HIV and drug services, and service outcomes. The goal of this activity in FY 2008 is to establish policy and operational advisory groups with key stakeholders in the drug abuse and HIV policy, service planning, and treatment delivery arenas to address issues of service quality and develop systems for service improvement. The major emphasis areas are local organization capacity building and the development of networks, linkages, referral systems, and service quality improvement mechanisms; and information, education and communication. Minor emphasis areas include community mobilization/participation; linkages with other sectors and initiatives; and training. Primary target populations are key stakeholders in the HIV and substance abuse treatment policy arena as well as substance abuse treatment service providers.

This project is consistent with the revised South African National Drug Master Plan and will provide guidance on how the South African Government can translate strategies into action. Sustainability is addressed across all activities, by developing the capacity of existing service providers to measure service quality and service performance, providing ongoing technical support to stakeholders via regular telephone and videoconferences, enhancing data management systems, and providing program adjustments as necessary. This project also directly addresses the NSP for HIV and AIDS by identifying a set of standardized indicators that can be used to monitor service quality and service performance.

BACKGROUND:
Using FY 2008 funding, the MRC will engage in formative work in the area of improving drug treatment services through the integration of drug treatment services with HIV services. The formative work will result in the development of specific interventions that will be implemented in subsequent years. The formative work, (FY 2008 funding)will ensure that serrvice quality measures (SQMs) to improve the quality of drug treatment services especially in areas such as integration of HIV and substance abuse services, provision of wraparound HIV services in substance abuse treatment settings, access to services (including HIV related services such as VCT), barriers to HIV and drug service use, quality of HIV and drug services, and service outcomes are developed. These SQMs will help South African Department of Health improve the quality of its substance abuse services by creating the means to empirically measure the results achieved in service priority areas such as access to services (including HIV related services such as VCT and including access to services for vulnerable groups such as women), quality of HIV and substance abuse services and service outcomes thereby creating a platform to guide policy and service improvements. Such improvements in the efficiency, effectiveness, and equitability of treatment in South Africa are especially important in the light of the relationship that is increasingly being established between drug and alcohol abuse, high-risk sexual behaviors and HIV. It is also important in the light of recent policy initiatives which call for better quality and standardized data on service performance and service quality within the substance abuse treatment sector. Calls for better monitoring of substance abuse treatment quality are in keeping with policies such as the National Drug Master Plan and the new Substance Abuse Bill that is currently being reviewed by parliament.

The use of SQMs provides a platform for the monitoring of service quality and service performance which is currently lacking in South Africa, despite a commitment to measuring service outcomes. This project has a strong policy component that is integral to the start-up of the project as well as to the uptake of SQMs as a routine part of the substance abuse treatment system functioning. The project allows for an iterative process of feedback between policy advisory and technical advisory groups and service providers. This process moves beyond the previous top-down approaches that have been implemented in attempts to regulate the treatment sector (and which have so far failed to make much of an impact). This project therefore has the potential to strengthen the substance abuse policy making process, particularly around the integration of HIV services into substance abuse services and the provision of wraparound rather than standalone services. Apart from policy goals, this project directly allows for quality improvement in health care delivery. The use of SQMS will help us identify areas that can be changed to improve service quality, client outcomes and service delivery (despite local challenges). Over time the use of SQMs will allow us to test whether changes made to the system impact on service quality.

ACTIVITIES AND EXPECTED RESULTS:
ACTIVITY 1: Formation of an advisory group
FY 2008 funding will be used to set up an advisory group that will consist of a policy and operational subcommittee. This advisory group will be made up of 22 members;12 of whom will be key stakeholders in the drug abuse and HIV policy and service planning and monitoring arena at a national level and ten of whom will be key individuals from the treatment delivery arena at a provincial level. For the latter, the stakeholders will represent substance abuse treatment service providers in the Western Cape, Gauteng and KwaZulu-Natal provinces. A core function of this activity will be to build capacity among these 22 stakeholders to address issues of service quality and service performance. This activity will also support the development within these groups for the monitoring of service quality, outcomes and performance. FY2008 activities include building capacity among an advisory group of key stakeholders to collaboratively identify a set of quality improvement goals for the drug abuse treatment sector; identify potential service quality measures (SQMs) addressing each of the stated goals, taking into account current infrastructure capabilities; review these SQMs to ensure that they are feasible to use, appropriate for the South African context, and culturally sensitive; identify barriers to SQM implementation; and develop implementation strategies that are sensitive to logistical and resource barriers and to cultural differences.

ACTIVITY 2: Recommendations to integrate drug treatment services and HIV services:
Based on the discussions with the advisory group, South African Government and other key stakeholders, MRC will develop a set of recommendation that will be used to develop specific interventions in FY 2009 to integrate drug treatment services and HIV services.

Results contribute to PEPFAR 2-7-10 goals by addressing the linkages between drugs, alcohol treatment and HIV treatment.Results are aligned with South African goals of improving substance abuse management information systems and building capacities among service providers to monitor their service quality and service performance. This project will help strengthen the South African health management information system as it helps identify standardized measures of the effectiveness, efficiency and equitability substance

Activity Narrative: abuse treatment services and of the HIV services provided in substance abuse settings. As such, it allows for theidentification of areas in which the current treatment system can be improved. It will also help us monitor the extent to which barriers to HIV services (including VCT) in substance abuse treatment exist, consumer perceptions of service quality, and the extent to which HIV services are integrated into substance abuse treatment settings.

Planned Funds: $350,000

Activity System ID: 19528

Activity Narrative: SUMMARY:

The South African Democratic Teachers Union (SADTU) workplace program aims to work with provincial, regional and branch structures in three provinces to strengthen HIV prevention and increase access to care and treatment for teachers, their communities and learners.

BACKGROUND:

The HIV and AIDS pandemic has created workplace environments that are not conducive to quality teaching and learning for both educators and learners alike. The school as a workplace is plagued by high levels of stigma. This often results in educators suffering silently and becoming victims of the pandemic despite high perceptions of knowledge of HIV and AIDS. As a result many educators do not have the courage and support in the workplace to go for voluntary counseling and testing, since knowing your status is not publicly encouraged. Consequently most educators discover they are HIV positive when they start showing symptomatic illnesses that do not respond to medications. By this time their CD4 counts are usually low and they can no longer function optimally at their schools with compromised health. The SADTU project aims to reduce the impact of HIV and AIDS by focusing on preventing transmission of HIV for teachers and caring for orphans and vulnerable children in the workplace. SADTU has existing national and provincial partnerships with the Department of Education and was a member of the team that developed the National Strategic plan with the Department of Health. SADTU has also established relationships with other HIV and AIDS organizations around the country. This will ensure sustainability of program after PEPFAR funding. The target population for these activities is teachers, their communities and primary and secondary school learners who they are in contact with.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Strengthening Policy Development and Implementation

Technical support, training and financial support will be provided to strengthen the capacity of the trade union movement to participate in the development of public policies and policies within the union structures and at the workplace, in this case, within schools. Technical support and training will be provided via workshops on ways senior school management, employers, senior union leadership and co-workers can mainstream HIV and AIDS issues into routine workplace activities. Support will also be provided to develop workplace policies and strategies on HIV and AIDS.

ACTIVITY 2: Capacity Building and Mentorship Program

PEPFAR funds will be used to train and establish a mentorship program for a large number of peer educators, within the union. These peer educators will be provided with technical assistance to conduct HIV and AIDS prevention education programs for fellow educators, and community members. Peer educators will be responsible for the following key HIV and AIDS prevention efforts: 1) develop strategies to increase awareness of HIV and AIDS, sexual transmitted infection and tuberculosis among union members; 2) increase the involvement of unions in the development, implementation and monitoring of HIV and AIDS workplace policies and programs.; 3) increase the involvement of men in HIV prevention efforts (male norms and behaviors, key legislative issue) and in efforts to combat violence against women (reducing violence and coercion, key legislative issue); and 4) develop strategies to reduce stigma and discrimination (key legislative issues) against HIV-infected members in the workplace; and finally, 5) develop strategies to promote healthy lifestyles and the adoption of risk reduction behaviors among union members.

Providing effective prevention messages and leadership education to employer associations, business, worker representatives and union members in a cross-section of South African industry will contribute to PEPFAR's goal of preventing 7 million new infections. The activities described here will also support the prevention objectives identified in the USG Five-Year Strategy for South Africa.

Funding Source:	GHCS (State)	**Program Area:**	Other/Policy Analysis and System Strengthening
Budget Code:	OHPS	**Program Area Code:**	14
Activity ID:	19527.08	**Planned Funds:**	$332,000
Activity System ID:	19527		

Activity Narrative: The South African Business Coalition (SABCOHA) will implement through the Vender Chain Management and BizAids sub-partnerships. The major emphasis for this program will be the development of a workplace program, with minor emphasis given to community mobilization and participation; training and linkages with other sectors and initiatives and development of information, education and communication materials. The target population will include adults (men and women of reproductive age), truck drivers, factory workers, the business community and HIV/AIDS affected families. The project will focus on gender by addressing male norms and behaviors, issues associated with violence and coercion and stigma and discrimination (all key US legislative issues).

Activities and expected results:

Activity 1: Vendor Chain
In the Vendor chain program, during the capacity building of companies, there will be discussions on the HIV and AIDS workplace policy, procedures and human resources (HR) issues. This will result in drafting of policies with the participating companies and in ensuring that the HIV and AIDS programs can be linked to the existing company systems without unnecessary duplication of work and/or roles.

Managers will be trained on Stigma and Discrimination as part of the Management training.
One of the components will include the discussions on the HIV/AIDS Workplace policy, procedures and HR issues specifically relating to performance management, compensation, industrial relations and the management of incapacity and disability in accordance with the Code of Good Practice, ensuring a non-discriminatory work environment . This will also include managing misconceptions and prejudice and the development of supportive relationships amongst employees.

Activity 2: Peer Education
In offering HIV-related education, counseling and support in the workplace, peer educators are in many respects at the coalface of the epidemic. SABCOHA will also strengthen the existing Peer Education forums in the 5 provinces where they exist.
Using FY 2008 PEPFAR funding, the trained HIV Coordinators and peer educators in the vendor chain program will be linked to the strengthened and fully functional peer education forums. As the Vendor Chain Programme unfolds in other provinces, SABCOHA will develop more Peer Education forums.

Activity 3: BizAids
A personal participant handbook forms the basis personal plans of action to mitigate against the risk of HIV/AIDS and its potential for disruption of small business. BizAIDS training materials have been developed in English. Research has found that small businesses owners prefer to have the training delivered in English as they believe the language of business is English. Trainers switch to the vernacular when translating areas of uncertainty. Training handouts include information on HIV/AIDS prevention, abstinence/be faithful, VCT & Treatment options and guidance on how to link into local business, treatment and legal assistance services. These materials come from strategic partners such as the Khomonani campaign (the communication campaign implemented by the South African Department of Health, The AIDS Law Project and Metropolitan Health. Linking the business owner, their employees and family to VCT and treatment is the next necessary link.

Providing effective prevention messages and leadership education to employer associations, business, worker representatives and union members in a cross-section of South African industry will contribute to PEPFAR's goal of preventing 7 million new infections. The activities described here will also support the prevention objectives identified in the USG Five-Year Strategy for South Africa.

Budget Code: OHPS

Program Area Code: 14

Activity ID: 19529.08

Planned Funds: $450,000

Activity System ID: 19529

Activity Narrative: SUMMARY:

With an estimate of 12.3 million learners in South Africa, served by 386,600 teachers and more than 26,000 schools managing a response to HIV and AIDS across the education sector requires a comprehensive and substantial effort. Efforts must include a focus on both learners and educators if the impact of HIV is to be mitigated; and it must be recognized that any efforts focused on learners via the education sector cannot succeed without educators also being addressed. The Education Labour Relations Council (ELRC) will implement a comprehensive HIV and AIDS workplace program for the education sector of South Africa.

BACKGROUND:

ELRC is a statutory council which serves the South African education sector nationwide and is comprised of the public sector, the national and provincial departments of education, the private sector and teacher unions representing all primary and secondary public school educators. The ELRC works as an interface between the Department of Education (DOE) and labor organizations for labor peace and a vision of contributing towards the transformation and development of a quality South African public education system. A 2005 Health of Our Educators Report found that 50% of all teacher attrition is linked to complications of HIV and AIDS, resulting in 4000 teachers being lost each year due to AIDS. The general prevalence rate among educators was found to closely parallel that of the national population with an estimate of 12.7% of all DOE employed educators living with HIV. Based on the findings of this report and with FY 2007 and FY 2008 PEPFAR funding ELRC will implement a country-wide project in all 9 South African provinces to educators living with and affected by HIV and AIDS. The target group for this project is teachers, including those living with HIV or those who have family members living with HIV. This is a workplace intervention with minor emphasis areas in information, education and communication, community mobilization, and the development of linkages and networks. A particular focus of this project is the greater involvement of people with AIDS. ELRC will work with HIV positive teachers to ensure they can serve as role models to fellow teachers and to learners.

ACTIVITIES AND EXPECTED RESULTS:

Activity 1: Institutional Capacity Building

ELRC will work with four teachers' unions to strengthen institutional capacity to address HIV and AIDS. Activities include developing workplace programs, identify capacity needs, and address the capacity needs of each participating union.

Activity 2: Addressing Stigma and Discrimination

Teacher union leaders will be trained in treatment literacy and stigma and discrimination. These union leaders will be responsible for distributing IEC materials focused on treatment literacy and stigma and discrimination as well as conducting workshops to address these issues.

These activities contribute to PEPFAR's goal of preventing 7 million new infections. The activities described here will also support the prevention objectives identified in the USG Five-Year Strategy for South Africa.

Activity ID: 14570.08

Planned Funds: $3,000,000

Activity System ID: 14570

Activity Narrative: SUMMARY:

The Quality Monitoring and Assessment Program (QMAP) is a new activity for FY 2008, and was added in response to the additional funding made available to South Africa for this fiscal year. The purpose of the activity is to assess performance in adherence to USG and agency-specific policies and guidance; administrative and financial practices and procedures; evidence-based sound clinical care and management; evidence-based, sound interventions at the community level; and the policy and practice of partners in providing support services through on-site visits and consultation. The QMAP is not an individual partner quality improvement program. These on site monitoring assessments will provide Activity Managers (AM) with information to identify challenges to partner implementation and ensure that PEPFAR funds are maximized in promoting evidence-based and quality programming under each program area. Since 2004, the South Africa PEPFAR team has experienced rapid growth of the HIV and AIDS prevention, care and treatment programs from over $8 million in FY 2005 to an anticipation of almost $600 million in FY 2008. Management and Staffing has not proportionately increased in an effort to apply the bulk of funds into program areas. AMs from the larger agencies (USAID and CDC) have responsibility for upwards of 25 partners and fiduciary responsibility for as much as $15 million. Given the increase in resources, the ratio of staff to partners or dollars will grow in FY 2008 despite new recruitment. The PEPFAR Task Force and partners utilize several approaches that aim to monitor partner performance. Quarterly and bi-yearly reports with follow-up; interim progress reports; partner meetings; and requested budget draw-downs are examples that are currently in use. On-site visits to partners and subs funded through PEPFAR are rare due to the heavy and growing workload of AM. In FY 2008, the PEPFAR Task Force agreed to prioritize site visits for the purpose of monitoring quality and assessing performance. This activity is considered an essential aspect of strategy development under the PEPFAR reauthorization.

The following activities are to be included:

ACTIVITY 1: Establishment of a QMAP Leadership Team to determine the goals and objectives of the program

The team membership should consist of South Africa Government (SAG) and appropriate Agency representatives (technical leads and/or AM). A contractor will be named to carry out the tasks. The leadership team will collaboratively develop the goals and objectives for the QMAP in each technical and administrative area. The scope of work for the contract will be developed and bid in limited competition so as to restrict competition to include only bidders from South Africa-based organizations.

ACTIVITY 2: Review of existing tools

In conjunction with the SAG, USG and PEPFAR partners will carry out a review of currently existing assessment and performance monitoring tools for healthcare settings. Current PEPFAR partners and international agencies have developed, piloted, and implemented assessment and monitoring tools that may be modified for this program. It is important to evaluate those already existing tools to minimize duplication of effort. Appropriate tools developed by other countries will be included in this review. In addition, in conjunction with the SAG, PEPFAR will develop new tools to monitor performance in any areas where appropriate tools have not yet been developed.

ACTIVITY 3: Site visits

After development and validation of the QMAP tools, the QMAP Leadership Team will collaboratively develop a calendar to visit sites of PEPFAR partners. The intent is to conduct site visits and implement the QMAP for 70% of partners in the first year. A partner review may include, but will not be limited to a file review; on-site interview of leadership and staff; on site review of administrative, financial, clinical and support services (in a clinical setting); review of curricula, plans and observation of activities (in a community setting); focus group interviews with clients who are receiving services; and each partner will conduct a follow-up consultation to provide appropriate technical assistance or modify program activity as needed. SAG involvement will ensure buy-in and strengthen a sustainable health care system for persons affected with HIV and AIDS. This activity is in support of and provides strengthening for all aspects of PEFPAR and plays a meaningful role in assisting partners to achieve the 2-7-10 goals.

Activity Narrative:

SUMMARY:
Health Policy Initiative Task Order 1 (HPI TO1) provides an enabling policy environment as a foundation on which to build quality, sustainable HIV programs and services. The HIV epidemic in South Africa (SA) cannot be addressed by the health sector alone—it requires a strong, coordinated multisectoral response from workplaces, faith-based groups, and civil society organizations to ease the burden on the health system. They also have critical role to play in reducing stigma and discrimination (SD) against people living with HIV (PLHIV) which is essential for encouraging counseling and testing, disclosure, and antiretroviral (ARV) treatment. Multisectoral engagement, including involvement of PLHIV and other vulnerable groups, is critical to ensure that: needs of those most affected are met; community leaders break the silence; stigma that hinders HIV prevention and treatment is eliminated; and resources for implementation are mobilized across all sectors.

In response, HPI proposes three activities that will strengthen HIV policies and programs of public and private sector workplaces; reduce SD; and build HIV-related institutional capacity of civil society groups. HPI will provide technical assistance to partners to build capacity to analyze and use data to enhance evidence-based decision-making, and to identify and address operational barriers to effective HIV and AIDS programs. HPI will also assist organizations in translating policies, strategic plans, and operational guidelines into effective programs and services.

BACKGROUND:
The National HIV, AIDS and STI Strategic Plan for SA, 2007-2011 highlights “World of Work” as an important sector for future management of HIV and AIDS in SA. Workplace policies in public sector and National Operational Plan for Comprehensive HIV and AIDS Management, Treatment Care and Support have been developed to support implementation of HIV and AIDS strategies. Adequacy of existing structures should be assessed, and capacity to develop and implement public and private sector HIV and AIDS programs should be strengthened. Workplace policies need to be developed and implemented in both private and public sector, with special focus on encouraging acceptance of HIV-infected employees and promoting open discussion of HIV and AIDS and non-discrimination.

In FY 2007, HPI TO1 developed "Managing HIV and AIDS in the Workplace: A Guide for Government Departments" as a guide in implementing the Minimum Standards on HIV and AIDS. Use of this guide within the Department of Public Service and Administration (DPSA) has mostly been done at national and provincial levels for managers leading and developing HIV and AIDS programs. HPI TO1 has launched several HIV and AIDS Management Programs for senior managers and executive leaders in 2007 with key tertiary institutions (TIs). Primary objective of the leadership training programs is to secure commitment by leaders in South Africa to actively and openly address HIV in their business environments.

For many years women have been suffered from discrimination. Gender inequality hinders social and economic development and is a critical element of the transformation agenda in SA. HPI TO1 will strengthen capacity of women by conducting a leadership course for women to capacitate and mobilize them in leadership to play vital role to ensure accountability and gender sensitive responses that will increase reach of HIV and AIDS programs run by them.

Evidence from programs in South Africa suggests that people still fear testing for HIV and treatment. In partnership with HPI TO1, Center for the Study of AIDS (CSA) has implemented the Siyam'kela Project,, focusing on HIV-related stigma. To date, the project has been successful in developing conceptual and theoretical tools to understand and mitigate stigma for government and civil society to inform the mitigation efforts, build capacity, design advocacy messages and materials, and offer training and technical assistance (TA) around stigma.

ACTIVITIES AND EXPECTED RESULTS
ACTIVITY 1: HIV and AIDS Workplace Programs
A. Program Managers and Graduate Students. HPI TO1 has worked closely with University of Stellenbosch to design training modules and facilitate training sessions as part of its diploma course on HIV program management and the workplace. As a follow-up to this activity, HPI will identify graduates of the program who have become HIV policy champions in their workplaces. HPI will provide capacity building and TA to these policy champions to strengthen development and implementation of HIV workplace policies and programs in their respective workplaces. In addition, HPI will assess the impact of the overall diploma course. HPI will identify a sample of 50 graduates to explore extent to which they are engaged in HIV workplace policies, dialogue, advocacy, and program implementation.

B. Executive Business Leaders. HPI TO1 will build leadership capacity of key business personnel to strategically and effectively respond to HIV in their work environments. Training participants will include senior managers and executives, from both public and private sectors, who enroll for Masters in Business Administration (MBA) and Executive Leadership courses through six TIs. These institutions will assist in educating key role players and their contribution is in the form of integrating the HIV & AIDS workplace module to the MBA and Executive courses. HPI expects to initiate, strengthen and improve more appropriate workplace programming in the private sector.

C. Women Program Managers. HPI TO1 seeks to strengthen technical expertise, leadership abilities, and program management skills of women working to prevent spread and mitigate effects of HIV. This responds to need for greater and more meaningful involvement of women in designing and guiding HIV and AIDS programs. Through their current programs, the national departments for Gender will help select women to participate in the program who are from civil society, religious, and government bodies and are involved in or manage HIV programs. Women’s leadership courses will help improve focus, ensure accountability, and increase reach of HIV programs by incorporating strategies that are gender sensitive.

D. DPSA and Government Departments. In partnership with DPSA, HPI TO1 will assist 30 departments to plan, develop, implement, and maintain HIV workplace policies and programs within human rights and gender framework. DPSA has mandate of instituting, strengthening, and upholding effective and efficient human resource practices in all government departments in nine provinces. Heads of Departments will oversee development and implementation of HIV workplace policies and programs. Heads of Departments follow the "Managing HIV and AIDS in the Workplace: A Guide for Government Departments,” which provides guidance on Minimum Standards on HIV and AIDS. HPI will work with DPSA to develop and

Activity Narrative: improve existing guides and monitoring tools to strengthen HIV & AIDS programs in public sector workplace.

ACTIVITY 2: Stigma Mitigation
SD has had a negative impact on HIV prevention in SA and has affected efforts to improve care and support for PLHIV. This has been exacerbated by lack of concepts and theoretical tools to understand and measure SD and their impact. Through ongoing implementation of Siyam'kela Project, capacity building for PLHIV organizations and families was done to advocate for stigma mitigation. With FY 2008 funds, the activities will focus on providing training to PLHIV organizations and their members at provincial levels on SD mitigation using the National Stigma Framework (NSF). Training will take place in all nine provinces of SA and through NDOH's HIV, AIDS, STI and TB directorate - Care and Support Unit; selection will take place to ensure departmental representation of all provinces. Representatives of PLHIV networks in different provinces will be included. Training and subsequent follow up will focus on implementation of NSF and sector plans to reduce HIV-related stigma. Through NDOH sector plans resources have been allocated for M&E of activities related to SD in provincial health departments. HPI TO1 will work with 405 representatives from NGOs, PLHIV groups and provincial health departments. HPI TO1 will provide TA to the HIV, AIDS, STI and TB directorate - Care and Support Unit to ensure implementation of their stigma plans. Evaluation will be conducted to report on progress and implementation of NSF.

ACTIVITY 3: Civil Society Organizational and Institutional Capacity Development
The SA Government's AIDS Action Plan spearheaded a national capacity-building process for the interfaith sector, in collaboration with POLICY Project which resulted in establishment of an interfaith program, FBOs in HIV/AIDS Partnership (FOHAP), in 2002. As a continuation of assistance started in 2007, HPI TO1 will provide institutional capacity building to two national FBOs, the National Baptist Church of Southern Africa in Crossroads and an African traditional FBO such as the Zion Christian Church or the Shembe, as well as three NGOs in three provinces which have been identified by the NDOH as key outlets in high prevalence areas for support to strengthen their capacity to: 1) develop strategic plans for program implementation; 2) provide institutional capacity building by facilitating governance and organizational development workshops to respond to the need for designing and implementing HIV prevention programs; and 3) build capacity of TB organizations to enable them to integrate HIV activities into their work. HPI TO1 is engaged with the three organizations providing TB outreach under the palliative care section. These activities will result in stronger TB/HIV technical programming and operations for the organization. HPI TO1 will provide institutional capacity building to 5 organizations and 180 staff for COP FY 2008.

Budget Code:	OHPS	**Program Area Code:**	14
Activity ID:	16853.08	**Planned Funds:**	$0
Activity System ID:	16853		

Activity Narrative: SUMMARY:

Using FY 2008 funds from the New Partners Initiative (NPI), Genesis Trust, in close collaboration with Two Tunics, will implement a series of technical assistance and associated training activities to address the gaps in monitoring and evaluation and strategic planning among the organizations comprising the The Ugu AIDS Alliance. The Alliance recognizes the importance of system strengthening and strategic information, especially as they relate to increasing the capacity to generate and manage the information needed to improve HIV and AIDS programming and to document progress toward achieving goals and objectives. The overall emphasis in this section of the Genesis Trust FY 2008 COP is on developing systems to ensure long -term sustainability. Realizing the need for all organizations in the alliance to be strengthened to be able to sustain the activities beyond the period of the PEPFAR Grant, these functions were designed into the project under the leadership and direction of the partner Two Tunics.

BACKGROUND:

Genesis Trust represents one of five non-profit organizations that have joined together to address the HIV and AIDS epidemic and the underlying issues of poverty, health and social inequalities in the Ugu District of KwaZulu-Natal. The other organizations are Positive Ray, Rehobeth, Child Welfare, SA (Port Shepstone), and Two Tunics. Taken as a whole these five organizations comprise the Ugu AIDS Alliance (UAA). UAA is committed to create an integrated, holistic continuum of care for people in the Ugu District infected and affected by HIV and AIDS. An important goal of the UAA is to share resources and expertise to enable all partners to ensure long term organizational sustainability. Thus system strengthening and strategic information are viewed by Genesis Trust as essential components in the design and planning of HIV and AIDS activities and in their continual adjustment based on monitoring and evaluation.

It is important to note here the role of Two Tunics with respect to Genesis Trust in particular and the Ugu AIDS Alliance more generally. Two Tunics will provide the leadership and direction for system strengthening and strategic information by liaising with the other sub partners, monitoring and evaluating partner work plan implementation, coordinating quarterly progress reviews and documenting review outcomes, and preparation of required results reporting to USG/South Africa.

As a part of its capacity-strengthening program Two Tunics (TT) will supply the Genesis Care Centre with a consultant Medical Superintendent (estimated half-time position) for the duration of the grant. This function will assist Genesis with a comprehensive review and updating of policies and procedures related to palliative care. This will ensure that PEPFAR and Government of South Africa standards and best practices are incorporated and implemented in a timely and efficient manner.

ACTIVITIES AND EXPECTED RESULTS:

Genesis Trust will use FY 2008 funds to implement a set of system strengthening and strategic information activities that can be broadly categorized into an activity focused on the collection and management and use of data, another activity focused on organizational development for sustainability, and a final activity focused on the improvement of HIV and AIDS service delivery. These activities are outlined below.

ACTIVITY 1:

Genesis Trust will work closely with Two Tunics. The goals of this component of the project are to improve the capacity of UAA partners to collect, analyze, disseminate and use HIV-related data for effective program monitoring and evaluation. The emphasis here will be on further enhancing existing systems of data management and on improving the quality of data that are generated. The overall goal of this activity is to through improved HIV/AIDS surveillance, health management information systems and M&E, ensure that Genesis Trust has the capacity to generate and manage quality data and that M&E personnel together with Program Managers use these data for routine program monitoring and evaluation.

ACTIVITY 2:

In conjunction with Two Tunics Genesis Trust will implement a program of technical assistance and trainings for the purpose of enhancing the long-term sustainability of UAA partners through capacity building in areas of strategic planning, resource mobilization, financial management, human resource management and commodities, equipment and logistics management.

ACTIVITY 3:

The third activity is designed to improve all aspects of prevention and palliative care services through technical assistance in clinical aspects of HIV/AIDS care and education.

The technical assistance built into the Genesis Trust program also refers to training activities that strengthen HIV/AIDS surveillance and M&E. Work will be done with each of the partner organizations to develop M&E models, improve on methods and tools for collecting, analyzing, disseminating and using data, improving information systems, improving program monitoring, conducting program evaluations, monitoring and disseminating best practices to improve program efficiency and effectiveness.

Activity Narrative: Summary
The University of Western Cape (UWC) is implementing multiple activities aimed at improving human capacity development to address HIV and AIDS in South Africa.

BACKGROUND
The 2004 report of the Joint Learning Initiative on health human resources states that “after a century of most spectacular health advances in human history, Human survival gains are being lost because of feeble national health systems. The HIV and AIDS emergency has undoubtedly contributed to this problem, particularly in South Africa. The pressure on health care workers is immense and with the crisis of attrition and out-migration of personnel, systems in South Africa are challenged as never before. This has been placed in stark relief by the urgent need to respond to HIV and AIDS epidemic, and especially the current imperative to deliver antiretroviral therapy (ART) to large numbers of sick people who are often living in areas where health systems have been poorly developed. This project focuses on strengthening and expanding the development and implementation of comprehensive HIV and AIDS prevention in South Africa in order to mitigate the impact of the HIV and AIDS epidemic. The emphasis area for these activities is human capacity development, training, including pre-service and in-service training. The minor emphasis area is local organization capacity building. Target populations include public and private sector health care workers including human resource managers and HIV program managers.

ACTIVITIES AND EXPECTED RESULTS:
HIV and AIDS require a comprehensive approach with a view beyond the health system. Consistent with this approach, the activities in this program area demonstrate a multi sectoral approach to targeting a variety of health professionals. There are two separate activities in the program area.

Activity 1: Provide management and leadership training for new HIV program managers and human resources managers at the provincial and district level:
This activity aims to strengthen the overall capacity of both human resource managers and HIV project managers to deal with the ever-increasing challenges faced in their workplace through the provision of a leadership and management training program. The goal of the project is to improve the skills, knowledge and competencies of new HIV project managers and human resource managers so that they may be better equipped to deal with the challenges in their work. The objectives of the project are to provide a training program that would aim to introduce participants to the concept of “self-management”; provide participants with an understanding and overview of the management functions of planning, organizing, and leading; familiarize managers with the concept of innovation and allow them to apply creativity techniques so that managers may be able to lead projects to meet new innovative ideas and introduce problem solving and decision making processes and techniques applicable to their work environment. In this activity a training curriculum approved for continuing education credit through the UWC Division of Lifelong Learning will be implemented. Twenty new HIV project managers will be trained in public service leadership and management and ten human resource managers at the provincial and district level will be trained in public service leadership and management.

Activity 2: Human Resources Information System
UWC’s current work with the NDOH has initiated a process of conducting a human resource information audit in South Africa and developing a framework of national indicators for human resource management, development and planning. This activity will take this process to the next level by developing a district based human resource information system (HRIS) for general human resources information, with a specific focus on HRIS requirements for HIV and AIDS program delivery. Planning and managing programs is often hampered by the unavailability of reliable human resource information. Yet, developing good health program information system is a labor intensive and time consuming process and the staff that operates them must be trained and supported. The aim of the project is to improve the quality of healt care provided through developing a sustainable, decentralized capacity to operate and maintain integrated district based HRIS, as well as increasing the use of information by health care providers. This activity will develop a framework for district-based HRIS for the management and planning of human resources and will also develop a training program fro the data collectors and information users on the development and use of human resource information. In addition, a group of data collectors and information users will be trained on the district based HRIS for piloting.

These activities contribute to the PEPFAR goals by training HIV program manager and developing a district based HRIS. This will lead to improved human capacity development for the implementation of HIV and AIDS services

Activity ID:	3033.08	**Planned Funds:**	$776,000
Activity System ID:	14034		

Activity Narrative: SUMMARY:

In FY 2008, NASTAD will continue to support government-to-government twinning relationships between four South African provincial Departments of Health AIDS Directorates and five U.S. state health department AIDS programs, resulting in bi-directional exchange of expertise and improved capacity of provincial health systems. The primary emphasis areas for the activity are local organization capacity building and human resource strengthening with secondary emphasis on community mobilization, linkages with other sectors and initiatives, and policy and guidelines. The activity targets persons living with HIV (PLHIV), policy-makers, teachers, public health workers, and faith-based organizations (FBOs).

BACKGROUND:

NASTAD is a U.S. non-governmental organization (NGO) with a membership of U.S. state health department AIDS program directors whose positions are analogous in program responsibility to provincial AIDS Directors in South Africa. NASTAD utilizes state AIDS program directors and their staff to engage in twinning relationships with South African provincial and district staff, providing peer-based technical assistance to increase program capacity.

ACTIVITIES AND EXPECTED RESULTS:

In FY 2008, NASTAD and its partners will (1) maintain the existing four health department twinning relationships; (2) add a fifth twinning relationship with Mpumalanga; and (3) enhance the network, linkages, and referral capacity of the provincial health departments by promoting twinning relationships between U.S. state and South African provincial academic centers and NGOs.

ACTIVITY 1: Capacity Building

Human resources are the backbone to the organizational structures, institutional arrangements and strategies existing in South Africa. NASTAD will build capacity in leadership, strategic management and program management in the areas of logistic and supply, finance, information management, collaboration and partnership development, behavior change, community participation and NGO management. Provincial DOHs require strong, dynamic HIV program leadership and well-trained program managers at the national and district levels. Conditions and resources vary significantly among provinces. NASTAD will focus on core content, skills and competencies that should underlie all programs NASTAD will enhance the twinning relationships with its current provincial partners in South Africa utilizing an HIV leadership model to enhance capacity at the provincial level. In addition, NASTAD will work with the provincial AIDS Directorate in Northern Cape Province to continue providing peer education training to incarcerated populations in the province and work with religious leaders to foster closer collaboration with the province.

ACTIVITY 2: Support of MANEPHA (Network of People Living with HIV and AIDS) - sustained growth in Eastern Cape, and replication in Free State, Mpumalanga and Northern Cape.

NASTAD will continue to support and strengthen PLHIV advocacy groups with the following activities: 1) support regular meetings of MANEPHA leadership structures (provincial network committee, coordinating structure, health advocates, and district network committee); 2) organize the provincial summit to be held in April 2008 that will include government and PLHIV representatives from across the Eastern Cape; 3) provide introductory leadership and advocacy training for newly identified PLHIV leaders in all the provinces; 4) provide capacity building sessions to strengthen existing leadership in the network, further develop organizational functioning and develop skills and knowledge of network members; 5) increase outreach at the District and Local Service Area (LSA) level targeted at reducing stigma, mobilizing communities, and education about HIV-related services; and 6) further integrate MANEPHA activities into those of the Provincial and District AIDS Councils.

In FY 2008 NASTAD will explore a potential relationship with the South African Institute for Health Care Managers (SAIHCM). NASTAD is based in Washington, DC and is a member organization of U.S. state health department HIV/AIDS directors. SAIHCM is a local professional association and alumni service to the HIV and AIDS managers who participate in the PEPFAR-funded management development programs offered by the Foundation for Professional Development (FPD). The activities would include an alumni service, management and leadership development at centers, work place peer support systems and mentorship. The target for this population is current district health system managers and students undergoing pre-service training in this area. The program would improve effective and efficient delivery of HIV/AIDS treatment and care through management development capacity building.

Strengthening HIV programming leadership at provincial and district level and the development of advocacy, leadership and networking skills of people living with HIV (PLHIV) will assist in meeting PEPFAR's strategic plans for HCD and 2-7-10 goals.

Activity Narrative: SUMMARY:

Through the Center for the Support of Peer Education (CSPE), the Harvard School of Public Health (HSPH) contributes to PEPFAR prevention (AB and Other), OVC, and system/capacity building goals by providing training, technical assistance, and materials development to government, NGOs, FBOs, corporate, and other organizations using peer education strategies. CSPE is the linchpin of an unprecedented sustainable, intersectoral national system delivering rigorous peer education in schools, FBOs and CBOs, clinics, sport and recreation programs, higher education, and public and private sector workplaces. The major emphasis area is training; minor emphasis areas are local organization capacity development and policy and guidelines. The target populations are girls and boys, primary and secondary students, out-of-school youth, adults, orphans and vulnerable children, HIV and AIDS affected families, the community, policy makers, and CBOs, FBOs, NGOs and other implementing organizations.

BACKGROUND:

This project is an expansion and institutionalization of a five-year national consultative process developing consensus on goals, essential elements and standards of practice for peer education programs, and materials and tools in wide circulation to improve how peer education is conducted. Rutanang - meaning "teaching one another" -- peer education is consistently defined and implemented as including, among other characteristics, multiple-dose small-group structured and facilitated discussions; informal influence; recognition and referral of those with further needs (e.g., CT, OVC); and advocacy.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1:

CSPE is especially designed to build capacity among PEPFAR and non-PEPFAR partners through training and ongoing technical assistance and assists with the development and adaptation of educational materials, tools, policy guidelines, linkages and community mobilization, and strategic information. The Center will prepare and coordinate trainers (with accreditation process initiated) from a variety of sectors and geographic areas. The CSPE model for rigorous peer education involves the training of a strong supervisory structure (adults) who are responsible to support the teams of selected peer educator in a variety of settings and structures in the efforts to implement peer led time limited structured prevention sessions with youth or adults in work place settings. CSPE also provides TA to managers of peer education programs in their efforts to improve peer education within a systems approach. Partners will use evolving standardized monitoring and evaluation tools to collect and share comparable data on program activities and outcomes. All CSPE materials explicitly and intensively address the following: male norms and behaviors; reducing sexual violence and coercion; stigma reduction; and maintaining infected and affected children in school. By its very nature, peer education also explicitly promotes democratic leadership development. Peer education, as mentioned earlier, is consistently defined and implemented as including, among other characteristics, multiple-dose small-group structured and facilitated discussions; informal influence; recognition and referral of those with further needs (e.g., CT, OVC); and advocacy.

ACTIVITY 2:

CSPE will attempt to work with Learner Representative Councils and School Governing Bodies through the schools program to articulate and evaluate the extent to which peer education programs contribute to active participation in school governance. Peer education with adolescents and adults emphasizes delaying sexual debut, secondary abstinence, and reduction in concurrent partners. Peer education also is a means for early identification and referral to services of vulnerable children and youth, and CSPE is pursuing strategies that enhance peer education as an advocacy tool to make environments safer. Each of the foregoing content themes is explicitly addressed in design of peer education support systems, training of peer educators, and content peer educators are trained to deliver.

The CSPE initiative strengthens an essential strategy currently used across South Africa, and indeed, across the world, with little rigor and evaluation. A key CSPE goal is South African Qualification Authority (SAQA) and other accreditation for programs, peer educator trainers and supervisors, and peer educators themselves. CSPE policy and system strengthening activities also feature education of multisectoral policymaking bodies, including National and Provincial Infectious Diseases Advisory Committees, unions, and the business community.

ACTIVITY 3:

CSPE will also develop, refine, and implement standardized monitoring and evaluation (M&E) tools and develop a database on peer education activities conducted by its partners. An annual conference of peer education evaluators and researchers will be part of its ongoing program; the seeds for this collegial approach to peer education measurement have been thoroughly sown in years of consensus-building and networking. Additionally, expert peer educators and supervisors will convene at least once a year to develop new tools and materials as needs are identified by practitioners in the field or researchers around the world. An integral part of systems/capacity building is dissemination through training and technical assistance, articles and publicity of our models and materials for psychosocial support of OVC and for workplace programs in public and private sectors, especially components that focus on motivating and equipping workers who are parents and guardians to engage in early and useful discussion and limit-setting with children/teens on norms of abstinence and delay of sexual debut.

In addition to contributing to PEPFAR annual and cumulative targets, long-term results of the HSPH project will be the establishment of a sustainable integrated system supporting rigorous, measurable peer education that increases the amount and quality of social interactions and skills acquisition concerning norms, traditions, and behaviors that will help reduce the transmission of HIV.

Table 3.3.14: Activities by Funding Mechansim

Mechanism ID: 2809.08

Mechanism: Twinning Project

Prime Partner: American International Health Alliance

USG Agency: HHS/Health Resources Services Administration

Funding Source: GHCS (State)

Program Area: Other/Policy Analysis and System Strengthening

Budget Code: OHPS

Program Area Code: 14

Activity ID: 7928.08

Planned Funds: $780,000

Activity System ID: 13382

Activity Narrative: SUMMARY:

The American International Health Alliance (AIHA) will conduct activities to support strengthening national and organizational policies and systems to address human resource capacity development through two major activities: twinning and volunteers. The first twinning activity is a partnership to develop nurse case manager systems in four selected ARV sites located in Gauteng province. The second twinning activity is building capacity for TB/HIV integration policy, program, and training. The volunteer activity will result in placing public health specialists in primary healthcare clinics in Gauteng province to help develop those clinics' capacities to deliver high-quality HIV care. The primary emphasis areas for the twinning and volunteer activities is local organization capacity development and the minor emphasis areas are training, human resources, and quality assurance, quality improvement and supportive supervision. The specific target populations for these activities are public and private healthcare providers and host country government policy makers.

BACKGROUND:

The two twinning partnerships continue and build upon activities that began in July 2007, through an existing collaborative relationship between FPD and AIHA and our experience in HIV/TB management, which developed during a Twinning Center-facilitated partnership between FPD and Brits District Hospital cross reference. The twinning activities are implemented through a sub-grant to either one or both partners, with partnership development, management and evaluation provided by the Twinning Center. The Twinning Center South Africa Regional Office will manage, monitor and evaluate the volunteer activities.

ACTIVITIES AND EXPECTED RESULTS:

Three activities will take place as a result of this partnership:

ACTIVITY 1: TB/HIV

Building on the accomplishments of the partnership in FY 2007, AIHA will support scaling up opportunities in TB/HIV, focusing on the development of a model TB/HIV Center to be housed at a TBD university in South Africa, such as the University of Free State, with technical assistance from local TB/HIV research centers such as CHSR&D, with the goal to support the South African National Department of Health (NDOH) and provincial DOHs with various training and capacity building activities. The US partner will work with South African stakeholders from the university, national and provincial DOH, and other identified stakeholders to asses the feasibility of implementing a model center(s), using experts from US TB/HIV centers as technical consultants, and determine the needs and priority areas for the partnership. It is anticipated that this will result in a proposal outlining the steps necessary for the development and management of a model TB/HIV center. Included in this assessment will likely be feasibility studies, exchanges, identification of center goals, recommendations regarding center management and staffing, and identification of collaborative funding opportunities The partnership will also create links between model TB and HIV centers in the US, particularly the Regional Tuberculosis Training and Medical Consultation Centers regions of the US, and the regional AIDS Education and Treatment Centers in order to develop the centers' programs, which may include clinical training, mentoring and medical consultation (programs to be defined based on needs assessment. Linking South African universities with experience in the social science aspect of TB with model TB and HIV Centers in the US, which are more focused in the provision of clinical services and training, will provide this partnership with the necessary resources and technical assistance for the development of a model National TB/HIV Center.

ACTIVITY 2: Nurse Case Management

The second twinning partnership is between University of California-San Francisco School of Nursing and FPD. The aim of this partnership is to develop nursing case management systems in four selected clinics, and this will garner support for this approach within the nursing profession.

The objectives of this partnership are:
1. Train a cadre of nurses, nurse leaders, nurse educators and key clinic management personnel from selected clinics, associations, and schools in HIV nursing case management;
2. Implement HIV nursing case management in selected ARV clinics identified by FPD and USG;
3. Create organizational and management support for nursing case management systems;
4. Implement a training/mentoring model of "nurses supporting nurses" to institute and support HIV nursing case management and to expand the model to additional clinics/down referral sites; and
5. Develop an HIV Nursing Case Management Module to use for in-service training of nurses and hospital and clinic management personnel.

These twinning activities support effective and efficient case management in selected clinics, and training on nursing case management is incorporated into in-service/continuing education course offerings. Both of these outputs contribute to improved quality of HIV care by South African nurses. In the first year of the partnership, it is developing and implementing a training/mentoring model of "nurses supporting nurses", focusing on HIV-nursing case management, that will reach about 30 nurses. In the second year, the partnership will expand the model to additional clinics/down referral sites, training about 80 nurses. In addition, the HIV Nursing Case Management Module for in-service training for nurses and hospital/clinic management personnel, piloted in the first year, will be expanded in FY 2008. As a result, effective and efficient case management will be cascaded to other clinics and the HIV Nursing Case Management Module will be added to in-service/continuing education course offerings to reach a wider nurse audience.

ACTIVITY 3: Volunteer Health Care Corps

The Twinning Center will place up to six public health specialists (physicians and nurses) for up to three months in selected primary care clinics in Gauteng province. This activity complements the current volunteer recruitment and placement activities in KwaZulu-Natal, North West, Northern Cape and Mpumalanga. Depending on the capacity and needs at the identified sites, volunteers will be assigned to work in just one clinic for the entire time, or to rotate between clinics in a designated area. The volunteers are expected to support at least five health professionals per site. The volunteers will quickly determine the

Activity Narrative: training and systems management gaps at the clinics and help find solutions to fill the gaps, provide training and ongoing mentoring to staff, help to cement relationships between the hospitals and the down-referral sites, ensure that supplies and systems are in place to handle an increased patient load, and provide encouragement and support to clinic staff. The volunteer activities are expected to increase the knowledge and expand the skills of health-care professionals in primary care clinics who deliver HIV services. The volunteer activities will contribute to the implementation of functional down-referral systems. It is also expected that the volunteers will continue to provide technical assistance, via electronic and telephone communication, to their host clinics after their return to the U.S.

Budget Code: OHPS

Program Area Code: 14

Activity ID: 3012.08

Planned Funds: $25,000

Activity System ID: 13762

Activity Narrative: SUMMARY:

Dira Sengwe will provide support for the 4th South African AIDS Conference in April 2009. The conference will bring together scientists, government health workers, and religious, private sector, and civil society leaders to promote a dialogue among all partners involved in HIV and AIDS throughout South Africa. Emphasis areas include the development of network/linkages/referral systems, infrastructure, and local organization capacity development. Host country government workers, public and private health care providers, USG staff and local groups and organizations are key target groups.

BACKGROUND:

Dira Sengwe has used PEPFAR funds to support the 2nd and 3rd South African AIDS Conferences. As part of this financial support, the USG PEPFAR Task Force has been allocated a satellite session before the meeting and a half-day session during the conference, which generated substantial and favorable publicity for PEPFAR in South Africa. FY 2008 funds will be obligated during FY 2008 to support the planning and implementation of the June 2009 meeting.

ACTIVITIES AND EXPECTED RESULTS:

In addition to supporting this national meeting, sponsors are also invited to convene satellite sessions before the conference officially begins and are provided space for a series of workshops or symposia during the conference. The conference will provide an opportunity to examine the achievements and challenges in providing effective and efficient HIV prevention, care, and treatment services and assist in developing a future direction for the national response to HIV. Dira Sengwe estimates that 300 organizations will attend the conference.

The conference will contribute to the five-year strategic plan for South Africa and the overall PEPFAR objectives by strengthening information and the knowledge base of healthcare providers throughout the country of ongoing efforts, lessons learned, and future directions.

Activity ID: 7950.08

Planned Funds: $500,000

Activity System ID: 13756

Activity Narrative: SUMMARY:

Nurses SOAR! (formerly known as the Global HIV and AIDS Nursing Capacity Building Program), is an ongoing three year program to strengthen the leadership, education and clinical capacity of nurses to provide HIV and AIDS services to those infected, or affected by, HIV and AIDS. Nurses SOAR! works in close partnership with Ministries of Health and other stakeholders and PEPFAR in-country teams. The program is currently active in South Africa and Lesotho. Scale-up to Swaziland is expected in FY 2008.

BACKGROUND:

Needs assessments during FY 2007 in South Africa with in-country nurses, other stakeholders and partners strongly directed this program to initially focus its work in KwaZulu-Natal (KZN) province. Additionally, the need for nursing curricula and national standards for South African nurses caring for persons with HIV and AIDS led to initiating collaborative activities with the South African Nursing Council (SANC), the Universities of KZN and Zululand, and in-country/region organizations (some PEPFAR supported). Nurses SOAR! is active with national partners (such as the SA-based Foundation for Professional Development - FPD, and SADC AIDS Network of Nurses and Midwives – SANNAM). The Anglican Diocese of Johannesburg has engaged Nurses SOAR! to capacity build for VCT and ARV delivery; these activities will maximize collaboration with PEPFAR partners and provide opportunities for Nurses SOAR! to scale-up nationally. During FY 2008 and 2009, Nurses SOAR! will continue to build capacity within national nursing entities while strengthening regional nurse capacity in KZN, Lesotho and Swaziland.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Needs Assessment

After permission to be active in-country was gained in January 2007, a comprehensive needs assessment of the capacity to provide HIV and AIDS nursing leadership, clinical care, and education was the initial activity completed at each selected site. These data provided specific priorities for HIV and AIDS nursing capacity building activities (at pre-service and in-service levels) to improve the HIV and AIDS prevention, care, and treatment for South Africans. During FY 2007, 10 nurse faculty, 10 nurse managers, 50 clinical nurses and approximately 30 other stakeholders (e.g., SANC leaders) were engaged in the process (over 20 organizations involved). In FY 2008 and FY 2009, needs assessment data will be collected at each additional program site to guide training plan development. Activities 2 and 3 address the findings of the needs assessment.

ACTIVITY 2: Capacity Development by Systems Strengthening

This activity consists of four components:

i) Leadership activities have been designed to develop a critical mass of nurse leaders who can provide leadership in the AIDS pandemic and bring voice to the profession that highlights the nursing contributions to the African response. The program mentors a cadre of nurses committed to HIV and AIDS care, developing and implementing individualized plans for professional leadership development. Activities focus on communication, policy development, and strategic planning for the delivery of HIV and AIDS services (improving outcomes of care at the local, national, and regional levels). Nurses SOAR! engaged others working in this area (see activity 3). Currently, Nurses SOAR! is working with 20 nurses at all professional levels. In FY 2008, the cadre will increase to approximately 40 nurses, and in
FY 2009, to approximately 70 nurse leaders.
ii) Education: this component a) enhances efforts to integrate HIV and AIDS educational content into the local and national nursing curricula; and b) builds the HIV and AIDS knowledge base of clinical nurses and nurse tutors building on prior activities by partners (e.g. Foundation for Professional Development – FPD). Activities included a) didactic HIV/AIDS trainings; b) inserting HIV and AIDS content into nursing curricula, classroom instruction, and clinical education (at colleges and universities); c) collaborating with the SANC to integrate nursing standards into pre-service training and post basic education in HIV and AIDS prevention, care, and treatment. In FY 2007, approximately 150 nurses or nurses in training received such support. In FY 2008, this will increase to 400, and Nurses SOAR will support the scholarly development of nursing faculty to increase their contribution to the South African HIV and AIDS literature. South African nursing faculty expressed a need for support in conducting their research. Finally, great interest was shown by the SANC to incorporate HIV and AIDS into the national curricula. However, due to managerial changes at the Council, efforts have been slowed. Efforts will be made in FY 2008 to accelerate the integration of HIV and AIDS content into pre-service education, and in FY 2009 to consider the development of a post-basic education for primary care nurses and effective evaluation of nurse competencies.
iii) Mentoring: Nurses SOAR! utilized clinical nurse experts from Southern Africa and North America to serve as mentors that provided targeted on-site clinical precepting. Nurses, nurse tutors and the nurse tutor/student dyad were mentored in the application of didactic knowledge to real life clinical settings to improve delivery and outcomes of nursing care. Activities included working one-on-one with the clinical nurses and the nurse tutors/dyads in their work settings. In FY 2007, approximately 20 nurses were mentored. In FY 2008 and FY 2009, the number of nurses engaged in the program will significantly increase.
iv) Nurse Retention: Nurses SOAR! also focused on building nursing capacity by addressing the health and well-being of current and future nurses. Activities included reducing nurse morbidity from exposure to AIDS-related multiple loss and grief by conducting uniquely designed Loss & Grief retreats. Local religious and spiritual leaders were engaged to build a sustainable program to address the continued burden of grief and multiple loss issues of nurses that contributes to nurse burnout and migration. The program also supports HIV-infected nurses to encourage their access to appropriate support, care and treatment. Maintaining the health and wellbeing of nurses requires the reduction of stigma and establishing a confidential support system. Nurses SOAR! has engaged 29 nurses in the Loss & Grief program; it is expected that 150 nurses will participate in FY 2008 and 250 nurses in FY 2009.

ACTIVITY 3: Capacity Development by Partnership and Network Development

The Program facilitates partnerships, collaborative systems, networks, and resources that build and sustain a nursing workforce to meet the increasing need for nurses to deliver quality HIV and AIDS prevention,

Activity Narrative: care, and treatment services. The Georgetown team, and its partners the US Association of Nurses in AIDS Care (ANAC) and the University of Incarnate Word (UIW), collaborate with key stakeholders such as SANC, SANNAM, the Universities of KZN and Zululand, and other partners currently working in nurse development such FPD. These relationships assure that the Nurses SOAR! Program is an 'additive' program, filling high-priority gaps in nurse capacity building and strengthening networks by a) facilitating the creation of a professional network of nurses who deliver HIV and AIDS services; b) establishing a train-the-trainer (TOT) network to provide on-going HIV and AIDS clinical mentoring for all levels of nursing; c) fostering focused professional development and d) facilitating collegial relationships between nurse leaders, clinicians, educators, and nurse mentors to enhance the quality of HIV and AIDS care.

FY 2008 COP activities will be expanded to include: down referral clinical sites that feed into the St Mary's Hospital site (Mariannhill); nurse training support to the nurses delivering HIV and AIDS prevention, care, and treatment services in the Mtubatuba rural area in KZN and in northern KZN (partner: Catholic Medical Mission Board); nurse training support to the nurses delivering HIV and AIDS prevention, care, and treatment services in Johannesburg (partner: the Anglican Bishop of Johannesburg); nursing association technical assistance services for South African professional nurses; building academic capacity building with nurse educators at the University of KZN to integrate HIV and AIDS content into graduate curricula, increase HIV and AIDS nursing research, and disseminate HIV and AIDS data; extending nurse leadership skills building to a second cadre of nurse leaders; increasing the caregiver support for HIV-infected nurses; and extending the clinical mentoring to develop nurse experts in palliative care, pediatric HIV and AIDS, and midwifery (including prevention of mother to child transmission).

Prevention: Although the program's main technical area is not 'prevention', its work very closely supports and facilitates increased prevention activities. The main prevention areas currently addressed are a) the occupational transmission of HIV in the clinical setting; b) the upgrading of tutors' knowledge, nursing curricula and effective teaching methods to assure that students integrate HIV prevention messages into their clinical practice and c) an emphasis of the role of all nurses in reinforcing prevention messages for vulnerable young adults (including tutor messages for nursing students).

Gender Issues: The Nurses SOAR! Program focuses on nurses, who are predominately female. The needs assessment data identified several training topics influenced by gender inequalities. Nurses requested training in empowering female nurses in professional interactions with male colleagues (e.g. usually female nurses and male physicians). They also requested strategies for including males in the "family-centered" provision of HIV and AIDS prevention, care and treatment services.

Mechanism: I-TECH

Prime Partner: University of Washington

USG Agency: HHS/Health Resources Services Administration

Funding Source: GHCS (State)

Budget Code: OHPS

Activity ID: 3335.08

Activity System ID: 13869

Program Area: Other/Policy Analysis and System Strengthening

Program Area Code: 14

Planned Funds: $1,370,000

Activity Narrative: SUMMARY:

I-TECH activities are currently carried out to support sustainability of HIV, AIDS, TB and STI care and treatment programming in the Eastern Cape (EC) province through four components: 1) establishing I-TECH field offices in South Africa (SA); 2) providing organizational development and human capacity building technical assistance (TA) up to three Regional Training Centers (RTC); 3) supporting the EC Department of Health (ECDOH) HIV and AIDS program; These activities are continued in FY 2008. The primary emphasis area for these activities is local organization capacity building. Strategic information and human capacity development are secondary emphasis areas. The primary target population is a non-governmental organization.

BACKGROUND:

I-TECH has been working in the EC since 2003 to develop the capacity of the RTC to train/mentor clinicians in the care and treatment of HIV, AIDS, TB and STI. The majority of activities described here (exceptions include expansion activities) were first funded between FY 2003 and FY 2007. I-TECH established an office in the EC beginning January 2007, is collaborating with other EC PEPFAR partners, and has/will conduct field assessments of TA needs with 16 EC PEPFAR partners to identify programmatic TA activities which could be supported by I-TECH. I-TECH is working in SA at the invitation of the ECDOH, and its activities are supported by the NDOH HIV/AIDS Directorate. All activities described under this program area with the exception of TA related to the development of clinical care information systems will be implemented by the primary partner. TA related to clinical care information systems will be implemented by the primary partner and its subcontractor, UCSD Owen Clinic.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Technical assistance to NDOH Human Resource Department (HRD) to develop Regional Training Centres (RTC) nationally

I-TECH as part of its HCD program will assist the National Department of Health HRD responsible for the establishment and monitoring of RTC in each province to develop policies and guidelines to strengthen provincial RTCs and improve the quality of HIV/AIDS/STI/TB (HAST) training programs. I-TECH will also work with the national department to develop tools to monitor the quality of services rendered by these RTCs, identify provincial RTCs in need of technical support and develop a plan of action to assist those identified.

ACTIVITY 2: TA to Mpumalanga RTC

I-TECH will assist the Mpumalanga and Limpopo RTC in:

-Developing policies and guidelines and a governance structure for the RTC.
-Develop capacity of RTC staff in developing assessment tools to assess training needs of health care providers in the province
-Develop the capacity of RTC staff in developing yearly HAST training plans for the province and conducting quarterly reviews of training and develop skills of RTC and district training staff to monitor quality of training programs
-Develop skills of RTC staff in curriculum development and integration of new national and international guidelines into existing curricula and seeking accreditation with SAQA
-Develop capacity of RTC staff to track, monitor and assess HAST training done by other NGO within the province
-Develop capacity of RTC and other district trainers to monitor quality of training and assessment of skills transfer.
-Develop facilitation skills of district trainers in Mpumalanga, Eastern Cape and Limpopo provinces
-Development and production of HAST training manuals for accredited training
-Purchase of teaching aids such as data projectors, lap tops, demonstration models and other visual aids to be used by the RTC to train health care workers

ACTIVITY 3. Development of training and facilitation skills of trainers

I-TECH will develop capacity of district and RTC trainers to ensure a pool of qualified trainers are available in each of these provinces (Mpumalanga, Eastern Cape and Limpopo) to continue developing capacity of health care workers. These training programs will utilize a variety of training techniques to ensure transfer of skills. These trainings will also include the techniques on assessing training programs. For this activity I-TECH will utilize the services of a local service provider accredited to conduct such trainings.

Activity 4. Prevention with Positives
I-Tech will develop capacity of trainers at the Regional Training Centre in 3 provinces (Mpumalanga, Eastern Cape and Limpopo Provinces) to integrate Prevention with Positive for PLHIV into the HIV and AIDS training curriculum and content material for both health care professionals and lay health care workers. This integrated curriculum will ensure that HIV and AIDS training programs are updated with messages and programs on Prevention with Positives

Activity 5
I-TECH will also train the trainers of all three RTCs on prevention with positives, develop their skills to impart these trainings to others and mentor them on conducting the actual training.
I-TECH will also assist the RTCs in developing and disseminating quick reference guides on Prevention with Positives to be used by health care providers and lay health care workers in all settings (i.e. facility, community and home based settings). These quick reference guides will serve as prompt tools for health care providers and lay health care workers.

Through development of capacity of RTC to increase the pool of competent health care workers to deliver quality HIV and AIDS services and thus increasing access to a much wider population in need of these services, I-TECH will contribute to reaching PEPFAR's 2-7-10 goals.

Program Area: Other/Policy Analysis and System Strengthening

Budget Code: OHPS

Program Area Code: 14

Activity ID: 13876.08

Planned Funds: $727,500

Activity System ID: 13876

Activity Narrative: SUMMARY:

Through introduction of quality assurance (QA) tools and approaches and practical work, University Research Co., LLC/Quality Assurance Project (URC/QAP) will train 600 staff members of PEPFAR partners to gain a better understanding of quality improvement and quality assurance tools and approaches. Emphasis will be put on practical application of the quality assurance and improvement concepts in HIV/AIDS care, support and treatment settings. The training will also look at quality improvement and how its links with overall system strengthening activities. The training will seek to improve the quality of PEPFAR programs in general and HIV and AIDS programs in particular.

The essential elements of QA include technical compliance with evidence-based norms and standards, interpersonal communication and counseling and increasing organizational efficiency. The major emphasis areas for this activity are QA and supportive supervision, with minor emphasis on development of networks, linkages, referral systems, training and needs assessment. The target populations include policy makers, public and private healthcare workers, community-based organizations (CBOs), and NGOs.

BACKGROUND:

This is a new activity, initiated at the request of the South African USAID mission and various PEPFAR partners. The Quality Assurance Project (URC/QAP) has been working with the National and provincial Departments of Health in South Africa since 2000 on improving the quality of health services. Over the years, URC/QAP has successfully tested various interventions for improving and assuring quality of healthcare services. Since 2004, URC/QAP has assisted DOH facility staff in five provinces in applying these same tools and approaches for improving the uptake and quality of HIV and AIDS services. Currently, URC/QAP is supporting HIV and AIDS programs in 120 healthcare facilities in five provinces as well as two community-based organizations. The use of QA/QI tools and approaches have helped facility teams in integrating services (HIV testing with antenatal care program, TB and HIV integration among others), enhancing quality (increasing compliance of healthcare workers with national guidelines and patients/caregivers with treatment regimens). This has resulted in increased uptake of services as well as improved treatment outcomes. URC/QAP has conducted a number of studies to evaluate the impact of the use of QA/QI models on various services (neonatal health, TB, etc. over the past two years). These studies have highlighted both improvements in patient outcomes as well as program sustainability.

In order to broaden the reach of the QA/QI model, which has been integrated within the South African Government DOH QA Program, many USG partners have requested QA/QI training to improve the quality of their respective HIV/AIDS prevention, care and treatment programs

ACTIVITIES AND EXPECTED RESULTS:

In FY 2008, URC/QAP has been requested to implement a QA training program for up to 600 staff members of 20 PEPFAR partners to improve the theoretical and practical understanding of quality improvement. These partners will be identified in consultation with USG. It is envisioned that this training will be designed for PEPFAR partners who work in public health facilities and who request the QA/QI training.

ACTIVITY 1: Identify PEPFAR Partners for Capacity Building

This activity was initiated at the request of the South African USAID mission and various PEPFAR partners. An assessment will be done to identify PEPFAR partners who work in public health facilities and who request the QA/QI training. URC/QAP will work with USG partners to identify who all should participate in the QA/QI training program.

ACTIVITY 2: Finalize training package

URC/QAP will conduct a rapid needs assessment of various partners for QA/QI training. Based on the assessment results, URC/QAP will design targeted training for various types of partners (clinic, community, faith-based etc.). The focus of training will reflect clinical or community-based interventions implemented by targeted partners. The training will include the following key elements:

-Basic QA/QI principles
-Integrating QA/QI in clinical settings
-Integrating QA/QI in community-based settings
-Monitoring quality of clinical and community-based services
-Tools for improving quality of services
-Plan-Do-Study-Act
-Story-boarding for dissemination of results

ACTIVITY 3: Conduct Training

URC/QAP will conduct training sessions for the PEPFAR partner staff. Each course will last 3 days in and will not include more than 30 participants. The training programs will be interactive and participants will use case studies for learning various QA/QI tools. URC/QAP training will also facilitate linkages between different organizations by emphasizing training and compliance of facility staff with national guidelines and implementing quality improvement plans including process re-design, integration of services, and enhancement of network development with CBOs to improve referral patterns. URC/QAP staff will emphasize the strengthening of referral networks and URC/QAP staff will demonstrate that promoting integration of services at the facility level ensures the development of links between services such as sexually transmitted infections, family planning and VCT, promoting holistic care. It is envisaged this will serve to identify and strengthen existing networks; highlight gaps in the quality of services provided; and provide information about the feasibility of incorporating relatively rapid QA approaches into ongoing routine health care programs.

ACTIVITY 4: Follow-up Support

URC/QAP will assist the partner staff to develop a strategic plan for improving the quality of specific HIV

Activity Narrative: and AIDS services. Interventions will include: (1) use of QA tools to improve compliance with national and provincial guidelines; (2) re-design of clinical processes to improve patient flow and service times; and (3) train QI teams to analyze their performance and compliance in relation to standard indicators. URC/QAP will at least visit each partner organization once or twice in a year to provide hands on TA in improving the quality of services. All partner staff supporting specific HIV and AIDS programs will be capacitated to ensure that programs are in compliance with the national guidelines and to assess compliance with quality assurance standards and other key performance indicators. URC/QAP will also be involved in training district and facility-level supervisors in QA methods and development of supervision techniques to improve the sustainability of QA within HIV and AIDS programs The training will be done in collaboration with NDOH staff, to ensure accountability and long-term sustainability of the program URC/QAP staff will also capacitate organizations to train other members of staff with their "train-the-trainer" program, where at least 2 members of each organization will be invited to attend an extended QA/QI training workshop. This will ensure transfer of skills & capacity building of local organizations.

URC/QAP will contribute to 2-7-10 PEPFAR goals by providing care services to 10 million. The activities also support the USG strategy for South Africa by collaborating closely with the DOH to improve access to and improve the quality of basic care and support.

Table 3.3.14: Activities by Funding Mechansim

Mechanism ID: 274.08 **Mechanism:** Masibambisane 1

Prime Partner: South African Military Health Service **USG Agency:** Department of Defense

Funding Source: GHCS (State)

Program Area: Other/Policy Analysis and System Strengthening

Budget Code: OHPS

Program Area Code: 14

Activity ID: 7916.08

Planned Funds: $50,000

Activity System ID: 13830

Activity Narrative: SUMMARY:

The main components of this program area are planning and coordinating workshops for all the relevant role players, and building the capacity of those role players to strengthen this program. Most of the training provided within the South African Department of Defense (SA DOD) HIV and AIDS Training program has been developed internally by utilizing the knowledge and skills of members in the organization. Training development workshops are now needed to update training content. The major emphasis areas of these activities are policy and guidelines and training. The target population is public healthcare workers.

BACKGROUND:

The Masibambisane program was established in 2001, and has received PEPFAR funding from FY 2004. It is an integrated prevention, care and treatment program in the SADOD, addressing the management of HIV and AIDS within the Department by interventions that target SADOD personnel and their dependants. The prevention programs include mass awareness; workplace programs with condom distribution through condom containers in military units and sickbays (container supplies monitored by workplace managers); information, education and training; gender equity and substance abuse programs delivered by social workers, psychologists, occupational therapists, peers and peer educators. The program uses communication and education through a wide range of media such as pamphlets, posters, industrial theater (dramatic plays that address coping with stigma and discrimination in the workplace) and videos.
The funding allowed the program to expand and to address program elements that were not possible before. The program currently consists of seven generic disease processes each with various projects and sub-projects, namely: prevention, promotion, diagnostics, treatment, rehabilitation, palliative care, research and development. These are managed by the HIV and AIDS management structure in the office of the Surgeon General with the Director HIV and AIDS, advisory board, coordinating committee and regional program managers in each province and each military hospital. The SA DOD HIV and AIDS Management Structure that facilitate program development, planning, execution, monitoring and evaluation. As the program expands, various additional role players (new personnel that are coming onto the program, e.g. doctors, nurses, psychologists, social workers, and nurses) become involved that need to be provided with induction training, and existing role players need to be provided with strategic guidance towards comprehensive planning and effective coordination to ensure an integrated approach to HIV an AIDS management in the SA DOD. This is done through workshops and training.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1:

SA DOD will conduct training for regional and national SA DOD HIV coordinators and sub-program and project coordinators in the strategic objectives of the program. This training will consist of a workshop that reviews the results of the Knowledge, Attitude, and Practices (KAP) study and discusses strengths and weaknesses of the program to help plan for the following year's activities.

ACTIVITY 2:

SA DOD will conduct strategic and operational planning work sessions to ensure integrated program development and coordinated execution of program elements (e.g. PEPFAR M&E training which members of SA DOD attend and then cascade to other regional coordinators). These work sessions will be led by the Monitoring and Evaluation (M&E) Director at South Africa Military Health Services. Representatives from all provinces that collect data will be invited to participate. The sessions will address strengths and weaknesses of the M&E processes and will include training in new M&E activities and guidelines issued by PEPFAR.

ACTIVITY 3:

SA DOD will hold training development workshops to assist in the establishment of new HIV-related training courses and updating of training contents in existing HIV-related training curricula for SA DOD. Training development will include courses specifically targeted at mid- and upper-level leadership concerning the prevention of and identification and remediation of stigma and discrimination in the workplace.

A number of training opportunities and workshops have been funded since the inception of PEPFAR and these opportunities have contributed to the success of the Masibambisane program. The Masibambisane program is implemented through a cascade of national and regional program coordinators, trainers and sub-program and project coordinators. These individuals are responsible for the development, planning and execution of the program to address all the components necessary to ensure a comprehensive HIV and AIDS Program in the South Africa Department of Defense, thereby supporting accomplishment of the PEPFAR 2-7-10 goals.

HVMS - Management and Staffing

Program Area:	Management and Staffing
Budget Code:	HVMS
Program Area Code:	15

Total Planned Funding for Program Area: $22,531,718

Estimated PEPFAR contribution in dollars	$0
Estimated local PPP contribution in dollars	$0

Program Area Context:

HIV and AIDS continue to be the number one priority for the US Mission in South Africa. Managing and coordinating the implementation of the PEPFAR program in South Africa is the responsibility of an Inter-Agency USG PEPFAR Task Force which includes representation from the Department of Health and Human Services (HHS), the Centers for Disease Control and Prevention (HHS/CDC), the United States Agency for International Development (USAID), the Department of Defense (DOD), Peace Corps, and the Department of State. These represent all relevant USG Agencies present in South Africa working on global health. The primary objectives of the Task Force are to: 1) advise the Ambassador and other US Embassy leadership on all matters related to HIV and AIDS in South Africa; 2) plan the overall USG response to HIV and AIDS in South Africa; 3) coordinate USG-supported HIV and AIDS prevention, treatment and care activities with the South African Government (SAG); and 4) ensure that USG activities are consistent with guidance from the Office of the Global AIDS Coordinator (OGAC).

Central features of the South African PEPFAR management and staffing plan are: 1) an effective Inter-Agency Task Force that meets regularly to guide the U.S. Mission in developing and implementing a coordinated USG HIV and AIDS program; and 2) a Secretariat that facilitates the communication, coordination, and planning necessary for effective Task Force deliberations and actions. This helps assure successful, uniform messaging to all stakeholders. Given the growth in budget and staffing, an Inter-Agency Management Committee meets on a regular basis to give policy direction, approve new partner selection, provide assistance in (the rare) cases when the Task Force needs help in reaching consensus, and review budget and staffing decisions regarding USG HIV and AIDS activities in South Africa. Its membership is a Department of State representative, senior leadership of USAID and CDC, representatives of Peace Corps and DOD and the Health Attaché.

The USG Country Team made significant progress this year in implementing a management and staffing plan through Staffing for Results. The interagency management team meticulously reviewed the South Africa PEPFAR staffing and management situation through focus group and individual agency interviews and group discussions. The management team posed four key questions in each meeting: 1) What are the staffing needs – how many and what new staff will be recruited in coming years? 2) How can we improve efficiency of PEPFAR management? 3) How can we improve technical oversight of partners? and 4) How can we improve administrative oversight? Improving efficiency is essential, because South Africa's rapidly expanding PEPFAR budget stands in stark contrast to the Embassy's limited potential to hire USG staff due to security and space constraints. For FY 2008, the M&S budget for South PEPFAR is 4% of the total budget.

Key recommendations were developed during the Staffing for Results exercise as follows:

1) New staffing positions were identified (described in detail, below).
2) The number of SA Technical Working Groups (TWG) was reduced from 15 to 6 to decrease the amount of time professional staff members spend in meetings.
3) A new contract will be developed to monitor and evaluate administrative and technical quality through site visits. The contract (QMAP) will be managed by HHS/CDC but serve all agencies.
4) Positions for individuals working outside of the headquarters of implementing agencies were identified and include staff to be placed: (a) in the Durban and in Cape Town Consulates; (b) within the South African Government (SAG) to provide technical assistance; and (c) within six provinces in order to coordinate the nationally-dispersed PEFPAR activities. Note that Gauteng, Durban and Cape Town were not included because of the USG presence in Consulates.

An additional recommendation was made to co-locate agencies. However, despite a high level of interest and lengthy discussions, no logistically feasible solution can be found at this time.

PEPFAR in South Africa will continue to operate as a single, integrated USG program, taking advantage of each Agency's individual comparative strengths, and promoting a culture of Inter-Agency collaboration. When an Agency possesses technical expertise it will take the lead, but in consultation with other Agencies through the local TWG that has been established by the Task Force. For example, USAID has technical staff with extensive experience in working with partners in the area of Orphans and Vulnerable Children (OVC). CDC, Peace Corps, and DOD also have assigned staff to assist in the OVC area. CDC has technical expertise in Lab work and is bringing together local stakeholders to work with NDOH to improve quality lab services. In other technical areas, such as treatment and prevention, which are the largest portfolios, the responsibilities are shared by both CDC and USAID, and technical guidance is coordinated through the TWGs. The TWGs ensure objectivity and breadth of vision, and build synergies between USG Agencies and partners. Standing TWGs include: 1) Care, PMTCT and CT; 2) Treatment, TB and Medical Transmission; 3) OVC, MC and Prevention; 4) Communications; 5) Strategic Information, Epidemiology, cross-cutting; and 6) Government and provincial coordination. Furthermore, several members of the Task Force in South Africa participate in the OGAC TWGs and liaise with Washington. This provides OGAC with input from the field, and also provides the SA program with input from central expertise.

In addition to the standing TWGs, the Task Force appoints ad hoc working groups to address issues as they arise. For example, to respond to the need to focus resources on Male Circumcision, the Task Force appointed a Male Circumcision TWG to design an appropriate strategy. The government and provincial coordination TWG was established to work closely with SAG to implement the HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011. Membership on the TWGs is always representative of multiple Agencies.

Finally, it is important to note that both USAID and HHS/CDC have invested in umbrella organizations that provide grants management, and financial and technical assistance to local grantees, thereby reducing the government cost of additional employee salaries.

The new staff positions are listed below, according to Program Area. The largest growth area will be in locally-employed (LES) more junior or administrative staff, with strong attention to orientation and training for LES. This focus is intended to reduce the administrative burden on senior technical staff and free them to do more high-level technical functions, such as oversight of partners, interaction with technical leadership of other organizations, sharing of knowledge base and best practices across partners, and strategic planning within their technical area. Hiring locally-employed staff will also contribute to long-term sustainability of the program.

MANAGEMENT:

CDC:
1. Program Officer ADS – LES
2. Secretary for OD – LES
3. Human Capacity Officer – LES
4. Grants Officer – USDH
5. Contracts Officer – USDH
6. Assistant Accountant – LES
7. Assistant Resource Manager – LES
8. Driver – LES
9. Extramural Coordinator – USDH
10. CoAg Assistant – LES
11. CoAg Assistant – LES
12. Computer Support – LES
13. Data Administrator – LES
14. Cape Town Liaison – LES
15. Durban Liaison – LES
16. Durban Admin Asst - LES

USAID:
1-2. Secretary x 2 - LES
3. Technical Writer – LES
4. Human Resources Assistant – LES
5. Financial Manager Assistant – LES
6. Cape Town Activity Manager – LES
7. Cape Town Admin Asst – LES
8-9. Provincial Coordinator x 6 – LES
10. HCD Advisor – USPSC

Peace Corps:
1. Volunteer Activity Support and Training (VAST) Coordinator

State Department (Small Grants):
1-4. Four part-time positions will be converted to four full-time positions.

Secretariat:
1. A Deputy Coordinator position has been added and the prior Program Assistant position has been changed to PEPFAR Specialist/COP Manager. Note that the prior Evaluation Officer position has been eliminated.

SI:

CDC:
1. Epidemiology Branch Chief – USDH
2. Program Assistant – LES
3. Surveillance Program – LES
4. Epidemiologist (NDOH) – LES
5. Statistician – LES
6. Statistician (NDOH) – LES

USAID:
1. GIS Mapping Advisor – LES
2. Program Assistant - LES

CARE AND TREATMENT:

CDC:
1. Public Health Analyst – USDH
2. CT/Care CoAg Assistant (Dept of Corrections) – LES
3. TB/HIV Advisor (NDOH) – LES
4. TB/HIV Clinical Officer – LES
5. Care/CT Coordinator – LES
6. Clinical Advisor (NDOH) – LES

USAID:
1. Nutritionist – LES
2. Program Assistant - LES

OVC:

USAID:
1. Community Network Advisor - LES

PREVENTION:

CDC:
1. Public Health Analyst – LES
2. Prevention Advisor – LES
3. PEPFAR Coordinator (NDOH) – LES
4. PMTCT Program Coordinator – LES
5. Youth Specialist – LES
6. Prevention and Medical Transmission Specialist – LES
7. PPP/Worksite Specialist – LES

USAID:
1. Program Assistant – LES
2. Program Assistant - LES

LAB:

CDC:

1. Lab Branch Chief – USDH
2. Program Officer – LES
3. Assistant Lab Training Coord – LES
4. Laboratory Scientist – US contractor

Table 3.3.15: Activities by Funding Mechansim

Mechanism ID: 1402.08
Mechanism: Emergency Plan Secretariat
Prime Partner: US Department of Health and Human Services
USG Agency: HHS/Office of the Secretary
Funding Source: GHCS (State)
Program Area: Management and Staffing
Budget Code: HVMS
Program Area Code: 15
Activity ID: 3121.08
Planned Funds: $962,418
Activity System ID: 13920

Activity Narrative: South Africa PEPFAR management is coordinated by a Secretariat that reports directly to the US Ambassador and is located in the International Health Office in the Chancery. The Secretariat serves as the central point for planning, communication and coordination on all PEPFAR-related tasks conducted in South Africa by the various USG Agencies, and in doing so, assures that all USG contributions to PEPFAR reflect the consensus of a united and dedicated USG team.

The Secretariat's roles include: 1) provide the US Ambassador and Mission leadership with information and guidance about PEPFAR; 2) coordinate the implementation of PEPFAR with the South African Government; 3) communicate with the Office of the Global AIDS Coordinator and coordinate preparation of the Country Operational Plan and other required reports; 4) prepare reports on issues related to PEPFAR activities in South Africa; 5) undertake programmatic and reporting activities to assure coordination and harmonization of USG Agencies' responses to audits and Congressional inquiries; 6) organize regularly scheduled meetings of the PEPFAR Task Force, keep records of all Task Force meetings, and circulate minutes to Task Force members and the South Africa Core Team at OGAC; 7) document any Inter-Agency Annual Program Statement (APS) and facilitate review and approval processes; 8) serve as a repository and clearinghouse for technical and programmatic information regarding HIV, AIDS, and PEPFAR; 9) assist in the preparation of speeches, articles and other communications regarding PEPFAR by USG representatives in South Africa; 10) assist the Mission's Public Affairs efforts in publicizing and promoting PEPFAR activities in South Africa, and provide public affairs support for implementing partners; 11) manage and maintain the South Africa PEPFAR website and photo gallery, allowing easy access to technical resources and information about PEPFAR in South Africa; 12) coordinate global health elements of the Mission Performance Plan; 13) assist in the organization of PEPFAR partner and technical meetings; 14) prepare and host VIP visits and audits; 15) collaborate with other major donor Agencies (e.g. European Union, Department for International Development/United Kingdom, UNAIDS and Belgian Technical Cooperation) to ensure programmatic synergies; and 16) attend meetings of SA Technical Working Groups and assist in preparation and circulation of minutes.

PEPFAR funds currently support the following staff positions: 1) PEPFAR Deputy Coordinator; 2) Office Assistant; and 3) one-half OMS position. PEPFAR funds will additionally support the following positions in the coming year: PEPFAR Specialist/COP Manager and Communications Specialist/Web Master. Recruitment for these positions has been completed and they are expected to be filled imminently. In addition, PEPFAR funds will support one-half of the Health Attaché position that is being filled on a temporary basis, but is anticipated to be permanently filled in upcoming months. Additionally, the State Department currently funds a PEPFAR Coordinator position and a Health Assistant position. PEPFAR funds also support a series of technical and partner meetings that may include: meetings with provincial governments; a portion of the national South African Aids Conference; the Annual PEPFAR Partners' Meeting; and technical meetings. An organogram detailing the HHS/OIH South Africa staffing pattern for PEPFAR is uploaded as a supporting document. In addition to salaries, benefits and travel costs, the management budget includes operating costs (such as utilities, administrative and logistic support, travel costs, office supplies, etc.), and may include other items related to PEPFAR support. The total HHS/OIH PEPFAR budget for staffing and associated management in FY 2008 is $962,418.

Program Area: Management and Staffing

Budget Code: HVMS

Program Area Code: 15

Activity ID: 6377.08

Planned Funds: $200,000

Activity System ID: 13924

Activity Narrative: SUMMARY:

The Public Affairs Section of the U.S. Embassy in South Africa will carry out, with PEPFAR funding, targeted outreach to print and electronic media and the public in support of increased awareness of PEPFAR priorities, projects, and success stories.

BACKGROUND:

Public knowledge of and appreciation for the accomplishments of PEPFAR in South Africa remain lower than desired, due in part to media fatigue for HIV and AIDS issues, as well as limited USG resources, both budgetary and personnel, which have precluded the capacity to orchestrate a continuing nationwide media campaign. Though awareness and exposure have improved in FY 2007, more can be done in FY 2008 to ensure appropriate public appreciation for this unprecedented U.S. investment.

ACTIVITIES AND EXPECTED RESULTS:

A multi-media program of direct placements (paid and otherwise) in print and electronic media is an important means of increasing public awareness of PEPFAR activities in South Africa. As the large majority of South Africans receive their news via radio, this program would focus largely on the development and placement of radio programs around the country. In addition, the program would develop a series of print notices for placement in major newspapers, focusing on key PEPFAR themes and accomplishments, and featuring individuals benefiting from PEPFAR programs, supported by a special website where readers could learn more about PEPFAR and make comments. Finally, this program will support press participation in PEPFAR site visits, training programs, and other activities.

The Public Affairs section will request support to establish a baseline of public knowledge of PEPFAR in early FY 2008 via nationwide survey. (Note: this survey is neither a Public Affairs nor PEPFAR mechanism, but rather a recurring national survey conducted by the State Department's Office of Research. Public Affairs will request permission to incorporate survey content to assess knowledge of PEPFAR programs.) Follow-up focus groups and surveys will measure message penetration.

The Public Affairs Section will conduct programs for journalists and PEPFAR partners to educate them on PEPFAR as a whole and USG health policy and funding priorities in order to promote positive coverage of PEPFAR and expand public recognition and understanding of the program. The Public Affairs Section will also conduct other programs that support public diplomacy activities related to PEPFAR. Projected activities and outcomes include:
-Development and placement of PEPFAR program descriptions, success stories, personal histories, etc. in key national print outlets.
-Continuation of radio features and program profiles in selected provinces (to include KwaZulu-Natal, Gauteng, and Western Cape) to run on key community and commercial broadcasters.
-Targeted promotion of PEPFAR activities, including project launches, Ambassador's media events, and output announcements in regional print and broadcast outlets.

Mechanism ID: 1401.08

Mechanism: Management 1

Prime Partner: US Agency for International Development

USG Agency: U.S. Agency for International Development

Funding Source: GHCS (State)

Program Area: Management and Staffing

Budget Code: HVMS

Program Area Code: 15

Activity ID: 3120.08

Planned Funds: $9,123,000

Activity System ID: 13916

Activity Narrative: These funds support the management and staffing expenses of USAID/South Africa (USAID). The funds cover the costs of ongoing and new staff who provide technical, financial and contractual oversight of over 63 USAID partners implementing the PEPFAR program in South Africa. The total USAID PEPFAR management and staffing budget is $9,478,000 including ICASS estimated at $120,000 and the IRM tax which is estimated at $135,000. In FY 2007, USAID was responsible for the obligation and management of over $228 million in GHAI funds. In FY 2008 this amount will rise to over $332 million. In order to provide comprehensive administrative, technical and managerial oversight of the PEPFAR portfolio, USAID will recruit an additional 16 staff to work in the USAID office in Pretoria. Of these, it is anticipated that one will be an overseas hire, and the remainder locally recruited. Many of these positions will be filled by junior staff who will provide basic administrative support as they became more engaged in and knowledgeable about technical issues.

The USAID Health and PEPFAR Office was divided in three divisions to correspond loosely with technical working groups designated during the Staffing for Results exercise. Including the new hires, the Office staff will include approximately 23 professionals, who will manage an average $14 million each, and seven administrative and project assistants. While this dollar-to-staff ratio is relatively high, the country team has developed innovative mechanisms to strengthen management and oversight. These include the Umbrella Grant Management mechanisms and the new quality assurance program QMAP.

The Umbrella Grants Management agreement was designed at the beginning of PEPFAR to manage new and small partners. In FY 2007, the Umbrella Grants Management component was recompeted and three separate awards made to organizations to provide financial and administrative guidance and support to over 35 small organizations, thereby reducing USAID's management burden. Funding for the umbrella grants element is included in the individual program areas.

In addition to the technical staff, PEPFAR will support staff in support offices including the Contracting Office, Financial Management and Executive Office. Two headquarters-funded regional advisors, a legal advisor and a contracting officer also provide services to PEPFAR. In addition to technical staff who will serve within the Health and PEPFAR Team, USAID/South Africa will recruit additional support staff in the Executive, the Financial Management and the Contracting Offices who will work on PEPFAR programs.

Activity Narrative: A PEPFAR VAST (Volunteer Activity Support and Training) Coordinator, Program Assistant and driver will provide PEPFAR programmatic and training support to 150 Volunteers assigned to the Community HIV/AIDS Outreach Project and Schools and Community Resources Project. The Program Assistant will design and facilitate HIV/AIDS workshops. The PEPFAR VAST Coordinator, who oversees PEPFAR-funded projects within Peace Corps, will train PCVs and their counterparts in project design and management and project proposal writing and will be responsible for the initial screening of proposals, monitoring project implementation, reporting on project results, and liaising with the Task Force. Lastly, the driver will support the logistical needs for conducting the workshops and conducting monitoring field visits to VAST recipients.

Program Area: Management and Staffing

Budget Code: HVMS

Program Area Code: 15

Activity ID: 3104.08

Planned Funds: $4,818,000

Activity System ID: 13940

Activity Narrative: These funds partially support the management and staffing expenses of the HHS/CDC/South Africa office. The funds will cover ongoing and new staffing needs to provide technical, financial and contractual oversight of over 52 CDC partners implementing the PEPFAR program in South Africa. The total management and staffing budget for CDC is divided between GHAI and base so these funds represent almost half of the management and staffing budget. Within the total budget, the cost of ICASS is estimated at $538,235 and Capital Security Sharing is estimated at $235,537. In FY 2007, the HHS/CDC/South Africa office was responsible for the obligation of over $140,000,000 in PEPFAR funding. In FY 2008, this amount will increase to over $220,000,000. CDC staff also has oversight responsibility for almost $30,000,000 of Health Resources and Service Administration (HRSA) projects. Staff responsibilities include program monitoring, design, implementation, and evaluation of funded activities; providing technical direction and assistance to assure that activities are implemented in accordance with OGAC technical guidance; and working closely with in-country and international partners to assure synergy and avoid duplication. Staff participate actively in the Inter-Agency Task Force to design the overall comprehensive PEPFAR program that meets the needs of South Africa and OGAC. Moreover, HHS/CDC staff participate in Technical Working Groups (TWG) of the Task Force that work to coordinate all partners in a particular technical area to ensure complementary and synergistic activities. Staff is also regularly tasked to participate in ad hoc working groups to address specific issues as they arise.

Table 3.3.15: Activities by Funding Mechansim

Mechanism ID: 1235.08

Mechanism: Small Grants Fund

Prime Partner: US Department of State

USG Agency: Department of State / African Affairs

Funding Source: GHCS (State)

Program Area: Management and Staffing

Budget Code: HVMS

Program Area Code: 15

Activity ID: 8481.08

Planned Funds: $246,613

Activity System ID: 13923

Activity Narrative: PEPFAR funded positions: The Small Grants Program in South Africa will use PEPFAR funds to continue to support South Africa's most promising small community and faith-based organizations (CBOs and FBOs) making significant contributions to the fight against HIV and AIDS. The organizations will receive grants in the amount of $10,000 and will enter a one-year contract with the USG. Major emphasis areas are commodity procurement and human resources. The activities target PLHIV and their families and caregivers, community volunteers, CBOs and FBOs.

The Small Grants Program is managed in four locations: Embassy in Pretoria, Cape Town Consulate, Durban Consulate, and Johannesburg Consulate. Currently Cape Town, Durban and Johannesburg Consulates have half-time positions and Pretoria has had a full-time person (Embassy Small Grants Coordinator) since November 2006. Due to the increase in program funding and administration, Cape Town, Durban and Johannesburg Consulates will increase staffing hours so that there will be full-time positions at each location.

The Embassy Small Grants Coordinator is responsible for administering grants in a particular geographic region and responsible for overall program coordination. This person is the liaison for the program to key stakeholders at the State Department, CDC and USAID. The positions at the Consulate are each responsible for administering grants in a particular geographic region. They report to the Consul General.

Non-PEPFAR funded positions: The POL Officer at the Embassy is the Grant Officer and facilitates the legal and technical matters with the grant agreements. This person oversees the overall management of the program. An FSN, POL Assistant, works in Pretoria to assist with the grants. Fifty percent of his time is devoted to helping manage this program. The POL Office Assistant provides some administrative support to this program. This person spends approximately 15% of her time in this role.

Other Significant Data Collection Activities

Name: National HIV and AIDS Communication Survey

Brief Description of the data collection activity:

The Second National HIV and AIDS Communication Survey will provide more in-depth information about the communication environment, impact of communication interventions both generally and specifically. No other survey captures as much information which is extremely valuable in informing both the SA Government's communication programmes and individual communication interventions of NGOs, CBOs and FBOs. The findings are disseminated through a series of workshops to more than 500 key stakeholders throughout the country. The survey is a collaborative effort between the SAG, JHU/CCP and Soul City (funded by PEPFAR) and other key communication projects. Please refer to the JHU/CCP COP under SI for further details.
