Country Program Strategic Overview

Will you be submitting changes to your country's 5-Year Strategy this year? If so, please briefly describe the changes you will be submitting.

Yes No

Description:

FY 2009 Additions: Changes in the NDOH, including a new Minister of Health, predict a new relationship with the NDOH and the establishment of a bilateral strategic coordination group that will enable negotiation of a Partnership Compact.

PMTCT: The new PMTCT policy was rolled out 6/08 and includes WHO recommended dual therapy and HAART treatment for eligible women of child-bearing age, routine offer CT at ANCs, retesting HIV negative mothers in the third trimester, CD4 testing for all HIV positive women, maternal nutrients for pregnant and lactating mothers, screening for TB, STIs and other OIs, and fast tracking pregnant women to ART services. USG will continue to support NDOH scale up and rollout of the new policy and promote integrated PMTCT programs.

TB/HIV: Additional objectives will 1) improve prevention, detection and management of MDR/XDR TB in HIV positives; 2) strengthen infection control; and 3) strengthen laboratory services and networks to support TB/HIV program activities. Activities will 1) strengthen TB/HIV coordinating bodies at all levels, 2) expand interventions promoting access to TB/HIV (e.g., in primary health care, task shifting to nurses, and ART accreditation of TB hospitals); 3) implement three I's; 4) expand HIV testing and ART in TB clinical services; 5) enhance referral systems between TB and HIV services and hospitals and primary health care facilities; 6) engage community in comprehensive care, treatment adherence and DOT; 7) improve early detection and management of persons suspected with MDR/XDR TB; 8) support timely, quality assured laboratory services for TB/HIV, and rapid diagnostics for TB and MDR-TB; and 9) improve information, M & E and management systems to increase access to quality services.

OVC: With DOSD, develop an M&E framework for the Children's Amendment Act, 2007 to ensure effective implementation of the Act's new definitions and elements that include provision of partial care of children, early childhood development, prevention and early intervention, children in alternative care such as foster care, child and youth care centers and drop-in centers; authority for additional protection of children; and creation of new offences relating to children.

Prevention: New activities include 1) evaluating PEPFAR prevention efforts, 2) implementing prevention interventions for 2010 Soccer World Cup, and 3) supporting NDOH in creating/leading an HIV prevention consultative core action group to develop a national prevention implementation strategy and accelerate the scale-up of HIV prevention.

Palliative Care: Care programs add a family centered approach to care and support for PLHIV to decrease stigma and discrimination at family and community level, review family dynamics that impact HIV transmission, introduce prevention with positives, and pediatric care and support programs.

Laboratory Services: Expand NHLS, NIOH, and NICD laboratory support activities, strengthen HIV and TB diagnostic capacity and information management infrastructure, increase access to TB diagnosis and referral services, strengthen the management and reporting of MDR and XTR-TB cases, data mining, surveillance analysis from the existing NHLS Data Warehouse (DISA), integration of data into the existing national Electronic TB Register (ETR.Net) surveillance system, piloting a new patient management system, support development and implementation of national infection control policies, standards, and monitoring for laboratory staff and other healthcare worker, and develop a regional laboratory for Sub-Saharan Africa.

FY 2009: Treatment: New NDOH pediatric and adult standard ART guidelines are expected to be released 12/08. These will change the eligibility for ART initiation from a CD4 count of 200 to 250, increasing ART eligible by ~10%, and change first line and second-line ART regimens.

Global Fund

What is the planned funding for Global Fund Technical Assistance in FY 2009? \$0

Does the USG assist GFATM proposal writing? No

Does the USG participate on the CCM? No

Table 2: Prevention, Care, and Treatment Targets

2.1 Targets for Reporting Period Ending September 30, 2009

	National 2-7-10	USG Downstream (Direct) Target End FY2009	USG Upstream (Indirect) Target End FY2009	USG Total Target End FY2009
Prevention				
End of Plan Goal	1,806,271			
1.2 - Number of pregnant women who received HIV counseling and testing for PMTCT and received their test results	0	423,486	476,514	900,000
1.3 - Number of HIV-infected pregnant women who received antiretroviral prophylaxis for PMTCT in a PMTCT setting	0	112,564	87,436	200,000
Care (1)				
End of Plan Goal	2,500,000			
6.2 - Total number of individuals provided with HIV-related palliative care (including TB/HIV)	0	1,154,968	481,533	1,636,501
***7.2 - Number of HIV-infected clients attending HIV care/treatment services that are receiving treatment for TB disease (a subset of indicator 6.2)	0	95,949	144,051	240,000
8.1 - Number of OVC served by OVC programs	0	469,577	330,423	800,000
9.2 - Number of individuals who received counseling and testing for HIV and received their test results (including TB)	0	1,140,181	1,359,819	2,500,000
Treatment				
End of Plan Goal	500,000			
11.4 - Number of individuals receiving antiretroviral therapy at the end of the reporting period	0	456,571	218,429	675,000
Human Resources for Health				
End of Plan Goal	0			
Number of new health care workers who graduated from a pre-service training institution within the reporting period.	0	644	0	644

2.2 Targets for Reporting Period Ending September 30, 2010

	USG Downstream (Direct) Target End FY2010	USG Upstream (Indirect) Target End FY2010	USG Total Target End FY2010
Prevention			
End of Plan Goal			
1.2 - Number of pregnant women who received HIV counseling and testing for PMTCT and received their test results	615,790	284,210	900,000
1.3 - Number of HIV-infected pregnant women who received antiretroviral prophylaxis for PMTCT in a PMTCT setting	163,600	61,400	225,000
Care (1)			
End of Plan Goal			
6.2 - Total number of individuals provided with HIV-related palliative care (including TB/HIV)	1,306,293	377,890	1,684,183
***7.2 - Number of HIV-infected clients attending HIV care/treatment services that are receiving treatment for TB disease (a subset of indicator 6.2)	103,626	136,374	240,000
8.1 - Number of OVC served by OVC programs	485,815	514,185	1,000,000
9.2 - Number of individuals who received counseling and testing for HIV and received their test results (including TB)	1,317,022	1,182,978	2,500,000
Treatment			
End of Plan Goal			
11.4 - Number of individuals receiving antiretroviral therapy at the end of the reporting period	600,516	199,484	800,000
Human Resources for Health			
End of Plan Goal			
Number of new health care workers who graduated from a pre-service training institution within the reporting period.	643	0	643

(1) Total Care represents number of OVC served by an OVC program during the reporting period and the number of individuals provided with facility-based, community-based and/or home-based HIV-related palliative care, including those HIV-infected individuals who received clinical prophylaxis and/or treatment for tuberculosis(TB).

Program Budget Code: 01 - MTCT Prevention: PMTCT

Total Planned Funding for Program Budget Code: \$36,782,154

Program Area Narrative:

PMTCT Program Area Narrative 2009

The South African “National HIV and Syphilis Prevalence Survey, 2007” shows a slight decrease in HIV prevalence in pregnant women over the last three years: 30.2% in 2005, 29.1% in 2006, and 28% in 2007. However, the prevalence is still relatively high compared to other countries in the region. There are approximately 908,000 new pregnancies per year, and based on the above HIV prevalence, approximately 254,000 HIV-infected pregnant women will need to be identified and provided antiretroviral (ARV) prophylaxis annually.

The South African National Department of Health (NDOH), with support from many partners including the United States government (USG), has successfully scaled up the national prevention of mother-to-child transmission (PMTCT) program from a pilot program in 2002 to a national program today. As of September 2008, PMTCT service delivery is available and accessible at all public hospitals and in about 90% of public clinics, community health centers, and mobile clinics. Despite the high coverage in terms of PMTCT service points, the national PMTCT cascade is relatively low. Data from the South African National District Health Information System (DHIS) shows that 92% of pregnant women attending antenatal care (ANC) facilities tested for HIV, 63% of HIV-infected pregnant women received ARV prophylaxis, and 61% of infants born to HIV-infected mothers received ARV prophylaxis in 2008. However, there are still challenges with data quality, given that the source of information is the DHIS. HIV rapid tests have been utilized nationally, and test results are returned to the women on the same day. CD4 tests and HIV polymerase chain reaction (PCR) testing is offered to all HIV-infected pregnant women and HIV-exposed infants nationally. The South African National Health Laboratory Service (NHLS) currently has over 50 laboratories providing CD4 tests in all nine provinces, with plans to expand CD4 testing capacity to each district. There are nine laboratories in five provinces that have the capacity to perform early infant diagnosis (PCR). Current PCR test utilization rates are between 60-65% of the NHLS's existing capacity (approximately (~)192,000 infants tested annually, total capacity of ~310,000 annually), indicating a shortfall of more than 100,000 of the national estimates out of a target of 300,000 for required testing. This results in challenges in the turn-around times, specimen collections, and result management within healthcare facilities, which contributes to difficulties in patient follow-up and treatment initiation. The NHLS use courier services to pick up and drop off specimen results, but this may not be adequate to meet the demands of clinics.

Since 2003, the USG has been supporting the NDOH through a range of 26 prime PMTCT partners that work directly at the facility level to facilitate the implementation of the PMTCT program. The support includes policy development; capacity building; implementation of early infant diagnosis; and integration of PMTCT into existing Maternal, Child, and Women's Health (MCWH) services. In FY 2008, to ensure that there is greater geographical and technical support for the national PMTCT program, the USG has been working in partnership with the NDOH and UNICEF to conduct a stakeholder analysis. This analysis will map all PMTCT stakeholder activities, identify gaps and overlaps in technical assistance, and provide recommendations to ensure better coordination among stakeholders. In addition, towards the end of 2008, the South African PMTCT program will be reviewed and recommendations will be incorporated in implementation plans for the upcoming financial year. This will provide strategic direction to both the national and the PEPFAR PMTCT programs. In addition, CDC is currently providing technical support to the NDOH for the review and update of the PMTCT and Infant Feeding Training Curriculum in line with the new policy and guidelines. PEPFAR partners have played key roles in facilitating readiness for implementation by (1) providing ongoing technical assistance to the provincial and local health structures to address operational challenges; (2) ensuring that all healthcare workers receive the necessary policy updates and training; and (3) strengthening linkages between antenatal care and HIV service delivery and social services.

With the support from the USG and its implementing partners, 834,396 women were counseled and tested in the PMTCT setting in South Africa in FY 2008 (exceeding the target of 700,000), and 129,636 received a complete course of antiretroviral prophylaxis in a PMTCT setting (106,112 through direct PEPFAR support).

The South African National Strategic Plan for HIV & AIDS and STI, 2007-2011 (NSP) has set a target of decreasing the mother-to-child transmission rate for the national PMTCT program to 5%. In February 2008, the NDOH released a new national PMTCT policy that fully integrates PMTCT into comprehensive MCWH services. The new policy and guidelines include:

- Providing routine screening for sexually transmitted infections (STIs) and tuberculosis (TB);
- Offering voluntary counseling and testing (VCT) to all pregnant women and retesting at 32 weeks for those who initially test negative;
- Providing a dual ARV prophylaxis regimen (AZT from 28 weeks plus a single dose of nevirapine at labor), as well as highly active antiretroviral therapy (HAART) for eligible pregnant women and infants;
- Providing early infant diagnosis for HIV-exposed infants at six weeks, retesting six weeks after weaning, and providing cotrimoxazole prophylaxis to HIV-exposed infants; and

- Improving maternal nutrition and safe infant feeding for HIV-exposed infants

The NDOH is currently revising the adult treatment and pediatric guidelines, and is expected to implement these by the end of 2008 or early 2009. The revised guidelines will have significant impact on the PMTCT program, as pregnant women who are eligible for HAART will have early access to treatment initiation. Thus, the PMTCT program targets will be revised accordingly.

The primary objectives for the FY 2009 PEPFAR program in South Africa are to support the NDOH in (1) building local capacity to implement the 2008 National PMTCT policy effectively by increasing coverage of training and re-training for healthcare workers; (2) providing site-specific support through PEPFAR partners and the NDOH to implement and roll out the new PMTCT policy and guidelines; (3) building capacity for early infant diagnosis and follow-up for mother-baby pairs post delivery by improving linkages between PMTCT service points, MCWH, HIV pediatric care and treatment programs, and antiretroviral care and treatment for adults; and (4) improving the quality of the national PMTCT monitoring and evaluation systems.

In addition, in FY 2009, the PEPFAR PMTCT program will continue to support the national PMTCT program by addressing some of the inherent programmatic gaps in service delivery. These include ongoing support and supervision for healthcare providers and community healthcare workers; the promotion of routine offer of counseling and testing; strategies for follow-up for mother-baby pairs post delivery; quality improvement; management and prevention of STIs, TB, and other opportunistic infections; community outreach and referral to wellness and treatment programs for HIV-infected mothers and exposed infants; and scale-up of early infant diagnosis services. Furthermore, activities addressing cultural attitudes to infant feeding, male involvement in PMTCT and increased uptake of services will also be supported. The USG will support the NDOH in facilitating quarterly meetings with all partners who are working on PMTCT programs in South Africa. These meetings will provide an opportunity for partners to share lessons learned and to prevent the duplication of tool and curriculum development. The quarterly meetings will ensure greater coordination among partners and government, particularly with respect to capacity building and training. All partners are required to use the NDOH curriculum as a generic training guide.

With the implementation of the new PMTCT policy and guidelines and the continued partnership with the NDOH, the South Africa USG team is optimistic that there will be an increase in the uptake of PMTCT services and a decrease in the rate of vertical transmission in FY 2009.

Table 3.3.01: Activities by Funding Mechanism

Mechanism ID: 190.09	Mechanism: N/A
Prime Partner: Aurum Health Research	USG Agency: HHS/Centers for Disease Control & Prevention
Funding Source: GHCS (State)	Program Area: Prevention: PMTCT
Budget Code: MTCT	Program Budget Code: 01
Activity ID: 13689.22603.09	Planned Funds: \$235,444
Activity System ID: 22603	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

The Aurum Institute for Health Research (Aurum) will increase support for the public sector sites and decrease support for non-governmental organization and general practitioner (GP) programs in FY 2009. In FY 2008 Aurum amended its policy in line with the new South African PMTCT guidelines of dual therapy, and this will continue in FY 2009. A focus on couple counseling and integration of a family-centered approach will be undertaken. This will include integration of other services at the community health center and primary health care levels such as linkages to family planning services, prevention with positives, and increased linkage with the community.

The prevention of mother-to-child transmission (PMTCT) support will be provided to eight of the Aurum down-referral sites that have antenatal services in Ekurhuleni Northern district (Gauteng province), the current GP project, the currently supported public sector sites including Tshepong hospital and Orkney clinic in the North West, Chris Hani Bara hospital, Tembisa hospital, Tembisa main clinic in Gauteng, and Madwaleni hospital in the Eastern Cape. The Aurum-supported PMTCT sites will be provided with a nurse and/or lay counselor as required from individual sites and training is to be conducted for each of the geographical areas. The program will also include routine counseling and testing; strengthening the tracing of the babies from the PMTCT program in collaboration with the existing home-based care system; strengthening of TB screening amongst expectant mothers; and staging and provision of highly active antiretroviral therapy (HAART) to those women eligible. Training will be given for couple counseling, prevention with positives, and engagement of the male partner for health staff in the clinical setting of PMTCT.

The program will also link with the integrated management of childhood illnesses (IMCI) and the expanded program on immunization programs and include them in the trainings for better follow-up of children. Emphasis will also be on the early screening of HIV-exposed babies by polymerase chain reaction testing and provision of cotrimoxazole.

Training is to be provided to lay counselors on sexuality, including empowering pregnant women to use condoms consistently during their pregnancy and lactation periods to avoid new and reinfection.

Another gender activity is to encourage the involvement of fathers during the antenatal period, promote HIV testing among fathers, and provide advice on the use of condoms during pregnancy. Specific training and mentoring of health staff in prevention with positives, couple counseling and testing and gender issues will target these issues. A gender module will be developed for health-care staff, patients and their partners that will seek to identify and prevent gender-based violence.

SUMMARY: Aurum will provide PMTCT services to patients in South African government clinics, GP practices and non-governmental sites. Emphasis will include the implementation of the PMTCT diagnosis and treatment protocols at the service outlets, early counseling and testing of pregnant mothers, provision of antiretroviral prophylaxis to HIV infected mothers both during the pregnancy and during delivery. Emphasis will also include provision of ARV to infants born to HIV mothers according to protocols and PCR of infants born to HIV-infected mothers. Also included in this activity is counseling on safe infant feeding practices and prevention of STI and HIV infection during pregnancy and while breast feeding. The primary target populations are HIV-infected pregnant women and their infants. BACKGROUND: Aurum Institute for Health Research (Aurum) is a not-for-profit, public benefit organization that is committed to improving the health of disadvantaged individuals and communities through transformational research (the research programs are not PEPFAR-funded), management of TB and HIV programs and provision of HIV testing, treatment and care. Aurum has received PEPFAR funding since October 2004. The main focus of the Aurum program in the public, private and non-governmental sector is to provide HIV care and treatment to a large number of persons in a cost-effective standardized manner ensuring a high quality of counseling, patient care and patient monitoring. The model is centrally coordinated and designed to be implemented on a large scale in peripheral sites that are resource-constrained and lacking basic resources such as HIV specialists, information technology (IT) infrastructure, and laboratory and pharmacy capacity. Aurum has established a centralized system of support which includes the following: (1) training of all levels of healthcare workers to ensure capacity building of clinicians to manage patients in resource limited settings with remote HIV specialist support; (2) provision and maintenance of guidelines for HIV preventive therapy (including INH and cotrimoxazole), treatment of adults and children, prevention of mother-to-child transmission and VCT; (3) clinical and administrative support through site visits by staff involved in psychological support, training, clinical support and monitoring data management systems; and (4) centralized distribution of medication and laboratory testing. This program will supplement the South African government's ARV rollout and therefore the program adheres to national guidelines and protocols. ACTIVITIES AND EXPECTED RESULTS: Aurum will carry out five activities in this Program Area. All of the activities are aimed at the provision of quality PMTCT service delivery. ACTIVITY 1. Establishing Capacity for PMTCT at Service Outlets This activity will include the dissemination of information on the importance of PMTCT and the application of PMTCT protocols to all South African government clinics, GP and NGO sites funded supported through the Aurum grant. This is also linked to the training of health workers (activity 7 below). ACTIVITY 2: Counseling and Testing of Pregnant women Pregnant women will receive provider-initiated counseling and testing as soon as they present to the health care service outlet. Women who test negative during the initial testing will be encouraged to repeat testing during the pregnancy to detect early HIV infection and ensure proper clinical care for the mother and infant. ACTIVITY 3: Provision of Prophylactic ART Women who are HIV-infected and pregnant will be provided with prophylactic ARVs to prevent transmission of HIV from the mother to the unborn child. As part of the minimum service package, newborn infants will receive the recommended prophylactic ART. Following pregnancy women will be enrolled onto the HIV care program. ACTIVITY 4: Early infant diagnosis using PCR Training will be given to health care providers at South African government clinics, GP sites and NGO sites on the importance of early infant HIV diagnosis and the correct use of the PCR test. Data collection will include a compilation of results of all PCR tests performed. ACTIVITY 5: Prevention of STI and HIV in pregnancy and during breast-feeding period Counseling given to pregnant mothers will emphasize the risk of contracting STI and new HIV

Activity Narrative: infections during pregnancy and how that increases the risk of transmission to the unborn child. ACTIVITY 6: Promotion of safe infant feeding practices Aurum will provide education and counseling to support mothers to make correct choices around infant feeding practices to ensure reduced risk of HIV transmission in the post-partum period while safeguarding the health of the infant. ACTIVITY 7: Training of Health Care Workers to provide PMTCT Aurum will incorporate training around the provision of PMTCT into its existing training curriculum for doctors and professional nurses and counselors. This training will include counseling of pregnant women to encourage them to test for HIV, the prophylactic antiretroviral therapy, the modification and continuation of antiretroviral therapy in mothers already receiving therapy the use of PCR for early infant diagnosis and counseling around other prevention methods for STI and HIV and safe infant feeding practices. Aurum's PMTCT activities contribute to the achievement of the PEPFAR 2-7-10 goals.

Planned Funds: \$800,511

Activity System ID: 22613

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

In late 2006, BroadReach Healthcare (BRHC) began capacity-building work with South African government (SAG) sites, initially with four hospital systems in KwaZulu-Natal. As of June 2008, BRHC was reporting data from 110 sites, including 11 hospitals, 62 private General Practitioner (GP) practices and 37 SAG clinics. Almost 20,000 patients are receiving treatment, care and support services at BRHC-supported sites as of 30 June 2008. At the request of a district Department of Health (DOH), BRHC has committed to continued expansion and plans to be supporting 19 complete hospital systems by September 2009. With FY 2009 funds, BRHC expects to be active at 250 sites, including 25 SAG hospital systems.

In FY 2009 BRHC will focus on the following enhancements:

SCALE UP OF DUAL THERAPY PMTCT: In FY 2009 BRHC will aim to scale up PMTCT significantly by working with provincial and district DOH in line with the revised PMTCT policy (dual therapy). Dual therapy has only been recently introduced in South Africa based on revised policy and guidelines. BRHC was one of the first partner agencies asked to roll out training on dual therapy and training has been done in one sub-district of Gauteng province for 92 health workers, primarily doctors and nurses.

ROUTINE OFFER OF COUNSELING AND TESTING, INFANT PCR AND IMPROVED LINKAGE AND REFERRAL: BRHC will continue to support the offering of group education sessions and routine offer of counseling and rapid testing at the nearly 200 SAG sites supported by the organization. BRHC will also support the roll out of re-testing of women who tested negative earlier in their pregnancy at 32 weeks. Partner testing is encouraged and BRHC uses a number of health education modalities centered on a family model of care to promote this (e.g., educational videos in local language, flip chart tools for small group presentations, counseling sessions and community mobilization model).

An additional critical area of focus will be to increase coverage of infant polymerase chain reaction (PCR) testing where currently the major bottleneck is training of nurses to perform the test. A key weakness of the current system is that women are tested with relatively good coverage, however, there remains a systematic gap in follow up and tracking between the hospitals (where delivery occurs) and the originating clinics that referred them. For example, almost all HIV-infected women who deliver, receive a CD4 test at the hospital, but the results tend to arrive after they have been discharged. These results typically accumulate at the hospital and are not returned to the originating clinic which the mother will visit for subsequent follow up maternal-child health (MCH) services and immunization. Furthermore, in addition to sub-optimal levels of infant PCR (due to lack of training), it is systematically difficult to link a child born to an exposed mother to the mother's medical record. Currently policy does not allow the mother's status to be reflected on the baby's road-to-health card, which would allow the child to be identified as at risk and monitored during other interactions with the health system like well-baby visits and immunization. BRHC, under its data management initiative, will work to ensure that the mothers' and children's data is linked between hospitals and clinics to effective referral both ways and subsequent follow-up of mothers and children in their local clinics and communities. Treatment eligible women will be fast tracked into antiretroviral therapy (ART) at whatever point in the patient flow that they are identified or captured.

CARE AND TREATMENT FOR WOMEN AND CHILDREN: A major area that BRHC is supporting is the scale up of ART and care at hospitals and supporting clinics (through a down referral model). Within this scale up, pregnant women and children are prioritized. This includes the provision of highly active antiretroviral therapy (HAART) per national and new WHO guidelines for children, opportunistic infections management, treatment of TB co-infection, cotrimoxazole prophylaxis, support for optimal feeding options (promoting replacement feeding if acceptable, feasible, affordable, sustainable and safe (AFASS) or exclusive breast-feeding) and improved linkages and referral to other child survival interventions such as the Expanded Program on Immunization and nutritional and micro-nutrient support.

PREVENTION: BRHC has always emphasized prevention with HIV-infected clients and views treatment, care and prevention as an inextricably linked and integrated package of services. Patient and client health education will continue to be provided through the BRHC Information, Education and Communication program (an area of key distinction for BRHC having developed the first treatment-related integrated messaging to support HAART rollout in Botswana). This package includes education to encourage testing for HIV, TB and sexually transmitted infections (STIs) (individual and partner testing), appropriate condom use (male and female), importance of avoiding re-infection, provision of psychosocial support via facility-based staff and community-based support groups and linkage/referral to and from services such as family planning, STI clinic services and other MCH and primary care programs (e.g. IMCI).

COMMUNITY LINKAGES: BRHC is developing a signature community mobilization program through which a large array of community- and home-based services will be delivered, monitored and reported. In each geographical area where BRHC works, the community mobilization program will be the vehicle through which the defined care package will be delivered and home- and community-based follow-up and patient tracking and monitoring accomplished. The aim of this model will be to ensure that every single patient can be reached reproducibly through defined and stereotyped channels. This will involve non-governmental and community, local leader and traditional healer partnerships. BRHC has already pioneered a model whereby Community Support Organizations such as churches are formally capacitated to serve as an extension of the care team and to assist in monitoring and provision of support for patients at community and home level. BRHC will be extending this model across new high potential partners to provide comprehensive community coverage. A critical function of the community model will be to provide referral and linkage services to and from other critical social welfare services (e.g., Department of Social Development programs, income generation projects, gender and legal support services, etc.).

HEALTH SYSTEMS STRENGTHENING: As mentioned, BRHC approaches prevention, treatment and care in an integrated fashion. In this regard, BRHC has been strengthening health systems through key initiatives such as augmenting Department of Health staff and infrastructure (across all cadres), training (didactic and mentorship, including training on rapid tests and infant PCR), strengthening data management and

Activity Narrative: monitoring, evaluation and reporting systems, and providing management and leadership training at national, provincial, district and health facility level. BRHC is also leading the development of a centralized disease control and monitoring hub for the country of South Africa (and ultimately the region) through a separate project with Virgin Unite and the National Department of Health.

SUMMARY:

BroadReach Healthcare (BRHC) supports integrated ARV services that include PMTCT, doctor consultations, lab testing, adherence support, patient counseling, remote decision support, quality assurance (QA), and data management. The main emphasis area is capacity building, with minor emphasis on strategic information and human capacity development (training). The primary target population is pregnant women.

BACKGROUND:

PEPFAR funds support BRHC initiatives that provide HIV and AIDS clinical management, care and support services to HIV-infected individuals in areas where the SAG rollout has not yet been implemented and assists ART rollout in the public sector. The BRHC PEPFAR program began in May 2005 and now operates across 5 provinces. BRHC is supporting approximately 5000 individuals directly with care and treatment and 15,000 indirectly. BRHC taps private sector health professionals to provide comprehensive care and treatment, fostering capacity-building initiatives within the public health system, and supporting community-based programs. BRHC leverages PLHIV support programs to identify and assist with treatment literacy, adherence support and ongoing community mobilization, prevention education activities, and positive living initiatives. BRHC also works to build capacity in public health facilities, focusing efforts on human capacity development (HCD) activities, including clinical didactic training, clinical mentorships, patient training and operational assistance training. BRHC is expanding its provision of staff and infrastructure support to SAG facilities. Finally, BRHC is expanding its involvement in the design of scaleable down referral models in partnership with faith-based organizations (FBOs), community-based organizations (CBOs), and public-private partnerships (PPPs).

ACTIVITIES AND EXPECTED RESULTS:

To ensure that patients are armed with accurate and practical HIV prevention strategies, BRHC will carry out the following activities:

ACTIVITY 1: Clinical Services

BRHC patients will be treated in accordance with national guidelines by ensuring that all elements for effective treatment are provided in a coordinated manner. Patients see doctors regularly, and will receive laboratory tests, HIV and AIDS education (complete with prevention messages), management of sexually transmitted infections (STIs), adherence support, counseling, cotrimoxazole prophylaxis and linkage to other support and wellness services. Pregnant women identified through the BRHC program and partner sites will be offered PMTCT services in line with SAG guidelines. PMTCT services include counseling and testing (see subsequent activity); counseling and support for maternal and infant nutrition; access to ARV treatment and safe infant feeding practices. Linkages will be made to pediatric treatment. At each facility a "tracer" will be employed full time to ensure that appointments are kept, opportunistic infections are treated, CD4 counts monitored and referrals completed.

ACTIVITY 2: Human Capacity Development (HCD)

BRHC will provide comprehensive HIV and AIDS training that includes PMTCT to its network of providers including doctors, nurses, pharmacists and other healthcare professionals through a variety of initiatives including remote decision support, telemedicine, web-based training, didactic training, and clinical mentoring from experienced clinicians. Comprehensive HIV and AIDS training for health professionals includes prevention and management of sexually transmitted infections, PMTC, ART management, tuberculosis (TB), adherence, management of complications and side-effects, and pediatric HIV management. BRHC will continue to train patients and support group facilitators on topics including prevention and PMTCT, HIV and AIDS, ART, adherence, living positively, and accessing psychosocial support in communities.

ACTIVITY 3: Counseling and Testing

BRHC will work with partner sites to ensure that pregnant women are counseled and tested for HIV, and offered access to PMTCT. This will be done by both private general practitioners who are in the BRHC network and at the government facilities where BRHC works.

ACTIVITY 4: Support to SAG

BRHC will conduct an initial needs assessment at each SAG partner facility. The assessments will identify problems that impact overall capacity and efficiency. Solutions for each institution include recruitment and salary support for doctors, nurses, and pharmacy staff. BRHC general practitioners provide part-time services at SAG facilities, and train SAG staff in HIV care and treatment and related management. Other support may include infrastructure, such as refurbishment, equipment and supplies procurement. This will also include strengthening linkages between essential HIV support services such as PMTCT to ensure clear referral procedures, patient tracking, and reporting of intervention results.

These activities directly contribute to the PEPFAR 2-7-10 goals by attempting to prevent new infections among infants.

Program Area: Prevention: PMTCT

Budget Code: MTCT

Program Budget Code: 01

Activity ID: 13736.22747.09

Planned Funds: \$1,327,797

Activity System ID: 22747

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

ACTIVITY 1: PMTCT at Clinics and Maternity Obstetric Units

The International Center for AIDS Care and Treatment Programs (ICAP) at Columbia University will support implementation of rapid screening for antiretroviral treatment (ART) eligibility through continuous mentoring for health-care professionals, regular patient file reviews, and monitoring and evaluation (M&E) activities. Program feedback will be provided to the sites and improvements be monitored. This will have a direct impact on pregnant women's access to care and CD4 testing within a month of diagnosis.

Challenges identified during FY 2008 will be addressed through training health facility staff, provision of essential equipment, and psychosocial support. In addition, regular multidisciplinary team meetings and program feedback sessions will be instituted to ensure service gap identification and corrective strategies.

Site-specific interventions will be implemented to fast track ART-eligible women to receive highly active antiretroviral therapy (HAART). The interventions include improved communication and feedback between the antenatal care (ANC) and ART sites, and prioritizing ART-eligible mothers for timely prevention of mother-to-child transmission (PMTCT) services.

Routine counseling and testing (CT) of all pregnant women on first visit will be expanded to all supported sites. Additional health-care workers will be trained on routine CT using the opt-out approach. M&E activities will focus on measuring the numbers of women counseled and tested on first visit, proportion that receive test results and get CD4 done. Program information will be routinely fed back to the providers. Partner testing will be encouraged for both HIV-infected and negative women.

All women who test HIV negative during their first visit will undergo a repeat test at 32 weeks of pregnancy. Prevention counseling for HIV negative mums will be intensified.

Cotrimoxazole (CTX) prophylaxis will be ensured based on the National Department of Health guidelines. A monitoring system will be implemented for the CTX uptake in pregnant women.

Tuberculosis (TB) screening for all women at the PMTCT site will be conducted at every visit, followed by sputum exam and culture for those suspected with TB disease. Through collaboration with the TB treatment sites, all TB infected pregnant women will be treated. Routine mentorship will be conducted to ensure appropriate TB/HIV collaboration activities with PMTCT.

HIV-infected women will be provided with other routine ANC services including sexually transmitted infections screening, multivitamin supplementation, infant feeding counseling and nutritional support.

Routine CT for women with unknown HIV status in labor and post-natal clinics will be instituted using lay counselors deployed in the hospitals and postnatal clinics. All these activities will be monitored using the registers currently under review by the Eastern Cape Department of Health (ECDOH). Women found to be HIV infected during labor will be provided with appropriate interventions and enrolled into care and treatment prior to discharge from the hospital.

ACTIVITY 2: Provide HIV Care, Treatment and Support

ICAP will ensure the extension of services beyond PMTCT include partner/couple counseling and testing using standard operating procedures, provision of comprehensive care and treatment during pregnancy, post delivery and ongoing care and treatment for the woman and her family. Care and treatment will include screening for opportunistic infections, ART for eligible mothers, monitoring for toxicity, nutritional counseling and support, family planning post delivery, HIV prevention with positives and psychosocial support.

ACTIVITY 3: Provide Early Diagnosis, Care, Treatment and Support to Infants and Children who are Exposed or Infected

ICAP will review the systems for early diagnosis of the HIV exposed and infected infant (HEI) to increase the uptake at 4 - 6 weeks and to ensure testing using rapid tests at 12 - 18 months facilitated by the registers currently under review at the ECDOH. The site support teams will continue mentor the health-care workers on the management of HEI. Infants who are HIV infected will be fast tracked to start HAART.

Enhanced counseling in antenatal and maternity settings will be promoted to minimize loss to follow-up (LTFU). LTFU will be analyzed and interventions planned and implemented for consistency of messages and effectiveness of delivery messages.

ICAP will enhance the use of partners and family members as infant feeding supporters. HIV-infected pregnant women will be encouraged to disclose their status and to be accompanied by infant feeding supporters during their ANC visits to promote adherence to infant feeding choices. ICAP will provide adequate information that will enable mothers make an appropriate feeding choice. Health-care workers will be trained on infant feeding using National Department of Health guidelines.

Postnatal clinics will be revived and integrated with the integrated management of childhood illness (IMCI) clinics to ensure infant follow-up and continuity of care. This activity will include counseling on infant feeding. Health-care providers will be trained and mentored to ensure that the CTX prophylaxis for HEI, growth monitoring, developmental and TB screening, immunizations and vitamin A supplementation will be provided at every visit.

SUMMARY:

ICAP will support implementation and expansion of comprehensive prevention of mother to child

Activity Narrative: transmission and linkages with treatment, care and support. The target population includes infants, men and women, pregnant women, family planning clients, people living with HIV (PLHIV) and healthcare workers in the public and private sectors.

BACKGROUND:

ICAP has been a PEPFAR partner since FY 2004, and supports services to strengthen integration of PMTCT activities into HIV chronic care in all supported HIV care and treatment outlets. ICAP's geographical coverage includes the Eastern Cape (EC) and KwaZulu-Natal (KZN) provinces. FY 2008 funding will ensure expansion to the Free State (FS). ICAP's PMTCT component is designed to support the national scale-up of PMTCT programs by assisting the government in implementation of strategies and plans; capacity building and training, infrastructure support; monitoring and evaluation support; and development of key tools and standard operating practices (SOPs) for program implementation.

ACTIVITIES AND ANTICIPATED RESULTS:

ICAP's PMTCT comprehensive approach will focus on HIV counseling and testing (CT) to all pregnant women seeking care; ARV prophylaxis for PMTCT; and, counseling and support for infant feeding. The interventions will be underscored by treatment, care and support including maternal health for women living with HIV, their children and families. The planned activities will ensure that HIV-infected pregnant women are identified early and enrolled into treatment, care and support programs. This approach will ensure that prevention, care, treatment and support services cover pregnancy, delivery, neonatal, and infancy periods.

ACTIVITY 1: PMTCT at clinics and maternity obstetric units

ICAP will improve the quality of antenatal care and maternity services at the 14 sites and integrate key interventions to prevent MTCT. This will ensure that women have greater access to high-quality antenatal, labor, delivery and postpartum care, including counseling and support for infant feeding, and use existing services more frequently and earlier in pregnancy. CT will be the pivotal component of the PMTCT program. Expanding provision of PMTCT services to include both antenatal clinics and maternities at the sites will significantly increase access to both maternal and infant HIV prophylaxis regimens. The program will focus on:

1. Conducting readiness assessments for implementation of basic PMTCT services
2. Conducting infrastructure renovations/refurbishment to allow for PMTCT implementation
3. Providing supplies and additional equipment as needed
4. Hiring additional health workers to provide support to sites
5. Training staff in CT within ANC setting
6. Implementing routine rapid CT as an integral part of antenatal care
7. Providing simple/short course prophylaxis regimens for PMTCT, with access to more complex and effective regimens as capacity and national guidelines allow
8. Developing replicable models of PMTCT in the 14 sites of EC, KZN and FS
9. Provision of CT during labor and delivery for pregnant women of unknown HIV status
10. Promoting safer delivery practices
11. Devising referral mechanisms to ensure patient follow-up post-delivery
12. Improving activities for optimal obstetric care including development/adaptation of SOPs.

ACTIVITY 2: Provide HIV-related care, treatment and support

ICAP will ensure extension of services beyond the PMTCT to the treatment and care services for the HIV-infected women, their infants and family members. This will be done through the early identification and referral of HIV-infected pregnant women who are eligible for treatment, enhanced laboratory capacity to monitor and conduct CD4 and other recommended tests for HIV care and treatment; establishment of mechanisms for prioritization and fast tracking of HIV infected pregnant women for ART; providing screening, diagnosis and treatment of TB; providing screening, diagnosis and treatment of STIs; providing cotrimoxazole prophylaxis to eligible mothers according to national guidelines; establishing a family centered case management approach with particular attention to establishing continuity of care; enhancing referral systems to ensure continuum of care post-partum; providing counseling and care relating to maternal nutrition and psychosocial support; establishing appropriate linkages and referral for HIV negative mothers tested; develop best practice models in pediatric and maternal care which can be replicated at national level and other sites; support continuation of routine health care including VIA for cancer of the cervix screening; and testing other family and household members and enroll them into care and treatment programs within clinic setting.

ACTIVITY 3: Provide early diagnosis, care and support to infants and children who are HIV-exposed or infected

ICAP will institute regular infant follow-up care. This includes infants who have received ARV prophylaxis, because HIV exposure increases risk of illness and failure to thrive, whether or not the infant has HIV infection. In addition, the PMTCT interventions will only reduce, but not eliminate the risk of HIV transmission from the mother to the infant. The focus of interventions will be to ensure PCR testing at 6 weeks and enrollment in ART for eligible infants. In order to scale up PCR testing, health care workers will be trained to identify HIV exposed infants and to ensure follow-up, provide cotrimoxazole prophylaxis. In addition, health care workers will be trained to provide counseling and support for infant feeding options and to establish functional appointment systems for regular health assessment and promotion visits for HIV-exposed infants. Particular attention will be given to establish functional linkages between the MCH health care workers with the care and treatment sites for follow-up of HIV infected women and HIV-exposed infants. Technical laboratory assistance for early infant diagnosis that includes training and providing essential lab equipment in the EC and FS will be provided. ICAP will hire a laboratory adviser and support staff for technical expertise and mentoring on early infant diagnosis. With FY 2008 reprogramming funding, ICAP will strengthen support in Free State, including strengthening early infant diagnosis and additional

Activity Narrative: space in some facilities.

ACTIVITY 4: Promote linkages to community-based services and psychosocial support for comprehensive family care

ICAP will establish formal links with community resources through ICAP's adherence and social support unit to provide the resources that can help women cope with the impacts of HIV diagnosis. The focus of interventions will be to: increase behavior change communication activities focusing on access to PMTCT and treatment literacy to mobilize community in PMTCT and to develop/adapt tools to improve the follow-up of HIV-infected mothers and tracking at community level

ACTIVITY 5: Mentor Mothers Approach

ICAP proposes to expand the scope of services of the mothers to mothers program (m2m) - a PEPFAR prime partner since FY 2007 - through an existing sub-agreement. The mentor mothers will provide support to the PMTCT component. Based in the antenatal, delivery and post-natal units, the primary duties of these mentor mothers will include: promoting counseling and testing among the pregnant women; linking mothers who test positive to PMTCT services; providing psychosocial support and education (individual and group) to mothers in PMTCT programs; forming and facilitating support groups of HIV-infected mothers; linking PMTCT mothers with necessary HIV care and treatment.

ACTIVITY 6: Engaging Stakeholders

ICAP will engage stakeholders in the planning and management of the program through meetings, sensitization workshops and feedback reports. The stakeholders include: DOH officials, District Managers, Health Facility managers, Clinic supervisors, Laboratory personnel, Staff representatives (doctors, nurses etc) and community members. In addition, Columbia will engage any other PEPFAR partners engaged in PMTCT activities in the same provinces in the stakeholder planning and management.

ACTIVITY 7: Quality of Care

ICAP will focus attention on the quality of PMTCT services provided in each of the facilities. Particular attention will be given to ensuring quality in service delivery during the site level operational planning, implementation and M&E of the program in order to support two overarching principles of quality assurance i.e. supporting clients' rights and addressing providers' needs. Clients' rights will be addressed by: ensuring provision of complete and accurate information to the mothers; facilitating access to all the PMTCT and ART services; ensuring safety of PMTCT service delivery; providing privacy and confidentiality; ensuring provisions that take into account patients dignity, comfort and expression of opinion and ensuring continuity of care from PMTCT, to treatment, care and support.

Systems and capacity will be developed by: Establishing good quality management and supervisory support at all levels; provision of adequate information, competence-based training and skills development; and provision of adequate supplies, equipment and infrastructure.

Planned Funds: \$1,081,588

Activity System ID: 22754

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

The South to South Partnership for Comprehensive Pediatric HIV Care and Treatment Initiative (S2S) will adopt a dynamic and contextualized strategy to support each implementing partner to implement programs with a family-centered approach at the site level. The site support will be dynamic and continuously customized to address site attributes and existing resources. While the support and program area emphasis will vary, all designated sites will benefit from the following activities:

Systems will be implemented to ensure that all pregnant and post-partum women and those of child-bearing age that visit the antenatal care (ANC), maternity and maternal and child health (MCH) facilities will be routinely offered an HIV test with same day results (with routine CD4 testing, if positive). HIV testing and counseling will be reframed to ensure informed consent via group pre-test information sessions, and in-depth support and individual counseling post-test. Disclosure support and testing will also be offered to partners and other family members (including children).

Partner testing will be strengthened to integrate the family into PMTCT. Staff will be trained to address gender issues and their impact on PMTCT and the family. Women will be encouraged and empowered to bring partners to ANC and follow-up visits to participate in pregnancy or child care; learn about HIV, pre- and post-natal care, support for males and couples; test for HIV; link to services for HIV men and children; learn about prevention services for HIV negative men in discordant couples.

MCH services will be enhanced to address the needs of HIV-infected pregnant women. Services include primary HIV prevention; STI screening and syndromic management; maternal cotrimoxazole per South African government (SAG) policy; safer sex practices; nutrition; malaria screening, prophylaxis and treatment; TB screening; immunizations; family planning; delivery preparedness; and community-based support services/linkages.

All HIV-infected women enrolled in the PMTCT program will be evaluated for clinical and immunologic status. CD4 count and WHO clinical staging will be used to determine eligibility for highly active antiretroviral therapy (HAART) during pregnancy. Women who do not meet national eligibility criteria will receive multidrug ARV prophylaxis, according to national guidelines, and be enrolled in HIV care services for close monitoring. Women who present in labor without documented HIV status will receive rapid HIV testing and counseling (if positive and in the first stage of labor, ART will be administered, per national policy). Women presenting in labor will be referred to HIV care services for a full evaluation post partum.

PMTCT sites will provide quality labor and delivery services to help reduce the risk of MTCT. This includes implementing safe obstetric practices and standards; reducing invasive procedures; taking universal precautions; implementing biosafety; following up and referrals post-partum; and linking to care and treatment services.

Infant feeding education, counseling and support will be initiated at the point of diagnosis (ideally in the antenatal period) and continued throughout the postnatal period. This support will be routinely integrated into all visits as part of the continuum of care. S2S will work with site staff to improve the quality of infant feeding counseling and assessment whether it is acceptable, feasible, affordable, sustainable and safe (AFASS) so that women can make informed choices to support exclusive infant feeding. Infant feeding support will be offered at every encounter including after an HIV-positive test result but before delivery; within the first 10 days after delivery; during the time of early infant diagnosis; at 6 months; and whenever the mother plans to change her feeding practice.

S2S will use site information to improve programmatic activities and provide training to clinic staff to enhance effectiveness of existing client tracking systems and, when needed, supplement with additional systems to improve clinic management and client care.

S2S aims to decrease the morbidity and mortality among HIV-infected mothers, their partners and children by engaging infected/affected people into care and treatment services. PMTCT sites will establish functional referral mechanisms to care and treatment services. This will include routine CD4 testing at point of HIV diagnosis so eligible women can begin HAART as early as possible in their pregnancies, thus reducing viral load and significantly reducing the risk of transmission. Women not eligible for HAART will be provided with appropriate multi-drug ARV prophylaxis and will be referred to HIV care and treatment services for long-term and aggressive follow-up care.

S2S will ensure that there are dynamic systems within a facility and between hospitals and clinic facilities to offer HIV care and treatment to all eligible HIV-infected pregnant women, post-natal women and women of childbearing age. This will vary by site but can include offering comprehensive ART services at the ANC/MCH facility, conducting initial ART assessment at the clinics and referring to ART services, or offering HIV care at the MCH facility with strong referral and follow-up systems to ensure the pregnant woman and her family access and are retained in treatment services at the ART facility.

Based on the tenets of the MTCT-Plus model of care, S2S will work closely with implementing partners to provide all HIV services with a family focus. This will be comprised of HIV care, including access to standardized antiretroviral options, for HIV-infected women and children identified in PMTCT programs, and for their infected partners and other family members. The model of care will include engaging more women and families in long-term care including regular follow-up visits, regular immunological and clinical monitoring, OI prophylaxis when needed, counseling and psychosocial support and referrals to community resources and support groups; and early identification of women who need ART during pregnancy at all points of entry.

S2S will ensure that all HIV-infected pregnant women are assessed for treatment eligibility. Eligible women will be fast-tracked to treatment regardless of ANC progress and point of entry. Women accessing MCH at hospital facilities will initiate treatment at the nearest ART site with coordinated visits to ensure that both her

Activity Narrative: MCH and HIV needs are met. Women accessing MCH at sites with no ART services will either be referred to the nearest ART facility for rapid initiation of treatment and (as much as possible) managed and monitored at the MCH facility, or, be initiated on ART and managed directly at the MCH facility.

S2S will support the initiation and management of coordinated and comprehensive HIV care services for families in accordance with SAG policy. This can include, depending on available resources, conducting rapid ART eligibility assessment of the HIV-infected pregnant woman, HIV staging, OI screening and when feasible OI management, OI and cotrimoxazole prophylaxis, immune monitoring, psychosocial and adherence support, active referrals (and referral follow-up), pain management, alcohol and substance abuse referral and support, and communication with the local ART clinic. S2S may adapt/develop an appropriate package of HIV care and the development of simple HIV care information systems (client card, registers, and referral tools) at MCH and/or clinic level.

Because of the rapid roll out of HIV services, there is a large population of HIV-infected women that know their status and are enrolled in HIV care and treatment services. To ensure that women of reproductive age are supported to make safe and informed contraception, family planning and reproductive health decisions in the context of their HIV infection S2S can sensitize site staff to the sexual and reproductive health rights and needs of all people living with HIV, particularly those of reproductive age.

S2S will work with implementing partners to foster linkages with other resources, programs, and partners to ensure that resources and expertise are properly leveraged within the context of the USG and country national plans. In this way, expertise is maximized to reduce duplication of efforts and to optimize existing resources.

SUMMARY:

Columbia University International Center for AIDS Care and Treatment Program (ICAP) will use FY 2008 funding to apply its PMTCT capacity building activities in 30 sites located in Limpopo, Northwest, Gauteng, Mpumalanga, Northern Cape, and Western Cape provinces. ICAP's capacity building model is based on its support of the South-to-South Partnership for Comprehensive Pediatric HIV and AIDS Care and Treatment Training Initiative (S2S) in the Western Cape, which emphasizes site level training; namely, continuous and supportive onsite presence, onsite dynamic skills-building events such as on-the-job training, clinical mentoring, modeling and site implementation workshops and case-based learning. The core activity for FY 2008 involves designing and implementing PMTCT performance action plans and establishing long-term monitoring systems so that increased quality of service delivery can be sustained over the long term. This activity will be implemented in collaboration with the Foundation for Professional Development (FPD), BroadReach Healthcare and Right to Care.

BACKGROUND:

A main focus of ICAP support on the site level is to build provider and system capacity with a focus on continuous quality improvement. Shortages of health care workers are exacerbated by the gap between the knowledge and skills required to provide HIV and AIDS services. Additionally, poor design of facility systems and services, lack of patient scheduling systems, inefficient provider placement and scheduling and irregular supervision by senior management continue to weaken already stressed HIV services. ICAP's site level support is dynamic and continuously customized to consider site attributes and existing resources. During FY 2008 this capacity building model will support the continuation and expansion of the S2S Partnership with Tygerberg Children's Hospital-Stellenbosch University in the Western Cape. The S2S program, experiences and materials will support the activities within this initiative aimed at supporting pediatric HIV and AIDS.

ACTIVITIES and EXPECTED RESULTS:

ACTIVITY 1: Basic Capacity Building Model

While the technical support and capacity building focus varies according to site attributes, all sites benefit from ICAP support to: (1) jointly develop or review/revise existing site specific work-plans (with clear benchmarks, targets, and activities) to outline action steps on how to achieve related goals, including setting site specific benchmarks and targets (in close collaboration with USAID-SA partners); (2) leverage and maximize efficiency of existing site and regional level human and commodity resources; (3) deliver a quality package of PMTCT-Plus and family-centered HIV services to clients; (4) implement active referrals and linkage systems; (5) efficiently operate with an integrated approach to caring for the HIV-infected pregnant woman/mother and her family; (6) facilitate and lead site level system improvements that improve quality of care, support optimal patient flow, and decrease patient wait time; and (7) initiate a multidisciplinary approach to service delivery.

ACTIVITY 2: Exposed Infant Follow-up/Care and Pediatric HIV Care and Treatment

ICAP will continue to support pediatric activities in close collaboration with the S2S program to rapidly expand access to HIV care and treatment for infants and children. Through its basic capacity building model ICAP will support the implementation of comprehensive care services for the HIV-exposed child at all sites, including growth monitoring, neuro-developmental screening, and cotrimoxazole prophylaxis. ICAP will capitalize on IMCI, EPI, and under-5 services to identify infants at peripheral sites that should be referred for HIV testing, and use aggressive pediatric case finding by supporting clinical/immunological presumptive diagnosis and/or early infant diagnosis services. The ICAP model will be used when appropriate to expand provider-initiated in-patient testing in pediatric wards, and to assist in the implementation of routine pediatric psychosocial assessments to appraise readiness and support needs prior to initiating treatment.

ACTIVITY 3: Expansion of Early Infant Diagnosis (EID)

The ICAP capacity building approach will support implementation and expansion of EID services. This includes the improvement of follow-up services, including improving counseling to ensure that caregivers

Activity Narrative: understand the importance of returning for services and developing mechanisms to identify and trace caregivers who have not returned for follow-up and test results.

ACTIVITY 4: HIV-infected Women of Childbearing Age and their Partners

ICAP plans to strengthen the quality of the clinical and psychosocial services available to women of childbearing age and males (especially partners) enrolled in care and treatment services. This activity includes supporting facilities to offer services and referrals to counsel HIV-infected women and partners, specifically on family planning.

By strengthening PMTCT services, these activities contribute to PEPFAR 2-7-10 goals, averting new infections among infants exposed to HIV as well as increasing access to treatment care and support for HIV-infected women and their infants.

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

In FY 2009, the Elizabeth Glaser Pediatric AIDS Foundation (EGPAF) plans to increase prevention of mother-to-child HIV transmission (PMTCT) coverage in the supported provinces. The following activities are prioritized:

- With the introduction of the new PMTCT guidelines in February 2008 (i.e., dual therapy) EGPAF has had to scale up training of Department of Health (DOH) staff on the new guidelines and will continue to do so in FY 2009 to ensure that PMTCT services are in line with the new guidelines.
- EGPAF will continue to participate in the review of the PMTCT indicators to ensure alignment with new PMTCT guidelines.
- Repeat HIV testing at 32 -34 weeks for initial negative status or testing in labor for unknown status is of high priority.
- Quality improvement (QI) activities will continue in an effort to ensure quality PMTCT services.
- A Chronic Care Model that emphasizes community linkages, self-patient management support, optimum service delivery system design, efficient health information and referral systems, is being rolled out in supported districts.
- Effective referrals to child survival interventions will be implemented. EGPAF plans to strengthen community integrated management of childhood illnesses (IMCI) in home- and community-based care.
- EGPAF will assist the DOH to improve follow-up of mother/infant pairs and polymerase chain reaction (PCR) testing six weeks post weaning. Women will be supported with their infant feeding options and it will be determined if it is acceptable, feasible, affordable, sustainable and safe (AFASS) for all mothers who choose to exclusively formula feed.
- Women and their partners will be screened for sexually transmitted infections (STI) in the PMTCT setting and referred to other sexual reproductive health service points (e.g., family planning, STI clinic) where required.
- TB infection control and the integration of TB/HIV services in the PMTCT setting is an area of focus in FY 2009. Women will be screened for TB at antenatal clinics.

As at 30 June 2008, EGPAF-SA is supporting 136 DOH PMTCT sites. A trained and motivated health workforce is essential for the sustainability of the PMTCT program. In an effort to address human resources (HR) gaps and in consultation with the DOH, EGPAF hires additional staff where required, at all levels of service delivery (i.e., site, district, provincial and national level). Categories of staff provided depend on the HR needs (e.g., nurses, counselors, data capturers, etc.). EGPAF adheres to DOH salary scales. Additional staff seconded to DOH has fixed term contracts of employment with EGPAF and where applicable, DOH absorbs them into the DOH payroll at the end of the contract. As a recruitment and retention strategy, DOH has recently introduced the Occupational Specific Dispensation (OSD).

In addition to human resources provision, EGPAF strengthens DOH human capacity development (HCD) efforts by providing training using various training methodologies, namely, didactic training, preceptorship, onsite mentoring, coaching and supportive supervision. Health-care workers are trained on comprehensive PMTCT, early infant diagnosis (including PCR testing), clinical staging in infants and children, infant feeding as well as community IMCI. To strengthen the monitoring and evaluation (M&E) capacity, staff is trained on basic M&E including data quality and analysis as well as encouraged to use data for quality improvement. EGPAF has and will continue to train health-care workers on the new PMTCT guidelines to ensure compliance and improve the quality of care.

PMTCT is an important entry point for gender programming. EGPAF will promote partner testing and male participation to improve PMTCT uptake. Support groups for HIV-infected pregnant women and mothers will be established or strengthened to provide psychosocial support as well as support for safe disclosure. As part of strengthening community linkages, EGPAF plans to work with communities to promote human rights, women rights in general, address gender-based violence, strengthen social cohesion and support the institution of the family, and promote male sexual health. Specific needs of pregnant women and children, including follow-up, infant feeding support and prevention with positives will be addressed.

EGPAF's overall PMTCT support is provided in line with the National DOH PMTCT policies and guidelines and the HIV & AIDS and STI Strategic Plan for South Africa, 2008-2011 (NSP). NSP Priority area 1, goal 3, is to reduce mother-to-child transmission of HIV. All EGPAF support is aimed at assisting DOH to scale up coverage and improve quality of PMTCT to reduce MTCT to less than 5%, as well as to broaden existing PMTCT services to include other related services and target groups (e.g., family planning and male involvement).

SUMMARY:EGPAF will use FY 2008 PEPFAR funds to continue prevention of mother-to-child transmission (PMTCT) support for its existing partners which include National Department of Health (NDOH) and provincial DOH Kwazulu-Natal and Gauteng. The Foundation will expand its geographic coverage during FY 2008 to include direct support to provincial and district health departments in the Free State and North West province. The key objective is to expand the coverage of PMTCT services, and thus ensure provision of quality PMTCT services, and increase the uptake of PMTCT services. The primary emphasis area is human capacity development and expansion of services through training and task-shifting, quality improvement, development of networks, linkages, referral systems and strengthening M&E and health systems, and strengthening of local organizations. Primary populations to be targeted include infants, men and women, pregnant women, HIV-infected pregnant women, people living with HIV (PLHIV), and public

Activity Narrative: and private healthcare providers. BACKGROUND: The long-term goal of the EGPAF Project HEART PMTCT program in South Africa is to decrease transmission of HIV from mother-to-child. This is to be achieved through an intensive focus on increasing: the capacity of health facilities to deliver high quality PMTCT services in antenatal care (ANC), including screening and staging of HIV-infected pregnant women; the uptake of voluntary counseling and testing (VCT) through the implementation of the opt-out policy; and the referral of eligible HIV-infected pregnant women to care and treatment. USG support for the PMTCT program was initiated in 2003. This support was provided to McCord Hospital in KwaZulu-Natal, Hlabisa sub-district through the Africa Centre in KwaZulu-Natal, mothers to mothers (m2m) in KwaZulu-Natal and Mpumalanga, and the Johannesburg Metro District through the Perinatal HIV Research Unit (PHRU) in Gauteng. The Africa Centre, M2M and PHRU programs have been transitioned to the KwaZulu-Natal Department of Health (KZNDOH) and to direct USAID support, respectively. McCord Hospital implements best practices for PMTCT through highly active antiretroviral therapy (HAART) for prevention/treatment, AZT from 28 weeks and nevirapine in labor, nevirapine for pregnant women who first present in labor, as well as a stat dose of nevirapine and AZT seven days post delivery to the HIV-exposed infant. This is different from the national protocol. This resulted in a vertical transmission of 4.25% in 2006. McCord uses a family-centered approach for PMTCT. New partnerships created at the end of FY 2006 and implemented in FY 2007 include working directly with the Tshwane-Metsweding Region in Gauteng, and the Free State, North West and KwaZulu-Natal provincial health departments. To improve quality of PMTCT service delivery, EGPAF will continue to support the national and provincial Departments of Health by providing technical support, human capacity development, and infrastructure rehabilitation, where applicable. Priority areas for the South Africa program that are implemented through the activities include: (a) Follow-up of HIV-exposed infants and referrals to care and treatment for HIV-infected infants. (b) Develop referral and integration strategies for fast-tracking pregnant women to treatment services. (c) Improve partner (i.e., couple) testing and increase male and mothers-in-law involvement in the PMTCT program. (d) Work directly with Government sites to strengthen PMTCT services. (e) Strengthen monitoring and evaluation (M&E) activities. (f) Encourage provider-initiated testing and counseling, counseling for HIV negative to stay negative, repeat HIV test at 36 weeks. (g) Tuberculosis (TB) screening, identification of eligible pregnant women for HAART and referral to care and treatment sites. (h) Integrating PMTCT into existing maternal and child health and family planning services including pap smears. (i) Infrastructure rehabilitation, e.g., renovations to existing structures, acquisition of park homes. (j) Encourage support groups for pregnant women. (k) Community and facility-based strategies to support infant feeding choices made. ACTIVITIES AND EXPECTED RESULTS: ACTIVITY 1: McCord PMTCT Program Activities (a) Implement the family-centered model encouraging couple counseling, providing partner testing and testing of other siblings. (b) Use the both provider-initiated and voluntary "opt-out" approach in the counseling and testing (CT) program. (c) Provide polymerase chain reaction (PCR) testing at six weeks for early infant diagnosis and thus improve HIV-exposed infant testing and follow-up. (d) Strengthen the referral system between PMTCT and the wellness clinic or care and treatment services. This is achieved by offering routine CD4 testing to HIV-infected pregnant women and HIV-infected infants to identify those eligible for HAART. (e) Provide TB screening for HIV-infected pregnant women. (f) Offer complex ARV regimens depending on the clinical and immunological (CD4) staging. (g) Provide HIV and AIDS training to local community-based organizations such as churches and youth organizations to raise community awareness. (h) Provide cotrimoxazole prophylaxis for mothers and children. ACTIVITY 2: Free State, Gauteng, KwaZulu-Natal and North West Provincial Departments of Health (a) Conduct needs and site assessments to identify gaps and address the needs of human resources, infrastructure, training of healthcare workers (HCW), technical support, monitoring and evaluation, commodity, and ways to strengthen PMTCT services. (b) Provide training in early infant diagnosis (PCR) to improve follow-up of HIV-exposed infants. (c) Incorporate CD4 testing of HIV-infected pregnant women and HIV-infected infants in the PMTCT program, and fast-track those eligible to care and treatment sites or wellness clinics. (d) Facilitate the provision of antiretroviral treatment for eligible HIV-infected women within the PMTCT program. (e) Develop comprehensive referral systems to care and treatment sites. (f) EGPAF respects Provincial Policy on Nutrition. The nutritional advice is provided through health education to all pregnant women (HIV infected or not). ACTIVITY 3: Support to National PMTCT Staff Capacity and Training; Participate in the National Pediatric AIDS Working Group (a) Provide training to the nine provinces on early infant diagnosis, antiretrovirals in pregnancy, clinical and immunological staging of HIV and AIDS in infants and children, and clinical manifestations of HIV and AIDS in infants and children. (b) Place a technical advisor within the National Department of Health. (c) Participate in the National Pediatric Working Group to discuss and advise policy with regard to pediatric treatment guidelines and access to pediatric treatment services. With FY08 reprogramming funding, EGPAF will provide support to the National Department of Health and three provinces (KwaZulu-Natal, North West and Free State) in training and mentoring of health workers to implement the new (2008) PMTCT dual therapy guidelines. Tools to measure compliance to these new guidelines are being developed and will be rolled out to facilities in the three targeted provinces, and beyond. With FY08 reprogramming funding, EGPAF will provide support to the national Department of Health and 3 provinces (KwaZulu-Natal, North West and Free State) in training and mentoring of health workers to implement the new (2008) PMTCT dual therapy guidelines. Tools to measure compliance to these new guidelines are being developed and will be rolled out to facilities in the three targeted provinces, and beyond.

Budget Code: MTCT	Program Budget Code: 01
Activity ID: 8049.22782.09	Planned Funds: \$48,545
Activity System ID: 22782	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Project Phidisa (Phidisa) is a clinical research project focused on the management and treatment of HIV infection in the uniformed members of the South African National Defence Force (SANDF) and their dependents. Phidisa no longer caters for pediatric cases, creating a huge need for specific pediatric training for clinicians and other health-care workers in all roll-out sites. This will include training health care workers on prevention of mother-to-child transmission (PMTCT) according to the revised South African national PMTCT guidelines, that includes provision of dual therapy and that must be implemented in all South African Military Health Service facilities.

Health-care professionals will be trained to implement the new policy in antenatal care, including provider-initiated testing and counseling, dual therapy to all HIV-infected pregnant mothers, partner testing, and antiretroviral therapy to newborns and other siblings. The PMTCT Policy guidelines also include polymerase chain reaction testing of all HIV-exposed babies at 6 weeks and 3 months later. According to the new WHO guidelines, early infant diagnosis is critical and the South African Department of Defence (SA DOD) will adopt a policy of placing all HIV-infected infants under 12 months on highly active antiretroviral therapy.

HIV-infected mothers who had, previously opted to exclusively bottle feed were responsible for the purchase of infant formula feed. The SA DOD, in line with National Department of Health Guidelines, has changed this policy to provide infant formula feed to mothers who choose to exclusively bottle feed. Both cotrimoxazole and INH prophylaxis is given where indicated and babies/children are referred to the pediatric department for further management. HIV-infected mothers are then referred to adult antiretroviral treatment clinics for further treatment and follow-up.

Information, education and communication material relevant to PMTCT is developed and distributed as part of the Corporate Communication Plan for the Masibambisane DOD prevention program.

SUMMARY:

The South African Department of Defense (SA DOD) Prevention of Mother-to-Child Transmission (PMTCT) program is an integral component of the SA Department of Defense Comprehensive Management, Prevention, Care and Treatment Program. It focuses on training military healthcare workers with standardized educational materials based on World Health Organization (WHO) and South African National PMTCT guidelines to ensure appropriate and uniform PMTCT services for HIV-infected mothers and their babies. Healthcare workers in all military hospital and clinic settings throughout all nine provinces will be trained. The program will include counseling and testing of mothers as part of antenatal care, the provision of antiretroviral treatment for PMTCT, in line with national policy, appropriate management of infant deliveries, follow-up support for infant feeding practices, and linkages with treatment, care and support for HIV-infected women. It is envisioned that PMTCT will serve as an entry point for male partners and other family members to access counseling, testing, care and treatment services. The major emphasis area is training, with minor emphasis on information, education, and communication, and policy and guidelines. Target populations include adults, pregnant women, HIV-infected pregnant women, people living with HIV, HIV-infected infants, doctors, nurses, laboratory workers, pharmacists, and other healthcare workers within the military.

BACKGROUND:

Since 2000, the SA DOD has provided a comprehensive care, management and treatment plan for HIV and AIDS to members of the military and their families that includes PMTCT as a mode of intervention. This PMTCT intervention has served as an entry point to treatment and care, thereby ensuring access to treatment for women. Although this intervention has already been integrated into the HIV and AIDS program, it has never received PEPFAR funding and is not standardized across all military units in all nine provinces. It is envisaged that future management of the SA DOD PMTCT project will include more vigorous PMTCT training for military healthcare workers and ensuring that healthcare workers are able to link PMTCT and antiretroviral treatment programs. In addition, healthcare workers will also be trained to see PMTCT as a HIV and AIDS service delivery entry point for the whole family, including mothers, fathers, infants and other children. This expansion requires standardization of protocols, more vigorous implementation of a comprehensive package of PMTCT services according to WHO and national guidelines, and monitoring and evaluation of the PMTCT program.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Training

SA DOD will modify PMTCT clinical practice guidelines to be implemented in PMTCT programs. Existing guidelines will be reviewed annually during a PMTCT workshop attended by SA DOD doctors and nurses. The goal of this workshop will be to ensure that current WHO PMTCT guidelines and NDOH PMTCT guidelines are being incorporated into all SA DOD communication tools and educational aids for practitioners and patients and that PMTCT services available for whole families (including mothers, fathers, and babies) are standardized across all military health units in all nine provinces. SA DOD will provide standardized PMTCT training to healthcare providers using these evidence-based clinical practice guidelines as part of a comprehensive package of PMTCT services. Dependent upon human resource capacity within SANDF, the Director of the SA DOD HIV and AIDS Program will decide whether the training will be centralized within SA DOD or will need to be outsourced to an accredited training institution. The PMTCT training program was included for FY 2007 into the ARV training program, which is outsourced to the University of Pretoria. One hundred eighty six healthcare workers have been trained since April 2005. It is expected that another 56 healthcare workers will attend this training in August 2007. Due to human resource shortage and capacity within the SAMHS, the FY 2007 PMTCT funding has not been utilized, yet this is still an unmet need.

Activity Narrative: ACTIVITY 2: Service Delivery

SA DOD will provide a comprehensive package of PMTCT services to every pregnant woman. A large component of this PMTCT package is counseling and testing. All pregnant women will be counseled and offered HIV testing using the opt-out testing approach. Women who test positive will be post-test counseled and antiretroviral treatment for PMTCT will be provided. An important component of the comprehensive package of PMTCT services includes the referral of HIV-infected women to treatment, care and support services. SA DOD will ensure that all women are fully supported once the HIV status has been established. This includes support on appropriate infant feeding practices. The SA DOD PMTCT program will ensure that PMTCT does not stop at delivery and an infant follow-up system will be implemented to ensure that the HIV status of the HIV-exposed infant can be determined and the infant can be referred to treatment, care and support services. This follow-up system will also ensure that HIV-exposed infants are monitored for signs and symptoms of HIV infection and that cotrimoxazole prophylaxis is provided appropriately. The SA DOD program will support HIV-infected pregnant women such that they are in a position to disclose their HIV status to their families and can encourage their families to participate in the program. This will be done by providing ongoing counseling and support to these women. SA DOD will also offer counseling and testing to other family members, and family members who test positive will be referred to treatment facilities as well. Presently, procurement of antiretroviral drugs for this purpose will be funded by PEPFAR as managed by USAID.

The PMTCT package also includes micronutrient supplements (multivitamins, iron therapy, folic acid) and recommendations for a well-balanced nutritious diet for pregnant and lactating women. Nutritional supplements will be procured through the SA DOD budget. Guidelines will be given to all health units on the provision of PMTCT and the SA DOD Monitoring and Evaluation team will track women who receive this PMTCT package of services through the SA DOD health informatics system. It must be noted at this stage it is not possible to report on the numbers of pregnant women receiving PMTCT services as the SA DOD only reports on cumulative numbers of adult patients on treatment as agreed. This will be further explored with the US and SA DOD M&E teams for future reporting in this financial year.

These activities will directly contribute to the PEPFAR 2-7-10 goals by averting HIV infection in children, increasing access for people living with HIV to counseling, testing, care, treatment and support in the South African Department of Defense, and increasing the capacity of healthcare providers.

Activity ID: 22374.22732.09

Planned Funds: \$640,797

Activity System ID: 22732

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

This University of KwaZulu-Natal project is committed to reducing all components of mother-to-child transmission, including in utero, intra partum and postnatal transmission. The activities described in COP 2008 focus principally on reducing in utero and intrapartum (i.e., peripartum) transmission via a process of system strengthening and resolving obstacles to service delivery in the antepartum period. These are the most accessible aspects of the prevention of mother-to-child transmission program and most likely to yield immediate benefits. Furthermore, the interventions to reduce peripartum transmission are very well described and currently available for intervention at scale.

In 2009, the project will aim to consolidate gains in system performance and the monitoring of outcomes and then, depending on progress in 2008, shift emphasis to postnatal transmission (i.e., optimizing infant feeding practices in order to reduce postnatal transmission of HIV and promote child survival). This will involve activities in the health system as well as in the communities that the facilities serve. The team is already starting to engage on the components of such interventions and to identify what formative work may be needed.

The project also aims to complete data collection in 2009 for a costing analysis of the main systems intervention over 2008-2009 to permit a cost effectiveness analysis in 2009-2010.

SUMMARY:

The KZN 20,000 project aims to significantly reduce perinatal HIV transmission within 2 years and improve overall child survival within 5 years in three districts of KwaZulu Natal (KZN) through health system support interventions that would increase the effectiveness of current Prevention of mother-to-child transmission (PMTCT) services;

BACKGROUND:

HIV infection in children is preventable. In Europe and the United States mother-to-child transmission rates have been reduced to less than 2% and few HIV-infected babies are born in these countries. This has been achieved through active screening and thereby identification of HIV-infected women attending antenatal clinics, the early initiation of highly active antiretroviral treatment (HAART) whilst women are pregnant, delivery of infants by cesarean section and the avoidance of all breast milk.

Implementing the same interventions and achieving the same low transmission rates has not been realized in most resource-poor settings. Whilst the relatively restricted PMTCT protocols that have been applied in most South African provinces cannot be expected to produce the results seen in developed nations (where perinatal HIV transmission is the exception) there is an unacceptable gap in performance of the existing PMTCT programs. Numerous obstacles have contributed to the failure of national and district health systems to successfully operationalize international PMTCT recommendations. While in some cases there are genuine deficiencies in human and physical resources, as well as incomplete training, experience in rural and urban South African PMTCT program points to a widespread failure to reliably deliver the sequence of simple processes of care (e.g. determining a mother's HIV status, reliable dispensing of prophylactic drugs). Additional transmissions occur due to inappropriate infant feeding choices by HIV-infected mothers either because of poor antenatal counseling or/and lack of support from health workers. Target population for the project includes pregnant women, their infants, and health care workers at the district health facilities. The emphasis areas are training, strategic information and local organization capacity building.

ACTIVITIES AND EXPECTED RESULTS:

The KZN Department of Health (DOH) and University of KwaZulu Natal agreed that the project, now known as KZN 20,000, would proceed in three phases. Phase I comprises of a situational analysis and planning exercise (currently underway) to determine the level of health system intervention required to effect large scale improvement of the PMTCT program. Phase II will focus on rapid scale up of system strengthening and priority activities to improve effectiveness of PMTCT. Phase III will focus on infant feeding strategies and community mobilization. FY 2008 funding will be used to implement phase II activities. Subsequent years of funding will ensure the implementation of Phase III.

Activity 1: Implementation of KZN 20,000

KZN 20,000 will operate across three districts that were chosen by the KZN DoH, namely Ethekwini (Durban and immediate surroundings), Ugu and Umgungundlovu. Ugu district is a Presidential nodal site, meaning that it has been designated as a district that is exceptionally poor and under-resourced. Umgungundlovu contains Pietermaritzburg, the second largest city in KZN. Durban and Pietermaritzburg both have large areas of informal housing and peri-urban areas with extremely poor communities. The 3 districts contain more than half (~5m) of the entire population of KZN (~9m) and suffer high antenatal HIV prevalence rates - Ethekwini 41.6%, Ugu 38.9% and Umgungundlovu 44.4%. Between the three districts there are over 260 PHC clinics and 16 state hospitals delivering 82,000 babies per year. The project is designed to reduce the number of infant infections in the three districts by 4,800 per year and improve the health of HIV-infected mothers through strengthening of the existing health system and capacity development at district and local level. Emphasis will be given to careful documentation of process and monitoring of outcomes so that best practices and lessons can be rapidly extended to the other 8 districts within the Province. The KZN DoH is committed to the project and is using it as a way of improving overall health care management and service delivery. The health system support intervention (Phase II) will also create a platform from which to introduce interventions to improve infant feeding practices that are critical for preventing infant HIV infection and reducing infant mortality.

Activity 2: Health System Improvement Intervention:

KZN 20,000 will introduce health systems improvement intervention designed to improve the quality of PMTCT services across 3 districts. The project team will train and mentor mid-level Primary Health Care (PHC) supervisors in quality improvement methodologies and management skills that will be supported through a data collection and monitoring system specifically designed and supported by the project.

Activity Narrative: Implementation of PMTCT services will remain the primary responsibility of health staff in clinics and hospitals. Routine PMTCT performance indicators will be tracked as well as 3 outcome indicators namely a) infant HIV prevalence rates at immunization clinics, b) population-based infant mortality rates and c) in-patient child mortality.

Activity 3: Development of a Data System:

A robust system that allows for timely and accurate collection, transmission (to central data assembly points), collation, translation and feedback of data is a critical component of an effective improvement intervention. An IT system is in development that will install a local MS Access database on computers that will be placed in each District Information Office. All applications will work independently but data will be automatically uploaded to an SQL database on a remote server each day. Data security can be assured by use of digital certificates such that data is only accepted from pre-specified machines which have valid certificates installed. A dedicated data assistant will be located in each district office to capture and manage data from each clinic and to produce reports for the PHC supervisors. This will initially be a system that runs parallel to, and will derive data from the current provincial data collection system. There will be no duplication of data collection since all data will flow to the provincial office. It is anticipated that the systems will be merged at the end of the funding period if the potential benefits of the proposed system are realized. The main output of the data system will be to run system performance data reports for program leadership and site specific process performance reports (line charts and histograms) to guide activities of the nursing supervisors and clinics staff.

Activity 4: Development of Learning Networks:

Prior experience with large scale improvement interventions indicates that change is accelerated when successful ideas are transmitted from peer-to-peer, and when a culture of peer support can be developed. In a traditional quality assurance environment, the front-line staff receive instructions to improve across a broad array of indicators in what is often a pejorative context. The purpose of the learning network is to bring together small teams (e.g. facility manager, nurse, counselor) from each health care site to set common project aims, learn together how to map care processes, identify obstacles and solutions, learn how to test innovations and how to collect data to track improvement. Additional support will be given to poor performing clinics. At Learning Sessions, sites that are struggling will also be exposed to participants from high performing sites who will share their experience and strategies for success. Between these Learning Sessions, quality mentors will visit the hospitals and together with PHC supervisors will visit the clinics regularly (1-2 times/month) to support the teams, and sustain the improvement process through planning new tests of change. The concept of learning networks will apply also to the mentoring of the PHC supervisors themselves who will be brought together each month for training, transparent review of team progress, and peer support for successes and challenges in the field.

Activity 5: Monitoring of Infant HIV transmission rates, Infant and Child Mortality:

Perinatal transmission rates will be routinely monitored at sentinel sites in each district through surveillance of all infants attending 6 week immunisation clinics. Dried blood samples will be collected from all infants following informed consent from the mother or legal guardian regardless of whether the mother was part of the PMTCT programme or not. Maternal, infant HIV prevalence rates can be determined as well as vertical transmission rates.

The goals of project 20,000 are directly aligned with the goals and objectives of the US President's Emergency Plan for AIDS Relief (PEPFAR). These goals include achieving primary prevention of new HIV infections through expanding VCT programs and building programs to reduce mother-to-child transmission. KZN 20 000 aims to improve the overall performance of PMTCT and thus reduce the incidence of new perinatal HIV infections. Improvement of PMTCT has other desirable indirect outcomes which include early diagnosis of HIV that leads to increased access to HAART, decrease in infant mortality rates and overall improvement in child survival.

Activity ID: 9083.22733.09

Planned Funds: \$728,178

Activity System ID: 22733

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Using FY 2008 funding, the two existing Demonstration sites in KwaZulu-Natal (KZN) will be supported until December 2009 and an additional site established in the Ethekwini District of KZN and NOT in the Eastern Cape as proposed in the FY 2008 COP. Each of the three sites will develop a best practices model which can be rolled out by the provincial departments of health and social development to the province.

FY 2008 funding will also be used to provide ongoing technical assistance and support to KZN at the district level to ensure that program managers develop skills to conduct program level evaluations and can use these evaluations to strengthen existing prevention of mother-to-child transmission (PMTCT) services. Technical assistance will also be provided at the clinic level through the provision of a comprehensive training and capacity-building program, and an onsite, mentorship and support program. A pilot program utilizing Maternal Health Carrier Books will also be implemented to ensure continuum of care of HIV-infected women. The Maternal Health Carrier Book issued to pregnant women at their first antenatal visit serves to communicate essential health information between health service providers at primary health clinics and hospitals and to assist primary health-care providers at primary health-care facilities to monitor antenatal and postnatal progress.

FY 2008 Activities Include:

ACTIVITY 1: Continued Support of Demonstration Project:

This activity will continue to be supported in two sites, (i.e., Umzinto Clinic and GJ Crookes Hospital in Ugu and Umlazi D Clinic and Prince Mshyeni Memorial Hospital in Ethekwini). The University of KwaZulu-Natal (UKZN) will continue to support the Department of Health in the Districts of Ugu and Ethekwini to improve the follow-up and continuum of care of women (HIV-infected and uninfected) and children in the PMTCT program. This project is a holistic PMTCT program that focuses on enrolling women into PMTCT services, PMTCT service delivery, and linking women and their infants to social welfare programs, treatment, care and support.

ACTIVITY 2: Expansion of Demonstration Project

This activity will be expanded in KZN to an additional site in the Ethekwini District. An assessment of current health and social systems in the community accessing care at the site will assist identification of suboptimal outputs of service delivery. A strategy of providing an integrated comprehensive HIV health and social service to women and children seeking care at the Newtown A Community Health Centre and the referral facility, Mahatma Gandhi Memorial Hospital will be developed.

ACTIVITY 3: Technical Assistance

Technical assistance to the province will ensure the facilitation of linkages between family planning, PMTCT, and treatment by supporting two districts in implementing a new patient-held information system for use at primary health clinics. This system will improve continuity of maternal care by having one health document that can be presented at different health facilities. The health book is patient-owned and is designed to incorporate most existing medical records. Currently, women seeking antenatal care at primary health clinics receive a Maternity Case Carrier Record (Record). This document is designed to obtain the following patient information during antenatal care and delivery: basic particulars relating to patient (e.g., name, ID number, marital status, date of birth, contact details and dates of hospital admission and discharge); details of current pregnancy (e.g., LMP, EDD, complaints); history of previous pregnancies; laboratory tests (e.g., RPR, PAP and Rh), risk factors and recommendations; record of antenatal attendances for the current pregnancy; clinical notes; record of labor; admission; labor history; a partogram; details of mode of delivery; summary of labor; postdelivery record during hospitalization; and record of maternal and infant condition during the puerperium period. Other information documented in the Record include HIV information such as a PMTCT stamp indicating HIV status of the patient. This stamp can be seen on the rear inner cover of the Record. Other information in the stamp would include the date of nevirapine issued, CD4 test done and results, and proposed infant feeding method. The Record serves to communicate essential information between health service providers at primary health clinics and hospitals and to assist primary health-care providers at antenatal clinics to monitor antenatal progress. Unfortunately, this communication of crucial patient information ends at the point of hospital discharge following delivery since all Records are retained in the hospital registries. Upon hospital discharge, women are given an Appointment Card for their scheduled postnatal visit and an infant Road to Health Chart for ongoing care and immunization. The above patient held-information system has major drawbacks in ensuring continued maternal care, while health services have previously focused only on infant health. These challenges have recognized, particularly when implementing HIV programs.

Technical assistance will also include the implementation of an integrated training strategy which addresses operational issues for the delivery of a comprehensive package of care for women and children. Training health teams from each of the facilities and their associated ART sites will be conducted in direct partnership with the district program managers. The training will establish and strengthen referral mechanisms and a multidisciplinary team approach, thus ensuring that women and children have easy access to continuum of care and ART. Three-day training courses will take place at the district level.

FY 2009 Activities:

ACTIVITY 1: Technical Assistance

UKZN will use FY 2009 funding to roll out the Maternal Health Book to all public health facilities in the districts of Ugu and Ethekwini and to monitor usage during a two month period.

ACTIVITY 2:

Activity Narrative: Technical assistance will ensure the linkages between family planning, PMTCT, and ART, including implementation of an integrated training strategy that will address operational issues for the delivery of a comprehensive package of care for women and children. In addition to the 3-day training course supported during FY 2008, an additional refresher training will occur over a 1-day period at 6 to 12 monthly intervals depending on need and performance indicators.

The UKZN PMTCT project aims to increase uptake of counseling and testing, PMTCT, improve maternal and infant follow-up, better ART and medical adherence rates associated with reduction in maternal and child morbidity and mortality, improve health awareness and service delivery.

SUMMARY:

UKZN proposes to use PEPFAR funding to strengthen existing prevention of mother-to-child transmission (PMTCT) services, by continuing ongoing FY 2007 activities in the Eastern Cape province and providing technical support to KwaZulu-Natal to facilitate better PMTCT implementation and integration with treatment, care and support. Target populations for the project include pregnant women and infants born to HIV-infected mothers, all cadres of health care workers engaged in maternal and child health services and provincial PMTCT coordinators. Emphasis areas for the project include human capacity development, local organization capacity building, and the provision of technical assistance. The UKZN PMTCT project has 2 components viz. (i) Expansion of the FY 2007 funded Demonstration Project which aims to create linkages between health and social services in the EC; and (ii) Provision of technical assistance to 3 Health Districts in KwaZulu-Natal with the highest antenatal HIV seroprevalence.

BACKGROUND:

MTCT rates prior to implementation of the national PMTCT program ranged between 20% - 34%. Since 2002, South Africa has made significant progress in the rapid expansion of PMTCT services. Several national and provincial audits of the program have highlighted common gaps and challenges to implementation, and as a result MTCT rates remain high, 20.8% at six weeks as compared to the anticipated 12%-14%. Challenges to program implementation include: low uptake of CT, lack of ongoing support for both HIV-infected and uninfected women, poor administration of ARV prophylaxis (less than 25%), policy confusion around nevirapine, poor postnatal follow-up (retention < 15%) and erratic and unsafe infant feeding practices. In addition, with the implementation of ART programs, linkages between PMTCT and ART programs have not been established successfully. In view of the above challenges and using FY 2006 and FY 2007 funding; the UKZN PMTCT project was conceptualized to begin to address these deficiencies. Specific FY 2006 and FY 2007 activities included: establishing pilot sites in each province to begin implementation of repeat HIV testing for pregnant women who were missed or who tested negative at the first antenatal care visit. During FY 2006, the project was completed in 12 primary health care clinics, three in each of the provinces with the highest HIV antenatal prevalence, namely MP, FS, EC and GP and using FY 2007 funds preparations for implementation in three primary health clinics in each of the remaining provinces, namely North West (NW), Limpopo (LP), Western Cape (WC) and Northern Cape (NC) have begun.

Using FY 2006 funding, a demonstration project aimed at improving follow-up and continuum of care of women (HIV infected and uninfected) and children in the PMTCT program by fostering a partnership between Health and Social Services in KwaZulu-Natal was implemented. This project serves as a demonstration site for a holistic PMTCT program that focuses on enrollment of women into PMTCT services, PMTCT service delivery and linking women and their infants to social welfare programs, treatment, care and support. This project has commenced in collaboration with management of both departments of Health and Social Development in KwaZulu-Natal and is due to be complete in July 2008. Using FY 2007 funding, a demonstration site for holistic PMTCT service delivery is being set up in Eastern Cape and expanded to two health facilities in KZN. Funding will ensure that each of the two provinces have a best practices model which can be rolled out by the provincial departments of health and social development. The project is supported by a trained team of clinicians, community health workers and social workers who would perform a situational assessment of health service utilization and the provision of comprehensive maternal and child health services among women and children, implement a comprehensive package of clinical care for HIV infected and uninfected women and their children through integrating HIV and PMTCT programs in routine maternal and child health services, establish a support program for HIV-infected and uninfected women antenatally and postnatally until 18 months post-delivery and facilitate and expedite access to social support services such as child support grants (CSG), child care grants (CCG), and disability grants through interdepartmental collaborations viz. health, social welfare and home affairs.

FY 2007 funding is also being used to provide ongoing technical assistance and support to four provinces, namely Eastern Cape, Gauteng, Free State and Mpumalanga. Technical assistance will be provided at the provincial level to ensure that provincial program managers develop skills to conduct program level evaluations and can use these evaluations to strengthen existing PMTCT services. Technical assistance will also be provided at the clinic level through the provision of a comprehensive training and capacity building program, and an onsite, mentorship and support program.

FY 2008 Specific activities include:

ACTIVITY 1: Expansion of Demonstration Project

This activity will be expanded in the Eastern Cape to all peripheral clinics associated with Motherwell Community Health Centre. UKZN will use PEPFAR funds to support the Department of Health in the EC in its effort to improve the follow-up and continuum of care of women (HIV-infected and uninfected) and children in the PMTCT program. To this end, UKZN will foster a partnership between Health and Social Services in the EC. This project is a holistic PMTCT program that focuses on enrolling women into PMTCT

Activity Narrative: services, PMTCT service delivery, and linking women and their infants to social welfare programs, treatment, care and support. An assessment of current systems of the provision of social services in these communities will assist identification and networking of relevant stakeholders in the Departments of Health, Home Affairs and Social Development. We will develop a strategy of facilitating rapid access to identity documents and social grants for HIV infected women and children in consultation with the relevant role players.

ACTIVITY 2: Support and Technical Assistance to KwaZulu-Natal

The premise behind this activity is to improve knowledge of health workers to ensure successful implementation of a comprehensive HIV and AIDS plan at the primary health care facilities and to increase awareness among patients regarding the availability of HIV and AIDS related health services at the facility level. Technical assistance will ensure the facilitation of linkages between family planning, PMTCT, and treatment. The focus of this activity includes the development of an integrated training strategy which address operational and implementation issues for the delivery of a comprehensive package of care for women and children affected by the HIV and AIDS pandemic. Technical assistance also target teams off service providers from each of the facilities and their associated ART sites to establish and strengthen referral mechanisms and a multidisciplinary team approach towards ensuring that women and children have easy access to ARV treatment and continuum of care.

Training will take place at the facility level and will be implemented over three days per month. In addition to on-site training and mentorship, audiovisual aids to promote education and communication at the health facilities will also be implemented. These aids include video recordings, pamphlets and posters.

The UKZN PMTCT project aims to increase uptake of CT, PMTCT, improve maternal and infant follow-up, better ART and medical adherence rates associated with reduction in maternal and child morbidity and mortality, improve health awareness and service delivery. This project contributes to PEPFAR 2-7-10 goals by preventing vertical transmission and linking women and infants to treatment programs.

USG Agency: U.S. Agency for International Development

Program Area: Prevention: PMTCT

Program Budget Code: 01

Planned Funds: \$1,211,926

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Absolute Return for Kids (ARK) will use PEPFAR FY 2009 funds to co-fund new prevention of mother-to-child transmission (PMTCT) activities in the Eastern Cape (EC). ARK has been requested by the EC HIV and AIDS, STI and TB (HAST) directorate and the Nelson Mandela Metro to scale up support in this province. ARK has been supporting the province since 2006 and is currently working in 11 sites, delivering care and treatment in 10 sites and PMTCT services in 1 site.

PEPFAR funding for FY 2009 will support the implementation and scale up of the revised national PMTCT guidelines in the EC. The scale up in ARK-supported sites will ensure that women in the high HIV burden areas of the EC are reached with PMTCT services.

Modifications to FY 2008 activities are as follows:

ACTIVITY 1: Support to KwaZulu-Natal and Eastern Cape Departments of Health

Referral systems will be strengthened to ensure the easy, quick referral of patients between antiretroviral ARV, TB, PMTCT and pediatric ARV services to ensure that mothers and infants testing HIV positive will be referred for early care and treatment. Tracing of lab results for early infant diagnosis will be conducted proactively to ensure that bottlenecks in the system are addressed with the KwaZulu-Natal and Eastern Cape Departments of Health and the National Health Laboratory Services. Additional information management capacity will be added to sites including data capture and computers. All sites will have internet connectivity to facilitate information management activities. TB infection control practices are standard at ARK-supported sites, include well-ventilated waiting areas and consulting rooms, safe sputum collection, and patient and staff education on safe cough etiquette and hygiene. All HIV-infected pregnant women and HIV-exposed infants who have a TB contact will receive TB screening, prophylaxis and treatment if appropriate.

In those clinics where space is a bottleneck to service delivery, ARK will assist the facility with the provision of space in the form of temporary infrastructure, or renovating existing rooms to ensure efficient patient flow.

ACTIVITY 2: Treatment for HIV-infected Pregnant Women

All HIV-infected pregnant women will be screened for TB and referred for further diagnostics, prophylaxis and treatment as appropriate. Linkages to on-site family planning services will be established where available. Linkages will be established with other service providers who are providing prevention-focused support groups for HIV-infected pregnant women.

ACTIVITY 3: Pediatrics

ARK's program follows current National Department of Health guidelines for PMTCT prophylaxis, therefore mothers with a CD4 > 350 or between 250-350 with WHO Stage 1&2 will not be given Highly Active Antiretroviral Therapy (HAART), as anticipated in the FY 2008 plan. All babies will be tested 12 weeks post-weaning if breastfeeding, and all negative infants will be re-tested with an Elisa at 18 months.

The PMTCT program will link into the pediatric care component to allow for improved child survival activities with specific reference to improved diagnosis and treatment of TB, recommended Vitamin A supplementation, routine immunization and the integrated management of childhood diseases. All HIV-exposed infants will receive the basic preventative care package including infant feeding and nutrition, cotrimoxazole prophylaxis, early testing, and TB screening, prophylaxis and treatment.

SUMMARY:

Absolute Return for Kids' (ARK) focus is to provide a comprehensive care package for PMTCT services to HIV-infected mothers and their children through partnerships with local government health facilities. ARK's primary emphasis has been in areas of human capacity development, local organization capacity development, and construction/renovation at about ten facilities. The target population is HIV-infected pregnant women and their infants.

BACKGROUND:

ARK is a charity organization whose mission is to facilitate and support delivery of accessible, sustainable comprehensive treatment, care and support services to children and their caregivers in communities affected by HIV and poverty. In partnership with the KwaZulu-Natal Department of Health (KZNDOH), ARK, has established an antiretroviral treatment program in government primary health facilities and hospitals. Specifically, ARK works with the KZNDOH to identify sites and areas for capacity building, including human resources, modest infrastructure support, and organizational capacity development. PEPFAR funding has enabled ARK to successfully enroll over 15,000 patients in ART in KZN with about 12000 remaining in care at ARK supported sites.

FY 2008 funding will enable ARK to expand its established ARV treatment program to include a comprehensive range of PMTCT services. These services will be supported by improvements in the infrastructure of targeted sites, and the provision and training of human resources in partner health facilities to further strengthen their capacity to deliver quality counseling and testing, treatment, care and support for HIV-infected mothers and their children.

ACTIVITIES & EXPECTED RESULTS:

ACTIVITY 1: Support to KZNDOH

Activity Narrative: ARK works with the KZNDH to develop the necessary processes and systems to manage the PMTCT program, to ensure that the model implemented is scaleable, sustainable and replicable elsewhere. ARK's PMTCT program works within KZNDH selected districts and focuses on strengthening the existing networks of operating clinics; capacity-building is site specific. Upon identification of a site, ARK conducts an analysis to identify staffing, clinical equipment, and infrastructure needs. The program works with facility management to prioritize and promptly address gaps and develop plans for manageable scale-up. ARK also assesses hospital patient data management systems and will employ and train, where needed, data captureurs. The data captureurs support both providers and facility administrators to strengthen the management and use of patient records systems for improved service delivery.

ACTIVITY 2: Human Capacity Development

ARK will conduct a thorough needs analysis of human resource capacity prior to initiating support to the PMTCT program at each site and recruit all the necessary medical staff required for the successful rollout of services. The staff recruited varies from site to site but include doctors, nurses, pharmacists, pharmacy assistants, medical technologists, facility-based counselors, and patient advocates. For all key staff, ARK will provide two-week orientation training based on the National PMTCT and Infant Feeding Curriculum and Methodology. The training and follow-up refresher courses cover all aspects of ARK's PMTCT program including employee policies and procedures, onsite mentorship from experienced ARK staff, and an introduction to key performance areas. The specific topics covered include: counseling and testing, treatment guidelines for pregnant women, management of opportunistic and sexually transmitted infections, adherence support as well as the value of community access, prevention counseling and patient advocacy. Staff are invited and encouraged to attend formal training offered by external providers including other PEPFAR partners such as the Foundation for Professional Development (FPD).

ACTIVITY 3: Counseling and Testing

ARK will focus on provider driven opt-out testing to all pregnant mothers entering the antenatal clinics. To better ensure sustainability, where possible, ARK will use the counselors available through the District HIV program and existing trained community care workers to provide counseling. Where needed, ARK will employ and train additional counselors. Counseling and ongoing training will be in line with the National Department of Health (NDOH) Guidelines. ARK will provide mentorship and supportive supervision to lay counselors to ensure high quality standards for CT. In accordance with NDOH standards, all testing will be conducted by trained medical staff (primarily nurses). Pre- and post-test counseling for all clients will include information on HIV & AIDS, STIs, prevention education, risk reduction strategies, and partner testing. Post-test counseling will further include information and support on treatment, care and support services, and positive living.

Formal and informal training and onsite mentorship will be provided to all lay counselors in the program. ARK, in partnership with the Centre for Social Science Research at the University of Cape Town, will continue to develop and improve training modules for lay counselors. The areas covered in training include: basic and advanced counseling skills, positive living, disease progression, opportunistic infections, risk reduction for HIV transmission and safer sex.

ACTIVITY 4: Treatment for HIV-infected pregnant women

All pregnant women testing positive for HIV will have an immediate CD4 test and will have a clinical assessment for the present of opportunistic infections and for staging. Women will receive nutritional counseling as well as counseling around feeding options for their babies. Exclusive breast feeding will be encouraged in those women who do not satisfy the AFASS principles for formula feeding. A particular focus will be on triaging pregnant women who are treatment eligible into treatment programs, and ensuring that women who are not treatment eligible are provided with the appropriate dual-drug prophylaxis (new DOH guidelines.) The process and follow up of women on triple therapy will be dependant on the facility. In some facilities this site will be in the same place as the antenatal service, in others the ARV treatment site will be separate to the antenatal clinic.

Upon registration into the PMTCT program, a paid trained patient advocate is assigned to the patient. The patient advocate conducts a pre-treatment home visit and provides ongoing support to the patient and her family. The patient advocate will accompany the mother to her antenatal visits, provide adherence support and referrals and follow-up as needed. Should a patient be non-adherent or lost to follow-up, the patient advocate will investigate the reasons for this, acting as the link between the patient and the clinic. ARK facilitates the integration process for ART, TB, palliative care and OVC care and support services where appropriate.

ACTIVITY 5: Pediatrics

HIV-infected pregnant women will be educated and encouraged during pregnancy to undertake post delivery testing for their babies. All children born to HIV-infected mothers will be closely followed up for any evidence of early deterioration and will receive NVP and AZT as per PMTCT protocol. At the six week visit, all HIV exposed babies will have a PCR test done, will be given cotrimoxazole prophylaxis and multivitamins to await the PCR result. Mothers with a CD4>350 or between 250-350 with WHO STG 1&2 will stop HAART if babies are exclusively formula fed OR after weaning if exclusively breast fed. Formula fed babies that test negative will be offered an Elisa at 18 months. Breast fed babies if tested negative will be offered a PCR at 12 weeks after weaning and if still negative an Elisa at 18 months. HIV-infected babies will be immediately referred to ARK's ARV treatment program and will have access to cotrimoxazole prophylaxis, multivitamin supplements and general nutritional advice, and breastfeeding counseling and support for the mother. The patient advocates (PA) will ensure that all babies are brought back for their immunization and testing for HIV will be actively encouraged by the community workers.

Activity Narrative: ACTIVITY 6: Family-Centered Care and Support Services

In an effort to encourage adherence among mothers and ongoing care for their infants, ARK's program takes an integrated maternal and child health care approach and extends care and support (including treatment literacy and prevention education) to all members of a patient's household. Together, facility-based counselors and patient advocates counsel mothers and their partners on treatment literacy, nutrition, safe infant feeding practices, and safe sex. They offer services within homes and provide encouragement and support to male partners to serve as "adherence buddies" in the management of care during pregnancy and after delivery. Patient advocates are also trained to provide basic psychosocial support and link mothers to individual counseling services and/or support groups.

ACTIVITY 7: Quality Assurance/Improvement

ARK provides computers and employs data capturers at all sites. Data is captured from patient folders and transferred to ARK's data center, allowing for ongoing evaluation and outcome analysis. Adherence rates, death rates and loss to follow-up are closely monitored. Quarterly updates are provided to the KZNDH and information is used within the clinics to strengthen service delivery. All ARK staff are provided onsite, on-the-job training, followed with regular onsite mentorship and evaluation by ARK's national executive and provincial management teams. Informal training sessions are conducted quarterly. Staff are encouraged to attend formal external training courses offered by FPD.

These activities contribute to PEPFAR's 2-7-10 goals by increasing the number of South Africans on treatment and possible new infections averted among infants and children.

Activity System ID: 22561

Program Area: Prevention: PMTCT

Program Budget Code: 01

Planned Funds: \$1,699,083

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Academy for Educational Development / Capable Partners Program (AED/CAP) will use FY 2009 funds to continue building human capacity in the integration of maternal nutrition, infant and young child feeding and prevention of mother-to-child HIV transmission (PMTCT). The program is in line with the HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011 and aims to broaden the involvement of agencies, including non-governmental organizations and communities to strengthen key programs such as health education and behavior change communication, voluntary counseling and testing, PMTCT, antiretroviral therapy, and screening for sexually transmitted infections and TB. All these activities will contribute to the reduction of new infections among pregnant and lactating women. The organization will continue trainings aiming at improving the quality of service delivery, focusing on the minimum packages during antenatal, labor and delivery and postnatal care based on the Batho Pele principles of respect for human rights and confidentiality.

SUMMARY:

AED will use FY 2008 PEPFAR funding to continue to support integration of maternal nutrition and Infant and Young Child Feeding (IYCF) in the context of HIV policy into healthcare and community services through three components: training of healthcare providers and community health workers from all nine provinces; assistance for implementation of integrated IYCF and PMTCT model in two districts of KwaZulu-Natal and one district each in North West, Mpumalanga and Eastern Cape; and support to enhance public awareness of the importance of maternal nutrition and IYCF in PMTCT.

BACKGROUND:

This is an ongoing AED project, initiated in FY 2004 with PEPFAR funding. The first activity was development of guidelines on nutrition for pregnant and lactating women and IYCF in the context of HIV and AIDS. AED has been working in collaboration with the South African National Department of Health (NDOH) nutrition directorate and local NGOs to build health workers' capacity to integrate maternal nutrition and IYCF into existing healthcare and community services based on these guidelines. This will continue with FY 2008 funding. In addition, AED will continue to support efforts to enhance public awareness of the importance of improved nutrition for HIV-infected women in general and pregnant and lactating women in particular, as well as the importance of IYCF counseling as an aspect of PMTCT. Furthermore, AED will provide technical assistance to the National, Provincial and District Departments of Health and selected NGOs and FBOs to enhance male involvement to address gender issues in PMTCT. AED will also provide technical assistance to ensure sustainability through continuing support and monitoring of PMTCT data. AED will also provide technical assistance to provincial DOH staff to encourage expansion to other sub-districts in the provinces and promote greater sustainability.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Technical Assistance to NDOH, NGOs and FBOs

Building on the development of Maternal Nutrition Guidelines in collaboration with the NDOH, further technical assistance will be provided to National, Provincial and District Departments of Health and selected NGOs and FBOs. This technical assistance will increase Human Capacity Development (HCD) by training health workers to integrate counseling on maternal nutrition and IYCF in the context of HIV into existing healthcare and community services. AED will provide technical assistance to the targeted provincial Departments of Health in the implementation of the guidelines. In addition, following earlier successful training of lecturers from universities and schools of nursing in the integrated model, AED will provide technical assistance to develop capacity to include the integrated program into existing professional development curricula of nurses and dieticians' pre-service orientation. Additional trainers from these institutions in the nine provinces will be trained at the national level as well as provincial level in Gauteng, Limpopo, Northern Cape, Western Cape and Free State provinces. Healthcare providers from each of the five target provinces will be trained to provide direct integrated services to clients in their respective districts. Policies and guidelines on pregnant and lactating mothers and IYCF in the context of HIV will continue to be disseminated and implemented. Technical assistance will continue to be provided to Mpumalanga, Eastern Cape and North West provinces to conduct needs assessments at clinics and community services in three sub-districts, and will be followed by mentorship and supervision in view of implementing integrated PMTCT and nutrition for pregnant and lactating women and IYCF into service outlets. Facilities where AED is currently working will continue to receive support, mentorship and in-service training around issues not fully addressed during the initial implementation of the program, such as stigma and family planning. Program managers working with women and children (on integrated management of childhood illnesses, PMTCT, CT, Maternal, Child and Women's Health, and Health Promotion) will be mobilized on the promotion of the Baby Friendly Community Initiative in the context of HIV.

ACTIVITY 2: Quality Assurance

Building on the activities of FY 2006 and 2007 in the four sub-districts (Kagisano Molopo, North West; Qaukeni, Eastern Cape; Umzumbe, KwaZulu-Natal; and Kabokweni, Mpumalanga), AED will support existing facilities to increase the provision of quality care by supporting the provision of refresher courses for performance and quality improvement in the integration of nutrition to the basic PMTCT package. AED will provide technical assistance for the integration of safe-feeding practices in PMTCT into antenatal, labor and delivery practices, as well as post-natal care. Quality assurance and supervision will be provided using the trained Baby Friendly Hospital Initiative assessors to conduct internal and external assessments.

ACTIVITY 3: Family-Centered Community Care

Technical assistance will be provided to three sub-districts to implement the "Family-Centered Community

Activity Narrative: Care" approach, with clear follow-up and referral system for mothers and infants. CBOs, NGOs and FBOs will contribute to community mobilization. Technical assistance will be provided to health care workers and community volunteers to address stigma and discrimination, including gender issues. In addition, key community members, leaders, and religious leaders will be trained to organize behavior change communication activities on male involvement and people living with HIV in each of the three target facilities. AED will support development of linkages and referrals to existing services such as family planning, TB treatment, and care and support for HIV-infected mothers and families. AED will strengthen linkages between facility interventions and community services for follow-up, couple counseling, family-based counseling and testing, specifically involving men in PMTCT activities, and will also encourage and facilitate public-private partnerships.

ACTIVITY 4: Integrated IYCF/PMTCT expansion to Northern Cape

With FY 2007 funding, AED expanded to the Northern Cape Province. FY 2008 funding will be used to continue activities with FHI and JPHEIGO to harmonize the PMTCT provincial guidelines and monitoring systems. FY 2008 funding will be used for expansion of the integrated IYCF/PMTCT model in the Western Cape, Gauteng, Limpopo and Free State provinces.

ACTIVITY 5: Expansion

FY 2008 funds will continue to support the roll-out of and training on the new NDOH PMTCT guidelines with the integration of maternal nutrition and Infant and Young Child Feeding practices. This will include capacity development of non-governmental organizations and community health care workers in existing provinces so they will be able to play a key role in achieving project targets, strengthening referrals and linkages, and improving monitoring and evaluation to ensure program sustainability within the selected provinces. Funds also will be used to expand the program by providing onsite support to other service outlets within the existing districts. In the existing districts, FY 2008 activities will include emphasis/addition of HIV counseling and testing and ARV prophylaxis in the integrated training on maternal nutrition and IYCF in the context of PMTCT. This will be based on the national PMTCT guidelines, in line with the National HIV and AIDS Strategic Plan.

These activities will directly contribute to the seven million infections averted component of the 2-7-10 objective of PEPFAR by training additional health workers on safe infant feeding practices, hence reducing the risk of transmission via mixed feeding. AED will contribute to the PEPFAR vision outlined in the five-year strategy for South Africa by expanding access to PMTCT services and by improving PMTCT related counseling of mothers.

Program Budget Code: 01

Activity ID: 7914.22567.09

Planned Funds: \$291,271

Activity System ID: 22567

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Provider-Initiated Testing and Counseling (PITC) was successfully piloted in one clinic during COP 2007. PITC will be rolled out to all the clinics during COP 2008 and COP 2009. The uptake for HIV testing among pregnant women is higher than 90% in the pilot site and all the other 15 clinics in the Hlabisa sub-district, but with PITC offered to all patients attending the clinic, Africa Centre anticipates an increase close to 100%. This routine offer of counseling and testing (CT) is aligned with the South African government's CT guidelines, and rapid testing is used. CT will be offered during the first antenatal clinic visit, and because of the high HIV incidence in the area, re-testing will be done in the last trimester. All 16 clinics are staffed with 2 or more counselors that ensure that all pregnant women are offered CT, and a PMTCT stamp with a sub-district specific code to indicate HIV status is placed in the woman's antenatal care (ANC) card. This stamp and the code assist in identifying women who were missed or those who refused to be tested, and thus make it easy to offer CT to women who have not tested in their subsequent ANC visits.

The Africa Centre dietician will develop appropriate nutrition-related curricula, adapted from international and national policy to suit the local, rural community. This curricula will be used in pre- and post-service training programs and to develop appropriate job aids for health-care workers. The dietician will train nurses, counselors, home-based caregivers and support group members using the existing South African curriculum and the in-house curriculum, to enhance their ability to carry out nutritional assessment, counseling and support for pregnant women

Partner testing is routinely offered and systems will be set in place to make the service more male friendly.

Antiretroviral treatment (ART) and cotrimoxazole will be offered to all eligible women following South African Department of Health (DOH) guidelines. Women will receive optimum counseling on feeding options, cotrimoxazole prophylaxis, TB screening and treatment, and immunizations.

More and more HIV-exposed children are referred to the clinic. The pediatrician also works at the Hlabisa Hospital's pediatric unit, where she is able to down refer some of these children for follow up at the family clinic. Referrals of children who need to be followed or have missed their clinics are transferred to the home-based care nurses and the tracking nurse for follow up, and children who need other support services are referred appropriately, e.g. to the ART social worker.

Infant diagnosis is aligned with South African and WHO guidelines. Polymerase chain reaction (PCR) testing will be done at six weeks and again at six months, and at any point in time for children that were lost to follow-up. A system will be set in place to track all children lost to follow up: the tracking nurses, support group members and home based care workers will track the children. The Vitamin A Campaign (March and September) will also be used as a vehicle to identify all children lost to follow up and all HIV- exposed children within the sub-district.

Cotrimoxazole prophylaxis will be offered to all children from six weeks to one year or stopped sooner if confirmed HIV negative and the child has stopped breast-feeding. Efforts to increase sustainable infant feeding choices and early infant diagnosis will be strengthened. This will be done through follow up of mother and baby pairs postnatally.

Support groups will be strengthened during COP 2009 and will focus on pregnant women.

In COP 2007 the wellness program was started to strengthen and integrate PMTCT within maternal-child health by addressing sexually transmitted infections screening (STI). The wellness program will address STI screening, family planning and prevention with positives. Monitoring and evaluation of the program will be strengthened through standardizing the PEPFAR data collection tool to include South African government PMTCT indicators, and to ensure that all know efforts made in the program.

SUMMARY:

The Africa Centre for Health and Population Studies, in partnership with the Hlabisa Department of Health (DOH), based in Hlabisa Health District in rural KwaZulu-Natal, operates the Hlabisa antiretroviral treatment (ART) program and aims to deliver safe, effective, efficient, equitable and sustainable ART to all who need it in Hlabisa district. The program emphasizes integration of the government Prevention of Mother-to-Child Transmission (PMTCT) Program and Antiretroviral Treatment (ART) Program. The target population for the integrated PMTCT and ART Program are people living with HIV and AIDS (of all ages), HIV-infected pregnant women and HIV-infected infants (0 to 5 years). The major emphasis area of this program is development of network/linkages/referral systems, and minor emphasis areas include information, education and communication, local organization development and training.

BACKGROUND:

The Africa Centre, a population research department of the University of KwaZulu-Natal, implements a PMTCT program in partnership with the KwaZulu-Natal Department of Health (DOH). The program is based in Hlabisa sub-District, a rural health district in northern KwaZulu-Natal that provides healthcare to 220,000 people through one government district hospital and 15 peripheral clinics. The ART Program is embedded in the DOH ART rollout whereby the Africa Centre and KwaZulu-Natal DOH work to complement each others abilities and resources in providing ART. The Africa Centre has expertise in infectious diseases and management that is not available at the district DOH. In addition to clinical staff, and infrastructure, the district DOH provides the necessary drugs and laboratory testing for effective ART rollout.

With FY 2008 funds, the Africa Centre will continue partnering with the district DOH to improve and expand PMTCT services by providing additional human resources and training. In addition, Africa Centre will integrate PMTCT services with its tuberculosis (TB)/HIV, palliative care, counseling and testing, and

Activity Narrative: treatment programs. Increased attention will be given to addressing gender inequality (including increasing male involvement in PMTCT) and promoting HIV service delivery among men and children.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Partnership with South African Government (SAG)

All government clinics within Hlabisa District offer PMTCT services. However, many of these clinics are under-resourced and require additional human capacity to ensure that HIV-infected women are enrolled in the PMTCT program. Africa Centre provides training, supervision, mentoring, and systems strengthening in support of PMTCT services in Hlabisa district. The PMTCT program is the main referral base for assisting HIV-infected women with ART. Africa Centre aims to address the lack of human resources with the district DOH to recruit and place nurses and treatment counselors at government facilities to assist with pre and post-test counseling and appropriate infant feeding counseling. During pregnancy, if criteria are met, or during post delivery when women become eligible, nurses will provide HIV rapid testing, CD4 counts and referrals to trained ART counselors. Counselors will offer pre and post-test counseling and further facilitate enrollment into the ART program. In addition, counselors will offer pregnant women continued follow-up and support and facilitate testing of all exposed infants at 6 weeks of age, with referral to the ARV program if they are HIV-infected.

Africa Centre conducts workshops and meetings with DOH promoting linkages between PMTCT and ART programs and educates clinic staff about available services. Africa Centre will develop and distribute informational materials for wider circulation in the hospital and clinics and will target pregnant women.

ACTIVITY 2: PMTCT and Treatment

Africa Centre will provide clinics with clinical services (via the provision of doctors and other health workers) to initiate HIV pregnant women enrolled in the PMTCT program on ART. Africa Centre's assistance provides the full package of PMTCT services in line with the National Department of Health's PMTCT standards. Doctors will be present in clinics at appointed times, on a weekly or fortnightly basis, as appropriate, and will provide treatment management including work-up (complete medical history and medical examination), consultation, screening, symptom and pain management, and patient counseling (including maternal nutrition and family planning). PMTCT clients will be referred to Africa Centre-supported ART services. These services will also provide patients who experience adverse side effects or treatment failure with additional monitoring and support. Africa Centre-supported home-based care organizations will provide ongoing care and monitoring support to ensure treatment adherence. All patients transferred into the ART program from the PMTCT program will be tested for TB and receive TB treatment if necessary.

ACTIVITY 3: Counseling and Support

To reduce vertical transmission of HIV from mother-to-child, treatment counselors will provide counseling on appropriate infant feeding and support into routine PMTCT in line with the newly published WHO guidelines on infant feeding. The selection of counseling content and material will be informed by the results from a large local vertical transmission study conducted by the Africa Centre. All HIV-uninfected women will be counseled on exclusive breastfeeding from birth to six months, with continued breastfeeding to at least 2 years of age, and on safe sex. HIV-infected women will receive individual counseling and it is anticipated that most women will choose to breastfeed given the results of previous work in this area and the lack of resources to fulfill the AFASS criteria for replacement feeding (AFASS: acceptable, feasible, affordable, sustainable and safe). Women who do not wish to test and who, therefore, do not know their status will be counseled on infant feeding practices as per HIV-uninfected women (i.e. exclusive breastfeeding to six months) in line with WHO policy. Opportunities to counsel women and their partners on infant feeding will be taken at every visit, both antenatally and postnatally. HIV-infected women who choose to exclusively breastfeed, whatever their CD4 counts, will receive a monthly food parcel from the government, as do mothers who do not breastfeed. In addition, counseling on family planning will be offered. The program will address gender by attempting to increase gender equity by promoting the involvement of male partners in the PMTCT and family planning sessions. The PMTCT counselors will ask pregnant women and mothers to come with their male partners during follow-up visits. During road shows (a form of "edutainment," which successfully disseminates information through entertainment since 2004) a special focus will be the involvement of men. Men are still underrepresented in the clinics not only for being tested, but especially for getting treatment. The main objective will be to make men aware of their responsibility concerning the response to HIV. Male involvement will be strengthened using existing materials when appropriate. The possibility of family testing in the home will be investigated.

Finally, counselors will refer eligible patients to the government services that are available (for instance, for food aid or to a social worker if domestic violence is suspected).

ACTIVITY 4: Human Capacity Development

The South African DOH and Africa Centre counselors and nurses will be trained in the full PMTCT package according to government guidelines and standards. Refresher and on-the-job training will be provided as needed, keeping healthcare providers up to date in the delivery of PMTCT services. All healthcare providers will receive training on HIV and ART. A baseline course is based on the DOH curriculum and comprises four sessions of three hours each. The four sessions cover basics of HIV and ART, follow-up of patients, assimilation of follow-up and practical work with a patient (including blood taking for CD4 counts and viral loads). This training will be enhanced with clinic visits from training officers, during which the officers will monitor counseling and provide individual mentoring. In addition, nurses and treatment counselors will be offered the opportunity to participate in short courses covering the management of ART side effects, opportunistic infections, and pediatric ART. When necessary additional space may be renovated or park homes provided to increase facility capacity.

Activity Narrative: Due to the shortage of staff and to the increasing number of patients and increasing workload, additional staffing will be provided in close cooperation with the facility and wherever possible SAG positions will be created. It is estimated that one position for each of the 14 sites is necessary and all of these will be staffed by SAG employees as soon as they can be recruited.

ACTIVITY 5: Monitoring and Evaluation

Africa Centre's Vertical Transmission Study published in the Lancet in 2007 (369: 1107-16) had major impact on the guidelines of the WHO. It showed that exclusive breastfeeding reduces the risk of Mother-to-Child transmission compared to mixed feeding. With dedicated Health Workers in the clinics and a strong M&E system, PEPFAR funding will be used to continue monitoring and evaluation activities.

Africa Centre's integrated PMTCT and ART program contributes to PEPFAR's 2-7-10 goals for South Africa by improving capacity, access and demand for PMTCT and ART for pregnant women and mothers. These activities ensure that new infant infections are averted and the HIV-infected treatment-eligible women are referred and initiated on treatment in a timely matter.

Program Budget Code: 01

Planned Funds: \$71,371

Activity Narrative: ACTIVITY UNCHANGED FROM FY 2008

SUMMARY:

CARE serves as an umbrella grant making mechanism for the Centers of Disease Control. CARE has been an umbrella grants mechanism since FY 2006. CARE's primary responsibility is for the financial oversight of the grant which includes review of the financial reports and on-site assessment of the supporting documentation. CARE does not provide programmatic level technical assistance to the sub-grantees. Technical assistance and programmatic over-site is provided by CDC activity managers. The specific activities that CARE is responsible are listed below. The target area for PMTCT umbrella grants mechanism is local organization capacity building. The target population is pregnant women and children under the age of five. Currently CARE support three indigenous organizations who are implementing PMTCT activities, these include Wits Health Consortium - National Health Laboratory Services; Nozizwe Consulting; and Leonie Selvan Communications.

ACTIVITIES AND EXPECTED RESULTS

ACTIVITY 1: Contractual Responsibilities

CARE is responsible for the contractual arrangements of the sub-grants with CDC South Africa. These arrangements include application for funding for implementation of activities by the sub-grantees that have been approved by CDC South Africa to meet the PEPFAR goals. CARE will prepare all supplemental and continuation application, and ensure that progress reports are received by the sub-grantees. CDC activity managers will be responsible for the technical review of the sub-grantees; thus targets met by the sub-grantees for the PMTCT program will not be assigned to CARE.

ACTIVITY 2: Financial Oversight

CARE is responsible for the financial oversight of the sub-grants. This activity includes the review of financial reports submitted by the grantees on quarterly/6-monthly basis; and on-site assessment of the supporting documents to ensure compliance with the contract. These on-site assessments will be conducted on a 6-monthly basis. CARE will also ensure progress reports are received from the sub-grantees and approved by the activity managers of CDC South Africa on a quarterly/6-monthly basis prior to the disbursement of continuation funding.

Although these activities do not directly contribute to the overall PEPFAR goals and objectives, the Umbrella Grants Mechanism ensure that PEPFAR support can be given to small and medium-sized organizations, enabling them to facilitate the achievement of the PEPFAR 2-7-10 goals.

New/Continuing Activity: Continuing Activity

Activity ID: 22313.22672.09

Planned Funds: \$456,325

Activity System ID: 22672

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

The University of the Western Cape (UWC) program is part of the University Technical Assistance Program aimed at strengthening human capacity development and ensuring sustainability in multiple program areas. The PMTCT focus is on improving the outcomes of HIV-infected women and their infants through multiple approaches, which address system strengthening and human resource development at the district and primary health-care levels. These activities center on monitoring and evaluation (M&E) and the integration of PMTCT services into routine maternal and child health (MCH) service delivery. The project focuses on improving the quality of Community Health Worker (CHW) programs, and increasing the capacity of nurse-midwives to implement integrated PMTCT and MCH in one district in the Western Cape. In addition, the program focuses on the development and implementation of a facility-based M&E system for integrated PMTCT/TB/HIV services in KwaZulu-Natal.

BACKGROUND:

In FY 2009, UWC will build on expertise obtained as a PEPFAR sub-partner to the Medical Research Council. Activities started in FY 2008 will be continued and expanded to KwaZulu-Natal.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Improving Quality of CHW Programs for Delivery of HIV and AIDS Services

The use of CHWs such as home-based caregivers, lay counselors, and adherence counselors, to support the delivery of HIV and AIDS care in communities, is becoming increasingly common in South Africa. CHWs are a key cadre of personnel in PMTCT activities as they can identify and refer women in the community for appropriate treatment and care, as well as provide a direct point of support. The National Department of Health (NDOH) introduced a National Community Health Worker Policy Framework in 2003 that regulates initiatives. Work conducted by UWC in 2007 indicated, however, that implementation of the Community Health Worker Policy Framework is not being monitored or evaluated; that standards for training and supervision are either not available or not being adhered to; that training materials are not available in local languages; and district and sub-district managers have not received sufficient training and guidance in the implementation of these programs. Working in close collaboration with the national and relevant provincial Departments of Health, emphasis will be placed on rolling out the M&E tools developed in FY 2008 to the entire Western Cape province. A training course will be developed for implementers of the framework. The course will be accredited with UWC and the Health Professions Council of South Africa and will train be used to train middle-level managers. Some of the data elements developed in the course of this evaluation will be inserted into the Human Resource Information System being developed in the activity described under the Health Systems Strengthening Component. It is anticipated that following the limited rollout of the evaluation tool in FY 2009 the tool will be revised again and a national audit conducted in FY 2010. The following sub-activities will be implemented to support this activity.

ACTIVITY 1A: Roll Out of the Audit Tool

The audit tool will be rolled out in the Western Cape. The rollout of the audit tool will be conducted in close collaboration with the national and provincial Departments of Health, with the aim of setting up a monitoring system for CHW programs. Fieldworkers and fieldwork coordinators will be appointed and trained in the Western Cape. The results of the audit will be written up and made available to national, provincial and district policy makers and managers.

ACTIVITY 1B: Training District and Sub-district Managers in the Implementation of CHW Programs

This project will develop a 5-day short course for 20 implementers of the CHW policy. The training course and materials will be developed in consultation with colleagues from UWC, and National Department of Health, and will then be offered to implementers as part of the School of Public Health's Winter School program and subsequently evaluated and revised.

ACTIVITY 2: Training Nurse-Midwives In Community-Based PMTCT, HIV Prevention And Management Skills And Competencies

The South African government is currently faced with a challenge of implementing a new national policy on PMTCT. The policy is based on the premise that health-care providers, specifically, nurses and midwives will be the key players in implementation, especially in areas where there are no medical doctors and in rural areas. The Western Cape developed a provincial PMTCT protocol in June 2008, thus indicating the need for specific competencies for those who will be providing services, especially in relation to integrating PMTCT and MCH services. This project seeks to develop the capacity of nurses and midwives, a crucial cadre of health care workers, as providers of integrated services as well as mentors for students in in-service training. UWC has a relationship with the Overberg Health District, Teewaterskloof (TWK) sub-district/municipality where students from the Community and Health Science faculty are exposed to rural health; thus providing a valuable relationship and opportunity to train midwives in a rural area. The six clinics in the TKW sub-district serve an impoverished population, including women on farms who have no access to health education.

The project will build capacity through training nurses and midwives in the prevention and management of HIV and AIDS, including integrating the PMTCT program into MCH services in the TWK district. The nurse-midwives will need skills and competencies including provision of PMTCT prophylaxis, AZT and nevirapine to pregnant women, prompt referral for HAART, and PCR for children. While the project, in this phase, focuses on improving the capacity of nurse-midwives to deliver effective services, in the long-term it builds them as mentors for students who will be placed in these facilities. Core competencies for nurse-midwives to implement integrated PMTCT and MCH services will be developed in consultation with the Western Cape Department of Health, and in alignment with the provincial protocol and the directorates of HIV and AIDS and Maternal & Child Health. A training package for rural clinic based midwives will then be developed, focusing on these core competencies as well as on mentoring undergraduate nurse-midwife trainees. The

Activity Narrative: training package will be in line with the national curriculum, but will be adapted for nurses and midwives in rural, minimally resourced settings, and will include components of how to train and mentor students who are placed with them. The development of the training package and training will be done concurrently through participatory reflective action approach, which uses the following steps: drawing experience from the participants and trainers, reflection, action and review. This method takes a form of a spiral where learning materials and content are developed together with participants and there is constant feedback until completion of a final product (training package). At least two nurse-midwives per health facility will be trained (12 in total). Monthly mentoring will also be provided by the UWC coordinators. Feedback on the training will also be provided to the district and provincial managers. The effectiveness of the training will be evaluated by participants, and the outcomes of the training by monitoring the indicators of targets reached in relation to the provincial PMTCT protocol, for example, the number of pregnant women undertaking HIV testing.

Activity 3: Building Capacity to Monitor and Evaluate HIV Care in KwaZulu-Natal

KwaZulu-Natal has a population of 10 million people (20.9% of South Africa's population). The antenatal HIV seroprevalence in 2006 was 39.1%, the highest of any province. KwaZulu-Natal also had the greatest number of reported TB cases (34,928 cases registered in 2006) and the lowest cure rate (45.2% for cases registered in 2005). The majority of TB cases in the province are co-infected with HIV (64.4%). The province is divided into three administrative areas and 11 districts. The School of Public Health at UWC has been implementing and evaluating interventions to reduce MTCT of HIV through a project call Good Start in 2 sites in KwaZulu-Natal (Umzimkulu and Umlazi). The PEPFAR-funded Good Start facility-based project developed and piloted an HIV/PMTCT/TB M&E system that has now been finalized and accepted for implementation throughout the province. UWC has been requested to assist the province in implementing the new system. The project will help KwaZulu-Natal implement an M&E system for integrated PMTCT/HIV/TB care at facility and community level.

The project will employ three HIV M&E trainers who would report to the provincial HIV M&E officer. Each trainer will be responsible for one area of the province and the districts that fall within that area. The trainers will train district information officers and district HAST coordinators on the new HIV M&E system, including the patient-held card, clinical chart, pre-ART register and ART register. They will also train on the existing M&E systems for voluntary counseling and testing, PMTCT and TB. The trainers will assist the districts in training staff in all primary care health facilities and all ART sites on the new and existing systems. There will be at least 2 training workshops in each of the 11 districts (22 in total). The first workshop will focus on data collection tools and the second workshop will focus on monthly and quarterly reporting. The trainers will maintain close contact with the district coordinators and assist them with facility-level support visits. They will collect and collate monthly and quarterly reports and provide feedback to the districts. They will encourage and support regular district meetings at which indicators for integrated HIV/TB/PMTCT will be presented, discussed and used to assess program performance and address deficiencies. There are currently long delays in printing and distribution of some stationery used by the Department of Health. The project will assist the province to establish systems to ensure an uninterrupted supply of stationery for integrated HIV/TB/PMTCT care, including printing and distribution when required. The large numbers of people in HIV care in KwaZulu-Natal make the long-term follow up of patients in HIV care difficult using a paper-based system. There is therefore a need to develop and train relevant staff on an electronic HIV M&E system. The program will be assessed in several ways, including a review of the completeness and accuracy of recording and reporting for the new HIV M&E system 6 months and 12 months after implementation in the 11 districts. Subsequent training will be provided to address problems found during the reviews.

Summary

The University of Western Cape is implementing multiple activities aimed at improving human capacity development to address HIV and AIDS in South Africa.

BACKGROUND

The 2004 report of the Joint Learning Initiative on health human resources states that "after a century of most spectacular health advances in human history, Human survival gains are being lost because of feeble national health systems. The HIV and AIDS emergency has undoubtedly contributed to this problem, particularly in South Africa. The pressure on health care workers is immense and with the crisis of attrition and out-migration of personnel, systems in South Africa are challenged as never before. This has been placed in stark relief by the urgent need to respond to HIV and AIDS epidemic, and especially the current imperative to deliver antiretroviral therapy (ART) to large numbers of sick people who are often living in areas where health systems have been poorly developed. This project focuses on strengthening and expanding the development and implementation of comprehensive HIV and AIDS prevention in South Africa in order to mitigate the impact of the HIV and AIDS epidemic. The emphasis area for these activities is human capacity development, training, including pre-service and in-service training for nurse midwives. The primary target groups for these activities include nurse midwives and community healthcare workers in the public sector. Secondary target groups include HIV positive pregnant women and their infants.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Improving the quality of community health worker programs for the delivery

The use of community health workers, such as lay counselors to support the delivery of HIV and AIDS care in communities is becoming increasingly common in South Africa. The National Department of Health (NDOH) has introduced a national community health workers policy framework in 2003 which unifies and regulates initiatives in this regard. This project aims to develop an audit tool to assess the implementation of CHW programs in the country using PMTCT as an example. The tool will be piloted in one urban and one rural sub-district and feedback will be disseminated via a workshop to the NDOH and corresponding PDOHs where the piloting occurred. The project will begin with a series of workshops with policy makers and program implementers in two provinces, and national experts to define the scope and key components of the tool. This will be followed by the development of the tool, during which time further consultation with

Activity Narrative: stakeholders will take place.

ACTIVITY 2: Training nurse mid-wives in community-based PMTCT
 Nurses and midwives are a backbone to the health system and are major role players in the delivery of quality health services, especially in the context of maternal and child health services. With HIV and AIDS the most common primary cause of maternal and child deaths in the country, this puts a challenge onto the already depleting MCH health services and to health care providers, the midwives. The overall aim of this project is to build capacity through the training of midwives in the prevention, management and integration of PMTCT into maternal and child health services in a rural district in the Western Cape. The school of nursing, UWC, will develop a training program targeting midwives managers/supervisors at health facilities, qualified midwives at primary health care/community health centers and midwives trainees (within undergraduate and postgraduate studies). Midwives implementing PMTCT at primary health care will mentor the midwifery trainees. The midwives managers/supervisors will be responsible for conducting training and implementing the train-the-trainer skills education program for the MCH facility manager on integration of PMTCT into MCH services.

Activity ID: 3564.22845.09

Planned Funds: \$1,153,236

Activity System ID: 22845

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

The National Department of Health's ACTIVITY 3 is no longer being funded under this program area but has been moved to the CARE Umbrella Grants Mechanism. This will be replaced with an activity aimed at the district levels to strengthen monitoring and evaluation of the entire prevention of mother-to-child transmission (PMTCT) program. A consultant will be employed to monitor the worst reporting districts in terms of PMTCT data submission. The consultant will travel to the districts, conduct a data audit, and identify problems with data collection. Based on the findings of the assessment, interventions to improve the data quality and the data collection will be implemented. Activities will be implemented in the worst performing PMTCT districts first. By the end of the financial year, it is anticipated that approximately half of the health districts will be covered, hence strengthening reporting in the national PMTCT program.

In close collaboration with the National Department of Health (NDOH), CDC will provide overall HIV and AIDS programmatic support to the national and provincial prevention of mother-to-child transmission (PMTCT) program. In addition, NDOH relies on CDC to implement activities that address NDOH's emerging priorities, provide financial and technical support quicker than the NDOH systems allow. PEPFAR PMTCT-specific activities are represented on the NDOH operational plan, and contribute to the overall implementation of the national PMTCT program.

SUMMARY:

The aim of the "In Support of the NDOH PMTCT" project is to provide technical assistance to the NDOH and provincial health departments to ensure expansion and strengthening of PMTCT services in all nine provinces. The major emphasis area is training. Minor emphasis areas include development of network/linkages/referral systems, policy development, local organization capacity development, quality assurance, and strategic information. Target populations for these activities include policy makers, National AIDS Control Program staff, other NDOH staff, other healthcare workers, women, family planning clients, pregnant women, people living with HIV, HIV-infected pregnant women and their infants.

BACKGROUND:

The goal of the National PMTCT program is to reduce mother-to-child transmission of HIV by improving access to HIV counseling and testing in antenatal clinics, improving family planning services to HIV-infected women, and implementing clinical guidelines to reduce transmission during childbirth and labor. In addition, the National program is responsible for ensuring follow-up of infants born to HIV-infected mothers and ensuring that these infants are identified early and referred to treatment if necessary. The purpose of this project is to provide technical assistance to NDOH by funding two program assistants to work within the NDOH on all aspects of the program. The technical assistance focuses particularly on capacity building of healthcare workers and community healthcare workers, development and implementation of provincial PMTCT-specific operational plans, strengthening national and provincial reporting systems, coordinating the national PMTCT steering committee meeting, developing a monitoring and evaluation system for early infant diagnosis and strengthening service delivery by implementing systems strengthening activities.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Capacity Building

In FY 2005, PEPFAR and the NDOH finalized the PMTCT and Infant Feeding Curricula and PEPFAR funding produced a trainers' guide, participants' guide and course directors' guide. In FY 2006, course directors and trainers were updated on the finalized curriculum and provincial training coordinators were assisted in developing provincial training plans to implement the curriculum at the provincial level. FY 2007 funding was used to ensure expansion of the PMTCT training throughout the country. Particular support was given to expand training on PCR implementation and monitoring and evaluation of the PMTCT program. FY 2007 Plus up funding will be used to align the existing PMTCT and Infant Feeding Curricula with the important policy shift in the area of PMTCT ARV prophylaxis. As of FY 2008 the national PMTCT policy will no longer be single dose nevirapine, but the provision of dual therapy to all HIV-infected pregnant women. It is anticipated that the regimen will be AZT from 24-28 weeks and nevirapine at the onset of labor. FY 2008 PEPFAR funds will be used to assist the NDOH and provincial DOHs to develop strategies for the implementation of the new PMTCT policy, the development and printing of the new PMTCT guidelines, training and updating of all health care workers. Funds will be used to ensure that all healthcare workers offering antenatal care, postnatal and child health services receive training. These activities will contribute to the PEPFAR goal of averting seven million new infections, as healthcare workers will be trained to integrate PMTCT into routine service, and more pregnant women will receive PMTCT services.

ACTIVITY 2: Technical Assistance

In FY 2004 CDC placed a technical advisor at the NDOH to support the PMTCT program. For the last three years, this advisor has worked closely with the national PMTCT program and the national PMTCT steering committee to identify gaps and challenges to PMTCT implementation and develop strategies to strengthen PMTCT implementation. As the PMTCT policy will shift in FY 2008, it is necessary to bring an additional PMTCT advisor on board to assist the NDOH in the roll-out of the dual therapy PMTCT policy. This will mean that in FY 2008, CDC will support two PMTCT advisors at the NDOH. The one advisor will focus on the maternal aspects of the PMTCT program and integration of PMTCT into antenatal care services. This advisor will be tasked with assisting the NDOH increase PMTCT uptake, develop strategies and provincial operational plans for the roll-out of dual therapy, providing technical assistance to the provinces to address health systems challenges in PMTCT implementation. A second advisor will focus on ensuring rollout of early infant diagnosis, ensuring stronger linkages between PMTCT and treatment, care and support, addressing infant feeding issues and creating systems to improve follow-up of PMTCT enrolled mothers and

Activity Narrative: their infants. These advisors will offer technical assistance for the implementation of policy, monitoring and evaluation and day-to-day programmatic support to the NDOH. The technical advisor will conduct provincial site visits to assess quality of PMTCT service delivery and will work directly with the provinces to strengthen and improve existing services.

ACTIVITY 3: Monitoring Early Infant Diagnosis

Using FY 2007 and FY 2008 funding a monitoring and evaluation system for early infant diagnosis is currently being developed and piloted at the coronation hospital complex in Gauteng province. FY 2008 funding will be used specifically to support the scale-up and rollout of early infant diagnosis services to other clinics and hospitals in Gauteng province. The monitoring and evaluation system is currently being developed as no national system to monitor early infant diagnosis exists. The district health information system (DHIS) which is responsible for the national data set only captures the number of infants tested at 12 months of age. The new system includes monitoring and evaluation training on the national early infant diagnosis testing protocol implementation, implementation itself and client adherence and follow-up. The activity is a logical follow-on from the formative/descriptive work conducted in FY 2006, and the results obtained from the formative work served as the basis for formulating monitoring and evaluation tools (both quantitative and qualitative, exploring both quality of care and service provision and client adherence and psychosocial impact) that can be used for early infant testing rollout. Expected results include development of a draft monitoring and evaluation package to be tested in a number of facilities as the early infant testing training and protocol are progressively rolled out. The draft package will also include an assessment of the feasibility of implementing the package in different types of health facilities and how it can be adapted to facilities already offering the service. In addition, while the monitoring and evaluation package will be thorough and comprehensive, certain components may not be realistic for certain clinical settings. Therefore, part of the package will explore different levels of monitoring and evaluation (gold, silver, bronze standard) depending on the clinical environment. This will ensure exploration of quality of care issues in greater depth. This activity will contribute to PEPFAR goals by facilitating a process where HIV-infected infants can be identified early and referred to antiretroviral therapy facilities for monitoring and ensuring that they receive treatment at the appropriate time. In addition, the focus on quality of care will ensure sustainable implementation of early infant diagnosis.

ACTIVITY 4: Collaboration with Other Donors and Stakeholders

At the request of the NDOH, a stakeholders analysis of PMTCT activities is currently underway. This analysis will identify and map all existing PMTCT activities taking place around the country. It will facilitate the identification of gaps in PMTCT service delivery and highlight the different levels of support being given by various donors and stakeholder to the NDOH PMTCT program. FY 2008 funding will be used to hold a National PMTCT stakeholders workshop, where the results of this analysis will be presented. The NDOH, the donors and stakeholders will then decide how to scale up and strengthen PMTCT activities. The premise behind the stakeholders workshop is to ensure that there is no overlap in activities, all areas of the country are being provided with support and assistance and that stakeholders and donors are collaborating in the rollout of PMTCT services. The expected result of this activity will be the development of one national annual PMTCT operational plan for South Africa. The NDOH, with support from CDC, will take the lead on this activity.

The "In support of NDOH" activity plays a pivotal role in the implementation of the national PMTCT program as all activities assist the NDOH and provincial departments of health in the rollout of the New Strategic Plan (NSP) for HIV and AIDS, and the accelerated prevention strategy. Funding will ensure that the new PMTCT policy is disseminated throughout the country and that health care workers are trained in accordance with the NSP. This program will contribute to 2-7-10 goals by ensuring implementation of quality PMTCT services and by preventing vertical transmission.

Activity ID: 8248.22888.09

Planned Funds: \$3,013,688

Activity System ID: 22888

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

To create an inclusive identity, PATH changed its name to Khusela Project (Khusela), which means in isiXhosa, to prevent, to protect, and to handle with care. Khusela will scale up the revised PMTCT policy in all its facilities, including adoption of dual therapy; routine offer of counseling and testing; CD4 testing; enabling women to make, and adhere to informed infant feeding choices; linking women to comprehensive care and treatment programs; assuring infant diagnosis and treatment as necessary; and integrating reproductive health and family planning services.

Khusela was unable to begin work in the Cacadu district (Eastern Cape) as projected in COP 2008, due to change of plans by Eastern Cape Department of Health (ECDOH). Instead, work was moved to three sub-districts in the Eastern Cape: Mbashe and Mquma in Amatole District and King Sabata Dalindyebo in OR Tambo District. Khusela works in 40 facilities (50%) in the sub-districts. In FY 2009, the project will add 40 new facilities using a phased approach. Training and supervision will continue in the existing 40 sites, which will require two additional full-time training and supervision advisors. The ECDOH has requested that Khusela expand services to Amalathi sub-district, because of the great need in the area.

ACTIVITY 4 was modified. The systems assessment to assist the transition to dual therapy will be completed in FY 2008, and will be implemented in Khusela's sites.

ACTIVITY 5 has been modified to include development, production and dissemination of nutrition and informed infant feeding materials by the end of FY 2008 pending permission from the National Department of Health.

ACTIVITY 6: The two activities evaluating linkages between reproductive health and PMTCT will continue into FY 2009 due the multiple Institutional Review Board requirements.

Khusela will continue to support the Midwives Alliance and implementation of advocacy strategies that emerge from FY 2008 activities. If successful, the pilot nevirapine pouch for homebirths will be rolled out to additional locations.

Training will be provided to existing and new sites, including training on basic PMTCT, refresher training on PMTCT, and training on infant feeding. Nurses, clinical supervisors lay counselors, and traditional birth attendants will be trained. Classroom and on-site training to improve M&E will be implemented among district data information officers, data capturers and managers.

Khusela will improve referral systems to care and treatment sites and pediatric centers. Milk registers will be revised so that all babies can be traced. By FY 2009 all parallel reporting systems will be eliminated.

Community engagement in promoting, supporting and utilizing PMTCT service will be enhanced. This includes reducing stigma, generating demand for services, working with partners and families of HIV-infected women, developing community networks for client follow-up, and strengthening tangible links between the community and the facility. Community interventions will include start-up activities including hiring additional field staff, facility assessments, mapping and zoning, community focus group discussions, revision of communication strategy, NGO/CBO capacity assessment, training new field staff, and implementation of project interventions as described above.

Field staff will continue to work with designated NGOs to expand the Magnet Theatre, a participatory community theatre that inspires critical reflection using incomplete enactments of community dilemmas. Facility-based Closed Support Groups will be managed by facility staff, who will help community members to form support groups, identify group leaders, arrange for support group facilitation skills training (through MANEPHA), and monitor ongoing support groups. Historically these groups have been short-lived (six weeks) but with improved facilitation, there should be deeper discussion, greater support, and potential for greater sustainability.

Field staff will continue to oversee the heterogeneous Dialogue Groups, in communities near health facilities. These are voluntary (fixed and committed membership) groups that meet regularly to participate in facilitated discussions on HIV and PMTCT issues. The local Chief, community members and CBOs participate. Field staff will oversee the Open Dialogue Groups (ODG). These groups will emerge from local facility-based support groups and will be led by trained HIV-infected women. Grandmothers play a vital role in enabling mothers to realize comprehensive PMTCT interventions. These voluntary dialogue groups will include mothers (and mothers-in-law) and daughters to encourage discussion of PMTCT issues. The cross-generational interaction may have a huge impact PMTCT uptake.

Khusela aims to accredit the lay counselor curriculum and make this available to Khusela project sites, and eventually to all PEPFAR partners.

SUMMARY: The PATH prevention of mother-to-child transmission (PMTCT) project will improve the quality, availability, and uptake of comprehensive PMTCT services in Eastern Cape by strengthening systems that support the delivery of high-quality, comprehensive PMTCT services, building the capacity of health facilities and staff to provide comprehensive PMTCT services, and increasing community engagement and leadership in promoting, supporting, and utilizing PMTCT services. Emphasis areas include training and community mobilization/participation, with minor emphasis on quality assurance and supportive supervision. Primary target populations include people living with HIV (PLHIV), pregnant women, HIV-exposed and infected infants. South African-based volunteers and nurses, and provincial and district HIV and PMTCT coordinators. BACKGROUND: With FY 2007 funding, PATH in collaboration with the Eastern Cape Department of Health (ECDOH) initiated a PMTCT program in Amatole, OR Tambo and Cacadu districts. The PATH PMTCT program supports the South African Government's HIV/AIDS/STI Strategic Plan for 2007-2011, the Eastern Cape's Comprehensive HIV/AIDS/STI/TB Program, and the Strategic Plan for US-SA Cooperation. PATH, the prime partner, provides technical, programmatic, and financial leadership. The

Activity Narrative: ECDOH, provides all the facilities, systems, and local personnel. Health Information Systems Program (HISP) is responsible for monitoring and evaluation. South African Partners, an NGO, leads the community support and mobilization interventions. There is also a small grants program for community-based organizations. PATH will address the root causes of gender inequity by examining values and norms. The project provides information and support for infant feeding choices and helps clients assess their needs, considering issues such as the risk of stigma and discrimination associated with not breastfeeding. The project provides holistic psychosocial support to HIV-infected women. Community mobilization is led by PLHIV leaders—the majority of whom are women, to increase knowledge about PMTCT, promote understanding of PMTCT as the equal responsibility of men and the community, and work toward transforming current norms, stigma and discrimination that hold women solely responsible for having HIV and transmitting HIV to children. **ACTIVITIES AND EXPECTED RESULTS:** This program will strengthen the ability of current PMTCT facilities to provide a minimum package of services, enable the ECDOH to expand PMTCT services by training and supporting providers such that they can provide comprehensive services, and raise awareness of and support for PMTCT service use within communities. The project is focused on the public sector and dependent communities only.

ACTIVITY 1: Systems strengthening Building on FY 2007 activities, FY 2008 resources will be used to ensure continuity of system strengthening activities. One set of interventions will strengthen human resource capacity: training existing but untrained facility staff (e.g., nurses, midwives, lay counselors) to provide PMTCT services, reinforcing the skills of current PMTCT staff, and orienting other staff (e.g., child/wellness clinic nurses, community health workers) who help ensure a continuum of care. Training will focus on HIV counseling and testing, measuring CD4 cell counts, clinical staging, psychosocial support, antiretroviral treatment (ART), and follow up and care for the exposed child, including piloting polymerase chain reaction (PCR) testing. A second set of interventions will ensure that monitoring and supervision systems are fully operational at all levels (district, local service area, facility), providing on-site technical support as needed. A third set of interventions will strengthen ECDOH data and logistic systems, improving the quality of data recorded, collected, reported, and used at all levels. The project will also work with the ECDOH to address specific policy and guideline issues that directly affect PMTCT services. Finally, the project will improve referral systems, especially referral of pregnant or postpartum women and their children to antiretroviral (ARV) care and treatment sites and pediatric centers.

ACTIVITY 2: Capacity building The project works at all levels of service delivery to strengthen the provision of high-quality, comprehensive PMTCT services. The project will focus on priority hospitals and select feeder-community health centers and clinics to ensure that women have access to the full continuum of PMTCT services, from the first antenatal care visit through follow-up of the mother and baby after birth. The package of interventions will be tailored to each facility's needs and may include training in essential PMTCT skills, monitoring and supervision to maintain high-quality services and/or upgrade staff skills, data management for ongoing corrections and decision-making, integration of services to give women and babies necessary care and treatment, and linkages to the community so that PMTCT is accepted and used widely.

ACTIVITY 3: Increasing community engagement and leadership One of ECDOH's priorities is to broaden the role of the community in promoting, supporting, and utilizing PMTCT services. This includes providing health education, reducing stigma, generating demand for services, working with the partners and families of HIV-infected women to increase support for PMTCT, developing community networks for client follow-up, and strengthening tangible links between the community and the facility. Underlying these interventions is the need to build capacity of community networks and organizations to implement and monitor programs. Interventions will strengthen HIV prevention programs, provide PMTCT information, and reduce stigma in the community; strengthen peer support for HIV-infected pregnant women to increase demand for and adherence to PMTCT and ARV regimens; and improve community-facility collaboration to increase local ownership and utilization of services. The ECDOH is the driving force of this project and all of the investments in human capital will benefit their workers and the communities. Human capacity development is at the center of this project as described in the training and systems strengthening activities above.

ACTIVITY 4: Preparing for a transition to dual therapy for PMTCT The new HIV & AIDS and STI Strategic Plan for South Africa calls for a new policy on the drug regimen used in PMTCT, suggesting that the policy should be updated according to the WHO Guidelines. The purpose of this activity is to conduct an assessment to assist ECDOH in planning for the implementation of the policy change and to suggest a set of criteria to inform how and when the introduction of dual therapy should be introduced at the facility level. The assessment will look at the critical components of the health system including policy, financing, human resources, training, supply systems, service management and referrals, and information and monitoring systems to establish what will be needed to implement the pending policy. PATH will also establish a pilot project in six sites in the EC (upon ECDOH approval) and implement dual therapy services to establish a "better practice" model. This will be rolled out to other districts and facilities. In addition, PATH will work with the ECDOH to strengthen referral systems for HIV-infected pregnant women ensuring that all treatment eligible pregnant women are fast-tracked to treatment programs.

ACTIVITY 5: Maternal nutrition and infant feeding job aids and materials In FY 2007 PATH developed a series of job aids and print materials for both health workers and mothers such as handouts on feeding options, flip charts and counseling cards for infant feeding counselors on feeding options, AFASS, lactation and breastfeeding, etc., basic maternal nutrition guidance, a wall chart linking each antiretroviral drug with a statement on its implications for food intake at the time when it is taken, etc. FY 2008 activities will focus on dissemination and utilization of these materials. **ACTIVITY 6: Creating Linkages between Reproductive Health (RH) and PMTCT** This activity will effectively link prevention of HIV and prevention of unintended pregnancies into PMTCT settings in the EC. The work will provide evidence-based information and recommendations for decision-makers and program managers to improve policy and practice for integrating RH services into PMTCT settings. Current integration policy and practices will be explored, as will client fertility intentions and desires. The community will be consulted on what services should be integrated and to strengthen community ownership of service delivery and to increase demand for RH services. The PMTCT continuum will be analyzed to determine when clients are most likely to want internalize information that could influence their uptake of services. Lay counselors and professional nurses will be trained and community mobilization will be expanded to improve access to and utilization of RH services. **ACTIVITY 7: Preparing nurse/midwives to expand their role in HIV and AIDS prevention and treatment** This activity targets professional nurses from maternity wards and expand their roles and responsibilities in terms of HIV prevention and treatment. The focus will be on hospitals where the need for task shifting is greatest.

Activity Narrative: Activities will improve attitudes, motivation, knowledge and skills. Participatory training approaches will be used to work with this cadre to define the problems and to create solutions to ensure quality comprehensive services.

Activity ID: 15942.22892.09

Planned Funds: \$242,726

Activity System ID: 22892

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Pathfinder will implement activities aimed at equipping clinics to offer prevention of mother-to-child transmission (PMTCT) services, train nurses in the provision of PMTCT services and train peer educators in case finding and supporting groups. After discussions with CDC/Global AIDS Program South Africa and the National Department of Health (NDOH), it was decided that the project be piloted in four clinics in the Northern Cape. The project sites will be part of the NDOH's antiretroviral treatment (ART) sites, and not the Planned Parenthood Association of South Africa's youth-friendly service clinics as described in COP 2008. The sites will function as satellite ART clinics for young people. This means that the lengthy ART accreditation process for new clinics can be waived, and it will encourage provincial Department of Health to collaborate in the project. Finally, centers can be created more efficiently and faster using this method.

All the other activities in the 2008 COP will remain the same.

SUMMARY:

Pathfinder will implement activities aimed at equipping clinics to offer prevention of mother-to-child transmission (PMTCT) services, train nurses in the provision of PMTCT services and train peer educators in case finding and supporting groups. The emphasis areas for these activities are human capacity development and local organizational capacity development. The target population is women between the ages of 15-24 years.

BACKGROUND:

Pathfinder International is a new PEPFAR partner and all activities related to this project will be initiated in FY 2008. The objective under this program area is to improve access to youth-friendly PMTCT services, including the prevention of unwanted pregnancies and protection/treatment of the pregnant women. All activities will be implemented by Planned Parenthood Association of South Africa (PPASA) and services will be made available in PPASA youth-friendly service (YFS) clinics in KwaZulu-Natal, Gauteng, North West, and the Eastern Cape. Antenatal Care (ANC) comprises a large percentage of services delivered in YFS clinics. With demand for ANC among young people increasing, the YFS clinics are well positioned to offer the continuum of PMTCT services in the selected sites. The establishment of PMTCT services will have a two-pronged approach: increasing PMTCT services at YFS clinics and encouraging community support/mobilization for these services. The clinics will provide ANC, VCT, infant feeding and psychosocial counseling, ART, family planning in the context of HIV and referrals for optimal obstetric care, newborn care (including infant feeding options), and well-child/well-mother follow-ups. The community (through existing networks of peer educators and local NGOs) can be organized, trained and be supported to identify cases; support young women during pregnancy and home-birth; encourage facility delivery; provide information on PMTCT; and promote safer breastfeeding. These elements of service provision must be carefully linked and coordinated to guarantee the even flow along the continuum of care for the young woman and family at risk. A two-way referral system, training of facility-based providers and peer educators, and sensitization of facility-based staff and community leaders are all part of establishing this two-pronged approach. This effort to integrate PMTCT services into existing YFS clinics will utilize and strengthen the existing infrastructure and systems in the selected sites to ensure sustainability in preventing new infections.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: PMTCT Continuum of Services

PMTCT services for young people will go beyond the usual focus on pregnant women to engage partners, family members and the community in institutionalizing the services and reducing the stigma associated with them. VCT is an important entry point for PMTCT services, starting with primary prevention for couples intending to have children and then promoting VCT early in pregnancy to minimize chances of MTCT. VCT, as a routine part of ANC, is the cornerstone of PMTCT. Consistent and correct condom use after pregnancy, as well as early postpartum care will be encouraged through counseling on family planning. Family planning and dual protection for young mothers will be reinforced in PMTCT training of service providers. Nurses will also be trained in the provision of youth friendly PMTCT services. Pathfinder will also conduct monthly supervision and refresher training meetings with nurses providing PMTCT. The project will train peer educators to find young pregnant women in the community and encourage them to use youth-friendly PMTCT services. The project will also establish a two-way referral system between providers and peer educators. The peer educators will refer young pregnant women from the community to the YFS clinic and the nurses will refer the pregnant women who test positive to the peer educators for ongoing support during their pregnancy.

ACTIVITY 2: Guidelines for PMTCT

The project will follow the National PMTCT guidelines and will expand them by adding best practices and practical guidelines on PMTCT services for young people. Pathfinder will adapt these guidelines to be more youth-focused and use the national training curriculum on PMTCT, complemented by Pathfinder's PMTCT curriculum developed in Kenya, to train doctors and nurses specifically on issues relating to youth and PMTCT. It is also crucial that providers be trained in YFS and counseling for pre- and post-testing, as well as to provide support throughout the PMTCT continuum.

ACTIVITY 3: Behavior Change Communication (BCC) Interventions for PMTCT

The BCC campaign will increase knowledge about and motivation for the use of PMTCT services. Aside from gaps in service delivery that will be addressed through the project, cultural barriers to testing for pregnant women (such as stigma, denial, and lack of partner, familial or community support) will be addressed through a PMTCT BCC intervention. Because the PMTCT services will be offered through

Activity Narrative: existing youth-friendly clinics providing an array of services, including ANC, the common stigma associated with seeking PMTCT services will be reduced and young women will be able to seek the services confidentially at the clinics. The project will benefit from lessons learned from Pathfinder's PEPFAR-funded PMTCT work in Botswana and in Kenya, as well as the Ndola demonstration project run by AED in Zambia. These successful BCC messages will be adapted to focus on youth for the South African setting. The first BCC priority will be to develop materials for young clinic clients and providers. Community outreach efforts to increase awareness of services will be coordinated with other HIV and AIDS awareness activities, especially those under this project on VCT and community home-based care (CHBC). BCC efforts will also encourage young expecting couples/partners to utilize services at YFS clinics to prevent MTCT. Finally, information campaigns on PMTCT will be carried out by peer educators in the waiting areas of clinics. Pregnant clients waiting for services will be informed that PMTCT services are available and will learn of the importance of protecting their own health and the health of their child.

These results contribute to the PEPFAR 2-7-10 goals by improving access to and quality of PMTCT services in order to identify HIV-infected pregnant women and increase the number of pregnant women receiving ARV services.

Planned Funds: \$1,041,295

Activity Narrative: ACTIVITY HAS MODIFIED IN THE FOLLOWING WAYS:

ACTIVITY 5 described in COP 2008 has been moved to the TB Care Association COP. TB Care will be the main partner on this project, working with the Medical Research Council to provide technical assistance where necessary.

There are no modifications to ACTIVITIES 1 through 4.

SUMMARY:

This project is implemented by a consortium of organizations, including the Medical Research Council of South Africa (MRC), the Health Systems Trust, the University of the Western Cape (UWC) and Centre for AIDS Development, Research and Evaluation (CADRE). The project focuses on improving the outcomes of HIV-infected women and their infants through multiple approaches at the facility and the community level. The project will also include a targeted evaluation of PMTCT effectiveness. Emphasis areas include community mobilization/participation, needs assessment, quality assurance and supportive supervision, strategic information, and training. Target populations include infants, women, pregnant women, people living with HIV (PLHIV), HIV-affected families, nurses, and other healthcare workers.

BACKGROUND:

This ongoing project, started in FY 2005, builds on the PEPFAR-funded Good Start Cohort Study. The study results highlighted the need for greater community support for HIV-infected mothers in relation to infant feeding and postnatal care, and health systems weaknesses that have contributed to the poor performance of PMTCT programs.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Community Peer Support Project

With FY 2005 and FY 2006 PEPFAR funding, UWC developed training materials and trained 36 locally-identified peer supporters in basic child health skills. In FY 2007, the project focused on identifying pregnant women in 34 project clusters, followed by providing peer support to each of these households until the infants reached six months of age. The activity aimed to support exclusive infant feeding practices (either exclusive breastfeeding or formula feeding); encourage mothers to attend antenatal care and to be tested for HIV; support disclosure of HIV status; support access to child support grants; encourage women to attend clinics postnatally for immunizations; provide cotrimoxazole and access to antiretroviral (ARV) therapy if required; and support early cessation of breastfeeding for HIV-infected women choosing to breastfeed. In FY 2008, the project will focus more on the early neonatal period, with the peer supporter visits beginning within 24-48 hours after delivery. This change in focus is aimed at creating greater linkages between communities and the facility-based PMTCT programs. During their initial visits, peer supporters will ensure that HIV-infected women's infants received nevirapine and that the women are aware of ongoing PMTCT-specific care during the postnatal period. Funding for this activity will be used to provide a stipend to the peer supporters, for supervision and mentoring of peer supporters and for transport to visit mothers in the clusters. The expected results from this activity include identifying HIV-infected women and providing community peer support to these women from the antenatal stage until the infants reach 10 weeks of age.

ACTIVITY 2: Monitoring and Evaluation:

Data collectors will be recruited to determine if the provision of peer support leads to increases in exclusive infant feeding practices, uptake of PMTCT-specific care (e.g. nevirapine CD4 testing, infant six week testing, cotrimoxazole) and improved infant HIV-free survival at 12 weeks. Data will be collected from mothers enrolled in the project when their infants reach 12 weeks. Information on infant feeding practices, morbidity, infant growth and health-seeking behavior of mothers will be collected. Dried blood spots will be taken to determine the rate of mother-to-child transmission of HIV at 12 weeks. This data will be used to determine the effectiveness of the peer supporter program on infant survival. The data will be reported to the provincial departments of health and based on the findings the provinces will determine how the peer supporter program should be scaled up.

ACTIVITY 3: Community Voluntary Counseling and Testing (VCT)

Using FY 2007 Funding, development of a pilot community-based VCT project for pregnant women is underway. FY 2008 funding will ensure continuation of this pilot project. This activity is being undertaken in the rural district of Sisonke in KwaZulu-Natal. It was designed in response to the finding that many pregnant women in this district do not know their HIV status and are not accessing facility-based antenatal VCT. FY 2008 funding will ensure employment of community VCT counselors who will go door to door in their communities identifying pregnant women and offering them home-based pre-test counseling. If women agree to be tested, a mobile testing team led by a nurse will visit the home to perform the testing and post-test counseling. Other household and family members will also be able to receive VCT. This project aims to assess the feasibility and acceptability of a home-based VCT model in a rural area in South Africa.

ACTIVITY 4: PMTCT Integration

During FY 2006, this project developed a baseline assessment tool to assess the integration of PMTCT within maternal and child health services. The assessments began in 2006/2007 in all facilities in two districts in KwaZulu-Natal and were undertaken as a participatory process with district management teams. During FY 2007, the results of the assessments were fed back to districts during workshops where district teams identified interventions aimed at improving PMTCT service delivery. Examples of interventions include provider-initiated opt-out antenatal HIV testing and an intervention to adapt the infant Road to Health Chart to improve the identification of HIV exposed infants. The main focus has been on providing technical assistance to district management teams to act on the identified bottlenecks to integration by

Activity Narrative: developing action plans. During FY 2008, the project aims to implement the identified interventions in the two districts in KwaZulu-Natal and to monitor the effect of the interventions on key PMTCT indicators.

ACTIVITY 5: Facility-based Intervention

This project will involve various interventions to improve the quality of PMTCT care. Interventions would include training health workers on appropriate use of PMTCT and HIV registers and training on HIV/TB/PMTCT integration. During FY 2006 and 2007, two training workshops on TB/HIV/PMTCT registers were held in Sisonke district with 50 people trained. The revised registers have been introduced in the district. During FY 2008, the project plans to implement strategies to improve the linkages between the TB, HIV and PMTCT program through management training, information system support and operational research activities. This activity will be undertaken in Sisonke district, a rural part of KwaZulu-Natal.

These activities will contribute to PEPFAR's 2-7-10 goals by promoting exclusive infant feeding practices among HIV-infected women, increasing the number of pregnant women who are aware of their HIV status and who can access PMTCT, improving the quality of PMTCT services and providing strategic information regarding the operational effectiveness of PMTCT. Ensuring that more pregnant mothers are aware of their HIV status will empower more women to access PMTCT interventions, and a significant number of postnatal HIV infections will be averted by increasing the number of women who practice exclusive feeding during their infants' first year of life. These activities are in line with the USG goal of integrating maternal and child health services into primary care systems.

Program Area: Prevention: PMTCT

Program Budget Code: 01

Planned Funds: \$269,614

Activity Narrative: SUMMARY:

Prevention of mother-to-child transmission (PMTCT) activities support the comprehensive antiretroviral treatment (ART) program carried out by Catholic Relief Services (CRS) in 24 field sites in 7 provinces in South Africa. The area of emphasis is the improvement of care and support to HIV-infected pregnant women in the program, ensuring the wellness of both mother and infant. The field sites target those in need of these services, who live in the catchment area of the site, and who cannot access the services in the public sector. The major emphasis area is to provide linkages with other sectors and initiatives, ensuring that pregnant women receive the much-needed care in line with national guidelines. These will include dual therapy for pregnant women with a CD4 above 200, fast tracking and provision of highly active antiretroviral therapy (HAART) for eligible pregnant women, testing of infants and other HIV-exposed children. All high-risk HIV-exposed children and their mothers in HIV care and support should be provided with related services for wellness, opportunistic infection (OI) and TB treatment and prevention and nutritional supplementation. Minor emphasis areas are partner involvement, nutritional counseling, community mobilization/participation, development of networks/linkages/referral systems, and human resources. The main target populations are HIV-infected pregnant women, HIV-exposed children and their families as well as caregivers.

BACKGROUND:

AIDSRelief (the Consortium led by CRS) received Track 1 funding in FY 2004 to scale up ART rapidly in nine countries, including South Africa. Since FY 2005, South Africa COP funding was received to supplement central funding, with continued funding applied for under COP 2009. The activity is implemented through two major in-country partners: the Southern African Catholic Bishops' Conference (SACBC) and the Institute for Youth Development South Africa (IYD-SA).

Currently, two thirds of patients in the program are women, most of them of childbearing age. Many of the rural areas AIDSRelief serves are resource poor and antenatal care and PMTCT services are scarce due to the remote and rural nature of these locations. AIDSRelief is trying to address this by identifying pregnant women and HIV-exposed children while providing home-based care, as well as putting increased focus on family-centered voluntary counseling and testing. In addition, AIDSRelief will involve all cadres of health-care workers at selected sites to identify pregnant women and HIV-exposed children's needs. Where the AIDSRelief sites cannot provide the services, a functional referral system will be put into place.

ACTIVITIES AND EXPECTED RESULTS:

With funding provided in FY 2009, AIDSRelief will continue implementing activities in support of the South African National PMTCT program. Utilizing technical assistance from AIDSRelief's staff and South African experts, support and guidance will be provided to sites in the form of appropriate medical training courses, patient tracking and reporting, monitoring and evaluation mechanisms and other necessary support.

Although the majority of the AIDSRelief sites cannot provide a comprehensive antenatal, intrapartum and baby wellness care packages, the sites will focus on strengthening and establishing clear mechanisms of tracking and follow-up of mother and HIV-exposed children, and by providing support services where needed. The AIDSRelief sites will provide the following services where needed: routine offer of counseling and testing to women, their partners and their HIV-exposed children, support to enable mothers to safely disclose their HIV status, provision of dual therapy or highly active antiretroviral therapy (HAART) to pregnant mothers in line with the South African National PMTCT program in cases where the patient does not have access to ARV prophylaxis, provision of essential care for pregnant women in care with an emphasis on OI prevention and treatment, maternal and pediatric cotrimoxazole and provision of nutritional supplements according to South African guidelines (and PEPFAR guidance), provision of essential care for all HIV-exposed children and infant feeding and nutritional support by supporting and informing mothers to make and adhere to safe feeding choices. Another emphasis will be on involving partners with PMTCT activities and establishing support groups for pregnant women and mothers.

Home-based caregivers are recruited through parish networks, and are deployed in the areas they live in, with the intention that they should serve patients who live within the walking distance of their homes. All provincial health departments pay stipends to their caregivers. Home-based caregivers within the CRS network tend to pay their caregivers the same stipend that the Department of Health (DOH) pays theirs, as the training that they undergo is the same, as well as the workload. Stipends paid to caregivers vary from one site to another according to the differences in stipends paid by different provinces. Caregivers are also reimbursed for transport expenses.

Some of the AIDSRelief sites also receive PEPFAR and other funding through different sources for the provision of orphans and vulnerable children (OVC) care. The provision of these services gives OVC access to both care and treatment services provided under the program.

The program will involve partners (through increased partner testing, male support, prevention and interventions in regards to gender-based violence) with PMTCT activities, including support groups for HIV-infected pregnant women and mothers. Other activities, where applicable, will include programs targeting partners of pregnant women and providing information to men on PMTCT, counseling and testing, prevention and other health issues, and encouraging couple counseling and testing in an attempt to increase men's involvement in HIV and AIDS treatment and care programs and to reduce stigma and violence against women. The approaches will include couple counseling and testing at CT and PMTCT sites with the view of promoting testing of men as well as building their support for their female partners, where possible. Efforts will be made to include health worker trainings to recognize signs of gender-based violence, to provide appropriate counseling and referral services to social, legal, and community-based support groups, as well as training and employment of women as health-care providers to increase the confidentiality and comfort of women and girls seeking treatment for HIV.

Activity Narrative: On the staffing front, AIDSRelief is making a conscious effort towards staff retention, through skills development and strengthening, retreats and debriefing sessions for the staff at the site level where burnout and compassion fatigue support groups are facilitated. In addition, staff remuneration is monitored and, to the extent possible within the faith-based environment, reasonable packages are offered. All activities will be implemented in close collaboration with the South African government's (SAG) HIV and AIDS directorate and the respective provincial authorities to ensure coordination and information sharing, thus directly contributing to the success of the SAG's PMTCT program and the goals of PEPFAR. These activities are also aimed at successful integration of AIDSRelief activities into those implemented by the SAG, thus ensuring long-term sustainability. This activity will directly contribute towards the goals of reaching 80% of HIV-infected pregnant women with prophylaxis and reducing new infant infections by 50%. This support will be in line with OGAC and SAG guidance and standards on PMTCT.

Table 3.3.01: Activities by Funding Mechansim

Mechanism ID: 4746.09

Mechanism: Desmond Tutu TB Centre

Prime Partner: University of Stellenbosch, South Africa

USG Agency: HHS/Centers for Disease Control & Prevention

Funding Source: GHCS (State)

Program Area: Prevention: PMTCT

Budget Code: MTCT

Program Budget Code: 01

Activity ID: 13865.22709.09

Planned Funds: \$131,906

Activity System ID: 22709

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

The Desmond Tutu TB Centre (DTTC) has revised the scope of the intervention initially planned by reducing work in six antenatal facilities to two facilities and from work in six well-baby clinics to five well-baby clinics linked to these antenatal facilities. The challenges presented in these facilities are substantial and after discussion with government partners, a decision was taken to provide in-depth support and to create best-practice models at two sites rather than to spread resources (particularly human resources) too thinly.

In addition to the specific support provided to the two sites, however, program level support will be provided to the whole prevention of mother-to-child transmission (PMTCT) program through a general assessment of gaps in PMTCT and through working with government partners to improve and standardize systems to address the gaps identified. This is considered to be of particular importance at present as the obstetric facilities are not integrated into the District Health System and systems are not integrated among the different health authorities running the services. The best practice models created will be shared regionally, with the Western Cape province and with the National Department of Health in an effort to help improve PMTCT services.

The reduction in this component of the project has to be viewed within the context of the increased support requested by government partners in other areas of the PEPFAR TB-HIV Integration Project. These activities and the targets relating to the activities have expanded substantially (specifically objectives related to improving TB and HIV care through various health system strengthening initiatives). The details for these expanded activities are provided in the Care component of this COP.

In consultation with, and on advice of government partners, two antenatal facilities in Khayelitsha (Site B and Michael Mapongwane Midwife Obstetric Units) have been selected for the intervention as 22% of HIV-infected pregnant women in Cape Town book at these facilities. A substantial number of women would thus still be reached through the in-depth PMTCT support provided to these facilities. An effective service to pregnant women requires linkages between PMTCT, TB and HIV services. These currently fall under different South African health authorities and departments resulting in fragmented services being delivered to pregnant women. In addition, maternal services are not linked to infant services. Special attention will be paid to integrating the PMTCT and child health services. These will all be linked with the TB and HIV services, with an aim of improving the quality of services.

The types of activities being undertaken however remain the same as in the COP 2008. For each of the activities listed below, particular emphasis will be placed on the following issues:

ACTIVITY 1: Increase Access and Improve Quality PMTCT Services at Antenatal and Delivery Sites Through Improvement of Health Systems

The maternal and child health (MCH) client records are not yet standardized in Cape Town. In addition, PMTCT records are poorly integrated into the MCH records. A specific area of support requested from government partners is to review and recommend changes to these records to enable standardized recording of client information and improved source information for the PMTCT intervention aimed both at ensuring good continuity of clinical care and at improving program management through improved data quality. There are currently no standardized records available nationally that meet these requirements. All tools developed will be shared with the National Department of Health once they have been piloted and shown to improve record keeping.

ACTIVITY 2: Provision of Adequate HIV, STI and TB Care Antenatally

Staff at antenatal facilities will be trained on National Department of Health infection control guidelines. Particular emphasis will also be placed on ensuring that clients diagnosed with TB access appropriate treatment through improved referral system and specific follow-up of all clients referred for TB treatment. Similar processes of referral and feedback will be used to track access to highly active antiretroviral therapy (HAART) for clients requiring HAART. Support will also be provided to improve the diagnosis and management of sexually transmitted infections (STIs) in antenatal facilities as this has been identified as an important gap in the services. Resources and time will be allocated to integrate these services (TB, HIV and STI).

ACTIVITY 3: Family-Centered Care to Mothers and Infants at Well-Baby Clinics.

Emphasis will be placed on improving the retention of clients on the PMTCT program. Although resources do not allow for community-based follow-up of clients, efforts will be made to increase retention of clients through intensified and ongoing counseling.

SUMMARY:

The Desmond Tutu TB Centre project aims to improve access to prevention of mother-to-child-transmission (PMTCT) services, address comprehensive care of antenatal women and promote family centered postnatal care of mothers and babies at well baby clinics. The PMTCT program will be evaluated at facility level to identify gaps in services and quality improvement initiatives will be developed in response to these gaps. The emphasis areas include human capacity development through in-service training and ongoing supervision. The project aims to improve pre- and post-natal PMTCT care and to improve maternal and infant health outcomes. The primary target populations includes all women in their reproductive years, with a focus on those who are HIV-infected, and all HIV-exposed babies, whether registered with the PMTCT program or not.

BACKGROUND:

Activity Narrative: The Provincial Government initiated the PMTCT Program in the Western Cape in 1999 in the Khayelitsha Sub-District. The program offered HIV testing to women booking at antenatal services in Khayelitsha, dual therapy (AZT/NVP) in pregnancy and labor and advocated formula feeding of infants. The Provincial rollout of the program commenced in 2001 and was completed within two years. This rollout followed national protocols and offered nevirapine monotherapy. The Western Cape PMTCT protocol was modified in 2004 to include a dual therapy regimen. Emphasis was placed on exclusive feeding options and early infant diagnosis using PCR tests at 14 weeks. Reporting was simplified with single registers at antenatal sites, in labor wards and at well baby clinics with reporting done on a cohort basis. The Western Cape PMTCT program has been extremely successful and serves as a best practice model for the country. During 2006, 54,211 women accessed opt-out counseling at antenatal services in Cape Town with 93% accepting HIV testing. This is substantially higher than the rest of the country. However, a substantial number of pregnant women never access antenatal care and they and their babies thus fall outside the PMTCT program - these may be the women and babies with a high risk of being HIV infected. Of the 3389 HIV-exposed babies who came through the PMTCT program and were registered at well baby clinics in 2006, 79% had PCR tests done at 14 weeks and transmission rates were 5%. There are, however, several gaps in the program that make a thorough evaluation of PMTCT difficult. These include: inconsistent collection of booking data; fragmented TB and HIV care in antenatal settings; poor quality of labor ward data; loss of clients between obstetric units and well baby clinics; mixed infant feeding; delays in testing of infants; low index of suspicion of HIV among exposed babies whose mothers did not access the PMTCT intervention. This project aims to address these challenges and facilitate the implementation of quality PMTCT services. This project will be implemented in close collaboration with the Western Cape Department of Health, Cape Town City Health Department and non-governmental organizations (NGOs) and will be embedded within the services offered by these health departments. Project staff will work closely with line and program managers to support facility staff in implementing quality improvement initiatives that increase access to quality PMTCT interventions. Lessons learned will be used to inform the program throughout the province. This project will be implemented within existing health facilities. The integration of postnatal maternal and infant care will take place in the six clinics which form part of the Zamstar project and which are also associated with these flexi-hour VCT centers. The Zamstar project is part of the CREATE consortium and is funded by the Bill and Melinda Gates Foundation through a grant to the Johns Hopkins University. Zamstar works to reduce the prevalence of TB by improving integration of HIV and TB services. This project will complement Zamstar through insuring that PMTCT services are also fully integrated into TB and general HIV services.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Increase Access and Improve Quality PMTCT Services at Antenatal and Delivery sites through improvement of health systems

The PMTCT program is clouded by inconsistent information from antenatal and delivery sites. Inconsistent collection of antenatal booking data makes it impossible to assess the true reach and impact of the PMTCT program. Poor recording of information, high staff turnover and the use of untrained locum staff all present problems to the implementation of a quality program. Formal training courses are difficult to arrange due to staff shortages. Using FY 2008 PEPFAR funding, project staff will work on site at six Midwife Obstetric Units in Cape Town. Systems will be evaluated and the overall program will be improved by various interventions, including the collection of quality data to allow a better assessment of the PMTCT outcomes. Simple flow charts will be developed and made available to serve as prompts to locum staff that may be unfamiliar with the program protocols. Once good baseline data is available, quality improvement initiatives will be implemented to address deficits in the local program. The role of project staff will be to assist with program evaluation and to support the facility manager in implementing quality improvement initiatives. This will be done in a way that will ensure sustainability by building capacity within the health services.

ACTIVITY 2: Provision of Adequate HIV and TB Care Antenatally

The provision of antenatal services to women in Cape Town is fragmented: in general, women receive obstetric specific care at Midwife Obstetric Units, TB care at Local Authority Clinics and HAART at Provincial Community Health Centers. While it is outside of the scope of this project to address the structural issues contributing to this fragmentation, this project will ensure that women who access antenatal care are appropriately screened for STIs, TB and HIV and receive the necessary services through improving services at the Midwife Obstetric Units as well as referral links to other health facilities. Community health workers, PMTCT counselors and clinic nurses will be trained to do symptomatic screening for TB. Nurses at the six Midwife Obstetric Units will be trained on TB screening algorithms. Once clients are diagnosed with TB, they will be referred to the local clinic for treatment. Further antenatal visits will be used to reinforce key messages and to motivate TB clients to complete the full course of treatment. Staff will also be trained on the basic package of HIV care to enable them to deliver this at the Midwife Obstetric Units. The components of HIV care will include WHO staging, CD4 counts, PAP and RPR, cotrimoxazole prophylaxis, management of concurrent OIs, TB screening at every clinical visit, including the use of sputum culture in symptomatic clients who are smear negative and referral for HAART if required. The responsibility of project staff will be to train and supervise staff, to transfer skills and build capacity, and to conduct regular folder reviews to ensure that established protocols are being followed. Project staff will work with facility staff and managers to improve the quality of all aspects of PMTCT services as described above.

ACTIVITY 3: Family-Centered Care to Mothers and Infants at Well Baby Clinics

At present, when mothers present with their infants at well baby clinic, the focus is on the care of the infant whose mother accessed PMTCT. Little effort is made to ensure that the mothers receive general HIV care at the same visit or that babies of mothers who did not access the PMTCT program are screened for HIV. There is also little reinforcement of exclusive feeding options. A significant number of babies are lost to follow-up by the time of the PCR test at 14 weeks. Systems will be established at the six clinics attached to the PEPFAR-funded flexi-hour VCT sites to ensure that the care of babies and mothers is linked. Staff will

Activity Narrative: be trained on the basic package of HV care to be provided to mothers and infants and on simple algorithms to screen for HIV among infants not registered on the PMTCT program. Ongoing counseling of mothers will improve the retention of babies so that a higher percentage of babies are tested at 14 weeks and retained on the program for the full six-month duration. The role of project staff will be to evaluate services, undertake in-service training, transfer skills, build capacity and plan quality improvements with facility staff and managers. Improvements will be evaluated through ongoing supervision on-site, audit of clinical folders and evaluation of routine program data.

These activities support an integrated approach for TB and HIV services in a PMTCT setting that is a key strategy for both PEPFAR South Africa and the South African Government. The project contributes to the 2-7-10 PEPFAR goals by ensuring early identification of HIV-infected pregnant women and ensuring that they are enrolled into the PMTCT program and reducing vertical transmission of HIV.

Activity System ID: 22718

Activity Narrative: SUMMARY:

The Eastern Cape Regional Training Center (RTC) was established in 2003 by the Eastern Cape Department of Health (ECDOH) to create a center of excellence for HIV care, management and treatment. The initial focus of the RTC was to coordinate HIV and AIDS training for health workers across the province, but has since expanded (with PEPFAR funding) to develop model HIV care and treatment programs in facilities around Mthatha. RTC is located at the Walter Sisulu University in Mthatha. RTC will focus on the provision of training health-care workers on PMTCT guidelines in this program area.

BACKGROUND:

The Minister of Health approved the revised national prevention of mother-to-child transmission (PMTCT) Policy and Guidelines on 12 February 2008. These new national guidelines include dual therapy for pregnant HIV-infected women. All public health facilities are required to implement these new guidelines. RTC will use FY 2009 PMTCT funds to assist the Eastern Cape in the training of health-care providers on these new national guidelines. The implementation of the revised national PMTCT policies and guidelines will be one of the most important interventions during this financial year.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Updating Training Module and Procedures Manual

The ECDOH has asked RTC to ensure that the current PMTCT training module and procedures manual is updated to include the dual therapy, infant feeding, and the data management aspects of the program. Sections relevant to nutrition, laboratory services, counseling and testing, drug stock management, etc. will be covered in the curriculum.

ACTIVITY 2: Training

RTC will conduct a brief skills audit of nurses already trained in PMTCT, per facility. This will also inform site selection, as well as prioritization for 'top-up' training. RTC will facilitate the 'top-up' training for 1,600 nurses that have already been trained on PMTCT.

RTC will also facilitate the cascading of the train-the-trainer program that was initially facilitated by the National Department of Health, and that aimed at reaching non-governmental organizations, including the AIDS Training Information and Counselling Centres (ATICCs) in the province.

RTC will package PMTCT and Health Information system modules (already developed) to form part of certificate courses offered by the Walter Sisulu University.

ACTIVITY 3: Reporting

RTC will facilitate the review of registers currently used to monitor the PMTCT program in the province. These registers include voluntary counseling and testing, PMTCT, antenatal care and Milk registers.

RTC will use PEPFAR funds to continue to employ members of a PMTCT dedicated team, consisting of one medical doctor, one trainer, one laboratory technologist, and one nurse clinician. Funds will also be used to support the administration of and logistics of the team to accomplish the above tasks.

Planned Funds: \$160,137

Activity System ID: 22721

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

ACTIVITY 1: Technical Assistance and Scale-up of Early Infant Diagnosis

Using FY 2009 funding, The Wits Pediatric HIV Clinics (WPHC) and National Health Laboratory Service (NHLS) aim to assess the implementation challenges and develop guidelines to scale up early infant diagnosis for infants born in prevention of mother-to-child transmission (PMTCT) programs. Technical assistance will be provided to the provinces (and other countries on request) to help escalate the rollout of early infant diagnosis services. This project was specifically requested by Gauteng's Department of Health (DOH), with strong support from the National Department of Health and its PMTCT Early Diagnosis Committee. Technical assistance for the introduction of the new automated Taqman assay to replace the HIV DNA polymerase chain reaction (PCR) assay will be provided. In particular, monitoring the performance of this new assay in the field will be done in relation to the new dual therapy PMTCT program; the age of the infant and the ability to use the assay for viral load monitoring on dried blood spots; monthly PCR test statistics for monitoring the progress of the program will be provided to HIV program managers in Gauteng and the monitoring database will be upgraded to a national level (except for KZN data); incorporation of rapid HIV tests for infants and children; updating of diagnostic algorithms for children in an evidence-based manner; and establishing a system for feedback from clinics for central monitoring (e.g., service issues, quality control, etc.). A program that increases peripartum HIV testing of women to improve identification of HIV-exposed infants is being assessed. All women are offered HIV testing in the peripartum period, newly diagnosed HIV-infected women's babies are given post-exposure prophylaxis and infants are followed to 6-weeks of age for PCR testing. Monitoring of the accuracy of the rapid tests supplied by DOH is done using "Determine" as a gold standard test because health-care worker confidence in these tests that are frequently changed is low.

ACTIVITY 2: Capacity Building

In FY 2009, WPHC and NHLS will continue to facilitate training clinic health-care workers including nurses, doctors and lab technician in the area of early infant diagnosis. Training content will be updated as practice evolves. The training will ensure that infants exposed to HIV accessing immunization clinics at six weeks of age are offered PCR testing. Training will help facilitate an average increase in test volumes from 3,500 to 4,500 per month in the Johannesburg laboratory. Serum panels from infants and children will be prospectively stored for testing rapid HIV tests. The latter are currently evaluated only on adult samples.

ACTIVITY 3: Linking the Expanded Program for Immunizations at Primary Health-care Clinics with Early Infant Diagnosis

In FY 2009, WPHC and NHLS will continue to explore systems to ensure primary health-care clinics (PHC) clinics act as entry points for HIV-affected children by identifying HIV-infected children (and other family members) for comprehensive HIV medical care, including referral between PHC and hospital facilities.

SUMMARY:

The Wits Pediatric HIV Clinics (WPHC) and National Health Laboratory Service (NHLS) will use PEPFAR funds to expand a demonstration project that was implemented with FY 2006 and FY 2007 funding. The project is aimed at increasing access to early HIV diagnosis for infants, and developing guidelines for rollout of the project on a national level. This project was specifically requested by the Gauteng provincial Department of Health (DOH), with strong support from the National Department of Health (NDOH) and its Prevention of Mother-to-Child Transmission (PMTCT) Early Diagnosis Committee. Local organization capacity building, in-service training and ongoing operational research validating suitable HIV assays will be the major emphasis areas for this program, with minor emphasis given to commodity procurement, development of networks, linkages, and referral systems (especially between immunization clinics, early infant diagnosis and treatment, care and support), and logistics. The primary target population will include HIV-exposed infants (birth to five years old) and infants who are not infected, and secondary target populations include lab workers, doctors, nurses and South African government policy makers.

BACKGROUND:

Early infant diagnosis of HIV is vital for monitoring PMTCT programs and identifying HIV-infected children to receive care. Diagnosing HIV in children is more complex than in adults because of the interference of maternal HIV antibodies during infancy and ongoing exposure to the virus during breastfeeding. To date, HIV diagnostic services for children in low resource settings have been neglected and healthcare workers are not familiar with its theory or practice. About five million people in the country are HIV-infected and it is estimated that about 500,000 of these, which include 60,000 children, are in urgent need of antiretroviral (ARV) therapy. One frequently cited reason for so few children accessing treatment is the fact that mechanisms to diagnose infants early are not in place. Although NDOH Guidelines have made provisions for early diagnosis with HIV DNA PCR, in most places this has not yet replaced the previous protocol of using HIV ELISA tests at 12-months of age. In reality, infants are not followed up either die before accessing care or only present once they are already ill with their first HIV-related illness. Lack of early diagnosis for exposed infants and the integration of PMTCT services with services providing ARV drugs have been identified as keys to improving access to care for HIV-affected children and their families, and thereby increasing the number of HIV-infected people receiving treatment.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Technical assistance and scale-up of early infant diagnosis

Using FY 2008 funding, this activity aims to assess the implementation challenges and develop guidelines to scale-up early infant diagnosis for infants born in PMTCT programs. Technical assistance will be

Activity Narrative: provided to the provinces to help facilitate the rollout of early infant diagnosis services. This project was specifically requested by the Gauteng province DOH, with strong support from NDOH and its PMTCT Early Diagnosis Committee. Technical assistance will be provided to improve lab infrastructure to conduct early infant diagnosis and scale up these services around the province. Technical assistance will be provided to establish dried blood spot testing in all HIV DNA PCR laboratories; to make monthly PCR test statistics available, e.g., to "Concerned Pediatricians" to monitor progress; to optimize current and new HIV assays used; to update diagnostic algorithms for children in an evidence-based manner; and to establish a system for feedback from clinics for central monitoring, e.g., service issues, quality control, etc.

ACTIVITY 2: Capacity Building

In FY 2008, WPHC and NHLS will continue to facilitate training of clinic healthcare workers including nurses, doctors and lab technician in the area of early infant diagnosis and update training content as practice evolves. The training will ensure that infants exposed to HIV accessing immunization clinics at six weeks of age are offered PCR testing. Training will help facilitate an average increase in test volumes from 3,000 to 4,500 per month.

ACTIVITY 3: Linking the expanded program for immunizations (EPI) at primary healthcare clinics (PHC) with early infant diagnosis.

In FY 2008, WPHC and NHLS will continue to explore systems to ensure PHC clinics act as entry points for HIV-affected children by identifying HIV-infected children (and other family members) for comprehensive HIV medical care, including referral between PHC and hospital facilities.

The NHLS early infant diagnosis demonstration project directly contributes to PEPFAR's 2-7-10 goals by increasing the number of infants accessing treatment in Gauteng, and serving as a platform for expansion of early infant diagnosis programs throughout the country. These activities support the PEPFAR Five-Year Strategy for South Africa by supporting government efforts to improve quality of and access to care and treatment for HIV-infected children.

Program Budget Code: 01

Activity ID: 12240.22798.09

Planned Funds: \$471,613

Activity System ID: 22798

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Activities started in FY 2008 will continue in FY 2009. This includes the implementation of the new dual therapy South African National PMTCT Guidelines, started in FY 2008 when the new policy was instituted.

Modifications Plans to Activity 3 in FY 2009:

There will be a focus on creating stronger referral links and support between St. Mary's Hospital and the referral community clinics. The groundwork for this has already commenced as the hospital has initiated partnerships with various non-governmental organizations (NGOs) and community-based organizations (CBOs) and counselors in the community. This focus will also encourage mothers to attend antenatal clinic support before or by 20 weeks. The hospital will make use of current therapeutic counselors and links with NGOs and CBOs, and the school nurse in the community to achieve this objective. Antiretroviral treatment (ART) for treatment-eligible pregnant women will be emphasized at community clinic level and if possible, these patients will be referred to the hospital as soon as possible. It is important for the pregnant woman to receive at least 4 to 6 weeks of treatment prior to delivery. This will be addressed in the training modules for PMTCT staff at the hospital and the referral clinics. Education to encourage mother-to-mother support and integrated management of childhood illnesses (IMCI) health education will be addressed at clinic referral level. Greater emphasis will be placed on provider-initiated testing and counseling (PITC) to all mothers attending the antenatal clinic at St. Mary's Hospital as well as in the referral clinics to increase the number of pregnant HIV-infected mothers choosing dual therapy. A greater emphasis will be placed on nutrition and micronutrient supplementation, at all referral clinics and at hospital level.

Human Capacity Development:

Funding will be allocated in FY 2009 to train PMTCT staff at referral clinic level to encourage mother-to-mother support and peer group counseling. There will be a focus on nutrition, partner testing and counseling, routine PITC, but more specifically health education in IMCI for therapeutic counselors and the Department of Health community health-care workers. The objective will be for these trained counselors to encourage health management of children in the community. St. Mary's has five nurses who are IMCI trained and these nurses will be used in this capacity training.

SUMMARY:

St. Mary's Hospital in Durban, KwaZulu-Natal will aggressively address the need to prevent the transmission of HIV from mother-to-child. St. Mary's is ideally situated and offers a wide range of services to 'capture' the target group to ensure success. This will be achieved through the integration of maternal services at the primary health care facility. The activities will encompass human resources, laboratory tests and medical supplies. The emphasis area of this activity is to provide counseling and testing to the family unit and in particular there will be a focus on couple counseling. The ultimate aim is to reduce the number of new infections from mother-to-child and to refer the mother into treatment programs when required. The target groups for this activity are people living with HIV, pregnant women, and their infants.

BACKGROUND:

This is a new program activity funded in FY 2008, although St. Mary's has received previous PEPFAR funding as a sub-partner to Catholic Relief Services (CRS). This activity is linked in with the counseling and testing activity program. The program is supported by the South African Government as St. Mary's Hospital has a service level agreement with the KwaZulu-Natal Provincial Department of Health and the Hospital is in partnership with the District Office of the Department of Health to provide HIV and AIDS training to all clinical staff over the next two years.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Routine HIV testing and counseling

The PMTCT program is based in the primary health care (PHC) facility that has an antenatal clinic. This is the first point of entry for a pregnant mother (not in labor) to the hospital. It is at this point that the pregnant mother will be counseled and tested using same-day rapid test results to establish her status. Provider-initiated Testing and Counseling is currently the standard practice for testing in the entire facility. Women who initially test negative will be offered a repeat HIV test during the last trimester in the pregnancy, and if the mother is not tested at the PHC facility then the mother will be tested at the hospital when the mother is in labor. Linkages and referral to the PMTCT program will occur at the primary health care facility as well as from the midwifery and obstetrics unit in hospital. The overall objective of this activity is to routinely counsel and test as many pregnant mothers as possible so preventative prophylaxis will be offered to the women and their infants. Counseling and testing in hospital at labor and delivery will also be a focus as some mothers are referred from community clinics and have not attended the antenatal clinics sessions on site. Partner counseling and testing will also occur at the primary health care facility as well as in the hospital. In addition attention on TB screening will occur at all levels of health care for the mother. A group of six PMTCT counselors based at the PHC facility and in the hospital will be trained extensively in PMTCT and pediatric ART to ensure that the goals of this activity are achieved. Government counseling and testing protocols will be adhered to. The expected results of this activity are to: (a) create a culture in which all people regularly seek counseling and testing for HIV; (b) provide preventative treatment to mothers for their unborn child; and (c) the subsequent follow up and support for the family unit post-delivery.

ACTIVITY 2: The provision of ARV prophylaxis and post-delivery support

The provision of ARV prophylaxis dependent on the CD4 count of the mother will be in line with the South African Guidelines, which currently include single-dose nevirapine (SDNVP). However, when the guidelines

Activity Narrative: change to include dual therapy, St. Mary's will change its protocols. Single-dose nevirapine will be provided to pregnant mothers that have a CD4 count of 200 and above and HAART to pregnant mothers that have a CD4 count of below 200. ARV prophylaxis will be provided to pregnant mothers who test positive during labor and who have not previously entered the PMTCT program at the PHC facility. PCR testing is conducted at 6 weeks post-delivery and if these infants are born positive to mothers who entered the PMTCT program, the children will be referred to the pediatric ARV program. This is an extension of the PMTCT program. Similarly, the mother and partner will be referred post-delivery if necessary. Subsequent PCR testing is conducted 6 weeks after cessation of exclusively breastfed babies, and formula fed infants will be re-tested at 18 months to determine HIV status. Home-based visits will occur through the counseling and testing activity program. St. Mary's Hospital is accredited as a baby-friendly hospital and the hospital promotes exclusive breast feeding; however, other feeding options are discussed in the extensive infant feeding counseling that is provided. A PMTCT therapeutic counselor will provide nutritional support and counseling to the mother, mother-in-law and father of the baby. Infant formula is available through the PHC facility on site as well as at the community clinic level. This is a service from the Department of Health. In addition, one of the treatment activity plans is for the dietician/nutritional expert to provide ongoing education to communities at clinic level. This educational support will be expanded to include pregnant mothers and mothers post-delivery. In addition, the therapeutic counselors will visit mothers in the home setting which is addressed as a counseling and testing activity program. Extensive counseling on feeding options will be provided in the home setting.

The expected results of this activity are: (1) Prevent the transmission of HIV from mother to child; (2) Effective referral and access to treatment programs if the child is born positive; (3) The referral and access to treatment programs for HIV or TB for the mother and partner if necessary; (4) Additional home-based support if required to the family unit to limit loss to follow-up, especially to those mothers that did not enter the PMTCT program at the PHC facility; (5) Address referral links for care and treatment to St. Mary's Hospital or other treatment centers.

ACTIVITY 3: Provision of support and guidance to referral clinics

The PMTCT program based at St. Mary's Hospital will work extensively with referral clinics in the area to ensure that pregnant mothers from referral clinics will be afforded the same service as if they had attended the PMTCT program at St. Mary's. The PMTCT training that will be afforded to the staff at St. Mary's Hospital will be extended to the referral clinics to the PHC facility on site. This will be included in the treatment activity plan.

These activities contribute directly to the overall PEPFAR 2-7-10 goals as HIV-infected pregnant mothers will be identified, appropriately treated, cared for and supported. Family members affected will benefit directly from counseling and support within the hospital environment as well as within the community setting during home visits.

Activity ID: 22309.22871.09

Planned Funds: \$273,753

Activity System ID: 22871

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Using FY 2007-2008 funding a monitoring and evaluation (M&E) system for early infant diagnosis (EID) has been developed and is being piloted in various sites in Gauteng (PAIT II & III Projects). The package emphasizes four specific areas of EID M&E: 1) implementation (i.e., identifying at-risk infants and tracking the management of blood samples and relationship between testing facilities (primary health clinics) and the National Health Laboratory Service (NHLS); 2) adherence to early infant testing, diagnosis and follow-up care; 3) psychosocial support for clients (mother-infant pairs); and 4) evaluation of EID training by WHC/ECHO staff. One of Nosizwe Consulting's (Nosizwe) aims in constructing the M&E package was to make it adaptable for use in varied health-care facilities; so that EID M&E activities could take place in well-supplied and staffed gold standard facilities and in basic forms in silver- and bronze-standard health-care environments. FY 2007 monies were used for the initial planning, tool construction, process mapping and preliminary testing at Coronation Hospital, a tertiary care facility considered a gold standard (i.e., highly resourced, well-staffed) environment. FY 2008 (PAIT III Project) funds have been used to test and refine the M&E package, and to adapt and roll out into more diverse clinic settings, the silver standard (mid-level resourced and staffed) environments. FY 2009 (PAIT IV) funding will be used to further refine and test the M&E package for use in bronze standard health-care environments. Of the three levels, this final bronze level clinic environment is the most challenging and important. Not only does this standard represent the most poorly resourced and staffed facility profile but it is the most common type of health-care facility in the South African public health system.

Using FY 2007 (PAIT II) funding, Nosizwe completed a community survey in Ekurhuleni (Gauteng East Rand Township). The results of this work showed high levels of ignorance of PMTCT in general and EID in particular in all age and both sex groups. Further, HIV-related stigma and gender dynamics (for example, partners blaming mothers for causing vertical HIV infection) are key factors that act as obstacles to mothers' and families' ability to adhere to PMTCT recommendations, including early infant HIV testing, diagnosis, and treatment. In FY 2008, Nosizwe used these data as the basis for the initial design of psychosocial support and education materials for at risk infants' mothers and families. The main theme was male involvement. FY 2009 funds will be used for facility-based testing of these materials in Gauteng and, if possible, in selected sites in North West Province.

Expected results in FY 2009 include development of a draft M&E package that will be tested in bronze standard facilities. Additional results will include a work-plan/expansion plan for scaling up use of the tested psychosocial support materials. These activities will contribute to PEPFAR goals by facilitating a process where mothers of at-risk infants are encouraged to undertake timely HIV testing and where HIV-infected infants can be identified early and referred to antiretroviral therapy (ART) facilities for appropriate monitoring, care and treatment. In addition, the focus on mother-family psychosocial support will provide an important step in breaking down social barriers to early infant diagnosis and care.

BACKGROUND:

South Africa does not have a national system to monitor early infant diagnosis. Moreover, most clinics offering EID do not provide routine psychosocial support or education materials to mothers and their families. Prevention of mother-to-child transmission (PMTCT), especially EID is routinely under-emphasized or even overlooked in public health education and advocacy campaigns surrounding HIV and AIDS. Thus, the activities of this project will help encourage the smooth functioning of under-resourced early infant HIV testing and diagnoses services, and help establish psychosocial support and educational resources for mothers of at-risk infants and their families. FY 2009 funds will be used to complete the three-tiered gold-silver-bronze M&E package by focusing on the final bronze level. It will be used to develop psychosocial support materials by rigorously testing them among the target populations.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Refinement and Roll Out of Monitoring and Evaluation Package (Bronze Level)

In FY 2009, Nosizwe will build on the results of FY 2007-2008 activities by refining the draft M&E package produced under PAIT II and III Projects and rolling it out for use in bronze level clinical settings within the Gauteng public health system. This will allow further assessment of the feasibility of implementing the package in a new health facility environment and identification of the M&E limitations inherent in this clinical context. This activity will provide the data necessary to design the final M&E package to accommodate very low resource clinic environments offering EID. As in FY 2008, two different M&E system implementation models for bronze level will be tested: one in which clinic staff take the lead in implementing and managing the system and the other in which external personnel (i.e., individuals who are not part of the clinic system and operate independently of the clinic) are in charge of implementation and management. Nosizwe will train staff on how to use the package and develop training protocols for each implementation model.

ACTIVITY 2: Psychosocial Support and Education Materials for Mother-Infant Pairs

Results of FY 2006-2008 activities have provided insight into social and cultural factors that act as potential barriers to HIV-infected mothers' ability to follow through with PMTCT recommendations, including early infant diagnosis, treatment and care. In FY 2008, Nosizwe focused on one theme in terms of developing support strategies and materials: partner involvement. FY 2009 funds will further test and refine these materials, and explore possibilities for adding additional themes, including development of counseling and support guidelines for counselors and health care workers. In order to take these materials beyond their current scope or scale, Nosizwe will work with organizations that focus on development of public health support and education materials, such as the non-governmental organization, Regional Psycho-Social Support Initiative (REPSSI).

ACTIVITY 3: Materials Testing in New Geographic Areas (North West Province)

Nosizwe will explore strategies and models for expanding the use of support and educational materials beyond the Gauteng public sector clinical environment. In FY 2009 Nosizwe will explore options for testing and using our support and education strategies in selected public sector antenatal and PMTCT clinical environments in North West Province. At the end of FY 2009, a detailed action plan for community outreach and education that could be put into practice at a later stage (i.e. for implementation and further scale up)

Activity Narrative: will be developed.

ACTIVITY 4: Advocacy and Dissemination

Using FY 2009 funds Nosizwe will engage in a variety of advocacy and information dissemination activities with stakeholders, members of the health system and other interested parties to showcase project findings, garner interest in further roll out of the M&E package and to promote the concept of facility-based M&E for early infant HIV testing and diagnosis. These findings may be presented at regular meetings (such as the PMTCT Steering Committee Meeting) as well as at convened meetings, for instance with members of the participating clinics. It is anticipated that these meetings will take place on at least three levels of the health system: local/municipal, provincial and national. Where appropriate, Nosizwe will share results with representatives of other provincial health systems.

In close collaboration with the Gauteng Provincial Department of Health (GPDOH), Nosizwe Consulting will pilot a monitoring and evaluation of early infant diagnosis program at Coronation Hospital.

SUMMARY: In late FY2007, the National Department of Health (NDOH), began implementing early infant diagnosis of HIV at two sites per province. At that time, it became evident, that a monitoring and evaluation system for early infant diagnosis was needed. Nosizwe Consulting, in collaboration with Coronation Hospital and Wits Health Consortium- National Health Laboratory Services began implementing activities to develop and strengthen early infant diagnosis. The major emphasis area is strategic information. Target populations for these activities include policy makers, National AIDS Control Program staff, other NDOH staff, other healthcare workers, and infants born to HIV positive mothers.

BACKGROUND: In South Africa, lack of early diagnosis of HIV-exposed infants and integration of early testing protocols into existing public health services has been identified as key to improving access to care for HIV affected children and their families. In FY 2007 funding was used to conduct formative work aimed at identifying psychosocial issues and implementation challenges relating to early infant HIV diagnosis. As a follow on to this activity, FY 2008 funding will be used to create a draft monitoring and evaluation system for early infant HIV diagnosis in South Africa. This project focuses on creating a pilot monitoring and evaluation system or package that will include assessment of four specific interest areas: 1) training on the national protocol implementation; 2) implementation itself, 3) quality of care and psycho-social well-being (of both clients and providers) and 4) client adherence/follow-up. This activity is a logical follow-on from the formative/descriptive work conducted in FY 2007; and the results obtained from the formative work will serve as the basis for formulating M&E tools (both quantitative and qualitative; exploring both quality of care/service provision AND client adherence and psycho-social impact) that can be used for early infant testing roll-out in South Africa and elsewhere. The project will explore different levels or standards of monitoring and evaluation (gold, silver, bronze standard) for early infant HIV diagnosis. As a result, part of the M&E package will contain recommendations on how to adapt monitoring and evaluation activities to differing local (clinical and community) contexts.

Expected results include the development of a draft M&E package that will be tested in a number of facilities and geographic locales as the early infant testing training and protocol are progressively rolled out throughout the country. The draft package will contain a log frame, indicators, data collection tools, and a protocol or plan containing guidelines for data collection, management and analysis plan. It will also include an assessment of the feasibility of implementing the package in different clinical and community settings (i.e. types of health facilities, geographic locales, stages of protocol training and implementation, etc.), how it can be adapted to sites that are already offering the protocol/service, and guidelines for using gold, silver or bronze standards/levels of evaluation.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Monitoring Early Infant Diagnosis Using FY 2007 and FY 2008 funding a monitoring and evaluation system for early infant diagnosis is currently being developed and piloted at the coronation hospital complex in Gauteng province. FY 2008 funding will be used specifically to support the scale-up and rollout of early infant diagnosis services to other clinics and hospitals in Gauteng province. The monitoring and evaluation system is currently being developed as no national system to monitor early infant diagnosis exists. The district health information system (DHIS) which is responsible for the national data set only captures the number of infants tested at 12 months of age. The new system includes monitoring and evaluation training on the national early infant diagnosis testing protocol implementation, implementation itself and client adherence and follow-up. The activity is a logical follow-on from the formative/descriptive work conducted in FY 2006, and the results obtained from the formative work served as the basis for formulating monitoring and evaluation tools (both quantitative and qualitative, exploring both quality of care and service provision and client adherence and psychosocial impact) that can be used for early infant testing rollout. Expected results include development of a draft monitoring and evaluation package to be tested in a number of facilities as the early infant testing training and protocol are progressively rolled out. The draft package will also include an assessment of the feasibility of implementing the package in different types of health facilities and how it can be adapted to facilities already offering the service. In addition, while the monitoring and evaluation package will be thorough and comprehensive, certain components may not be realistic for certain clinical settings. Therefore, part of the package will explore different levels of monitoring and evaluation (gold, silver, bronze standard) depending on the clinical environment. This will ensure exploration of quality of care issues in greater depth. This activity will contribute to PEPFAR goals by facilitating a process where HIV-infected infants can be identified early and referred to antiretroviral therapy facilities for monitoring and ensuring that they receive treatment at the appropriate time. In addition, the focus on quality of care will ensure sustainable implementation of early infant diagnosis.

ACTIVITY 2: Development of an Advisory Panel Nosizwe Consulting will convene an advisory panel for the project. Individuals will be selected who can provide input on all aspects of the project including; training, implementation, psycho-social support, and adherence. Together with the advisory team Nosizwe Consulting will identify potential study sites for testing of the draft M&E package; and will create a draft version of the M&E package itself. This project will help strengthen early infant HIV diagnosis efforts in South Africa by facilitating a process where HIV positive infants can be identified early and referred to ARV sites for monitoring and ensuring that they receive treatment at the appropriate time. In addition, the focus on quality of care will ensure that implementation of early infant diagnosis is sustainable.

Activity Narrative: NO FY 2009 FUNDING IS REQUESTED FOR THIS ACTIVITY:

This activity was approved in the FY 2008 COP, is being funded with FY 2008 PEPFAR funds, and is included here to provide complete information for reviewers. This will no longer be funded in FY 2009 due to the existing National Institute for Communicable Diseases (NICD) Cooperative Agreement ending. A new Cooperative Agreement is now in place with the National Health Laboratory Service (NHLS), the parent organization for the NICD, and a smaller Funding Opportunity Announcement is being developed with the Sexually Transmitted Infections Reference Center (STIRC), an STD division within the NICD. The TB/HIV funds earmarked for FY 2009 have been moved into LAB for FY 2009, so that there are only 2 program areas for NHLS in FY 2009, LAB and SI. All existing program activities in these areas will be supported under the new NHLS Cooperative Agreement in the FY 2009 COP. Care, treatment, and a smaller SI budget will continue to be supported, but through a new TBD COP entry for a NICD continuation (STIRC) in FY 2009. Therefore there is no need to continue funding this activity with FY 2009 COP funds.

Activity ID: 7903.22914.09	Planned Funds: \$184,860
Activity System ID: 22914	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Medical Care Development International - South Africa (MCDI-SA) has modified ACTIVITY 1 in the following way: All PMTCT training will be based on the new 2008 National Department of Health prevention of mother-to-child (PMTCT) guidelines, including the protocols for dual therapy.

ACTIVITY 2 has been modified in the following way: Pre- and post-natal support through HIV-infected mothers' support groups and Birth Companions programs will be continued as a child survival and safe motherhood wraparound program funded by UNICEF. PEPFAR funds originally allocated for these activities will be used to focus solely on facility-based support for improved PMTCT service delivery and referral. This activity will include training and refresher training of nurses on (a) the new South African PMTCT guidelines, including the dual therapy protocol; (b) routine offering of counseling and testing; (c) routine voluntary referral to TB screening, family planning and ANC services; (d) correct data recording and reporting; (e) effective patient communication; and (f) referral to available PMTCT support groups and Family Companions. Training will be followed with one-on-one mentoring and an annual quality and service assessment, including an annual client satisfaction survey and targeted one-on-one mentoring of facilities with poor indicator results as determined by service assessment results. Two nurses will be hired to train and mentor facility nurses on PMTCT, based on the current PMTCT protocol developed in consultation with the KwaZulu-Natal Department of Health. These MCDI-SA staffers will also be responsible for regular collection of PMTCT statistics from health facilities.

To increase health service uptake and community linkages, MCDI-SA will continue training and refresher training of community health workers, home-based caregivers, traditional health practitioners and other community leaders on community PMTCT. Training messages will include support for adherence to PMTCT infant feeding choices, basics of dual therapy; the need for TB screening; anti-stigma advocacy; involvement of men in care; and how to provide psychosocial support and promote adherence to treatment. This will include a particular focus on training of traditional health practitioners in the rural and deep rural areas, a previously neglected yet highly influential group of health workers, and will emphasize referral and linkage of these practitioners with South African government health facility services and personnel.

In setting target numbers for training, MCDI-SA has expanded the definition of health worker from facility nurses to include traditional health practitioners (THP). To date, 25 THPs have been trained. MCDI-SA will therefore expand the 2009 target to 660, including 2 nurses in each of 30 facilities (60), 10 community health facilitators, 400 community health workers, 50 THPs, and 120 home-based caregivers.

ADDITIONAL ACTIVITY: MCDI-SA will use PEPFAR funds to pilot Infant Feeding Corners (IFC) in five health facilities. The primary purpose of the IFCs is to introduce the sipping cup as a method of formula feeding that replaces the risks affiliated with bottle-feeding, and that is endorsed by the World Health Organization and UNICEF. Staffed by trained Family Companions, IFCs will be offered as a service to all pregnant women to provide thorough, individualized training and to assist pregnant women to make an informed infant feeding choice that decreases and removes the risk of transmission and supports the health of mother and child. PEPFAR funds will cover IFC materials and the transport needs of Corner staff. (Family Companions will be given a regular stipend from UNICEF funds for their time staffing the IFC.)

ADDITIONAL ACTIVITY: MCDI-SA will purchase and pilot the use of the LifeStraw Family Instant Microbiological Purifier (a low-cost household water purifying system approved for use in PEPFAR projects) in households of PMTCT clients, piloting the effort with women who are participating in PMTCT support groups co-facilitated by MCDI-SA (a wraparound program funded by UNICEF). The majority of households in deep rural areas of Maphumulo, Mandeni and Ndwedwe sub-districts rely on often contaminated surface water from local streams and rivers for their regular drinking water supply, leading to child and adult diarrhea and other water-borne illnesses, especially among those who are immuno-suppressed. MCDI-SA will select the households based on agreed-upon criteria with the Department of Health, train household members on proper use and maintenance of the LifeStraw device, and provide follow-up supervision and data collection to measure any implied effect on reducing diarrhea incidence among household members.

SUMMARY:

Medical Care Development International - South Africa (MCDI-SA) is a US-based private voluntary organization (PVO) that is registered as a Section 21 company (NGO) in South Africa. MCDI-SA has been successfully implementing community public-health and social support projects in KwaZulu-Natal, South Africa, since 1995. Prior to PEPFAR funding, projects have incorporated activities focusing on traditional Child Survival (CS) interventions, reducing HIV and AIDS through prevention among youth and adolescents, assisting with CT/PMTCT site establishment, strengthening the government healthcare system's provision of services to and creating support groups for HIV-infected and TB-affected individuals, and supporting other health-supportive community-based initiatives. MCDI-SA seeks to prevent mother-to-child transmission (MTCT) through a comprehensive training and support program. Target populations include men and women of reproductive age, pregnant women, and people living with HIV and AIDS, and children under five. The major emphasis areas are all gender-related issues (addressing male norms and behaviors, increasing gender equity in HIV and AIDS programs, increasing women's access to income and productive resources, increasing women's legal rights, and reducing violence and coercion), Human Capacity Development (in-service training and retention strategy), Local Organization Capacity Building, and include Child Survival and Safe Motherhood Wraparound Programs.

BACKGROUND:

FY 2008 PEPFAR funding will be used to expand MCDI-SA's ongoing PMTCT initiatives in rural Ndwedwe sub-district to the three remaining sub-districts of Ilembe District Municipality in KwaZulu-Natal province. The MCDI-SA PMTCT program is part of the Ndwedwe Integrated TB and HIV and AIDS program (NITHAP), funded by the USAID Child Survival Program, as well as Ilembe District Child Survival Project

Activity Narrative: and UNICEF. Proposed activities are consistent with the South African Government's mission of preventing the spread of HIV. The main partner in this activity area is Ilembe District Department of Health. Other partners include South African non-governmental organizations (NGO) such as The Valley Trust and National Association of People Living With HIV and AIDS (NAPWA) as well as the Campus Law Clinic at the University of KwaZulu-Natal (UKZN). Activities in this area will provide the means to empower women of reproductive age in general to protect the health and well-being of their children and themselves and will provide pregnant women and HIV-infected pregnant women and mothers expanded access to counseling and testing (CT), PMTCT and antiretroviral (ARV) services.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Capacity Building

MCDI-SA will continue to improve the capacity of local government-supported and volunteer-community health workers to provide quality CT, traditional VCT and PMTCT; services, and to educate the community on the importance of CT and PMTCT. Community Health Workers (CHWs), home-based care volunteers (HBCV), and other community influencers, such as traditional healers, religious and traditional leaders, will ensure that HIV-infected pregnant women and mothers adhere to PMTCT treatment and feeding protocols, i.e. taking nevirapine at the onset of labor, either on arrival at the health facility for delivery, or at home in a community setting (assisted by a birth companion) and adhering to exclusive infant feeding practices until appropriate weaning commences.

Training of health providers and community outreach workers will include the following: (1) Training of sub-district trainers, Community Health Facilitators (CHF) and health facility personnel on PMTCT/VCT and household and community integrated management of childhood illnesses (C/HH IMCI) by MCDI-SA and The Valley Trust; (2) CHFs will provide training to CHWs, HBCVs, Traditional Birth Attendants (TBAs), and Traditional Healers (THs) on C/HH-IMCI and Community PMTCT; (3) Households and communities as well as traditional healers and community and religious leaders will be reached by community workers and provided with information about Community and Household Integrated Management of Childhood Illnesses (C/HH-IMCI) and PMTCT. All training activities are based on the South African Government (SAG) PMTCT protocols. In addition, community workers will be provided with sound knowledge of C/HH-IMCI and community PMTCT and will serve as community advocates for CT and PMTCT to pregnant women in the area. Community awareness is a key to increasing access to PMTCT services and adherence to government healthcare and treatment protocols.

Training formats will be either small workshops held over one or more days or one-on-one mentoring and will be conducted by qualified nurses and/or South African Qualification Authority (SAQA)-accredited trainers. Training quality assurance will be measured through pre- and post-training evaluations as well as periodic follow up evaluations whenever feasible.

ACTIVITY 2: Pre- and Post-Natal Support Through HIV-infected Mothers Support Groups and Birth Companion Programs

MCDI-SA will continue its current efforts in providing HIV-infected women with psychosocial and other support as part of the PMTCT program. With FY 2008 funding, MCDI-SA will establish HIV-infected Mothers Support Groups in collaboration with the local National Association of People living With AIDS (NAPWA) affiliate. Locally recruited lay counselors trained by MCDI-SA and NAPWA will offer additional educational and psychological support to mothers support groups, and legal support will be provided through a partnership with the UKZN Campus Law Clinic. These support groups will: (1) guide new mothers on appropriate feeding practices; (2) assist new mothers in developing income generation and public awareness/anti-stigma projects; and (3) encourage information sharing on accessing and adhering to antiretroviral treatment (ART), childhood illness prevention, detection and treatment, accessing social grants, involving men in maternal and child care, and addressing and reducing domestic violence. HIV-infected mothers' support groups will be used as linkages between communities and health facility PMTCT/CT and ART services. Groups also will be mentored in how to register themselves as community-based organization who can receive funding for their own organized activities. Furthermore, birth companions will be identified and trained by MCDI-SA and NAPWA trainers to accompany pregnant women in all stages of the antenatal and postnatal periods. They will foster best practices in antenatal care, child bearing, and infant feeding and care, including ensuring that HIV-infected mothers adhere to PMTCT protocols related to self-administration of nevirapine in the home, when delivery does not take place in a facility. In addition, Birth Companions will promote referral to the two ARV service centers in Ilembe sub-district. The Support Group Facilitators will work with the district Department of Health Community Health Facilitators, traditional birth attendants (TBAs), HBCVs and CHWs to identify Birth Companions among the community, family members or volunteers.

ACTIVITY 3: Facility PMTCT Service Quality Assessments

Using an assessment tool developed in conjunction with the Ilembe District DOH under the current TB-HIV service integration project, MCDI-SA will conduct annual assessments of PMTCT services at the facility level. This tool is similar in format to the District Rapid Assessment Tool (DRAT) that was developed to evaluate TB services in the Eastern Cape for the Equity Project, which has been adapted and expanded for use in Ndwedwe under our TB-HIV project, NITHAP. This tool, which provides a more in-depth understanding of service provision than current DoH data vehicles are able to collect and present, has proven to be effective for TB services, and will be adapted to address PMTCT service quality. Each assessment will evaluate the quality of PMTCT service provision in terms of number, training and tenure of personnel; adequacy of physical space, supplies and equipment; integration with ANC, VCT, and TB services; consistency of recording and reporting; and other key service points in compliance with NDOH PMTCT guidelines. Results and recommendations will be discussed on-site with the service providers as well as compiled and presented to the Ilembe District Health Management Team. DOH PMTCT program managers will be trained on use of the tool and provided with electronic copies of the tool for their ongoing

Activity Narrative: use.

This project contributes to PEPFAR 2-7-10 goals by improving uptake and access of PMTCT services at public health facilities, facilitating the linkages between PMTCT and ART services, and providing psychosocial support to HIV-infected pregnant women and mothers, ensuring better adherence to PMTCT protocols and reducing the number of new infant infections.

Planned Funds: \$402,610

Activity System ID: 22947

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

ACTIVITY 1: Capacity Building

At the request of the provincial departments of health, Family Health International (FHI) activities will build on COP 2008 and previous years' work with a focus on training health service providers in rural areas of Western Cape, Limpopo, Free State and North West Departments of Health (DOH). Furthermore, all trainings will be conducted using the revised National Department of Health (NDOH) prevention of mother-to-child transmission (PMTCT) manual that includes the new guidelines on dual therapy, and that was signed by the Minister of Health in December 2007. FHI will cease PMTCT support to the Northern Cape in COP 2009 as sufficient PMTCT capacity has been built in the Northern Cape Department of Health over the past three years, and the province will be ready, in FY 2009, to continue without ongoing support from FHI. In 2008, FHI will work with the province to develop and implement an exit strategy to ensure that the current gains because of FHI support are sustained. FHI developed an interactive tutorial with FY 2007 funds, and this was saved on a CD-ROM. This CD-ROM was used for training and had been distributed in FY 2008, and so will not be a component of activities in FY 2009.

Furthermore, in FY 2009 the FHI PMTCT program will support the national roll out of the revised PMTCT policy through training health-care workers on the policy. FHI will work directly with the provincial departments of health to disseminate and train providers at the facilities on the policy. FHI will also support departments of health with training and methods to increase partner testing; implement prevention among positives activities such as the counseling and provision of family planning; diagnose and manage sexually transmitted infections; strengthen infant follow-up activities to assist with early infant diagnosis (this will also support the FHI activities under pediatric care); strengthen systems; and integrate PMTCT within Maternal and Child Health (MCH) services and programs.

A major part of the support to the DOH under this activity is the institutionalization of voluntary, age appropriate referral for family planning as a routine part of the PMTCT MCH services. FHI will actively encourage the DOH to ensure that protocols, staffing, supply chain and monitoring systems are optimally integrated with family planning services and the broader health system. FHI will further work with the DOH to ensure that as part of the multi-disciplinary HIV care services that access to family planning is increased through the provision of family planning counseling and active referrals.

ACTIVITY 2: Technical Assistance

At the request of the provincial DOH, new sites will be selected for the provision of technical assistance (TA), including mentoring and coaching in FY 2009. Furthermore, onsite mentoring and coaching will be increased to enhance implementation of learnt skills. A PMTCT checklist, based on national and international PMTCT standards, will be used on site visits to assure quality of services.

FHI will conduct an assessment of project progress in FY 2009 to provide information on current PMTCT practices in selected sites and to document achievements made through all the previous years of FHI training and TA support. This assessment will build on a similar assessment done by FHI and the DOH in 2005. Synthesis of information gathered through both assessments will document successes and lessons learned since 2005 and will be used to inform selection of COP 2009 sites as well as identify priorities for enhanced onsite mentoring and TA.

SUMMARY:

Family Health International (FHI) will collaborate with PEPFAR-funded prevention of mother-to-child transmission (PMTCT) partners to strengthen PMTCT services in four provinces. FHI will provide a PMTCT Training of Trainers (TOT) course designed for program implementers. Auxiliary nurses and lay counselors will be equipped with appropriate knowledge and skills of PMTCT. With the provincial departments of health (DOH), FHI will design and provide technical assistance (TA) to PMTCT facilities to improve the quality of those services. This project will provide resources to other PEPFAR partners, including Elizabeth Glaser Pediatric AIDS Foundation (EGPAF) and JHPIEGO. The target populations include men and women of reproductive age, pregnant women, and people living with HIV and AIDS. The emphasis areas are addressing male norms and behaviors, training and wraparound programs in family planning.

BACKGROUND:

Since FY 2004, with PEPFAR funding, FHI has provided TA to a number of South Africa provincial DOH PMTCT facilities. The goal of this TA is to improve overall performance of selected PMTCT sites, with an emphasis on promoting best practices including the provision of antiretroviral (ARV) prophylaxis and family planning (FP) counseling and referrals. Since FY 2004, FHI has supported the provincial DOH in Limpopo and Northern Cape provinces by providing training to over 211 PMTCT service providers, including nurses and lay counselors, and on-site TA to 50 PMTCT facilities. In FY 2006 FHI continued to work in Limpopo and Northern Cape provinces and extended TA to Free State. At the request of these provincial Departments of Health and with endorsement from the national DOH, FHI is assisting in the development and adoption of provincial PMTCT protocols. FY 2007 funding ensured that TA could continue to be provided to Free State, North West, Limpopo and Western Cape provinces. With FY 2008 funding, the project will build on the lessons learned from the two previous years of PEPFAR funding. FHI will develop and make available on CD-ROM an interactive tutorial that can be used by other PMTCT implementing agencies and the DOH. FHI will also continue to provide TA to improve overall PMTCT performance and strengthen the systems necessary to support PMTCT programs (e.g. supervision and data management). FHI, in conjunction with clinics, will also design strategies to improve outreach to male partners of women availing themselves of PMTCT services, hence increasing gender equity in HIV programs and addressing male norms and behaviors by providing training on couple counseling, and promoting male attendance at antenatal visits with women (based on women's consent).

Activity Narrative: ACTIVITIES AND EXPECTED RESULTS: ACTIVITY 1: Capacity Building

FHI's activities will build on the FY 2006 and FY 2007 program in which FHI developed human capacity by refining the current training course for auxiliary nurses and lay counselors and equipping them with the knowledge and skills necessary to strengthen PMTCT services, including: (1) counseling and testing; (2) provision of ARV prophylaxis; (3) counseling and support for safe infant feeding practices; and (4) counseling on FP. Focusing on transferring skills to trainers to train providers, as well as to providers directly, FHI will develop TOT training materials into a CD-ROM in FY 2007 and make it available as a resource to the DOH, all PEPFAR partners, and other PMTCT stakeholders. The CD-ROM will include the facilitator's guide and participant manual from the refresher course. Interactive in nature, the contents will focus on the main components of a comprehensive PMTCT program and will have an emphasis on increasing counselors' and nurses' knowledge of appropriate FP methods for women with HIV, including those women receiving ARV treatment, strengthening counselors' communication and counseling skills around FP for PMTCT clients, and providing referrals. In addition, FHI will continue to provide the TOT course to other agencies supporting or implementing PMTCT programs (e.g., EGPAF, NDOH, JHPIEGO) and work closely with them to provide additional TA to roll out the TOT curriculum through their programs.

ACTIVITY 2: Technical Assistance

FHI will continue to provide TA to the DOH in PMTCT facilities in four provinces (Free State, North West, Limpopo and Western Cape) to improve program performance. Specifically, the scope of work for the TA is: (a) conduct both pre-service and in-service training courses for auxiliary nurses and lay counselors to strengthen the four main components of the selected PMTCT programs; and design the TA with the DOH to ensure activities fit into the existing health system to help promote sustainability; (b) clarify performance expectations for newly trained staff and managers and strengthen supportive supervision processes; (c) strengthen referral systems to enhance continuity of care; (d) improve functional referrals from PMTCT to FP services in order to promote healthy spacing of pregnancies and prevent unintended pregnancies among post-partum PMTCT clients; (e) conduct training on couple counseling and create strategies to involve male partners in PMTCT visits, and; (f) draw on the results of FHI's research on optimal timing for FP counseling within PMTCT services to provide TA to facilities that will include the development of FP messages to be incorporated into points in the service delivery system that have shown to increase the likelihood of uptake of FP (e.g., pre-/post-test counseling, post-partum period, infant feeding counseling, infant testing, or child health services).

This project contributes to PEPFAR 2-7-10 goals by reducing the number of new infections among infants exposed to HIV and ensuring that HIV-infected pregnant women and infants are appropriately referred to treatment, care and support services. In addition, by strengthening the FP component of PMTCT programs FHI helps to prevent future unintended pregnancies in HIV-infected women.

Table 3.3.01: Activities by Funding Mechanism

Mechanism ID: 2813.09	Mechanism: HSRC
Prime Partner: Human Science Research Council of South Africa	USG Agency: HHS/Centers for Disease Control & Prevention
Funding Source: GHCS (State)	Program Area: Prevention: PMTCT
Budget Code: MTCT	Program Budget Code: 01
Activity ID: 3553.23159.09	Planned Funds: \$1,200,766
Activity System ID: 23159	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

FY 2009 funds will be used to expand prevention of mother-to-child (PMTCT) program-strengthening activities to the Ehlanzeni district of Mpumalanga.

ACTIVITY 1: Program Strengthening in Ehlanzeni District, Mpumalanga

The Human Sciences Research Council (HSRC) will promote the use of health facilities for delivery among pregnant women and their families. All pregnant women attending the 120 antenatal clinics in the Ehlanzeni district will be encouraged to undergo confidential counseling and testing (CT) for HIV infection during pregnancy. Women who test HIV positive will be referred to the nearest accredited antiretroviral treatment (ART) site for staging and initiation of ART, if indicated (according to the national ART guidelines) and will be referred to support services. HIV-infected pregnant women will be counseled about disclosure, and encouraged to refer their partners for HIV testing. Women identified as HIV-infected during pregnancy (and who do not have long-term ART initiated prior to delivery), and their infants, will be provided with a complete course of dual antiretroviral prophylaxis in a PMTCT setting. HIV-exposed infants will be tested using polymerase chain reaction (PCR) at 6 weeks and at 6 months. HIV-infected infants will be referred to the local health services for follow-up, monitoring and initiation of treatment if eligible. Staff already employed by district health services will do most of the programmatic work.

Activities will also include PMTCT program integration with family planning, reproductive health, ART services, and positive prevention interventions for HIV-infected women in Ehlanzeni district.

FY 2009 PEPFAR funds will be used to employ additional staff to strengthen PMTCT programs in the Ehlanzeni district. The Mpumalanga Department of Health and Social Services has agreed to take over the funding of these positions after the initial phase of program strengthening.

ACTIVITY 2: Technical Assistance

HSRC will provide technical assistance to strengthen monitoring and evaluation (M&E) systems and will seek to coordinate the M&E and PEPFAR-related reporting activities with routine district health M&E activities in order to minimize any unnecessary duplication of work. At the clinic level this will be paper-based. HSRC will employ a dedicated M&E specialist, a community engagement and outreach specialist, and a data manager. HSRC will mobilize community leaders, faith- and community-based organizations, district councils, traditional leaders and traditional birth attendants in the region to support PMTCT interventions. Training activities will include basic education about PMTCT and its benefits, infant feeding options (ensuring women make informed choices around infant feeding), risk-reduction counseling, the benefits of ART, disclosure counseling and encouraging partner testing, training to address HIV-related stigma, M&E, and positive prevention interventions.

Specific activities will include:

- a. Conducting PMTCT community awareness activities such as clinic days, training of clinic committees, etc.;
- b. Promoting disclosure of HIV status among women tested as part of PMTCT programs, and encouraging partner testing, thus increasing gender equity in HIV and AIDS programs;
- c. Training professional nurses on PMTCT and voluntary counseling and testing (VCT);
- d. Training lay counselors on VCT and PMTCT;
- e. Training traditional health practitioners and traditional birth attendants on HIV and PMTCT;
- f. Training professional staff on M & E;
- g. Training other professionals (nutritionists, pharmacists, social workers) on PMTCT;
- h. Establishing support groups for HIV-infected women; and
- i. Assisting with PMTCT program evaluation.

SUMMARY:

The Human Sciences Research Council (HSRC) will provide technical support, including ongoing monitoring and evaluation (M&E) to prevention of mother-to-child transmission (PMTCT) activities in 50 antenatal care clinics (ANCs) and surrounding communities in the Eastern Cape and Mpumalanga. Once the PMTCT program in the Eastern Cape is running smoothly, HSRC will embark on similar activities in an underserved district in Mpumalanga. The District in Mpumalanga is still to be determined and will be determined in consultation with the provincial department of health. The major emphasis area will include quality assurance and supportive supervision, with community mobilization, local organization capacity development, strategic information, and training as minor emphases. The primary target populations include pregnant women, people living with HIV and AIDS (PLHIV), families affected by HIV and AIDS, public and private healthcare workers, community-based organizations (CBOs) and non-governmental organizations (NGOs).

BACKGROUND:

This project will contribute to the PEPFAR objective of preventing HIV infections in the PMTCT priority area. The project was in the FY 2006 and FY 2007 COPs, but is currently in the early stages of implementation because funding was awarded late. At the request of the provincial government, the district was changed and it took longer to establish partnerships with provincial and local health authorities than anticipated. HSRC will provide technical support for the implementation of PMTCT services according to national guidelines, and will seek to actively engage communities served by the specified ANCs. HSRC will also seek to establish partnerships with relevant CBOs and NGOs conducting HIV-related work in the area, develop reciprocal referral networks and strengthen peer support group systems to enhance family support (especially husbands, partners, mothers and mothers-in-law) and support from traditional birth attendants (TBAs) for the PMTCT program.

Activity Narrative: ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Rapid Assessment

Using FY 2006 funding, a baseline assessment is currently underway to identify gaps and challenges to PMTCT implementation in the district. The assessment will identify program elements that are in need of strengthening, and provide a baseline measure by which to assess the success of systems strengthening activities.

ACTIVITY 2: Systems Strengthening

Once the baseline assessment has been completed, program strengthening activities will commence.

HSRC will promote the use of health facilities for newborn delivery among pregnant women and their families. All pregnant women attending the 26 antenatal clinics in the Kouga Local Service Area (LSA) of the Eastern Cape will be encouraged to have confidential counseling and testing (CT) for HIV infection during pregnancy. Women who test HIV-positive will be referred to the nearest accredited ART site for clinical staging, a CD4 count, and initiation of ART, if indicated (according to the national ART guidelines). Women who do not meet the criteria for initiation of ART will be referred to a wellness program and/or relevant social support services. HIV-infected pregnant women will be counseled about disclosure, and encouraged to refer their partners for HIV testing. Women identified as HIV-infected during pregnancy (and who do not have long-term ART initiated prior to delivery), and their infants, will be given a short course of ART prophylaxis at delivery for PMTCT. This regimen will be adapted once the dual therapy protocol becomes policy in the Eastern Cape province. HIV exposed infants will be tested using PCR, and at 15 to 18 months using appropriate tests to determine their HIV infection status. Infants found to be infected will be referred to the local health services for follow-up, monitoring and initiation of treatment if eligible. Most of the programmatic work will be done by staff already employed by district health services, or by traditional birth attendants in the target communities. FY 2008 PEPFAR funds will be used to employ additional staff to strengthen PMTCT programs in the Kouga area. The Eastern Cape Department of Health has agreed to take over the funding of these positions after the initial phase of system strengthening.

ACTIVITY 3: Technical Assistance

HSRC will provide technical assistance to strengthen M&E systems and will seek to coordinate the M&E and PEPFAR-related reporting activities with routine district health M&E activities to minimize any unnecessary duplication of work. At the clinic level this will be paper-based. HSRC will employ a dedicated M&E specialist, a community engagement and outreach activity specialist, and a data manager. HSRC will mobilize community leaders, FBOs, CBOs, district councils, traditional leaders and traditional birth attendants in the region to support PMTCT interventions.

ACTIVITY 4: Expansion

Activities will be expanded with FY 2008 funding to include:

PMTCT program integration (wraparound) with family planning, reproductive health, and ART services, and positive prevention interventions for HIV-infected women in the Kouga Local Service Area (LSA). The impact of the project on the PMTCT delivery system in the Kouga LSA will be monitored, and when service delivery quality is satisfactory, support will gradually phase out (based on service delivery indicators and achievement of more than 80% PMTCT uptake in the district), and similar program implementation and support service activities will be initiated in a new geographic region in an underserved area of Mpumalanga province. The area will be selected in consultation with the provincial department of health and the CDC, and an analysis of key PMTCT indicators by district. The district with the most need will be selected. This activity will increase gender equity in HIV and AIDS programs by increasing women's access to HIV information, treatment, care and support.

The HSRC PMTCT Program contributes to the PEPFAR 2-7-10 goals and objectives by strengthening PMTCT service delivery, increasing uptake of PMTCT and decreasing the number of new infections.

Table 3.3.01: Activities by Funding Mechanism

Mechanism ID: 242.09	Mechanism: ACCESS
Prime Partner: JHPIEGO	USG Agency: U.S. Agency for International Development
Funding Source: GHCS (State)	Program Area: Prevention: PMTCT
Budget Code: MTCT	Program Budget Code: 01
Activity ID: 21086.23176.09	Planned Funds: \$446,616
Activity System ID: 23176	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

In addition to strengthening the implementation of prevention of mother-to-child transmission (PMTCT) dual therapy, JHPIEGO endeavors to increase the uptake of PMTCT in the North West Province and Northern Cape through Provider-Initiated Testing and Counseling (PITC). JHPIEGO proposes to strengthen PITC through material adaptation, training providers and trainers using the onsite training approach at current and PMTCT service provider sites to be added in the future.

SUMMARY:

JHPIEGO will continue conducting monitoring and evaluation (M&E) training in PMTCT for staff from National Department of Health (NDOH) and provinces. In FY 2007, JHPIEGO would have implemented activities to strengthen PMTCT services in North West province. JHPIEGO will increase its geographic depth by expanding the model PMTCT facility that will link essential PMTCT services among six feeder primary healthcare clinics (PHC) and the district hospital in a targeted district in North West province. This program will be used as a model of best practice for the province, and will be expanded to other districts in FY 2008. JHPIEGO will also expand the Training Information Monitoring System (TIMS) to three additional provinces. Emphasis areas are training, human resources, quality assurance and supportive supervision, and strategic information. Target groups include adults, family planning clients, people living with HIV, HIV-infected infants, public health workers and policy makers.

BACKGROUND:

Using PEPFAR funding, JHPIEGO has provided M&E training to the NDOH since FY 2004. In FY 2007, JHPIEGO provided support and technical assistance to introduce an integrated model to adopt and support a PMTCT service delivery facility in North West province. JHPIEGO will continue this work in FY 2008, and will also expand this support to an additional district in the NWP. JHPIEGO proposes that the integrated PMTCT model combine antenatal care (ANC)/delivery services at the district hospital level inclusive of its feeder clinics, thereby increasing access and standardizing services. Currently, adequate referral systems between the PHC feeder sites and district hospital are lacking. This model will improve comprehensive PMTCT by addressing each pillar of the World Health Organization's (WHO) framework for PMTCT services, including (1) primary prevention of HIV infection, (2) prevention of unintended pregnancy among HIV-infected women, (3) prevention of transmission from HIV-infected women to their infants, and (4) care, treatment, and support for HIV-infected women and infants. JHPIEGO will work closely with the North West province Department of Health (NWDOH) HIV and AIDS directorate, and district health authorities to develop an implementation plan that will include eventual transition away from donor funding and to full support by the NWDOH. JHPIEGO may cover initial salaries of additional staff but will work with DOH authorities to ensure that required positions are created and budgeted for. This will ensure sustainability by permitting the NWDOH to eventually absorb these positions. JHPIEGO will work with the district hospital and the six feeder clinics to ensure adequate forecasting of required drugs and supplies.

As cross-cutting support to address sustainability, JHPIEGO will introduce standards-based management and recognition (SBM-R) for PMTCT that will encompass those interventions mentioned above as well as others. JHPIEGO will support the rollout of couple counseling in this model program in an attempt to increase men's role in PMTCT services. JHPIEGO will coordinate PMTCT activities with FHI, AED, and other PEPFAR partners working in the same geographical area. Family planning, infant and young feeding practices, and monitoring and evaluation topics are synthesized into the three respective training curriculums so that the topics are not repeated and to ensure that clinic staff are not pulled off of the clinic for redundant training.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Referrals & Linkages

The objective of this activity is to build strong linkages and referral systems between women's healthcare services and PMTCT programs, thus eliminating missed opportunities for women and their families to access PMTCT services. JHPIEGO will work to ensure that counseling and rapid testing services focusing on risk reduction will be available to all PHC clients and their partners. JHPIEGO will mentor and support personnel in PMTCT counseling and clinical interventions to reduce the risk of transmission during ANC, postnatal care, labor and delivery. JHPIEGO will link with the provincial and national departments of health to ensure that all providers who have not received adequate training are enrolled in the national PMTCT and Infant Feeding Training. After providers have attended training, JHPIEGO will offer supportive supervision and mentoring at the facility level and will facilitate the implementation of clinical staging for antiretroviral treatment (ART) so eligible HIV-infected pregnant women can be immediately referred to ART services. In accordance with South African Government PMTCT guidelines, JHPIEGO will ensure that all providers are equipped with adequate knowledge on ART prophylaxis for PMTCT. In addition, JHPIEGO will ensure that HIV-infected women and infants are not only referred for treatment but are tracked so they do not fall through the cracks after delivery. Services provided in the postpartum period will include ongoing monitoring for opportunistic infections, linkages with well-baby visits, HIV testing for infants and appropriate referrals to treatment, care and support. Finally, women will be referred back to family planning counseling. To increase men's role in PMTCT, JHPIEGO will work with facility staff to incorporate couple counseling, including prevention with positives. JHPIEGO will link with Kagiso Educational Television, which implements the "Grassroots Male Involvement in PMTCT" campaign, to include men in the catchment areas and to foster linkages between the CT, PMTCT, treatment and family planning aspects of these programs. JHPIEGO will work with community health workers, community-based organizations, and social services to strengthen linkages and referral systems, including referral for infant feeding programs and mother to mother-to-be support groups. JHPIEGO will work with facilities to measure performance, identify performance gaps and develop action plans to address challenges in implementation. JHPIEGO will work with staff and health authorities to use this tool as an internal and external supervision tool that can be used

Activity Narrative: to improve quality and sustainability of services. JHPIEGO will use its PMTCT performance and quality improvement tool, which was developed to improve M&E from the service delivery level to the district level. This will serve to strengthen data capture, monitoring, and evaluation, allowing the NWDOH to use data to strengthen PMTCT services in the province.

By strengthening PMTCT services and building the capacity of healthcare workers, these activities contribute to PEPFAR 2-7-10 goals, averting new infections among infants exposed to HIV as well as increasing access to treatment care and support for HIV-infected women and their infants.

Table 3.3.01: Activities by Funding Mechanism

Mechanism ID: 4625.09

Mechanism: N/A

Prime Partner: McCord Hospital

USG Agency: HHS/Centers for Disease Control & Prevention

Funding Source: GHCS (State)

Program Area: Prevention: PMTCT

Budget Code: MTCT

Program Budget Code: 01

Activity ID: 7906.23184.09

Planned Funds: \$489,336

Activity System ID: 23184

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

McCord Hospital Zoe-Life (ZL) and McCord Hospital (MH), in FY 2008, aimed to introduce a second test for women who test negative at 36 weeks. This will be modified according to current KwaZuluNatal Department of Health (DOH) guideline of repeat testing at 34 weeks.

ZL/MH will focus on pharmacy systems development to support initiating eligible pregnant women on antiretroviral treatment (ART) at the clinic sites. This is currently not possible due to legislation and municipal policy, which prohibit initiation of ART at clinics. In addition, the municipality pharmacy does not receive drugs from the DOH's Provincial Medical Supply Centre (PMSC). Assisting the Municipality and the DOH to develop a linked pharmacy system to procure ARV drugs from PMSC for the municipality pharmacy and clinics will be a sustainability priority in COP 2009.

Strengthening follow-up of children will include ongoing support to mothers on infant feeding; careful infant diagnosis processes which will begin at 6 weeks (PCR) and end at cessation of breastfeeding at 12-15 months; cotrimoxazole provision to HIV-exposed children from 6 weeks; TB screening of infants in follow-up; and integration of child survival interventions linked to integrated management of childhood illness (IMCI) including immunization and vitamin A provision.

NEW ACTIVITY: Linkages with community health workers to assist with tracking of pregnant women, mother-child pairs, and implementation of community integrated management of childhood illness (CIMCI) will be prioritized. Additional funding will be sought to implement a CIMCI & IMCI electronic data tool using a personal digital assistant (PDA). This will simplify use in the community clinics, strengthen M&E, and tracking mother-child pairs. Clinics do not use the IMCI system due to lack of relevant paper forms, but a PDA will overcome this challenge, and it can be used for other program areas. A PDA electronic device can be used as a clinical tool to guide diagnosis and treatment, and as an M&E tool in an integrated setting, minimizing the need for many paper forms for many program areas.

MODIFIED ACTIVITY: Strengthening M&E will include developing a patient-linked health management information system (HMIS) for mother-child pairs. This will assist with tracking and retention of mother-child pairs, and strengthen the integration of the pairs into care and treatment programs. If the IMCI PDA system works well, this may be expanded to the PMTCT services.

NEW ACTIVITIES:

1. ZL/MH will explore strengthening PMTCT in the private sector. Most private facilities do not offer a strong PMTCT component and often do not follow best practices, even though clients often have the financial resources. By offering technical support, resources, and training to obstetricians and midwives at a private hospital in Durban, ZL/MH seeks to ensure that private sector PMTCT services are aligned with the HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011 (NSP), use best practices, and offer comprehensive services, including psychosocial support and referral to appropriate providers for the mother/infant post-delivery. In addition, obstetricians and midwives will be trained to provide pre-conception and discordant couple counseling, and to encourage services to HIV-infected couples who would like to have children (e.g., sperm washing and in vitro fertilization). Private pediatricians will be trained on the diagnosis, care, and follow up of infected infants. This is an exploratory new activity and may not generate excessive targets in the first year. However, it will provide a picture of the needs in the 'paying community' of HIV-infected women, who do not generally use public health facilities, and may be a larger than expected target group that is not receiving much technical assistance.
2. Increased partner testing and participation of partners to help manage maternal child pairs will address male norms. Health-care workers will be trained in couple counseling, family-centered service provision and active case finding. A focus group assessment will ascertain barriers to partner involvement in management of maternal child couples. Results will be used to develop interventions to address male norms.
3. Women will receive support to prevent secondary infections during pregnancy and breastfeeding through focused outcomes-based support groups, which will also address sexual coercion/ violence.
4. Linkages with schools will be strengthened to encourage healthy sexual choices, address sexual coercion in young women, and increase access to PMTCT services for pregnant school-going women.
5. To date, MH's focus has been the reduction of HIV transmission 6 weeks postpartum with no assessment on transmission after 6 weeks postpartum or clinical/health outcomes for mother/child. There has been no assessment of infant feeding adherence post discharge. To address the high rates of postnatal lost to follow up (LTFU), a follow up mother and baby wellness clinic was established to offer primary health-care services and HIV-related care and treatment. This clinic will be evaluated to determine whether it is successful in addressing LTFU. Concurrently the long-term clinical and health outcomes of the PMTCT program intervention will also be evaluated.

SUMMARY: The McCord Hospital/Zoe Life's overall activities relate to building capacity at four municipal clinics in the Outer West area of Durban (KwaZulu-Natal) to provide a strengthened and integrated prevention of mother-to-child transmission (PMTCT) service which is linked with tuberculosis (TB) and HIV care and treatment. Activities that will strengthen services include provider-initiated (with the option to opt-out) counseling and testing of all pregnant women attending the antenatal clinics, testing of partners and children of the index patient where possible, TB screening of HIV-infected pregnant women with referral for treatment where needed, antiretroviral (ARV) prophylaxis for HIV-infected women and newborns, maternal nutrition and infant feeding counseling and infant follow-up. Emphasis areas include local organization capacity development, strengthening of referral networks between PMTCT and other vertical programs, including pediatric services; human resource development through training, mentorship and supervision of PMTCT staff, quality assurance and improvement through supportive supervision, technical assistance and mentoring during site visits and strategic information strengthening through development of a simple integrated monitoring and evaluation system. The primary target populations are pregnant women, HIV-infected pregnant women, and their infants. McCord Hospital currently receives funding for PMTCT and ARV treatment through the Elizabeth Glaser Pediatric AIDS Foundation (EGPAF). This program described here focuses on strengthening the capacity of public sector facilities, and it is distinct from the hospital-based program funded by EGPAF.

Activity Narrative: With FY2008 reprogramming funds, and as part of the optimization of services, the McCord PMTCT hospital-based program will be conducting a basic program evaluation which will feed directly back into the activities implemented by McCord Hospital and Zoë-Life. Up until now, the McCord PMTCT program focus has centred on whether HIV transmission occurs 6 weeks postpartum. However, there has been no assessment as to whether transmission is occurring later than 6 weeks postpartum and what the clinical and health outcomes of the PMTCT intervention are for mother and child. There has also been no way of determining whether infant feeding decisions made on discharge are, in fact, being correctly practiced. In addition, in an effort to address the high rates of postnatal lost to follow up that the Program had been experiencing, a follow up mother and baby wellness clinic, located within the PMTCT program, was recently established. This clinic offers primary health care services and HIV-related care and treatment to both mother and child. As such, an evaluation of this clinic will be conducted to determine whether it is proving successful in addressing the problem of lost to follow up. A concurrent evaluation of the long term clinical and health outcomes of the PMTCT program intervention will also be performed. These lessons will be used to strengthen both the hospital-based program and the clinic strengthening program.

BACKGROUND:The South African Government (SAG) recently published results of the PMTCT program per province (2006 Antenatal HIV and Syphilis Prevalence Survey). Results of this survey show that KwaZulu-Natal continues to have the highest antenatal prevalence of HIV at 39.1%. This is 10% higher than the national prevalence of 29.1%. Current statistics at the four municipal clinics in the Outer West area of Durban show suboptimal uptake of PMTCT and poor follow-up of infants from the PMTCT program. There are currently no statistics to indicate the success of infant feeding interventions, infant follow-up rates or involvement of partners. This is an ongoing activity designed to strengthen PMTCT services within the framework of a decentralization and integration of HIV care and treatment program. This project is supported by both municipal and provincial government. All protocols followed will be in line with the Provincial Treatment Guidelines, and outcomes of the program will be reported to the eThekweni (Durban) municipality as well as to the KwaZulu-Natal Department of Health. The implementing organizations, McCord Hospital and Zoe-Life, will strengthen capacity of staff employed by the municipal government (eThekweni Municipality) at the four clinics to optimize current PMTCT services.

ACTIVITIES AND EXPECTED RESULTS:An emphasis on gender equity in this program area will focus on optimizing the number of pregnant women who receive care, support and prophylaxis, as well as developing strategies to include partners of pregnant women in decision-making and issues relating to PMTCT. Partners will be encouraged to test for HIV, and infected partners or family members will be integrated into the HIV palliative care and antiretroviral treatment (ART) services program areas. Access to couple counseling will be increased, with focus areas around family planning, risk reduction, infant feeding choices and testing of family members included in the counseling and support.

ACTIVITY 1: Human Resources
Strengthening PEPFAR-funded staff with PMTCT expertise will provide onsite mentorship and supervision of staff of the PMTCT program at the four facilities to improve quality of PMTCT care; training and onsite mentorship of counselors and clinical staff at the four facilities to increase skills in couple counseling and integration of partners into PMTCT-related decision making; training of counselors and nurses in infant feeding choices and maternal nutrition; and training of nurses to draw blood from infants to increase access to infant testing.

ACTIVITY 2: Monitoring and Evaluation This activity will focus on the development of a monitoring and evaluation (M&E) system that can integrate data from ART, TB, palliative care and PMTCT services. This M&E system will optimize the provincial PMTCT data protocols and ensure smooth referrals into other vertical programs.

ACTIVITY 3: Technical Support in Response to M&E Results PEPFAR-funded staff will provide regular onsite technical support and training of staff to understand the outcomes of the M&E to improve quality of care and to highlight areas where necessary.

ACTIVITY 4: Follow-up of Infants This activity will focus on the development of sustainable strategies to improve follow-up of infants using M&E tools and optimization of routine infant clinic visits (e.g., for immunizations, weighing, etc.).

NEW ACTIVITIES: FY 2008 funding will go toward the following activities: (1) Counseling services will be expanded to include pre-conception counseling, discordant couple counseling, extended family counseling and establishment of relevant and appropriate psychosocial support interventions including focused outcomes based support groups (2) Testing services will be expanded to include a second HIV test for all women at 36 weeks gestation who tested negative at first booking. This will ensure that all women who may have seroconverted during the pregnancy are able to participate in the PMTCT program. (3) Care and Treatment services will be strengthened by improving early identification of women who require treatment, and by offering these women referral and fast tracking into established ARV treatment program. (4) Follow up of infants will be strengthened by establishment of child-friendly spaces within the clinics and through sensitization of staff to improve case finding of all children attending the clinic and strengthening linkages with community-based health workers and birth attendants where possible. (5) Linkages with the most common hospital-based delivery sites will be strengthened with the aim of improving perinatal management of the HIV infected women through staff training, technical support and strengthening of case finding systems within the maternity unit. (6) Linkages with schools and educational services will be formed and a program developed to sensitize young people to the realities of PMTCT and family planning. This activity will link with the provision of counseling and testing services at these centers, and will link schools with the clinics and NGOs that provide optimum PMTCT services. Sustainability is addressed through the capacity building focus of this program area. PEPFAR-funded staff will not be permanently assigned to these clinics but will lend support and build capacity until South African Government-funded staff are able to sustain the program without assistance. The M&E system developed will be offered to the municipal and provincial government if it is useful within this context. This program area expects to add quality and to increase uptake of PMTCT services in four municipal clinics. Uptake of PMTCT services is expected to increase by 30-50%. Zoe-Life and McCord Hospital expect to provide additional counseling services such as couple counseling, partner counseling and testing, and maternal nutrition testing. A follow-up system for infants will be developed which will capitalize on the routine immunization schedules, and an increase in infant and sibling testing is expected. HIV-infected infants or children will be supported according to the provincial pediatric treatment guidelines. Referral systems will be strengthened to ensure continuity of care. Infected infants will be referred for initiation of treatment and referred back to the ARV services program area for ongoing care once stabilized. This program area will thus increase access to treatment for infants and children.

Funding Source: GHCS (State)	Program Area: Prevention: PMTCT
Budget Code: MTCT	Program Budget Code: 01
Activity ID: 22979.09	Planned Funds: \$493,190
Activity System ID: 22979	

Activity Narrative: SUMMARY:

The success of Right to Care's (RTC) delivery of the antiretroviral treatment (ART) program activities and particularly with down referral has led the Department of Health to request support for implementation of prevention of mother-to-child transmission (PMTCT) activities at all RTC-supported sites. These sites include government, non-governmental and private sector ART programs that operate in partnership with primary care providers and workplace programs. RTC will use FY 2009 funds to accelerate the implementation of the South African government's national Comprehensive Care Management and Treatment (CCMT) program at government sites in partnership with the provincial Departments of Health (DOH). This includes the scale up of prevention and PMTCT services at 16 sites in 5 provinces, namely Gauteng, Mpumalanga, Northern Cape, Limpopo and Free State. PMTCT activity at these sites will be integrated into existing prevention education, counseling and testing, and ART activities. Emphasis will be placed on child survival, increasing gender equity, family planning and TB screening. Target populations will include women, infants, family planning clients, and people living with HIV.

BACKGROUND:

RTC has not been funded for PMTCT programs prior to FY 2008. It subsequently applied for funding because the organization upholds the importance that successful ART programs be integrated with prevention, and especially PMTCT programs. A recent change in the National Department of Health PMTCT guidelines, including the guidelines on dual therapy, has necessitated additional support to sites at which these guidelines must be implemented.

RTC will focus on expanding PMTCT services using family-centered models developed in FY 2008 at all supported sites. Since this is a new area of focus for RTC, a lot of training and implementation advice will be sought from other PEPFAR partners who are already providing this service (e.g., Perinatal HIV Research Unit, Mothers to Mothers and South to South). The major areas of focus as requested by the provincial HIV & AIDS and STI and TB directorates are human resources and training.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: PMTCT Coordinator and National PMTCT Guidelines

RTC is appointing a PMTCT Coordinator in COP 2008 to support a family-centered model of PMTCT according to the national guidelines. The Coordinator would provide technical assistance, coordinating infrastructure support in the form of renovations to buildings (may be necessary for the pharmacies to store AZT), training and quality assurance. This post will be filled by an experienced senior registered nurse, with expertise and experience to conduct site evaluations and to identify training and technical support needs for PMTCT. During FY 2008 and extending into FY 2009, the Coordinator will be responsible for the implementation of national PMTCT guidelines and policy-specific training program for PMTCT. Currently a one-day training program aimed at the development and enhancement of effective and successful implementation of the current South African national PMTCT policy and guidelines is being conducted and will be expanded in FY 2008 and FY 2009. RTC will establish a provincial team in each province to conduct site assessment, monitoring evaluation and continuous quality assurance, particularly as the program grows. Technical assistance will be provided to sites to address any limitations that hamper scale up of the program. In some sites, the lack of qualified personnel may be addressed through the hiring and secondment of personnel, particularly for rural underserved sites and populations.

ACTIVITY 2: Quality Assessment

The aim of the PMTCT program in FY 2009 is to consolidate the work done in FY 2008. The PMTCT Coordinator will continue to implement the PMTCT training program; this will be done together with training coordinators for the districts as well as in partnership with the regional training centers. Continuous quality assurance is a priority in order to assess the standards of PMTCT at each RTC-supported site and to provide continuous quality improvements where necessary. Program quality assurance will focus on the provision of dual therapy, supply chain management, implementation of the guidelines, quality of counseling, proportion of pregnant women taking up PMTCT (target >80%) and incidence of new pediatric infection (reduced to <5%). Additional staff may be deployed to provide expert on-site training and mentoring. Community education, mobilization and improved access to health-care will be supported. Community organizations may be supported to provide lay counseling, in an adapted model, similar to Mothers to Mothers.

ACTIVITY 3: PMTCT Program

Essential activities using FY 2009 funds to scale up of the PMTCT program at all levels of care, especially primary health care, include:

- a. Integration of the PMTCT program with on-site provider-initiated HIV testing and counseling, aimed at providing all pregnant women with HIV testing at their first antenatal care (ANC) appointment. As RTC only operates in high prevalence sites (15-33% ANC HIV prevalence) in the public sector, repeat testing will be provided in the third trimester and at the time of delivery. Women presenting in labor who have not been tested during the ANC period will be tested at time of labor and will receive single dose nevirapine and post-partum AZT. All women will be encouraged to know her status prior to delivery but she will have the right to refuse the test. Women attending ANC will be encouraged to come with their partners and couple counseling will be available. Postpartum voluntary counseling and testing will also be available in the post delivery wards.
- b. All counseling and testing activities will be linked to prevention in the context of pregnancy through ongoing risk reduction sexual behavior education, the provision of condoms and referral to family planning clinics. Partners of pregnant women will be invited to test. There will also be a strong focus on tracking and tracing for transition to care to minimize missed opportunities for prophylaxis and treatment.
- c. Early and fast track referral of all pregnant women either for PMTCT with dual therapy or if the CD4 <200

Activity Narrative: for the initiation of highly active antiretroviral therapy (HAART), in accordance with the national guidelines will be provided. As the program grows, HAART initiations may be conducted as part of the ANC service.

- d. Patients will be screening for TB, with health-care workers using with symptom questionnaires. This may result in increased case detection, and the provision of prophylaxis for opportunistic infections and TB to HIV-infected pregnant women. Women will be linked to nutritional support services that will improve maternal health.
- e. Infant diagnosis using polymerase chain reaction testing will be used to ensure early ART of infants born HIV positive. RTC will encourage exclusive breast-feeding for infants who are confirmed HIV positive, and will continue to provide prophylaxis for infants found to be HIV positive. A major focus of the 2009 COP will on the support of sustained infant feeding choices.
- f. Linkages to family planning programs will be established at each of the sites.
- g. Through the support of RTC an overall strengthening of the Maternal and Child Health services is anticipated, this will encourage women to bring children from previous pregnancies for testing. These services will also provide advice on safe disclosures, which help to reduce gender-based violence.
- h. Community Engagement in PMTCT will be promoted.
- i. RTC's PMTCT program will address maternal nutritional support, to reduce the maternal death rate during breast-feeding by approximately 10%, and the provision of information to enable informed choice support for either exclusive breast-feeding or infant formula feeding. Emphasis will be placed on lactating women and those with a BMI <16.5.
- j. RTC will establish the required monitoring and evaluation (M&E) and quality assurance program to enable reporting of PEPFAR and South African Department of Health targets, as well as to provide continuous assessment and technical assistance to sites. The M&E system will be implemented in FY 2009.

RTC is responsible for supporting more than 20 government treatment district and referral hospitals sites in three provinces. Initially, PMTCT activities will be supported at 8 of these sites in FY 2008 and this number will increase to 16 in FY 2009. At each of these 16 sites, targets will be set at 80% uptake of counseling and testing, and for HIV-infected women, an 80% uptake of PMTCT to reduce the infant infection rate to less than 5%. Improved maternal and child health service quality and better integration of PMTCT into existing HIV services will be an outcome of FY 2009 RTC activities.

Mechanism: N/A

USG Agency: U.S. Agency for International Development

Program Area: Prevention: PMTCT

Program Budget Code: 01

Planned Funds: \$6,577,879

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

ACTIVITY 1: Human Capacity Development and Training

mothers2mothers (m2m) training has been revised in light of new South African prevention of mother-to-child transmission (PMTCT) policy guidelines, and will be significantly improved and expanded to include new topics and tools for m2m staff to use with clients. m2m staff training on voluntary, age appropriate family planning has been expanded through a privately funded project with Engender Health (financially supported by Packard Foundation). Staff will be trained on infant feeding, HIV and AIDS basics, partner counseling, prevention with positives, post-delivery care and other PMTCT topics to ensure knowledge transfer to clients.

ACTIVITY 2: Service and Mentoring

m2m will actively seek to expand task-shifting opportunities at all facilities. In facilities where Mentor Mothers can provide pre-test counseling for pregnant women, nurses and counselors will have more time to provide critical services for PMTCT. m2m will continue to provide the critical education and support services for pregnant women and new mothers so that they receive the full package of PMTCT care and services before and after delivery. The program will strengthen efforts to link women and children to medical services for follow-up and continuing care and treatment. The program will work in collaboration with PEPFAR partners providing antiretroviral treatment (ART), including Foundation for Professional Development, Perinatal HIV Research Unit, and Right to Care, to ensure that all HIV-infected women and HIV-exposed infants are referred to appropriate care.

ACTIVITY 3: Counseling & Testing

m2m will expand its reach by encouraging HIV counseling and testing within PMTCT settings. The program already works within labor and delivery wards to encourage pregnant and newly delivered women to test or re-test for HIV. The program will also enhance testing opportunities for male partners of pregnant women to prevent new HIV infections or re-infection during pregnancy and to encourage HIV-infected men to enroll in HIV care programs. m2m will encourage mothers to bring all children from previous pregnancies for HIV testing to ensure that those who are positive can be referred to care and treatment services. m2m will also collaborate with PEPFAR partners to improve services through sharing of data and best practices.

NEW ACTIVITIES IN COP 2009:

ACTIVITY 4: Prevention

m2m mentors and site coordinators will receive enhanced training on HIV prevention during pregnancy. Program staff will expand activities to include information sessions with all pregnant women to ensure that those who test HIV-negative at a first antenatal visit understand the risks of infection during pregnancy, the importance of partner testing and retesting during pregnancy, as well as how to protect themselves from HIV infection. Program staff will continue ongoing prevention with positives activities, including education on family planning, STIs and prevention.

ACTIVITY 5: Couples Support

The m2m model of care will be expanded to focus on engaging male partners by encouraging women to bring male partners for HIV testing and then providing education and support for concordant HIV-infected and discordant couples. Staff will educate couples about how to prevent infection or re-infection during pregnancy through mutual fidelity and condom use, as well as how male partners can support partners to take medications, seek care, and practice safe infant feeding.

ACTIVITY 6: Infant Feeding

m2m will enhance and improve its post-delivery program to focus on safer infant feeding to reduce post-natal transmission. Enhanced training for Mentor Mothers on infant feeding and targeted program activities for new mothers will be added to provide intensive education and support for women (and their male partners) on how to maintain a chosen method of infant feeding.

ACTIVITY 7: Improved Monitoring, Evaluation, Patient Tracking and Follow-up

m2m will improve program monitoring to collect data to measure program activities and client outcomes more effectively. m2m will implement systems for patient tracking and follow-up to ensure that clients receive critical care and support needed for optimal PMTCT outcomes. The systems will allow m2m to measure outcomes of program participants in the following areas: CD4 test results; ARV prophylaxis uptake; ART for eligible women; post-delivery and ongoing care for mothers and babies, including receipt of cotrimoxazole; support for, selection of, and adherence to an exclusive method of infant feeding; early infant testing and enrollments of infected infants in care; and uptake of age appropriate voluntary family planning. The client tracking system will allow Mentors to follow up clients who have been lost from care. The new methods of patient tracking will be piloted at the m2m Innovation Center-10 healthcare facilities where new ideas and strategies for service provision, monitoring and patient tracking will be tested. The program will also use the Innovation Center to develop a system of quality assurance. The program aims to share patient outcome data with facility managers and district/provincial PMTCT managers and other Department of Health staff in order to contribute to healthcare systems strengthening.

ACTIVITY 8: TB Education

m2m will expand activities to include educating pregnant women and new mothers about TB diagnosis, care and treatment. All site staff will be trained to use a simple screening tool that will help identify women in

Activity Narrative: need of referrals for diagnosis/care services. Women screened by m2m and identified with risk factors or clinical indication of TB will be referred to medical services for definitive diagnosis and to start TB treatment.

SUMMARY:

mothers2mothers (m2m) will implement activities to improve the effectiveness of prevention of mother-to-child transmission (PMTCT) in HIV programs. Services are carried out through facility-based, peer education and psychosocial support programs for pregnant women, new mothers and caregivers, all living with HIV and AIDS. There are four components of the program: curriculum-based training and education programs; psychosocial support and empowerment services; programs to increase uptake for counseling and testing; and bridging services linking PMTCT treatment and care to antiretroviral treatment (ARV) and other health services. The primary emphasis areas are human capacity development (training) and local organizational capacity building. The target population is people living with HIV and pregnant women.

BACKGROUND:

m2m is a South African-based international NGO established in 2001 to help enhance and support publicly-funded PMTCT programs through peer education and psychosocial support for HIV-infected pregnant women and new mothers. With PEPFAR's support, m2m will increase the effectiveness of PMTCT services through a comprehensive program of facility-based, peer education and psychosocial support for pregnant women, new mothers and caregivers living with HIV and AIDS. m2m addresses issues of stigma through group counseling, support groups, and linkages to income generation. All activities have been and will continue to be coordinated with local PMTCT service providers and their partners, and will also be carried out in conjunction with provincial, district and municipal health authorities. The programs have the active support of the Departments of Health for KwaZulu-Natal, Mpumalanga and Western Cape provinces and will be integrated into their healthcare structures. Current m2m programs are located in over 90 healthcare facilities in four provinces in South Africa as well as in Lesotho. With funding from the PEPFAR New Partners Initiative, m2m will initiate service provision in Kenya, Rwanda and Zambia in 2007/2008. With FY 2008 funding, m2m will enhance the existing South African program sites and improve infrastructure, while adding significant numbers of facilities in these provinces. By the end of FY 2007 m2m will be active and will have launched sites in one of the following three provinces: Northwest, Limpopo, Gauteng. In the remaining two provinces, preparation during FY 2007 will have laid the ground work for implementation and site start-up so that these sites will be ready to launch as early as possible in the following year. With the work of FY 2007 as a foundation for expansion, in FY 2008, m2m will continue to build the program and increase service provision in new provinces and with new partners who offer antiretroviral care and treatment services. By the end of FY 2008, m2m will have established service in up to 200 sites throughout seven provinces in South Africa.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Human Capacity Development and Training

PEPFAR funding will be used to support the delivery of a cascade of curriculum-based training for m2m mentors and education programs designed to improve PMTCT outcomes through education and training of pregnant women and new mothers with HIV and AIDS. The training curriculum that is given to m2m staff provides guidance about PMTCT and ARV treatment tied to maternal and infant health, with the objective of encouraging women living with HIV (PLHIV) to take responsibility for their own health, their child's health, and the health of their partners. Additional critical subjects covered in the training include disclosure, safer feeding options, family planning, nutrition, couples counseling, and prevention guidance for these PLHIV and their partners ("Prevention with Positives"). An intensive two week training course is given to all m2m Site Coordinators (SC) and Mentor Mothers (MM), all of whom are PLHIV. Training for Site Coordinators includes an additional week of management training (3 weeks of training total). m2m staff, in turn, provide curriculum-guided education and support (individual and group) to mothers in PMTCT programs during antenatal care, post-delivery recovery, and at their return to clinics after delivery. Annual training is given to all staff, inclusive of new staff and retraining for existing staff. m2m does not provide formal training on direct PMTCT service provision for healthcare providers, including doctors and nurses. With FY 2008 PEPFAR funding, m2m will add a complement of trained PMTCT care providers (SCs and MMs) to supplement the resources of frequently overburdened local healthcare providers in 3 new provinces. m2m will also use funding to continue to support existing sites and open new sites. Simultaneously, the program will also hone the skills and knowledge of existing healthcare staff in PMTCT related care and support. The lasting impact of these activities will make a significant contribution to the sustainable development of the capacity of local organizations. Through expanded partnerships with providers of ART, m2m will also be able to train the staff of these organizations and have an impact on ARV care and treatment service providers.

ACTIVITY 2: Service and Mentoring

PEPFAR funding will be used to provide individual and group psychosocial support and empowerment programs for pregnant women and new mothers with HIV and AIDS to help them with issues including stigma and discrimination, disclosure, reducing risky behavior ("Prevention with Positives") and pediatric support. Nutritional support and guidance is also part of the programs. A related activity focuses on providing specific support programs for the MMs and SCs ("Care for Caregivers"), contributing to their own physical and emotional well-being as well as that of their clients. One objective of both group and individual support is specific knowledge transfer around the many issues women living with HIV and AIDS faces in navigating the PMTCT process. Another outcome is empowering the women to focus on and take responsibility for the health of their babies, and their own health. By encouraging behaviors that can help mothers sustain their well-being, the programs aim to reduce the potential that their children could become Orphans and/or Vulnerable Children (OVC). While m2m does not provide formal referrals for healthcare, MMs are well informed about where services are available and they inform women about how to access both medical and social services. The program addresses the reality of the high rates of violence against

Activity Narrative: women in the communities served, as well as the specific ties between HIV and domestic violence. They provide tactical as well as emotional support aimed at helping women confront this issue and reduce their likelihood of becoming targets and victims. Women who come to the program are also giving information about income generation projects in their area and are encouraged to participate in such programs.

ACTIVITY 3: Counseling and Testing

Working in close partnership with local health and government programs, m2m will facilitate the integration of MMs and SCs into the antenatal intake process at both the community and facility levels. In this role, they will focus on increasing counseling and testing uptake by serving as committed advocates, working with women like themselves and drawing on their training and their own personal experience. Through this program, the MMs and SCs also provide significant support for Pediatric Counseling and Testing during home visits by advocating for pregnant women to return to clinics post-delivery to test their infants, supporting the women in the post-delivery period, and providing referrals of babies to testing and treatment programs.

ACTIVITY 4: Linkages and Referrals

This activity provides linkages and referrals in various forms including creating a bridge between PMTCT services and other health and empowerment services. In active collaboration with local and provincial health officials, PEPFAR funding is used to link ante/post natal women to programs providing wellness care for themselves and their infants, and to refer women and infants with AIDS-defining conditions to ARV therapy programs. With FY 2008 funding, m2m will expand partnerships with service providers of ARVs in order to become fully integrated into HIV and AIDS care and treatment programs throughout South Africa. Working at sites where ARV treatment is provided, m2m will be able to assist in the process of steering pregnant and post-delivery women in need of referral for ARV care and treatment to these services.

The above results contribute to the PEPFAR 2-7-10 goals by increasing the number of women cared for by PMTCT programs; by improving prevention (PMTCT) outcomes, thus reducing the number of infected children; and by increasing the number of pregnant women, new mothers, and infants receiving treatment by providing a referral system from PMTCT to ARV services.

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Due to Population Council's (PC) strategic planning and consideration of the PEPFAR South Africa technical considerations, counseling and testing (CT) activities, which focuses on integrating HIV prevention and CT into family planning (FP) services, have been moved to the PMTCT program area.

ACTIVITY 1: Development and Implementation of Integrated Antenatal and Postnatal Care Policy and Guidelines for KwaZulu-Natal

This activity from COP FY 2008 has been modified to include support to services and to assess the effectiveness of implementation of the comprehensive PMTCT policy and guidelines. This modification was made because the National Department of Health (NDOH) has drafted national PMTCT guidelines and has requested PC to conduct a service-driven assessment of the implementation. Due to the release of the new national PMTCT guidelines, the final review of the antenatal and postnatal care (ANC/PNC) policy and guidelines was extended to ensure that the documents are harmonized. There was also a change in the KwaZulu-Natal Department of Health (DOH KZN) Maternal Child and Women's Health's (MCWH) management team, resulting in changes in the implementation of policy and guidelines. Instead of initial plans, the DOH KZN decided to pilot the integrated policy and guidelines in eight facilities in the uMgungundlovu district prior to provincial rollout. The launch of the integrated ANCC/PNC policy and guidelines was delayed and will be supported in FY 2009.

PC will continue to provide technical assistance (TA) to the KZN DOH at their request in ensuring that the integrated ANC/PNC policy and guidelines that were developed and finalized in FY2007 using PEPFAR funding are implemented within the province. These guidelines integrate PMTCT into antenatal and postnatal care and are harmonized with the new national PMTCT guidelines. In order to scale up the implementation of the ANC/PNC policy and guidelines to all 11 districts within KwaZulu-Natal, training manuals and job aids will be adapted to close any gaps and address weaknesses that may be identified based on the integration experiences of the uMgungundlovu pilot district implementation. PEPFAR funds will be used to print the training manuals and job aids and to fund a consultant who will adapt the training manuals and job aids.

Program assessment and monitoring will be conducted in collaboration with the KZN DOH. The ANC/PNC policy and guidelines include indicators that should be collected to ensure that the implementation of integrated HIV and maternal health services is effective. PC will assist the province in the adaptation of monitoring and evaluation (M&E) tools to include indicators in the policy. PC will conduct quarterly provincial and site visits to collect the information from the district reports and District Health Information Systems (DHIS), and will monitor and support the implementation of the policy and guidelines. Site visits will be conducted with the provincial and district managers/coordinators. The KZN DOH will be encouraged to include the policy and guideline indicators in the routine DHIS and clinic supervision tools for district managers.

In order to ensure that the integrated ANC/PNC policy and guidelines are extended to other provinces, a feedback session will be held by the PC in collaboration with the KZN DOH to ensure that the integrated ANC/PNC policy and guidelines, training materials and job aids as well as the experiences of implementing the integrated package are presented to the NDOH and representatives of the other provinces. PEPFAR funds will be used to host the session. Situational analysis (i.e., review of current ANC/PNC policy) will be conducted in one district each in Limpopo and Gauteng (Gauteng has already shown interest in having an integrated policy) to ensure that these provinces are also implementing the ANC/PNC policy and guidelines that integrate PMTCT into maternal health.

ACTIVITY 2 : Integration of Counseling and Testing into Family Planning Services

In the past years, PC has developed expertise in developing strategies and interventions focused on preventing HIV transmission, through activities like the promotion of counseling and testing. This activity, which is co-funded by the NDOH, seeks to implement the South African government policy and the national contraceptive guidelines by increasing CT uptake by FP clients. These models have been implemented in three South African districts in 30 clinics in the North West province and will be introduced to all seven regions in the North West, Gauteng and the Eastern Cape provinces. This program had focused on training FP health providers in HIV and FP integration, development of network/linkages /referral systems, creating conditions for scale-up and capacity building and continued partnership with the national and provincial government.

In FY 2009, PC will continue to provide technical assistance to the North West province, and will scale up support to Gauteng, Eastern Cape and another district in North West province.

ACTIVITY 3: Integration of FP into ART Services

Due to Population Council's (PC) strategic planning and consideration of the PEPFAR South Africa technical considerations, integration of antiretroviral treatment (ART) services, have been moved from the Adult Treatment to the PMTCT program area. The integration of CT into FP services undertaken in North West province, resulted in the realization that it is necessary to integrate FP into ART services in order to address unwanted pregnancies, fertility intentions and reproductive needs of people living with HIV . This activity focus on providing access to FP and ART services by training providers on integrated services and strengthening referral systems within the two services. In FY 2009 information, education and communication (IEC) materials on integrated reproductive health and HIV services will be developed for clients as booklets and posters. These will be distributed to facilities within the district and provinces. Key messages will be communicated on dual protection, reproductive intentions and options for people infected with HIV, routine counseling and testing, male involvement in RH, and use of hormonal contraceptives and ART. Messages for the IEC materials will be developed in collaboration with the health providers, and clients' community representative group discussions will be conducted with clients and providers to assess

Activity Narrative: needs and develop key themes and issues to be addressed in the IEC. These materials will be translated into isiZulu, the local language used in KwaZulu-Natal, and then printed and shared with facilities and districts.

SUMMARY:

Population Council (PC) is using PEPFAR funding to provide technical assistance (TA) to the KwaZulu-Natal Department of Health (KZN DOH) in the development of a provincial antenatal (ANC) and postnatal (PNC) policy and evidence-based comprehensive guidelines. These will incorporate aspects of HIV prevention, counseling and testing (CT), prevention of mother-to-child transmission (PMTCT), antiretroviral (ARV) and male involvement, which are aimed at providing pregnant women, their partners and infants with quality comprehensive care during the ANC and PNC period. The target populations for this activity are people living with HIV and AIDS, HIV-infected pregnant women, and program managers. The emphasis areas for this activities are local organization capacity development (major), strategic information, and human capacity development (training and task shifting).

BACKGROUND:

PC currently provides TA using a participatory methodology aimed at ensuring that local, national and international evidence, and relevant guidance from the vertical HIV related programs (CT, PMTCT, and ARV) feed into the development of comprehensive and integrated provincial ANC and PNC policies and guidelines. This ongoing project, which commenced in 2004 with PEPFAR funding, is carried out in collaboration with the Reproductive Health and HIV Research Unit (PEPFAR funded) and two KwaZulu-Natal DOH directorates (Maternal Child and Women Health [MCWH]/PMTCT, Sexually Transmitted Infections [STI]). The KZN MCWH is the lead for the provincial "Core Team". The overall function of the Core Team is to steer the development of policy and guidelines. To date, multiple stakeholders and the Core Team have developed drafts of both the policy and guidelines. As part of the process to inform the development of the policy and guidelines, the Core Team conducted focus group discussions with pregnant women to identify their maternal health needs. Further resources, including monitoring and evaluation tools, a set of job aides and training materials had been developed to support the implementation of the policy and guidelines.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Continued technical assistance to the KZN DOH in support of the implementation of the policy and guidelines

PC will provide ongoing TA to the KwaZulu-Natal DOH as key drivers of the comprehensive and evidence-based policy and guideline development. The development of the policy and guidelines has been a provincial process which has mainly been driven by the MCWH/PMTCT program. As a way of strengthening integration at district and facility levels and for sustainability of the implementation of the guidelines, technical assistance will be expanded to other programs which are STI, HIV and AIDS, ART, VCT, TB and gender. Task teams representing these programs will be formed to assist in driving the implementation of the policy and guidelines. Specific support will include assistance with the development of district work plans for implementation, development of health delivery systems as well as continued training on M&E. Ongoing support will be provided to the relevant programs to identify any implementation issues and further training will be organized where necessary. PEPFAR funds will be utilized for conducting feedback/debriefing sessions, facilitating the development of health delivery systems, coordination of the development of district work plans and training. The target population for this activity involves program managers and health providers of the six programs listed above.

ACTIVITY 2: Supporting and evaluating the effectiveness of the implementation of the comprehensive policy and guidelines in improving maternity care at provincial level

In order to improve the implementation of the policy and guidelines, the evaluation will take several forms (testing the effectiveness of job aides and training materials, M&E tools, training of trainers, assessment of provider attitudes, as well as ANC and PNC client satisfaction assessment). Based on the outcome of this evaluation, identified gaps will be addressed and relevant adaptations will be made. PEPFAR funds will be used for the design of data collection methodology and tools, training of data collectors, collection of data, data entry, analysis and interpretation of the evaluation data at facility level.

This activity will contribute to the overall PEPFAR goals of preventing 7 million new infections by strengthening PMTCT programs with policy and guidelines and an implementation plan in the province most affected by the HIV and AIDS crisis.

Activity System ID: 23053	

Activity Narrative: SUMMARY:

USAID/South Africa (USAID/SA) supports institutional capacity building of indigenous organizations that implement PEPFAR programs, including prevention of mother-to-child transmission (PMTCT) programs, through three competitively selected Umbrella Grants Management (UGM) partners: Pact, the Academy for Educational Development (AED) and Family Health International (FHI). The main purposes of these UGM projects are to (1) facilitate further scale-up of PMTCT services in the short term; and (2) develop indigenous capability, thereby creating a more sustainable program. The emphasis area is local organizational capacity development. Primary target populations are indigenous organizations, including non-governmental, faith-based, and community-based organizations. The current UGM with FHI will support ten sub-partners. The activity described below refers only to the USAID/SA UGM PMTCT project managed by FHI.

BACKGROUND:

USAID's Health and HIV/AIDS strategy responds to the overwhelming challenges posed by the HIV and AIDS epidemic on individuals, communities and society in South Africa. In response, the U.S. Mission has obligated funds to many partners and sub-partners in South Africa, who play valuable roles in the response to HIV and AIDS, including organizations that provide comprehensive services for PMTCT. Through this UGM, FHI is responsible for managing sub-grants to ten of USAID's partners (all of whom submit their own COPs directly to USAID). As USAID's prime partner and the managing umbrella organization, FHI will not directly implement program activities, but rather act as a grants management partner to manage and mentor sub-recipients who, in turn, carry out the assistance programs. Thus, FHI functions primarily as a sub-grant making entity, and a relatively small percentage of overall funds is used for administrative purposes. Given that grant recipients require significant technical assistance and management support to grant recipients, FHI will devote a reasonable percentage of overall funding to provide this support.

USAID closely collaborates and coordinates with the South African government (SAG) in supporting PEPFAR partners through the umbrella grant mechanism. Although some of the partners work closely with various SAG departments at national or local (i.e., provincial and district) levels, the umbrella grant's primary interface with the SAG is through the Senior Management Team, which includes key staff from USAID, National Departments of Health and Social Development (NDOH, DOSD), and representatives from the provincial departments.

Under this UGM with FHI USAID supports one international private voluntary organization: Medical Care Development International - South Africa (MCDI-SA) that provides PMTCT services to communities in KwaZulu-Natal. MCDI-SA seeks to prevent mother-to-child transmission (MTCT) through a comprehensive training and support program. The grant to this PMTCT partner supports a range of locally driven best practices for MTCT services consistent with the South African Government's mission of preventing the spread of HIV. Activities in this area will provide the means to empower women of reproductive age in general to protect their health and well-being of their children, and will provide pregnant women and HIV-infected pregnant women and mothers expanded access to counseling and testing (CT), PMTCT and antiretroviral (ARV) services. This scale-up will require adequate financial, monitoring and evaluation, and management systems to accommodate growth and maximize sustainability.

ACTIVITIES AND EXPECTED RESULTS:

In FY 2009, USAID will continue to support the current PMTCT partner through this UGM with FHI. Funds budgeted under this narrative will support costs for administering and managing the PMTCT sub-partner. Separate COP entries describe the PMTCT activities implemented by the sub-partner under FHI. Institutional capacity building of indigenous organizations is a key feature of the umbrella grant mechanism and an important strategy for achieving prevention, care and treatment goals of PEPFAR to ensure long-term sustainability of programs and organizations.

ACTIVITY 1: Grants Management

The umbrella mechanism will award and administer grants to partners selected through PEPFAR's Annual Program Statement, a competitive process to recruit new partners. The current PMTCT sub-partner is MCDI-SA. This activity involves an array of activities including award and administration of grants, monitoring of grant progress, meeting reporting requirements, and grant closeout. The umbrella mechanisms will monitor the PMTCT partners' program implementation and adherence to financial regulations. This involves provision of extensive technical assistance to partners on project development and implementation, financial management, monitoring and evaluation, and reporting.

ACTIVITY 2: Capacity Building

The umbrella mechanism will support institutional capacity building of indigenous organizations; this is defined as activities that strengthen the skills of indigenous organizations to implement HIV and AIDS programs efficiently, with diminishing reliance on internationally-based technical assistance and support. The umbrella partner will support activities that improve the financial management, program management, quality assurance, strategic information, monitoring and evaluation (M&E) and reporting, and leadership and coordination of partner organizations implementing PMTCT activities.

FHI will also provide technical assistance to the USAID partners, as needed, to improve technical approaches used for PMTCT activities and to enable quality assurance/quality improvement (QA/QI) of activities falling within this technical area. All these functions provide key support to organizations that enable better implementation of care activities. FHI will conduct PMTCT quality assessments to identify issues and allow partners to address issues related to training, counseling, adherence to ART and infant feeding, maternal-child health (MCH) care and linkages to PMTCT care services. FHI will further assist the partner to support the scale up of the revised national PMTCT policy through training provided by FHI.

Activity Narrative: FHI will also work with the sub-partner to develop and strengthen referral networks. Referral is necessary for comprehensive service provision (e.g., linkages with MCH, sexually transmitted infections services, family planning and other prevention-with-positives initiatives). FHI will ensure that the PMTCT program includes a prevention component, specifically to encourage partner testing and disclosure support. FHI will also work with sub-partners to promote and motivate increased infant follow-up of HIV-exposed infants.

ACTIVITY 3: Monitoring and Evaluation (& Reporting)

The umbrella grants mechanism will provide support to USAID's PMTCT partners in M&E, in order to strengthen measurement of the implementation and impact of PMTCT program activities, and eventual achievement of PEPFAR goals. M&E support of PMTCT partners include measurement of program progress; provision of feedback for accountability and quality; surveillance; and implementation of information management systems. In addition, the umbrella mechanism will provide supportive supervision to provide guidance, monitoring, mentoring and oversight through site visits, technical assistance, and performance evaluation. FHI will follow up on some of the findings that were made during the sub-partner quarterly reviews and ensure that these are factored into the workplans that sub-partners will develop with the assistance of FHI.

Table 3.3.01: Activities by Funding Mechanism

Mechanism ID: 328.09	Mechanism: N/A
Prime Partner: Johns Hopkins University Center for Communication Programs	USG Agency: U.S. Agency for International Development
Funding Source: GHCS (State)	Program Area: Prevention: PMTCT
Budget Code: MTCT	Program Budget Code: 01
Activity ID: 13965.23074.09	Planned Funds: \$776,724
Activity System ID: 23074	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Johns Hopkins University/Center for Communication Programs (JHU/CCP) will ensure that all activities relating to pregnant women and HIV will address issues relating to sexually transmitted infections, TB screening, treatment and referral, family planning, antiretroviral services, counseling and testing, and ensuring that exposed infants are tested for HIV.

Owing to changes at the Department of Correctional Facilities as well as a change in emphasis in programming by JHU/CCP, it is not foreseen that any activities will take place with the Department of Correctional Services in FY 2009.

ACTIVITY 1: The Turntable Trust

The Turntable Trust (TTT) is based in KwaZulu-Natal in the Sisonke District. TTT works with clinical staff, peer educators and community outreach workers to reach community members in schools, at workplaces, including farms, at the TTT youth drop-in center, at health facilities and at community gatherings. TTT will target pregnant women and their partners through household visits, community mobilization to educate pregnant women and their partners on PMTCT, sexually transmitted infections; TB screening, family planning and to refer them to local health facilities to get tested and to access PMTCT and related services.

ACTIVITY 2: Mass Media

JHU/CCP has initiated the Scrutinize Campaign together with Matchboxology, and new partners Mediology and CellLife, that will encourage young South African men and women aged 18 -32 to take action to prevent mother-to-child transmission and safe feeding practices.

CellLife will support the mass media outreach of all communication partners in South Africa with free short message service technology to encourage pregnant women to be tested for HIV.

In FY 2009, a new campaign will be created, targeting adult men on HIV prevention, and using male celebrities (including footballers, to capitalize on the 2010 Football World Cup) that will address male involvement in pregnancy. This campaign will bring together organizations working on men and HIV in South Africa to launch a concerted national effort to address the sexual behaviors that place men and their partners at risk of HIV infection. Behaviors that will be addressed include multiple and concurrent partners, correct and consistent condom usage, alcohol, sex and HIV, counseling and testing, male wellness, male sexually transmitted infections, family planning and prevention of mother-to-child transmission.

Trailblazers, which was co-produced with the SABC, has been fully absorbed into the programming of SABC Education, which will enable these resources to be directed to the further development of the Circles Drama Series, the Scrutinize Campaign and the new campaign to be initiated in FY 2008 targeting adult men.

ACTIVITY 3: Advocacy

JHU/CCP has formed a strategic partnership with Health-e to support in-depth media reporting on the key drivers of the epidemic in South Africa, including PMTCT.

SUMMARY:

Johns Hopkins University/Center for Communication Programs (JHU/CCP), coordinates the work of 20 South African partners, provides technical assistance and capacity building to prevent HIV and AIDS through a comprehensive HIV prevention program that addresses risky behaviors and the key drivers of the epidemic in the general population through mass media and social mobilization. The target populations are: youth, adults, people living with HIV (PLHIV), religious leaders, teachers, public health workers, and community, faith-based and non-governmental organizations. Eleven partners working across South Africa will support efforts to mobilize pregnant women and their male partners in support of PMTCT. Two mass media programs are utilized to highlight themes relating to PMTCT guided by the findings of the 2006 South African HIV/AIDS Communication Survey that found that 87% of all South Africans were reached with messages dedicated to HIV prevention and living with HIV and AIDS by means of television and radio programs.

BACKGROUND:

This is the first year that JHU/CCP is undertaking strategies using community-based mobilization and mass media in support of PMTCT programs. Our approach recognizes the need to educate pregnant women and their male partners (and discordant couples) concerning their right to PMTCT prior to delivery so that they can make the best decision regarding their own sexual behaviors, know their HIV status, have access to PMTCT services and understand the need for safe feeding practices that will reduce the risk of their newborn from getting HIV. Through ensuring that women are counseled in advance of their rights to access PMTCT services upholds the constitutional rights of women and their to access PMTCT services. The evidence-based strategic message design identifies key theoretical and practical factors that influence behavior, reinforcing the positive and minimizing the negative. Each activity below is designed to enhance critical and creative thinking, contribute to changes in social norms, create social networks that support individual change, build skills and improve decision-making. Eleven of the twenty South African partners will incorporate social mobilization for PMTCT into their community mobilization and mass media activities.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY1: Community Mobilization

Activity Narrative: DramAidE places Health Promoters (HPs) living with HIV in 23 of the country's higher learning institutions. The HPs use campus events to educate young female students and their male partners on PMTCT, to undergo voluntary counseling and testing, and referrals to appropriate services on or in the vicinity of tertiary institutions.

Mindset Health (MH), Health Workers Channel is located in more than 400 public clinics. It produces and disseminates training materials for Health Care Workers that is expanded upon through an interactive web-based training program. Its Public Health Channel sensitizes audiences through facilitated discussions within public health centers on issues relating to PMTCT and encourages pregnant women to be tested for HIV, obtain antiretrovirals for PMTCT and safe feeding practices. Mindset Health, a partnership between Mindset Network, the Department of Health and Sentech, operates under the umbrella body of Mindset Network, which is funded through a number of public-private partnerships, such as Standard Bank, Liberty Life as well the Nelson Mandela Foundation.

The Community Health Media Trust (CHMT) is increasing the number of Treatment Literacy and Prevention Practitioners (TLPPs) to 92 (72 funded by PEPFAR and 20 by the National Department of Health (NDOH)) who work in health centers serviced by MH in the Western Cape, Eastern Cape, KwaZulu-Natal, Free State and Gauteng, to facilitate discussions with patients in general waiting rooms, prevention of mother-to-child transmission (PMTCT), Antenatal (ANCs) and ART Clinics on PMTCT. In addition, these outreach workers work with CBOs and support groups of people living with HIV to increase awareness of PMTCT.

Lesedi Lechabile and Mothusimpilo, who work with mobile populations in the mining areas of the Free State and the North West, train their peer educators and clinical staff working in their mobile clinics to sensitize pregnant women, their male partners and women engaging in transactional sex and those engaging in sex work in areas surrounding the mines to be tested for HIV so that they can know their HIV status, access PMTCT services and receive education on safe feeding practices.

The Valley Trust, working in rural KwaZulu-Natal, trains its peer educators and clinical staff in their mobile clinics to encourage pregnant women to be tested for HIV, access PMTCT services and obtain information on safe feeding practices. It also utilizes community events and activities to mobilize pregnant women and their male partners around knowing their status, PMTCT and use safe feeding practices.

Lighthouse Foundation trains its peer educators and community facilitators to work in the 13 informal settlements in the Madibeng District of the North West province to incorporate PMTCT into their community outreach comprising door to door campaigns, HIV support group and men's support group in order to mobilize pregnant women and their male partners to know their HIV status, be referred to PMTCT services and educated on safe feeding practices.

LifeLine South Africa expands its innovative workplace approach from one informal settlement/rural area in Gauteng and Limpopo provinces to include an informal settlement in the Free State, Northern Cape, and Mpumalanga. This program works with management and employees in small and medium enterprises to develop a comprehensive program that trains peer educators (PEs). As part of its workplace-based program LifeLine provides pregnant women within these workplaces with counseling and testing so that they may be referred for PMTCT services, while sensitizing male workers on PMTCT so that they can support their partners. LifeLine works in partnership with the Small Business Associations and with the Farm Owners Associations in the areas that they operate in.

The Department of Correctional Services, a PEPFAR partner, trains master trainers from the Department that will train offenders within correctional facilities to provide peer education using the TshaTsha series to promote HIV prevention. In male and female correctional facilities knowledge of HIV status and PMTCT are addressed as key topics so that offenders can make appropriate decisions upon their release and reintegration into society.

ACTIVITY 2: Mass media in support of Community Mobilization

ABC Ulwazi produces a radio talk show series tailored to 60 different community radio stations. Special emphasis is on male norms and behaviors, partner reduction, and on PMTCT. Each episode will end with a summary and clear messages on the topic discussed. Listeners' associations formed by local citizens have facilitators' guides to carry out community outreach interventions related to the series themes.

JHU in a public-private partnership with the South African Broadcasting Corporation co-funds two TV programs, nine local language radio programs and web support. Trailblazers, a community health show, broadcasts 13 episodes highlighting individuals that provide models of positive behaviors for others to emulate. A second season of the 26 episode TV drama (tentatively called Circles) deals with contextual issues relating to social and cultural norms that inhibit and/or support positive male norms and behaviors, including addressing the theme of male involvement in relation to PMTCT. Radio talk shows follow both programs, providing additional information and stimulating community participation.

JHU/CCP contributes towards meeting PEPFAR goals by building the capacity of individuals and the social networks through awareness, education and human support within the public health care system to support pregnant women to prevent mother-to-child transmission of HIV. The results expected include: (1) Contributing towards increasing the number of pregnant women accessing PMTCT services from the current 17%; (2) Ensuring that greater numbers of pregnant women are aware of their HIV status and enrolled into the national PMTCT program; (3) ART for treatment eligible pregnant women; (4) Essential care for women and children in need of PMTCT; and (5) Safe feeding and nutritional practices. This contributes to the goal of the National Strategic Plan for South Africa 2007 - 2011 by ensuring that 80% of people living with HIV and their families have access to an appropriate package of treatment, care and support services by 2011 through focusing on pregnant women and the wellness management of people before they become eligible for ART.

Prime Partner: Kagiso Media, South Africa

USG Agency: HHS/Centers for Disease Control & Prevention

Funding Source: GHCS (State)

Program Area: Prevention: PMTCT

Budget Code: MTCT

Program Budget Code: 01

Activity ID: 7944.23085.09

Planned Funds: \$873,154

Activity System ID: 23085

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

ACTIVITY 1: Conducting Workshops

In FY 2009, The Kagiso Educational Television and Communications (Kagiso) will continue to train male facilitators and provide refresher training periodically. The national accreditation board has accredited the 2008 training curriculum, and now Master Trainers and Community Facilitators have established one key stepping-stone on the road to sustainability. Identifying community workers, volunteers or community health workers that are already trained in PMTCT and offering them accredited community-based male involvement training will continue capacity-building efforts of FY 2008. This will extend the partnership between PEPFAR and the South African National Department of Health to a grassroots level. Using FY 2009 funding, Kagiso also seeks to deepen productive relationships with national and provincial department of health initiatives such as Men in Partnership Against AIDS and Women in Partnership Against AIDS as well as those relationships established at a district and regional level.

ACTIVITY 2: Media Campaign Rollout

FY 2009 funds will be used to support a campaign entitled "Real Men Talking to Real Men". This campaign will draw on the successes of previous years' case studies documented for television, and will be complemented by a community radio campaign driven by the real life stories of the men in the project. The campaign will also leverage the Soccer World Cup in South Africa, 2010, to develop stories for a range of media organizations focusing on South Africa's challenges and successes. The media campaign will operate at two levels. Firstly, the mass media campaign will be opportunistic, securing airtime with the South African public broadcaster, leveraging its commitment to public education and to a world alliance of media organizations supporting the prevention of the spread of HIV. The second level is aimed at deepening the relationship with community radio and newspapers with specific messages drawing on the idea of Fathers-to-Fathers or Men-to-Men, thus encouraging men at a community level to support each other and their HIV-infected partners. This campaign will be linked with community outreach through community radio, newspapers and other civil society initiatives to ensure that communities, particularly men, have a platform to discuss issues raised by the campaign. In addition, Kagiso will investigate digital storytelling and website channels as platforms to provide skills and work opportunities for young men and women. Master Trainers and Community Facilitators will be trained in media skills to create opportunities for themselves, the campaign and the communities they support. Community radio supports indigenous languages and the campaign will develop an innovative crossover between the traditionally English mainstream commercial media and the hugely popular vernacular media.

ACTIVITY 3: Men's Clubs

Building on the findings of previous years, FY 2009 funding will be used to strengthen the male networks and support structures identified in FY 2008. As the campaign has shown, men are interested in playing a role in their community and are interested in the information and knowledge it brings for them. Men usually do not attend support groups and so a different approach is used to reach men, driven by the Master Trainers and Community Facilitators. Men's group meetings take place outside of the health facility, at places in which they are comfortable, including sports grounds, faith-based organizations, and informal stokvels (gatherings) or taverns. Master Trainers and Community Facilitators will take these messages to the workplace in FY 2009. Community radio will be used to promote these monthly meetings under the banner of, for example, a burial society or a soccer club.

Kagiso will continue to encourage men to attend antenatal care clinics with their partners and to accept couple counseling and testing. Men who want to be tested but who do not want to visit the clinic are referred to alternative sites. These sessions aim to encourage the development of support networks (however informal) for men whose partners are enrolled in PMTCT programs, and to encourage improved support to their partners, ensuring better uptake and adherence of PMTCT service delivery.

ACTIVITY 4: Consolidation

In FY 2009 Kagiso will consolidate the lessons learnt of all the training workshops and media campaign, to address weaknesses highlighted in FY 2008 and to build on strengths to ensure the Master Trainers and Community Facilitators continue to develop skills enabling them to function as trainers, entrepreneurs or even media professionals, thus generating further income for themselves and their families.

This activity increases awareness of HIV and AIDS and uptake of PMTCT, by reducing vertical transmission. Targeting men and ensuring men identify and implement community-based activities in support of PMTCT will improve community-wide support for PMTCT services. Increased male involvement and community support for PMTCT will improve uptake of PMTCT service delivery.

SUMMARY: The Kagiso Educational Television (Kagiso) PMTCT activity focuses on male involvement in the prevention of mother-to-child transmission (PMTCT) to increase uptake of PMTCT through the expansion of a grassroots campaign targeting community-based men's groups. The campaign aims to create male awareness of PMTCT ensuring that men understand the implications of mother-to-child transmission (MTCT) and can support and encourage their pregnant partners to uptake PMTCT services. **BACKGROUND:** Low uptake of PMTCT services remains a challenge to successful implementation. Although coverage of PMTCT exceeds 80%, PMTCT uptake still hovers around 50%, indicating that the majority of women who need PMTCT services are being missed. Reasons for low uptake vary from health systems issues to social issues. Cultural and social values are prime factors, with fear of violence and abandonment from male partners due to HIV disclosure often cited as the primary reason for choosing not to be tested during antenatal care. Furthermore, many women assume that because they are faithful to their male partners, they cannot be HIV-infected and choose not test for HIV during antenatal care. MTCT is also affected by the cultural perceptions that breastfeeding is a practice adopted by model mothers and wives. Many HIV-infected mothers report that they breastfeed in the presence of their husbands and

Activity Narrative: mothers-in-law, but formula feed when they are absent. These mothers are not aware that mixed feeding practices increase the risk of vertical transmission. Anecdotal evidence suggests that many men are afraid to undergo HIV testing and use their wives' HIV test results as a proxy for determining their negative status. Conversely, when their wives test positive, they often do not assume they are infected. These misconceptions contribute to vertical transmission of HIV, and led to a joint decision by the USG Inter-Agency Task Force and the National Department of Health (NDOH) to target the partners of pregnant women and to develop a PMTCT male involvement campaign targeting grassroots men's groups. Using FY 2006 PEPFAR funding, the grassroots male campaign was initiated. This campaign works directly with non-governmental and community-based organizations, sports clubs, savings associations, faith-based organizations and other men's groups at the community level to ensure HIV, AIDS and PMTCT information transfer, and to address gender, stigma and masculinity in the context of South African culture and how it relates to PMTCT. Partners of women attending antenatal care are targeted by the campaign. The campaign aims to sensitize men to issues relating to PMTCT, to create a platform from which to address cultural and gender issues that impede the uptake of PMTCT. FY 2008 funding will ensure expansion of the campaign to rural communities and will continue to target male partners of women attending antenatal care and family planning clinics to facilitate their understanding of HIV and AIDS and PMTCT issues, and to encourage them to get tested, "know their HIV status" and to support their partners, even if their results are discordant. Efforts will be made to hold support groups for men whose partners are in the PMTCT program, with a specific focus on the development of skills to reduce stigma. In addition, Kagiso will link with the SAFPU (South African Football Players Union) to expand its reach training the Union's HIV and AIDS facilitators, where they exist, and supporting the Union to select and train facilitators where they do not exist. This project has a particular focus on the year 2010 when South Africa hosts the Soccer World Cup.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Conducting workshops Using FY 2008 funding, Kagiso will train male facilitators. Refresher training will be offered periodically. Trained facilitators/community activists will be responsible for conducting ongoing workshops with different male groups in their community. In each workshop or identified community activity, men will be taken through a number of activities aimed at increasing awareness and understanding of PMTCT and then each group of men will identify a community-based action or activity illustrating male support for PMTCT and build on its outcomes. These actions may range from wearing T-shirts with emblems supporting PMTCT, holding community meetings to address myths around PMTCT or encouraging men to go with their partners to antenatal care and to be tested. With monitoring and ongoing support from the workshop facilitators, the men will implement the activity in their communities. These activities will be developed and implemented by the communities and will focus on creating support and awareness for PMTCT. Using FY 2008 funding, the training curriculum will be accredited by the national accreditation board. This will ensure continued support and sustainability. Capacity in the provincial departments of health will be built around health communication by identifying community workers, volunteers or community health workers that are already trained in PMTCT by offering the accredited community-based male involvement training as a way for these community workers to continue their work and earn additional resources. This will extend the partnership between USG and SA NDOH to a grassroots level. Using FY 2008 funding, Kagiso also seeks to deepen productive relationships with national and provincial department of health initiatives such as MIPAA (Men in Partnership Against AIDS) and WIPAA (Women in Partnership Against AIDS) identified in the previous year. Having established public-private partnerships (PPPs) with appropriate companies as well as training existing facilitators in fundraising, Kagiso will concentrate on establishing sustainability of these organizations with FY 2008 funds. These activities will be done in collaboration with Soul City training and outreach and the Soul Buddyz clubs throughout the country. Soul City is also a recipient of PEPFAR funds.

ACTIVITY 2: Media campaign rollout Building on the project's success stories profiled in FY 2007, FY 2008 funding will be used to ensure scale up and rollout of a media campaign entitled "Real Men Talking to Real Men." This campaign will draw on successes of FY 2007 and will aim to reach a wider audience through broadcasting on both television and radio. It will also leverage the hosting of the Soccer World Cup in South Africa in 2010 drawing on the relationship with the South African Football Players Union. The media campaign will operate at two levels with the mass media campaign being a targeted media burst. For example, in August, which is traditionally "women's month," the messages could be differentiated by running a series of smart campaign commercials on SABC radio stations and for one week on SABC TV; the second level could be community radio and newspapers with a more specific messages drawing on the idea of Fathers to Fathers encouraging men at a community level to support each other and their HIV-infected partners. This campaign will be linked with community outreach through community radio, newspapers and other civil society initiatives to ensure that communities, particularly men, have a platform to discuss issues raised by the campaign. In addition, Kagiso will investigate digital storytelling and website channels and opportunities to provide skills and work opportunities for young men and women.

ACTIVITY 3: Support groups In FY 2007, Kagiso targeted women attending antenatal care and pregnant HIV-infected women attending support groups and encouraged them to bring their male partners to a discussion group. At the outset of the partner discussion groups, all aspects of pregnancy, not just HIV and PMTCT, are discussed. Groups meet regularly. Men are encouraged to attend antenatal care clinics with their partners and accept couple counseling and testing. Men who want to be tested but who do not want to go to the clinic are referred to alternative sites. The aim of the group sessions is to ensure the development of support networks for men whose partners are enrolled in PMTCT programs, and to encourage improved support to their partners, ensuring better uptake and adherence of PMTCT service delivery. Using FY 2008 funding, these groups will be expanded geographically. The groups will be modeled on the highly successful mothers2mothers initiative, although a different approach is being used to reach men. Men's groups will take place outside of the health facility, at places where they are comfortable hanging out. These include sporting grounds, churches, (through faith-based organizations) and informal stokvels (gatherings) or tavern associations.

ACTIVITY 4: Expansion Funding will be used to expand the workshops and media campaign by linking the campaign with the South African Football Players Association Union (SAFPU). By linking the male involvement in PMTCT campaign to SAFPU, Kagiso will be able to reach at least 80,000 men and create greater awareness around HIV, AIDS and PMTCT. In addition, this linkage will enable SAFPU the opportunity to strengthen the HIV prevention campaign and to incorporate messages around PMTCT, thereby creating greater awareness among their members.

This activity contributes to PEPFAR 2-7-10 goals by increasing awareness of HIV and AIDS, increasing

Activity Narrative: uptake of PMTCT, and reducing vertical transmission. Targeting men and ensuring men identify and implement community-based activities in support of PMTCT will improve community-wide support for PMTCT services. This activity will begin a process by which men begin to understand PMTCT.

Activity Narrative: NO FY 2009 FUNDING IS REQUESTED FOR THIS ACTIVITY:

This activity was approved in the FY 2008 COP, is funded with FY 2008 PEPFAR funds, and is included here to provide complete information for reviewers. No FY 2009 funding is requested for this activity. PEPFAR funds were allocated to PMTCT through the Integrated Primary Health Care Project (IPHC), a collaborative project between the National Department of Health, the provincial Departments of Health in the Eastern Cape, KwaZulu-Natal, Limpopo, Mpumalanga and North West provinces and the United States Agency for International Development (USAID) awarded in 2004 and extended until December 2010 to Management Sciences for Health (MSH). Since this project has a ceiling which cannot be exceeded, no further funding can be added since the contract has reached its ceiling. MSH will work with the DOH to ensure that activities are sustainable to the maximum extent possible. The PMTCT activities of MSH will be completed according to schedule in 2010. Therefore there is no need to continue funding this activity with FY 2009 COP funds.

Table 3.3.01: Activities by Funding Mechansim

Mechanism ID: 588.09	Mechanism: Strengthening Pharmaceutical Systems
Prime Partner: Management Sciences for Health	USG Agency: U.S. Agency for International Development
Funding Source: GHCS (State)	Program Area: Prevention: PMTCT
Budget Code: MTCT	Program Budget Code: 01
Activity ID: 7854.23104.09	Planned Funds: \$339,817
Activity System ID: 23104	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

In FY 2009 Management Sciences for Health (MSH), Strengthening Pharmaceutical Systems (SPS) will focus on supporting the implementation of the new prevention of mother-to-child transmission (PMTCT) dual therapy guidelines through strengthening the integration within pharmaceutical services in the provinces and the metropolitan area. Specific activities include training of pharmacy and nursing personnel at sites as well as support for implementing logistics systems for PMTCT commodities.

a. PMTCT Training

Training is provided to pharmacy and nursing personnel on implementation of PMTCT services in relation to the new guidelines. An important focus of the training relates to the forecasting, procurement, storage, and distribution of PMTCT medicines and related supplies, HIV tests and related laboratory reagents and supplies for infection control and health worker safety. Participants are trained to identify critical issues in systems and policies that may either facilitate or hinder services and PMTCT commodity security. They are also trained to recognize areas that could be improved and provide alternative intervention options. The training program also focuses on safety monitoring in patients offered PMTCT regimens.

b. Technical Assistance to Counterparts

Technical support is being provided to provincial counterparts to support program implementation and to improve logistics management systems for PMTCT drugs and related supplies. A rapid assessment tool has been developed to assist counterparts to assess the logistics capacity and readiness of sites to expand PMTCT services and regimens in relation to new recommendations as well as to assess referral systems for ART initiation in pregnancy.

c. Cross Links with Other SPS Activities

The availability and use of cotrimoxazole, nevirapine, AZT, test kits and other supplies will be monitored using a routine information system (RxSolution), which is being deployed by SPS at selected sites. SPS has also developed a morbidity-based quantification model for PMTCT commodities that has been introduced during the National quarterly quantification workshops to assist the provinces in quantifying their requirements. The implementation of this model will be part of the overall support provided under Health Systems Strengthening.

SPS is also contributing to the review and promotion of the National Standard Treatment Guidelines for PMTCT.

SUMMARY:

Management Sciences for Health (MSH) has been awarded the RPM Plus follow-on: Strengthening Pharmaceutical Systems (SPS), therefore all RPM Plus activities for FY 2008 will be undertaken by SPS. SPS will strengthen the pharmaceutical component of the Prevention of Mother-to-Child Transmission (PMTCT) services at the facility level and the role of pharmacy personnel in promoting and supporting PMTCT services. Three activities have been identified: 1) strengthening health personnel capacity to support the PMTCT program, assisting with the review of National PMTCT standard treatment guidelines (STGs); 2) monitoring of PMTCT commodities; and 3) improving management of patients to support National Department of Health (NDOH) prevention efforts. The major emphasis area is needs assessment, and minor emphasis areas include human resources, linkages with other sectors, logistics and training. Target populations include women, infants, family planning clients, people living with HIV (PLHIV), policy makers, national program staff, and public doctors, nurses, pharmacists, and other healthcare workers.

BACKGROUND:

In South Africa, the implementation of PMTCT services is one of the key HIV and AIDS interventions, as prevention remains the cornerstone of the country's response to HIV and AIDS. PMTCT services are available through hospitals, midwife obstetric units, community health centers and primary healthcare clinics. In 2003, RPM Plus received funds from the USAID Child Survival program to assist in strengthening the "pharmaceutical component" of the PMTCT program. An in-depth analysis of existing policies and practices was conducted and is being applied in collaboration with the National and all nine provincial Departments of Health. SPS is also providing support to the NDOH Pharmaceutical Policy and Planning Cluster (NDOH-PPP), and the Medicines Control Council (MCC) with the selection and review of the drug(s) and regimen of choice for PMTCT.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Strengthening health personnel capacity to support the PMTCT program

SPS will conduct provincial workshops for pharmacists, pharmacist's assistants and nurses to address issues identified during the assessment of PMTCT services and will include an update to health staff on recommended ART regimen(s) for pregnant women and the associated clinical pharmacology (i.e., drug of choice, adverse-drug-event while on ART). The focus of the provincial workshops will be on training primary healthcare (PHC) level workers, as PHC sites constitute one of the primary sites for prevention, and also diagnosis, staging, referral and routine follow-up of HIV-infected patients. Quantification of PMTCT related medicines and commodities will also be addressed during the training. Additional provincial workshops will be conducted during FY 2008. The expansion of the National ARV program to the PHC level is anticipated to take place during this period. A full comprehensive training program will be implemented in provinces and local government authorities.

Activity Narrative: ACTIVITY 2: Technical assistance

SPS will continue the ongoing support provided to the NDOH Essential Drugs List Committee in reviewing PMTCT drug(s) of choice and standard treatment guidelines (STGs), to the MCC on regulatory issues, and to the NDOH PMTCT Task Force in planning implementation of the strategy. This activity also includes the review and development of training modules to include new PMTCT STGs in the training conducted by SPS (e.g., HIV and AIDS management and Pharmaceutical and Therapeutic Committee training). The review of the National PHC EDL is underway and includes the review of PMTCT STGs. In FY 2008 SPS will continue to provide support in the implementation of the recommendations that arose from the PMTC assessment and National workshop.

ACTIVITY 3: Monitoring of PMTCT commodities and patient management

SPS will implement systems (manual and computerized) to monitor the use of PMTCT commodities and the management of patients at PHC level. This includes the monitoring of distribution and use of cotrimoxazole, nevirapine and/or AZT.

These activities contribute to the PEPFAR 2-7-10 goals by improving the quality of the PMTCT services provided at the facility level.

Development

Funding Source: GHCS (State)

Program Area: Prevention: PMTCT

Budget Code: MTCT

Program Budget Code: 01

Activity ID: 3103.23638.09

Planned Funds: \$1,962,099

Activity System ID: 23638

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

The Perinatal HIV Research Unit (PHRU) strives to continually improve the quality of prevention of mother-to-child transmission (PMTCT) services and has attained very high uptake in Soweto. One challenge, which is being worked on, is to strengthen links from these services to HIV care and treatment services. Male participation remains a concern. Quality improvement and linkages is a focus going forward.

The PHRU will continue to work in the government PMTCT program as described in COP 08, and will expand and enhance these services in the following ways:

Scale-up

The PHRU has received funding from Orange Babies (Netherlands) to enhance PMTCT services in rural Limpopo province, one of the poorest in South Africa. This complements PHRU's current PEPFAR-funded work in the district, which is vast and distances between clinics are extensive, making travel time and cost of public transportation to clinics difficult.

Routine Testing and Re-testing

Most sites routinely test women for HIV at their first antenatal visit. The PHRU will put this in place at all supported sites where permission is obtained from the Department of Health (DOH). Re-testing women, in accordance with South African Government (SAG) guidelines, will be scaled up. The re-testing of HIV-negative women helps reinforce counseling and testing (CT) and will help identify those women where primary infection occurs during pregnancy. Recent statistics show a five percent rate of infection.

Dual Therapy / Antiretroviral Treatment

Optimal antiretroviral treatment (ART) for pregnant women is critical to reduce transmission to infants. The PHRU works with the provincial DOH to implement dual therapy, which has been successfully implemented in PHRU sites in Western Cape and Gauteng. PHRU will support the switch from nevirapine to dual therapy at the other sites in partnership with DOH. Referral for ART is required because the services are not integrated, resulting results in mothers not getting onto triple therapy. The PHRU will strengthen these linkages so that more than 50% of eligible women get ART. Tracking women and following them through their pregnancy will be stepped up.

Opportunistic Infection Prevention and Treatment, TB Screening and Family Planning

Opportunistic Infection (OI) prevention and treatment is provided at antenatal care (ANC). Routine TB screening for all pregnant women is being introduced. Women suspected of having TB will be referred to the nearest TB treatment site since this is not provided at all clinics. Family planning and preventing HIV transmission to partners needs to be addressed at ANC, as seroconversion during pregnancy remains an issue. These HIV prevention and care issues will be enhanced and referral networks strengthened.

Early Infant Diagnosis, Treatment and Care

In 2007, PHRU participated in the National Institute of Allergy and Infectious Diseases' ground-breaking research, the Children with HIV Early Antiretroviral Therapy (CHER) study, regarding early treatment of children. The results of this study have now been incorporated into World Health Organization and U.S. guidelines. The PHRU will continue to test and follow HIV-exposed infants. Re-testing infants at one year will be scaled up. Tracking these children will be stepped up. Safe infant feeding methods and weaning will be emphasized to mothers opting to breastfeed.

Male Involvement

There are very few PMTCT programs that have successfully involved men at ANC, primarily because the atmosphere at ANC is not conducive for male involvement. Other services that are male friendly will be developed so that men and their partners will feel free to test, to participate in couple counseling, to discuss prevention, family planning and secondary transmission, and to develop strategies on issues of fatherhood. Through what is learned in through our sexual prevention work, PHRU will develop innovative ways to increase male involvement in issues related to child rearing and family responsibility.

Training

PHRU will expand training efforts on PMTCT to other provinces as needed through workshops and on-site training and mentoring. PHRU will develop and distribute appropriate materials to health-care workers and parents in an effort to improve the program.

PHRU has conducted three very successful "Priorities in AIDS Care and Treatment" (PACT) conferences which are targeted at public sector health-care workers (doctors, nurses and pharmacists) and program and facility managers. These conferences have had different themes and were very practical in nature. They were well received by participants who claimed that they were able to take away useful information and knowledge to improve the quality of care and treatment access at their facilities. PHRU has also used these conferences to disseminate its research findings and HIV prevention, care and treatment experiences, and, in addition, has invited other PEPFAR partners to share their experiences, knowledge and best practices. More than 800 people have attended these conferences.

SUMMARY:

The approach taken by the Perinatal HIV Research Unit (PHRU) is one of comprehensive, high quality care

Activity Narrative: and support for people living with HIV and AIDS (PLHIV). The PHRU will use PEPFAR funds to provide high quality coverage of prevention of mother-to-child transmission of HIV (PMTCT) in Soweto (Gauteng province) and Mpumalanga provinces. This will include support to pregnant women for pre- and post- test counseling and testing (CT), information on safe infant feeding choices, referral of women to appropriate HIV and AIDS treatment programs and support for early testing of infants exposed to HIV. The major emphasis area addressed is human resources; minor areas are information, education and communication, local organization capacity development and training. The target populations are adults, pregnant women, HIV-infected infants (0-5 years), PLHIV and their families.

BACKGROUND:

In partnership with the Gauteng Provincial Department of Health (DOH) the PHRU has been running the Soweto (Gauteng) PMTCT program since 2000. All pregnant women accessing public health antenatal clinics are reached, resulting in very high uptake rates. The PHRU offers post-partum counseling and testing (PPCT) in the maternity wards at the tertiary hospital (Chris Hani Baragwanath Hospital (Bara)) where most deliveries in Soweto take place, and provides post-exposure prophylaxis (PEP) to infants exposed to HIV. The PHRU has supported the Mpumalanga Provincial DOH by providing PMTCT service in the Bushbuckridge district since 2003. The PMTCT service is integrated into maternal and child health services. All activities are ongoing and are funded by PEPFAR. The close partnership with the DOH and emphasis on capacity building and training ensures sustainability of the programs. All PMTCT sites use rapid HIV tests with results given on the same day. Each day a group health talk is given, followed by individual pre-test counseling. After a pregnant woman voluntarily consents to testing, the test is conducted and the results given during individual post-test counseling session. Women testing HIV-infected are then provided with ARV prophylaxis following the South African Government (SAG) guidelines. The PMTCT program is an important entry point for HIV-infected women to access palliative care and antiretroviral treatment (ART) for themselves and their families. All women who test positive are referred for CD4 count tests, those with CD4 counts <200 cells/mm³ are referred for ART. Infants born to positive women are given nevirapine syrup in the labor wards and a PCR test is conducted at 4 to 6 weeks. Infants are given cotrimoxazole prophylaxis and other basic preventive care. Psychosocial support is provided through ongoing counseling and support groups. Information is provided on issues such as safe infant feeding practices, formula, nutrition, general healthcare, family planning, prevention for positives and disclosure. Negative women are provided with information on how to stay negative. Safe disclosure is encouraged to reduce stigma and violence. All women are encouraged to bring their partners for testing to increase male involvement in HIV and AIDS care and treatment programs and to improve male involvement in PMTCT and reduce stigma. Health workers and lay counselors are mentored, provided with debriefing and continuous in-service training on PMTCT and developments in the field.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: PMTCT, Gauteng (urban township)

The PMTCT program in Soweto is considered a best practice model for PMTCT in South Africa with greater than 96% uptake at each stage of the cascade. The program is ongoing and will continue operating in all Soweto public antenatal clinics with funding from PEPFAR and Gauteng DOH. Staff employed with PEPFAR funding offer PMTCT to around 30,000 pregnant women annually. Around 30% are HIV-infected and about 27,500 receive their results. Following SAG guidelines for PMTCT, positive women and their babies are provided with ARV prophylaxis. Support groups run at all clinics with emphasis on HIV information, prevention for positives, informed infant feeding choices, nutrition, safe disclosure to partners, etc. Partners are encouraged to come for testing and be involved in PMTCT. All HIV-infected women are referred for CD4 count tests and those with CD4 <200 cells/mm³ are referred for ART. Currently over 60% of women accept the CD4 count test with half receiving their results. The introduction of PCR testing for infants by DOH provides the opportunity for early infant diagnosis of HIV and referral for appropriate treatment and care, currently more than 50% of babies are tested. During FY 2008, the program will become more closely integrated with ARV treatment and will improve gender equity in treatment programs.

ACTIVITY 2: Post-Partum Counseling and Testing (PPCT), Gauteng (urban township)

Each year, two thirds of births (around 20,000) in Soweto occur at Bara Hospital. Around 3,000 women at the time of delivery present with an unknown HIV status. In this ongoing activity, staff funded by PEPFAR work with DOH staff to provide PPCT. A PEP dose of nevirapine syrup is provided for HIV-infected mothers' infants to reduce the risk of transmission. It has been shown that a post-exposure prophylactic dose of nevirapine is effective if given to infants within 72 hours of birth. Approximately 2,500 women are offered PPCT, about 2,000 accept and receive their results. Around 30% of these test HIV-infected. Over 98% accept nevirapine for their infant. The uptake of the program is high and operates seven days a week to ensure access for all women giving birth. Women who tested negative early in pregnancy will be offered a follow-up test. Positive women identified at the time of delivery are provided with psychosocial support through counseling and groups, referred for CD4 count tests and early infant diagnosis.

ACTIVITY 3: PMTCT, Mpumalanga (rural facilities)

PMTCT in the Bushbuckridge District is run by the provincial DOH. The PHRU and HIVSA, support PMTCT at Tintswalo hospital with PEPFAR funding. Activities include mentoring the counselors, assisting with referrals and providing education and support to pregnant women. Each year, around 4,000 women deliver at the hospital; about 25% are HIV-infected. PHRU will liaise with the PMTCT service providers to ensure increased uptake of HIV counseling and testing. Following SAG guidelines, ARV prophylaxis is given to the mother and infant. Women testing positive are referred for CD4 count tests and to ART if CD4 <200 cells/mm³. All women are encouraged to bring their infants for testing at 6 weeks. Support groups and counseling are available with emphasis on informed safe infant feeding practices, nutrition, disclosure to partners, early infant testing, HIV information, etc. HIVSA provides support groups in the district primary care clinics assisted by a US-based volunteer.

Activity Narrative: These activities directly contribute to the PEPFAR 2-7-10 goals by improving access to and quality of PMTCT services, testing pregnant women, identifying HIV-infected persons, reducing transmission to infants and improving access to care and ARV treatment.

Budget Code: MTCT

Activity ID: 23608.09

Activity System ID: 23608

Program Area: Prevention: PMTCT

Program Budget Code: 01

Planned Funds: \$1,941,809

Activity Narrative: SUMMARY:

The Reproductive Health and HIV Research Unit (RHRU), as part of an outreach project in deprived inner city areas, and within the parameters of comprehensive and integrated HIV services, became a prevention of mother-to-child transmission (PMTCT) partner in late 2007, after the FY 2008 COP was submitted. For this reason, no targets were included in previous COP entries, even though some PMTCT work was being undertaken as part of antiretroviral treatment (ART) services provided to pregnant women. This program focuses on increasing gender awareness, child survival, safe motherhood and TB screening. Target populations are adults, pregnant women, HIV-infected infants, people living with HIV and their families.

BACKGROUND:

RHRU, a unit of the University of the Witwatersrand in Johannesburg, currently provides technical support to the Operational Plan for Comprehensive HIV and AIDS Care, Management and Treatment for South Africa, which includes the national antiretroviral (ARV) rollout. RHRU was intrinsically involved with the development of the HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011. The Executive Director of RHRU heads the Program Implementation Committee at the South African National AIDS Council, and two other senior members are represented on the Treatment Task Team. With PEPFAR funding since FY 2004, RHRU has provided regular on-site support, direct treatment, training and quality improvement to Department of Health sites in three provinces. RHRU will continue these activities, and will continue an inner-city program (Johannesburg), a district-wide program (Durban), and a discrete site-based provincial program (North-West Province) focusing on providing support to complete up and down treatment referral networks. In addition, RHRU will continue the provision of counseling and testing (CT), palliative care and prevention services. RHRU will seek to develop models of service delivery that can be replicated and expanded, and produce findings from lessons learned and targeted evaluations to disseminate and share with others. It should be noted that the success of ART scale-up depends on the comprehensive approach described in other program areas. In particular, the strengthening of referral from other primary health-care programs such as tuberculosis (TB), family planning, and antenatal/postnatal and sexually transmitted infections services is critical. HIV prevention is an integral part of this system and RHRU will focus its prevention program on high-risk groups such as sex workers and their clients and people infected with HIV. RHRU will aim to reduce mother-to-child transmission, and will build capacity of health-care workers and community-based and non-governmental organizations with which it works. RHRU will also continue to develop strategies to address underserved communities affected by HIV, such as couples (both concordant and discordant), high-risk groups such as young people, and gender-based interventions with women at risk, sex workers and their clients, and men.

ACTIVITIES AND EXPECTED RESULTS:

The accelerated access to ART programs, expansion of HIV counseling and testing at ANC services (including partner testing), and increased training of health-care providers will facilitate RHRU reaching PEPFAR targets.

ACTIVITY 1: Integration of Antenatal and Postnatal care with ART and Other Services

RHRU will focus on fast-tracking eligible HIV-infected pregnant women and newborns on to ART. Integral to the PMTCT program is the integration of antenatal care (ANC) and post-natal care with ART services to ensure continuum of care. Program specific counseling and support for maternal and infant nutrition, support to new sites providing dual therapy or scale-up of delivery of the dual therapy PMTCT program, and improving information sharing on adherence to dual therapy, infant feeding choice, access to cotrimoxazole and disclosure to expectant mothers through additional counseling support at antenatal services will be provided.

This will be achieved by (a) employing an additional two nurses and five counselors, (b) expanding treatment to two new clinics, (c) increasing the uptake of PMTCT services, (d) ensuring quality assurance and strengthening linkages and referrals to treatment, care and support services within 15 Johannesburg inner-city clinics providing ANC services, a large maternal health clinic in North-West supported by a large network of primary care clinics, and (e) direct training, staff and technical support within primary care clinics in Durban. HIV-infected pregnant women attending ANC and their children will be enrolled in longitudinal comprehensive HIV care including opportunistic infections and TB management. Appropriate nutritional interventions will be facilitated among HIV-infected pregnant women and their infants, using National Department of Health guidelines and resources, and through appropriate training and community mobilization. Effective referral linkages will be established to support postnatal follow-up of HIV-infected mothers and exposed infants. In line with RHRU's strategy to provide a family-centered approach to care and treatment services, programs will be developed to promote partner testing for PMTCT clients and for linking postnatal care with early infant diagnosis and testing.

RHRU is committed to strengthening integrated ANC and postnatal care with ART services to ensure continuity of care, and facilitate rapid access to appropriate levels of ART and PMTCT treatment for eligible women. Public sector health workers will be trained in the provision of ART and PMTCT services according to South African and international standards.

Prime Partner: University Research Corporation, LLC

Funding Source: GHCS (State)

Budget Code: MTCT

Activity ID: 3111.23888.09

Activity System ID: 23888

Mechanism: HCI

USG Agency: U.S. Agency for International Development

Program Area: Prevention: PMTCT

Program Budget Code: 01

Planned Funds: \$423,800

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Health Care Improvement (HCI) is a follow on to the organization known as University Research Co./Quality Assurance Project described in COP 2008. HCI will continue to focus on the activities described in COP 2008, but will expand them in 2009:

ACTIVITY 1: Establish Quality Improvement (QI) Teams at the Facility Level

By improving and institutionalizing QI teams at a facility and district level, HCI provides the knowledge and skills required for leadership and sustainability for the program. This is an ongoing initiative, specific to each area, due to the variable nature of the stakeholders and geographic location of HCI-supported sites.

ACTIVITY 2: Training

In FY 2009, HCI will develop accredited HIV and AIDS and home-based care training materials, including a comprehensive package of manuals, posters, flip charts and job aids. These materials will include modules on basic HIV, staging of HIV disease, care of HIV-infected individuals, PMTCT issues and challenges, infant feeding options, eligibility for antiretroviral treatment (ART), initiation of ART in HIV-infected pregnant women, disclosure, adherence issues, poly-pharmacy (addressing concomitant administration of medication), living positively with HIV, TB/HIV co-infection in PMTCT clients and provision of integrated management of childhood illness care to HIV-exposed infants and children.

HCI will revise existing quality assurance (QA) training materials and expand on proposed training initiatives to include QA/QI methodology for all cadres of health-care staff, including informal staff such as community workers, lay counselors and home-based caregivers. This is particularly important at primary health-care facilities where HIV-infected pregnant women interact with a wide range of formal and informal health staff.

ACTIVITY 3: Human Capacity Development

HCI is recruiting and placing medical staff in health facilities, and these staff will be tasked to (a) provide clinical services to HIV-infected clients each day, and (b) train and mentor health facility staff on HIV and AIDS care, focusing on PMTCT treatment and care on a weekly and monthly basis. To ensure sustainability, HCI seeks to build capacity and develop local skills by providing training and support to DOH clinic staff (doctors, nurses, counselors, pharmacists, etc.) providing them with appropriate knowledge and skills to deliver quality PMTCT services to all clients. HCI and DOH staff meet regularly to share new knowledge on PMTCT treatment options and research findings.

ACTIVITY 4: Referrals and Linkages

Building on previous experiences, HCI can facilitate linkages between stakeholders within the health system by coordinating and providing leadership.

To improve existing referral networks, HCI will identify and strengthen linkages between PMTCT, CT and ART sites, by working with health facility staff at different levels of care and advocating for the development of integrated referral and follow-up networks. All staff at PMTCT and CT sites will be responsible for referring HIV-infected mothers and their newborns for onward care, treatment and support, while staff at ART sites is responsible for care, treatment, support and follow-up of these patients. It is essential to ensure that all patients receive optimal care and remain within the health-care system, ensuring compliance and adherence with treatment and an improved quality of life.

HCI will also ensure that health-care workers are capacitated to ensure appropriate infant care follow-up, opportunistic infection prophylaxis, and basic preventive care to HIV-exposed infants identified in the PMTCT programs, as well as capacitating community-based tracers to identify and follow-up PMTCT, TB or ART defaulters, including HIV-exposed babies who have been 'lost to follow-up'.

HCI plans to strengthen linkages between Orphans and Vulnerable Children (OVC) programs, routine maternal and child health services and ART services. This will serve to identify and strengthen existing networks; highlight gaps in the quality of services provided; and provide information about the feasibility of incorporating relatively rapid QA approaches into ongoing OVC programs.

ACTIVITY 5: Strengthening Supervision Systems

HCI has been extensively involved in revising the Clinic Supervision Manual for health-care facilities, and will continue to lead the implementation and monitoring of supervision systems by training district and facility-level supervisors in QA methods and facilitative supervision techniques for improving the quality of PMTCT and follow-up services.

ACTIVITY 6: Policy

URC/QAP will actively collaborate with national and provincial DOH staff, and contribute to the development, revision and implementation of the national PMTCT guidelines and PMTCT monitoring and evaluation framework to ensure long term sustainability of this program.

SUMMARY: Through training, mentoring and the introduction of quality assurance (QA) tools and approaches, University Research Co., LLC/Quality Assurance Project (Health Care Improvement - URC/QAP/HCI) will assist South African Department of Health (DOH) facilities in five provinces to improve the quality of PMTCT and follow-up services. Facilities identified for support differ from those of other PEPFAR partners. Training and other activities are coordinated to avoid duplication and redundancy. URC/QAP will capacitate healthcare workers to ensure rapid identification and referral of HIV-infected

Activity Narrative: pregnant women and their babies to appropriate services. The essential elements of QA include technical compliance with evidence-based norms and standards, interpersonal communication and counseling and increasing organizational efficiency. The major emphasis areas for this activity are QA and supportive supervision, with minor emphasis on development of networks, linkages, referral systems, training and needs assessment. The target populations include adults, people living with HIV, HIV-infected pregnant women, HIV and AIDS affected families, HIV-exposed infants, HIV-infected children, policy makers, public and private healthcare workers, community-based organizations (CBOs) and NGOs. BACKGROUND: Using FY 2007 funding, URC/QAP has been supporting PMTCT programs in 120 facilities in four provinces. URC/QAP also supported two home-based care organizations (HBOs) to improve the quality of their program targeting HIV-infected mothers and their babies. A collaborative model has been used to rapidly expand access to PMTCT services in a large number of antenatal care (ANC) facilities. In FY 2008, URC/QAP plans to expand the support to an additional 40 facilities and to assist health facilities to integrate PMTCT with ANC services. Loss to follow-up of infants is one of the major challenges to PMTCT as the majority of HIV-exposed babies do not receive appropriate follow-up care. URC/QAP will assist healthcare facilities in integrating follow-up strategies into postnatal/well-baby services. Changes will be made and monitored to ensure implementation and compliance with national guidelines in all supported URC/QAP facilities. URC/QAP coordinators will facilitate training in integrating clinical practices. URC/QAP will continue to provide support to additional CBOs to improve the quality of their services to peripartum women. Support will focus on improving infant feeding practices and follow-up care of HIV-infected infants. URC/QAP will work with district supervisors to ensure that they provide ongoing support and mentoring to healthcare workers. URC/QAP is collaborating with the National Department of Health (NDOH) and the provincial departments of health to ensure sustainability of the program. ACTIVITIES AND EXPECTED RESULTS: ACTIVITY 1: Facility-level Quality Improvement Teams URC/QAP will work with each facility to support teams representing various service delivery components such as ANC, and HIV care and treatment. Facility teams, with URC/QAP and DOH staff support, will be responsible for developing facility-based plans to increasing the uptake and quality of PMTCT services. Each facility team will conduct regular rapid assessments to identify factors affecting access to and quality of PMTCT services. Using standardized quality assurance (QA) tools, the assessments will measure/track changes in compliance with the NDOH PMTCT standards. URC/QAP will assist each facility team to develop a strategic plan for improving the uptake and quality of PMTCT and follow-up services. Interventions will include: (1) integration of ANC, intrapartum, postpartum with HIV and AIDS services; (2) re-design of clinical processes to improve patient flow and service times using QA/QI tools; and (3) promote facility teams to carryout ongoing monitoring by analyzing individual and facility level compliance with various standard indicators. ACTIVITY 2: Training for ANC and other HIV and AIDS service providers in PMTCT URC/QAP will build knowledge and skills of healthcare providers in PMTCT technical issues. This will be done through training workshops for healthcare workers as well as through on-the-job mentoring at facilities which only QAP supports. Training includes two days of formal training sessions, with ongoing monthly follow-up at each facility. QAP training compliments the NDOH PMTCT and Infant Feeding Curriculum as it has a specific focus on quality assurance methods and quality improvement techniques. The measurement of quality is also highlighted with emphasis placed on the indicators used to monitor clinical performance, such as the proportion of women attending antenatal services who were offered HIV counseling and testing case studies and data sheets are used and participants work in groups to identify quality gaps within the case study and make recommendations on possible solutions to improve the quality of service provision in PMTCT. Participants, either individually or as a group, are also required to analyze/interpret the data from the data sheets, graphically illustrate their analysis and make quality improvement plans based on this. Trainings are done by the URC/QAP staff and are scheduled to complement the district HAST/PMTCT trainings in each province. ACTIVITY 3: Facility-Community Linkages URC/QAP will assist participating facilities in building linkages with community-based groups to increase awareness about PMTCT as well as address issues of psychosocial support, stigma reduction and prevention of domestic violence for HIV-infected pregnant women. This will involve working with communities, community-based and home-based care organizations, specifically community-based workers/tracers who will work to improve the visibility of PMTCT activities; increasing voluntary counseling and testing (VCT) in communities by education (in facilities and door-to-door/household visits); and hosting open days for clinic staff and community members, to showcase improvement activities and encourage support for improvement initiatives. ACTIVITY 4: Referrals and Linkages URC/QAP staff members will identify and strengthen linkages between PMTCT and ARV treatment sites, by working with facility staff at different levels of care and advocating for the development of integrated referral and follow-up networks. PMTCT sites will be responsible for referring HIV-infected mothers and their newborns for onward care, treatment and support, while staff at ARV sites are responsible for care, treatment, support and follow-up of these patients. It is essential to ensure that all patients receive optimal care and remain within the health care system, ensuring compliance / adherence with treatment and an improved quality of life. URC/QAP will strengthen the ability of healthcare workers to provide infant care follow-up, opportunistic infection (OI) prophylaxis, and basic preventive care to HIV-exposed infants identified in the PMTCT programs, as well as capacitating community-based tracers to identify and follow-up defaulters, including HIV-exposed babies who have been 'lost to follow-up'. URC/QAP will continue to promote improvements in counseling of mothers regarding infant follow-up and best practices, early infant diagnosis, ongoing training and onsite mentoring, and support for national initiatives. URC/QAP plans to strengthen linkages to Orphans and Vulnerable Children (OVC) programs and to routine maternal and child health services, including family planning. It is envisaged this will serve to identify and strengthen existing networks; highlight gaps in the quality of services provided; and provide information about the feasibility of incorporating relatively rapid QA approaches into ongoing OVC programs. ACTIVITY 5: Strengthening Supervision URC/QAP will visit each facility fortnightly to provide on-the-job support and mentoring to staff. In most cases, the visits will be conducted together with district staff. This will ensure that the district staff take ownership of the program and can sustain the program when URC/QAP support ends. The mentoring will focus on improving clinical skills of staff and ensuring that the improvement plans are implemented correctly. During these visits, URC/QAP and facility staff will compare performance data with expected results. URC/QAP will conduct quarterly assessments in each facility to assess whether the facility staff is in compliance with the national guidelines. Facility staff will be provided with feedback regarding compliance with national guidelines. All facilities exhibiting 100% compliance for all programs assessed for at least three consecutive quarters will be judged to be sustainable. Sample-based surveys will be done in a small number of QAP-assisted facilities annually to assess compliance with quality assurance standards

Activity Narrative: and key performance indicators. Although the coverage area for the URC/QAP PMTCT project is primarily in four provinces, some activities are also directed at the national level. URC/QAP will actively participate in the training and development of the National NDOH PMTCT monitoring and evaluation framework, to ensure accountability and long-term sustainability of the program. URC/QAP will advocate for strategies to address male norms and behaviors (Key Legislative Area) specifically seeking their involvement in PMTCT and highlighting the importance of partner testing at all levels. In addition, the URC/QAP PMTCT program includes sensitizing staff to the importance of male testing and participation in PMTCT programs. Male counselors are being trained at some facilities, to enhance the current system. Promoting integration of services at the facility level ensures the development of links between services, promoting holistic care. URC/QAP will contribute to 2-7-10 PEPFAR goals by ensuring a strengthened PMTCT program.

Activity ID: 13837.24471.09

Planned Funds: \$121,363

Activity System ID: 24471

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

BACKGROUND: TB Care Association will coordinate this activity in FY 2009 and University of the Western Cape (not the Medical Research Council) will be the sub-partner.

ACTIVITY 1: Community TB/HIV Case Finding and Case Holding Among Women Participating in PMTCT

Rather than using community peer supporters, the project will train multi-skilled community health workers to identify suspected TB cases in the households of pregnant mothers and other households and refer them to the health services for TB diagnosis. They will encourage all community members, including pregnant women, their partners and HIV-exposed infants to be tested for HIV and to access health services for appropriate prophylaxis and antiretroviral therapy (ART). They will also provide adherence support for household members on prophylaxis or treatment related to TB or HIV. The impact of community support on integrated PMTCT/TB/HIV activities will be assessed by monitoring case finding and adherence. Through funding from the TB/HIV program area, community outreach teams will be hired with an enrolled nurse acting as a community health facilitator responsible for coordinating and supervising community health workers and linking the community and the facility.

ACTIVITY 2: Integration of PMTCT with TB/HIV and ART Services

Additional to the activities listed in the COP 2008, the site manager will provide support to 24 health facilities to implement provincially approved recording and reporting systems for voluntary counseling and testing, PMTCT, HIV care and ART. She will train health workers and district coordinators on the collection, analysis and quarterly reporting of key indicators for PMTCT/TB/HIV integrated activities.

SUMMARY:

TB Care Association's activities will be carried out to increase TB and HIV case finding and case holding through community peer supporters as well as to support facility-based integration of prevention of mother-to-child transmission (PMTCT) with TB/HIV and antiretroviral treatment (ART) services. The TB CARE Association PMTCT project emphasizes gender issues by increasing access to PMTCT, TB/HIV and ART services for women and their partners. A second emphasis area is in-service training. The target populations for this activity include children under the age of five years, pregnant women, discordant couples, people living with HIV and AIDS, families. The emphasis area for this program include gender, by addressing gender equity in HIV and AIDS programs, human capacity development by providing in-service training and local organization capacity building.

BACKGROUND

Although TB CARE Association is a new FY 2008 PMTCT partner, this is an ongoing activity. TB Care Association was founded in March 1929 as a social support group for TB sufferers in Cape Town. The core role of TB Care has remained largely unchanged in the intervening 70 years. TB Care provides a comprehensive, developmental social support service to TB sufferers and their families in the City of Cape Town. TB care operates from the community health centres which patients to take their daily treatment on the street where they live under the supervision of specially trained community treatment supporters. In FY07, TB CARE Association partnered with the Medical Research Council in FY 2007 and was a sub-partner implementing these PMTCT activities. In FY 2008 PEPFAR funding will be coordinated by TB Care Association and the Medical Research Council will be a sub-partner. The activity will be coordinated with the provincial and district Departments of Health. TB CARE Association partnered with the Medical Research Council in FY 2007 and was a sub-partner implementing this activity. FY 2008 PEPFAR funding will be coordinated by TB Care Association and the Medical Research Council will be a sub-partner. The activity will be coordinated with the provincial and district Departments of Health.

ACTIVITIES AND EXPECTED RESULTS

ACTIVITY 1: Community TB/HIV Case Finding and Case Holding Among Women Participating in PMTCT

The Good Start Community Intervention Project (PEPFAR-funded since FY 2005) has trained and employed community peer supporters to provide household-level support to improve postnatal care of mothers served by PMTCT programs. In the TB/HIV component of the Community Intervention Project, community peer supporters will identify suspected TB cases in the households of pregnant mothers and refer them to the health services for TB diagnosis. They will encourage pregnant women, their partners and HIV-exposed infants to be tested for HIV and to access health services for appropriate prophylaxis and antiretroviral therapy (ART). They will also provide adherence support for household members on prophylaxis or treatment related to TB or HIV.

ACTIVITY 2: Integration of PMTCT with TB/HIV and ART Services

This project will support a comprehensive best-practice approach to integrate PMTCT into TB/HIV care in Sisonke District in KwaZulu-Natal. The project will improve screening of pregnant women for TB and HIV as part of antenatal care. HIV-infected pregnant women will routinely have CD4 counts assessed and be screened for full antiretroviral treatment. HIV-infected mothers will also be screened for prophylaxis (isoniazid preventive therapy and cotrimoxazole prophylaxis). HIV-exposed infants will receive cotrimoxazole prophylaxis and will have a PCR test at their six week immunization visit. PCR-positive infants will have a CD4% test to determine their eligibility for ART. The project will establish a best practice approach to integrated TB/HIV prevention and care in PMTCT services and will provide training to PMTCT health care providers on integrated TB/HIV care. Project results and lessons learned will be shared with the national and provincial Departments of Health to inform existing policies and guidelines on TB/HIV care. TB patients and PLHIV are the principal target populations and include pregnant women (referred to PMTCT

Activity Narrative: services) and children (receiving ARVs if indicated).

These activities will contribute to PEPFAR's 2-7-10 prevention goals by reducing mother-to-child HIV transmission. The prevention outcomes are also in line with the USG goal of integrating TB and HIV services within primary care systems in South Africa.

Total Planned Funding for Program Budget Code: \$24,715,378

Program Area Narrative:

South Africa, with a population of 48.3 million, has a highly generalized AIDS epidemic; the estimated HIV prevalence at mid-2007 was 18.1% for the 15-49 age group. Transmission is primarily heterosexual followed by mother-to-child transmission. HIV prevalence among pregnant women attending antenatal clinics was 28% in 2007, reflecting a small decline since 2005 after rising steadily since the early 1990s.

HIV infection rates vary greatly by age and sex. Young adults have the highest infection rates; prevalence peaks at 33% for women aged 25-29 and at 23% for men in their thirties. Almost twice as many women as men are infected. In the 15-24 age group, the ratio of infected females to males is four to one. Young women aged 20-29 have extremely high HIV incidence at 5.6%; incidence in pregnant women is also high at 5.2%. Although incidence rates are higher in 15-24 year olds, adults over age 25 account for two-thirds of new infections, owing to their larger numbers.

Prevalence varies greatly across geographic settings. Among provinces, KwaZulu-Natal had the highest antenatal care prevalence in 2007 at 37.4%. Mpumalanga has the highest incidence among all the provinces (2.4%) based on 2005 survey estimates. Recent data from the 2007 National HIV and Syphilis Prevalence Survey indicates that one or two districts in each province contribute disproportionately to the epidemic. Urban informal settlements, which are a magnet for migrants, also have very high HIV rates; in a recent study, migrant men had HIV prevalence double that of non-migrants.

Factors associated with high HIV transmission include high rates of multiple and concurrent partners and age mixing in sexual partnerships, early sexual debut, and low consistent condom use. Alcohol and substance abuse also contribute to risky sexual behavior. The mean age at first sex, currently about 17 years, is declining. Levels of sexual violence in South Africa are among the highest in the world. Frequent labor mobility, low marriage rates, and low rates of male circumcision further contribute to HIV transmission.

Basic knowledge and awareness of HIV and AIDS are almost universal, and exposure to mass media and interpersonal sources of information about HIV and AIDS is high. Yet personal risk perception is astonishingly low ; 66% of South Africans do not see themselves at risk of HIV, primarily because they do not understand the dangers of multiple and concurrent partnerships. In addition, high levels of HIV in the early stages of HIV infection while people do not know their status and do not take necessary precautions with sexual partners exacerbates rapid transmission among these dense sexual networks.

In 2007, the South African Government (SAG) issued the National Strategic Plan for HIV & AIDS and STI, 2007-2011 (NSP). The plan seeks to involve all sectors of society in HIV prevention with an emphasis on maintaining the HIV-negative status of those currently uninfected and strengthening social mobilization and poverty reduction. The NSP builds on national programs to address gender-based violence and mainstream HIV and AIDS interventions with priority to the rural poor, urban informal settlements, and marginalized groups. NSP priorities include strengthening behavior change programs, scaling up interventions for youth, especially for young women, engaging parents and children in open discussion, and implementing workplace programs.

Consistent with the SAG strategy, the United States government (USG) supports a comprehensive, multisectoral, abstinence, be faithful, and consistent and correct condom use (ABC) approach to prevention. The USG's Five-Year Strategy emphasizes a full range of age-appropriate prevention messages and interventions to address the key drivers of the epidemic, especially multiple concurrent partners, low rates of consistent condom use, and early onset of sexual debut. With South Africa's high, generalized epidemic, the general population, and particularly adults, will increasingly be the focal point for mass media and community outreach efforts, while specific targeted interventions for other populations, including youth, most-at-risk populations (MARPs), migrants and disadvantaged populations living in informal settlements, and prevention with positives continue to be important activities. In addition, integrated prevention activities that link prevention with counseling, treatment and care, and support services will be reinforced.

Abstinence and Be Faithful (AB) funding was increased in FY 2008 to \$32,518,850 million for more than 50 partners with a target of 7 million people to be reached. As of March 2008, prevention efforts had reached 13,101,391 individuals with AB messages and 2,343,755 individuals with other prevention (OP) messages. A total of 981,425 individuals were reached with abstinence-only messages. The FY 2009 COP funding levels are approximately \$36,693,000 for AB and \$22,259,000 for OP. In FY 2009, based on recommendations from the Prevention Technical Working Group, FY 2008 COP reviews, and the recent PEPFAR South Africa Interagency Partner Evaluation, the USG proposes to take stock to assess the overall prevention program and to provide short- and mid-term recommendations for developing a strategic focus and enhancing program impact.

In FY 2009, the USG will encourage greater attention to the quality of interventions, particularly training and peer education. In addition, the USG will focus on the coordination of prevention activities to avoid duplication and to increase synergies. PEPFAR-funded partners are encouraged to align their activities to the NSP and to sign Memoranda of Understanding with relevant provincial governments in order to enhance sustainability and integrated programming. In addition, PEPFAR partners are encouraged to create linkages with partners working in the same areas and with other donor programs to ensure greater coordination and coverage. For example, a group of prevention partners meets monthly to share ideas and develop synergies with Soul City's "One Love" campaign (funded by the United Kingdom's Department for International Development) that addresses multiple concurrent partnerships.

USG assistance for HIV prevention complements support from other international donors, including the Global Fund, the Japanese, British and Irish governments, as well as the European Union. The Round 6 Global Fund grant provided support to several current USG prevention partners to expand their programs.

Ongoing prevention activities will continue to reinforce normative change and responsible sexual behavior through networks of community- and faith-based organizations (CBOs/FBOs) and traditional leaders and healers to help individuals internalize these norms in order to achieve sustainable behavior change. AB activities targeting adults will receive complementary funding for Condoms and Other Prevention activities; funding will be used to provide comprehensive prevention education for individuals who continue to engage in risky behavior. Linkages will be strengthened with counseling and testing partners and for those who test positive, referrals will be made for further management and prevention with positives programs. Prevention programs will continue to be integrated with PMTCT and care and treatment.

The USG will take a more balanced approach to address the drivers of the epidemic with increased focus on sexually active adolescents and adults. Activities will focus on increasing risk perception to reduce multiple and concurrent partners, intergenerational sex (primarily young women), and increase consistent condom use. For example, Johns Hopkins and Soul City, two mass media partners, have launched multi-level, multimedia campaigns to increase understanding of the risks associated with multiple and concurrent partners. This will be the thematic focus of a new television drama series and a series highlighting real-life individual success stories in adopting abstinence and fidelity. Radio, outdoor media advertising, and a cellular phone text messaging campaign will support the TV series. Campaign messages will draw on recent qualitative research on the drivers underlying multiple partnerships. The campaign will emphasize the role that male attitudes norms and behavior play in sustaining sexual networks, cross-generational sex, and high rates of concurrency and partner turnover.

In the lead-up to the 2010 World Cup in South Africa, the media campaign features prominent South African soccer players delivering messages about male responsibility, personal risk perception, and community action to support healthy behaviors. The campaign will also engage in a parallel effort to target the young women who are at highest risk. Women of reproductive age and their partners will also be educated about the risks of HIV in pregnancy. The role of alcohol and substance abuse in risky behaviors will be integrated into prevention education and disseminated to all audiences.

Media activities will be complemented by expanded community outreach to adult populations, especially men. A new initiative will seek to promote partner reduction through high visibility advocacy by the leadership of national faith-based networks and NGOs. As a comprehensive activity, the mass media, linked to community outreach and grassroots social mobilization, should shape new community norms of responsible sexual behavior by working through local FBOs and CBOs. In addition, Population Concern International (PCI) will implement new workplace programs that will target small and medium enterprises and selected government departments. These new initiatives will deepen understanding of the risks associated with multiple overlapping partners and cross-generational sex, the potential for exposure to HIV through regular partners, and the benefits of mutual monogamy in the context of knowing both one's own and one's partner's HIV status. PCI will also address gender-based violence with a focus on changing male behavior and community and cultural norms.

The USG will support the National Department of Health (NDOH) to create and lead an HIV prevention consultative core action group (or "Action Tank"). The purpose of the Action Tank will be to help the South African government (SAG) accelerate the scale-up of HIV prevention through an inclusive, broad-based process to develop comprehensive, coordinated, evidence-based, target-driven national prevention implementation strategy. The group is slated as an "action tank" because in addition to providing expert advice and recommendations, its primary purpose is to facilitate large scale preventions action under NDOH leadership. The establishment of the Action Tank will be done through an active and participatory approach that will engage key stakeholders and facilitate the alignment of prevention actions based on understanding the SA HIV epidemic.

The USG will continue to support the Department of Education (DOE) and a diverse array of indigenous faith-based and other non-governmental partners to deliver intensive, curriculum-based and peer HIV prevention education to youth through schools, churches, and other community fora. Messages focus on delayed onset of sexual activity for youth aged 10 -14 and improved risk perception of multiple concurrent partners among sexually active youth. Partners will address gender issues by, for example, tailoring curricula for girls and young women to enhance their self-esteem and to address the risks of transactional sex with older men. The USG will also provide skills-building assistance to promote best practices, focusing on a combination of curriculum-based HIV education, peer education, community mobilization, and parent interventions. Working with the DOE, the USG will support a rapid assessment of school-based HIV education to help develop a more strategic and systemic approach to prevention programming in schools.

With FY 2008 funding, the USG is adapting "Families Matter," an evidence-based intervention to engage adult family members in communicating with youth about HIV prevention, which also aims to create safer contexts for young women. Using FY 2009 funding, many youth partners will begin implementing "Family Matters" with older family members of youth that are currently participating in their programs. The USG continues to encourage linkages between AB and orphans and vulnerable children's programs to ensure that orphans and other at-risk youth receive HIV prevention education. Several partners, including Ubuntu,

Youth for Christ, and Salesian Missions, will work with higher risk youth in disadvantaged locales.

The USG will continue and reinforce work with MARPs. Humana People to People will continue to provide support to sex workers through door-to-door visits in townships. The Reproductive Health and Research Unit's comprehensive program addresses health care and supports needs of sex workers, including HIV testing. The services were evaluated last year and results of the survey will be used to re-orient the organization's services, including widening the reach of their program and strengthening referrals. The Human Sciences Research Council (HSRC) and the Joint Working Group for Gay, Lesbian, Bisexual and Transgender people will conduct research to identify gaps in programming for this vulnerable population. The findings will be used to expand targeted prevention interventions with men who have sex with men. CDC will conduct an assessment on sex workers and HIV to identify gaps and solutions to these gaps. The International Organization for Migration (IOM) will be working to reach migrant and mobile populations in Limpopo and Mpumalanga provinces with comprehensive prevention education. IOM will also target young women in their twenties in high transmission areas, including destination communities for migrants. The Medical Research Council (MRC) will continue with its bar-based intervention focusing on people frequenting taverns, a public-private partnership with the South African Breweries. MRC also links HIV treatment programs with prevention.

In FY 2009, the USG team will focus on the expansion of post-exposure prophylaxis (PEP) services and training on sexual assault. The MRC and the National Department of Health will roll out a comprehensive training program aimed at health-care workers and the judicial service to ensure better implementation of PEP services throughout the country.

The USG Prevention team has expanded and now includes senior prevention experts who will promote the adoption of evidence-based, best practice intervention models, a common set of clear, actionable, behavioral messages, and coordination and synergy across partners.

Table 3.3.02: Activities by Funding Mechanism

Mechanism ID: 224.09	Mechanism: CTR
Prime Partner: Family Health International	USG Agency: U.S. Agency for International Development
Funding Source: GHCS (State)	Program Area: Sexual Prevention: AB
Budget Code: HVAB	Program Budget Code: 02
Activity ID: 29690.09	Planned Funds: \$0
Activity System ID: 29690	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Family Health International South Africa (FHI SA) worked with the University of the Western Cape (WC) on this program in FY 2005 and FY 2007 and will continue to work with them in FY 2008. In FY 2009, however, FHI SA will cease work with the University of the Western Cape as their capacity has been developed through the previous years' programming; reports indicate that their peer education system is now well established and is able to sustain itself through other sources of funding.

In FY 2009 FHI SA will work with the Universities of the Free State and Limpopo and will provide training to a new cadre of peer educators on these campuses. FHI SA will further provide refresher training to those peer educators who were trained before. FHI SA will continue to provide technical assistance to both the partners and universities to ensure proper implementation of the project. This will be accomplished through establishment of quality assurance mechanisms -- such as internal and external monitoring systems, use of program manager and peer educator checklists and job aids, and comprehensive documentation -- that ensure quality of implementation. Peer educators will be trained and provided with refresher workshops that continuously update them on new information and strengthen their skills. Equipping supervisors with skills to provide supportive supervision, mentoring and monitoring to the peer educators will also be included

SUMMARY:

Family Health International (FHI) will provide technical assistance (TA) to three universities' peer education programs to continue integration of abstinence and be faithful messages (AB) as well as life skills into the ongoing activities of the peer education programs on university campuses. Using the curriculum developed in FY 2005, the AB and life skills training will be extended to a cadre of peer educators (PEs) on each of the campuses participating in this project. The PEs will then pass these skills on to other students on campus primarily through interaction in ongoing, small behavior change groups. Emphasis areas are gender which includes addressing male norms and behaviors, cross-generational sex and multiple sexual partnerships, reducing violence and coercion, training, local organization capacity building, and wraparound programs in family planning and education. Main target populations addressed are men and women of reproductive age and people living with HIV.

BACKGROUND:

Currently, most efforts addressing sexuality and reproductive health needs for young people are focused on out-of-school youth and those in secondary school in South Africa. Youth at institutions of higher learning represent a special group at risk as they are often left unsupervised by both parents and teachers, who are under the assumption that they are mature enough to protect their sexual and reproductive health. Available evidence suggests that these young men and women have high sexually transmitted infection (STI) and unintended pregnancy rates, an indication that they are not yet equipped with the knowledge and skills required to protect themselves from these adverse outcomes. In FY 2005, in consultation with the South African Universities Vice Chancellors' Association (SAUVCA) and the Department of Education, FHI implemented a project that took place on three university campuses in South Africa: University of the Western Cape, University of the Free State, Qwaqwa campus and University of Limpopo, Medunsa campus. Each campus contributed to the development of the AB/life skills curriculum which was subsequently implemented among 26 PEs from each of the three campuses. After the training, PEs recruited six students each to take part in ongoing behavior change communication (BCC) groups on their campus, reaching in total 468 students. Life skills aim to enhance the students' ability to make responsible sexual health decisions and adopt behaviors that will keep them free of STI and HIV infection, as well as avoid unintended pregnancies. The curriculum included sessions on "Abstinence"; which promotes delaying sexual debut for youth under 14, as well as secondary abstinence for older youth and "Be Faithful" for youth and adults in long-term relationships, discouraging them to engage in multiple and concurrent sexual relationships which are the drivers of the HIV epidemic. The AB prevention messaging will address secondary abstinence, values clarification, self-esteem, communication, decision making and negotiation, and utilized participatory learning techniques. Another key component of the AB/life skills training was a session on gender equity. The curriculum complemented the universities' existing peer education curricula, which provides basic information about prevention of HIV and AIDS. The BCC groups provided a safe place to explore strategies for adopting and strengthening the AB life skills in their personal lives. Students were able to support each others' behavior change process, including seeking counseling and testing (CT). Through one-on-one and group interaction, the PEs took advantage of a variety of regularly scheduled campus events-such as orientation week, condom week, and STI awareness week-to reach additional students with basic information on STIs, HIV and unintended pregnancies and how to protect oneself and maintain a healthy lifestyle. The program also promoted referrals between the PEs and student health or community health services for CT as well as family planning (FP). Major accomplishments to date include development of the AB life skills curricula and successful training of the PEs. The program has gone beyond the university campuses and PE groups to be conducted in high schools in communities near the campuses. A radio series was produced and launched on campus and community stations throughout South Africa, reaching approximately 6,000,000 listeners. The show addressed issues related to risk-reduction behaviors for STIs, HIV and unintended pregnancies that are relevant for university students. The curriculum was also used by University of Nairobi for a similar intervention. The universities did not receive PEPFAR funding for FY 2006, however the universities were committed to continue the BCC groups and supervision activities. While the activities are expected to continue with the respective university funding, additional resources are needed to strengthen the longer-term institutionalization of the life skills program.

ACTIVITIES AND EXPECTED RESULTS:

In collaboration with the Department of Education, in FY 2008 FHI will continue to work with the three universities, University of the Western Cape, University of the Free State, Qwaqwa campus and University of Limpopo, Medunsa campus, and explore opportunities to expand activities to tertiary institutions. FHI will

Activity Narrative: work in collaboration with JHU at the University of Western Cape and the University of Free State, Qwaqwa campus to ensure that all PE programs are harmonized. To align the goals of the program with the government goals, FHI will work closely with the Department of Education staff to further refine the program and improve outreach. Further integrating AB life skills into their peer outreach program work plans, each university will recruit new PEs for the AB life skills project, who will then recruit other students to participate in small, ongoing BCC groups. TA will also be provided to strengthen supervision skills to ensure the quality of the peer interactions, modeling problem solving skills, and shaping perceived peer/social norms on sexual behaviors. The "Be Faithful" messages will also promote mutual monogamy, partner reduction and full information on correct and consistent condom use will be provided.

Specific activities include: (1) Incorporating AB life skills program into existing peer education work plans in a cost-effective manner; (2) Conducting AB life skills training for all PEs participating in the program; (3) Providing refresher trainings to strengthen basic peer education/facilitation skills; (4) Standardizing job aids and tools for PEs to use in small groups; (5) Conducting supervision skills training for and provide TA to supervisors to help support PEs and the BCC group process; (6) Building and strengthening relationships between PEs and student health services, and formalize referral links to health services; (7) Integrating alcohol and substance abuse risk behaviors in the life skills program; and(8) Monitoring AB, life skills and BCC group processes. The project will help decrease the number of new infections by achieving the expected results which will ultimately lead to a delay in sexual debut, a reduction in sex acts, fewer partners or a reduction in unprotected sex. The activities contribute to the 2-7-10 PEPFAR's goals of averting of seven million new infections.

Continuing Activity:

Table 3.3.02: Activities by Funding Mechanism

Mechanism ID: 7568.09	Mechanism: NPI
Prime Partner: Genesis Trust	USG Agency: U.S. Agency for International Development
Funding Source: GHCS (State)	Program Area: Sexual Prevention: AB
Budget Code: HVAB	Program Budget Code: 02
Activity ID: 16849.24765.09	Planned Funds: \$0
Activity System ID: 24765	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Based on consultation and recommendations of the PEPFAR South Africa Interagency Partner Evaluation, Project Positive Ray has modified its abstinence and being faithful (AB) education program.

This year the program will aim to achieve a balance among the adult and youth target populations to address the gaps in prevention programming. Thirteen additional community workers who split their time between prevention and home-based care have been recruited to bring the total number of community educators to 26. This was done to add capacity and to improve the quality of the program, not to expand the geographic area or the targets.

The AB prevention programs will focus on meeting with families in homes in the eight communities (two consolidated communities from the previous nine communities as they form a single continuous community) to encourage parent-youth communication. The vital outcome measure monitored in the community education program will be the number of people knowing their status through referral to government voluntary counseling and testing (VCT) sites or testing in the newly established Ugu AIDS Alliance VCT program. Emphasis will be on encouraging partner reduction and mutual monogamy. Consistent and correct prevention messages that address the key drivers of the epidemic will be adapted and distributed. The new FY 2009 target for number reached through the community education program will be 14,820.

Two full time school educators will present the AB prevention program in schools. The program will be expanded to four high schools utilizing the GOLD (Generation Of Leaders Discovered) program. It is believed that the leadership development and mentoring aspect of this program will assist with converting knowledge to meaningful behavior change among youth. The school education program will focus on delaying onset of sexual debut, especially in young women and on reducing the number of sexual partners in those who are already sexually active. The project will implement tools to measure outcomes in terms of age of onset of sexual activity or number of sexual partners in the students enrolled in the program at each of the schools. The program will reach 1680 learners through the school education program in FY 2009.

Two community workers will present the AB prevention program in workplaces, which will be closely linked to the implementation of workplace VCT through the Ugu AIDS Alliance's newly established VCT program.

Project Positive Ray has hired two professional nurses. During the first half of FY 2009, the nurses will provide VCT at the six factories where the prevention education program has been implemented during FY 2008. During the first part of FY 2009, the AB prevention program will be expanded to three additional factories and one clinic, which will be linked with the VCT program in the last half of the year. With these changes in the program, the new FY 2009 target for the number reached through the workplace program will be 1600. More than 80% of those reached in the factories are women. Consistent and accurate prevention messages that address the key drivers of the epidemic, (e.g., multiple and concurrent partnership and low condom use) will be highlighted.

Finally, the AB education program in the prison will be emphasized in FY 2009. It could not be implemented as planned in FY 2008 because the Department of Corrections did not allow access to the cellblocks. Negotiations, however, are ongoing and fruitful and Project Positive Ray anticipates that the program will be implemented in 2009. The new FY 2009 target for number reached through the prison education program will be 150. Nearly all of the people reached will be men and the messages will be tailored to address male norms of behavior and to reduce violence and coercion in sexual relationships.

The new FY 2009 target for total number reached will be 18,250 for the combined efforts of the four activities described above.

SUMMARY:

The education and awareness outreach programs are implemented in nine communities, two schools, and six factories. The emphasis areas are education, gender and workplace programs. The program includes activities that address societal and community norms to reduce stigma. Workplace programs engage private businesses to provide HIV and AIDS care, treatment and prevention for their employees. Gender is addressed through efforts to increase gender equity in HIV and AIDS programs by encouraging couple counseling and testing. Education programs use the existing school system as a means to address HIV prevention with children. The school program also addresses the emphasis area of addressing male norms and behaviors by encouraging young men to be responsible in their sexual behavior and child rearing and to respect women- including the reduction of sexual violence and coercion, number of sexual partners and cross-generational and transactional sex. The primary target populations are youth and adults, many of whom fall into most-at-risk populations, namely mobile populations, persons who exchange sex for money and /or other goods with one or multiple or concurrent sexual partners but who do not identify as persons in prostitution.

BACKGROUND:

Project Positive Ray (PPR), is one of the Ugu AIDS Alliance (UAA) implementing partners. PPR's activities are not directly supported by the South African Government (SAG) but are in line with the SAG priority areas. PPR uses government-facilitated training for the community-based volunteers.

Young people are South Africa's most important asset and protecting them from contracting HIV is one of the most important objectives shared by the Ugu AIDS Alliance (UAA) and PEPFAR. UGU AIDS Alliance addresses OCAG's priority intervention of 'Abstinence and Behavior Change for Youth' through school programs and the priority intervention: 'Promoting Healthy Norms and Behaviors' through our community and workplace programs. The project also addresses the South African HIV and AIDS and STI Strategic

Activity Narrative: Plan for 2007-2011 the following key priority areas: (1) Create an enabling environment for HIV testing; (2) Implement interventions targeted at increasing behavior change and subsequent HIV infection in young people, focusing on young women; (3) Increase open discussion of HIV and sexuality between parents and children; and (4) Increase roll out of workplace HIV prevention programs.

The volunteers reach large numbers of people, operating on the premise that the more individuals who receive the message, the higher number who may make behavioral change as a result of being able to make informed choices. This is done by working with families and small group and not large community awareness events. People are also educated on factors that drive HIV transmission such as cross generational sex and having concurrent partners. People are actively encouraged to know their HIV status. HIV negative people are encouraged to stay negative through the various messages from the awareness education program.

Abstinence and being faithful is promoted as the most important means of reducing sexual transmission of HIV. The programs encourage unmarried individuals especially the youth, to delay sexual activity until marriage. The education and awareness program conducted in schools highlights to adolescents aged 10-19 the benefits of undertaking early HIV counseling and testing. In all the education programs people are strongly encouraged to know their HIV status. They are referred to go for testing at government accredited sites.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Education and Awareness programs

To reduce the risk of HIV infection by educating our communities on the importance of abstinence, being faithful and delaying sexual debut. The training will be used to do education and awareness interventions in schools, factories, and communities. Topics covered include: What is HIV and AIDS? How people are infected and affected? What causes AIDS? Can AIDS be cured? What happens to a person infected with Aids? Voluntary Counseling and Testing? Treatment and adherence to antiretroviral treatment.

The organization will conduct education and awareness programs in six factories, two schools, and nine communities, and will reach 15,300 people. Thirteen volunteers each do 20 education and outreach activities visits to families in their homes each per month, each family averaging five members. Therefore, per month, 1300 people are reached, and in 11 months, 14,300 people. In addition, work in factories reaches 500 people per year and work in schools reaches 500 youth per year.

ACTIVITY 2: Skills Training in HIV Prevention Education

Thirty community members will be trained to provide HIV prevention education. Training on quality assurance is done through monitoring and evaluating the work the volunteers do and through study of the reporting forms which are submitted to the project office on a monthly basis.

Current staff will be sent on refresher training to update their skills and community members will be afforded the opportunity of receiving training. GT's role is to coordinate the attendance of peer educators at government run training programs. The results of these activities will contribute to the PEPFAR 2-7-10 goals to reduce new HIV infections among youth by facilitating the HIV prevention programs through abstinence and/or being faithful activities encouraging behavior change.

Mechanism: NPI

USG Agency: HHS/Centers for Disease Control & Prevention

Program Area: Sexual Prevention: AB

Program Budget Code: 02

Planned Funds: \$0

Activity Narrative: SUMMARY:

The Sophumelela Clinic Incorporated (SCI) has just received funds under the New Partnership Initiative. Activities only commenced in September 2008. SCI has been a PEPFAR sub-partner under the Catholic Relief Services (CRS) Track 1 award for the past four years. Additional funds are being used to support HIV prevention activities not covered under the current award with CRS. Through this program, SCI will increase the quality of life for the terminal patients and their families and as SCI assists with the care for the dying and helping families through the bereavement process.

BACKGROUND:

SCI is a non-profit faith-based organization that was formed by the First City Baptist Church, Buffalo City, Eastern Cape in 2005. SCI exists to provide comprehensive clinical, social and spiritual care to HIV affected people and their families in a faith-based environment within the greater Buffalo City Metropolis. SCI began as, and is currently, an antiretroviral (ARV) rollout sub-contractor under the AIDS Relief PEPFAR Track 1 Treatment and Care grant to Catholic Relief Services. Soon after opening the ARV clinic, the decision was made to form a non-governmental organization (NGO). This was done because of the recognition that the simple provision of ARVs to patients attending the existing clinic did not address the many individual needs and social problems in the community. From its inception, the vision of SCI was to provide comprehensive and holistic care services to people infected and affected by HIV. SCI will deliver HIV awareness and prevention education in Port Elizabeth (Eastern Cape) through schools, churches, small businesses, partner NGOs, and through the education program in SCI's ARV clinic.

ACTIVITIES AND EXPECTED RESULTS:**ACTIVITY 1: HIV Prevention in the ARV Clinic**

SCI's program presently consists of ongoing lifestyle and HIV prevention education among the patients visiting SCI and the education of staff members in a few local small businesses. The on-site education is done by SCI's professional nurses and adherence staff for the patients in the waiting room. The education at local businesses is conducted by SCI's chief professional nurse.

ACTIVITY 2: Community Outreach

SCI will train a team of educators consisting of a professional nurse and at least eight community educators. SCI is in the process of establishing a formal partnership with Focus on the Family, which has been appointed by the South African Department of Education to present an abstinence, be faithful, and correct and consistent condom use (ABC) program in all public schools in the Eastern Cape. When Focus on the Family present in schools, SCI will implement the program to churches and youth groups in the same area. This would have the dual effect of reinforcing the message presented by educating pastors, community leaders and parents as those the pupils receive in the school-based program. In addition, the message will be reinforced by repetition in the schools and churches. SCI would not be limited to working with Focus on the Family, as First City Baptist Church, on whose premises the clinic is situated, have extensive partnerships with churches and schools. Through this network, SCI will have access in areas not covered by Focus on The Family. The church program will be carried out by a team of community and peer educators. SCI will use the same model for the appointment of these educators as it does for the recruitment, training and deployment of its adherence monitors.

ACTIVITY 3: Small Business Outreach

Many of the larger companies in Port Elizabeth run effective lifestyle and prevention education for their employees; this, however, is not the case with the many hundreds of small businesses in the area. They simply do not have the capacity to run such programs. Through the local Chamber of Commerce and partnership with a number of these businesses, SCI will initiate an HIV prevention program. SCI will offer free/low cost education programs to the workforce of small businesses and manufacturing concerns. The program will be headed by a professional nurse who will conduct two training courses a week at different company premises. Each company visited will be followed up by field educators on a six monthly basis. Any individuals who respond will be referred for HIV counseling and testing and will then be followed up through the existing clinic operation. The material to be used will be tailored for the work environment.

Program Budget Code: 02

Planned Funds: \$0

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Activities will stay the same, but the program content (e.g., illustrations, case studies, role plays and exercises) will be adapted to recommendations from PEPFAR Interagency Partner Evaluation.

Multiple Concurrent Sexual Partnerships: The training manual, workbook and handbook will explore the cultural and social norms relating to traditional gender roles and power imbalances within relationships, as these are key to multiple concurrent partnerships and cross-generational and informal transactional sex, thus contributing to disproportionately high infection rates among females. Choose Life, using a range of exercises, case studies and role plays, based on values frameworks, will explore appropriate social norms, and develop skills that will lead to partner reduction. Emphasis in FY 2009 will be on specific behaviors resulting from the values of respect, responsibility, and integrity. The skills of assertiveness, decision-making and negotiation will be practiced and translated into specific behaviors.

Cross-generational and informal transactional sex will be addressed among youth. Choose Life will build skills to support behavior change, through in-depth exploration of the risk behaviors, contrasted with a life style based on responsible values and choices. Self-image, life skills will be highlighted.

Gender Roles and Power Imbalances: The faith-based community creates a environment that helps empower women to avoid or reduce risk behaviors, and to change harmful gender norms that place women and men at increased risk.

Promotion of Mutual Monogamy: The choice for mutual monogamy will be motivated based on the value frameworks and practical values. A choice for, and adherence to values like responsibility, love and service, should lead to a commitment to testing to determine one's own and one's partner's HIV status.

Using Additional Fora: The Choose Life program will engage leaders, peers, family members, local organizations, and the media to facilitate the widespread adoption and maintenance of safer behaviors. Religious and community leaders, are particularly influential in reaching a wider audience.

Supporting Behavior Change: Behavior change is an ongoing process. The mentoring program will be expanded to extend activities beyond single contacts with key target groups. Regular and ongoing contact and support of participants will ensure a sustainable and effective community program.

Promotion of Counseling and Testing (CT): In FY 2009, community- and faith-based leaders will be asked to promote CT. CT in each community will be explored and promoted via referral systems to other organizations.

Geographic Expansion: In cooperation with the Baptist Union, an area coordinator for the Eastern Cape will be appointed to expand the program to East London and Mthatha.

Choose Life supports the prevention goals of the HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011 (NSP) (i.e., reduce vulnerability to HIV infection, and reduce sexual transmission of HIV) Choose Life aims to strengthen social cohesion in communities and to support the institution of the family. Other activities include identifying the origin of values; appreciating, choosing and supporting values that promote spiritual and physical well being; making decisions guided by values; managing needs, desires and relationships in a value-based way; understanding basic facts about HIV and AIDS; and committing to a personal program of action.

The Choose Life program supports the NSP by promoting personal responsibility so that people commit to protecting themselves and others from HIV infection; empowering leadership to promote HIV prevention and responsible behavior change; ensuring that interventions are informed and owned by communities and leaders; supporting organizations to address gender-based violence; encouraging HIV testing; empowering organizations and leadership to build AIDS competent communities; creating awareness and strengthening behavior change programs for vulnerable and high-risk groups; implementing prevention interventions targeting young people, especially women; promoting equality for women and girls by prioritizing interventions focusing on gender inequality; facilitating life skills development; increasing open discussion of HIV and sexuality among parents and children; facilitating greater involvement of people living with HIV; challenging stigma; identifying and contributing to the removal of legal, policy, religious and cultural barriers to effective HIV prevention; and developing and promoting research on behavior change and the long-term impact of programs.

The Choose Life curriculum currently includes, (as recommended by the NSP) abstinence, especially delaying first sex; safer sex practices; provision of information about HIV risk of different sexual practices and concurrency; gender relations and gender-based violence; coercive and intergenerational sex.

Through experiential exercises, men are encouraged to be responsible in their sexual behavior, to respect women, and to be involved in family life. Choose Life aims to reduce sexual violence and coercion, number of sexual partners, and cross-generational and transactional sex. The positive roles that men can play in the health and well-being of their partners are demonstrated and practiced. Gender inequality and stigmatization are still prevalent in faith-based communities. Often power is vested in male leadership and submission of women is seen as necessary. Choose Life promotes gender-appropriate behaviors and life-style choices.

Women are empowered through understanding, and practice and implementation of life skills, particularly assertiveness and negotiation. Faith-based communities are encouraged to implement programs that highlight the plight of women and children, reduce stigma, promote gender equality, and support healthy permanent relationships through conflict resolution. Talks and enrichment programs for couples, life-skills training for teenagers, promoting responsible behavior towards women and children in church services, and informational materials support this in a congregational context.

Activity Narrative: Young people, especially women, have shown leadership resulting from the Choose Life program. They have initiated peer-based programs, motivating other young girls to be tested for HIV. Girls have also taken a stance on gender issues and stigmatization.

Community Outreach: Kurima, implementing the Know Your Neighborhood program, is no longer part of the overall program. The program will be done by Hospivision facilitators and care workers.

SUMMARY:

By training faith and community-based leaders, as well as youth leaders in "Choose Life", a value-based Abstinence and Be Faithful (AB) prevention program, CompreCare and its prevention partner, HospiVision, will empower these leaders to implement AB programs in their various constituencies. The emphasis area for this intervention is training as well as community mobilization. Primary target populations include faith-based organizations (FBOs), non-governmental organizations (NGOs) and community leaders, volunteers, caregivers of people living with HIV and AIDS, people living with HIV (PLHIV), children and youth, orphans and vulnerable children.

BACKGROUND:

CompreCare is a South African NGO, undertaking HIV prevention and care activities under a multi-partner initiative called the CHAMPs Initiative. CompreCare's partner in this program is HospiVision, a FBO involved in spiritual care, counseling and training. HospiVision is part of a network of FBOs involved in the prevention of HIV by involving churches in the Tshwane (Greater Pretoria) metropolitan area in Gauteng. The prevention program will strengthen value-based AB messages in faith-based and community networks, with the goal of changing individual, social and community norms. This will lead to reduced risk behaviors and strengthen stable family relationships thereby reducing the HIV infection rate in the target communities.

The program is accredited by the Powell Centre at the University of South Africa (UNISA) and Transforming Tshwane, an ecumenical faith-based initiative focusing on networking and community mobilization in Tshwane. This program is conducted in support of the Tshwane local government's HIV and AIDS strategy which is in line with the National Department of Health (NDOH). HospiVision is also accredited by the NDOH. The Christian AIDS Bureau for Southern Africa has cooperated in the development of the training program and has provided support in the Western Cape. These partnerships and linkages will contribute largely to the sustainability of the program.

This activity builds on the successes achieved with PEPFAR FY 2005, FY 2006 and FY 2007 funding. During the first 18 months of the implementation of the AB program 700 leaders were trained, 57,596 people were reached and an estimated 540,000 people have already been reached through the mass media program by Radio Pulpit. In addition, at no cost to CompreCare or to PEPFAR, the Northwest University is conducting an evaluation and analysis of the impact of the personal and community impact of the Choose Life Program. The results of this study will be made available, annually, in November and will be used to improve and strengthen the program.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Human Capacity Development

The "Choose life" program is a value-based AB training program for faith, NGO, community and youth leaders who are targeted and identified through existing networks. "Choose Life" is an experiential basic (three days) and advanced (five days) accredited training program. The program focuses on two value frameworks ("the golden rule" and Ubuntu "being through community") as well as six central spiritual values (respect, responsibility, integrity, fairness, love and service) and enhancing decision-making, assertiveness and negotiation skills. A trained facilitator conducts workshops with a group of (maximum) 20 participants. Facilitator capacity building is conducted through a master trainer and mentor training program. By increasing the number of master trainers, and faith, community, youth and NGO leaders trained, the number of people reached will increase considerably. "Choose Life (Youth)" has adapted the program for the youth context. The outcome of this program is to empower participants with knowledge, skills and attitudes to live powerful, spiritual, self-confident lives by making wise ethical decisions. There will be a particular emphasis on the role of FBOs in reducing stigma, addressing gender issues and empowering youth and unmarried people to make abstinence and "be faithful" choices, and for active couples to make "be faithful" choices that are based on values and supported by life skills. FY 2008 PEPFAR funding will ensure continued support for fund trainers, workshops, adapt training manuals and handbooks. FY 2008 funding will ensure geographic expansion of these activities to Free state, Western Cape, Limpopo and Mpumalanga and expanding into new areas in Gauteng. Ongoing review and adaptation of the program will be based on lessons learned from the previous year of implementation. This program will in turn reduce stigma and discrimination on HIV and AIDS. The participants are identified in various faith-based communities and they get nominated to attend the course. At the end of each course participants are given evaluation forms and assignments which they have to perform and bring after six months. This is a train the trainer program, where trainers are nominated from existing community structures. Once the training is completed, trainers go back into the community to implement what they have learned and come back after six months for a review.

ACTIVITY 2: Community Outreach

Leaders trained will form action teams that will initiate the community mobilization activities. The value-based prevention approach, incorporating "Choose Life" program, includes raising awareness about HIV and AIDS in faith communities, workshops for community members and youth as well as activities like church services and catechism for children and youth. Apart from the "Choose Life" program implemented by CompreCare's prevention partner HospiVision, other prevention activities will be implemented using

Activity Narrative: several modalities in cooperation with Kurima, a NGO, by means of the Know Your Neighborhood (KYN) program. Prevention communication will be implemented via a network of trained KYN community facilitators who are responsible for spreading AB messages within designated areas at the grassroots level in target communities.

ACTIVITY 3: Mentoring and Implementation Support

Trained community, faith and youth leaders will receive ongoing support through trained mentors and during follow-up workshops. Mentors will assist participants in the completion of assignments for certification as well as in the implementation of the program in their communities. This will significantly increase the numbers of people reached through continuous implementation by trained leaders. HospiVision will continue to train the KYN Facilitators and Child Care Workers from the OVC program in value-based prevention as well as provide counseling and debriefing services on a regular basis. The mentoring and implementation support will form an essential part of a quality assurance and monitoring and evaluation program. Through the monitoring and evaluation process, the impact and effectiveness of the value-based prevention approach will be assessed. FY 2008 PEPFAR funds will support mentors and mentor workshops.

ACTIVITY 4: Information, Education and Communication

Via the medium of Radio Pulpit, a national Christian radio station, and other community radio stations, a media program will emphasize the value-based prevention approach, incorporating the messages of the "Choose life" program about AB lifestyle choices and life skills based on value frameworks and value-based behavior change principles. This will be done through interviews, discussion forums and listener-driven programming. In addition, "Choose life: A value-based response to HIV and AIDS", a handbook will be published on annually by the Powell Bible Centre. This will be linked with series of AB value-based leaflets published by "The Christian Literature Fund" specifically aimed at targeting community members, pastors and leaders of FBOs.

CompreCare and its prevention partner, HospiVision, will contribute towards meeting the vision outlined in the USG Five-Year Strategy for South Africa (PEPFAR goal of seven million infections averted) by improving AB preventive behaviors among the youth and adults and increasing effective CBO/FBO prevention activities.

Program Area: Sexual Prevention: AB

Program Budget Code: 02

Planned Funds: \$0

Activity Narrative: SUMMARY:

Mfesane will employ and train three peer education facilitators to reach a 900 in-school youth, aged 10-14 years. This is done in cooperation with the High Five program (non-USAID). Mfesane will focus on abstinence until marriage and delay of sexual debut for younger youth and sexually abstinence for older youth as well as encourage sexually active youth and adults to be faithful by practicing mutual monogamy and reducing number of sexual partners. Mfesane will adapt and distribute consistent and correct prevention messages addressing the key drivers of the epidemic. Creative strategies are used to reach youth with messages on HIV and AIDS but also on gender stereotypes, self-awareness, and other life skills. This is done in cooperation with the schools in the Western Cape and the Eastern Cape, and Scripture Union (a PEPFAR partner) will provide training and prevention materials.

BACKGROUND:

Woord en Daad, a Dutch faith-based organization, works through its long-standing South African partner organization, Mfesane, to provide quality prevention, HIV counseling and testing, and care services to members of communities in two distinct municipalities: Saldanha Bay in the Western Cape, and Nelson Mandela Bay in the Eastern Cape. These areas are semi-urban, informal settlements and underserved communities with a high incidence of HIV.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Recruiting and Training Peer Education Facilitators

Four additional peer education facilitators will be hired in addition to the existing three facilitators. The peer education facilitators providing abstinence and being faithful (AB) messages are young adults who can give the 10-14 years old some guidance on relevant topics.

At the end of 2009, the new peer education facilitators will be sent for training at Scripture Union. Training will take place for a period of one week. The training includes 27 modules. Pre-course and post-course evaluation forms part of the curriculum whereby the impact of the program can be measured. Specific focus is on building the capacity of facilitators to improve their skills for working with youth. Another focus is on having a comprehensive and integrated HIV prevention approach.

ACTIVITY 2: Adaptation of Education Materials

Mfesane will adapt education materials. By the end of 2009, the materials will have been adapted and will be available for distribution.

ACTIVITY 3: Selection of Schools

Mfesane will select relevant schools in cooperation with the District Department of Education in the project area. When the district education department has identified schools in which Mfesane can work, the organization will approach at least six schools, and collaboratively plan to implement the peer education program with them.

ACTIVITY 4: Implement Peer Education

Each peer educator will work with 30 students every month. Peer education will take place in small groups of 10 students. Peer educators will run four sessions with each group within a month. Different strategies will be explored, like groups of only girls or boys, or, different ways of imparting messages to young people. Prevention messages to delay sexual debut until marriage or to begin practicing secondary abstinence for youth who are sexually active, will be an integral part of the information sessions that aim to prevent HIV, sexually transmitted infections, and pregnancy among unmarried youth. The "Be Faithful" approach will focus on enforcing partner reduction and mutual monogamy. Learners will be given comprehensive information on consistent and correct use of condoms to assist them to transition properly at a later stage. The importance of abstaining from alcohol and drugs will also be widely highlighted to reduce risk behaviors. Modules will include information on HIV and AIDS, and on gender-based violence, male norms and values, human and child rights, gender stereotypes, and self-development. All participants will receive a journal to record their experiences. The program is geared to make a real impact on the students' behavior to prevent further HIV infections among the youth. There will be a follow up session to reinforce the prevention messages and to encourage behavior change four to six months after the end of these four sessions. The students will go home with written information and reference telephone numbers that can be used to access HIV services (e.g., counseling and testing centers). A pre- and post-session evaluation will be done to evaluate the effects of the sessions and to determine future content.

Mfesane establishes links with schools by creating working partnerships with school management and other personnel like school psychologists and Life Orientation teachers. In this way Mfesane can have easy access to the target groups during school hours, thus benefiting the pupils.

The HIV and AIDS sessions are combined with activities of a partner organization, High Five. Mfesane sponsors some of High Five's activities, which hikes and other fun activities to encourage healthy and responsible lifestyles among the youth. This program provides a service to the Safe Schools Program of the Education Department in the West Coast/Winlands area.

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

BACKGROUND: The following is added to this section: In FY 2009 Peace Corps will contract with individuals and organizations specializing in training and conducting outreach in Abstinence and Being Faithful (AB) activities. Priority will be given to contracting with those individuals and organizations that have already received PEPFAR capacity development support. This will (a) strengthen and build upon previous PEPFAR investment and (b) provide training and outreach in the communities where Peace Corps Volunteers (PCV) live and work, allowing the PCVs to provide follow-up and document results.

Modifications to ACTIVITY 1: In FY 2009, approximately 80 PCVs and 80 counterparts will receive training in HIV prevention. In addition to using the Peace Corps Life Skills Manual, PCVs and counterparts will be trained to address male norms and behaviors and gender equality based on the EngenderHealth program, Men as Partners.

Modifications to ACTIVITY 2: Approximately 80 PCVs and 80 counterparts will attend Peace Corps Project Design and management training.

ACTIVITY 3: The COP 2008 ACTIVITY 3 has been deleted and replaced with the following activity. Approximately 80 PCVs and 80 counterparts will attend Grant Proposal Writing, and Monitoring and Evaluation training to enable them to prepare Volunteer Activity Support and Training (VAST) proposals for PEPFAR and Small Grant proposals for the U.S. Embassy. The training will also support the development and use of appropriate monitoring, reporting and evaluation tools with their host schools and civil society organizations. This training will take place in the context of the AB prevention training and will find application across all program areas.

ACTIVITY 5 in COP 2008 is now ACTIVITY 4 in COP 2009. The following changes have been made: (1) Approximately 80 PCVs and 80 counterparts will deliver life skills sessions in schools and communities, using and developing peer educators in the process; and (2) 4,000 individuals will be reached through community outreach that promotes HIV prevention; 250 peer educators and other service providers will be trained to promote HIV prevention.

SUMMARY: Peace Corps Volunteers (PCVs) work in civil society organizations (CSOs) that focus on HIV and AIDS relief under the Community HIV/AIDS Outreach Project (CHOP) and in the education system at the primary school and district levels under the Schools and Community Resources Project (SCRP). All CHOP and SCRPCVs will be encouraged to work with both in-school and out-of-school youth in delivering Abstinence/Be Faithful (AB) messages through life skills and peer education sessions delivered in classrooms or in association with extracurricular school activities and through community events organized by youth and adult volunteers. Activities in this program area aim to encourage positive life styles and health-seeking behaviors among youth and to help them develop positive gender norms and expectations. SCRPCVs will specialize in training teachers and mobilizing in-school youth while CHOP PCVs will focus more on training out-of-school peer educators, community citizen volunteers, and CSO employees and mobilizing traditional, business and religious leaders in supporting community- and school-based prevention activities. CHOP and SCRPCVs and their counterparts will be encouraged to work together in designing and delivering comprehensive HIV prevention training and outreach programs in their rural communities. Prevention training and outreach activities will be conducted in the KwaZulu-Natal, Limpopo, North West, Northern Cape and Mpumalanga provinces. **BACKGROUND:** To date, the program in South Africa has relied primarily on PEPFAR-funded PCVs assigned to the (previous) NGO Capacity Building Project. Although the FY 2007 program still utilizes PEPFAR-funded PCVs, the Schools and Community Resources Project (SCRPC) and the (now) Community HIV/AIDS Outreach Project (CHOP) were significantly revised in FY 2007 so that all CHOP and SCRPCVs and their counterparts can be involved in prevention AB activities. In FY 2008 the program will not place PEPFAR-funded PCVs and instead use PEPFAR funds to enable all PCVs to train service providers in HIV prevention and to conduct HIV prevention outreach to various youth groups. **ACTIVITIES AND EXPECTED RESULTS:**ACTIVITY 1: HIV Prevention TrainingIn FY 2008, approximately 100 PCVs (key legislative issue) and 100 counterparts will receive training in HIV and AIDS prevention (key legislative issue), using the Peace Corps' Life Skills Manual (an internationally recognized best practice model) and other peer education materials. The peer education and life skills training will focus on building skills among youth in communication, decision-making, thinking, managing emotions, assertiveness, self-esteem building, resisting peer pressure and building relationships. ACTIVITY 2: Project Design and Management TrainingApproximately 100 PCVs and 100 counterparts will attend Peace Corps' Project Design and Management training to develop skills in participatory development and implementation of HIV and AIDS activities with target groups. This training will take place in the context of the AB prevention training and will find application across all program areas. ACTIVITY 3: Organizational Capacity Building TrainingApproximately 60 CHOP PCVs and 60 CHOP counterparts will attend Organizational Capacity Building training to enable them to develop or strengthen policies, systems and practices that will enable CSOs to deliver quality and sustainable HIV and AIDS programs. This training will take place in the context of the AB prevention training and will find application across all program areas. ACTIVITY 4: Grant Proposal Writing and Monitoring and Evaluation TrainingApproximately 100 PCVs and 100 counterparts will attend Grant Proposal Writing and Monitoring and Evaluation training to enable them to prepare Peace Corps PEPFAR Volunteer Activity Support and Training (VAST) proposals and U.S. Embassy PEPFAR Small Grant proposals. The training will also support the development and use of appropriate monitoring, reporting and evaluation tools with their host schools and CSOs. This training will take place in the context of the AB prevention training and will find application across all program areas. ACTIVITY 5: Delivery of Life Skills SessionsApproximately 100 PCVs and 100 counterparts will deliver life skills sessions in schools and communities, using and developing peer educators in the process. Teachers in the schools and supportive adults and business, traditional and religious leaders in the communities also will be used to champion HIV and AIDS activities. Male behaviors and gender equity (key legislative issue), reducing violence and coercion and stigma/discrimination are directly addressed in the prevention activities. PCVs work with counterparts in the schools and communities to ensure that, on completion of their service, their initiatives continue with school and community support. 3000 individuals will be reached

Activity Narrative: through community outreach that promotes HIV prevention and 120 peer educators and other service providers will be trained to promote HIV prevention. Both CHOP and SCRIP PCVs contribute to the US Mission's country emphasis on prevention by uniquely providing American citizen assistance in rural communities. Their activities are also closely aligned to the South African government strategies in each of the provinces in which PCVs work.

Planned Funds: \$0

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

ACTIVITY 1: Abstinence and Being Faithful Life Skills

Population Council (PC) will continue to provide activities described in FY 2008, but the role of PC will change. In FY 2009, PC will work with the Mpumalanga Department of Education and help them take over the implementation of the program. As an exit strategy, and to ensure sustainability, PC will ensure that a model has been adapted, and that this program is completely integrated to the existing Life Skills Program; and that the recipients have developed a sense of ownership. The Council will provide assistance with training, work plan development, and program monitoring and management, and other technical issues as needed.

ACTIVITY 2: Faith-Based Organizations and Mutual Monogamy

The program will remain the same in FY 2009; however, the role of PC will change. In FY 2009, PC will work with the South African Council of Churches and Eastern Cape Provincial Council of Churches (ECPCC) to take over the implementation of the program. As an exit strategy and to ensure sustainability, PC will ensure that a model has been adapted, and that this program is completely integrated in the existing faith-based organization (FBO) and church activities, and that the recipients have developed a great sense of ownership. The Council will provide technical assistance with training, work plan development, and program monitoring and management, and other technical issues as needed.

ACTIVITY 3:

Due to the Population Council's strategic planning and the PEPFAR South Africa's technical considerations the activities and budget for this project have been moved from APS to AB Prevention.

This activity is linked to Activities 1 and 2. The main objective is to sustain, strengthen and work beyond the existing interventions aimed at reaching school learners with AB life skills messages, and building the capacity of FBOs to carry out HIV prevention messages to church members. This program will reach out-of-school youth, which the existing two projects miss, with a structured and balanced ABC strategy that addresses three key behaviors recommended to prevent the likelihood of sexual transmission of HIV, (i.e., abstinence from sexual intercourse; being faithful to one sexual partner; and correct and consistent use of condoms). The proposed program will be implemented in two provinces (i.e., Eastern Cape and Mpumalanga) in collaboration with the ECPCC and Mpumalanga Provincial Council of Churches [MPC]. These two provincial FBOs have strong linkages with PC.

In FY 2008, this program will be piloted in two communities, one district in Eastern Cape [Amathole District] and one in Mpumalanga [Nelspruit]. During FY 2009, PC will scale up this program by identifying two additional districts in each of the two provinces. This strategy is meant to provide an opportunity for a phase-out scale-up approach, which will also give the partners their own opportunity to develop and test relevant interventions, apply lessons learnt and program the results in the new sites, while strengthening activities in the pilot sites with technical assistance from Population Council.

During FY 2009, this program will focus on consolidating relevant, effective interventions in the communities reached in FY 2008, developing and facilitating sustainability plans for these sites. Secondly, the program will rapidly expand into two additional districts in each of the two provinces, drawing on lessons from year one. During this scale-up phase, the following activities will be reinforced: 1) building synergy among the three activities; 2) mobilizing youth and different stakeholders; 3) building service delivery capacity, and fostering linkages and networks in new sites; 4) facilitating and fostering sustainability interventions, including community leadership/ownership, and developing management and resource mobilization skills; 5) monitoring key indicators and outcomes and documenting results and program lessons; and 6) disseminating results widely and facilitating utilization by different stakeholders engaged in prevention programs for youth.

SUMMARY: Prevention efforts are key to reducing sexual transmission of HIV. In South Africa, the Population Council (PC) has implemented several prevention programs targeting young people, learners, as well as men and couples to delay sexual debut, promote faithfulness and mutual monogamy, and to reduce risk behaviors. With PEPFAR FY 2008 funds, PC intends to strengthen and expand these activities. The proposed activities are in response to requests from various government departments (provincial and national), and will draw upon existing partnerships with South African institutions and organizations such as the Departments of Health and Education and the South African Council of Churches. BACKGROUND: Over the past few years, the PC has developed an expertise in developing strategies and interventions that more specifically focus on the role of men in HIV prevention. The first activity has been to work with the Department of Education, South African Council of Churches and local FBO piloting interventions on AB in primary schools and mutual monogamy in churches in Mpumalanga Province and the Eastern Cape Province, respectively. These community interventions have reached couples, church members, youths, teachers, learners, parents/guardians and other stakeholders. However, reaching an adequate number of men through churches is a major challenge because fewer men than women participate in church activities. This year's activities will continue to increase male involvement through specific strategies such as strengthening couples interventions and educating learners. The emphasis area include: human capacity development public health evaluations / targeted evaluations. Interventions will target program managers, program implementers, NGOs and other stakeholders. ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: AB Life Skills AB Life Skills: Adapting a comprehensive school-based AB Life Skills Curriculum for 8th and 9th grade learners. The AB Life Skills curriculum, Dare to be Different (D2BD) is a Horizons developed comprehensive ABC prevention curriculum specifically designed for South African schools. D2BD is unique to the life skills curricula currently being implemented in South African schools as it is an outcomes-based curriculum that utilizes a learner-centered approach that promotes a balanced ABC prevention strategy by emphasizing abstinence (A) and faithfulness (B) and building upon the existing condom knowledge of in school learners. D2BD has been designed to meet all the learning outcomes and assessment standards set forth by the South African DOE and the National Curriculum Statement for the

Activity Narrative: national Life Orientation/life skills program in schools. D2BD promotes a balanced ABC strategy through a comprehensive curriculum that addresses/promotes goal setting, character building, messages and activities that promote the advantages of abstinence and the consequences of sexual engagements, activities around risk assessment, and skills building, including: decision making, critical thinking, problem solving, resisting peer pressure and communication skills. D2BD features two additional components: (1) Hometalk: homework activities fostering parent/child communication, and (2) Peer Support: supplemental activities to be implemented by trained learners. The current Life Orientation curricula being implemented in South African schools do not address any of the above mentioned messaging or skills building and this is what makes the D2BD curriculum unique. D2BD has been piloted in nine primary schools in Mpumalanga District among 1,562 learners and 25 teachers. Data from the pilot suggests that the curriculum differs from what is currently being implemented, provides more comprehensive information on HIV prevention, encourages parent-child communication around HIV prevention and pregnancy and is well received by learners and teachers. In FY 2008, Population Council will build on the findings of the pilot and implementation of the curriculum in 6th and 7th grades in 2006 and 2007 and adapt the AB life skills curriculum D2BD for use in 8th and 9th grade (13-14 year old learners) classrooms in South African schools in Mpumalanga Province. The D2BD curriculum that has been developed for the 6th and 7th grades, and as the Life Orientation learning outcomes and assessment standards vary by grade, D2BD will need to be adapted to reflect the requirements for the 8th and 9th grade DOE Life Orientation Program. Population Council will monitor and evaluate the implementation of the adapted curriculum in the 8th and 9th grade classrooms. Some formative research, and a pre-test and pilot will need to be conducted to be sure that the material is age appropriate, that it meets the DOE Learning Outcomes and Assessment Standards and that teachers are comfortable with the curriculum. For this evaluation Population Council is interested in following the same cohort of students who participated in the program in 2007. As this study will be a cohort study Population Council will also need to continue monitoring and evaluating the implementation of the AB life skills curriculum in the 7th grade classrooms. The 2008 cohort study will follow the 1,562 learners who received the AB curriculum as part of their schools Life Orientation Program in the 6th and 7th grades in 2007. The cohort study evaluation will focus on sexual behavior outcomes but will also examine knowledge and attitudinal outcomes around abstinence and faithfulness. **ACTIVITY 2: Strengthening FBO Prevention Activities** Kindly note that the program area for the FBO Mutual Monogamy Study has been changed to Counseling and Testing. For FY 2008, this program focuses on promoting Couple's HIV Testing and Counseling through faith-based organizations. The program will continue to focus on couples in churches with the goal of mutual monogamy among these couples. Couples will continue to receive messages and skills to enable them to establish and/or maintain mutual monogamy in their partnerships. Indeed, mutual monogamy messages are still important for this population as baseline data collected April 2007 among church members in Butterworth and Alice indicated that approximately one-third of church-goers in stable relationships suspected their primary partner to be having sex with someone else, and 17 percent of those in stable relationships indicated they had sex with someone else outside of their primary relationship. Given the potential for exposure to HIV through non-monogamous relationships, HIV testing among couples becomes crucial, particularly in light of the high level of HIV serodiscordance among couples that have been reported in Sub-Saharan Africa. An integral part of the FBO program on mutual monogamy has been the promotion of HIV counseling and testing, particularly as a couple, so that they can know their HIV status and plan accordingly as a couple. In the current program, individuals and couples have been referred for HIV counseling and testing, however, the quality of the service of couple counseling and testing is likely to be poor. Therefore, by adding on the couple counseling and testing component to this program, the program becomes more comprehensive. This activity contributes to the PEPFAR goal of averting seven million infections.

Table 3.3.02: Activities by Funding Mechanism

Mechanism ID: 8709.09	Mechanism: N/A
Prime Partner: Montefiore Hospital	USG Agency: HHS/Centers for Disease Control & Prevention
Funding Source: GHCS (State)	Program Area: Sexual Prevention: AB
Budget Code: HVAB	Program Budget Code: 02
Activity ID: 23745.09	Planned Funds: \$0
Activity System ID: 23745	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

SUMMARY:

ACTS (Advise, Consent, Test, Support) is an innovative system for implementing routine HIV testing. It was developed by the Adolescent AIDS Program at the Children's Hospital at Montefiore Medical Center in New York and has been proven in both the US and South Africa to help providers more routinely offer HIV counseling and testing to their patients.

BACKGROUND:

This is a new activity funded in last quarter FY 2008. Montefiore Hospital implements youth-focused prevention programs that seek to educate and empower youth to delay the onset of sexual activity, abstain from sex and/or reduce the number of concurrent sex partners in line with the goals of the HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011. Prevention programming will foster female youth empowerment with a goal of improving self-esteem and reducing high-risk behaviors, and programming will also emphasize being faithful to young men in an effort to reduce the practice of multiple concurrent partners.

ACTIVITIES AND EXPECTED RESULTS:

In late FY 2008, Montefiore's Youth Program looked to provincial youth peer education programs to open doors to implementing ACTS (Advise, Consent, Test, Support) in other provinces. In addition, Montefiore was asked to assist these youth programs by providing training on routinely offered voluntary counseling and testing and by providing sexual prevention messages.

In FY 2009, \$122,000 will go toward abstinence and being faithful (AB) programs. South Africa in general has a high teenage pregnancy rate with every one in three girls having had a baby by the age of 20 (LoveLife Report). In many instances, the first sexual experience of girls is through coercion. Other reported factors that contribute to teenage pregnancy include health-care professionals' attitudes about youth and sex (presenting barriers to accessing contraception), social pressures and self affirmation (pregnancy proves fertility and, therefore, womanhood; multiple concurrent partners proves virility and, therefore, manhood) and low socio-economic conditions (lack of education and employment opportunities). To address these issues in the context of HIV prevention, the ACTS Project proposes partnering on a new program that engages small youth-serving non-governmental organizations to offer peer-delivered prevention programs in three new provinces: Limpopo, Mpumalanga and KwaZulu-Natal.

Strong linkages will be sought with youth peer education programs that can engage in-school and out-of-school youth to delay sexual debut (especially youth in high transmission and rural areas) and reduce risk among sexually active youth by promoting the idea of being faithful and reducing the practice of having multiple concurrent partners. The ACTS program leadership will work with the appropriate provincial and district department of health offices to coordinate these new sub-partner efforts with sexual prevention as well as counseling and testing activities in their service areas. Successful applicants will receive small to medium sized grants to educate and empower youth to delay the onset of sexual activity, abstain from sex and/or reduce the number of concurrent sex partners.

Due to the high risk nature of their sexual relationships, it is of utmost importance that both young men and women are equipped with the necessary knowledge to make informed decisions about their sexual and reproductive health, and services to address their sexual and reproductive health needs are accessible and efficient. The programs will also educate youth about HIV and AIDS, provide HIV counseling and testing and emphasize other key prevention messages in line with the goals set forth by the South African government. The new sub-partners will be provided with an evidence-based prevention curriculum such as "Family Matters" that they can adapt for their local youth populations. Grantees will also receive ACTS collateral materials including HIV prevention and education videos; standard operating procedures for HIV testing and prevention programmes, work plans with measurable objectives and timelines within which they must meet their targets. The evaluation of these sub-partners will take place as continuing quality improvement activities recorded on a quarterly basis.

The Montefiore Medical Center aims to eliminate missed opportunities to test youth by building the capacity of youth-serving clinics and STI clinics to more routinely provide CT using the ACTS model. ACTS (Assess, Consent, Test and Support) is a program of rapid, simplified counseling and testing (CT) that effectively scales up provider-initiated counseling and testing (PICT). In addition, will implementing a youth-based PICT, Montefiore Medical Center will work with rural districts to target non-government organizations (NGOs) working with youth to provide HIV prevention activities.

BACKGROUND:

Engaging young people in HIV counseling and testing, prevention and care is one of the most important strategies for reducing the burden of HIV and AIDS in South Africa. Unfortunately, thousands of opportunities to achieve these goals are missed every day when vulnerable South African youth seek a variety of health care services but are not offered HIV counseling and testing (CT) or provided with HIV prevention information. By reducing pre-test counseling sessions to five minutes or less, ACTS allows nurses to incorporate CT into the other clinical services they provide, such as sexually transmitted infection (STI) care and family planning and promotes immediate follow-up and linkage to care. In addition, youth can then be linked with NGO providing HIV prevention services to ensure behavior change. The target population for this activity is youth between the ages of 10-25 in hard to reach parts of the country. The major emphasis area for these activities includes building local capacity and creating linkages, networks and referrals between youth-based prevention services

Activity Narrative: and the ACTS CT model.

ACTIVITES AND EXPECTED RESULTS:

Using ACTS, this program will focus initially on maximizing the linkages between youth based NGOs working in the area of HIV and AIDS prevention and CT services in high-prevalence youth clinics, starting with STI clients and expanding to family planning clients. The linkage with the NGOs will ensure that ACTS services can be implemented in conjunction with AB targeted messaging and with other NGO activities. ACTS will link with youth-based NGOs in and around the clinics where services are being implemented. This will ensure that youth get both CT services and AB prevention messages. Similarly to its approach with working with health facilities, the ACTS team will engage each new NGO, develop an implementation and monitoring plan and train all relevant providers HIV and AIDS prevention, in the importance of CT, collection PEPFAR indicators, provide quality assurance monitoring and initial HIV care. During the five year cooperative agreement, this model will be continuously refined and successively implemented in high prevalence communities and sites throughout South Africa starting in the Western Cape and Mpumalanga. The youth-based NGO project will expand services to Waterberg district in Limpopo province and the North West Province.

In FY 2008, the team will continue to refine the ACTS services in two youth clinics in Khayelitsha. A monitoring and evaluation plan will be developed that includes PEPFAR indicators. A quality assurance plan will evaluate linkage to prevention among HIV negative youth as well as ensure that newly diagnosed HI-infected youth also receive information on positive prevention. A Project Director will be hired and trained and locations in Mpumalanga or other Province will be chosen as well as additional clinical and community sites in the Western Cape. The goal is for this partner to test 20,000 youth for HIV and link them to prevention.

These activities will contribute towards meeting PEPFAR's 2-7-10 goals by targeting youth between the ages of 15-25 and ensuring that they receive AB messages. In linking prevention services with CT services, this activity will ensure that youth understand how to stay negative after undergoing a HIV test.

Table 3.3.02: Activities by Funding Mechanism

Mechanism ID: 2810.09	Mechanism: CARE UGM
Prime Partner: Leonie Selvan	USG Agency: HHS/Centers for Disease Control & Prevention
Funding Source: GHCS (State)	Program Area: Sexual Prevention: AB
Budget Code: HVAB	Program Budget Code: 02
Activity ID: 13986.23089.09	Planned Funds: \$0

Activity Narrative: Funds removed from AB
ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Leonie Selven Communication (LSC) will expand FY 2008 activities in FY 2009.

The youth-friendly training manual that will be piloted in at least three provinces during FY 2008 will be rolled out nationally during FY 2009.

A game, similar to Trivial Pursuit, will be developed to support training with the youth-friendly manual. This will be done in a fun, more interactive way, more appropriate to the target audience.

In conjunction with the provinces, possibly Mpumalanga and Eastern Cape initially, LSC will continue to hold focus group discussions with peer educators and a cross-section of urban and rural youth to determine what communication channels and media work best for them, so that the material developed is appropriate.

In addition, since self esteem is a major part of youth being able to say no, LSC will develop a peer educator/train the trainer program based on self-esteem. This course will explore bullying and aggression, gender issues, cultural issues, social norms, etc.

SUMMARY:

At the request of the National Department of Health (NDOH) and CDC, Leonie Selvan Communications (LSC) will use PEPFAR funding to review the existing Youth Friendly Training Manual for Nurse Youth Health Providers, as well as other material pertaining to this target group. The material will be updated and reworked to ensure that it is user friendly and accessible. Prior to revising the material, focus groups will be held with nurse youth health providers to determine their perceptions of the existing material and to identify any specific needs or areas of improvement, if necessary. The updated manual will be piloted at provincial level before being finalized. Train the trainer forums will be held at the launch of the new Youth Friendly Training Manual for Nurse Youth Health Providers so that facilitators are familiar and comfortable working with the revised manual. In addition, Leonie Selvan Communication will work with the NDOH to develop a tool kit for school-based peer educators. The emphasis area for this activity is in-service training as health workers and peer educators on youth friendly services and building capacity of local organizations. This will be done by providing tool kits to school-based peer educators from different non-government organizations to ensure the delivery of quality peer education messages. Target populations for this activity are adolescents aged 10-24 and adults which includes all health care workers.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Review and Consolidation of Existing Materials

There are currently a number of different curricula being used by the NDOH to train nurses and other health care workers on the specific needs of youth in the context of HIV and AIDS. In addition, there is a number of different curricula that focus on the establishment and implementation of youth-friendly services. At the request of the NDOH, Leonie Selvan Communications will review the curriculum and make recommendations for a single curriculum that encompasses aspects from the multiple sources. The new materials will focus on ensuring that all youth between the ages of 10- 18 receive HIV prevention messages when they visit health services. The primary focus of this activity is abstinence. However, for youth that are already sexually active the focus will be on the B component of the AB program and will be linked with other prevention activities of the NDOH to ensure the provision of condoms and clear and consistent messaging around condom usage.

ACTIVITY 2: Focus Groups with Youth Nurses

In order to ensure that the specific needs of youth are addressed and incorporated into the curriculum and materials to be developed, Leonie Selvan Communications will conduct nine focus group discussions with nurses from youth friendly clinics. All nine provinces will be represented in the focus groups to ensure that provincial youth issues can also be address in the materials and curriculum. The results of the focus group will be presented to the NDOH youth directorate with the curriculum review outlined in activity Both activity one and activity two will culminate in the development of a youth friendly training manual for nurse providers. The national youth program will ensure that all youth nurse providers are trained in the curriculum ensuring the provision of youth friendly service delivery in the context of HIV.

ACTIVITY 3: Materials for Peer Educators

At the request of the National Department of Health and CDC, Leonie Selvan Communications (LSC) will use PEPFAR funding to identify, source and develop a range of suitable promotional material for peer educators. This material will include bags to carry their manuals and hand-outs when they visit schools. Marketing material in the form of leaflets, posters and brochures will be designed and developed to assist peer educators market the peer education program. In addition, a Resource Pack/tool kit will be developed to ensure that they have all the necessary materials, handouts and resources to conduct quality peer education workshops. Prior to developing material focus groups will be held with a cross-section of peer educators to identify what marketing and training material works best for them. New material will be designed/ developed based on the outcomes of the focus groups.

This activity contributes to the PEPFAR 2-7-10 goals by ensuring access to youth friendly services in the context of HIV and AIDS. In addition, this project will assist in ensuring the sustainability of the national peer educator program by providing the peer educators with a standard set of resources to conduct quality peer education activities.

Table 3.3.02: Activities by Funding Mechansim

Mechanism ID: 9691.09

Prime Partner: Lifeline Mafikeng

Funding Source: GHCS (State)

Budget Code: HVAB

Activity ID: 22508.23090.09

Activity System ID: 23090

Mechanism: N/A

USG Agency: HHS/Centers for Disease Control & Prevention

Program Area: Sexual Prevention: AB

Program Budget Code: 02

Planned Funds: \$0

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

SUMMARY:

Activities conducted at identified sites include HIV counseling AND testing and concurrent HIV prevention and marketing activities. Trend Setters* will undertake the HIV prevention and marketing activities include placing banners, canvassing the area on foot, distributing pamphlets and invoking discussion with pedestrians, conducting information education sessions on HIV and AIDS, projecting culturally appropriate abstinence and be faithful (AB) messages, performing dramas about HIV and AIDS, establishing "post-test clubs" and condom demonstrations/distribution.

Teenager programs (13 -18 years) will focus mainly on abstinence or delayed sexual encounter and encourage those who are sexually active to pledge abstinence once again. In the programs for older youth and adults, focus will be on encouraging them to pledge faithfulness to monogamous relationships and to avoid cross-generational relationships.

BACKGROUND:

LifeLine Mafikeng is a non-governmental, non-profit, community-based organization affiliated to LifeLine Southern Africa, which in turn is affiliated to LifeLine International. Affiliation is awarded annually based on maintenance of standards, adherence to policy and procedures and acceptable performance in areas of service. Operational since 1991, LifeLine focuses on counseling and crisis intervention services; provision of life skills training; capacity building for community-based organizations; voluntary counseling and testing and HIV prevention activities.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Prevention with Traditional Leaders

LifeLine will work with traditional leaders and the community to transform male norms and behaviors in order to reduce violence and sexual coercion, which is rife in the community. Traditional Leaders will be utilized as participants in workshops, and in training with respect to traditional healing procedures and addressing cultural norms. They are an important sector and can assist with community mobilization and promote prevention activities such as condom distribution.

ACTIVITY 2: Prevention with Farm Workers and Sex Workers

Sex workers and farm workers are vulnerable populations who have little access to health care and information. These groups will be targeted with the mobile units and Trend Setters for HIV testing, referral and information. Programs will include prevention and living positively programs to promote maintaining a negative HIV status and living positively to ensure quality of life. Trendsetters will conduct regular meetings with each of these groups to discuss issues such access to health care and sexually transmitted infections, condom use and other prevention strategies. They may even be encouraged to form Post-Test Clubs to promote prevention strategies and positive living.

ACTIVITY 3: Post-Test Clubs

Post Test Clubs (PTC) is a model used in Uganda THAT help people living with HIV and AIDS to cope with infection, and in addition, helps HIV-infected and negative members adopt and maintain an effective prevention behavior. Formation of PTC can assist in changing the social norms in support of HIV risk reduction. (UNAIDS pub.20 1999). PTCs will be established at each of the partner community-based organizations. The PTC aims to address issues of HIV prevention, stigma reduction and positive living while also addressing issues of gender-based violence and cross-generational relationships. Multiple Wound Phenomena will be addressed in the PTC environment as a strategy to mobilize communities to effect behavioral change with respect to HIV and AIDS, domestic violence and-cross generational relationships.

HIV prevention activities emphasize fidelity, though these are balanced with abstinence messages, especially those targeted towards youth, and condom promotion (i.e., correct and consistent use of male or female condom) in order to reach as many people in the target audience as possible. Management will ensure PEPFAR regulations are strictly followed.

ACTIVITY 4: Education and Marketing

Education and marketing is used to dispel myths and to ensure the right information is out there. These activities enable people, who may have been unable to overcome fear or stigma, to encourage knowing their HIV status, which ultimately can prolong or save their lives and possibly the lives of others.

Activities conducted at identified sites include HIV counseling & testing and concurrent HIV prevention and marketing activities. Trend Setters* will undertake the HIV prevention & marketing activities include placing banners, canvassing the area on foot, distributing pamphlets and invoking discussion with pedestrians, conducting information education sessions on HIV&AIDS, projecting culturally appropriate abstinence and be faithful messages, performing HIV&AIDS-related dramas and performances, establishing "post test clubs" and condom demonstrations/distribution. Post Test clubs (PTC) is a model used in Uganda which helps PLWHA's cope with infection and both HIV positive and negative members adopt and maintain an effective prevention behavior. Formation of PTC can assist in changing the social norms in support of HIV risk reduction. (UNAIDS pub.20 1999).

HIV prevention activities especially emphasize fidelity, though are balanced with abstinence messages,

Activity Narrative: especially targeted towards youth, and condom promotion (i.e. correct and consistent use of male or female condom) in order to reach as many people in the target audience as possible. Management will ensure PEPFAR regulations are strictly followed.

Education and marketing is essentially to dispel myths and ensure the right information is out there. These activities enable people, who may have been unable to overcome fear or stigma to encourage knowing their HIV status, which ultimately can prolong or save their lives and possibly the lives of others.

Teenager programs (13 -18) will focus mainly on abstinence or delayed sexual encounter and encourage those who are sexually active to pledge abstinence once again. Programmes will include prevention and living positively programmes to promote maintaining a negative HIV status and living positively to ensure quality of life.

Table 3.3.02: Activities by Funding Mechanism

Mechanism ID: 4753.09	Mechanism: N/A
Prime Partner: LifeLine North West - Rustenburg Centre	USG Agency: U.S. Agency for International Development
Funding Source: GHCS (State)	Program Area: Sexual Prevention: AB
Budget Code: HVAB	Program Budget Code: 02

Activity ID: 8271.23093.09

Planned Funds: \$0

Activity System ID: 23093

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

LifeLine Rustenburg will continue activities described in COP 2008, but in FY 2009 will focus on superior service delivery by ensuring competent personnel to provide education, motivation and training to individuals and communities; and continued update and enhancement of imaginative and effective training material to advance abstinence and be faithful (AB) prevention strategies and programs.

LifeLine will augment existing monitoring and evaluation activities with a state-of-the-art data management and reporting system. This will enhance monitoring and evaluating activities to ensure accurate and reliable data compilation, and to guide and improve programs, with the aim of implementing future research activities.

A further enhancement would be facilitating active involvement of the boy child in peer education and HIV prevention activities within the community. LifeLine will start targeting boys at school level with the aim of continued involvement and personal responsibility throughout life. The organization will aim at increasing the number of HIV negative students who graduate from high school. Ideally, these students would be equipped with the necessary knowledge and life skills to maintain a negative HIV status successfully, and to cope with adulthood effectively.

LifeLine will encourage participation of school governing bodies, parents and populations at higher risk in trainings and other activities that will promote prevention of HIV, sexually transmitted infections and other preventable diseases. The North West province has a large mining community and therefore emphasis on training and education for mobile and migrant populations will be amplified.

Another focus area is addressing the intergenerational sex problem and promoting the balance between youth and adult prevention activities in curbing the high HIV prevalence among young women and adult men. In life skills training sessions, girls and young women will be targeted with personal empowerment skills to help discourage them from entering into relationships with older men. For boys and men, training will emphasize moral responsibility with regard to partnerships with younger girls or women.

SUMMARY: The PEPFAR-funded Abstinence and Being Faithful activity described in this FY 2008 COP harnesses the activities and work of other ongoing projects, namely, the Community Counselor Project, especially with respect to community mobilization and outreach. It also benefits from contributions from other donors such as Anglo Platinum Mines, which has committed to three-years of cost-sharing. In particular, Anglo Platinum Mines are funding a vehicle to be used in the mining areas and covering traveling costs and stipends for a nurse and driver. Relationships formed with local government and municipal departments will assist to ensure the continuity of the project. The two major components of the Abstinence and Being Faithful (AB) program area include community outreach and mobilization around the designated hot spots and throughout Bojanala District and the LifeLine centre in Rustenburg. The AB messages and HIV prevention activities address gender issues and gender dynamics directly, encouraging target populations to examine gender roles in society. Emphasis areas include gender addressing male norms and behaviors, and reducing violence and coercion as well as human capacity development. Target populations include boys and girls (aged 10-14); adolescents; and adult men and women, especially of reproductive age. In a generalized epidemic such as the one in South Africa, the project targets the general population; thus the project will also reach groups such as persons who engage in transactional sex, but who do not identify as persons in sex work, discordant couples, people living with HIV, and orphans and vulnerable children. BACKGROUND: LifeLine Rustenburg is a non-governmental, non-profit, community-based organization affiliated to LifeLine Southern Africa which in turn is affiliated to LifeLine International. Affiliation is awarded annually based on maintenance of standards, adherence to policy and procedures and acceptable performance in areas of service. Operational since 1991, LifeLine focuses on counseling and crisis intervention services; provision of life skills training; capacity building for community-based organizations; voluntary counseling and testing (VCT) and HIV prevention activities. To date LifeLine has implemented a community counselor project (CCP) that provided counselors to 150 health facilities in Bojanala; established a non-medical VCT site; provided 24-hour counseling service via a national counseling line; and provided training to numerous other organizations. FY 2008 plans for the project include placing counselors at all health facilities in the Bojanala District; supplying mobile VCT; conducting referrals for care to HIV persons; and promoting HIV prevention throughout the Bojanala District of the North West Province. The South African Government, specifically the Bojanala District Department of Health in the North West province, supports and contributes to a sustained and broad-based community mobilization and outreach effort in public health facilities, schools, other government outlets, and through media. Informal partners include local businesses, Radio Mafisa, local taxi associations, mining corporations and others, who provide support for our community mobilization and outreach efforts. In particular, Mafisa Radio Station provides an hour time slot weekly for Lifeline to discuss and debate on topics related to HIV and AIDS education. The local taxi associations agreed, in FY 2006, to paste Lifeline stickers on their vehicles and to participate in prevention campaigns. Many prevention modules require male and female participants to be separated in order to delve into specific issues. This is the approach LifeLine will continue to use during education and training sessions in the FY 2008 period. The program activities also emphasize changing male norms and behaviors, promoting one-partner relationships and altering the norm of violence against women in society. A hot spot is defined as an area that has a high rate of traffic of vulnerable persons; for example, taxi ranks and the mining hostels. The LifeLine hot spots are currently located in the Bojanala region, with one hot spot identified in each sub-district. In COP FY2007, PEPFAR enabled LifeLine to work in eight such hot spots, with the target for COP FY 2008 being 12 hot spots. ACTIVITIES AND EXPECTED RESULTS: Four activities will be covered in this program area. For youth, particular emphasis is placed on abstinence and delayed sexual debut based activities. Contact is made during school hours with education sessions and at the end of the school day when leaving the premises. After school activities (i.e. sports, youth and church clubs, etc.) are utilized especially to reach the out-of-school youth. Men and women, especially of reproductive age, are initially reached at the hot spots, and thereafter encouraged to join more intensive education sessions. They are also contacted at evening and weekend activities such as men's and/or women's clubs/groups, church groups, "stokvel" meetings, etc. In a generalized epidemic such as the one in South Africa, the project targets the general population. This

Activity Narrative: will also include encouraging sexually active youth to consider secondary abstinence. Messages for the older youth and adult population will focus mostly on reduction of number of sexual partners and will discourage multiple and concurrent sexual relationships as well as cross-generational sex. LifeLine will also work with the traditional leaders and community to transform male norms and behaviors in order to reduce violence and sexual coercion, which is rife in the community. **ACTIVITY 1: Community Mobilization**The community mobilization and outreach efforts seek to ensure that the general public receives the necessary information targeted towards behavior change. Eight community outreach volunteers and four trainers will conduct the HIV prevention activities in areas surrounding the hot spots, which are visited bi-monthly. Education is provided in plenary sessions, as well as focus group education and discussion. Education topics highlight behavior change; attitudes; cultural, legal, gender, alcohol and substance in young people as a risk factor, and other issues; multiple partners; same sex partners; and cross-generational sexual partners. The pros and cons of abstinence, benefits of later sexual debut, and one partner relationships will be highlighted to people who are not yet sexually active. For persons already sexually active emphasis will be on faithfulness, one partner relationships and secondary abstinence where relevant. All prevention activities are target and language group sensitive i.e. each target group receives relevant information and education specific to the age, culture or other dynamic of the group. Some of the LifeLine activities are conducted at the lifeline offices while others take place within the communities. **ACTIVITY 2. Capacity Building**Human capacity development requires ongoing trainings throughout the project for the community outreach volunteers in order to ensure their motivation, competency and proficiency in carrying out the activities. Peace Corps volunteers help with training where required. Bi-annual training as an incentive that ensures retention of staff in the service. Training is conducted on monthly basis as an in-service kind of training. Workshops of five-days duration aimed at behavior change will be conducted for community members. These are presented three times per annum per hot spot. Workshops will be held one day a week over a five week period, with the same participants in groups of 10-20 persons. An evaluation session will be held three months after completion of each workshop to measure behavior change. A variety of techniques and participatory methodologies are used. Topics cover basic life skills, behavior patterns, sexuality, reproductive health, morals and values, choices, consequences and responsibilities, substance abuse, multiple, concurrent, same sex and cross generation partners, and HIV topics. These activities strive to influence behavior change in the form of increased abstinence and delayed sexual debut, commitment to one partner at one time, and general social norm transformation related to gender issues. The workshops are facilitated by LifeLine trainers. These activities will contribute to PEPFAR 2-7-10 goals of averting HIV infections through promoting Abstinence and Be Faithful prevention activities among the general population and youth.

Table 3.3.02: Activities by Funding Mechanism

Mechanism ID: 481.09	Mechanism: N/A
Prime Partner: Living Hope	USG Agency: U.S. Agency for International Development
Funding Source: GHCS (State)	Program Area: Sexual Prevention: AB
Budget Code: HVAB	Program Budget Code: 02
Activity ID: 3024.23096.09	Planned Funds: \$0
Activity System ID: 23096	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Living Hope (LH) has modified its AB prevention program to address the needs of impoverished children living in informal settlements and townships. LH aims to develop a formal referral network with other NGO and government OVC programs where OVC identified in the AB program will be referred into social and medical services to receive holistic services.

LH's Life Skills Educators will be trained on how to identify OVC within the AB program (school or after school). This referral system will help fill the gaps between LH's effort to provide children with AB messaging and helping vulnerable children (including child-headed homes) receive psychosocial and medical support. Through interactions with the children during the AB activities, LH will also identify children with other needs (e.g., school uniforms and supplies), who will then be referred to partners who can address these needs. Through this referral system, children will access more services in line with their individual needs and to apply the principles and lessons learned from the AB program. The aim is to enable children to continue with their education and live in a more secure environment.

LH has started a new Wait4Me program that encourages pre-teens and teens to abstain from sexual activity before marriage. This program creates an atmosphere of security and choice for teens that are often pressured by peers to engage in sexual activity. The youth in the program sign a pact agreeing to abstain from sex until marriage; this message is popularized among peers by wearing an identifying bracelet and bandanas. The Wait4Me members routinely meet to discuss peer pressures, stigma, HIV risks and other norms and behaviors. The Life Skill Educators will visit parents and guardians at home to encourage them to support and reinforce the messages given to their children by the Life Skill Educators. Parents, guardians and other members of the family will also be invited to Parent Days and special outreach activities, and where necessary, referred to the basket of care offered by Living Hope or other partner organizations.

LH aims to reach 10,000 with AB message. The Life Skill Educators will conduct quarterly sessions using drama, music and teaching for teenagers in 11 high schools. The following schools will participate: Ocean View, Masiphumelele, Simon's Town, Muizenberg, Crestway, Lavender Hill, Steenberg, Grassy Park, Heathfield, Sibelesus and False Bay College. This program aims to encourage young people to make good choices, to delay sexual debut, and to access HIV counseling and testing and other health services. To support more children in the communities, LH will start additional Afternoon Clubs in Ocean View and Masiphumelele. These provide children with time to sing, play games and learn moral values via drama or a story, and small discussion groups. The Afternoon Clubs offer more time to help them with the making of good choices in their lives. It also enables the Life Skill Educators to assess the needs of the children so that they can ensure that the program is relevant, meaningful and dynamic.

LH works in partnership with South African government primary schools to provide Department of Education outcome objectives in Life Skills and attitude change towards HIV and AIDS. LH's focus on these skills-based sexuality and HIV education programs in schools are directly in line with the HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011 (NSP). The adult and adolescent programs is also in line with the NSP and South African government policy. LH is moving towards more programs that promote AB and delayed sexual debut messages.

The LH AB programs target 4-14 year olds in public schools and the same age group through its community-based Afternoon Clubs. It has been necessary to expand the afternoon programs to include more teens as the youth graduate from our program and enter high school. The resulting Girls and Boys clubs have been started to address gender related issues.

The Girls Clubs address issues such as understanding the menstrual cycle, mood changes, body changes at puberty, fashion, hygiene, deportment, pregnancy, abortion and motherhood. The girls are encouraged to understand themselves and to become more self-aware and to make positive choices with their lives. Through this program, LH became aware of the fact that many girls stayed away from school during their menstrual cycle due to not having sanitary ware, and in so doing missed 3-4 days a month of school, which resulted in loss of education as they fell behind in the syllabus. LH, through various private donors is now making sanitary ware available through the Girls Club, thus encouraging them to be better educated which will result in more employment opportunities and sustainability in adulthood.

The Boys Clubs include sporting activities such as soccer and surfing. Several good male role models in the Life Skills team seek to change the perception of males, and mentor and teach the boys the values of responsibility, teamwork, taking instructions, integrity, the value of women, as well as understanding their body changes, erections and the "breaking of their voices."

SUMMARY:

Living Hope (LH) provides a comprehensive HIV and AIDS awareness and prevention education program with an emphasis on abstinence and fidelity in schools, churches, workplaces, and community centers. The program is values-based and targets vulnerable and impoverished groups residing in the Western Cape peninsula, including migrants from the Eastern Cape into the Ocean View, Masiphumelele, Capricorn and Red Hill areas of the Western Cape. The program's emphasis is gender and human capacity development through life skills education for children and youth on HIV prevention.

BACKGROUND:

LH Community Center is an indigenous South African faith-based organization (FBO) formed in 1999 in direct response to the HIV and AIDS epidemic. LH's response to HIV has grown to include a comprehensive approach to the pandemic including HIV prevention programs for children, youth and adults, a 22-bed Hospice for HIV care, home-based care, and pre- and post-test counseling. The LH network includes five branches in different communities, with partnerships through local churches, local Department of Health (DOH), hospitals, schools, as well as DOH clinics.

Activity Narrative: The prevention program curriculum utilizes the Scripture Union's "Jika" and "Reach for Life" program and Family Impact's 'Positive Parenting' course. The success of LH's program is due, in part, to the development of partnerships with other community stakeholders and service providers. LH works with over eight primary schools, seven churches, and several private organizations including Homestead, All Nations, OIL, Desmond Tutu Foundation, Vrygrond Development Trust, New World Foundation, and Next Generation. LH's PEPFAR-funded activities are a continuation and expansion of some of the first programs conducted by LH such as after school life skills programs and community interventions held in the clinic in Masiphumelele. FY 2008 funding will be used to expand geographical focus to include new areas in the Western Cape such as Muizenberg, Red Hill, Fish Hoek, Simon's Town, Ocean View and False Bay.

FY 2008 funding will be used to provide life skills education, youth clubs for children and teens, outreach activities to increase risk perception and behavior change for adults, and training and mentorship for local churches. Other community-based organizations (CBOs) will be supported to undertake HIV prevention activities.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Human Capacity Development

LH's life skills educators are recruited from local communities and attend a life skills workshop with a local CBO called Think Twice as well as Scripture Union. Each life skills educator also attends the AIDS Training, Information and Communication, Basic HIV/AIDS information course. Several other short courses are conducted to sharpen the skills of life skill educators, such that they are able to communicate effectively with children and to be creative in their presentation of the prevention program.

The life skills educators will be educated on the needs of diverse audiences including children, youth and adults. The educators address abstinence for pre-teens and youth as well as delayed sexual debut. The life skills educators will be provided with ongoing follow-up support and supervision from LH's Prevention Coordinator. Regular meetings to evaluate progress and monitor activities will be held.

As LH continues to build relationships with community and religious leaders, it will conduct HIV prevention education at LH facilities and partner churches, workplaces, schools, and community centers with a focus on behavior change. The behavior change communication (BCC) focus on abstinence for youth aged 10-14 before they start sexual activity and AB for youth aged 15-24 to encourage them to adopt secondary abstinence and reduction of number of sexual partners. Adult men will be educated on male norms and values to discourage cross-generational sex and multiple concurrent partnerships. Youth at risk due to their sexual behavior and adults will be provided with full information on correct and consistent condom use and referred to condom service outlets. HIV outreach activities aim to prevent youth at risk and adults from becoming HIV-infected by (1) increasing understanding about the nature of the disease; (2) increasing understanding about how HIV can be prevented through abstinence, or delaying sexual debut, being faithful and partner reduction; (3) increasing personal risk perception about HIV infection; and (4) reducing stigmatization and discrimination against people living with HIV.

LH is aware of the influence of community leaders and encourages community leaders to become advocates for HIV prevention through ongoing outreach activities and training. LH equips community and religious leaders with teaching materials and encourages them to teach others about male norms and behaviors as well as gender roles and equity to discourage discrimination, violence, coercion and abuse against women and girl children. LH provides ongoing support as requested by various community leaders and will be available for further awareness and education in local churches, businesses or community centers upon request.

LH's prevention activities aim to provide comprehensive health-related courses with an emphasis on HIV and AIDS risk perception and behavior change. This activity is designed to increase HIV risk perception and knowledge of HIV and AIDS, with an emphasis on AB as the best means of preventing transmission. Within the Be Faithful messages, there is a strong emphasis on sexual partner reduction, discouragement of cross-generational sex and multiple concurrent sexual partnerships.

ACTIVITY 2: Outreach and Education

FY 2008 funds will be used to provide in-depth education and training in life skills and basic health topics with an emphasis on HIV prevention. The adolescents under 14 years are targeted before they start engaging in sexual behavior through the outreach and education designed to change behaviors and attitudes to prevent HIV. This activity will be conducted through a partnership with local government, in public schools as well as community churches in underprivileged communities such Masiphumelele, Vrygrond Ocean View and Red Hill.

The HIV prevention messages will be disseminated in various places where youth congregate. Prevention messages and structured curricula will be delivered through church sermons, public school assemblies in underprivileged communities, youth and after-school kids clubs in these communities, and holiday clubs during school holidays.

LH has implemented a life skills development program for children and youth-based on an abstinence value system. Specific activities will include weekly children's and teen's clubs that incorporate life skills training to encourage healthy life choices, including delaying sexual debut, abstinence until marriage for children before they start to engage in sexual activity and faithfulness once married, and to enable youth to resist sexual pressures. Women and girls will be empowered through these workshops to say no to premarital, extramarital, and unprotected sex.

ACTIVITY 3: Referrals and Linkages

Activity Narrative: Adults and youth at risk and those who are sexually active will be encouraged to test for HIV and will be provided with referrals for counseling and testing at clinics in Masiphumelele, Red Hill, Ocean View, Fish Hoek, Simon's Town, Muizenberg, Seawinds and False Bay. LH's lay counselors will offer a comprehensive basket of services to people based on their HIV status. These services include South African government ARV treatment programs, clinical services, LH and other home-based care, hospice care and support groups. If an adult or youth know their status to be HIV negative they will likely be more empowered to protect their negative status through AB and partner reduction if already sexually active.

LH has developed a partnership with the City of Cape Town Clinic in Masiphumelele, Red Hill, Ocean View, Fish Hoek, Simon's Town, Muizenberg, Seawinds and at False Bay Hospital where LH's lay counselors conduct pre- and post-test counseling for CT clients with clinic staff conducting the rapid-tests. The client is also offered a comprehensive list of services for follow-up care or support. Full information on correct and consistent condom use will be provided to youth at risk and adults. For individuals who test positive, the program will provide referrals to support groups to encourage positive living and will ensure treatment access.

FY 2008 funds will be used to expand the HIV prevention programs by using social workers to help needy children and their families. The communities where the prevention program is active have high rates of unemployment and drug and alcohol abuse coupled with little or no access to social assistance. LH will seek to fill this social service gap by providing at least one social worker for the prevention program to help link needy families with appropriate government or non-government social services. The social worker will also help in conflict resolution and linking vulnerable or abused children with the appropriate authorities. The prevention program will also network with other area service providers in the area to help coordinate needs with service delivery which will help reduce overlap and redundancy.

Table 3.3.02: Activities by Funding Mechanism

Mechanism ID: 328.09	Mechanism: N/A
Prime Partner: Johns Hopkins University Center for Communication Programs	USG Agency: U.S. Agency for International Development
Funding Source: GHCS (State)	Program Area: Sexual Prevention: AB
Budget Code: HVAB	Program Budget Code: 02
Activity ID: 2988.23075.09	Planned Funds: \$4,825,396
Activity System ID: 23075	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Focus Areas: In COP 2008, emphasis was placed on working with young women aged 15 - 24, however, research has indicated the need to focus on young people (men and women) as a target audience. Johns Hopkins University/Center for Communication Programs (JHU/CCP) will shift the focus audience to 18 - 32 year olds who have a high incidence of HIV infections, thus indicating the need for a focused intervention emphasizing partner limitation. The shift to focus on young people recognizes that the norms and attitudes that may place young men at risk of infection in later lives must be raised among the youth to influence these norms and values as early as possible.

Interpersonal Communication: Turntable Trust works in the rural areas of KwaZulu-Natal, targeting youth 15 - 24, young people 18 - 32 and adult men with activities that promote male norms and values in relation to delay of sexual debut and partner reduction.

Correctional Services: Activities with the Department of Correctional Services will not be continued in FY 2009, due to changes in departmental staff, and a change in JHU's programming focus.

Mass Media: JHU has initiated the Scrutinize Campaign together with Matchboxology, and its new partners, Mediology and CellLife. The campaign aims to encourage young South Africans 18 -32 to assess their risk of HIV infection and to encourage delaying sexual debut and partner reduction. Scrutinize utilizes a variety of mass media tools, including the outdoor media and cellular technology. CellLife will support the mass media outreach of all communication partners in South Africa with free SMS technology to address multiple concurrent partners, male norms and behaviors. In FY 2009, JHU will scale up a new campaign targeting adult men by using male celebrities, including footballers. This campaign would include prevention messages, and aims to capitalize on the 2010 Football World Cup that will be held in South Africa.

Trailblazers, which was co-produced with the South African Broadcasting Service (SABC), has been fully absorbed into the programming of SABC Education. Resources originally used for this activity will be re-directed to the further development of the Circles Drama Series, the Scrutinize Campaign and the new campaign targeting adult men.

Advocacy: JHU has formed a strategic partnership with Health-e (a news agency that produces news and in-depth analysis for the print and electronic media) to support in-depth media reporting on the key drivers of the epidemic in South Africa including multiple and concurrent partners, delaying sexual debut and HIV. The University of the Witwatersrand's HIV and the Media Project will mobilize editors and journalists to focus on the key drivers of the epidemic, particularly targeting men, male behavior and multiple and concurrent partners.

SUMMARY: Over the next four years Johns Hopkins University/Center for Communication Programs (JHU/CCP) and its 20 South African (SA) partners will combine mass media with interpersonal community mobilization to bring about heightened awareness of risk of HIV infection among general population to address sexual partnerships and behaviors placing them at risk of HIV infection. With young people under 14, emphasis will be on abstinence ("A") and delaying sexual debut (DSD). With people over 14 main focus will be on younger girls and women aged 15-24 and men aged 25-49 and emphasis will be on faithfulness ("B"). "B" messages focus on heightening perceptions of risk to HIV infection owing to sexual partnerships and behaviors people engage in placing them at risk of HIV infection, namely: multiple and concurrent partners (MCP), intergenerational/transactional sex (ITS), casual sex, violence and coercion, linkage between alcohol and substance abuse and HIV, stigma and discrimination (SD). The target populations are youth, people living with HIV (PLHIV), religious leaders, teachers and adults which will include the public health workers, and community, faith-based and non-governmental organizations. The emphasis areas are gender, human capacity development, strategic information, and work place programs.

BACKGROUND:JHU/CCP AB prevention initiatives are in their fifth year. Over the next four years all partners will prioritize interventions to focus on men aged 25-49 and young girls and women aged 15-24, while addressing social norms and values among youth below age 15. Interventions will impact on key drivers of the epidemic and perception of risk in relation to sexual partnerships and behaviors including MCP, ITS and incorrect and inconsistent condom use. Interventions are informed by qualitative research intervention undertaken by JHU/CCP and its partner CADRE. The study found high-risk behaviors driving epidemic are determined by social norms and values that include male attitudes and behaviors, alcohol and substance abuse; population mobility and gender dynamics including gender-based violence (GBV). In hyper-endemic situations where HIV prevalence exceeds 15% there is need to engage people to heighten perception of risk while providing them with tools to enable them to manage risk of HIV infection by taking necessary actions to address risk behaviors. JHU/CCP uses a social-ecology approach to communication that combines power of interpersonal communication with mass media to engage and mobilize individuals around sexual behavior and risk perception to HIV infection and influence social networks, communities and societies to create enabling environment that allows them to reduce risk of HIV infection. Each activity is designed to contribute towards change in social norms, create social networks that support individual change, build skills, and improve decision making leading to safer sexual behavior. **ACTIVITIES AND EXPECTED RESULTS:**ACTIVITY 1: Young People 12-14 The Valley Trust (TVT) and Lighthouse Foundation (LF) will work with youth under 14 in primary and secondary schools to encourage DSD and provide them with life skills to help reduce their risk to HIV infection. ACTIVITY 2: Mobilizing In- and Out-of-School Youth 15-24Dance4Life (D4L), DramAIDE, TVT, Lesedi Lechable (LL), LF and Community Health Media Trust (CHMT) will work with youth in secondary schools using variety of approaches to train peer educators who will establish HIV prevention, care and support clubs to act as entree to in-school youth. Among youth under 14, the primary focus will be on DSD. Among youth over 14, the focus will be on messages relating to MCP, ITS; correct and consistent condom use, male norms and behaviors, substance and alcohol abuse, gender-based violence (GBV), risk perception and SD. TVT, LF and LL will undertake interpersonal discussions, workshops and community events with out-of-school youth to heighten perceptions of risk in relation to sexual partnerships and behaviors.DramAidE's Health Promoters work in 23 tertiary institutions and use group meetings, individual consultations, dorm visits, classroom instruction and community events to increase perceptions of risk in relation to MCP, ITS, GBV, condom negotiation skills,

Activity Narrative: STIs, male norms and behaviors, SD, sexual and reproductive health (SRH) and risks of substance and alcohol abuse. ACTIVITY 3: Mobilizing Adult Men and Women 15-49 Sonke Gender Justice (SGJ) supports partners to integrate Men as Partners approach to mobilize men on responsible male behavior, substance and alcohol abuse and reduction of GBV. SGJ, LF, LL and TVT will expand the number of men's clubs and health services to mobilize men, communities and traditional structures around MCP, responsible male behavior, substance and alcohol abuse and reduction of GBV. TVT, LF and Matchboxology (MB) will mobilize adult men and women using door-to-door campaigns, taverns and taxi ranks, around MCP, ITS, male norms and behaviors, SD, and risks of substance and alcohol abuse. LifeLine SA and TVT will support workplace interventions and train PEs within small and medium enterprises and on farms. MB will work with professional footballers and fan clubs. All workplace based interventions will increase perceptions of risk in relation to MCP and ITS, GBV, SD, male norms and behaviors and alcohol consumption and sexual behavior. TVT and LF will engage with traditional leaders and healers to mobilize them to address cultural dimensions of MCP, GBV, SD, male norms and behaviors and alcohol consumption. TVT, LifeLine SA and LF will work with FBOs through activities to promote partner limitation, GBV and SRH. Religious leaders will be trained and provided with appropriate communication materials to guide them. Mindset Health Channel (MHC) has a Healthcare Worker Channel (HCWs) and a Patient Channel in more than 400 public clinics. The HCW Channel trains health workers and its public health channel sensitizes audiences on partner reduction, GBV, substance and alcohol abuse. CHMT, will increase number of Treatment Literacy and Prevention Practitioners to 92 (72 funded by PEPFAR and 20 by National Department of Health (NDOH) and facilitate discussion among patients in general waiting rooms in MHC on topics relating to correct and consistent condom use, GBV, substance and alcohol abuse, STIs and SRH. LF, TVT and Mothusimpilo will work with CHMT and MHC to facilitate dialogues in clinics surrounding their areas. LL and Mothusimpilo use PE and HCW in mining districts of North West and Free State to reach young women at risk, including sex workers, through clinics, schools and community events to heighten risk perceptions on sexual partnerships and behaviors that place them at risk of HIV infection including MCP, ITS, GBV, SD, male norms and behaviors and risks of alcohol and substance abuse. Their programs are linked to local mining companies who generally focus on male employees. Department of Correctional Services (DCS) will expand their correctional facilities program from Limpopo and North West to include Gauteng and Northern Cape. DCS uses TshaTsha TV drama series to train PEs to heighten awareness of risks pertaining to sexual partnerships and behaviors that place them at risk of HIV infection. ACTIVITY 4: Mass Media Support for Community Mobilization The 2006 national communications survey found that 76.7% of people had at least one television (TV) in their households. 60% watch TV every day and 60% listen to radio every day. TshaTsha reached about 48% of population, while the treatment literacy program Siyanqoba - Beat It reached 27% and community radio program Mind, Body Soul reached 6% of the population. TshaTsha is used to facilitate discussions with people in schools, correctional facilities and community meetings around issues of risk of HIV infection, ITS and MCP. However 16% of population was not reached by any media interventions partly due to fragmentation of media environment in relation to audience preferences influenced by socio-economic status and language. To address this, JHU/CCP will expand mass media program to include new platforms such as cellular and internet technology and outdoor media that will complement radio and TV outreach. All platforms will heighten awareness of risk among men aged 25-49 and young girls and women aged 15-24 in relation to sexual partnerships and behaviors including MCP, ITS and male attitudes and behavior. ABC Ulwazi will produce a community radio talk show for 60 community radio stations using local languages that are facilitated through listener associations. JHU has a public-private partnership with SA Broadcasting Corporation to fund two TV programs supported by nine regional SABC language radio programs and internet. A second season of TV drama Circles heighten perception of risk to HIV infection through highlighting sexual partnerships and behaviors that place them at risk of HIV infection including MCP and ITS. Trailblazers provide positive models. MB in partnership with SA Professional Football Union and the Professional Soccer League will mobilize prominent SA football players to provide messages through different mass media platforms to raise awareness of risk concerning MCP, ITS, male behavior, GBV, alcohol and substance abuse, treatment of STIs, as part of build up to 2010 Football World Cup. A TBD outdoor media partner will work with JHU to develop messages for outdoor media to heighten perceptions of risk in relation to sexual partnerships and behaviors that place people at risk of HIV infection including MCP with low and inconsistent condom use. A TBD cellular telephone partner will use short message services technology to address MCP, ITS, correct and consistent condom use, male norms and behaviors and the risks of alcohol and substance abuse.

Budget Code: HVAB

Program Budget Code: 02

Activity ID: 3014.23062.09

Planned Funds: \$679,633

Activity System ID: 23062

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

HPI will work with traditional faith-based organizations (FBOs) such as the Zion Christian Church and AMOS to develop and broadcast abstinence and being faithful messages in COP 2009.

ACTIVITY 1. National House of Traditional Leaders (NHTL)

In addition to activities described in 2008, HPI will assist the NHTL in finalizing its sector plan, which will be presented to the South African National AIDS Council. HPI will also assist the NHTL to develop a national plan for implementation throughout seven provinces of South Africa. HPI will focus on human and institutional capacity building activities to newly constituted district and local houses of traditional leaders (TLs) to expand, improve and implement HIV prevention activities. HPI aim to improve governance, accountability, and leadership, to widen partnerships and resources for HIV prevention within TL structures. HPI envisages that there will be increased community participation in HIV prevention activities.

ACTIVITY 2. Zion Christian Church

HPI will assist the National Council of the Zion Christian Church (ZCC) to develop a national HIV prevention strategy and an implementation plan to be carried out in all the affiliated churches. HPI will also support the provincial churches of the ZCC by developing and implementing AB prevention messages into the church activities. Thirty participants will be reached in each provincial workshop. HPI will encourage the ZCC to promote prevention messages, such as the reduction of concurrent sexual partners, delayed sexual debut for young people, being faithful to one sexual partner, the role of gender and gender-based violence, and prevention for positive individuals. This activity will reduce stigma and discrimination towards people living with HIV. Approximately 270 people will benefit from this activity. Each of the 270 participants will then conduct various activities at the church level to reach other members of the church and the community with AB prevention messages. Participants will develop action plans to disseminate AB prevention messages and conduct outreach within the church communities. HPI will follow up with support and supervision to a subset of those who participated in this activity to assess (1) the degree to which participants were able to implement their action plans; (2) the challenges and opportunities participants encounter in their community; and (3) to reinforce skills learned in the provincial implementation program to build a sustainable cadre of HIV Prevention Champions. Participants will be comprised of faith-based HIV committee leaders, members of the broader church community. IEC materials will follow the guidelines of the National Department of Health and the leadership of the church.

ACTIVITY 3: Digital Storytelling

HPI will engage Sonke Gender Justice and the Center for Digital Storytelling to develop HIV prevention messages and stories for TLs and farm workers. Men and women affected by violence and HIV and AIDS will share their stories through an intensive, participatory workshop process, and will bring people together to speak out in digital format. HPI hopes to deepen existing conversations about gender norms and the HIV epidemic by highlighting every-day voices of courage, survival, and action. Some stories are raw testimonials about survival; others challenge damaging myths, and misperceptions among men about their sexuality and offer practical steps and interventions. This activity will also focus on restoring healthy relationships between men and women in order to make a distinctive contribution towards HIV prevention.

The stories will be distributed across South Africa, and will be used to educate local communities, training community, civic leaders, FBOs and TLs, and to promote sustained community action. This will be in keeping with the "Silence Speaks" methodology, which adapts principles from popular education, art therapy, trauma recovery and group process to ensure opportunities for personal and collective transformation.

ACTIVITY 4: AMOS

Amos is a nonprofit organization registered with the Health and Welfare Seta. AMOS's strength lies in its unique position and influence among the farming communities and its ability to engage with marginalized farming populations in South Africa. It has a 15-year track record of working with farm owners and workers in addressing the challenges posed by HIV. HPI will work with AMOS to implement an HIV prevention program targeting farm workers and owners. The farm workers are particularly hard to reach, highly mobile and live in isolated areas in the Northern Cape, Mpumalanga and KwaZulu-Natal. This effective prevention program will address life skills, accurate HIV prevention information and social mobilization of the farming community to counter gender injustice and stigma and discrimination.

SUMMARY

HPI TO1 is follow-on to the POLICY Project funded by USAID. HPI TO1 will support the implementation of policies and programs to integrate gender, stigma and discrimination into HIV prevention programs. The project will work with faith-based organizations (FBOs), traditional leaders (TLs), and community-based organizations (CBOs) to develop and implement Abstinence and Be faithful (AB) prevention messages and programs. HPI TO1 will assist FBOs and CBOs to systematically identify program gaps and barriers to uptake or dissemination. Activities will focus on improving knowledge about HIV, behavior change to reduce risk, community mobilization and participation in HIV prevention programs.

Over the years, HPI TO1 has worked with the FBOs and TLs as a key target group. The organization aims to respond to the needs of the groups in prevention. These needs have evolved variously from the need to sensitize the leadership and membership on the necessity of including a prevention focus in their programs, to helping groups set up prevention programs for their diocese and communities. Currently, HPI TO1 is targeting behavior change and emphasizing what needs to happen at the personal level. HPI TO1 will be utilizing approaches that influence individual behavior as it relates to HIV prevention, using proven

Activity Narrative: approaches that reinforce person-to-person influences and decision making, and which will ultimately lead to behavior change at the personal level.

Emphasis areas are training in AB, with special focus on behavior change; community mobilization and participation; gender which will address male norms and behaviors, reduce gender-based violence and coercion; and human capacity building for partners at the national, provincial and community levels. Capacity building aims to identify and address the operational barriers that impede the expansion of HIV programs. The target population is adolescents, adults, people living with HIV, and religious leaders.

BACKGROUND

HPI TO1 empowers new partners to participate in the policy making process. The initiative helps organizations translate policies, strategic plans, and operational guidelines into effective programs and services. The project will work with FBOs, TLs, and CBOs to develop and implement AB prevention messages and programs and to assist these organizations in systematically identifying program gaps and barriers to uptake or dissemination. HPI TO1 will continue to build and strengthen the capacity of organizations and institutions across all sectors to design, implement, and evaluate comprehensive HIV prevention, care, and support programs and policies. Project assistance focuses on improving multi-sectoral capacity and involvement in the country's national HIV and AIDS program by assisting different role players in developing and implementing effective advocacy strategies for HIV and AIDS; facilitating effective planning for HIV and AIDS programs; increasing the information used for policy and program development; and strengthening collaboration between government and civil society organizations (CSOs) and institutions working in HIV and AIDS. The activities proposed under HPI TO1 will (1) focus on the devolution of capacity building and training in AB programs to district level for TLs and to FBOs; (2) provide technical assistance to TLs and faith-leaders to ensure their training skills are used and appropriate prevention messages are being disseminated in communities; and (3) build the capacity of traditional and faith leaders to identify barriers to uptake or expansion of prevention programs. In this period HPI TO1 will also work in partnership with the South African National AIDS Council (SANAC) and the National House of Traditional Leaders. HPI TO1 will partner with SANAC to provide direct technical assistance to TL structures in South Africa.

Traditional Leaders: It is estimated that over 16 million people live in the rural areas that are under the jurisdiction of TLs. These TLs command respect and have significant influence on the day-to-day running of many rural/ peri-urban communities. They are also key players in the governance structures of South Africa, particularly at the local level, and are therefore well placed to mobilize communities to access and use services. In 2001, a partnership between the National Department of Health (NDOH) and the Nelson Mandela Foundation (NMF) supported the formation of the National TLs' HIV and AIDS Forum and the development of a national strategy by TLs to address the challenges of HIV and AIDS. Previously, the activities in this program area focused mostly on Traditional Leaders at the provincial level and were implemented in partnership with a small non statutory Traditional Leaders forum. In this period HPI TO1 will be implementing this activity in support of the National House of Traditional Leaders. This is the biggest body of Traditional Leaders in South Africa and is also a statutory body represented in the national parliament and the South African National AIDS Council. The National House of Traditional Leaders is key in assisting HPI reach as many Traditional Leaders in their various forms, kings, indunas, chiefs, traditional councilors and will be implemented at the district level. Further in this period HPI will be implementing activities in the Northern Cape which did not receive any interventions previously.

Faith-Based Organizations: South Africa is a multi-faith country. FBOs are rooted in the community and are in a strong position to mobilize communities to address the challenge of HIV and AIDS. They can promote prevention strategies, mobilize communities against stigma and discrimination, and provide community-based care and support to people infected or affected by HIV and AIDS. The capacity of many FBOs to develop appropriate training materials or to design and implement effective programs varies considerably. In the previous interventions HPI TO1 worked with FBO's such as the National Baptist Church of Southern Africa, the Southern African Catholic Bishops Conference and the Church of the Provinces of Southern Africa. In this period HPI will be working with the mostly Africa traditional faiths such as the Zion Christian Church and Shembe.

ACTIVITIES AND EXPECTED RESULTS

ACTIVITY 1. Traditional Leaders

HPI TO1 will conduct six provincial, three-day training workshops; each workshop will host 40 participants. Each of 240 people trained will then conduct at least five activities to reach community members with A/B messages within one year of receiving the training. These workshops will be focusing on encouraging TLs to promote prevention messages in particular, the reduction of concurrent sexual partners being faithful to one sexual partner, especially in older youth and adults engaged in sexual relationships, abstinence or delaying sexual debut for young people aged 10-14 before they start engage in sexual activity, the role of gender and gender based violence in prevention and prevention for positive individuals. This activity will be implemented in KwaZulu-Natal, Eastern Cape, Mpumalanga, Free State, Limpopo, North West and Northern Cape provinces. The training will focus on the design, planning, and dissemination of successful AB prevention messages and will include strategies to reduce community level stigma and discrimination and raise awareness of the impact of gender-based violence on women's access to prevention programs including discussion of issues of the role of men in society. HPI TO1 will look at individual behavior and how to reinforce positive behaviors in the community. We will look at addressing both individual and larger community issues that are barriers to behavior change. Trainees who are TLs will include AB prevention messages into one TL's council meetings once a month. As more TL's take the lead in addressing HIV and AIDS, this would have more impact in behavior change of men in their different constituencies, because most Traditional Leaders are men. The training materials used throughout this activity will be developed by HPI TO1. HPI TO1 will follow up with a subset of trainees to (1) assess the activities carried out; (2) identify the challenges and opportunities TLs are experiencing in disseminating AB messages; and (3) provide technical assistance to the TLs to strengthen their skills in order to address implementation challenges.

Activity Narrative: ACTIVITY 2. Faith-Based Organizations

HPI TO1 will facilitate nine provincial workshops on integrating AB messages into the church activities of a selected church group. Thirty participants will be reached in each provincial workshop. These workshops will focus on encouraging FBOs to promote prevention messages, such as the reduction of concurrent sexual partners, the delay of sexual debut for young people, being faithful to one sexual partner, the role of gender and gender-based violence against women and girl children in prevention and prevention for positive individuals. A total of 315 people will be trained. Each of the 315 people trained will then conduct at least one activity to reach community members with A/B messages within one year of receiving the training. Trainees will develop action plans to disseminate AB prevention messages and conduct prevention outreach activities within the church communities. HPI TO1 will follow up with a subset of those who participated in training to assess: (1) the degree to which participants were able to implement their action plans; (2) the challenges and opportunities trainees encounter in their community; and (3) to reinforce skills learned in the provincial training workshops in order to build a sustainable cadre of trainers. The trainees for FBOs will be comprised of faith-based HIV and AIDS committee members and other members of the broader church community. Technical assistance will be included in the training curriculum.

Planned Funds: \$203,890

Activity System ID: 22984

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Mpilonhle will continue activities described in COP 2008, but activities will be enhanced.

1. During Mpilonhle's Health Screening and Health Education activities its health counselors and health educators will continue to emphasize the value of reducing multiple and concurrent partnerships, as well as cross-generational and transactional sex. These issues are already addressed in Mpilonhle's COP 2008, but these will be strengthened in line with the FY 2009 COP Technical considerations.
2. Mpilonhle will encourage the participation of school governing boards and parents in its training sessions on HIV prevention, promotion of reproductive and general health, and care and support for people living with HIV and AIDS and orphans and vulnerable children.
3. Mpilonhle will continue to improve its referral systems for linking up participants in programs with community-based health facilities, support services, and support groups, particularly to access reproductive health services, and services for substance abuse.

SUMMARY:

Mpilonhle is a new South African community-based organization registered in 2007 with the South African Directorate for Non Profit Organisations (NPOs). It is dedicated to improving the health and well-being of adolescents in high schools in Umkhanyakude District Municipality, KwaZulu-Natal (KZN) through its "Mpilonhle Mobile Health and Education Project". Mpilonhle will become operational in late 2007 with a single mobile unit funded with support from Oprah's Angel Network, and expand with two further mobile units funded by PEPFAR. Mpilonhle expects to recruit and hire 40 staff members who will be based at Mpilonhle offices in Mtubatuba, KZN.

Mpilonhle's Abstinence and Be Faithful (AB) prevention activities include school-based provision of (1) health screening, (2) health education, and (3) computer-assisted learning, delivered through mobile clinic and computer laboratory facilities to 12 secondary schools in the rural KwaZulu-Natal province. Emphasis areas are gender, human capacity development, and education wraparound programs. Targeted populations are adolescent males and females aged 10-24 and teachers.

BACKGROUND:

This is a new PEPFAR funded activity to be implemented under the FHI Umbrella Grants Mechanism (UGM). Mpilonhle has the broad support from district and provincial South African Government (SAG) leadership. AB prevention activities will be implemented in Umkhanyakude District Municipality, the poorest and most rural district in KwaZulu-Natal that has extremely high HIV prevalence rates. Services will be delivered using mobile units traveling to rural secondary schools. Students in these schools suffer from physical remoteness, scarcity of health services and generally inadequate resources. Partners include the Department of Education (DOE), the South African Democratic Teachers' Union (SADTU), District Health Services, district and municipal leadership, including the Traditional Authorities. The local Department of Education officials, school principals, district and municipal mayors, teachers and students have expressed the acceptability of school-based voluntary counseling and testing (VCT).

ACTIVITIES AND EXPECTED RESULTS:

The AB prevention activities will be provided through mobile facilities beginning in January 2008. There will be a cost sharing of resources through the Oprah Winfrey Angels funding. Each mobile health unit will have four counseling rooms, a nurse room, and two group education areas - one for HIV and health education, and one for computer training. Each mobile unit will be staffed by a primary health care nurse, four health counselors, a health educator, and a computer educator. Each unit will serve four participating secondary schools, staying at each school for one week per month during the eight-month school year. The project will have three mobile facilities, allowing it to serve 12 secondary schools in total. Each participating secondary school has an average of 800 students. Six of the 12 schools have been initially selected by identifying principals who expressed interest in participation. With greater knowledge of the proposed project there has been a greater expression of interest and the remaining six schools will be determined through deliberations with the Mayors of Umkhanyakude District Municipality, Mtubatuba Municipality, and Hlabisa Municipality, and with local officers of the Department of Education and the Traditional Authority.

Mpilonhle will conduct three main activities in the AB Program Area, as described below.

ACTIVITY 1: School-Based Health Screening

The health counselor will provide students with an annual individualized health screening that is comprehensive, integrated, and appropriate; however the emphasis is on HIV prevention and promotion of risk perception. It includes voluntary counseling and testing (VCT) and individualized AB counseling. Through this activity, young people will be screened for tuberculosis (TB), sexually transmitted infections (STIs) and other common health problems. Those who are HIV-infected will be referred for CD4 count and further management at the nearest appropriate health facilities. The premise behind the health screening is to ensure that young persons are reached before they begin having sex. The main messages will focus on abstinence, delay of sexual debut for young people (10 -14years). For older youth (15 -19 years) who are sexually active they will be encouraged to revert to secondary abstinence. For those most at risk sexually active (20 -24 years) information on correct and consistent use of condoms will be given and encouraged to limit number of sexual partners (i.e. be faithful). VCT will be an entry point to prevention programs, especially for sexually active students, including in-school OVC.

Activity Narrative: ACTIVITY 2: School-Based Health Education

The health educator will provide students with four 90-minute small-group HIV, general health and life skills education sessions per year that will discuss the basic facts about: HIV and STIs; VCT; TB; anti-retroviral therapy (ART); prevention of mother-to-child transmission of HIV (PMTCT); a balanced Abstinence-Be Faithful-Condoms (ABC) approach to HIV prevention; reducing stigma and discrimination against people living with HIV/AIDS (PLHIV); promoting healthy lifestyles including the avoidance of substance abuse and the promotion of exercise and good nutrition; and promoting mutual respect between men and women. An age-appropriate curriculum on these topics has been developed by the Educational Development Center (EDC) and the South African Democratic Teacher's Union (SADTU). Existing material developed by the EDC and SADTU, and the World Health Organization (WHO), the summarized WHO publication "Teachers' Exercise Book for HIV Prevention", will be used because it conforms to the SA DOE's Life Skills curriculum. This curriculum will also be submitted to the SA DOE for approval, and for certification of conformity with the Life Skills curriculum. The curriculum will also be sent to UNICEF for their inputs. This curriculum emphasizes the traditional three-part public health theory of improving Knowledge, Attitudes and Practice (KAP) skill-building methods in topics such as risk reduction, decision-making, and social responsibility, as a way of preventing HIV infection, providing support to those infected and affected by HIV, fighting stigma and discrimination, and dealing effectively with the challenges of everyday life. The skill-based HIV education will provide focused messages about the benefits of delaying sexual debut and other safe sexual behaviors. Activities will aim to develop students' self-esteem to build their resilience, assist them to make informed choices and develop communication skills.

ACTIVITY 3: School-Based Computer-Assisted Learning

The computer educator will provide students in participating schools with four 90-minute small-group computer education sessions per year. This training will focus on how to use computers, basic software, the internet; and computer-assisted learning for improved school performance, HIV prevention, and general health promotion. The computer-based health education lessons are packaged to address the life skills needs of youth and are consistent with SAG guidelines. The AB messages are internationally recognized, appropriately researched messages. This activity is intended to improve student learning, raise number of pupils who graduate (graduation rates), and augment employability. These outcomes can in turn increase women's socio-economic status, and reduces their vulnerability to coercive, cross-generational, and transactional sex.

Sustainability will be achieved through (1) political commitment from district and municipal governments, and the local Department of Education; (2) the relatively low-tech and easily replicable nature of many core program features; (3) minimal dependence on scarce health professional such as doctors and nurses; (4) the ability of rugged mobile facilities to reduce the need for additional investments in fixed physical infrastructure; (5) the possibility of adapting the VCT service delivery model to workplaces as well as schools; (6) the multi-dimensionality of program activities, which includes HIV and AIDS, general health, and education related activities, and which broadens the scope of donors interested in funding continuation and scale-up of activities.

Building human capacity in remote rural areas will occur by maximizing the capacities and skills of relatively abundant lay health workers to enable them to perform critical yet scarce services such as VCT, health screening and personalized risk assessment, and health education. This will help shift the burden of these activities away from relatively scarce professional health workers such as nurses and doctors. The organization will build the technical expertise and capacities of lay health workers through rigorous training and regular refresher courses, and through the technological support provided by the Information Technology components of the program.

This activity addresses gender issues through (1) the provision of AB education to large numbers of adolescent males and females encouraging males to respect females, abandon gender stereotypes, and by discouraging multiple sex partners; (2) computer education which promotes female educational attainment, self-confidence and self-reliance, and employability, which in turn reduce vulnerability to HIV, in particular coercive, cross-generational and transactional sex; and (3) health education that promotes safer behavior and gender-sensitive attitudes among men and yield benefits to women when making informed choices with regard to their sexual health.

These activities will contribute to 2-7-10 PEPFAR goals of preventing seven million new HIV infections.

Funding Source: GHCS (State)	Program Area: Sexual Prevention: AB
Budget Code: HVAB	Program Budget Code: 02
Activity ID: 3020.23164.09	Planned Funds: \$615,068
Activity System ID: 23164	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

BACKGROUND:

In South Africa, Humana People to People (Humana) has until now implemented eight Total Control of the Epidemic (TCE) areas in Mpumalanga and Limpopo provinces with 400 field officers working with PEPFAR funding. Humana has started 12 new TCE areas in four provinces with funding from the Global Fund to fight AIDS, TB and Malaria and thereby extended the total outreach to 2.5 million people in five provinces.

ACTIVITY 1 (Household-based Person-by-Person Campaign) has been modified as follows:

In FY 2009, Humana will start one new TCE area to take the place of a TCE area in Bushbuckridge Municipality that will close on the 30th September 2009. The total number of TCE areas will remain at 10.

ACTIVITY 2 (Human Capacity Building) will continue with training described in COP 2008, but FY 2009 funding will be used to send management and supervisory staff for further training at Frontline Institute in Zimbabwe and KwaZulu-Natal Experimental College. This will contribute to strengthening overall leadership of TCE activities as TCE continues to expand in South Africa.

ACTIVITY 3 (Linkages and Networking) will continue with these activities, but will enhance the activity by creating linkages with even more government, non-governmental organizations, and departments as the TCE program expands into new areas, and works with additional stakeholders. With the addition of the HOPE Humana projects started in FY 2007, many of the AB activities run by the Passionates, such as clubs and outreach to schools will be handed over to HOPE Humana Bushbuckridge following the closure of the TCE in Bushbuckridge. Hope Humana is an HIV and AIDS intervention run by Humana, and it was established in FY 2007 with PEPFAR funding to conduct counseling and testing and home-based care. Hope Humana in Bushbuckridge and Mopani work closely with TCE as long as TCE is in the area; Hope will continue in the area after the closure of TCE and will seek funding from other sources to sustain its activities in the future, hereunder the provincial Department of Health and Social Services.

ACTIVITY 4 (Monitoring & Evaluation) has been modified. Corps Commanders and Division Commanders will now meet as part of the leadership of TCE worldwide every two months at Humana's international headquarters in Zimbabwe, replacing the quarterly meeting mentioned in COP FY 2008. This has allowed the TCE Commanders to learn quickly from best practices used in other countries where TCE is operating and has, as a result, enabled TCE in South Africa to reach a much higher percentage of its goals.

Since TCE in South Africa has expanded, it has become necessary to increase the number of coordinating offices from one to three. This has led to the formation of a Corps Commander Forum (CCF), where the Corps Commanders and their Deputies meet and make sure that all TCE in South Africa is moving in the right direction. The CCF takes place over two days every month. One day is used for discussions about results, public relations and partnership, and the second day is used for producing materials such as pamphlets, manuals and newsletters. Humana will continue to use its tried and tested methods for monitoring and evaluation that have proven themselves efficient and easy to use as well as comprehensive. TCE will make improvements on monitoring and evaluation (M&E) tools based on experience in South Africa and in other countries. PEPFAR-funded TCE in South Africa have adapted some of its systems to capture the required indicators in AB and other program areas effectively and accurately.

Humana has also undergone a successful assessment of its data quality by Khulisa Management Services.

SUMMARY:

Humana People to People (Humana) implements a comprehensive, integrated ABC HIV prevention program called Total Control of the Epidemic (TCE). TCE trains community members as Field Officers (FOs) to utilize a person-to-person campaign to reach every single household within target areas with AB messages, with the objective of changing community norms and individual behaviors. The emphasis of the prevention program is gender, human capacity building and a TB wraparound. Target populations are adolescents and adults and teachers.

BACKGROUND:

TCE was launched by Humana in 2000 in Zimbabwe. The program has been implemented in eight countries in Southern Africa reaching a population of five million people. Humana has received PEPFAR since July 2005. By August 2007, Humana had implemented five TCE areas in the Mpumalanga and Limpopo provinces. Humana works in partnership with the South African Government (SAG) and local municipalities. In the first year of implementation, 200 community members were trained as Field Officers (FOs) and prevention services had been provided to about 60% of the targeted community members. During FY 2006, follow-up visits were made to develop individual risk management plans with household members. FOs mobilized whole communities to address stigma and discrimination associated with HIV and AIDS and raised awareness related to HIV preventive behaviors. TCE tracks service provision by gender and has developed strategies to reach men over and above those already reached with AB messages. FOs also promote gender equity during their home-visits, by empowering both males and females with gender-specific knowledge about protecting themselves and their families. TCE has trained community volunteers called Passionates that are responsible for establishing vegetable gardens, running children and youth clubs, and offering care and support to orphans and people living with HIV (PLHIV). Since FY 2005, the Mopani and Ehlanzeni District Municipalities have been major partners, contributing over \$140,000 per year to the program. The program has received several awards, including the 2003 Stars of Africa Award (in partnership with Johnson & Johnson) for best Corporate Social Investment Program in Health and HIV and AIDS in South Africa. TCE also expects to scale up its coverage with funding from Global Fund via the South African National AIDS Council (SANAC) in 2008.

ACTIVITIES AND EXPECTED RESULTS:

Activity Narrative: ACTIVITY 1: Household-based Person-by-Person Campaign

The TCE program uses a person-to-person campaign over three years to reach every household with information about HIV and AIDS within the targeted areas. Each FO is allocated a field of 2,000 people (approximately 485 households). Households are visited at least three times over a three-year period and receive targeted prevention messages emphasizing age-appropriate abstinence and faithfulness (AB) with the objective of changing community sexual norms and addressing issues of multiple concurrent partnership and cross-generational sex. FOs visit households and engage individuals in discussions about HIV and AIDS and preventive behavior. FOs also provide information about government services such as counseling and testing (CT), prevention of mother-to-child transmission (PMTCT), TB and sexually transmitted infections (STI) services, social grants and home-based care and refer those in need. FOs also refer people with symptoms of AIDS-related conditions directly to public health clinics for CD4 testing, HIV clinical staging, and treatment of opportunistic infections. A tool called Perpendicular Estimate System (PES), has been developed and tailored to measure the impact of the program in the target areas. PES consists of a set of questions and demands to the individual in order to be TCE-compliant, which means being in control of HIV and AIDS in one's life. During the second and third year of the program, community members interact with their TCE FOs on an individual basis to make a PES-plan, which minimizes their risk of being infected and makes them live responsibly and positively if infected. Further, the program has a series of targeted interventions to reach schools, including teachers, youth in after school clubs, and health workers on HIV and AIDS awareness and AB prevention. TCE organizes workshops for local leaders, traditional healers, and community-based organizations, to explain TCE and promote HIV awareness and prevention. In FY 2008, six new TCE areas will be started (including four TCE areas completed in 2007 that will be replaced and an additional two TCE areas) bringing the total number of areas under PEPFAR to 10. These areas are selected with regard to relationships that Humana already has with certain communities, relationships with the health districts involved, the reach of other NGOs in the areas, and the need presented by the communities. Some of the lessons learned in the previous years will be used to strengthen the program including the refinement of PES, improved counseling for behavior change, and the intensification of in-service training of the FOs. The continuation of the counseling and testing (started in FY 2005) and palliative care programs (started in FY 2007) are expected to have an influence on the effectiveness of the AB campaign. The counseling, antiretroviral (ARV) adherence program, and the direct observed therapy (TRIO) under palliative care will support the ARV program of the South African Government (SAG).

ACTIVITY 2: Human Capacity Building:

Using FY 2008 funding FOs will receive training on promoting AB messages through the implementation of door-to-door campaigns and other targeted interventions. FOs will receive ongoing in-training, through weekly meetings. FOs will be trained as lay-counselors in year one and graduate to educators in the subsequent year. The training is based on experiences gathered in the field. TCE makes use of its own material, and educational material developed by other organizations and the SAG. All programming is in line with the SAG national prevention strategy. Passionates are trained in HIV and AIDS and in communication and facilitation skills, such as running youth clubs.

ACTIVITY 3: Linkages and Networking

TCE's activities ensure that individuals receive appropriate care. The establishment of linkages and networking activity was initiated in FY 2006 and will continue in FY 2008. A key strategy of the prevention program is the promotion of counseling and testing (CT). TCE works in partnership with South African organizations like LoveLife, to provide CT services to the sites. All households receive messages on the benefits of CT. Referrals to CT are provided during home visits. TCE also collaborates with other PEPFAR partners and SAG hospitals, to ensure that referrals to treatment, care and support services are made. TCE maintains a strong partnership with the TB sub-directorate in the Ehlanzeni and Mopani districts. FOs are trained to raise awareness about TB in the context of HIV, make referrals to clinics and collect sputum. TCE works with public clinics to ensure that pregnant women have access to antenatal services and PMTCT. TCE also ensures cooperation with SAG including the Department of Social Development to ensure that OVC and PLHIV identified through household visits are able to access social security and with the Department of Education to ensure children and youth access education and receive HIV and AIDS information and education on importance of abstinence and delaying sexual debut for the youth aged 10-14, who have not started with sexual activity; and secondary abstinence and reduction on the number of sexual partners using the be faithful prevention component.

ACTIVITY 4: Monitoring & Evaluation

TCE has developed a range of systems to measure the impact of the program. Before starting in a new area, TCE carries out a baseline survey collecting information about knowledge, attitudes and practices in the area. After implementation, each FO maintains a household register, which keeps basic information about the household and provides a continuous source of data to evaluate the progress of the program. Specific information that is collected includes number of people tested, number of OVC, and pregnant women referred to PMTCT and STI services. The PES tool described under Activity 1 provides data that is used to track community behavior change. This data provides information on individual behavior change in the target area. Throughout the program, the FOs and TCE Management meet on a weekly and monthly basis to evaluate the progress of the program. The meetings monitor progress in achieving targets and deliberate on the challenges faced in the field. Quarterly, TCE management meet with staff at the TCE Regional Headquarters in Zimbabwe to further evaluate the progress of the program and develop activities in order to increase impact in people reached with prevention messages within the community.

These activities will contribute to the 2-7-10 PEPFAR goals of averting seven million new infections by increased knowledge and skills among community members in HIV prevention; reduced stigma; improved gender equity in access to information and services; increased knowledge about services (PMTCT and CT);

Activity Narrative: strengthened linkages between other organizations in the area and government services; increased number of people knowing their HIV status; and increased mobilization and capacity among community members and local leaders to deliver prevention messages and offer care and support.

Budget Code: HVAB

Program Budget Code: 02

Activity ID: 13987.23168.09

Planned Funds: \$0

Activity System ID: 23168

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS

ACTIVITY 1: This has linkages to the orphans and vulnerable children (OVC) and palliative care components of Ingwavuma Orphan Care (IOC). Clients will be targeted for prevention and care. The conceptual framework for this is that providing regular advice from knowledgeable adults and ongoing one to one or group counseling will provide an environment in which the OVC are more likely to abstain from sex or delay onset of sexual intercourse. Children in the OVC program will be educated about the benefits of abstaining from sex, dangers of indulging in sex for money, risks of concurrent partners, alcohol and drug abuse leading to inhibition, Teaching will be on a one to one basis or at group meetings. This intervention will be of particular benefit in reaching out-of-school youth.

Adults in the palliative care program will be taught about the risks of re-infection and the benefits of abstaining or remaining faithful to one partner while using condoms. Alcohol use and its effect on HIV spread will be discussed. This education will take place when caregivers visit clients at home and at support groups. As the educators have ongoing contact with their clients, there will be many opportunities to reinforce messages and discuss how the client can practice positive prevention in his/her context.

ACTIVITY 2: The conceptual framework for this activity is that by strengthening the churches and developing a church culture of promoting abstinence and faithfulness (AB), HIV will be reduced in church attendees. Church leaders (120) will continue to be taught and supported to talk about AB with their congregations. A review of available material will be made in order to find an appropriate curriculum to follow. The aim is to find a program that will allow for ongoing prevention messages coupled with activities that will produce an enabling environment. This should make such activities become part of the norm of church culture, thus promoting sustainability of the prevention program. The church leaders will target their programs at youth and also at adults both married and single. The voluntary counseling and testing (VCT) program will be available to provide services to churches whose congregations request it.

ACTIVITY 3: The conceptual framework of this activity is that strengthening families will lead to increased faithfulness in the marriages and so reduce the risk of HIV. Secondly, good family values will be passed on to the children in the family also reducing their risk of HIV infection. Family counseling will continue. The counseling provided will aim to challenge male and female norms, stressing the need for faithfulness by the husband and empowering the wife or wives in the relationship. This activity will be linked to the VCT program so that couples can easily access VCT and know their status.

ACTIVITY 4: Staff trained in giving prevention messages will be assessed in how the training has improved their work. Additional training needs will be identified and the training provided.

NEW ACTIVITY: The conceptual framework for this is to strengthen abstinence among youth attending school Christian unions. The youth who attend Christian unions follow a faith that believes in abstinence until marriage then faithfulness within marriage. However the youth lack skills and knowledge in how to put this into practice. School abstinence clubs will be set up. Selection criteria will be developed to screen potential Youth Club Facilitators and a review of available curricula and training materials will be made before the program starts. The facilitators will then be trained to use the chosen material and receive regular supervision during the program's duration. This activity uses a risk avoidance approach to sexual prevention that is appropriate for IOC's target group of youth 10 to 14 years of age. It uses peer groups to reinforce abstinence messages, geared at promoting abstinence and delaying sexual initiation. The involvement of schools help to expand the reach and scale of HIV and AIDS education programs, as young people spend a considerable amount of time in this setting.

It is envisioned that as part of the program, club members will wear "abstinence rings", which are steel rings earned by youth club members after they have nurtured a seedling into a small tree. The ring then reminds them of their promises and obligations to the group to remain abstinent. Youth Club Facilitators will start abstinence clubs in fifteen schools every four months. The schools will be chosen to be close to active community groups that are already working with us so that they will be able to help publicize and support the program. The youth club facilitators will continue to encourage each group, ensure its constitution is adhered to, ensure that its members are taking initiative to encourage and support one another, and to help solve problems that will arise among members of the clubs.

SUMMARY:Ingwavuma Orphan Care will continue to strengthen and, in some cases, formalize new prevention work, training its staff and volunteers to effectively advocate for and promote prevention, abstinence and faithfulness among all its beneficiaries. The emphasis areas include gender and human capacity building. The church congregations and families of clients in our programs for home-based care will be the entry point to access the target populations which are adolescents, adults, religious leaders and orphans and vulnerable children.BACKGROUND: This project is part of the work of two organizations, Ingwavuma Orphan Care (IOC) and their partner Lulisandla Kumntwana (LK), which began their work in 2000 and 2002, respectively. The organizations work in adjacent districts in Northern KwaZulu-Natal, covering an area of around 4,000 square kilometers between them. The organizations have been networking with each other since 2002 and benefit from this partnership through sharing ideas, information and resources, and occasionally loaning each other staff with particular expertise. Both organizations were new to PEPFAR in FY 2007, and are registered as welfare organizations with the South African Department of Social Development (DOSD). IOC and LK work closely with the Department of Health, which refers orphans and vulnerable children (OVC) to LK and helps facilitate psychosocial workshops that train boys and girls in life skills, gender issues, and sexual education. LK also has an Memorandum of Understanding with the local Department of Welfare to ensure that there is no duplication of services and to facilitate sharing of information, skills, and resources. These projects address gender by reducing the burden on girls and women of caring for OVC and reducing the need for teenage girls and young women to use sex to get food. The youth clubs and psychosocial workshops described below provide a forum for young people to discuss gender issues and for young girls to boost self-esteem and build self-confidence. These youth clubs will be actively involved with prevention messaging and counseling as well as all the other programs of IOC

Activity Narrative: and LK. Prevention has always been a part of the activities of IOC and LK and the need has been identified to further ensure its quality and scope through direct project management, support and monitoring; and also through new specific prevention programs. ACTIVITIES AND EXPECTED RESULTS: ACTIVITY 1: Behavior Change Outreach Family Support Teams, comprised of volunteers recruited from local churches, provide intensive care to OVC living in their immediate vicinity. The teams are supervised by Orphan Care Coordinators and both conduct regular home visits to OVC. Home-based carers visit the homes of people living with HIV and nurses, chaplains, youth pastors, social workers, and paralegals, facilitators of youth clubs and support groups for HIV-infected people all have a strong opportunity to educate on behavior change which includes encouraging youth aged 10-14 to abstain or delay sexual debut whenever they visit. For older youth aged 15-24, secondary abstinence is encouraged while information on correct and consistent condom use is provided for youth at risk and those who are sexually active. Education and counseling is done with both HIV negative and positive people, through support groups for HIV-infected people and counseling home-based care patients. IOC and LK will ensure all staff and volunteers are trained to do this effectively through their normal process of line-management supervision and will document and monitor the interventions using an innovative intervention monitoring database, described below. ACTIVITY 2: Mobilizing Pastors to Counsel for HIV prevention: In FY 2007 Ingwavuma Orphan Care meticulously built up relationships with many of the 800 pastors in the area, and a group of pastors, of all denominations, requested that Ingwavuma Orphan Care provide them with training on HIV and AIDS and prevention. IOC leadership training for pastors will be conducted in FY 2007/8, using Zulu source material from Dr. John C. Maxwell. Training will be conducted over 5 months in 20 sessions and will be followed up by the training of pastors to give prevention messages to their congregations along traditionally faith-based lines, including fidelity and mutual monogamy. This messaging will encourage reduction of the number of sexual partners and discouraging cross generational and multiple concurrent partnerships. Pastors, as trusted members of the community, will also conduct abstinence workshops for youth. The pastors have built a good relationship with the community members. They will first participate in HIV awareness workshops and then prevention and abstinence workshops. Pastors will then in turn conduct these workshops; targeting youth aged 10-14 before they initiate sexual activity. The workshops will be held at churches, and will include health presentations from the IOC nurse. Using FY 2008 funding, this activity will be scaled up significantly beyond the scope of the small pilot project that was implemented in FY 2007. ACTIVITY 3: Family Counseling: Ingwavuma Orphan Care holds workshops for couples once a month for a period of six months, rotating around the different IOC areas, to strengthen marriages and families. A program of oral and video presentations is given by locally-respected men and pastors, followed up by individual family counseling initially with the parents and then with the whole family. Counselors will receive additional training in marriage counseling and counseling in general by an external training provider. The training includes a series on "How to Have a Successful Marriage" and opportunities will be sought to reach mobile populations, specifically when husbands are home from the mines. Because its ethos is like a traditional community meeting profile, with respected elders sharing the secrets of having strong marriages and individual counseling to individual circumstances, this program has been highly popular since May 2007. Using FY 2008 funding, IOC will expand the couple's workshops throughout the municipal district, reaching larger numbers of people with a very high quality and personalized intervention. The workshops and counseling promote reduction of number of sexual partners and HIV testing with referrals to IOC's testing program. The expected behavioral changes are strong and monogamous marriages; giving children the family security they need to be successful and abstinent. The workshops specifically address male norms and behaviors and address discrimination, abuse and coercion amongst women and girl children. ACTIVITY 4: Training of Staff and Volunteers: An inter-disciplinary team of nurses, social workers, chaplains, and orphan care coordinators, as well as a consultant with proven motivational skills will train Family Support Teams. Training of IOC staff to provide prevention messages will occur every month at one of the three staff team days. Training for pastors, including prevention messages for AB and methods of disseminating this information to the community will occur once per month over three months. ACTIVITY 5: Monitoring and Evaluation: IOC's sophisticated M&E system operates on a MySQL/ PHP/ Javascript platform covering both home-based care and orphan care beneficiaries and field workers. Every contact with a beneficiary by a field worker and every intervention are recorded by timesheet. Each intervention is categorized according to the PEPFAR SASI indicators so that reporting is extremely simple. A Data Quality Officer audits the data and verifies the interventions with home-visits on a rolling three-month audit program. The Quality Improvement Manager and staff undertake regular client satisfaction interviews on visits to the clients' homes after three or four months subsequent to the intervention and establish what IOC staff and volunteers have done in practice and whether the client feels their behavior has changed. This activity will enable IOC to reach hundreds of youth and adults with the abstinence and faithfulness messages. This activity will contribute to the PEPFAR 2-7-10 goals of averting seven million infections by helping adults and youth reduce risky sexual behaviors.

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Family Health International South Africa (FHI SA) worked with the University of the Western Cape (WC) on this program in FY 2005 and FY 2007 and will continue to work with them in FY 2008. In FY 2009, however, FHI SA will cease work with the University of the Western Cape as their capacity has been developed through the previous years' programming; reports indicate that their peer education system is now well established and is able to sustain itself through other sources of funding.

In FY 2009 FHI SA will work with the Universities of the Free State and Limpopo and will provide training to a new cadre of peer educators on these campuses. FHI SA will further provide refresher training to those peer educators who were trained before. FHI SA will continue to provide technical assistance to both the partners and universities to ensure proper implementation of the project. This will be accomplished through establishment of quality assurance mechanisms -- such as internal and external monitoring systems, use of program manager and peer educator checklists and job aids, and comprehensive documentation -- that ensure quality of implementation. Peer educators will be trained and provided with refresher workshops that continuously update them on new information and strengthen their skills. Equipping supervisors with skills to provide supportive supervision, mentoring and monitoring to the peer educators will also be included

SUMMARY:

Family Health International (FHI) will provide technical assistance (TA) to three universities' peer education programs to continue integration of abstinence and be faithful messages (AB) as well as life skills into the ongoing activities of the peer education programs on university campuses. Using the curriculum developed in FY 2005, the AB and life skills training will be extended to a cadre of peer educators (PEs) on each of the campuses participating in this project. The PEs will then pass these skills on to other students on campus primarily through interaction in ongoing, small behavior change groups. Emphasis areas are gender which includes addressing male norms and behaviors, cross-generational sex and multiple sexual partnerships, reducing violence and coercion, training, local organization capacity building, and wraparound programs in family planning and education. Main target populations addressed are men and women of reproductive age and people living with HIV.

BACKGROUND:

Currently, most efforts addressing sexuality and reproductive health needs for young people are focused on out-of-school youth and those in secondary school in South Africa. Youth at institutions of higher learning represent a special group at risk as they are often left unsupervised by both parents and teachers, who are under the assumption that they are mature enough to protect their sexual and reproductive health. Available evidence suggests that these young men and women have high sexually transmitted infection (STI) and unintended pregnancy rates, an indication that they are not yet equipped with the knowledge and skills required to protect themselves from these adverse outcomes. In FY 2005, in consultation with the South African Universities Vice Chancellors' Association (SAUVCA) and the Department of Education, FHI implemented a project that took place on three university campuses in South Africa: University of the Western Cape, University of the Free State, Qwaqwa campus and University of Limpopo, Medunsa campus. Each campus contributed to the development of the AB/life skills curriculum which was subsequently implemented among 26 PEs from each of the three campuses. After the training, PEs recruited six students each to take part in ongoing behavior change communication (BCC) groups on their campus, reaching in total 468 students. Life skills aim to enhance the students' ability to make responsible sexual health decisions and adopt behaviors that will keep them free of STI and HIV infection, as well as avoid unintended pregnancies. The curriculum included sessions on "Abstinence"; which promotes delaying sexual debut for youth under 14, as well as secondary abstinence for older youth and "Be Faithful" for youth and adults in long-term relationships, discouraging them to engage in multiple and concurrent sexual relationships which are the drivers of the HIV epidemic. The AB prevention messaging will address secondary abstinence, values clarification, self-esteem, communication, decision making and negotiation, and utilized participatory learning techniques. Another key component of the AB/life skills training was a session on gender equity. The curriculum complemented the universities' existing peer education curricula, which provides basic information about prevention of HIV and AIDS. The BCC groups provided a safe place to explore strategies for adopting and strengthening the AB life skills in their personal lives. Students were able to support each others' behavior change process, including seeking counseling and testing (CT). Through one-on-one and group interaction, the PEs took advantage of a variety of regularly scheduled campus events-such as orientation week, condom week, and STI awareness week-to reach additional students with basic information on STIs, HIV and unintended pregnancies and how to protect oneself and maintain a healthy lifestyle. The program also promoted referrals between the PEs and student health or community health services for CT as well as family planning (FP). Major accomplishments to date include development of the AB life skills curricula and successful training of the PEs. The program has gone beyond the university campuses and PE groups to be conducted in high schools in communities near the campuses. A radio series was produced and launched on campus and community stations throughout South Africa, reaching approximately 6,000,000 listeners. The show addressed issues related to risk-reduction behaviors for STIs, HIV and unintended pregnancies that are relevant for university students. The curriculum was also used by University of Nairobi for a similar intervention. The universities did not receive PEPFAR funding for FY 2006, however the universities were committed to continue the BCC groups and supervision activities. While the activities are expected to continue with the respective university funding, additional resources are needed to strengthen the longer-term institutionalization of the life skills program.

ACTIVITIES AND EXPECTED RESULTS:

In collaboration with the Department of Education, in FY 2008 FHI will continue to work with the three universities, University of the Western Cape, University of the Free State, Qwaqwa campus and University of Limpopo, Medunsa campus, and explore opportunities to expand activities to tertiary institutions. FHI will

Activity Narrative: work in collaboration with JHU at the University of Western Cape and the University of Free State, Qwaqwa campus to ensure that all PE programs are harmonized. To align the goals of the program with the government goals, FHI will work closely with the Department of Education staff to further refine the program and improve outreach. Further integrating AB life skills into their peer outreach program work plans, each university will recruit new PEs for the AB life skills project, who will then recruit other students to participate in small, ongoing BCC groups. TA will also be provided to strengthen supervision skills to ensure the quality of the peer interactions, modeling problem solving skills, and shaping perceived peer/social norms on sexual behaviors. The "Be Faithful" messages will also promote mutual monogamy, partner reduction and full information on correct and consistent condom use will be provided.

Specific activities include: (1) Incorporating AB life skills program into existing peer education work plans in a cost-effective manner; (2) Conducting AB life skills training for all PEs participating in the program; (3) Providing refresher trainings to strengthen basic peer education/facilitation skills; (4) Standardizing job aids and tools for PEs to use in small groups; (5) Conducting supervision skills training for and provide TA to supervisors to help support PEs and the BCC group process; (6) Building and strengthening relationships between PEs and student health services, and formalize referral links to health services; (7) Integrating alcohol and substance abuse risk behaviors in the life skills program; and(8) Monitoring AB, life skills and BCC group processes. The project will help decrease the number of new infections by achieving the expected results which will ultimately lead to a delay in sexual debut, a reduction in sex acts, fewer partners or a reduction in unprotected sex. The activities contribute to the 2-7-10 PEPFAR's goals of averting of seven million new infections.

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Modifications to Activity 3:

Monitoring and Evaluation training and technical assistance will continue to be systematically provided to all Family Health International's (FHI) sub-partners under the umbrella grant mechanism during FY 2009.

New Activities:

FHI will work with its abstinence and being faithful (AB) partners to ensure that messaging that promotes the reduction of multiple and concurrent partners are included in all activities. These messages will be aimed at the older target groups (i.e., those that fall into the "B" group).

FHI will pay particular attention to partners' selection criteria when recruiting peer educators for their programs. FHI will request to see and review the selection criteria to encourage selection of suitable candidates for peer educators/role models.

FHI will work with those partners providing training as a service, to get their training accredited.

SUMMARY:

USAID/South Africa (SA) supports institutional capacity building of indigenous organizations that implement PEPFAR programs, including abstinence and fidelity focused prevention programs, through three competitively-selected Umbrella Grants Mechanism (UGM) partners: Pact, the Academy for Educational Development (AED) and Family Health International (FHI). The main purposes of these UGM projects are to: (1) facilitate further scale-up of HIV and AIDS prevention services through local and international implementing partners in the short term; and (2) develop indigenous capability thus creating a more sustainable program. The major emphasis area is local organizational capacity development. Primary target populations are indigenous organizations, including non-governmental organizations (NGOs), faith-based organizations (FBOs) and community-based organizations (CBOs). The current UGM with FHI will support five sub-partners who have transitioned over from Pact and five new sub-partners. The activity described below refers only to the USAID/SA UGM project managed by FHI.

BACKGROUND:

Currently, USAID/ SA's Health and HIV and AIDS strategy responds to the overwhelming challenges posed by the HIV and AIDS epidemic on individuals, families, communities and society in South Africa. Through this UGM, FHI is responsible for managing sub-grants to ten of USAID's partners (all of whom submit their own COPs directly to USAID). As USAID's prime partner and the managing umbrella organization, FHI will not directly implement program activities, but rather act as a grants management partner to manage and mentor its ten sub-recipients who, in turn, will carry out the assistance programs. Thus, FHI functions primarily as a sub-grant making entity and a relatively small percentage of overall funds are used for administrative purposes. Given that grant recipients require significant technical assistance and management support, FHI will devote a reasonable percentage of overall funding to providing this support.

USAID closely collaborates and coordinates with the South African Government (SAG) in supporting PEPFAR partners through the umbrella grant mechanism. Although some of the partners work closely with various SAG Departments at national and/or local (i.e. provincial and district) levels, the umbrella grant's primary interface with the SAG is through the Senior Management Team (SMT), which includes key staff from USAID, the National Departments of Health and Social Development (NDOH, DOSD), and representatives from the provincial departments.

Under this UGM with FHI, USAID is supporting four indigenous and international FBOs and NGOs providing abstinence and be faithful-focused (AB) prevention services to communities in the provinces. These are: GoLD Peer Education Agency; Humana People to People; LifeLine; and Mpilonhle. Grants to prevention partners support the delivery of AB programs in a variety of settings including schools, churches, and outreach to communities. Services are delivered in accordance with the PEPFAR ABC guidance. Approaches include capacitating community volunteers to conduct age-appropriate youth activities, working with religious leaders to reach congregations with value-based prevention for men and women, conducting participatory personal risk assessments, and promoting VCT and use of other HIV services.

ACTIVITIES AND EXPECTED RESULTS:

In the FY 2008, USAID will continue to support AB prevention activities through this UGM with FHI. Funds budgeted under this narrative will support costs for administering and managing these AB prevention sub-partners of FHI. The subpartners conducting Prevention activities are: GoLD Peer Education Agency; Humana People to People; LifeLine; and Mpilonhle. Separate COP entries describe the prevention activities implemented by each sub-partner under FHI. Institutional capacity building of indigenous organizations is a key feature of the umbrella grant mechanism and an important strategy for achieving prevention, care, and treatment goals of PEPFAR to ensure long-term sustainability of programs and organizations.

ACTIVITY 1: Grant Management

Through this UGM, FHI will award and administer grants to partners selected through the PEPFAR APS competitive process to implement HIV and AIDS AB prevention activities. This involves an array of related activities including award and administration of grants, monitoring of grant progress, meeting reporting requirements, and grant closeout. FHI will continue to monitor prevention program implementation and adherence to financial regulations, both within FHI itself and by its sub-partners (e.g., USAID's partners).

Activity Narrative: This involves provision of extensive technical assistance to partners on project development and implementation, financial management, and reporting. All these functions provide key support to organizations so they better implement AB activities.

ACTIVITY 2: Capacity Building

This umbrella mechanism will support institutional and technical capacity building of indigenous organizations, a key strategy for PEPFAR prevention goal, thus promoting more sustainable programs and organizations. (Capacity building activities are defined as activities that strengthen the skills of indigenous organizations to implement HIV and AIDS programs efficiently, with diminishing reliance on external technical assistance and support). FHI will support activities to improve the financial management, program management, quality assurance, strategic information and reporting (including monitoring and evaluation), and leadership and coordination of its sub-partner organizations implementing prevention activities. FHI will also provide technical assistance to the USAID partners, as needed, to improve the technical approaches used for AB prevention activities and to enable quality assurance/quality improvement (QA/QI) of activities falling within this technical area. All these functions provide key support to organizations so they better implement AB activities.

ACTIVITY 3: Monitoring and Evaluation (M&E) and Reporting

The UGM will ensure that support is provided to USAID's prevention partners in M&E, in order to strengthen measurement of the implementation and impact of program activities, an eventual achievement of PEPFAR goals. FY 2007 featured an initial intensive training workshop with the partners to address data collection, data analysis, and data use and to develop their annual M&E Plans and data collection tools. Training and technical assistance will continue to be systematically provided to all of FHI's sub-partners under the UGM during FY 2008, as well. M&E support of prevention partners will include revision/updates to data collection tools, as needed; measurement of program progress; provision of feedback for accountability and quality; and implementation of information management systems. In addition, the UGM will provide supportive supervision including guidance, monitoring, mentoring and oversight through site visits, virtual and direct technical assistance, and QA/QI initiatives. All these functions provide key support to organizations so they better implement AB activities.

The FHI UGM will contribute to the PEPFAR goals of providing treatment to two million HIV-infected people; prevent seven million HIV infections; and provide care to ten million people infected by HIV and AIDS, including orphans and vulnerable children (OVC).

Planned Funds: \$0

Activity System ID: 22915

Activity Narrative: In response to OGAC's review of the PEPFAR South Africa FY 2009 Country Operational Plan, the Prevention Steering Committee directed the country team to reprogram 20-30% of the PEPFAR South Africa sexual prevention portfolio

SUMMARY:

Medical Care Development International - South Africa (MCDI-SA) is a US-based private voluntary organization that is registered as a Section 21 company (NGO) in South Africa. MCDI-SA has been successfully implementing community public health and social support projects in KwaZulu-Natal, South Africa, since 1995.

BACKGROUND:

MCDI-SA will expand their PEPFAR funded programs to include abstinence and being faithful (AB) among youth. All MCDI-SA activities are based on the goals, guiding principles and strategies developed and published in the HIV & AIDS and STI National Strategic Plan, 2007-2011, and are in ongoing collaboration with the iLembe District Department of Health and KwaZulu-Natal Department of Health. A major emphasis of the activities under this project area for in- and out-of school youth will be messaging on the importance of gender equality as well as prevention of teenage pregnancy to encourage confidence and self-determination among girls and increased understanding among boys of the respect that all women and men deserve equally. This is especially critical in the context of the prevailing traditional Zulu cultural influence in the rural areas that support males as the dominant gender in all social contexts.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Expansion of Youth HIV and AIDS Education and Advocacy through High School Health Groups and Out-of-School Youth Clubs

MCDI will expand its previously successful program of participatory youth education on HIV and AIDS and abstinence, sexually transmitted infections (STIs), and teenage pregnancy prevention to 10 iLembe District high schools through its partnership with Royal Falcon Education Initiative, a South African non-governmental organization. This organization uses dramatic methods including acting and role-playing, which are very appealing to youth, to increase knowledge and awareness of HIV and AIDS while building the skills and confidence necessary for the practice of safe sexual behaviors, specifically abstinence and faithfulness, to prevent new infections and reduce stigma and discrimination. Due to MCDI's previous success in two Ndwedwe sub-district high schools, it has been able to secure support from the iLembe District Department of Education for this activity, as well as commitment from school principals. Special efforts will be made to involve 10-14 years to instill abstinence messages.

In order to reach out-of-school youths, the established school-based health groups will be supported to establish out-of-school youth clubs within their local community. The clubs are encouraged to call bimonthly meetings to deliver education on HIV and AIDS, STI and teenage pregnancy prevention, specifically through AB and through dramatic methods. These out-of-school youth clubs will be significantly more successful at identifying and encouraging the participation of out-of-school youth than efforts from outside the community. The school-based health groups will deliver the same education messages through dramatic methods delivered in schools. Initiating clubs in this manner assures easy scalability into any number of other districts and provinces. These clubs will then be linked with the prevention of mother-to-child HIV transmission and voluntary counseling and testing support groups that have already been established by MCDI. The clubs will interact for mutual benefit, including participatory education and available venues for meetings.

In the first year, MCDI-SA will target eight schools with an estimated 1,000 students each for a total of 8,000.

This activity will be preceded by a standardized Knowledge, Attitude and Practice (KAP) study that will be repeated annually. The frequency and content of messages will be established by Royal Falcon and will be reflected in their work plan.

ACTIVITY 2: Behavior Change through Educating Community Role Models

MCDI will reinforce youth behavior change and communication, specifically through AB, delivered through the school-based health groups and out-of-school youth clubs by training influential community members who are central to community spheres of influence. Having influential community members trained to deliver HIV-related education will also combat HIV-related stigma and discrimination within communities. The need for this is particularly substantial in iLembe District where HIV-related stigma and discrimination are widespread.

ACTIVITY 3: Radio Messages to Promote Abstinence and Faithfulness

Previous community surveys done by MCDI have shown that about a third of the general population rely on radio messages for health information. Using community radio stations in iLembe District and eThekweni, as well as Ukhozi Radio, a mainstream radio station with the highest listenership in southern KwaZulu-Natal, MCDI will develop and produce a series of Zulu-language radio messages communicating AB messages targeted to youth as well as to the general population. These messages will be based on the Youth Enrichment Program training manual developed by Royal Falcon.

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Youth for Christ South Africa (YfCSA) has modified FY 2008 activities to improve YfCSA's comprehensive prevention program, and in consideration of the FY 2009 Technical Considerations.

ACTIVITY 1: Life Skills Training

Youth Facilitators will, in the schools they are placed in, work closely with Life Orientation (LO) educators to schedule possible times in a quarter, to facilitate life skills lessons. They will work in schools, with the 10-14 year age cohort to promote abstinence and delay of sexual debut, and will promote secondary abstinence and being faithful, with the 14 -19 year cohort.

Youth Facilitators will present a range of life skills sessions delivering abstinence and being faithful (AB) messages engendering behavior change by dealing with consequences of high-risk behavior and negative peer pressure, and, at the same time, promoting the advantages of abstinence and secondary abstinence to those who are sexually active. YfCSA has partnered with the Centre for the Support of Peer Education (CSPE) to develop a life skills curriculum that will inculcate priority areas and specific outcomes identified by the Department of Education and Department of Health. This curriculum will include modules on sexual and reproductive health; HIV and sexually transmitted diseases prevention; human rights; women's rights and gender-based violence; and substance and alcohol abuse. Youth Facilitators will be trained to facilitate sessions with an interactive approach to engage learners, and thus, to enhance behavior change through dialogue.

ACTIVITY 3: Peer Education

Using the Rutanang model of peer education, Peer Educators will be selected from the various schools, and trained and established as Peer Education groups/committees. These groups/committees will be trained at a three-day camp that will combine groups and their LO educators from several schools in the vicinity. Throughout the year, Youth Facilitators will coach Peer Educators and their committees, supervising and supporting their work and schedules. Each Peer Education Committee, will develop their own plan of action in conjunction with the Youth Facilitators and their LO educators after training. Training of Peer Educators aims to equip them as agents of influence in their schools and friendship circles, while a Peer Education Supervisor or Coach (Youth Facilitator) supports them in conducting an effective program. Their training covers public speaking, organizing skills, peer education and its purpose, sexual reproductive health and HIV and sexually transmitted infections prevention, HIV drivers, reporting, etc.

ACTIVITY 4: Creative Arts

Since FY 2007, YfCSA has used trained itinerant dance and drama teams to enhance the prevention program in schools. To train and maintain an itinerant Dance and Drama Team is not an easy exercise as there are several challenges, including high maintenance costs. However, creative arts as a mass media tool has been very effective, and has been used to complement the ongoing Peer Education and life skills programs conducted by Youth Facilitators, on a daily basis at their selected schools. In FY 2009, Youth Facilitators will be trained in dance and drama and equipped with a repertoire to deal with a range of relevant topics such as abstinence, fidelity, high risk behaviors, HIV and AIDS, making decisions about sex, and promoting abstinence and secondary abstinence. Youth Facilitators will be able, from time to time, to regroup and work together, using their dance and drama presentations on special occasions such as launches, awareness events and campaigns, World AIDS Week, etc. They will also be able with their newly acquired knowledge dance and drama, to organize and run workshops in their schools, and in turn, coach Peer Education groups on the use of dance and drama to mobilize and communicate AB messages. Therefore, in FY 2009, YfCSA will not have and use itinerant teams; instead, the skills of creative arts and drama will be used by the Youth Facilitators to roll out the prevention program in schools and communities.

ACTIVITY 4: Gender Empowerment

In FY 2009, Youth Facilitators will organize workshops, seminars, and gender-based camps for schools. They will mobilize strategic people in the community to speak to groups of learners, Peer Educators and their committees and clubs. Gender empowerment will be addressed by dispelling negative norms, myths and practices that fuel gender-based violence, power imbalances between men and women that may be rooted in societal and cultural stereotypes. Gender-based violence and power imbalances continue to fuel the spread of HIV. Gender problems are also closely linked to customs and cultural practices, often-sensitive issues. Youth Facilitators and staff will be trained to address, through workshops and training sessions, gender-based violence. Youth Facilitators and YfCSA staff will also be trained, through the University of Pretoria's Institute for Women and Gender Studies on gender-based violence; HIV and AIDS and gender awareness; sex and sexuality; and reproductive health.

ACTIVITY 5: Parent/Child Based Seminars

In FY 2009, YfCSA aims to introduce Families Matter! program, which has been effectively implemented in the USA and successfully adapted in Kenya. YfCSA will work with CDC South Africa to adapt and implement this program in South Africa. Previously, YfCSA has implemented an activity to promote and encourage effective communication and positive relationships between young people and their parents. This activity is a modification of the Parent/Child based seminars. At least 1,800 Peer Educators and their parents will be reached with the Families Matter! program.

This activity aims to bridge the gap and promote effective communication and relations between young people and their parents and/or significant adults. Youth Facilitators, YfCSA staff, school authorities and strategically invited facilitators (e.g., social workers, child and youth care practitioners; probation officers, etc.) will organize and facilitate dialogue between adults and young people. The activity aims at aiding effective communication on topics such as sex and sexuality, HIV and AIDS, dating and making a decision

Activity Narrative: to have sex, and other subjects that continue to be taboo in many families and communities.

SUMMARY:

Youth for Christ South Africa (YFC) will promote HIV risk reduction through abstinence and being faithful (AB) activities among youth 10 to 18 years of age. The activities will take place in at least 250 schools in five provinces, namely Eastern Cape, Gauteng, Mpumalanga, North West and the Western Cape. The organization will recruit and train young adults to work in the programs as youth workers and peer group trainers. The emphasis area for this program will be gender and human capacity building and training. The target population will include children and youth, adult, teachers and religious leaders.

BACKGROUND:

YFC is a youth development organization that directly addresses problems and needs of youth. YFC South Africa has established several training centers and local offices in five provinces of South Africa. YFC runs a number of programs aimed at preparing youth for the future. YFC has been funded by the National Department of Health (NDOH) since 1995 and received PEPFAR funds through the CDC cooperative agreement with the NDOH starting in 2005. As of FY 2007, YFC will become PEPFAR prime partner and will no longer receive PEPFAR funds through the CDC cooperative agreement with the NDOH.

ACTIVITIES AND EXPECTED RESULTS:

Many YFC activities promote behavior change through promotion of AB messages and activities. YFC will continue to empower young women through counseling and education, in an effort to improve general life and sexual decision-making skills. The abstinence-focused messages are geared towards children ages 10-14 in primary schools; messages to high school students ages 14-19, out-of-school youth and young adults focus on abstinence, delayed sexual debut and faithfulness. Full information on correct and consistent condom use is provided and referral to relevant service sites, but the focus is more geared towards AB messages. This is consistent with the PEPFAR ABC guidance.

ACTIVITY 1: Peer Education in Schools

Building on activities of FY 2007, YFC will continue to train a network of unemployed young adult volunteers from faith-based organizations to provide peer education in the form of training, support and referral services for students. YFC has developed effective models of working with, and empowering, youth who will be trained to share AB information and correct decision-making skills with their peers. YFC will work with the provincial Department of Education (DOE) to identify appropriate schools in which to implement these activities. YFC will also collaborate with school principals and the local communities. The young volunteers will be placed in schools to serve as coaches and mentors for peer groups, and these volunteers will encourage students to form support groups and clubs both in- and out-of-school. The volunteers will also be trained to run informative workshops and community events in their schools on a host of issues relating to HIV and AIDS, peer pressure, self-esteem, and goal setting.

ACTIVITY 2: Life Skills Training

Young volunteers will be trained to conduct life skills sessions at schools and in camps to educate youth on making informed decisions about life and sexuality. YFC will use the Rutanang curriculum, which has been endorsed by NDOH. Rutanang's peer education model highlights the importance of delaying first sex secondary abstinence and consistent and correct use of condoms, as well as respect for others. YFC has developed holistic prevention programs that incorporate key players from all levels of a community to bring about a positive school environment. It is the responsibility of each local office of YFC to maintain and sustain the work that they initiate in their localities. YFC will use drama, music and dance to effectively communicate the life skills and AB messages. Topics to be covered will include male norms and behaviors as well as gender roles and equity to discourage discrimination, violence, coercion and abuse against women and girl children YFC will also work with the DOE to implement this activity.

ACTIVITY 3: Creative Educational Teams

YFC will set up and use edutainment for support of the prevention program for both in- and out-of-school youth. This will be done by using drama, dance and discussion groups to educate youth on HIV and AIDS, and to promote AB life styles. YFC will recruit, train and deploy five itinerant teams to work and support work done in schools and communities to educate youth on these issues. YFC itinerant teams will present HIV and AIDS productions in high schools, youth centers, churches and prisons. These teams will spend three to five days in each school, giving assembly and classroom presentations, and creating informal discussion times. YFC will work in partnership with the NDOH and the DOE to reach the target audience. The provision of community programs will help to de-stigmatize HIV and AIDS in communities. YFC aims to have teams set up in each region.

ACTIVITY 4: Capacity Building

During FY 2007 YFC has established and is implementing an Internship Program. This program targets unemployed youth volunteers, active in faith-based organizations, and placed them in the various YFC offices. The purpose of the year-long internship is to provide the interns with on-the-job training in a program or project linked to the organization. Examples of activities that interns participated in include: life skills programs; leadership training; training camps; HIV and AIDS workshops. The Internship Program is based on the great emphasis on training and capacity development of the YFC management. Using FY 2008 funding, YFC South Africa intends to increase the number of Interns and Youth Workers placed in schools.

Activity Narrative: ACTIVITY 5: Gender-Based Camps

Using FY 2008 funding a new activity that will be implemented is that of gender-based youth camps that aim at tackling issues of gender stereotyping. YFC will run camps for boys and for girls. The purpose of the camp will be to create a space for youth to dialogue about sexuality, gender, and gender stereotypes in the context of HIV and AIDS.

ACTIVITY 6: Parent/Child School-based Seminars

In addition to the activities listed above, YFC understands that it is important to focus on building relationships between youth and their parents. YFC will establish school run, school based seminars to facilitate dialogue and increase awareness and understanding between youth and their parents, to foster good relationships and bridge the gap of misunderstanding created by lack of communication. Talking about sex, sexuality and boy/girl relationships continues to be taboo in many families and communities. This increases the risk factor of young people with regard to HIV and AIDS as they seek information from peers and other sources, unguided by relationship and communication with their parents, families and/or significant adults in their lives.

These activities will contribute to PEPFAR's goal of averting seven million new HIV infections. In addition, the activities support the USG Five-Year Strategy for South Africa by increasing effective faith-based activities and creating support for positive gender norms.

Planned Funds: \$395,546

Activity System ID: 22880

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Human Capacity Development

Pact's primary focus in implementing the Umbrella Grant Management Program (UGM) is the development of human capacity in South African non-governmental and community-based organizations to promote establishing and strengthening viable and sustainable civil society organizations. However, the COP guidance is very specific in terms of what can be included in Human Capacity Development (HCD) and for this reason, Pact will only address the leadership and management development aspects of the UGM HCD activities.

Prior to the signing of grant agreements, Pact provides extensive assistance to partner organizations in developing comprehensive program design documents that accurately reflect planned activities and clearly articulate defined goals and objectives. Further assistance is provided in costing program activities and developing a detailed budget that is consistent with program objectives. Pact emphasizes to management staff during this process, the importance of ensuring that program and finance units work as a team rather than in isolation. The ability to articulate program goals and activities clearly, and to develop realistic budgets greatly enhances the ability of management to diversify their funding base and ensure sustainability.

Pact conducts organizational capacity assessments in collaboration with each partner. The core methodologies used in all of Pact's capacity building activities are as follows: assessment of sub-recipient organizational and technical capacity, development of institutional strengthening plans, delivering capacity building services, reassessment and refinement of institutional strengthening plans (ISP). Several individuals from partner organizations participate in the assessments in order to ensure that feedback is obtained from staff at all levels. This process develops the skills of senior management to objectively assess organizational strengths and weaknesses and utilize the results to develop a realistic strategy that will ensure that organizational objectives are achieved (including retention strategies for staff) and identified gaps are addressed. The strategy also details what interventions and support will be provided, by whom, when and how organizational change will be measured.

Pact also conducts workshops that primarily target senior management and board members. A resource mobilization course is offered annually to provide information to partner organizations on sources and strategies for diversifying their funding base. One day of the three day workshop is devoted to developing the skills of participants in writing proposals. Board training is also offered annually to address issues related to fiduciary, legal and ethical roles and responsibilities of board members. Although Pact's Monitoring and Evaluation (M&E) course targets M&E and program staff, senior management members of partner organizations are encouraged to attend in order to ensure that they understand how to utilize data to make organizational decisions.

Pact, in working with partner organizations over the course of the past four years has recognized that management skills among the leadership of many of the civil society organizations need to be further developed. For this reason, utilizing FY 2008 and 2009 funding, Pact will identify short-term management courses in South Africa that will enhance leadership and management skills. All partner organizations and their sub-recipients will be allowed to attend the leadership and management courses, but Pact will primarily target the partners that have experienced great difficulty in transitioning to the increased funding levels or have new management staff and structures.

Alignment with South African Government Policies or Plans

In developing program descriptions with partners, Pact ensures that activities are aligned with district and provincial business plans, the HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011 and other South African government policies or plans.

Gender

Pact ensures that gender-related activities are clearly articulated in partner's program descriptions and implementation plans. Programmatic and technical assistance provided to partners addresses gender issues as part of the assessments and recommendations for strengthening technical and organizational capacity.

SUMMARY:

Pact's Rapid Response for HIV and AIDS in South Africa is an umbrella grant mechanism for USAID PEPFAR grants identified through a USG interagency competitive (APS) process. Pact's primary goal is to build sustainable institutional capacity and increase the effectiveness of local partners to achieve expanded and quality services. Pact conducts initial assessments (identifying key organizational strengths and weaknesses) and works with each partner to develop and implement a tailored, phased capacity building agenda.

BACKGROUND:

Since FY 2004, Pact has facilitated the efficient flow of grant funds during the rapid scale-up of the PEPFAR South Africa program. Pact provides PEPFAR funding and assistance to over 30 total PEPFAR partners and sub partners in South Africa playing valuable roles in the fight against HIV and AIDS. Primary target organizations include non-governmental, private voluntary and faith-based organizations. Pact's major emphasis is the enhancement of local organizational capacity building through the development and implementation of documented organizational systems and procedures and human capacity development at management and operational levels. Prevention activities have to date resulted in Pact partners reaching

Activity Narrative: over 200,000 people with Abstinence and Being Faithful (AB)-focused messages. Grants to prevention partners support the delivery of AB programs in a variety of settings including schools, churches and through household visits. Services are delivered in accordance with the President's Emergency Plan for AIDS Relief (PEPFAR) policy guidelines and in line with the South African Government's Department of Health strategy. Approaches include capacitating community volunteers to conduct age-appropriate youth activities, working with religious leaders to reach congregations with values-based prevention for men and women, conducting participatory personal risk assessments and promoting Counseling and Testing (CT) and use of other preventive services.

ACTIVITY 1 - Grant Management

Pact conducts a participatory assessment of each partner organization and collaboratively develops an organizational capacity building strategy that details planned interventions. These assessment results also inform Pact of what type of assistance must be provided urgently in order to ensure that the organizations comply with USAID rules and regulations. Prior to the signing of grant agreements, Pact provides extensive assistance to organizations in developing comprehensive program design documents that accurately reflect planned activities and clearly articulate defined goals and objectives. Further assistance is provided in costing program activities and developing a detailed budget that is consistent with program objectives. Pact assists partners in developing realistic cost share levels and emphasizes the sustainability aspect of this requirement. After the signing of the agreement, Pact works with each partner in developing a very detailed annual work plan that includes specific activities to be implemented, timelines, budgeted amounts, target beneficiaries and projected reach. The ability to clearly articulate program goals and activities and develop realistic budgets greatly enhances the ability of partner organizations to diversify their funding base and ensure sustainability.

ACTIVITY 2 - Human Capacity and NGO Development

Pact has developed a customized training series to orient new partners and their sub partners. The training series includes basic and advanced grants and sub grant management which addresses USAID rules and regulations, good governance and minimum financial management standards. Monitoring and evaluation courses cover basic principles of monitoring and evaluation and PEPFAR data requirements as well as internal data quality assurance. Refresher courses are also offered throughout program implementation. Pact ensures that ongoing, intensive on-site training and mentoring is provided to partners and sub partners. On a quarterly basis, Pact assesses the level and type of assistance required by each organization and develops a site visit plan that ensures that the necessary support is delivered to each partner and sub partner. Pact organizes and supports technical consultation meetings for the sharing of best practices and lessons learned among PEPFAR and non-PEPFAR partners. As required, technical assistance from select regional and international providers is sourced to assist partners in improving their technical capacity.

ACTIVITY 3 - Monitoring and Evaluation (M&E)

Pact SA assists each grantee in developing a results framework that tracks success against both PEPFAR program and organizational indicators. Pact further assists partners and sub partners in the development of monitoring, evaluation and reporting (MER) plans and systems. Participation in a five day M&E training is mandatory for all partners prior to full implementation. Pact provides additional M&E assistance to all partners in the following areas: review and development of effective data collection, analysis and reporting tools; setting realistic and achievable targets; establishing and strengthening data quality management systems, conducting internal data quality audits and verifying and validating partner and sub partner data submissions

ACTIVITY 4 - Program and Financial Monitoring

Pact recognizes the importance of monitoring partner and sub partner program progress and early identification and resolution of implementation issues. Pact has frequent and regular contact with partners and if technical/programmatic gaps or problems are identified, ensures that issues are promptly addressed and resolved. In addition to monitoring program progress, Pact closely monitors partner financial management and ensures that grants funds are utilized only for activities approved by USAID under PEPFAR funding. All partners submit monthly financial reports that detail and document expenditures. Once Pact has ascertained that the partner has implemented and/or strengthened financial management systems which fully comply with USAID regulations, the documentation requirement is removed and only the monthly reporting requirement remains in effect. Pact finance staff visit partners every quarter to audit program expenses and accompanying documentation, compliance with USAID rules (including branding requirements) and cost share.

ACTIVITY 5 - Technical Assistance

Pact will provide and manage direct technical assistance in prevention, care and support strategies for all sub-grantees. Pact technical staff will conduct assessments and provide consultation and training on the development and implementation of programs and services (in line with best practice models, donor and SAG recommended methodologies and standards). In addition, sub-grantees will be supported with guidance and ongoing assistance on the design and delivery of partner HIV and AIDS curricula, training modules and publications. Pact will also work closely with partners to ensure the effective incorporation and strengthening of nutrition and food security, protection services, gender mainstreaming, and human capacity development in existing programs.

Pact has contributed to the 2-7-10 PEPFAR goals through support to five indigenous and international FBOs providing prevention services to communities in all nine provinces.

Budget Code: HVAB	Program Budget Code: 02
Activity ID: 3013.22963.09	Planned Funds: \$2,971,822
Activity System ID: 22963	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

FY 2008 activities will be continued, but the following enhancements have been made:

Much time, attention, and resources have gone into improving Siyafundisa's data collection, evaluation and reporting systems. All project staff has been trained on how to use the new tools: how and when to collate, verify and enter data. In addition, management staff has skills to note the first, if any, signs of difficulty with implementation. The project has been enhanced by being able to report achievements to report, and acquiring tools for collecting and accurately reporting these achievements in a timely manner.

The project has significantly expanded its field staff. At the start of the project, in February 2006, Siyafundisa employed only one field worker/trainer. Siyafundisa soon realized that this was inadequate and added a second worker, so that each could cover two to three dioceses. In June 2007, another six field workers were employed, each being responsible for one to two dioceses. In February 2008, an additional 10 field workers were hired and the project achieved countrywide coverage. Today, Siyafundisa aims to hire field workers to work in two more dioceses, and may consider splitting some of the dioceses among existing field workers to accommodate the demand for the programs throughout the country.

Emphasis is gradually shifting from training (even though this is still significant, and more capacity building focused) to more outreach and reporting. The project has just established a team of four program officers/master trainers who, under the direction of the Capacity Building and Training Manager, will assume primary training responsibilities. This team will spend time developing, adapting and incorporating messages that directly address the key drivers of the pandemic, with stronger emphasis on the one-on-one sessions to address the issues of multiple concurrent partnerships, and male norms that undermine the dignity of women and that promote sexual violence against women. Simultaneously, similar messages will be developed for clergy and preachers to share during their weekly sessions at parishes. Rapid expansion and deeper concentration of the project will target the provinces that have high HIV prevalence (i.e., Mpumalanga, Free State, Gauteng, Limpopo, KwaZulu-Natal). More emphasis will be placed on reaching younger girls and older men (to break the intergenerational sex trend) through the church groupings. Field workers' main duties now revolve around supporting and mentoring the outreach staff (peer educators, peer educator supervisors and life skills facilitators) and reporting on their work.

SUMMARY:

Siyafundisa is an Anglican-based Abstinence and Be Faithful (AB) HIV prevention program that focuses on providing information and education to young people and adults within the Anglican churches. Siyafundisa has established a partnership with the Harvard School of Public Health to develop and roll out a peer education program. This program will be implemented by young people at different parishes across the country. Emphasis areas consist of building local organization capacity to deliver prevention activities; and training trainers/facilitators to reach other youth. Siyafundisa addresses gender by focusing on increasing gender equity in HIV and AIDS programs, addressing male norms and behaviors; reducing violence and coercion and stigma/discrimination; mobilizing and reaching communities; developing linkages with partners to sustain and enhance the program; as well as providing information, education and communication. Siyafundisa targets children and youth, especially orphans and vulnerable children, with AB messages through information and education. The AB prevention program is designed to develop skills that promote abstinence for youth aged 10-14, secondary abstinence for older youth aged 15 -24 and provide correct and consistent condom use for youth at risk and those in long term sexual relationships. Adults, especially parents, are also targeted with information and education to support youth as well as information that encourages mutual monogamy, partner reduction and HIV risk perception. Special populations include community and religious organizations that can help promote AB prevention, volunteers who can implement AB activities, religious leaders who can impact individuals and families through outreach, and individuals and families who are affected by HIV, AIDS and stigma, and especially people living with HIV.

BACKGROUND:

Siyafundisa is implemented in parishes, communities, schools, and tertiary institutions through clergy networks, children, youth, and family ministries. Using FY 2006 funding, this program has been piloted in five dioceses in the Eastern Cape, Gauteng and KwaZulu-Natal. FY 2007 funding was used to roll out this program to all dioceses in South Africa. The church plays a significant role in building the capacity and training members and volunteers from women's movements such as Mothers' Union and Anglican Women Fellowship. In addition, community facilitators are trained to be able to provide psychosocial and material support as caregivers. A strong focus is given to the training of youth as peer educators and facilitators of life skills programs. Prevention activities target men with a core objective of changing male norms and reducing violence and coercion and young women to ensure equal access to HIV and AIDS information and related training. Men both young and old are also educated on issues of cross-generational and multiple concurrent partnerships which are the risk behaviors that fuel the epidemic.

ACTIVITIES AND EXPECTED RESULTS:

FY 2008 funding will ensure that the project can continue and expand into all 19 of the dioceses in South Africa. Initially peer education will be introduced into ten parishes each within nine dioceses and Life Skills into ten parishes in each of the remaining ten dioceses. Once this expansion is completed, then the project will introduce peer education into the remaining 10 dioceses (10 parishes each) and additional parishes within the initial nine dioceses. Complementary to and co-located with the training, the project plans to partner with a testing organization using mobile VCT services to extend testing to those being trained and others in their communities.

ACTIVITY 1: Training Clergy and Adults

Activity Narrative: Adults and clergy will be trained to facilitate workshops around the issues of HIV and AIDS through structured outreach programs. Training will be conducted for the Mothers' Union - the women's group in the church responsible for prayer and family ministries, teaching of Sunday school and mentoring youth organizations; and the Bernard Mizeki members - the men's organization in the church that plays an influential role in mentoring young people and assisting them in spiritual formation.

ACTIVITY 2: Workshops

Workshops will include parent-child communication skills training and AB prevention. Young women and girls will be empowered with knowledge and skills to protect themselves against sexual abuse and violence. Men perpetuate most of gender-related violence, so emphasis and attention will be given to men, helping them to understand the role they play in HIV prevention. Men will be encouraged to reduce the number of sexual partners and to remain faithful to their partners. Life skills programs will be presented for both boys and girls to address the challenges and pressures of growing up as well as helping youth to refrain from harmful risky behaviors.

ACTIVITY 3: Human Capacity Development

The program will also focus on the expansion of internal capacity within the Anglican Church. More staff and HIV youth workers will be recruited to form the support team in the different Anglican dioceses and archdeaconries. Diocesan coordinators will provide additional support. Training for staff and volunteers will include HIV and AIDS, peer-to-peer outreach, parental involvement and participation, male involvement, community mobilization, and gender sensitization.

ACTIVITY 4: Peer Education

The Anglican Church is utilizing Rutanang, a peer education curriculum for children and youth (age 10-14, 15 -19, 20 -24), developed by the Harvard School of Public Health. It is being piloted in three provinces (Eastern Cape, KwaZulu-Natal and Gauteng), which cover five dioceses (Port Elizabeth, Grahamstown, Zululand, Highveld and Christ the King). Through the peer education program, each parish will have one supervisor and 15 peer educators. Members of the Anglican Students' Federation will also be trained as supervisors and mentors for the parishes located close to their universities, colleges, and technical colleges. Typically, a team of three peer educators will be assigned a group of up to 20 young people to deliver six lessons, over a period of four months, from the Rutanang manual. The program will be gradually rolled out, reaching full scale covering all dioceses and provinces. The trainings will be replicated with different groups of youth in each parish. Topics covered in the curriculum include; self worth and self esteem, relationships, communication, assertiveness, peer pressure, alcohol and substance abuse, refusal, asking for help, gender, media influences, personal safety, and helping others.

ACTIVITY 5: Large-scale Dissemination of AB Messages Through Nationwide Church Campaigns

Important commemoration and celebration dates have been identified to disseminate HIV prevention messages and to increase awareness and involvement of the community in the response to the HIV pandemic. These include development of sermon notes focusing on themes that build self-esteem for young people and avoidance of harmful behaviors, faithfulness, reduction of sexual partners and healthy relationships. The sermon notes are distributed to all dioceses. Different parishes and dioceses hold commemoration services and rallies and during these events, reach hundreds of people. Nothing the Church does is "one off." Messages are continuously reinforced in the church, Sunday School, Confirmation Classes and more. Church media will also be used to reach people with messages commemorating Women's Day, youth month campaigns and encouraging more boys and young men to get involved in outreach and education. The program will continue to address stigma across all dioceses, reaching people of different cultures and backgrounds, ethnic groups, races, and standard of living in rural and urban areas nationwide.

In FY 2007 the project increased the number of field workers to implement and support (assistance and quality control) the extension of training by peer educators and life skills facilitators. Further expansion is planned for FY 2008. The project will continue to emphasize preparation and dissemination of materials to parish priests throughout all nineteen dioceses to inform sermons, lessons, and more.

These activities, through the variety of approaches will all contribute to the overall PEPFAR goal of averting seven million new infections.

Activity System ID: 22965	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

The GOLD model is based on theory and evidence-based behavior change approaches and is refined continually through research and documentation of best practices. Activities in FY 2009 are being scaled up to reach areas with the highest rates of infection. GOLD has commenced and will be strengthening its messaging to drive provincial campaigns and to provide training to ensure that peer educator (PE) activities highlight the behaviors that drive high HIV transmission. Promoting abstinence and delay of sexual debut will be enhanced in FY 2009. GOLD will continue to scale up, strengthen and more effectively target current prevention efforts in order to increase the impact on reducing new infections among youth in- and out-of-schools. GOLD is aligned with the HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011 and with prevention priorities identified by PEPFAR.

In 2008, GOLD strengthened the approaches of the model to enable PEs to reach out to in-school youth, orphans and vulnerable children more effectively. Two new curricula sessions will be introduced to support this activity in 2009. In addition, gender mentoring will focus on promoting delay of sexual debut especially among girls, and on empowering young women to reduce risk and seek to change harmful gender norms that place both girls and boys at increased risk.

In FY 2009, GOLD will monitor outputs of activities that integrate educators, parents/guardians, church leaders and other influential community adults. This will ensure that youth receive concurrent messages at home, in school, at church and at social gatherings. GOLD has introduced an advocacy and program visibility service that will support existing approaches beyond behavior change communication in a creative way, and will address the contextual factors that make it difficult for young women to adopt safer behaviors. In addition, there will be a stronger emphasis on including positive male role models to support programs, in order to enable positive behavior change in communities.

BACKGROUND: This COP 2008 section has been modified as follows:

GOLD has not worked with an organization called Wagon of Hope. This is incorrect and the name of the sub-partner is listed in addition to the 15 organizations that GOLD had agreed to work with in FY 2008. All the other organization names are correct. Ten (not nine) additional organizations will be selected, and provided with training on recruitment of PEs in September 2008. The organizations will be confirmed at the end of August 2008 and are selected according to a rigorous process of application and assessment. To implement GOLD Peer Education, an organization must have adequate infrastructure to support the program and a track record in youth behavior change interventions. Some organizations will not meet all the required capacities, but GOLD will support them until they achieve a profile that enables them to meet GOLD standards for quality PE programs within a community development framework.

As planned, recruitment of new PEs will take place in January 2009, and in alignment with the GOLD Peer Educator Selection process and criteria. PEs either volunteer or are nominated by their peers. This process yields a diverse group of teens from the different sub-cultures. PEs are leaders, chosen on their shared experience with learners or community youth. PEs are nominated as change agents within their communities to mobilize their communities towards transformation and health enhancing behavior change. They are required to undergo a written and oral interview, including an interview by a panel of past peer educators and educators. In addition, peer educators require written approval from a parent or guardian, and are required to take a pre-test for base line purposes.

The nominated peer should have the following qualities: (1) ability and willingness to represent his/her class and grade/community group; (2) ability and willingness to be trained and equipped on HIV/AIDS, sexuality and lifestyle education issues; (3) a passion to lead by example and be a nation builder; (4) is opinionated; (5) reliable and trustworthy; (6) willing to work in a cross-cultural team; (7) leadership qualities; (8) a desire to help people; (9) has the strength of character to influence other peers easily; (10) prepared to be trained in fulfilling the four roles of a peer educator; (11) willing to examine his/her own life choices, and question whether these decisions are having a positive and healthy impact on the future; and (12) is committed to attending all the peer educator training sessions and outputs over the program life-cycle.

No other implementing organizations will be selected. The sentence that states that between 2007 and 2008, another batch of thirteen additional organizations will be selected to become GOLD implementing partners is not correct and is not in line with the other targets set in the COP 2008 and 2009 plans. In addition, it is incorrect to assume that nine additional organizations will be assessed in July 2008, and selected and trained in September 2008. Instead, GOLD aims to assess ten additional organizations in July 2008, and these will be trained in September 2008 to recruit PEs. It should be noted that the peer educators in the GOLD Program are comprehensively equipped and supported to advocate and refer sexually active youth for HIV testing and counseling.

ACTIVITY 2 has been enhanced in the following way:

GOLD will train 25 program managers, 108 community leaders (PE facilitators) from 25 implementing organizations, and 330 teachers to implement the structured three-year GOLD model (with an optional fourth year) in 132 secondary schools and communities through equipping and supporting adolescent PEs.

GOLD will reach 132 secondary school sites, with the exception of 3, which will be community sites targeting out-of-school youth PEs. GOLD will no longer aim to reach 8,008 adolescent PEs (for both program areas and 4004 reached for this program area only), but 9702 for both program areas within the 132 sites. Six PEs will be employed full time to fulfill specific roles and outputs as part of the optional fourth year of the GOLD program where they will be given a stipend to impact their peers positively, and will also be trained as co-facilitators. The increase in PE numbers is because all new sites as well as existing sites will recruit new junior PEs and the existing peer educators in Junior and Senior Peer Education will enter a new program in 2009 and become Senior and Mentor PEs respectively.

SUMMARY:

Activity Narrative: GOLD Peer Education Development Agency (GOLD) was awarded first place in the Commonwealth Good Practice awards 2006. GOLD became a new PEPFAR partner FY 2007. FY 2008 PEPFAR funds will support the expansion of comprehensive youth prevention services to facilitate the roll-out of the GOLD Peer Education (PE) model through three components: (1) development and dissemination of PE best practice methods and materials; (2) capacity building and training of PE participants; and (3) quality assurance of implementation of the GOLD Model. The primary emphasis areas for these activities are Gender, Human Capacity Development, and Local Organization Capacity development. Specific target populations include adolescents (10-14), adolescents (15-24), adults (25 and over), orphans and vulnerable children and teachers.

BACKGROUND:

This project is part of a larger initiative which began in FY 2004. The described activities are ongoing and will be scaled-up in FY 2008. GOLD developed the GOLD PE Model. GOLD partners work with suitable community organizations to implement its model using the secondary school system and other community youth servicing sites. GOLD works in conjunction with the relevant South African Provincial Government structures. GOLD manages and provides quality assurance of the implementation of GOLD PE of its sub-partners. GOLD assists its partners to align the PE programs with the South African Government (SAG) guidelines on prevention of HIV with a focus on youth as a priority population group. The GOLD model is implemented within Western Cape (WC), KwaZulu-Natal and Mpumalanga provinces of South Africa. GOLD is being implemented in collaboration with provincial education departments (DOE) and the National Department of Health (NDOH). GOLD's sub-partners in the Western Cape (WC) are partly funded by the Global Fund via the WC DOH and the conditional grant via WC Department of Education. In other provinces sub-partners are partly funded by HopeHIV. Two of the three activities will be implemented directly by GOLD. One activity, capacity building and training of PE participants, will be implemented in collaboration with 24 youth-focused community organizations that implement the GOLD model in various sites and train the youth peer educators (PEs). These organizations are: Youth for Christ (YFC, George, Knysna, Pietermaritzburg and Nelspruit), Masoyi Home-Based Care, Wagon of Hope, Planned Parenthood Association of South Africa (PPASA), MaAfrika Tikkun, Ukuthwasa, and Institute for Social Concerns, Christian Assemblies Welfare Organization, Club Coffee Bar Community Centre, Uniting Christian Students Association, OIL Reach Out, NOAH and Sethani. Nine additional organizations will be assessed in July 2008 and selected and trained in September 2008 to recruit peer educators. Recruitment will take place in January 2009. Between 2007 and 2008, another batch of thirteen additional organizations will be selected to become GOLD implementing partners. The issues facing South African youth in HIV prevention are firmly entrenched in the social constructions of behaviors and identities and include unequal power in sexual relationships, gender-based violence and intergenerational sex. GOLD messaging is designed to look beyond awareness and reflect the complex social dynamics of HIV transmission. By reflecting these dynamics that youth face daily, the model is intelligible to youth and fosters critical awareness, transformation and long-term behavior change that increases gender equity, challenges male norms and behaviors and supports activities to strengthen sanctions against sexual violence and coercion. PEs are equipped to challenge stigma around HIV and to promote the reduction of discrimination faced by HIV affected and infected individuals. The GOLD curriculum emphasizes the message giver as a role model. Peer Educators are equipped and supported to role-model lifestyles that promote, in order: abstinence; delayed, faithful sexual debut and reduction of sexual partners amongst youth.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Development and dissemination of PE best practice abstinence and be faithful methods and materials.

GOLD will refine and disseminate an interactive and context-specific resource base of GOLD PE curricula and good practice methods for use by: GOLD staff; trainers and master facilitators who use this to train peer education facilitators and program managers; PE facilitators who use this to train adolescent peer educators; Adolescent peer educators who use this to empower their peers; and program managers implementing the GOLD PE Program within secondary schools and communities who use this to help them in the implementation and management of their peer education program. The curricula focuses on social dynamics informing conceptions of gender, covering sexuality and the feminization of AIDS, to reduce the inequalities between men and women that have led to the increase of HIV and AIDS as well as challenging stigma around HIV and AIDS and addressing substance abuse and risk behavior. Ongoing refinement and development of curricula will involve human capacity development of representatives of implementing partners to provide constructive feedback on experiences and share their findings together.

ACTIVITY 2: Capacity building and training of PE participants

GOLD will train program managers and community leaders from 24 implementing organizations, as well as 660 teachers, to implement the structured three-year GOLD Model in 132 secondary schools and communities through equipping and supporting adolescent PEs. PEs are supported by implementing organizations through a structured skills training and mentoring program. GOLD will assess and provide implementing organizations with intensive capacity building to deliver the GOLD model in schools where access is given by the provincial Department of Education within youth high risk behavior sites. GOLD will equip staff of the organizations through a structured capacity building program including modular training sessions, mentorship and provision of PE resources and best practice methods. GOLD will provide training to teachers to enhance the quality and ownership of the program for long-term sustainability. Twenty four implementing organizations will train 8008 adolescent PEs within 132 secondary school sites to fulfill specific PE roles and outputs over a three year period in which they positively impact their peers. It is anticipated that gender will be impacted through both the implementation of curriculum and the GOLD program environment. Youth in the PE program will work through gender issues within a safe and enabling environment (the GOLD program) and are given room to critically analyze and challenge gender norms, working together towards gender equality. These youth will in turn support each other as they work among

Activity Narrative: their peers and communities. New GOLD trainers and facilitators will be recruited based on criteria that ensure their character and skills reflect the values and practices imparted through the curriculum and program design. A planned selection of both male and female facilitators and PEs will be aligned to the GOLD facilitator and peer educator recruitment guidelines.

ACTIVITY 3: Quality assurance around implementation of the GOLD PE Model

This activity provides quality assurance around the implementation of the GOLD Model in secondary schools via implementing organizations, PE facilitators, and adolescent PEs. This will involve: ongoing development and use of a robust information and communication technology infrastructure to (1) enable effective roll-out of the program in a way that enables ongoing monitoring and evaluation; (2) conduct bi-annual assessments of all implementing organizations; and (3) implement a comprehensive monitoring and evaluation system within all implementation sites.

The GOLD program contributes to the PEPFAR 2-7-10 goals to reduce new HIV infections among youth through: facilitating the structured promotion of safe and healthy behavior of HIV-infected and uninfected youth; improving access to services for affected youth and increasing positive youth role-modeling and advocacy.

Activity System ID: 22967

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Greater Mpumalanga Rape Intervention Program (GRIP) FY 2008 COP activities will be expanded and enhanced as described below; outcomes will be assessed after completion of the first year of activities, in October 2009.

One of the two targeted age groups for the peer education program will be modified in FY 2009. In FY 2008, the target group comprising 10 to 18 year olds will now be limited to included 10 to 14 year olds. GRIP has been determined that more effective influence, motivation and learning can take place in this revised age group, whereas in the larger group, the older, and more experienced youths often presented confrontation and views, influencing the younger group.

GRIP will have to work within the same budgetary constraints as FY 2008, thus it will not be possible to reach higher targets in FY 2009. FY 2008 targets are considered high in relation to staffing and resources. The Teacher Trainer and Special Program Facilitator are also included within the preventative services in FY 2009.

ACTIVITY 1: Enhancements

As mentioned, one of the target groups' age has been revised to include 10 to 14 year olds. The sexual prevention approach used will predominately be risk avoidance, as many of these youth are not yet sexually active. The peer education activity will also address the needs of the 15 to 24 age group by developing and delivering behavior change messages on being faithful and creating an enabling environment for the practice of preventive behaviors such as consistent and correct use of condoms and partner reduction. These activities will be linked to on-going community-based support services that provide condoms, offer HIV testing and initiate referrals for antiretroviral treatment and other HIV and AIDS services.

ACTIVITY 2: Enhancements

The use of teachers as role models and resources/repositories of information on prevention and referrals for community-based support programs is the central focus and strategy of this activity. GRIP will equip teachers with knowledge and skills on prevention, gender-based violence and on how to make effective referrals. This will improve coordination of services and enhance the supportive environment for prevention of HIV and care of HIV-infected and affected people.

Capacity of a Teacher Trainer, a Special Program Coordinator and a Peer Group Educator will be built through ongoing training, monitoring, supervision, support, and performance evaluations. Human resources to support these employees will take the form of job profiles, contracts, staff policies, retention policies and clearly specified code of conducts and role clarifications. Staff members will also be empowered by ongoing opportunities to attend training courses and workshops in the field of HIV and AIDS, prevention services and youth development. The costs of these trainings will be covered by GRIP, that aims to develop capacity among staff who will directly influence the beneficiaries described in the activity narrative.

This prevention intervention and service delivery is in line with the HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011 (NSP), specifically with priority area 1, prevention. To meet the goal of reducing the rate of new infections by 50% by 2011, government, business, civil society and GRIP must work together and educate people about HIV and AIDS, and encourage people to be tested for HIV. Within this priority area GRIP is responsible for helping to educate people about HIV and AIDS, including how to prevent HIV infection, where to get tested, where to get treatment and care. GRIP also reaches out to high-risk groups to ensure that they access relevant services. GRIP aims to ensure violence against women and children is stopped.

GRIP is registered with the Mpumalanga Department of Health and Social Services. The organization submits annual business plans, progress reports and audited statements to the Department. This provincial department forms part of the National Government of South Africa. The Mpumalanga Department of Health and Social Services has signed a service level agreement recognizing that GRIP is a reliable, registered and trusted non-governmental organization rendering services in the field of victim empowerment within the criminal justice system. The goals of the agreement is for GRIP to empower, rehabilitate and provide aftercare support o survivors of rape, sexual assault and domestic violence and to allow GRIP to take on partnerships with the involved Government Departments involved in the Criminal Justice system.

The Department of Education's Circuit Managers also provide consent forms for the schools that they identify for the Teacher Trainer to be involved in and will also give permission to the Peer Group Educator for entering certain schools to implement the Peer Group Program. When dealing with prevention and awareness GRIP ensures that activities are in line with the procedures, policies, acts, bills and plans of the National South African Government Department.

Male Norms and Behaviors:

GRIP's school-based youth and teacher programs will encourage men to be responsible in their sexual behavior and child rearing, and to respect women - including the reduction of sexual violence and coercion, number of sexual partners and cross-generational and transactional sex. GRIP will also focus on behavioral change programs for boys that promote the positive role men can play in order to increase their HIV preventative behavior.

Gender Equity in HIV and AIDS Programs:

GRIP's teacher and peer group programs will continue to, and increase the activities that address the obstacles that women and girls face in accessing health care, ranging from cost of treatment, transportation,

Activity Narrative: and child care, to appropriate appointment schedules, and guarantees of privacy and confidentiality. GRIP's programs meet the unique needs of women, including the empowerment of women in interpersonal situations, young people and children and those who are victims of sex trade, rape, sexual abuse, assault and exploitation.

Women's Legal Rights:

GRIP advocates for the inheritance rights of women, particularly women in rural communities. GRIP's interventions review, revise and encourage enforcement of laws relating to sexual violence against minors, including strategies to more effectively protect young victims and punish perpetrators. GRIP ensures institutional capacity building of government departments within the criminal justice system, and intervenes with lawyers, prosecutors, law enforcement and service providers on the legal rights of women and children, and their access to justice. GRIP also works with governments and other civil society groups to eliminate gender inequalities in civil and criminal code.

Violence and Coercion:

Counseling, referrals and follow-up treatment, and prevention programs about the risk of disclosing status, including links to shelters for women, support groups in the community and referrals to professional or legal services are provided to the survivors. GRIP ensures that health workers recognize signs of gender-based violence and provide appropriate counseling and referral services to social, legal and community based groups. GRIP trains unemployed women from rural areas as counselors in order to increase the confidentiality and comfort of women and girls seeking treatment for sexual assault. GRIP also addresses societal and community norms to reduce stigma, protect women from violence, promote gender quality, and build conflict resolution skills. All services for survivors of sexual assault/violence will link to the provision of post-exposure prophylaxis.

SUMMARY:

The Greater Mpumalanga Rape Intervention Program (GRIP) provides holistic services which include prevention and care for survivors of sexual assaults and domestic violence and for people infected and affected by HIV and AIDS. GRIP is involved in Abstinence and Being Faithful (AB) activities through community outreach programs. The emphasis areas are gender and human capacity development. The target populations are school children (boys and girls), teachers, and the community at large.

BACKGROUND:

GRIP was initiated by volunteers and established in 2000. GRIP started by offering services to all rape and sexual assault survivors. GRIP started empowering women, men, and children through the process of preventative education, counseling and testing, post traumatic care, and community outreach. Realizing the importance of HIV prevention and the need to address sexual assault and domestic violence in the community, GRIP is involved in two direct prevention services: peer education and teacher training. The prevention strategies include creating awareness on HIV and AIDS with special emphasis in addressing the plight of sexual assault and domestic violence survivors. This program will protect children, teachers, communities, and will uphold the rights and dignity of sexual assault survivors.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Peer Education

The aim of the peer education intervention is to encourage abstinence and to delay sexual initiation for youth aged 10 -14, before they start sexual activity. The program will target boys and girls in schools between 10 and 18 years old, who come from disadvantaged backgrounds, vulnerable to crime and experiencing socio-economic challenges within their communities. These children will be identified in targeted schools by teachers, principals and peers. For the Be faithful component of the AB program, older youth aged 15 -24 engaging in sexual activity, will be encouraged to adopt secondary abstinence and reduce number of sexual partners. Full information is provided on correct and consistent condom use for youth who are already sexually active.

At the beginning of the activities, individual sessions for boys and girls will be conducted separately for period of three months to identify their needs. After the three months, group sessions for boys and girls will be conducted separately for a period of six months. At the end of six months, both groups of boys and girls will be brought together to share what they have learned. GRIP will link this activity to an ongoing community-based support program and provide guidance to all the children. The children will also participate in camps, where boys and girls will take part in life skills.

The program is expected to empower children with information, problem-solving techniques, and life skills, which will lead to enhanced self esteem, and responsible behavior regardless of peer pressure or social problems. Through role modeling, participants in the program will with others pupils in the school who have not been through the program with a view to transference of knowledge gained. A monitoring and evaluation system will be in place for pre and post test of children who have participated in the program.

ACTIVITY 2: Training of Teachers

The goal of the GRIP program is to promote effective, accountable, and sustainable support systems in the schools and the surrounding communities. GRIP has realized that teachers and school management are usually reluctant to get involved in sexual assault issues that affect their pupils hence limited support is given to the victims of sexual assault in schools and the community. FY 2008 funding will therefore address

Activity Narrative: HIV prevention, sexual assault, cross-generational sex, multiple concurrent relationships and domestic violence information. Training will equip teachers with the skills to identify, support and conduct referrals for the affected children. The program will enhance community support as all children and youth will be linked to a support mechanism through community-based forums to ensure that HIV prevention and support is sustained. Additionally this program will be linked to community and government stakeholders to ensure ownership and collaboration.

Through this program GRIP aims at improving teachers' abilities to communicate their values and expectations regarding their pupils' behavior and individual social problems. This will increase awareness and sensitivity regarding sexual violence and HIV among teachers, pupils, and community. The program will reinforce the adoption and modeling of prevention behaviors among adults, and engender social sanctions against risky practices such as cross-generational sex, multiple concurrent partnerships and sexual assault.

GRIP will train teachers selected from identified schools in Mpumalanga. Training will enable them to identify vulnerable and abused children within their environment, and empower them to report such cases. GRIP has found that during past trainings, teachers were committed to referring children to GRIP's intervention. Apart from caregivers, teachers are the most constant adults within the school child's sphere of reference. Expected results from this program are teachers who are better equipped to identify, support, and refer affected pupils a community-based support system. This includes providing parents with continued support and counseling to minimize post-traumatic effects of abuse and to ensure complete recovery. This activity will be closely monitored and continuously assessed to ensure quality assurance in the effort to achieve intended results.

These activities, through the variety of approaches will all contribute to the overall PEPFAR goal of averting seven million new infections.

Activity Narrative: SUMMARY:

Hope Education (HE) aims to develop indigenous capacity to provide young learners with HIV prevention training and appropriate life skills to affect lasting moral and behavioral change. The organization aims to increase the capacity of Life Orientation (LO) teachers to promote HIV prevention through abstinence and being faithful (AB); reach learners and orphans and vulnerable children with AB messages; develop the capacity of the Department of Education at the provincial and district level; and develop the administrative, logistic and academic capacity of Reaching a Generation (RaG) and HE to sustain quality HIV prevention education.

BACKGROUND:

Prevention is key to reducing the high HIV infection rate in South Africa. The future course of the epidemic hinges in many respects on the behaviors young people adopt or maintain, and the contextual factors that affect those choices. Children, aged 10 to 14 years have the lowest HIV infection rate of any age group in South Africa. Thus, they represent one of the greatest opportunities to reduce the HIV prevalence rates. If young children adopt healthy behaviors, the spread of HIV can be limited. Schools, particularly LO classes that are designed to prepare children for life, provide an ideal setting to address topics related to HIV prevention. Because these classes have only recently become mandatory, the teachers have yet not received proper training nor do they have sufficient materials and resources. RaG, an indigenous community-based organization, in cooperation with HE, a US non-governmental organization have developed an age appropriate, child-centered curriculum called iMatter to equip teachers with materials and curriculum. This program has been developed in cooperation with the Department of Education (DOE).

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Teacher Training

The LO/HIV prevention training typically takes place during daylong workshops held for groups of 50 to 100 teachers. This is accomplished in close cooperation with the DOE, which increases efficiency by utilizing the personnel, communication channels and infrastructure that is already in place. For example, the Department handles communication with the schools and individual teachers and manages most of the follow up.

The LO/HIV prevention teacher training is based on a learner-centered model and focuses on practical and interactive activities that engage the teachers. RaG/HE piloted the program in the Free State province in August 2006, and was subsequently revised, improved and expanded. Since the pilot project, the RaG team has spent much time in schools and been attentive to feedback from the teacher training sessions. The manual has been revised seven times, based on the ongoing feedback from the educators. Key leaders within the DOE have gathered for multiple conferences to discuss how RaG/HE can ensure that the teacher training events and materials are closely linked to the objectives and desired outcomes of the Department. To date, more than 3,000 teachers representing more than 2,500,000 learners have been trained through the RaG/HE LO training program in six provinces. Training will expand to eight provinces by the end of FY 2008.

Every schoolteacher who attends the training receives a Training Manual that serves as a syllabus and ongoing resource. This manual supplements the existing educational materials by providing additional resources aligned with the Outcomes and Assessment Standards as indicated in the National Curriculum Statement. It also helps develop outcome-based education teaching skills based on experiential learning to create optimal participation and a positive learning experience for the learners. This underpins the holistic developmental approach of the National Curriculum Statement by including skills, knowledge and values as an integral part of the teaching and learning process. The National Policy on HIV/AIDS, for Learners and Educators in Public Schools, and Students and Educators in Further Education and Training Institutions states: "Life skills and HIV and AIDS education should not be presented as isolated learning content, but should be integrated in the whole curriculum. It should be presented in a scientific but understandable way. Appropriate course content should be available for pre-service and in-service training of educators to cope with HIV and AIDS in schools. Enough educators to educate learners about the epidemic should also be provided."

The LO/HIV prevention teacher training includes examples of how to create lessons in compliance with the National Curriculum Statement including outcome-based education methodologies such as using sensory learning. Instructions for integrating HIV prevention materials into the LO classroom are also incorporated into the training. Throughout the training the Learning Outcomes and Assessment Standards found in the National Curriculum Statement are emphasized to build the capacity of teachers for attaining the desired outcomes as identified by the DOE.

The teacher training aims to have every LO teacher from each district attend. Unfortunately, limited resources made this impossible at times. In the past, it has been necessary to limit attendance to one teacher per school; this teacher would then provide training and resources to other teachers. Because the trained teachers taught other teachers there was a high ratio of teachers to learners trained: 3,000 teachers for 2.5 million learners affected. In a scaled up version, every LO teacher will be able to attend and directly participate in the training. Thus by training all LO teachers directly, more than 6,000 teachers will influence more than 1,000,000 learners in a year.

ACTIVITY 2: Curriculum Materials

In addition to the training manual, each teacher will also receive age-appropriate HIV prevention materials for each of the learners in the Foundation and Intermediate Phases. This book called "iMatter" is complemented by a corresponding iMatter Teacher's Guide. Each lesson indicates which learning outcomes and assessment standards from the National Curriculum Statement are being taught. Teachers are required

Activity Narrative: to keep a file of their work as well as a learner's portfolio. Both the iMatter Teacher's Guide and learner books indicate the specific dimensions of HIV prevention teaching that can be included in the learners' portfolios and teacher's file.

As required by the Critical and Developmental Outcomes of the National Curriculum Statement each iMatter lesson is age appropriate in terms of language and cultural approach so that learners will adopt and maintain behavior that will protect them from HIV infection. The National Policy states "A continuing life skills and HIV and AIDS education programmed must be implemented at all schools and institutions for all learners, students, educators and other staff members." During the teacher training session, a district DOE official who is responsible for LO assists the teachers in understanding the correlation between the iMatter training and the National Curriculum Statement and articulates how the content learned will be used for performance appraisals in the future. Depending on the province, this person is called either a Learning Facilitator or a Curriculum Specialist. They also explain how to apply outcomes-based assessment in compliance with the National Policy of Assessment.

The iMatter curriculum was specifically developed for Sub-Saharan Africa in Swaziland. HE conducted due diligence and research to determine what the content should include and to ensure that no duplication was taking place. iMatter materials complement existing materials in South Africa and in Swaziland. The Foundation Phase book is for Grades 2 - 3 and the Intermediate Phase book is for Grades 4 - 7. Both editions include lessons on the value of human life, the importance of making good choices, the difference between good and bad touch, ways that HIV is transmitted and can be avoided, and ways to avoid stigma. Content is presented in an age appropriate manner.

Educators and curriculum specialists from Swaziland and the US began development of the iMatter curriculum in 2005, deployed a field test in 2006 and rolled out the curriculum in 37 schools with more than 24,000 learners in 2007 in Swaziland. There was strong government and community support throughout the process. This 10 lesson, age-appropriate HIV prevention material focuses on HIV prevention by targeting the underlying causes of the epidemic.

iMatter has been modified for the South African context. Education specialists in South Africa identified the grade-appropriate National Curriculum Standard learning outcomes contained in each iMatter lesson in order to integrate with the South African school curriculum. Practical teaching tips and activities to equip the LO teachers were also added. While the LO/HIV prevention teacher training has been designed to include an iMatter book for every child, current financial support allows for each teacher to receive only one copy of the iMatter material to utilize as a resource for teaching the Life Orientation and HIV prevention program. In a fully funded program, teachers will receive a copy for each of the learners. Recent changes within the requirements of the DOE along with the experience of the past two years provide additional content that would be helpful if included in the iMatter materials. A second edition of iMatter will be designed to align it even more fully into the requirements of the DOE. The project will be completed between September and December 2008.

The iMatter materials provide teachers and learners with resource material for teaching and learning life skills and HIV prevention in order to sustain the objectives of the DOE in the Learning Area of Life Orientation. This is aligned with the Minister of Education's objectives in the Strategic Plan for 2007-2011 that aims 1) to ensure effective implementation of the Curriculum Performance measure; and 2) to ensure that all schools have quality learning and teaching support materials. The iMatter books provide a structured and clearly defined way for the teachers to integrate what they have learned. The interactive teaching methods within the iMatter Teacher's Guide reinforce the content from the teachers training by providing specific classroom activities for the teachers to use with their learners. Depending on length and frequency of the LO class, the 10 lessons within iMatter can be used for much of the school year. There is enough content in each of one of the iMatter lessons to last for two or three class periods. The skills the teachers develop through this process will be used on an ongoing basis. In addition, both the learners and the teachers keep their books. The learners are encouraged to take their books home and share what they have learned with their families. The teachers keep their books and use the activities and stories in future classes.

ACTIVITY 3: Partnership and Certification Activities

Since the pilot teacher training program, RaG has secured agreements with the provincial education departments to provide HIV and AIDS prevention and awareness training to the LO teachers in the provinces of Eastern Cape, Free State, North West, Mpumalanga, Northern Cape, and portions of Gauteng and Kwazulu-Natal. Experience has shown that the DOE becomes increasingly supportive the more involved they become in the RaG/HE training. Initially the involvement is primarily limited to sending the teachers for training; but as the program shows positive results, the Department becomes increasingly involved in providing venues, logistical support, and meals for the teachers. In addition, the district officials within the provinces are providing monitoring and evaluation to ensure the materials are used and implemented in the schools. This is done on a continuous basis. At times RaG staff members accompany the district officials in order to capture this part of the process on video.

The HIV prevention/LO teacher training course has been registered with UMALUSI and the South African Qualifications Authority (SAQA). UMALUSI is a monitoring and moderating organization responsible for general education and training as well as further education and training. SAQA is responsible for the development and implementation of the National Qualification Framework established in 1995 to create a single and integrated qualification system for the education sector. Through a partnership with Worldwide Education Providers, RaG will offer up to five credits to the teachers who participate in the training. The DOE in their draft proposal requires that each of their teachers complete 120 credits of continuing education every 3 years.

Feedback from education leaders who have been involved with the training has been very positive.

Budget Code: HVAB

Activity ID: 3300.23148.09

Activity System ID: 23148

Mechanism: Track 1

USG Agency: U.S. Agency for International Development

Program Area: Sexual Prevention: AB

Program Budget Code: 02

Planned Funds: \$668,998

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

No considerable modifications have been made to Hope Worldwide South Africa's budget (Track 1) but enhancements of activities include more emphasis on quality approaches apposed to HIV prevention such as building community capacity through a community engagement and conversation technique and through a small-group theory model (through Community Action Teams) to address behavior change. As a result, a detailed description of program activities and sub-activities has been included.

In FY 2009, as part of HwWSA's efforts to implement quality programs, focus group discussions (FGD) with youth that have been a part of the CAT's program for over three years, will be organized and facilitated. The purpose of these FGDs will be to pinpoint the outcomes of all the program inputs since 2005.

Focus on leadership skills will be prioritized in FY 2009. Learners will be capacitated with skills to sustain their own CAT groups due to the cut to Track 1 funding in 2010.

HwWSA will facilitate continual workshops among all CATs and their parents in and effort to breach the intergenerational gap between parents and children. CAT's parents will participate in HwWSA's Parent Empowerment Program training on parenting.

The curriculum is broken into 10 sessions namely:

SESSION 1: Orientation & Personal Growth (Enhanced Self-Awareness)

SESSION 2: Understanding Children's Behavior

SESSION 3: Understanding Children's Feelings

SESSION 4: Building Children's Self-Esteem

SESSION 5: Assertiveness And Engaging Co-Operation

SESSION 6: Discipline

SESSION 7: Problem-Solving, Values And Family Meetings

SESSION 8: Faithfulness In Marriage And Relationships (Role Modeling Behavior)

SESSIONS 9 - 12 Done in Addition To The Above For Training Of Trainers (TOT).

SESSION 9: Awareness of Self As Facilitator

SESSION 10: Facilitation Skills

SESSION 11: Presentations - Presentation by individual participants on how they will replicate learning.

SESSION 12: Evaluations - Evaluation of presentations by participants, group and facilitator

This material is implemented in Gauteng, Eastern Cape, Western Cape and KwaZulu-Natal. Three Parent Action Teams that will function the same as CAT') have been established and implementation is currently underway.

SUMMARY:

HOPE worldwide South Africa (HWSA) will continue to support the expansion of a comprehensive HIV prevention program through a skills-based, gender-focused program for young boys and men, and the promotion of abstinence and being faithful (AB) messages for young people in four provinces, namely Western Cape (WC), Eastern Cape (EC), Gauteng (GP), and KwaZulu-Natal (KZN). This activity targets primary and secondary school children and youth (both in- and out-of-school), adults, teachers and religious and community leaders, community-based, faith-based and non-governmental organizations. The emphasis areas for the project are gender and human capacity development, which includes training. The target population is adolescents, teachers, religious leaders and adults as well as orphans and vulnerable children.

BACKGROUND:

The activities described below are part of an ongoing HIV prevention program of HWSA, funded by PEPFAR since FY 2006. Using FY 2008 funding, HWSA will promote and strengthen its AB prevention program, implement a gender-sensitizing component carried out by HWSA's Men as Partners (MAP) program, and work with parents, caregivers and guardians to promote consistent, positive and proactive parenting and a constructive family environment.

ACTIVITIES AND EXPECTED RESULTS

ACTIVITY 1: Promote AB Behaviors

HWSA will continue its programs in GP, KZN, WC, and EC provinces to promote and strengthen AB prevention messages within its community outreach efforts that include faith based communities. HWSA will expand to new areas within the current sites, and in particular to peri-urban and rural areas in KZN in response to the geographic development of the HIV pandemic in South Africa. HWSA will establish an abstinence-based program in four provinces, for youth 10 - 14 years who have not initiated sexual activity. HWSA will use PEPFAR funding to support a program that prioritizes abstinence activities, HIV prevention information, workshops and learning materials required for the HIV prevention intervention. HWSA will also target the 15-24 year old age group and will establish an AB approach for this target population. This will focus on reducing the number of sexual partners, mutual faithfulness with an uninfected partner and the importance of correct and consistent condom use. HWSA's AB program, for all age groups, follows a standard peer educator model of training small groups of change agents to influence their immediate and broader communities. HWSA's AB program for youth aged 10-14 provides age-appropriate messages that promote the importance of abstinence in reducing HIV transmission and encourages delay in sexual debut. This program educates children/youth on the basic facts about HIV prevention and AIDS, the skills for practicing abstinence, stigma and discrimination and avoiding and reporting violence and abuse. The HWSA program involves five contact sessions spread over 10-12 hours. HWSA's AB program for older youth aged 15 -24 consists of sessions that are age and culturally appropriate with sessions on the benefits

Activity Narrative: of abstinence in reducing HIV transmission. Where appropriate focus is on secondary abstinence, personal self-esteem, healthy relationships, the delay of sexual activity until marriage, the importance of reducing the number of casual sex partners, mutual faithfulness to an uninfected partner, the importance of HIV counseling and testing and full information on the correct and consistent use of condoms is encouraged as a way to reduce the risk of HIV for those youth who are already sexually active. The program involves ten contact sessions spread over 14-20 hours. The program is interactive and fun, and sessions mix limited teaching by HWSA facilitators with youth-led group discussions, role plays and debates. Relevant games are used. The program includes a component that targets out-of-school youth through youth clubs, community-based organizations and sports groups. HWSA will continue to work closely with the national and provincial health departments. The activity will build on FY 2006's success of reaching 57,000 individuals with A and AB messages through 100 FBOs and 50 schools.

ACTIVITY 2: Men as Partners (MAP)

A follow-up activity to Activity 1 will be a gender-sensitizing component carried out by HWSA's MAP program. This activity will address both the prevention needs of girls and young women and the promotion of positive gender-sensitive attitudes, practices and behavior for young boys and youth. Alcohol and substance abuse information will be integrated into the curriculum to reduce the risk behavior. The MAP program will be modified to be age-appropriate and will attempt to change social norms related to male socialization, coercive sex, cross-generational sex, and/or transactional sex. This activity will create community commitment and involvement in reduction of violence against women and children, support HIV counseling and testing, peer education and community interventions with messages to challenge norms about masculinity, early sexual activity and multiple sexual partners for boys and men, cross generational and transactional sex. This program will promote the benefits of abstinence in reducing HIV transmission, encourage the delay of sexual debut until marriage for the 10 -14 age groups and for the older youth MAP will also encourage the reduction in number of casual sexual partnerships, mutual faithfulness to an uninfected partner and will stress the importance of HIV counseling and testing and provide full information on the correct and consistent use of condoms to reduce the risk of HIV for those who engage in risky sexual behavior.

ACTIVITY 3: Parent Empowerment

This activity will work with parents, caregivers and guardians to promote consistent, positive and proactive parenting and a constructive family environment. This activity will build on research that shows that strong family bonds have a major influence on children's achievements in school and through life and also that youth report a preference of having parents/guardians educate them about sexuality and related issues. The program will empower and capacitate parents with skills to interact with children and youth about abstinence, sexuality, HIV prevention messages and create an enabling environment for AB messages. There is research evidence that good relationships between parents and teens and adequate supervision of teens reduce risky behavior among youth. HWSA will partner with the Parenting Centre and faith-based networks (e.g. South African Council of Churches, African Federation of Churches and the International Churches of Christ) to develop and implement this program. The program will include sessions on personal growth; enhance self-awareness, personal values, parenting skills, building children's self-esteem, discipline and problem-solving. The activity will be linked to the HWSA OVC program which will focus on empowering parents and guardians in vulnerable households and working with granny-headed households.

These HWSA activities will contribute to the PEPFAR goal of averting seven million infections, and support the USG Five-Year Strategy for South Africa by improving AB preventive behaviors among youth and adults.

Program Area: Sexual Prevention: AB

Program Budget Code: 02

Planned Funds: \$0

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

ACTIVITY 1: (a) HwwSA will increase the participation of schools in the community. An internationally recognized tool, the UNDP's Community Capacity Enhancement (CCE) program will be used. Most community methodologies focus on awareness raising and discussion; CCE focuses on interactive dialogue on the epidemic's deeper causes (e.g., power relations, gender issues, stigma or discrimination) and, through a facilitated process, community decision-making and action. New activities will include consultation with community stakeholders including the school governing bodies, school learners, teachers and parents; community mapping with stakeholders; facilitation of focus group discussions to assess HIV competence; facilitation of community conversations to identify issues in the school setting; participatory planning workshops to address concerns; facilitation of access to community resources; and working sessions to refine initial plans and strategies for the school. The revised strategy should benefit 20 schools in 4 provinces reaching an estimated 30,000 individuals with abstinence and be faithful (AB) interventions.

(b) The peer education (PE) training target will increase by a third. Measuring the quality of interventions and tracking behavior change outcomes will be emphasized. The PE model will be implemented in collaboration with Harvard School of Public Health and the Centre for the Support of Peer Education (CSPE). The Rutanang model will be used, which dictates ten standards for PE, namely, planning, mobilizing, supervisor infrastructure, linkages, learning program, peer education infrastructure, management, recognition, monitoring & evaluation and sustainability. These standards will ensure that key PE roles are executed and that significant life skills are developed, including decision-making; access to and empowerment to facilitate peers' access to counseling and testing; and strengthening civic virtue to address issues fuelling the HIV pandemic among youth. One component of HwwSA's PE program is being evaluated at Donaldson Primary School in collaboration with the Human Sciences Research Council (HSRC), CSPE, and CDC. The study runs from September to November 2008 and aims to interview one of the Community Action Teams (CAT). CATs are comprised of 8 peer educators (between the ages of 15-19) who facilitate two OVC groups consisting of 30 participants per group. The evaluation will provide information on the quality and effectiveness of the PE model. It will also inform program development for FY 2008 and FY 2009. In addition, a national post-assessment evaluative study is scheduled to take place at the end of September with youth in the PE program. This evaluative report will be compared to the baseline evaluation KAP study conducted in the inception of the program with the same target group.

ACTIVITIES 1-3 have been modified to address the 50% decrease in funding for FY 2009, from \$ 1,455,000 in FY 2008 to \$701,750 in FY 2009. The following cuts will be made: 100% in capital expenditure, 100% in Social Researcher salary (HR), 100% for the Impact Evaluation Study, and the travel budget will be decreased to accommodate the budget cut. This will not compromise the quality of service delivery as systems will be put in place to maintain and enhance quality approaches. Service delivery sites will not be cut, but FY 2008 plans to expand to Limpopo will be delayed until further funding can be leveraged. HwwSA will not employ new staff on permanent contracts, but current staff will be maintained and carried through FY 2009.

ACTIVITY 4: Due to budget limitations, HwwSA will not provide a sub-grant to GATEWAY International in FY 2008 and 2009. Instead HwwSA will provide organizational capacity development through mentoring and training, which will allow GATEWAY to transition from sub-grantee to self-sufficient partner. Creative Concept Mapping (CCM) will be used to assist GATEWAY with capacity building and sustainability. CCM identifies factors influencing individual's life and determines behavior by mapping the relationship between factors. HwwSA will be trained on, and partner with organizations who implement this tool, including Holistic Soul-Body Institute. Mentoring GATEWAY will take the form of monthly partner meetings with project coordinators, to monitor the implementation of AB Community outreach activities including, training PEs, forming CATs, CCE and the CCM. In addition, quarterly site visits will be conducted and training on good governance, facilitation skills, strategic planning, as well as guidance on program development will be provided.

The goals of the HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011 (NSP) include reducing the number of new infections by 50%; reducing the impact of HIV and AIDS on individuals, families and communities by expanding access to appropriate treatment, care and support to 80% of all diagnosed with HIV. The NSP states that young people aged 15-24 years be the focus of all interventions, especially behavior change prevention. A priority intervention is prevention. The NSP recognizes that keeping HIV negative people negative is the most effective and sustainable intervention. HwwSA's AB prevention intervention is aligned with the NSP as it partners with other prevention programs in South Africa to offer a comprehensive package to communities at risk of HIV. Key activities include training PEs in comprehensive life skills. Moreover, other prevention activities include the CCE (involving community members). Lastly, youth aged 15-24 years are emphasized.

Gender activities will be incorporated into the school programs to ensure that youth are reached in a controlled and conducive learning environment. Gender and leadership camps will increase awareness of gender-based violence as gender is mainstreamed in all of HwwSA's programs to reach more boys and vulnerable girls. The Men as Partners (MAP) component of the program is a community-based intervention that aims to reduce violence and coercion as men are trained as PEs. A life skills gender-based curriculum is used to promote gender sensitivity and healthy lifestyle behaviors.

SUMMARY:

HOPE worldwide South Africa (HWSA) will continue activities in abstinence and being faithful (AB) to support the expansion of a comprehensive HIV prevention program through a skills-based, gender-focused program for young boys and men and the promotion of AB messages for young people within designated communities.

The activity targets children and youth (both in- and out-of-school), adults, parents, teachers, religious and community leaders, mobile populations and non-governmental organizations (NGOs). The emphasis areas

Activity Narrative: for the project are gender addressing male norms and behaviors, reducing violence and coercion and human capacity development. The target populations are adolescents and adults.

BACKGROUND:

The FY 2008 funded activities are part of an ongoing HIV prevention program of HWSA, funded by PEPFAR since 2003. HWSA will continue its programs in Gauteng, KwaZulu-Natal, Western Cape and Eastern Cape provinces to promote and strengthen abstinence and faithfulness prevention behaviors within its community outreach efforts that include communities of faith. With FY 2008 funding, HWSA will expand to new areas, and in particular to peri-urban and rural areas in South Africa, where the HIV prevalence is high. HWSA has reached 300,000 individuals with A and AB messages through 32 faith-based organizations (FBOs) and 73 schools, and other community-based awareness campaigns in 26 clinics and hospitals through support groups. The HWSA prevention program is aligned to the South African Government's (SAG) prevention strategy in its promotion of abstinence, fidelity and the correct and consistent use of condoms (ABC) for sexually active youth at risk and older youth.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: AB Community Outreach

HWSA's AB program follows a standard Peer Educator model of training small groups of change agents, through age-appropriate activities, to impact their immediate and broader communities. The first part of the activity entails the establishment of an abstinence-based program for youth aged 10-14 years who have not initiated sexual activity. The program educates children on the basic facts about HIV prevention and AIDS, addresses stigma and discrimination and how to avoid and report abuse. The second part of the activity will be targeted at the 15-24 year old age group and will establish an abstinence and fidelity-based approach (AB) focusing on HIV prevention messages and AIDS awareness, the importance of abstinence in reducing the transmission of HIV, the importance of delaying sexual activity until marriage, the development of skills for practicing abstinence, and where appropriate secondary abstinence, personal self-esteem, the reduction in the number of sexual partners, the importance of mutual faithfulness in reducing HIV transmission, dangers of alcohol and substance abuse and the importance of HIV counseling and testing. The activity will reach youth through school programs, faith-based organizations, recreational activities, health care services and the workplace. HWSA will expand its services to new areas and focus on improving the quality of the services offered based on lessons learned using PEPFAR funding. Key areas to be addressed include the need to incorporate components on culture and personal leadership into the AB program

The HWSA program will also target out-of-school youth through youth clubs, community-based organizations and sports groups. HWSA will provide full information regarding the correct and consistent use of condoms and refer youth at risk of HIV infection to condom outlets and health facilities where necessary as a way to reduce the risk of HIV infection for those who engage in risky behaviors. This element of the program will be closely linked to HWSA's OP activity.

ACTIVITY 2: Men as Partners (MAP)

HWSA's MAP program is part of the national Men as Partners network initiated by Engender Health. The MAP program creates community commitment and involvement in the reduction of violence against women and children, community interventions that will challenge male norms and behavior about masculinity, early sexual activity, multiple sexual partners and transactional sex for boys and men and will establish new norms. FY 2008 funding will support school-based violence prevention programs, promote abstinence and the development of skills for practicing abstinence and skills training for peer educators to promote HIV counseling and testing. The MAP program will continue to build its public-private partnerships (with Coca Cola, South African Airways and the National Department of Arts and Culture), which provide corporate funding for workplace MAP workshops and awareness activities in the communities adjacent to these companies. The MAP program will be modified to be age-appropriate for school children and older youth reached by the school-based program. MAP project will focus on educating both young and older men to respect and protect the rights of women and girl children. Lessons learned through program implementation indicate the need for as a greater emphasis on gender issues in particular the vulnerability of girls and young women and discourage sexual abuse, violence and coercion of women and girl children.

The activity will target young men aged 15-24 years and their communities. PEPFAR funding will be used to maintain current staff of three coordinators, and eight peer educators.

ACTIVITY 3: Parent Empowerment

HWSA will scale up its Parent Empowerment program with FY 2008 funding. This activity started in FY 2006 and has been progressively scaled up in FY 2007. The need to scale up this activity and to empower and capacitate parents, caregivers and guardians with skills to interact with children and youth about sexuality and to create an enabling environment for AB messages has become increasingly evident over the last program year. The scaling up of this activity will involve more sessions on personal growth; enhance self awareness, personal values, and parenting skills. In addition much of the focus will be placed on creating spaces where both youth and parents/caregivers are able to interact. Camps, child-parent days and joint campaigns of youth Community Action Teams (CATs) and parent CATs will form a key part of this component of the activity. Target audiences for this activity include parents of youth involved in the A activities, members of FBOs and adults from the communities at large. The activity will also be linked to the OVC program with a focus on empowering parents and guardians in vulnerable households and working with granny-headed households. The practice and role-modeling of fidelity or partner reduction that forms a part of the parenting activity will contribute to the number of beneficiaries reached through the indicator for number reached with community outreach HIV prevention promoting AB. This activity will build on work done with FBO networks and school governing bodies in FY 2007.

Activity Narrative: ACTIVITY 4: Sub-grant to Gateway for AB Prevention for In-school Youth

HWSA's new partnership with Gateway, an NGO working in rural communities of South Africa, will assist in scaling up AB activities in areas where HWSA does not currently operate. As Gateway works predominantly in schools with in-school youth, these activities will focus on including AB peer education, AB MAP activities and the mobilization of Community Action Teams. The program will be expanded to new areas in Limpopo Province (Musina, Duiwelskloof, Makhado, Lephalale, Modimolle, Bela-Bela, Vaalwater), North West (Klerksdorp), Free State (Riebeeckstad, Kroonstad, Welkom, Odendaalsrus, Ventersburg), KwaZulu-Natal (Utrecht, Newcastle), Mpumalanga (Volksrust) and Northern Cape (Kimberly and Douglas). These provinces have a high HIV prevalence according to the Human Sciences Research Council (HSRC) research study. This strategic partnership will enable HWSA to expand its capacity to work in additional areas through providing human resources and utilizing Gateway's established links and track record in the new communities. HWSA will train Gateway staff on its Peer Education, AB and MAP curricula and provide mentoring and coaching on a regular basis. This partnership will build on Gateway's success for 2006 in which 338,464 individuals were reached. Gateway's work with youth has been funded by SAG grants and other corporate sponsors.

These HWSA activities will contribute to the PEPFAR objectives of averting 7 million infections, and support the USG PEPFAR Five-Year Strategy for South Africa by improving AB HIV prevention behaviors among youth and adults.

Activity System ID: 22872

Mechanism: N/A

USG Agency: HHS/Centers for Disease
Control & Prevention

Program Area: Sexual Prevention: AB

Program Budget Code: 02

Planned Funds: \$266,999

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

The targets for FY 2008 have not been modified or enhanced. As has been noted, the South African Business Coalition (SABCOHA) started the program a few months late due to CDC requests to change the service provider that was initially proposed. This has had a significant impact on targets to date. However, SABCOHA now has the necessary infrastructure to roll out the program and the organization has begun to implement the capacity building component.

SUMMARY:

This activity is a component of a comprehensive prevention education, care and treatment program for small to medium enterprises (SMEs) with 20-200 employees and other workplaces in South Africa. It includes activities in CT, ARV Drugs, ARV Services, Policy Analysis and Systems Strengthening, and Condoms and Other Prevention.

Background:

The South African Business Coalition (SABCOHA) will implement through the Vendor Chain Management and BizAids sub-partnerships. The major emphasis for this program will be the development of a workplace program, with minor emphasis given to community mobilization and participation; training and linkages with other sectors and initiatives and development of information, education and communication materials. The target population will include adults (men and women of reproductive age), truck drivers, factory workers, the business community and HIV/AIDS affected families. The project will focus on gender by addressing male norms and behaviors, issues associated with violence and coercion and stigma and discrimination (all key US legislative issues).

ACTIVITIES AND EXPECTED RESULTS:

Activity 1: Vendor Chain

Vendor Chain Management will make use of the SABCOHA HIV/AIDS Toolkit methodology which has a component on workplace prevention programmes. During the capacity building of companies, there will be training of managers, steering committees and HIV Coordinators on prevention. It will be one of the major components of the program as it will cut across at all levels of the company. The approach used will include the education in terms of workshops, information in terms of materials which will be provided during the various sessions as well as various communication channels include audio-visuals. In addition, an assessment to determine needs and risk profile of company (gender, age, socio-cultural aspects) will be conducted. This will assist in determining how prevention programs can be tailored to meet companies' needs. Companies will also be linked to external service agencies for continuous support after the direct capacity building intervention. A particular focus of the company workshops will be on the B component of the AB messaging.

Activity 2: Project Promote

Through Project Promote the current private sector partners in the cleaning and hygiene sectors will receive support on IEC material and programme messages to be included in in-house HIV/AIDS company training that focuses on issues such as the be faithful messages highlighting the significant risk of having concurrent partners as well as issues of stigma and discrimination within the workplace. The contract cleaning industry is almost 60% female and as such gender issues will also be covered in the materials provided to companies for dissemination. Current private sector partners of Project Promote combined employ over 30 000 cleaners. Through internal company trainers and as part of the partners ongoing workplace programs, Project Promote aims that its private partners will reach at least half of these employees over a 5 year period. During FY 2008 Project Promote aims to facilitate the training of 3800 cleaners.

Activity 3: BizAIDS

The Micro Enterprise sector in South Africa is enormous. Developed by the International Executive Services Corps (IESC) BizAIDS mainstreams HIV and AIDS issues within broader operational and strategic issues for micro enterprises. BizAIDS is a tested strategy in mitigating the economic impact of HIV and AIDS and other unplanned risks on micro-enterprises.

In a 15 hour programme, at minimal cost to the business owner, they will acquire business management; health (HIV) and legal knowledge in managing their business better, thereby reducing risk and to ensure that to continue to operate in the face of risk and to generate income. The aim of the SABCOHA response will be to expand on BizAIDS Project as a core strategic initiative and to include VCT as well as treatment and care to the core projects and through the BizAIDS project, the aim is to train 2500 people over the next 5 years. As the BizAIDS programme links to with the vendor chain programme the same treatment and care model will be used. While numbers are based on an average of 500 micro-enterprises per year to be serviced each year over 5 years, it is possible that the treatment and care components can be extended to include spouses and dependents should funds allow. The BizAIDS programme will have access to 500 Microenterprises per annum. On Average these enterprises have approximately 5 employees each with an additional 5 family members being influenced by the enterprise itself.

This activity will directly contribute to PEPFAR's goal of preventing 7 million new infections. These activities support the USG Five-Year Strategy for South Africa by expanding and improving quality AB prevention programs.

Funding Source: GHCS (State)	Program Area: Sexual Prevention: AB
Budget Code: HVAB	Program Budget Code: 02
Activity ID: 22865.09	Planned Funds: \$0
Activity System ID: 22865	

Activity Narrative: SUMMARY:

The Southern African Clothing and Textile Workers Union (SACTWU) has received PEPFAR funding in previous years through a sub-agreement with the Solidarity Center. In FY 2008, SACTWU started receiving direct PEPFAR funding. SACTWU has a well-structured training program, initiated in 1999, that has evolved within the dynamics of the industry and includes basic facts on HIV, AIDS, abstinence, being faithful and condom use. The major emphasis area of the activity is training. Target populations include factory workers and people affected by HIV, HIV-infected adults, especially women, and the business community.

BACKGROUND:

SACTWU is South Africa's largest trade union organizing textile and clothing workers. It also organizes footwear, leather and retail workers and has a membership of approximately 110,000 members nationally. Sixty-six percent of SACTWU's membership is female with the majority aged between 20 and 60 (i.e., the greatest population infected and affected by HIV and AIDS).

The SACTWU AIDS Project, known as SACTWU Worker Health Program, is a national program that provides prevention and care services in five provinces: KwaZulu-Natal, Western Cape, Gauteng, Eastern Cape and Free State. This Project was initiated in 1999 and developed as a national comprehensive program, with an initial focus on prevention. It has matured over the years to the point where it now has a well-structured comprehensive training program, provides workplace theatre, in-house voluntary counseling and testing (VCT) services, access to a social worker in KwaZulu-Natal, income generating workshops, a primary package of care through the VCT services, home-based care through its regional nurses, and a home-based care network in KwaZulu-Natal and the Western Cape. The nurses provide some level of support in the home through home visits, but this activity is mainly implemented by the home-based care network that provides ongoing home-level support.

The prevention program is a three-level training program that starts with a foundation phase on the basic facts of HIV and AIDS, abstinence, being faithful and consistent and correct condom use (ABC). These facts are reinforced and strengthened with the intermediate and advanced modules of training. The intermediate module deals with legal aspects and workplace policy development. In the advanced module, delegates are trained to become trainers, lay counselors and home-based carers. SACTWU also has an HIV and AIDS awareness workplace program where trainers take the training to floor level in 30-minute sessions in the factories. The major emphasis of the workplace program is on prevention. A particular focus of the SACTWU's program is to create greater gender equity in HIV and AIDS programs and address male norms and behaviors.

Previously, although work was done in this specific area of prevention, all activities were addressed in the area "prevention through behavioural change beyond abstinence and/or being faithful". This has been modified to allow for activities in "prevention through abstinence and/or being faithful" to occur and be reported on separately.

ACTIVITIES AND EXPECTED RESULTS:**ACTIVITY 1: Training**

One of the key objectives of SACTWU's training program is to educate shop stewards as master trainers/peer educators. This enables them in delivery of messages and information that directly address the issue of the prevention of HIV, to workers at the workplace. Emphasis is placed on behavioral change and the following topics are addressed: the effectiveness of abstinence in the prevention of HIV and sexually transmitted infections (STIs) and family planning; risk reduction through mutual fidelity and the importance of protecting one's family by staying negative; risk reduction through the reduction of multiple partners; and the need for parents to educate their children in the advantages of delaying sexual activity. Shop steward training is typically last from two to five days. At least one course per week will be offered with expected average attendance of about 20 participants per course. This training is conducted by SACTWU's internal trainers. Due to current gender inequalities, a key objective for FY 2009 is to develop an outreach training program aimed at training female adolescents at schools as peer educators in the areas of prevention, including abstinence and being faithful (AB), gender-based abuse and violence, and HIV risk reduction through the avoidance of alcohol and drug abuse.

ACTIVITY 2: Workplace Theatre

A fulltime drama group based in KwaZulu-Natal provides workplace theater at factories during tea and lunch breaks. Different scripts have been developed to address HIV-related topics including AB; STIs; correct condom usage; TB; and antiretroviral treatment. Recently, a sixth script has been developed to address prevention among adolescents with particular focus on abstinence, the advantages of delayed sexual activity and/or being faithful. The drama club will do outreach work at one or more high schools per month within the communities that SACTWU members live and work. It is anticipated that targets will be increased in this program area due to this outreach work.

Program Area: Sexual Prevention: AB

Program Budget Code: 02

Planned Funds: \$237,872

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

South African Democratic Teachers Union (SADTU) activities have been modified in FY 2009.

ACTIVITY 1: SADTU will train the school governing bodies on HIV prevention and treatment adherence to create a supportive environment for staff and learners living with HIV and AIDS

ACTIVITY 2: Prevention messages in information, education and communication (IEC) materials will be focused on, to support encouragement of alternative positive behaviors, to reduce incidence of concurrent and multiple sexual partners, and to promote mutual fidelity and mutual respect of human rights in relationships. SADTU will develop and distribute IEC materials with messages that promote correct and consistent use of condoms in every sexual act in discordant couples and as additional protection for circumcised males.

ACTIVITY 3: Gender sensitive activities in camps for boys and girls at regional sites will be conducted to provide opportunities for key skills development, such as taking responsibility for oneself and reducing risk behaviors. This will have the additional benefit of promoting access to continued education, resulting in a bright future and HIV-free generation.

Activity 4: Conduct provincial Gender and HIV workshop for 300 young women leaders between ages 21-35 to address issues of HIV Prevention as they relate to gender, social norms, self esteem and human rights, in skills building activities.

SUMMARY:

The South African Democratic Teachers Union (SADTU) project aims to reduce the impact of HIV and AIDS by focusing on preventing transmission of HIV for teachers, their workplace community, and caring for orphans and vulnerable children in the workplace. SADTU has existing national and provincial partnerships with the Department of Education and was a member of the team that developed the National Strategic plan with the Department of Health. SADTU has also established relationships with other HIV and AIDS organizations around the country. This will ensure sustainability of program after PEPFAR funding. The target population for these activities is teachers, their workplace community and primary and secondary school learners.

BACKGROUND:

The HIV pandemic has created workplace environments that are not conducive to quality teaching and learning for both educators and learners alike. Many schools have orphans and vulnerable children who lack basic needs and therefore cannot perform optimally at school. Teachers often have to take care of these situations themselves. Although some schools do have soup kitchens and food parcels for these children, this does not address the learners psychosocial needs.

The school as a workplace is often plagued by high levels of stigma. This often results in educators suffering silently and becoming victims of the pandemic despite high perceptions of knowledge of HIV and AIDS. As a result many educators do not have the courage and support in the workplace to go for voluntary counseling and testing, since knowing your status is not publicly encouraged. Consequently most educators discover they are HIV positive when they start showing symptomatic illnesses that do not respond to medications. By this time their CD4 counts are usually low and they can no longer function optimally at their schools with compromised health. SADTU aims to address this by creating an caring workplace environment for both learners and educators alike and focusing on HIV prevention and increasing access to care and treatment services.

ACTIVITIES AND EXPECTED RESULTS:

Activity 1: Training union leaders as peer educators in the workplace

The SADTU workplace program will seek to sustain peer education for teachers using union leaders, who already have positive influence and recognition amongst educators and good standing with senior management. IEC materials focusing on prevention, knowledge of HIV and AIDS, PMTCT and human rights will be used to ensure that the peer educators can implement activities after the initial training. The focus of the prevention messages will be a comprehensive ABC approach with a focus on the be faithful message. SADTU will work, through the trained peer educators to increase community involvement, and increase male involvement and awareness around HIV prevention, PMTCT, the role of male norms and behaviors in HIV transmission. In addition, through community involvement activities, SADTU will ensure the distribution of IEC materials to educators and communities.

Activity 2: Increase access in local languages to HIV and AIDS prevention knowledge

The SADTU workplace teachers program will target educators and learners through age and gender appropriate group activities and community mobilization to increase knowledge around HIV and AIDS prevention. The program will focus on addressing gender by reducing violence and coercion, and addressing male norms and behaviors. In addition community mobilization activities will focus on the reduction of stigma and discrimination by increasing knowledge around HIV and running community activities that focus on stigma reduction.

Activity 3: Implement HIV prevention activities for learners

As part of their OVC program, SADTU will integrate HIV prevention messages building on the existing school life skills program. The focus of these messages will be on AB. These messages will be carried out

Activity Narrative: by both youth peer educators and teachers.

These activities contribute to the PEPFAR 2-7-10 goals and objectives by increasing knowledge of HIV transmission and the prevention of new infections.

Budget Code: HVAB

Program Budget Code: 02

Activity ID: 22725.09

Planned Funds: \$0

Activity System ID: 22725

Activity Narrative: In response to request for changes in prevention.

SUMMARY:

World Vision (WV) is expanding to include abstinence and being faithful activities by increasing the coverage, scope, and quality of services to family members of HIV-infected individuals and older OVC. Emphasis areas are community mobilization, training, and development of linkages and referral systems. The target populations are people living with HIV and AIDS.

BACKGROUND:

World Vision is a non-profit organization established in 1967 working in six provinces of the country. World Vision seeks to make a difference in the impact of HIV and AIDS and improve the situation of children in rural schools. WV aims to build on the Radically Different Species (RADS) prevention program (change behavior to change the future). In the Free State, RADS is a full-scale prevention program, which mainly focuses on peer education support, and is managed by youth from the local community. RADS is abstinence based, which aims at helping youth delay sexuality activity, deal with relationships, prevent sexually transmitted infections (STIs), understand teenage social context, take responsibility, and maintain independence and interaction between youth and the community. WV has established a memorandum of understanding (MOU) with the Free State Department of Education to roll out this prevention program, which includes life skills. The RADS are the 'cool and hip prevention program' that emphasizes the enhancement of learners' self-worth, and their influence on others and society. The program develops knowledge, skills, attitudes and values, addresses self-awareness, HIV and AIDS, sexuality and life skills, and emphasizes behavior change. RADS is a character building program, as character changes behavior and behavior changes the future.

ACTIVITY 1: Training Youth as Peer Educators

WV will train peer educators in the RADS prevention program to help change behavior and change the future. RADS training workshops will be organized in the Free State and Eastern Cape. RADS is a prevention program, which focuses on peer education support, managed by youth from the local community. RADS aims at delaying sexuality activity, dealing with relationships, STIs, Teenage social context in the time of HIV and AIDS, accountability and future perspective, independence and inter-action between youth and the community. WV through its MOU with the Free State Department of Education will roll out this prevention program in schools using the RADS trained peer educators.

ACTIVITY 2: Implementation

WV in collaboration with Free State Department of Education, will implement RADS at schools, reach more learners, and establish support groups in each school. WV also intends to work with educators to develop the peer educator program in the schools, whereby the life skills program is aligned to life orientation programs. This is outcomes-based in the form of knowledge and understanding of self-conceptualization, esteem, behavior change, effective communication, gender differences and sexuality, self-awareness, critical thinking, problem solving, action planning for the future, goal setting, psycho-social emotions, resisting peer pressure, negotiation skills to ensure abstinence, and delaying sexual activity. RADS is built around community engagement, involving parents and caregivers in its messages, and working through the Community Care Coalitions in identifying resources in assisting young people in life-skills.

One of the key priority areas of the NSP is Prevention, which aims to reduce the new rate of HIV infections by 50% by 2011. WV through the RADS program, "Courage to Become Me," and the Channels of Hope program aims to reduce sexual transmission HIV by strengthening its behavior change programs. RADS is an innovative programmed of using language of the youth to address behavior change and also advocates for open dialogue of HIV and sexuality between parents and children. The RADS program aims at adolescents and young adult at higher risk, in alignment with the NSP. In training the educator to assist with the peer education program, this highlights a multi-faceted approach of a high risk population group (i.e., infected teachers are 12.7% sero-prevalence in South Africa), this contributes to a greater involvement of people affected and infected with HIV.

One of the strategic objectives of the Policy Framework on Orphans and Other Children Made Vulnerable by HIV and AIDS calls for the mobilization and strengthening of community-based responses for the care, support and protection of orphans and vulnerable children (OVC) and to promote and strengthen linkages between community-based responses to OVC made vulnerable by HIV and AIDS with prevention, treatment and care programs. RADS will integrate its program holistically into the community care coalitions.

In order to address the gender issues, RADS will facilitate an increase in dialogue among young women and men, talking about their sexuality, values, behavior changes and norms. Age intersects with gender in determining the allocation of dominance in any society, young people typically have less power than older generations, and younger women or girls have less power than younger men or boys. Hence power imbalances in gender relations have many of its roots in adolescence. RADS is determined to increase the dialogue between boys and girls, younger women and younger men. Cultural, societal, ethical, biological and psychological factors contribute in determining the mindset of young people, and RADS integrates these factors in influencing sexuality and gender roles. WV will also attempt to address multiple concurrent partnerships and cross-generational sex in its prevention program.

Public Health Evaluation**Food and Nutrition: Policy, Tools, and Service Delivery****Food and Nutrition: Commodities****Economic Strengthening****Education****Water****Table 3.3.02: Activities by Funding Mechanism****Mechanism ID:** 4762.09**Prime Partner:** Ubuntu Education Fund**Funding Source:** GHCS (State)**Budget Code:** HVAB**Activity ID:** 8261.22804.09**Activity System ID:** 22804**Mechanism:** N/A**USG Agency:** HHS/Centers for Disease Control & Prevention**Program Area:** Sexual Prevention: AB**Program Budget Code:** 02**Planned Funds:** \$0

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

As described in COP 2008, Ubuntu Education Fund (Ubuntu) utilizes a variety of approaches to reach different age groups with abstinence and being faithful (AB) prevention. Learners in grades four through eleven will continue to be engaged in discussions and role-playing to promote crucial skill development, such as decision-making, withstanding peer pressure, interpersonal communication, value clarification, negotiation, goal-setting, self-assertion and accessing health services.

In addition, Ubuntu will implement further age-appropriate lessons focusing on the development of positive attitudes related to gender equity and relationships, delaying sexual onset, delaying pregnancy, and challenging myths about HIV and AIDS. Ubuntu will also integrate a Men as Partners (MAP) approach in the life skills curriculum. This approach will be adjusted to be a thread that connects across curriculums. Ubuntu designs differing approaches for adolescents and older youth. The adolescent lessons will focus on guiding children to feel empathy with others and be self-aware. This approach will engage children and youth at an early age in establishing norms that reject gender-based violence.

Older youth from ages 14-24 will be taught sexual and reproductive health, the behaviors that place individuals at risk, and the social context and interrelationship of these factors. Ubuntu will address values, attitudes, and behaviors in individuals and communities and provide basic facts about preventing pregnancy and sexually transmitted infections (STIs), including HIV. Youth will be engaged in discussions about correct and consistent condom usage, the risks of concurrent sexual partners, the risks of transactional sexual relationships, the role of substance abuse in exposure to HIV, the need to treat STIs, and the importance of knowing one's personal and one's partner's HIV status as an essential part of committed relationships.

For this age group, Ubuntu peer education and life skills facilitators will focus on and further develop activities and discussion points to address the drivers of the epidemic including, multiple concurrent partners, age mixing, and substance abuse, as well as gender and gender-based violence. Ubuntu will utilize all of its existing approaches including in school classes and peer education sessions to impart these messages. However, new modules will be added to the curriculum. Girls will be empowered by addressing the denial, discrimination and complacency that act as barriers to taking action to address HIV and AIDS.

The Men as Partners approach utilized by Ubuntu life skills educators for this age group will foster equal partnerships and participation between boys and girls, young men and women. Modules will be adapted for this age group to promote the participation of boys and men in family life. The Ubuntu curriculum will be audited to make sure that HIV and AIDS-related messages do not reinforce gender stereotypes or other biases related to HIV status, race, religion or culture.

In order to complement the activities described in Ubuntu's 2008 activity narrative, Ubuntu life skills educators will create after-school support clubs for children aged 14-24 to give them a forum to discuss these issues relating to HIV and gender stereotyping. Ubuntu's life skills facilitators are stationed at schools throughout the community. This gives them a strategic advantage in identifying children who are particularly at risk to getting involved in substance and alcohol abuse.

Ubuntu has created lessons that expose the link between abuse of alcohol and other substances and impaired judgment. Once this link is established, the facilitators are then able to make it clear how alcohol and substance abuse can lead to risky sexual behavior. These support clubs will also function as a safe after-school space to help young people avoid the settings that are conducive to get involved in risky behaviors. Ubuntu's curriculum addresses consistency of condom usage and the influence of alcohol and drugs on sexual behavior.

Additionally, once per quarter, female peer educators will gather their female classmates to visit women in the workplace identified by Ubuntu staff. Ubuntu will provide access to successful professionals in the community where young girls can see career options and listen to role models discussing how to live healthy and prosperous lifestyles.

Built into Ubuntu's family-centered approach to prevention is support to vulnerable young women. Ubuntu counselors often conduct home assessments and often find instances of cross-generational and transactional sex, primarily because of unemployment and socio-economic conditions. Ubuntu counselors provide educational materials not only life-skills, but also on hygiene and referrals to government services that can provide health and economic assistance.

Ubuntu will involve the parents in community empowerment trainings where they will learn facilitation techniques that can be used in informal gathering at their homes and social gathering places. Ubuntu will utilize the parents of the peer educators to support their children in explaining the messages, but also to become facilitators to their adult peers; Ubuntu will also start training parents in schools on life skills, sexuality and HIV and AIDS. This initiative is in accordance with recent research that indicated that a child's behavior may not change if the parent is ignorant about issues, and therefore are unable to support or advise the child. Ubuntu will train parents in schools starting 2009; Ubuntu plans to hold four workshops per quarter with parents. Ubuntu will reach 30 parents per workshop for a total of 120 parents per quarter and 480 parents per year.

Ubuntu will also add teachers to the existing support networks for peer educators. By training teachers on the peer education methodology, they are empowered to act as mentors and co-facilitators for the peer leaders. This will increase the schools' buy-in to the approach.

Ubuntu will also improve initiatives to share their curriculum and methodology with other government institutions, non-governmental organizations and stakeholders. Ubuntu currently serves on multiple government-led outreach committees including the most important stakeholders in Port Elizabeth. These committees address various issues ranging from HIV management to nutrition and TB treatment. Ubuntu will initiate a campaign to start a prevention outreach committee to strategize how to educate further about

Activity Narrative: voluntary counseling and testing (VCT), TB treatment and HIV management.

In order to complete the circle of Ubuntu holistic approach, Ubuntu's team will continue to improve referral systems to care services including VCT. Ubuntu ensures that a life skills facilitator or peer educator can identify a person who needs further assistance. These procedures allow Ubuntu's care and counseling team to follow up quickie. When Ubuntu provides VCT, trained Ubuntu care workers are on site to enroll all people who test positive into Ubuntu's care and support program.

Ubuntu will add to its existing approach to order to broaden the reach of Ubuntu's messages. The team will partner with radio KQ FM. Ubuntu will be on the air every Friday for two hours targeting the youth on sexuality, alcohol and drugs and HIV-related topics.

SUMMARY:

Ubuntu Education Fund's (Ubuntu) health educators provide life skills education to vulnerable children and adolescents in the townships of Port Elizabeth, a city in the Eastern Cape Province of South Africa. Ubuntu's life skills classes focus on the development of knowledge, attitudes, values and skills needed to make and act on the most appropriate and positive health-related decisions. The major emphasis areas for this activity are addressing male norms and behaviors, increasing gender equity in HIV and AIDS programs. Specific target populations include adolescents (10-14) and (15-24).

BACKGROUND:

For the past six years, Ubuntu has provided life skills classes in over 20 primary and high schools in the Ibhayi townships of Port Elizabeth. The vast majority of the children in these schools are from high-poverty areas including informal settlements. There are high rates of sexual abuse and rape in the target area. Ubuntu has established partners with the Department of Education (DOE) and operates under Memoranda of Agreement with each school partner. Ubuntu works in close coordination with the Life Orientation Coordinator at each school and the Curriculum Development Specialist at the Nelson Mandela Bay Metropolitan Municipality's Department of Education to ensure that the life skills curriculum meets the learning and assessment objectives of the national curriculum for life orientation.

Ubuntu became a PEPFAR partner in FY 2007 and has only recently received funds.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Life Skills Education

Health educators will provide life skills education classes in primary and secondary schools reaching 8,000 children in high-poverty, high-density township communities in Port Elizabeth. Learners in grades four through eleven receive lessons from a comprehensive life skills curriculum once every five to ten days (two lessons every five days depending on school size). Discussions and role-playing promote crucial skill development, such as decision-making, withstanding peer pressure, interpersonal communication, value clarification, negotiation, goal-setting, self-assertion and accessing health services. Age-appropriate lessons focus on the development of positive attitudes related to gender equity and relationships, delaying sexual onset, delaying pregnancy, and challenging myths about HIV and AIDS. Older youth are engaged in discussions about correct and consistent condom usage, the risks of concurrent sexual partners, the risks of transactional sexual relationships, the role of substance abuse in exposure to HIV, the need to treat STIs, and the importance of knowing one's personal and partner's HIV status as an essential part of committed relationships. Ubuntu will integrate a 'Men as Partners' approach in the life skills curriculum to engage children and youth at an early age in establishing norms that reject gender-based violence.

ACTIVITY 2: Peer Education

Ubuntu's peer education training uses a curriculum that is accredited by the Department of Education and the Sector Education and Training Authority (SETA). Semi-annually Ubuntu conducts four-day trainings targeting youth age 16-18, who are in grades ten through twelve. The training is geared to mobilize youth to facilitate support groups on basic counseling and problem solving skills, the causes and prevention of HIV, delaying the onset of sexual activity, the dangers of alcohol and drugs, sexual orientation, living positively with HIV and prevention of teen pregnancy. Ubuntu provides one training every six months and ongoing in-service trainings every fortnight. Ubuntu is currently creating baselines and follow up surveys which will be administered every six months.

ACTIVITY 3: Mobilizing Youth

Ubuntu's peer education training is geared to mobilize youth to facilitate support groups on basic counseling and problem solving skills, the causes and prevention of HIV, delaying the onset of sexual activity, the dangers of alcohol and drugs, sexual orientation, living positively with AIDS and prevention of teen pregnancy. Ubuntu provides one training every six months and ongoing in-service trainings every fortnight. Using FY 2008 funding, Ubuntu will ensure that peer educators are trained and that they are working in their communities to mobilize youth on issues around AB messaging.

These results contribute to 2-7-10 goals by promoting knowledge and skills to prevent HIV infection in youth populations that may have an increased risk of HIV exposure.

Activity System ID: 22846

Activity Narrative: ACTIVITY UNCHANGED FROM FY 2008

SUMMARY:

PEPFAR funds will be used to continue to support the National Department of Health (NDOH) Youth and HIV directorate. Since FY 2005, PEPFAR funds have been used to place a Youth HIV advisor at the NDOH. This advisor has provided programmatic support to the NDOH in terms of growing the youth program and ensuring support for non-governmental organizations (NGOs), faith-based organizations (FBOs), and other organizations working in the area of youth and HIV. The emphasis will be on human and local organization capacity development, and training. The target populations will include host country government workers, implementing organizations and youth between the ages of 10 -18. Activities will also focus on young adults, between the ages of 18 and 24, especially women. The focus for this group, particularly those women that are sexually active, will be on the B component of the AB program

BACKGROUND:

Four NGOs will be supported to carry out AB prevention activities for youth through the NDOH cooperative agreement. The funds requested under this COP entry "In-Support of the NDOH" will continue to support a youth specialist that provides technical assistance to the NDOH on youth activities including the provision of technical oversight to the four NGOs. The "In-support of the NDOH" funds are also allotted to small-scale activities at the request of the NDOH for AB prevention activities.

ACTIVITIES AND EXPECTED RESULTS:

Three activities will be carried out in this Program Area.

ACTIVITY 1: Technical Assistance

FY 2008 funding will ensure continued support for a locally employed staff to provide technical and programmatic assistance to the NDOH in the area of youth and HIV. The youth advisor will continue to work closely with NDOH in the design and delivery of their youth interventions. In addition, the youth advisor will ensure collaboration between youth-based NGOs funded through the CDC-NDOH cooperative agreement.

ACTIVITY 2: Expansion of the Peer Educator Program

Providing coordination and oversight for Rutanang peer education trainings (particularly addressing abstinence and be faithful, youth-friendly services, HIV prevention initiatives and strategies, male norms and behavior and violence, cohesion, stigma and discrimination) offered for the NDOH, the South African Department of Education (DOE), and other South African Government partners in collaboration with Harvard University.

ACTIVITY 3: Capacity Building

FY 2008 funding will be used to build the capacity of local organizations that are working with Youth. Capacity building will be achieved through the provision of training on HIV and on the promotion of AB messages. This will be done in collaboration with the NDOH and DOE and in line with their priorities.

ACTIVITY 4: Families Matter!

FY 2008 funds will be used to begin to adapt and implement the Families Matter! Program (FMP). FMP is an evidence-based, parent focused intervention designed to promote positive parenting and effective parent-child communication about sexuality and sexual risk reduction for parents of 9-12 year olds, with the prospect of expanding to parents of teenagers at a later stage. FMP recognizes that many parents and guardians may need support to effectively convey values and expectations about sexual behavior and communicate important HIV, sexually transmitted infection, and pregnancy prevention messages to their children. The ultimate goal of FMP is to reduce sexual risk behaviors among adolescents, including delayed onset of sexual debut, by giving parents tools to deliver primary prevention to their children. Families Matter! is delivered over five consecutive sessions where each lasts for three hours. Each session builds upon the foundation laid in the previous session. Activities will be implemented in accordance with the NDOH

These activities support the PEPFAR 2-7-10 goals and the USG five-year strategy by ensuring close collaboration with the NDOH in the area of AB and youth HIV-related activities. This support strengthens NGO and FBO activities and contributes to seven million new infections averted.

Table 3.3.02: Activities by Funding Mechanism

Mechanism ID: 4761.09	Mechanism: N/A
Prime Partner: Training Institute for Primary Health Care	USG Agency: U.S. Agency for International Development
Funding Source: GHCS (State)	Program Area: Sexual Prevention: AB
Budget Code: HVAB	Program Budget Code: 02
Activity ID: 8267.22830.09	Planned Funds: \$0
Activity System ID: 22830	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Training Institute for Primary Health Care (TIPHC) has integrated of the prevention program with the orphans and vulnerable children (OVC) and home-based care (HBC) programs.

Implementation of the prevention program holistically, requires that prevention messages be taken beyond the school environment to improve communication to youth about their values and expectations regarding adolescent behavior. While the TIPHC prevention program is school-based, TIPHC has identified that prevention messages need to be reinforced beyond the classroom, and thus TIPHC will work with parents and guardians to help improve communication to youth about their values and expectations regarding adolescent behavior. TIPHC will also ensure that parents and guardians understand the importance of monitoring and supervising the adolescents at homes and within the community. The prevention team will be involved in the HBC and OVC programs. Data collection tools with learners' physical addresses and OVC classifications will be developed to allow home visits to render services.

Prevention facilitators will identify OVC in the schools, register them, and refer them to the OVC program coordinator to proceed with linking them for services. Facilitators will continue to liaise with the OVC program team, monitor the provision of services, and ensure that the identified OVC needs are met. In addition, the abstinence and being faithful (AB) facilitators will follow up on the homes of the identified OVC to counsel family members on prevention. Working with the HBC program coordinator, community talks with clients, family members and community leaders will be organized in each community where AB facilitators will present prevention messages. This will be a coordinated program strategy to ensure that HBC clients are reached. The AB messages for HBC and OVC clients will be delivered by the AB facilitators with coordination by the HBC and OVC coordinators. Data collected from this intervention will be collated and consolidated by the prevention coordinator in liaison with the HBC and OVC coordinators.

Human Capacity Development

TIPHC intends to strengthen the quality of its services by ensuring that the knowledge and skills of facilitators and trainers in HIV and AIDS are up to standard. Skills enhancement is the key strategy for ensuring quality improvement. Sustainability will be achieved through a ripple effect as AB trainers continue implementing program activities. Thirty-four TIPHC and sub-partner AB facilitators, trainers, project coordinators and program managers will be included in capacity building program.

Induction and Orientation: AB facilitators will undergo a three-day induction and orientation training on the AB facilitating model that integrates basic OVC care and support, and monitoring and evaluation (M&E) systems. In-service training on M&E tools will be conducted regularly to ensure quality data collection.

Management and Leadership Development: AB project staff will be capacitated on project management and supervision skills. This in-house training program will include basic computer skills, project management, and facilitation and leadership skills.

Retention strategies for AB facilitators and trainers: The AB facilitators and trainers will be rewarded with competitive remuneration. They will have incentives like uniforms and support in developing career paths and will be appraised based on performance management and skills development systems of TIPHC.

The prevention program is aligned with the HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011. Priority area 2, goals 2.1 and 2.2 states that behavior change programs interventions and curricula for the prevention of sexual transmission of HIV should be customized for different target groups with focus on those more vulnerable to, and at higher risk of HIV infection and interventions targeted at reducing HIV infection in young people focusing on young women. The integration of prevention and OVC program will be guided by these two objectives.

Gender Programming

Statistics (South African government) show that the HIV prevalence among women is high. Thus, TIPHC will focus prevention activities on addressing issues of increasing gender equity in HIV and AIDS programs, and addressing male norms and behavior. These will be achieved through school debates on teenage pregnancies, alcohol and substance abuse aiming at behavior change. The school debates will address cultural values and attitudes that shape the behavior of young girls and boys, and will identify opportunities for young people to influence change.

SUMMARY:

The Training Institute for Primary Health Care (TIPHC) prevention program provides HIV and AIDS information and education to underserved populations in townships, informal settlements, rural areas and mining communities. The program emphasis areas are training workshops, community mobilization and participation and capacity building of local organizations to promote HIV prevention and behavior change. The target populations are in-school youth, out-of-school young people, adult men and women, mineworkers, people living with HIV and local community leaders like school teachers, religious leaders, traditional healers and ward councilors. PEPFAR funding is used for abstinence messages for youth and young people and for AB messages targeting sexually-active populations.

BACKGROUND:

TIPHC is a South African registered non-profit organization which has been in operation since April 1994. It has a long history of implementing HIV and AIDS information, education, home care and support programs in Emalahleni Municipality, a local authority of Mpumalanga Province. TIPHC is a key partner to the national and provincial government's HIV and AIDS AB initiative which is a component of the South African AIDS

Activity Narrative: Prevention, Management and Treatment framework. The prevention program is aligned with the South African Government (SAG) policy of promoting equitable access to HIV and AIDS health services particularly for vulnerable groups such as women and youth. Since inception, TIPHC has grown and gained the confidence of both the provincial and national Departments of Health who have funded the bulk of its prevention and care activities. Through PEPFAR partnership, TIPHC intends to intensify and expand its community outreach with HIV prevention messages in partnership with two sub-partners. The outreach initiative will target teachers and learners in senior primary and high schools. Teachers and class leaders will be trained as peer educators and counselors for learners. Community target groups will include out-of-school youth (in sports clubs, music and drama groups and church choir) and members of women's groups, stokvels (savings clubs), burial societies and shop stewards of mineworkers unions.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Training Leaders on HIV and AIDS

Training workshops will be held with leaders of selected schools, churches and community groups. TIPHC will train the leaders of these groups and support them in organizing and facilitating HIV education information and life skills workshops for their group members. In this aspect, TIPHC will coordinate the workshops for leaders. Accredited service providers will be contracted to deliver workshops. Trained leaders will in turn deliver information and skills workshops to learners and community groups. TIPHC will assist the leaders with workshop organization and supply of approved curriculum materials. The main program objective is to influence behavior change of encouraging abstinence, delaying the first encounter of sexual intercourse and promoting faithfulness among sexual partners. Messages are age specific according to the PEPFAR guidance on AB. The curricula will incorporate gender bias issues like cultural norms of women's and men's behaviors and inequalities between men and women that increase the vulnerability to and impact of HIV and AIDS. Encouraging gender equity and reducing gender-based violence coercion, stigma and discrimination will be integral to the key outputs. More importantly, focus will be on enhancing life skills for instilling a value system of respect, integrity, responsibility, fairness, and constructive decision making. As part of the sustainability plan, TIPHC trains trainers from among the leadership groups such as teachers, church pastors, traditional healers, youth peer educators and counselors and union leaders. This is a strategy for scaling-up HIV and AIDS outreach to a broader target population. These leaders command substantial influence in the community and have the ability to reach large audiences easily. Leaders to be trained as trainers will be identified and selected during training workshops and sent for train the trainer courses.

ACTIVITY 2: Training of Other Community Groups

Among the adult population, there are mine workers and taxi drivers that require particular strategies for reaching them with AB messages. This is a critical group because they also engage in cross-generational sex. Traditional healers are also a target group. Educational workshops for these target groups will address issues of gender equity, cultural norms and behavior change.

ACTIVITY 3: Community Mobilization and Participation

A door-to-door campaign whereby caregivers talk to families about HIV and AIDS and distribute leaflets is another strategic approach for wider coverage in prevention outreach to communities. TIPHC will produce and distribute leaflets about the PEPFAR program and HIV and AIDS information materials from the national and provincial Departments of Health. In addition, all target groups will be encouraged to tune-in to monthly community radio topical discussions by two people living with HIV who will be supported with PEPFAR funding. They will also be supplied with TIPHC PEPFAR news articles printed in the local papers. These two activities do not have direct targets but they contribute towards community information and education about HIV prevention. All formal training to community leaders, trainers, peer educators and counselors will be coordinated by TIPHC but delivered by accredited service providers. TIPHC has not yet received full accreditation for its training program. It currently possesses a confirmation number for its application for accreditation by the South African Qualifications Authority (SAQA) through the Health and Welfare Sector Education and Training Authority (HWSETA). Therefore, TIPHC will liaise with accredited institutions on Health and Welfare Sector Education and Training Authority (HWSETA) database and outsource the activity. TIPHC will work closely with service providers and ensure that their curricula cover essential skills of, communication, development facilitation, leadership roles and qualities, promoting gender equity, human rights, needs assessment, activity organization and management, report writing, fund-raising, knowledge about HIV prevention. Essential training for leaders, trainers and peer educators is a five-day course followed by a two-day refresher course annually. TIPHC will in turn assist these trained facilitators with the organization and facilitation of planned training and information sessions with their group members. Support with provision of training and information materials and adaptation of curriculum will be provided. The sessions will be monthly one-day activities covering specific topics on HIV prevention. TIPHC will be responsible for quality assurance and will ensure that accredited assessors are used to evaluate the learning. A monitoring system will be instituted to capture information that will profile training participants and record what is covered in all training activities to enable proper and accurate reporting.

This activity contributes to the PEPFAR goal of averting seven million infections.

Activity System ID: 22634	

Activity Narrative: ACTIVITY UNCHANGED FROM FY 2008

SUMMARY:

CARE serves as an umbrella grant-making mechanism for the Centers of Disease Control and Prevention (CDC). Specific responsibilities include the financial oversight of the grant which includes review the financial reports and on-site assessment of the supporting documentation.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Contractual Arrangements

CARE is responsible for the contractual arrangements of the sub-grants with CDC Atlanta. These arrangements include application for funding for implementation of activities by the sub-grantees that have been approved by CDC South Africa to meet the PEPFAR goals. Care will prepare all supplemental and continuation application, and ensure progress reports are received by the sub grantees. CDC activity managers will be responsible for the technical review of the sub-grantees, thus targets met by the sub grantees for the HVAB program will not be assigned to CARE.

ACTIVITY 2: Financial Oversight

CARE is responsible for the financial oversight of the sub grants. This activity entails the review of financial reports submitted by the grantees on quarterly/6 month basis; and on-site assessment of the supporting documents to ensure compliance to contract. These on-site assessments will be conducted on a six month basis. CARE will also ensure progress reports are received from the sub grantees and approved by the activity managers of CDC South Africa on a quarterly/6 month basis prior to the disbursement of continuation funding.

CARE is contributing to the 2-7-10 PEPFAR goals through support to indigenous and international FBOs and NGOs providing AB and Youth focused services to communities in all nine provinces.

Budget Code: HVAB	Program Budget Code: 02
Activity ID: 21648.23039.09	Planned Funds: \$1,470,727
Activity System ID: 23039	

Activity Narrative: Project Concern International (PCI), along with two implementing partners in South Africa, has undertaken a program with the goal to reduce HIV transmission by changing social norms related reducing violence against women. The objective of the program is to reduce the prevalence of violence in both urban and rural areas with an emphasis on poorer areas where gender power disparities are typically heightened. This will be achieved through a large scale social mobilization program that will: 1) mobilize civil society and public sector partners to combat gender-based violence; 2) create an enabling socio-cultural environment for changing norms related to gender-based violence; and 3) support the implementation of multi-sectoral activities which will achieve and maintain significant reductions in violence against women and related HIV incidence

ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

SUMMARY:

Project Concern International (PCI) won the Annual Program Statement (APS) award in FY 2008. PCI will work with two implementing partners in South Africa to undertake a program to reduce HIV transmission by changing social norms related to sexual and other gender-based violence against women. The objective of the program is to reduce the prevalence of sexual and other gender-based violence in urban and rural areas. This will be achieved through a large-scale social mobilization program that will 1) mobilize public and private sector partners to combat gender-based violence; 2) create an enabling environment for changing social norms related to gender-based violence; and 3) develop and support the implementation of multi-sectoral activities, which will achieve and maintain significant reductions in gender-based violence.

This program will directly benefit the entire female population in the Western Cape and KwaZulu-Natal provinces who are at risk of acquiring HIV through forced sex, and it will indirectly benefit all (consensual) sexual partners who could be infected by victims of rape. This program stems from South Africa's exceptionally high rate of sexual violence, and the well-established link between sexual violence and HIV acquisition. This program will lead to significant reductions in gender-based violence that accelerates the progression of the AIDS epidemic in South Africa. It will put an end to the pervasive social norm of toleration for sexual and other violence against women, and it will go far to restore their basic sexual and human rights.

ACTIVITIES AND EXPECTED RESULTS:

This program will undertake social mobilization in three sets of activities in support of the three anticipated results including (1) working with key sector partners to help them understand, and take ownership of the problem of sexual violence in South Africa; (2) conducting an overarching communications campaign that will amplify activities implemented by sector partners, while unifying individual sectors' activities in a signed, branded movement to end sexual and domestic violence against women; and (3) providing support to key sectors and institutions in South Africa that will enable them to take actions to transform social norms regarding sexual and domestic violence against women.

This program will also undertake to implement HIV prevention programs for adolescents and young adults aged 10-24 through schools, church youth groups and other youth-serving settings. The geographic focus will include localities currently served by Track 1.0 partners and other areas with unmet needs in youth prevention. The APS objectives will be to delay first sex, increase "secondary abstinence," and promote safer behaviors, including mutual fidelity and partner reduction, among young people. Scale-up of skills-based HIV education, especially for younger youth and girls will include (a) community mobilization to promote norms that support healthy behaviors among young people; reinforcement of the role of parents and other protective influences in HIV prevention; and prevention of sexual coercion and exploitation of young people.

PCI will give priority to HIV prevention among orphans and other vulnerable children, who are at substantially increased risk of early sexual activity, pregnancy and HIV. Activities will incorporate a strong emphasis on the vulnerability of girls and young women to HIV, and include strategies to meet their unique prevention needs, for example, explicitly addressing sexual coercion, transactional sex, and sex with older partners. PCI will undertake behavior change approaches that are evidence and theory-based, such as rigorous, interactive curriculum-based HIV education that reflect internationally recognized best practices, and to tailor these approaches to each specific setting.

PCI: Project Concern International (PCI), along with two implementing partners in South Africa, proposes a program with the goal to reduce HIV transmission by changing social norms related to sexual and other gender-based violence against women. The objective of the program is to reduce the prevalence of sexual and other gender-based violence in both urban and rural areas. This will be achieved through a large scale social mobilization program that will: 1) mobilize public and private sector partners to combat gender-based violence; 2) create an enabling environment for changing social norms related to gender-based violence; and 3) develop and support the implementation of multi-sectoral activities which will achieve and maintain significant reductions in gender-based violence.

Activities leading to these results include: a) assuring that key sector partners in government, civil society, media, the private sector and education understand the impact of and are committed to ending all forms of gender-based violence; b) developing and implementing a communications strategy that will unite individual organizations' efforts into one unified, branded campaign reaching all sectors of society; and c) empowering sector partners with resources and training to implement a range of local activities to end gender-based violence. The Western Cape and KwaZulu Natal Networks on Violence Against Women (WCN and KZN), with over 700 member organizations, will provide the technical know-how, experience, commitment and leadership to end violence against women.

Table 3.3.02: Activities by Funding Mechanism

Mechanism ID: 3462.09	Mechanism: DoE
Prime Partner: National Department of Education	USG Agency: U.S. Agency for International Development
Funding Source: GHCS (State)	Program Area: Sexual Prevention: AB
Budget Code: HVAB	Program Budget Code: 02
Activity ID: 4784.23009.09	Planned Funds: \$1,695,199
Activity System ID: 23009	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

ACTIVITY 1: (a) Abstinence and be faithful (AB) activities will be integrated with other prevention activities in support of the Department of Education (DOE) activities to prevent HIV among students in targeted schools. Activities will encourage students to abstain from sexual activity as the best and only way to protect themselves from exposure to HIV and other sexually transmitted infections. In addition, activities will integrate education and training focused on the role of alcohol and drugs in increasing high-risk behavior and exposure to HIV and sexually transmitted infections (STIs). Training programs will support peer educators with age appropriate messages for 10-14 year olds and for 15-19 year olds respectively. The training programs will take into account that most of the South African high schools still have older boys and girls in Grades 10 and 11 due to high repetition rates and due to starting school at a later age. Older youth who are still attending classes in rural schools generally have limited career and continuing education opportunities, thus they will also receive support to improve knowledge and awareness of HIV with appropriate messages.

(b) In FY 2009, the program will include targeted support for teachers in selected schools. The support for teachers (adults) will focus on messages for be faithful, reduce the number of sexual partners, avoid concurrent or high-risk partnerships, and discourage cross-generational sex. The activities for the teachers will be integrated with other sexual prevention and will be funded using AB and other prevention funds. Teachers are included in the program to serve as mentors and to support the peer educators in the schools, and as they often lack skills to play these roles effectively, they are included in the training program.

(c) Parents of peer educators will attend talks and seminars to engage them on how to support and mentor their children at home as peer educators. This is aimed at ensuring that parents understand the role of peer educators.

ACTIVITY 2 and 3: FY 2009 funds will not be used to support the activities for the Universities of the Western Cape and Zululand. These will be new activities starting in early FY 2009 and will target older and sexually active youth to provide training on behavior change, to learn about their HIV status.

ACTIVITY 4: Support at Vocational Training Colleges. Peer education training will develop skills and norms to promote abstinence or delay sexual initiation, secondary abstinence, fidelity, and partner reduction for the older boys and girls who are attending targeted colleges. Support for abstinence activities will be linked with other sexual prevention activities for college students and older youth. The DOE will implement an integrated HIV prevention program for college students.

Specific modifications for the FY 2008 COP include direct focus of sexual prevention activities on teachers who support and work with peer educators in target schools. Teachers in the target schools were not included in the previous programs as a target group for support. This approach has been reviewed and revised during implementation of activities in 2007 and 2008. In FY 2009, teachers will be included as a key target group for support. The current DOE life skills programs also do not target teachers, and as a result, teachers are exposed to limited support on HIV and AIDS issues. Teachers are critical in sustaining peer education programs in their schools, and in assisting to raise the profile of peer education activities.

Reports from the current peer education program have demonstrated that working with peer educators over the past eight months has inculcated behavior change skills for the peer educators on abstinence. PEPFAR support will continue in the current target schools located in KwaZulu-Natal, North West, Free State and Mpumalanga provinces, with more peer educators trained and more learners reached.

The methods of selecting peer educators will be strengthened with increased participation of provincial, district and circuit level life skills coordinators. Selection criteria will focus on gender equity, age, school grade, motivation, acceptability by fellow students, students' personal traits and capabilities. Resources will also be used to provide regular support to schools participating in the program and to establish a sustainable incentive system for the peer educators. The incentive program will reinforce and strengthen the skills of the peer educators and encourage social recreation opportunities for youth and provide relevant awards.

The lessons learned during peer education training workshops will be shared with national and provincial DOEs through the follow-on activities when scaling up PEPFAR support in 2009 and 2010. Based on the strategic partnerships developed in 2007 and 2008 and working with schools in the target provinces of Mpumalanga, North West, Free State and KwaZulu-Natal, PEPFAR resources will be used to provide technical assistance to the national and provincial departments of education to strengthen their capacity to deliver improved HIV education in schools.

USAID will offer technical assistance to the DOE to improve capacity to implement successful HIV and AIDS programs within the education sector. Technical assistance will include the development of capacity to manage and deliver education-relevant health programs in schools and to strengthen the implementation of existing HIV and AIDS components of life skills and health education.

Technical assistance support to the DOE will be aimed at strengthening harmonization and alignment of the HIV and AIDS programs in education. This will result in improved information sharing through joint reviews of progress in education, joint planning, and better coordination. In addition, harmonization will lead to improved coverage of funding gaps and introducing joint funding mechanisms, improving consistency and continuity, moving towards one coordinating body or branch in the Ministry of Education and contribute to national priorities.

Technical assistance will also target curriculum design, teacher training and support for extra-curricular activities with specific focus on HIV and AIDS prevention. The monitoring and evaluation technical assistance to the DOE will support strategies to adapt existing education information management systems to capture relevant, timely and accurate information about HIV impacts on the education sector to be used

Activity Narrative: for advocacy and planning at all levels of the Ministry of Education, and support research to track the impact of HIV and AIDS on children orphaned by AIDS. Technical assistance for monitoring and evaluation will be used to provide feedback into decision-making processes, and to assess the impact of HIV and AIDS on the education sector and inform the development of relevant policies.

Non-PEPFAR funds have been leveraged to support technical assistance to the DOE to strengthen its internal structures and systems. This will help to scale up the peer education care and support program nationally.

SUMMARY: Abstinence and be faithful (AB) activities will target students at different levels of the education system. Activities will support the Department of Education (DOE), in the prevention of HIV in schools, colleges and universities. The focus of this activity will be on training, care and support for students, and promote positive healthy behavior. Primary areas of emphasis are training students as peer educators to develop skills to practice healthy behaviors, training to reduce gender based violence, and skills training to develop the capacity of students and teachers. Abstinence and be faithful (AB) activities will be integrated with other prevention activities in support of the DOE. The target populations are students aged 14-19 in schools; college students aged 18-25; university students aged 18-25; and teachers aged 20 plus enrolled for training at university. BACKGROUND: DOE's Health Promotion Directorate develops policies and provides inputs to legislative frameworks to address health and HIV and AIDS issues across the education system, in collaboration with other government departments. The nine provincial education departments are responsible for implementing programs in schools and colleges. Life skills programs offering age-appropriate AB messages are part of the school curriculum. The PEPFAR-funded peer education program complements these efforts. DOE is harmonizing the PEPFAR-supported peer education program with life skills activities to provide training on HIV prevention, gender based violence, sexual harassment and to fight abuse. Current DOE PEPFAR-supported activities are in KwaZulu-Natal, Free State, Mpumalanga and North West schools. Colleges offer vocational education and training programs to improve skills. The DOE revamped college courses to ensure that they respond to the country skills' needs, and are accessible to students in all areas. PEPFAR funds will support AB and other prevention activities while economic growth funds will support wraparound workforce training in health and science related fields. Universities have identified HIV and AIDS as a key challenge and they are supporting targeted peer education programs focusing on AB prevention messages. With respect to HIV, universities are involved in research, teacher training, support to feeder schools and integration of HIV into the curricula. PEPFAR and education funds will support wraparound activities at the Universities of Zululand and the Western Cape to strengthen AB programs started through previous USAID support. ACTIVITY 1: Expansion of Peer Education Program: This PEPFAR activity will expand the current AB program to an additional 250 schools in the four focus provinces of KwaZulu-Natal, Free State, Mpumalanga and North West. Funds will strengthen the focus in new schools in target districts, and develop training programs to address HIV prevention. Activities will encourage self-worth, the importance of HIV counseling and testing, reduction of stigma and discrimination, responsible sexual behavior, and knowledge about HIV prevention. Programs will target 36,000 students in the four districts. Complementary education resources will provide technical assistance to the DOE to support program management and build host country capacity. Implementation will be through a local NGO. ACTIVITY 2: Support at the University of Western Cape (UWC): Support to UWC will extend programs to the Western Cape province and target first year and post graduate students, trainee teachers and students in feeder high schools. Activities will focus on AB messages and will be integrated with more comprehensive prevention messaging. Activities will address gender by targeting male students and teachers and challenging traditional male norms and behaviors that contribute to the continued spread of the HIV epidemic. Interventions for first year students will encourage attitude and behavior change as they enter university. Fifty peer educators will encourage 700 first year students to participate in HIV and AIDS prevention programs as part of their work study programs. Peer educators receive a stipend, and gain facilitation and training skills. Training will be on AB messages and activities will be organized through student leadership structures, academic, sporting, and house committees at residences. UWC will also work with 1000 high school students from feeder schools located in the Cape Flats communities which are affected by high levels of gang violence, drug, substance and alcohol abuse. Trained UWC peer educators will work with high school students to address sexuality issues, and HIV prevention. Peer educators will provide training to high school students through motivational talks and small focus group discussions. Other activities to be supported with education resources will target 100 teachers in the same feeder schools through teacher training programs to build capacity in HIV education. The UWC HIV and AIDS unit will adapt teacher training modules used in Southern Africa for accreditation as UWC short-term courses. Teachers will be trained in life skills courses, enabling them to teach AB programs in schools to address HIV prevention, sexuality, gender, and abuse issues. ACTIVITY 3: Support at the University of Zululand (UniZul): UniZul operates multiple programs to fight HIV and AIDS. Support will focus on AB activities and will be integrated with other prevention activities targeting students. Activities will strengthen student peer education programs and address gender-based violence (GBV), particularly related to rape by empowering young girls with negotiation skills to delay sexual activities. Activities will promote awareness of women's legal rights and provide guidance on how to access GBV and legal services. UniZul will collaborate with DramAIDE to stage communication campaigns through drama, art, and poetry, and encourage strategies to abstain from sex. UniZul will hold quarterly communication campaigns and encourage active participation from students and staff. Assistance to local schools will strengthen life skills programs. PEPFAR AB activities will target 2,500 new students, some whom have not yet initiated sexual activity and many of whom do not yet have current partner on campus. ACTIVITY 4: Support at Vocational Training Colleges: Support for college students will target youth over age 18 with AB activities. Training will emphasize strategies to abstain from sexual activities, delay sex until later in life and teach measures to change behavior targeting 1000 students. AB programs will be integrated with more comprehensive prevention messages. Funds will be used to train students in skills they may need to abstain and to encourage delaying sex until marriage. Young people will also be encouraged to adopt social and community norms that support delaying sex until later in life and skills to avoid cross-generational sex, transactional sex, rape and other gender-based violence. The results of these activities will contribute to the PEPFAR 2-7-10 goal of seven million infections prevented and will directly support the USG/SA strategy in AB by improving A/B preventive behaviors among youth.

Table 3.3.02: Activities by Funding Mechanism

Mechanism ID: 519.09	Mechanism: N/A
Prime Partner: University of KwaZulu-Natal, Nelson Mandela School of Medicine	USG Agency: HHS/Centers for Disease Control & Prevention
Funding Source: GHCS (State)	Program Area: Sexual Prevention: AB
Budget Code: HVAB	Program Budget Code: 02
Activity ID: 3067.22734.09	Planned Funds: \$87,381

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

The University of KwaZulu-Natal, Nelson Mandela School of Medicine will use a new strategic approach in FY 2009. Traditional Health Practitioners (THPs) will use the knowledge acquired during training to promote abstinence and being faithful (AB) in their day-to-day community activities (e.g., school visits, religious functions and other community gatherings).

Usage of existing events such as annual reed dance, izimbizos, etc. will be part of the planned outreach programs. Event calendars will be compiled, which will create ideal opportunities to spread AB messages more effectively. Media that have been used in earlier COP activities to enhance the reach of the project messages will now be recorded as an additional indicator. This activity will be implemented with immediate effect.

Regarding point 5 in the COP 2008, the activity has been rephrased as follows: "to reinforce traditional ways of abstinence, THPs participating in this project will communicate these messages at their monthly meetings and other community meetings or events."

SUMMARY:

The University of KwaZulu-Natal (UKZN) Nelson Mandela School of Medicine (NMSM) uses PEPFAR funds to work closely with the KwaZulu-Natal (KZN) and Ethekwini Traditional Health Practitioner Councils, to tease-out, refine and outline culturally appropriate and effective behavior change messages focused on preventing the spread of HIV through abstinence and being faithful in relationships. The emphasis areas local and human capacity building. The target population is the general population which includes children, youth and adults.

BACKGROUND:

UKZN has an ongoing collaboration with associations of traditional health practitioners (THPs) in urban, peri-urban and rural areas of Ethekwini District, KZN. THPs are influential and are a largely untapped resource in HIV prevention and mitigation on the community level. THPs ascribe to and uphold traditional African cultural values, including conservative attitudes toward sexual practices and abstinence that make them natural partners in this effort. These values are a set of social and community norms that support delaying sex until marriage and that denounce coerced sexual activity among married and unmarried individuals and promote mutual monogamy. This THP cultural perspective has not been reinforced, nor has it been included in public abstinence and being faithful (AB) campaigns in KZN. THP is often the first counselor sought for married couples who wish to discuss issues related to marital relationships and couples counseling on HIV and AIDS. Given the position the THPs hold in their social networks, working with the THPs holds great promise for enhancing the uptake of a culturally appropriate version of the AB message. These activities began in August 2005 with the arrival of FY 2005 PEPFAR funding. NMSM is implementing the project in collaboration with the KZN and Ethekwini Traditional Health Practitioner Councils, with the eThekweni Health Unit, and the eThekweni District Health Office of the KZN Department of Health.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Promotion of AB Messages

It is widely acknowledged among health professionals in KZN that the Abstinence, Be Faithful and correct and consistent use of Condoms (ABC) messages are not having enough effect in this local cultural context. This project trains and mobilizes THPs in KZN so that they will be effective promoters of HIV prevention messages and strategies, including AB-focused behavior change messages. NMSM is adapting Abstinence/Be Faithful messages to the cultural and healing contexts in KZN to inform and communicate effective behavior change messages. NMSM is also developing prevention messages together with the THPs and incorporating these messages into training workshops on an ongoing basis. NMSM is also developing new prevention message formats for posters, pamphlets, instructional medical comic books, and medical animations for training and for distribution to the THPs to use with their patients. These messages are developed in Zulu and English, though they will be distributed primarily in Zulu. This project has also been developing dramatic presentations that are used in the training workshops to deliver prevention messages. These have been designed by the senior THPs on the project team and are embedded in Zulu cultural practice. The prevention messages are developed jointly with the THP team members so that they are culturally embedded and effective. Discussions with senior traditional healers on the PEPFAR-funded team indicate they have a variety of interesting, potentially effective suggestions for ways to deliver modified and improved prevention messages to the community that go beyond the confines of the traditional healer practice sites. Using FY 2008 funding the following activities will take place:

- (1) NMSM will call ongoing assessment workshops (usually one day) with the THPs to discuss the program and assess the effectiveness of the prevention messages and materials for use in their practice.
- (2) NMSM will continually assess the level of absorption and understanding (among the THPs) of the basic scientific information underlying the rationale of the need for prevention activities, particularly in the value of abstinence in preventing infection.
- (3) The School will continually investigate and assess the value of partner reduction and faithfulness to one partner, and the effectiveness of faithfulness if the other partner is not also being faithful (particularly relevant in marriage situations).
- (4) NMSM will facilitate meeting with indunas and amakhosi: these are headman and chiefs of the tribal areas. Traditional healers meet with these leaders who command some authority in their communities, and work together to speak to their constituents about prevention. Target communities include townships and

Activity Narrative: urban areas.

(5) The project will engaging parents. Modern mothers have often lost the knowledge of the traditional ways of protecting their daughters and helping them to be abstinent. Traditional healers trained during this program visit women's clubs and work with mothers to reintroduce these practices.

Formally integrating traditional healers into the public healthcare system is a stated objective of the National Department of Health and the prevention objectives in the South African Strategic Plan for HIV and AIDS. By expanding access to culturally and scientifically appropriate prevention messages, the Nelson Mandela School of Medicine will directly contribute to the PEPFAR goal of preventing seven million new infections. These activities also support the prevention objectives outlined in the USG Five-Year Strategy for South Africa.

Prime Partner: Scripture Union	USG Agency: HHS/Centers for Disease Control & Prevention
Funding Source: GHCS (State)	Program Area: Sexual Prevention: AB
Budget Code: HVAB	Program Budget Code: 02

Activity ID: 7930.22900.09

Planned Funds: \$795,171

Activity System ID: 22900

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Scripture Union (SU) has completely revised its curriculum to comprise 10 modules. The curriculum has been well received. SU will channel resources into strengthening training, improving staff and volunteer skills, improving data quality, sharing best practices with other youth NGOs, refining materials, and moving from tools that measure attitude change to ones that measure behavior change.

SU conducts several HIV prevention activities, but focuses on running small groups in schools. Priorities in FY 2009 will be cross-generational sex through the 'sugar daddy' module, and one devoted to teenage pregnancy. SU plans to integrate HIV drivers such as substance abuse, violence, gang warfare, discrimination and abuse into the program. SU will also expand geographically to schools in rural areas, where talk of sex and sexuality is often taboo. Expansion is based on SU's needs assessments and the high transmission areas identified by the South African government.

SU's methodology is participatory, based on respect for young people's views, and the realization that they learn more easily from their peers. Many young people confide problems to SU's leaders, however, confirming that they are approachable. SU treats behavior change as a process. SU's age-appropriate courses are tailored to different groups; ideally, a youth will attend SU courses at ages 10, 14 and finally at age 18. Each course will guide the youth's behavior and their life choices. SU also conducts workshops to train staff on writing and reviewing SU materials.

A major enhancement will be integration of life skills with a sports program. The linking of soft skills with hard skills is a powerful experiential learning tool. SU is linking with organizations like Sport for Christ Action South Africa and uBabalo eAfrika to harness the momentum of the 2010 Soccer World Cup. Soccer teaches skills like shielding (protecting the ball from your opponent) a skill linked to realities confronted by youth (e.g., protecting themselves from HIV). This also builds on SU's model of staff and volunteers being available on the township sports fields and recreation areas to respond to youth.

A second new activity is breakaway workshops or camps, including gender specific camps, according to the Family Matters! model. SU ran father and son events in FY 2008, and in FY 2009 will explore a mother and daughter initiative to tackle cultural and social norms, traditional roles, and to enhance family discussions of sexuality. This initiative will also improve parental participation in the program. SU's out-of-school camps are run throughout the year.

SU will promote voluntary counseling and testing (through linkages with partners) in all youth development programs and holiday clubs.

SU will address pertinent local drivers of the epidemic. Youth often get bored during the holidays, which may lead to risky behaviors resulting in HIV infection. Where drugs and gang warfare are endemic, SU will tailor the approach accordingly. Activities outside the classroom include watching a relevant DVD and discussing it; or inviting a speaker to introduce certain subjects followed by discussions. SU staff and volunteers provide feedback on each activity, thereby increasing SU's knowledge of the audience and the local context and allowing SU to tailor training material to the particular community.

SU will continue to involve people living with HIV (PLHIV) in programs. PLHIV may address SU staff, and participate in educating church leaders and volunteers.

SU draws volunteers from local communities and is able to enrich their lives through formal and on-the-job training. SU aims to improve the quality of the volunteer experience by providing, for example, branded promotional materials and events recognizing their work that may contribute to a spirit of camaraderie. In FY 2009, SU will conduct a needs survey to determine the training needs of volunteers. SU will ensure that marketable skills are imparted to SU's volunteers and that they emerge from the experience better equipped for tertiary education and the formal job market. SU's volunteers may work with the organization for six months to several years. There is a comparatively low turnover, primarily due to the strong faith beliefs held by the organization. Volunteers often report on the positive impact of the program; how the training and skills building has opened doors to employment. Volunteers are encouraged to participate in the program after gaining full-time work. Often volunteers become part of SU's staff.

SU also recruits influential adults within the community to serve as role models. These adults (peer group - just out of school- and upwards) contribute significantly to creating an environment conducive to the adoption of safer behavior among youth. SU will establish a base line and record of all volunteers, to track trained people and to document their progress.

SU will continue to refine SU's monitoring and evaluation (M&E) system. Currently SU measures the attitude change in learners but needs technical assistance to measure behavior change successfully. Currently each participant completes an anonymous pre-evaluation questionnaire, followed by a post-evaluation questionnaire at the end of each activity. The questionnaires are identical and thus help us to gauge whether the participants have had any change in their thinking towards their behavior as a result of what they have learnt. SU will work with experts, including teachers and Life Orientation teachers, to ensure that questionnaires are effective in measuring attitudes rather than behavior change. SU aims to measure lasting change and plans to evaluate this three or six months after an activity, and then again two to three years later. In FY 2009, follow up evaluation questionnaires will be given to targeted learners who went through the course in FY 2008. SU will run several training workshops on M&E for Community Lifeskills Workers. In addition, the M&E specialist will work alongside CLWs to assess whether SU's program meets the needs of specific communities. An online data program that will collect data more consistently and systematically, will be fully functional by early 2009. Archived data will be easily accessible and the database will be an invaluable source of information about young people that have participated in SU's programs. Evaluation sheets for the presenters and volunteers of each activity have been introduced. SU believes that the organization is due for another major evaluation and requires supplementary funding to do this. Independent evaluators, Nell & Shapiro, undertook the evaluation in 2001. They concluded that SU's

Activity Narrative: courses are effective.

SU will continue to strengthen the strategic alliances with the Departments of Health at national and provincial levels. SU has partnered with the Western Cape Department of Health and other NGOs and FBOs to develop activities for the 2010 World Soccer Cup, and to combine forces on existing initiatives. Other NGOs in this alliance include Youth Commission, Youth for Christ, Muslim AIDS Program, Department of Health, Department of Community Safety, and Planned Parenthood Association of South Africa. The coalition will combine forces for major events like World AIDS Day, School AIDS Week, World TB Day, etc. The initiatives begin in September 2008 with School AIDS Week. Each organization will focus on their area of expertise. SU will conduct in-schools youth programs to mark Schools AIDS Week and will partner with government departments who do not close during holidays to implement holiday programs. SU's Mthatha office, has led the pack in initiating activities with the Departments of Social Services and Health. SU works closely with national network of churches (e.g., HisNet, a network of Christian youth organizations working in the AIDS arena) and this contributes to a more sustainable national response. As a faith-based organization, SU is able to source many volunteers through churches.

SU targets community leaders and church leaders as role models. They are key multipliers and reinforcers of prevention messages. SU will review its methods to ensure that youth receive consistent messages at home, in school, at church, and at social gatherings.

SUMMARY:

The Scripture Union (SU) Life Skills Program implements education and training activities focusing on abstinence and being faithful (AB) HIV prevention for both in- and out-of-school youth. It is values-based, volunteer driven and aims to assist in the development of sexual and life decision-making skills by youth in order to prevent HIV exposure and infection. Community church members are trained to deliver prevention messages to local youth and provide small group discussions around prevention issues. The emphasis will be on gender through discouraging violence, coercion and abuse against women and the girl child as well as respect shown for one another, regardless of gender, and human capacity building. The target populations are children, youth teachers and religious leaders. SU targets youth and children in school aged 10 - 18 years drawn from disadvantaged communities.

BACKGROUND:

SU has worked with youth in South Africa since 1924. The Sakhulutsha, SU's HIV and AIDS Life Skills Program, started in 1992 and is ongoing. The South African National Department of Health (NDOH) and Department of Education have funded SU's program for the past ten years, and since 2005, PEPFAR co-funded SU through a NDOH cooperative agreement. In FY 2007 SU became a prime PEPFAR partner. Using PEPFAR funding SU has established youth programs in five South African provinces (Gauteng, Eastern Cape, KwaZulu-Natal, Mpumalanga and Western Cape). In FY 2008, SU will expand geographically to the Northern Cape Province to fill a need in one of South Africa's underserved areas.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Small Groups in School

SU will implement a peer education program to target youth in their formative years and equip them with skills to help them learn more about each other and discuss issues of love, respect and equality. These skills will help youth to make informed decisions about sexual activity and avoid HIV infection. The HIV prevention programs are run with in- and out-of-school youth, and consist of 12 modules presented over 12 weeks. The program uses a small group model, and trained volunteers from the community will run these programs. The ratio of 10:1, the ideal small group model, is maintained.

ACTIVITY 2: Breakaway Workshops

SU believes that societal norms and behavior change must be examined in order to address the challenges of HIV and AIDS in a proper way. SU uses single gender camps and discussions in classrooms (through the participation of school principals) to help young people to view each other as equals and to develop respect for one another, regardless of gender. Life skills training and a holistic learning experience which enhances HIV and AIDS education programs will also be implemented. Topics to be covered will include male norms and behaviors as well as gender roles and equity to discourage discrimination, violence, coercion and abuse against women and the girl child. SU will also run activities at eight camp-sites using the same small group model, but the full course in these programs will be completed over a period of three to five days. Trust is built up between group leaders and participants and this ensures open and effective dialogue. The single sex approach allows SU staff to focus on gender specific issues -- particularly those relating to girls - and topics include abstinence skills and the power to say no. Participants will be encouraged to access voluntary counseling and testing (VCT) sites so that they can know their status and plan for their future.

ACTIVITY 3: Youth Development Programs

SU Youth Development Programs (holiday clubs) are run during school holidays when youth are most likely to be bored, and this may lead to vulnerability and engagement in unsafe sexual behavior. The holiday clubs will be run in community centers and in church and school halls. Life skills activities will be presented to youth to facilitate sustained HIV prevention and to encourage youth to learn their HIV status by getting tested so that they can plan for their future. SU encourages youth to be compassionate and also to volunteer in their communities and be involved in the response to the HIV epidemic. Programs will be run by trained community members who are familiar with local customs and social norms, and so will be ideally placed to gain the trust of the members of the community.

ACTIVITY 4: HIV Prevention Programs

Activity Narrative: SU will conduct and expand leadership training for community leaders, and in particular, for pastors, so that they can support and lead HIV prevention programs for both in- and out-of-school youth. Volunteers will be trained using an HIV and AIDS education program that has been tested for effectiveness by SU using qualitative methods. Using the 12-module life skills program, volunteers will be equipped to lead small group discussions with youth about AB-based prevention of HIV which includes abstinence for 10-14 year olds, encourage delayed sexual debut and secondary abstinence for those who have started sexual activity and reduction of sexual partners and CT for youth at risk. This project will establish sustained relationships between the community leaders/pastors and the youth because the leaders and volunteers are community-based. Community workers will also focus on empowering and training female leaders to run youth development programs, and development of more female leaders will ensure that the needs of girls within the community are met.

ACTIVITY 5: Course/Camp Combination Intervention

In FY 2008, SU will introduce a new type of activity, namely a course/camp combination. This will allow the benefits of both types of venues to be combined for excellent synergy. SU will be running 178 course/camps to maximize the impact of prevention messages and reinforce healthy behavior. The course/camp combo is a hybrid of six modules run over six weeks at schools with the balance of the modules run over two days at a camp site. Sustainability is achieved through development of well-trained youth leaders and peer educators. Scripture Union will continue to develop their funding base to expand AB prevention programs to disadvantaged communities in South Africa.

SU will reach a significant number of youth and children with behavior changing messages. The results will contribute towards PEPFAR goal of preventing seven million infections by 2010. These results will also contribute to the South African response to preventing HIV infection among young people especially young girls.

Control & Prevention

Program Area: Sexual Prevention: AB

Program Budget Code: 02

Planned Funds: \$0

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

In FY 2009 Muslim AIDS Program (MAP) will expand services to areas with high prevalence such as the North West. There will be an expansion of accelerated prevention programs targeting youth, especially girls. MAP will also implement other sexual prevention strategies. MAP will target in-school and out-of-school youth as follows:

Adolescents, 10-14 Years: The life skills program, Ed-Unique and Free Teens focuses on the following topics: HIV and AIDS facts, self-esteem building, goal setting, effective communication, substance abuse, sex and sexuality, delaying sexual debut, peer pressure, bullying, and effective decision making. The programs are conducted through modules at schools.

Youth, 15-19 Years: No Apology, Free Teens, and the Sugar Daddy program includes HIV and AIDS education, peer education, drug addiction, prevention of teenage pregnancies, gender health, media literacy, rape, partner reduction, delaying sexual debut, encouraging secondary abstinence, sexually transmitted infections, and effective communication. The MAP facilitators conduct the sessions at schools; in addition, peer educators who have been trained to talk to their peers are available at schools.

Young Adults, 20-24 Years: The following topics are addressed in this age group: HIV and AIDS education, substance abuse, parenting skills, sexually inflicted violence, choice disabled partnership, gender-based violence, rape, incest, transactional sex, partner reduction, self-esteem building, counseling and testing, encouraging secondary abstinence, and income-generating skills development for unemployed youth.

Youth camps that are currently offered appear to be well received. The program will therefore be modified to include basic and follow-up camps for the vulnerable populations. MAP aims at 10 camps nationally reaching at least 50 out-of-school youth per camp.

Programs complement the other and negotiations with the school authorities ensure that they fit into the school curriculum.

The topics mentioned in the previous paragraphs are important for the prevention and management of HIV and AIDS. Information, education and communication on HIV and AIDS facts alone need to be supplemented with discussions on psychosocial issues that young people are faced with daily. MAP program facilitators have found that there is a prevalence of conditions such as sexually inflicted violence, transactional sex, teenage pregnancies, etc. within the communities. MAP implements HIV and AIDS education programs in relation to all these topics together with reinforcing life skills including goal setting, decision making, effective communication, assertiveness, self concept enhancement, etc. in order to capacitate young people to deal with these conditions.

MAP will train young university students and unemployed youth to render a service to the organization. Trained youth attend workshops as a self-development initiative, and as volunteer facilitators for the program. MAP conducts the Ladies' Life Skills and Parenting Skills programs that promote constructive and open communication between parents and their children. These programs are particularly well received by the community. The use of holiday camps together with mother/daughter and father/son projects are rapidly becoming a means of intervention whereby parent-child interaction is enhanced. MAP will adopt the "Family Matters" parenting program where facilitators will be trained to run the program. The Centers for Disease Control and Prevention (CDC) will provide technical assistance for this program.

The Rutanang Peer Education will be implemented within the existing program with the training of peer educators who will be able to communicate the abstinence and being faithful (AB) messages to their peers.

SUMMARY: Muslim AIDS Program (MAP) is a faith-based organization (FBO) working with families holistically through its youth to promote abstinence-based norms and behavior within communities. The project is implemented in close collaboration with either the provincial health departments the Department of Social Development in each of the four target provinces. MAP is currently operating in the four of the nine provinces: Western Cape, KwaZulu-Natal, Gauteng and Mpumalanga. The organization recruits and trains young adults to work in the programs as peer group trainers and facilitators. The emphasis areas for this project are gender through addressing male norms and behaviors, human capacity building and local organization capacity building. The target population for this project are youth both in- and out-of-school, community and religious leaders, and street youth. BACKGROUND: MAP life skills program is an initiative of the Islamic Careline, Jamiatul-Ulama and the Islamic Medical Association. One of the key objectives is to assist children and youth to become responsible members of the community. MAP has developed a series of life skills programs and continues to provide facilitation training for the programs. MAP has been receiving PEPFAR funding through the CDC-National Department of Health cooperative agreement since FY 2005. In FY 2007 MAP became a sub-partner of CARE international and now receives funding through the CARE international/CDC cooperative agreement. In FY 2008 MAP will expand services geographically in the provinces where it is operating. There will be an expansion of accelerated prevention programs targeting youth, especially girls. These programs will include discussions on promoting and strengthening primary and secondary abstinence; promoting post-exposure prophylaxis (PEP) after sexual assault, discussion on gender issues, delayed sexual debut, encouraging positive prevention for infected people and integrating reproductive health to HIV programs. These topics shall also be taught to young women as they are the most vulnerable. ACTIVITY 1: Abstinence and Being Faithful Program MAP's abstinence and being faithful (AB) life skills program will target secular and religious schools and educational institutions. The abstinence-based messages are designed to assist youth in- and out-of-school aged 10 to 21, and to encourage them to delay sexual debut until marriage. The organization visits a school for a six week period. During that time, bi-weekly two hour sessions are conducted with the same group. Topics covered include delaying sexual onset, adoption of community norms that denounce cross-generational sex, HIV and AIDS, and stigma and discrimination. The organization also promote behavior change by endorsing social and

Activity Narrative: community norms that support refraining from sex outside marriage and partner reduction. The "No Apologies" program will be implemented with youth from Grades 7-12, and with out-of-school youth. The program is a character-based abstinence until marriage program. Topics covered include: healthy relationships, media literacy, pre-marital sex has consequences, why abstinence works, and drugs and alcohol as it relates to abstinence. The "Free Teens" program is also abstinence-based and encourages young people to make informed choices about their future through interactive discussion on pertinent topics. The program covers HIV and AIDS, STI's and as well as a comprehensive pregnancy prevention program for unmarried people. Gender equity is achieved by encouraging a consistent number of both male and female learners to attend the program. Male/female norms and behaviors are widely discussed during school programs. Stereotypes of male/ female dominance and subservience exist in families and there is a need for the youth to engage in and interact with these issues. **ACTIVITY 2: Training and Peer Education in Schools** MAP will train young university students and available unemployed youth to render a service to the organization. Trained youth attend workshops for both self development and as volunteer facilitators for the organization. MAP conducts the ladies' life skills and parenting skills programs which promotes constructive communication between youth and parents who are primary caregivers. The Rutanang Peer Education concept will be implemented within the existing program with the training of peer educators as well as the incorporation of various appropriate experiential exercises. Peer Educators will be trained to effectively communicate the AB messages which include abstinence to the 10-14 years, encourage them to delay sexual debut and secondary abstinence to those who have started sexual activities and for the youth at-risk to reduce the number of sexual partners. **ACTIVITY 3: Creative Education** The organization incorporates entertainment in the form of role plays, drama, indigenous games, dancing and singing to reinforce the AB and the life skills message. In the Orphan and Vulnerable Children program, life skills are simplified to suit the needs of this special group of learners. Some of the topics that will be added will include road safety, basic entrepreneurial skills, peer communication skills as well as arts and culture. The program is translated into different languages for the benefit of the learners in some schools. Evaluations of these programs have proven that the use of creative arts is well received by the learners and this will therefore be expanded. The use of holiday camps as well as mother/daughter and father/son projects are rapidly becoming a means of intervention whereby parent-child interaction is enhanced and promoted. **ACTIVITY 4: Capacity Building** MAP provincial offices mentor eight community-based organizations (CBOs) in order to develop capacity in AB programs and to strengthen peer education. Specific training for CBOs includes workshops on program management, basic information on HIV and AIDS, and "NO Apologies" "Free Teen" and Rutanang Peer Education. Interns and volunteers are recruited to facilitate the implementation of the program in informal settlements and previously disadvantaged communities. The volunteers are capacitated with additional training opportunities to improve skills for effective service delivery. These activities will contribute to the PEPFAR 2-7-10 goals by promoting knowledge and skills to prevent HIV infection in youth population that may have an increased risk to HIV exposure.

Activity Narrative: NO FY 2009 FUNDING IS REQUESTED FOR THIS ACTIVITY:

This activity was approved in the FY 2008 COP, is funded with FY 2008 PEPFAR funds, and is included here to provide complete information for reviewers. No FY 2009 funding is requested for this activity. PEPFAR funds were allocated to fund the South African National Blood Service (SANBS) to ensure an adequate supply of safe blood. This includes expanding the Safe Blood Donor Base by donor education and selection, training donor and technical staff, logistics management, and appropriate information systems. This activity represented the country-funded portion of the SANBS activity. The PEPFAR South Africa Interagency Partner Evaluation panels decided that country funding was no longer needed, given the existence of Track 1 funding for SANBS and a planned end to the agreement in FY 2009, as well as a well-established South African blood safety program. Therefore there is no need to continue funding this activity with FY 2009 COP funds.

Activity System ID: 22896	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

A five-year HIV prevention strategy consolidates Soul City's Institute for Health and Development Communication (SC:IHDC) activities across nine countries into one focused intervention, in line with SADC recommendations and the HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011. It focuses on adults and youth to change population level norms, attitudes and beliefs and on developing individual skills to support risk avoidance and risk reduction to promote abstinence, faithfulness and to decrease stigma. The strategy addresses key epidemic drivers including the practice of and low risk perceptions related to multiple concurrent partnerships (MCP), cross-generational and transactional sex. MCP will be the focus of a major campaign. Violence and alcohol abuse are major aspects of the strategy and social norms are addressed as underlying drivers of many HIV risk behaviors. Target audiences include youth and adults, age 16-65. The 25-35 group are key audiences as are people in informal settlements and townships. Mobile populations are targeted as part of the nine-country programs where the strategy has been jointly designed to ensure consistent messages. Interventions for children continue, promoting abstinence and delayed sexual activity. The primary audience is 8-14, with secondary audiences of older siblings, caregivers and teachers.

SC:IHDC's interventions are based on WHO health promotion principles that emphasize an enabling environment for behavior change. The strategy targets individuals, communities and the socio-political environment through a combination of mass media, social mobilization, and advocacy to impart knowledge, shift attitudes and norms, increase individual and community efficacy, social cohesion and healthy public policy. It uses edutainment methodologies that integrate issues into prime-time entertainment programs, attracting large audiences. Radio in particular reaches marginalized communities. Based on "parasocial interaction" theory, edutainment creates characters with whom audiences identify and emotive stories as powerful tools for social change. Print material linked to the drama provides a sustained resource. The popular brand brings credibility to social mobilization initiatives. All interventions are based on social change theory and are researched and evaluated. Materials are developed through a formative research process with target audiences and key stakeholders. The strategy is conducted in partnership with key stakeholders in government, people living with HIV, faith-based organizations and civil society. Soul City maintains a close relationship with JHESSA and collaborates on many projects. This together with the multi-year, multi-level nature of the strategy is important to maximize impact and sustain behavior change. SC:IHDC collaborates with Johns Hopkins University and the Khomanani campaign on a joint evaluation.

ACTIVITY 1: Activity has been modified. The SC TV series broadcast in FY 2008 will be repackaged into DVDs and with reprints of the accompanying booklet, will be distributed nationally. Research and development of 2 new TV and radio series will take place in FY 2009; 1 series will be broadcast in FY 2009 together with 1 million copies of a new booklet for adults dealing with alcohol abuse.

ACTIVITY 2: Soul Buddyz will develop and broadcast a 13 part TV drama; distribute 1 million copies of a 42 -page color parenting book in four languages; a grade 7 life skills book will be distributed to all learners nationally. A further TV series combined with a parenting book will be developed in FY 2009 for implementation in FY 2010. The mass media activities are combined with community mobilization activities and other forms of communication such as public service adverts, pamphlets and posters.

ACTIVITY 3: School-based activities will be expanded into a comprehensive primary and high school intervention bringing community, private and government resources together for HIV prevention. Participating schools will become HIV prevention, care and support "hubs" through Buddyz Clubs, Schools as Nodes of Care" (SNOC) and Parenting Groups (the latter two are for adults). The hubs will extend into the community to reach out of school youth. The intervention is developed in partnership with the Department of Education (DOE). The high school component is a non-PEPFAR funded pilot. Soul Buddyz Club focuses on life skills, peer pressure and self-esteem, as well as delaying sexual debut, the risks of MCP and alcohol abuse. SNOC trains school governing bodies to support OVC and to promote HIV prevention in schools. In FY 2009, 80 primary school parenting groups will be set up per province involving 14,400 parents; these will strengthen parenting skills, in relation to preventing alcohol abuse, promoting abstinence and positive gender norms, and an understanding of HIV prevention. New facilitators (1,000) will be trained through 108 sessions to support community mobilization. A trainer and two fieldworkers based in each province constantly monitor quality and give support.

ACTIVITY 4: More than 200 new ETD training sessions will be conducted in FY 2009 with an average of 30 people per session.

ACTIVITY 5: Heartlines has been modified. As a result of the success of the first children's book, the DOE has requested a sequel for ages 6-10. This will be developed in FY 2008 and in FY 2009 translated into 11 languages; 100,000 copies will be distributed to 17,000 primary schools to help children to build the necessary skills to make their eventual transition to sexual activity, safer and healthier.

ACTIVITY 6: "Communities with Soul" KWANDA is a new activity designed to strengthen community mobilization. It consists of 13-episode TV reality show, 13 week radio show on 5 radio stations and multiple community stations. It will highlight a social mobilization process to prevent HIV, violence, alcohol abuse and strengthen livelihoods, where 7,500 people in 5 communities, will transform their communities. The project is a partnership with all levels of government. The media will inspire audiences to initiate similar programs in their own communities this will be assisted by 500,000 community mobilization toolkits. This program links to the Presidential Right to Work Programme.

SUMMARY:

Soul City has received PEPFAR funding since FY 2005 to implement a media and community-driven program to strengthen prevention, and increase awareness of and demand for HIV care and treatment services. The major emphasis area is community mobilization/participation. Other emphasis areas include:

Activity Narrative: information, education and communication; local organization capacity development; and training. There are five activities. Three activities target adults and children nationally using multimedia, and two activities build on this through training and community mobilization of adults and children.

BACKGROUND:

The activities are ongoing. Soul City has a long history of partnership with the South African Government, collaborating with the National Departments of Health (NDOH), Education (DOE), Social Development (DOSD), Transport, and Public Service and Administration, which includes financial support from NDOH, and potentially DOSD in the future. In addition, Soul City partners with 18 non-governmental organizations (NGOs) to implement the community mobilization program. All Soul City interventions address gender issues, particularly those associated with driving the epidemic (e.g., power relations and cross generational sex). In September 2007 Soul City and its sub-partners are planning a major planning retreat to design its five year prevention strategy, and the USG will be important contributors to this process. Violence and partner reduction will be a focus over the next five years as will the issues that promote violence, like substance abuse.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: The Soul City Series

The Soul City TV series, 13 episodes for a family audience, broadcast during primetime in October 2008; 30 radio drama episodes in nine languages in November 2008; and a 36-page color booklet for adults printed in four languages, with one million copies distributed through newspapers, health facilities, partners and community organizations. The booklet will focus on HIV and relationships, particularly concurrent partners. Other issues addressed are HIV prevention that promotes abstinence and faithfulness, and decreasing stigma. The series will cover gender in HIV prevention, violence reduction and substance abuse. PEPFAR funds will be used for 30% of this activity, with other donors funding the remaining 70%.

ACTIVITY 2: Soul Buddyz

Soul Buddyz is aimed at children, 8 to 12 years of age and comprises: (1) 13 TV drama episodes for children and their parents, broadcast in primetime October 2008; (2) development, printing and distribution of one million copies of a 42-page color parenting book in four languages from April 2008; (3) development of a 116-page grade 7 life skills book distributed to pupils in April 2008; and (4) marketing to promote and link these materials. This activity contributes to PEPFAR objectives by averting new infections through behavior change. The topics the Soul Buddyz series will cover are HIV prevention, in particular the promotion of abstinence and faithfulness, and youth sexuality. The Soul Buddyz intervention deals with a range of developmental topics relevant to children's lives and not only to HIV and AIDS. It will also deal with violence reduction, reduction in substance abuse, gender and building self esteem. PEPFAR funds will be used to support 30% of this activity, with other donors funding the remaining 70%.

The following two activities depend on the media activities for their credibility and impact at a community level.

ACTIVITY 3: Community Mobilization

Based on the Soul Buddyz intervention, Soul Buddyz Club is a community mobilization intervention aimed at children, largely at schools and facilitated voluntarily by teachers. Children in the clubs learn about life skills covered in the Soul Buddyz series (that stress abstinence and being faithful (AB) messages) and are encouraged to do outreach work in their schools, families and communities. Nationwide, 3000 clubs already exist, and in FY 2008 Soul City will establish another 1000 clubs. To achieve this, it will conduct 20 training sessions for facilitators; develop, print and distribute 6000 annual club guides; hold a national congress for clubs and their facilitators; develop, print and distribute 80,000 magazines to each club member bi-annually; and run Buddyz club competitions. The clubs will focus on preventing HIV infection, AIDS and its impact on schools; youth sexuality focusing on skills development; and violence reduction, reduction in substance abuse, gender and building self esteem. PEPFAR funds will be used to support approximately 80 percent of this activity, with other donors funding the remaining 20%. Soul City emphasizes building the capacity of facilitators so they can support clubs into the future. This will be done in partnership with the DOE at both national and provincial levels. This activity contributes towards PEPFAR objectives by averting new infections through increasing self esteem and behavior change.

ACTIVITY 4: Material Development

Soul City develops flexible training materials in five local languages to use in facilitated learning settings, and in the general public, with a focus on parents. They will build parenting skills and equip them to educate their own and other children about prevention using an AB approach. They also deal with all other aspects of the epidemic, including, antiretroviral therapy support, and support for home-based care and orphans and vulnerable children. These materials will also be used to train school governing bodies to create schools as nodes of care for vulnerable children. These materials are also used by businesses and workplace programs. These materials are used by 18 partner NGOs in a cascade training model. Trainees are given the support and skills with which to become mobilizers in their community. More than 200 training sessions will be conducted in FY 2008 with an average of 30 people per session. In addition, materials are made available to a wide range of institutions that make use of the materials in their work. A minimum of one million copies of materials will be made available. PEPFAR funds will be used to support approximately 70 percent of this activity, with other donors funding the remaining 30%.

ACTIVITY 5: Heartlines

Heartlines is a sub-partner of Soul City: IHDC uses a values-based approach to HIV prevention. It is fully

Activity Narrative: described in Other Prevention A children's book aimed at children 5-8 years old was produced in FY 2007. FY 2008 funding will be used to translate the book into 11 languages and 100,000 copies will be distributed to 17,000 primary schools. In partnership with DOE, teachers will also be trained to use the materials.

The long-term sustainability of Soul City is addressed by diversifying its funding sources and by establishing a broad-based empowerment company which can take ownership of shares and whose dividends will accrue to Soul City. An empowerment company is one that aims to strengthen small businesses and expand them in order to encourage investments from outside investors.

To determine the impact of the activities, Soul City and another PEPFAR partner, Johns Hopkins University Center for Communication Programs, will implement a nationally representative longitudinal panel design evaluation, which, together with propensity score analysis, enables one to attribute change to the intervention with a high degree of certainty, as the change is clearly measured in a time sequence, and the "control" is controlled for demographics, other interventions, other attitudes and behaviors. This allows a high degree of certainty about what the cause of the change is. (This activity is funded under the Johns Hopkins University PEPFAR program and described in that COP entry.) Soul City has reached over 6 million children and 22 million adults with AB prevention messages. A further study (not PEPFAR-funded) is planned in partnership with the University of the Witwatersrand which will be a randomized intervention study comparing the impact of the school based intervention on child resiliency

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

ACTIVITY 5: Youth Friendly VCT

During the last two years, Life Choices has made mobile voluntary counseling and testing (VCT) available to the high schools by networking with a highly qualified institution and PEPFAR partner, New Start (Society for Family Health). At the end of 2007, Life Choices was pleased to receive another grant from PEPFAR that will insure the establishment of Life Choices' own mobile VCT clinic, offering HIV testing, TB screening and support services. In FY 2008, Life Choices will not have indirect results under this grant. Instead, direct results will be reported under the new grant managed by CDC.

ACTIVITY 6: Monitoring & Evaluation

Life Choices staff is monitored on an ongoing basis by two coordinators. Surprise and supportive visits are conducted in all Life Choices sites in order that feedback reports are produced to feed back to management. Life Choices staff is also accountable to school management teams. School staff monitors Life Choices work and they provide feedback to Life Choices Management about how the activities are running in their schools (i.e., strengths and weaknesses). With the feedback gathered from different sources, Life Choices management is able to make informed decisions about staff training needs; programmatic changes and development; and staff appraisals and incentives.

Life Choices' Peer Educators are also supervised on a weekly basis by the Life Choices Trainers. Trainers and school educators monitor peer education activities in schools, as they provide support to peer educators in order to conduct quality peer activities.

Life Choices will continue conducting focus group discussions and annual knowledge, attitude and practice surveys to follow up on behavior change resulting from the program and to inform new developments in the program methodology.

SUMMARY:

Life Choices is one of the implementing organizations that run the Western Cape Peer Education Program for the Departments of Education and Health. Life Choices was the first organization integrated in this program that was not funded by the Global Fund or Conditional Grants. Life Choices is also a founding member of the Western Cape Youth Peer Education Association. This association aims to provide quality standards and ensure sustainability of the provincial peer education program. The Life Choices Program aims to reach young people with a powerful abstinence and be faithful (AB) message early in their lives, and to change social norms (gender roles, violence, discrimination, etc.). The intent of the program is to reach 56,000 young people in a period of four years. Life Choices believes in providing a quality Life Skills Program combined with a structured Peer Education Program to youth that will help them to maintain or change behaviors. In order to create a supportive environment around youth, Life Choices also run programs with the stakeholders in their lives - teachers and parents. Each year Life Choices chooses different themes in order to ensure that youth aged 10 -14 delay sexual debut, older youth 15 -24 practice secondary abstinence and those who are sexually active stay faithful to one partner, know their HIV status and are given full information on consistent and correct use of condoms. Some of the themes that Life Choices uses are - 'True Love Waits,' 'Spread Love not Gossip,' 'NO, I value LIFE,' 'I am the choices I make,' among others. The emphasis area for this activity is gender and human capacity building. The target population is adolescents, teachers, religious leaders and most at risk population which will include the street youth, persons who engage in transactional sex, but who do not identify as persons in sex work and incarcerated populations.

BACKGROUND:

The Life Choices Program was launched in FY 2005 in the Western Cape with the support of PEPFAR. Three main communities were selected by the Western Cape Department of Education: Athlone, Delft and Mannenberg. The schools within these three communities are the main target for the Life Choices Program and became the base for program activities. Life Choices brought a comprehensive program that aimed to change social norms (with components on HIV and AIDS, self-worth, gender, violence, and substance abuse) to 11 high schools and 10 primary schools. Besides these three communities, Life Choices also reaches youth around Cape Town in 'Street Youth' Shelters, churches and in one correctional center. The Western Cape Departments of Health and Education coordinate the Life Choices school activities. Once a month Life Choices meets with the Government and reports back about the monthly activities and quarterly written reports are also submitted.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Training of Trainers - Human Capacity Development

In FY 2008, 18 trainers (nine women and nine men) will be trained on an ongoing basis in order to increase the quality of their service delivery. Four major trainings will be organized during the year. These activities will build on last year's success in counseling, and parental and facilitation training skills.

ACTIVITY 2: Development of Behavior Change Communication Materials

Behavior Change Communication (BCC) materials on Abstinence, Be faithful and gender issues will be finalized and field tested in FY 2007. These materials will include pamphlets and other media, and will comprise topics related to Life Choices messages (self-worth, reproductive health, relationships, gender, violence, coercion, teen pregnancy, substance abuse, etc.). Furthermore, these materials will also need to be approved by the Western Cape Government, and teachers' and parents' associations. Once the

Activity Narrative: approval has been obtained, the BCC materials will be used to reinforce the message around changing of social norms which discourages gender violence and coercion of young women and girl children and address issues of cross generational sex and multiple concurrent partnerships in an interactive way during the delivery of the program. Some of the AB and gender materials will be given to the youth for free and they will be distributed by Life Choices facilitators, Peer Educators, teachers and church leaders.

ACTIVITY 3: Delivery of the Program to the Salesian -Based Centers

The Life Choices program will continue to implement Life Skills in the Correctional Center targeting high risk groups with behavior change activities. The work with Parish Youth Groups will also be maintained. Unfortunately last year, Life Choices did not achieve its goal of training 30 parish youth leaders. In FY 2008, Life Choices continue training youth leaders. These youth leaders will work in male-female pairs to reinforce and enhance their status as role models to their peers. They will also receive additional training to ensure that they are well informed to reinforce the AB message. Each pair of youth leaders will reach 50 youth in their respective parishes.

ACTIVITY 4: School-Based Program

In FY 2008, Life Choices will continue to work in the 12 high schools where service are already established and will expand to an additional two high school. The program will also continue in the ten primary schools. FY 2008 expansion activities in primary schools will include targeting youth in the lower grades (Grades 4, 5, 6 and 7) and providing them with abstinence messages. In addition, a Health Promotion Program will be initiated in high schools and primary schools where health services will be made available to school learners. These include comprehensive health screening like TB screening, voluntary counseling and testing, reproductive health services to provide an integrated prevention package.

Youth will be trained on an ongoing basis to become role models, to educate their peers in informal and formal ways, to identify and refer peers with problems, and to advocate for change. Youth camps will be organized to ensure the value, accuracy and consistency of the message given by the peer educators to their peers. All the target schools will also continue with the Life Skills program that will reach learners. In FY 2008 the Life Choices program will continue working with teachers by conducting quarterly workshops. Expansion activities for FY 2008 include the implementation of a parent program. Both programs will aim to improve teacher/parent-teen communication and to create a safe environment for positive behaviors among youth.

ACTIVITY 5: Youth-Friendly VCT

The Life Choices Program, in agreement with New Start (a PEPFAR partner), will continue providing youth-friendly VCT at designated schools via voluntary counseling and testing (VCT) mobile centers. The program will continue organizing VCT campaigns in high schools where youth above 14 years of age will be encouraged to test for HIV. These campaigns are used as powerful prevention tools. In a country where very few HIV-infected people know their status, it is essential that ongoing VCT campaigns are organized in the communities targeted by the program. New Start and Life Choices will continue establishing referral networking systems for youth who need further support, including those who are HIV-infected, have been abused, or are sexually active.

This Salesian Mission activity will contribute to PEPFAR achieving the overall goal of averting seven million new HIV infections.

Program Budget Code: 02

Activity ID: 2977.22783.09

Planned Funds: \$97,090

Activity System ID: 22783

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

In terms of a knowledge, attitude and practice (KAP) survey (2007), the South African Department of Defence (SA DOD) has been advised to conduct a more focused program on abstinence and being faithful (AB) among the Military Skills Development (MSD) youth. The moral, ethical and value-based program targets the MSD youth by particularly advocating for abstinence, delay of sexual initiation and further, advocating for secondary abstinence. The SA DOD aims to strengthen these activities to include small focus group training that will be more effective.

The Combating HIV and AIDS through Spiritual and Ethical Conduct (CHATSEC) program, conducted by the chaplains, has a huge focus on young recruits. The program concentrates on the individual's moral values and spiritual beliefs to enforce a culture of abstinence and being faithful. On completion of the training a pledge ceremony is conducted where participants pledge to live according to their moral values, to abstain from sex, delay sexual debut and if sexually active, to be faithful. The program also includes mechanisms such as developing posters reflecting these values, which are used to reinforce awareness. Approximately 400 Chaplains have been trained in the train the trainer CHATSEC program to date, and approximately 10,000 troops have received training. The chaplains are also key stakeholders in the Multidisciplinary Committees that exist at various units, and which they use to continue to promote AB values.

The Comprehensive Health Assessments that are during recruitment, mobilization preparation and as part of ongoing health assessments of the soldiers are conducted regularly. During these assessments, there is a significant component on health education and promotion particularly in the field of HIV, AIDS and sexually transmitted infections.

The Occupational Health and Safety Programs include aspects of HIV prevention in the workplace.

Other activities include peer education, gender equity training, mass awareness, pre- and post-deployment training on HIV prevention.

The South African Military Health Services is considering working with other expert implementers to exchange ideas, and improve program implementation.

SUMMARY:

The South African Department of Defence's (SADOD) activities are complementary to the other prevention and care components within the Masibambisane program (the HIV Prevention and Awareness Program of the SADOD). The focus of this abstinence and being faithful (AB) activity is the training of chaplains as trainers in the moral, values and ethics-based program, which addresses gender equity, the role of men as partners, and violence and coercion. This activity will facilitate transferring the value and ethics-based program to members of the SADOD, training chaplains in pastoral care and counseling, and providing pastoral care and counseling to HIV-infected and affected members. In addition, workshops are conducted with unit commanders to ensure buy in and to address stigma and discrimination. Mass awareness and targeted intervention programs will also address AB components of prevention. The activity has been expanded to include training of Southern African Development Community (SADC) chaplains. Specific target populations include HIV-infected pregnant women, people living with HIV (PLHIV), religious leaders and health workers as well as all other personnel within the military.

BACKGROUND:

The AB component of the Masibambisane program is an integral part of the Chaplaincy HIV program of the Department of Defence. This ensures more focused prevention messages in terms of abstinence and/or faithfulness. The program was developed with FY 2004 funding to expose all members of the SADOD to the training. In order to achieve this objective, all regular Defence Force chaplains as well as a number of Reserve Force chaplains were trained. The training was reviewed and redesigned in a three-day training program. This training will continue in order to reach the optimal number of Defence Force members.

Since 2005, all chaplains are trained in the pastoral, care and support program to enable them to render the appropriate care and support services to HIV-infected and affected individuals and families. This activity will continue to be implemented by the chaplaincy of the SADOD.

All these activities are monitored through the monitoring and evaluation (M&E) plan for Masibambisane. The M&E plan includes a focused program evaluation of the training courses. The chaplaincy will also involve Reserve Force chaplains and liaise with the broader religious community to market the training programs to civilian communities to mobilize faith-based organizations.

The chaplaincy developed both courses and trained the majority of chaplains within the SADOD. They have also trained a group of chaplains from Southern African Development Community (SADC) countries and those chaplains attended the North Atlantic Treaty Organization (NATO) chaplains' conference for the last three years. Training of Reserve Force Chaplains has resulted in the expansion of the program to civilian faith-based organizations.

The AB Program will continue with specific focus on highly vulnerable target groups such as the Military Skills Development (basic training) intake of young recruits between the age of 18 and 25 years.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1:

This activity will provide training to chaplains of the SADOD, SADC, and the NATO in the values- and ethics

Activity Narrative: -based intervention program to empower them to facilitate HIV prevention through abstinence and being faithful. This requires updating and customization of the training curriculum and the printing of training material.

ACTIVITY 2:

The activity aims to execute the values- and ethics-based program within the SADOD as part of unit workplace programs to members of the SADOD, focusing on activities that promote abstinence; for instance, development of skills in unmarried individuals for practicing abstinence and adoption of norms that supports delaying sex until marriage and that denounce forced sexual activity among unmarried individuals. This requires the development and printing of facilitation manuals.

ACTIVITY 3:

The SADOD will support the establishment of unit workplace programs through workshops with commanders on the AB programs to ensure targeted abstinence and faithfulness interventions within units. The commanders are the chiefs of the units, they have much influence on the military personnel in their units, therefore their buy in is critical for the success of the program. The workplace program will also address stigma and discrimination.

ACTIVITY 4:

The SADOD will provide ongoing pastoral care and counseling to HIV-infected and affected individuals and families within the SADOD with the secondary aim to prevent HIV infection through interventions that focus on abstinence and faithfulness. This will ensure that the spread of HIV within the SA DOD is contained.

ACTIVITY 5:

SA DOD will conduct community outreach campaigns to address abstinence and faithfulness through media and awareness activities which includes the development and printing of information and educational material. Awareness activities are an important component of the SA DOD Abstinence and Be faithful Prevention Program targeting new recruits who are vulnerable group aged 18 - 25 years.

ACTIVITY 6:

SA DOD will assimilate innovative ways of spreading AB information through attending PEPFAR prevention partner meetings, publications in military and peer-reviewed magazines and journals and oral and poster presentations on effective and innovative programs at conferences and seminars.

These activities will contribute to the prevention of HIV infection through increased pastoral care and counseling in the SA DOD for PLHIV and increased support to healthcare providers thus contributing to the PEPFAR goal of preventing seven million new infections.

Mechanism: RESPOND

USG Agency: U.S. Agency for International Development

Program Area: Sexual Prevention: AB

Program Budget Code: 02

Planned Funds: \$398,605

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAY:

EngenderHealth South Africa (EHSA) will continue to implement the capacity-building and programmatic activities described in COP 2008. However, minor modifications are planned. Specifically, messaging will be altered to focus on linking behavior with culturally influenced actions, such as multiple concurrent partners and alcohol abuse. To ensure the quality and the impact of these messages, EHSA will engage all program officers, implementing partners and stakeholders in defining the desired number of face-to-face interactions for each group reached through the project, as set out in the monitoring and evaluation plan.

ACTIVITY 2 (School/Community Action for Gender Equality (S-CAGE)) will technically remain unchanged, but EHSA will increase the number of middle schools working directly with the 10-14 year olds and beyond in the North West Province, conveying messaging on Abstinence and Being Faithful (AB), while building capacity of peers and educators to sustain implementation at school and community level. EHSA will increase emphasis on messages on multiple partners and alcohol abuse, and on challenging the social norms that often put males and their partners at risk.

EHSA is publishing a revised version of its Men as Partners (MAP) curriculum via a PEPFAR-supported multi-country gender norms Initiative. Field-tested and revised in the South African context, this new curriculum incorporates activities that dissect issues such as multiple concurrent partnerships and alcohol use vs. abuse, offering individual knowledge and skills-building activities to assist in addressing these cultural norms.

ACTIVITY 3 (Community Capacity Building Program) will remain the same, with EHSA partnering with various community-based stakeholders to integrate the MAP approach. Inherent in the evidence-based MAP approach is recognizing that behavior change as a process, and that the prevalence of HIV is higher among men in their thirties and forties and younger women in their twenties. This recognition leads to linking individual interventions with men to interventions focusing on partners, families and communities, as well as community mobilization efforts to reach additional community members, while collaborating with communities to increase the return of girls who drop out of school back to the educational system.

ACTIVITY 4 (Government/Other Key Stakeholders) will remain the same.

ACTIVITY 5 (Clinical/Community Outreach) will primarily remain the same. One modification will include EHSA working with civil society partners to implement a behavior change communication campaign aimed at out-of-school youth. This campaign will include direct messaging and skills-building on interpersonal communication in order to help the young men (and women) link their risk behavior with culturally-influenced actions, such as multiple concurrent partnerships and alcohol abuse. This activity also focuses on inner-city and peri-urban areas in Johannesburg, thus reaching immigrant and migrant communities.

ACTIVITY 6 (MAP Network) consisting of monthly meetings of prime partners to ensure information exchange and advocacy efforts will be continued in Gauteng and the Western Cape. EHSA will also co-chair quarterly meetings (with Hope Worldwide) of the MenEngage Alliance, consisting of key stakeholders representing the MAP Network and other non-governmental and community-based organizations, government agencies and general activists, gathering to discuss issues, exchange information, and develop an advocacy platform on public policies relating to gender-norm transformation, HIV and AIDS.

ACTIVITY 7 (National Campaigns) will not be modified, as EHSA will continue to promote AB messages through gender norm transformation via national campaigns. In FY 2009, EHSA will continue a new social marketing campaign -The Sisonke Campaign - engaging celebrity male artists (e.g., musicians, actors, professional athletes) to promote positive male gender norms linked to sexual health, with emphasis on reducing xenophobic and homophobic attacks, especially as they relate to sexual violence and HIV. Through the high visibility mass media campaign, EHSA will also develop prevention messages specifically targeted at the 2010 Federation of International Football Associations Soccer World Cup, appealing to boys and men via football analogies. EHSA's Police as Partners initiative will focus on reaching men in their thirties, forties, and fifties, focusing on messaging about multiple concurrent partnerships, consistent condom use, cross-generational sexual relationships, as well as raising gender equitable children.

SUMMARY:

EngenderHealth's Men as Partners (MAP) Program works to reduce the spread and impact of HIV and gender-based violence by challenging unhealthy gender-related beliefs and attitudes, such as equating masculinity with dominance over women, pursuing multiple sexual partners, and participating in other risk behaviors. The MAP program utilizes a range of strategies with focus on human and organizational capacity building through skills-building workshops, community mobilization, health service provider training, media advocacy, and public policy advocacy. The target population includes men and boys, in- and out-of-school youth, university students, adults, people living with HIV, caregivers, immigrants/migrants, community and religious leaders, program managers, public healthcare providers, CBOs, FBOs and NGOs.

BACKGROUND:

Since 1998, EngenderHealth received USG funding to support CBOs, FBOs and the South African government to implement the MAP program. EngenderHealth conducts skills-building workshops on gender norm transformation. Through these workshops, MAP develops "transformation agents" (peer educators) who then spread AB messages and skills to others in their communities. These workshops aim at motivating men to know their HIV status and take action if they test positive. MAP encourages men to participate in their communities and to challenge other men who are practicing high-risk behaviors and gender-based violence. MAP recognizes that this transformation will assist men and women in achieving low-risk behaviors such as sexual abstinence, being faithful to one partner, and treating women as equals. MAP works with individual men and boys, their partners, as well as community structures to influence

Activity Narrative: culture and transform lives. Working through various community-based partners, MAP also mobilizes communities to take action via community education events and the formation of "community action teams" (CATs). EngenderHealth MAP also produces information, education and communication (IEC) materials that motivate men and boys to confront harmful gender norms. Currently, EngenderHealth is running the "I am a Partner campaign" focusing on defining what men can do to take action and be more gender equitable to reduce the spread and impact of HIV (www.iamapartner.org). Finally, EngenderHealth staff coordinates provincial MAP Networks, creating a space for gender activists to share best practices and formulating a platform to participate in the development and adoption of the HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011. In response to demand, EngenderHealth developed additional programming linked to palliative care, and voluntary counseling and testing.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Tertiary Institution Programs

EngenderHealth will continue to build the capacity of tertiary institution's peer education programs to integrate AB messages into gender norm transformation programming on HIV. EngenderHealth will work with five institutions in the Western Cape (UCT, CPUT/Bellville, CPUT/Cape Town, UWC, and Stellenbosch University) and with least three institutions outside of the Western Cape. At least five staff and student "transformation agents" from each of the institutions will be trained on a quarterly basis. The communications skills of the "transformation agents" will be developed so that they are able to reach students on campus and learners in local communities with AB messages. Issues such as gender norms, multiple partnerships, cross-generational sex, communication issues, and alcohol abuse, as well as consistent and correct use of condoms and referral to condom service sites will be addressed. EngenderHealth staff will provide ongoing on-site and telephonic assistance on a range of management and content issues. EngenderHealth recognizes the power of working with such institutions and the sustainable benefits of building such capacity.

ACTIVITY 2: School/Community Action for Gender Equality (S-CAGE) based Program

EngenderHealth will continue to capacitate at least four NGOs working in school-based settings by focusing on the integration of AB messages into MAP programming on gender norm transformation and HIV. This programming will take place in communities where the drivers of the epidemic have been identified, i.e. in Gauteng (Diepsloot, Vaal, Hillbrow/Yeoville/Berea and Soweto), North West, and KwaZulu-Natal (KZN). EngenderHealth will work with another PEPFAR partner, Mpilonhle, in KZN -to build a gender component to their pre-existing work in schools and communities. EngenderHealth will work directly with school personnel and student leaders to develop their capacity to link AB-related MAP messaging and programming into the school curriculum via life orientation programs. Similar trainings will be conducted each quarter and course content will be tailored to meet the needs of each community-based partner. Typically, 20 to 30 participants will be trained over a period of four to five days. In addition, capacity-building assistance, in the form of individual on-site and telephonic sessions will be offered to all partners. EngenderHealth will solicit funds from other development partners, and private sector entities to assist with this program. Potential and existing public-private partnerships include those with the Ford Foundation (secured for North West province); De Beers Mining Company (secured for KZN); and Anglo American Mining Company (pending for KZN).

ACTIVITY 3: Community Capacity-building Program

EngenderHealth will continue building the capacity of at least four NGOs, CBOs, FBOs, and private sector partners on AB messages and gender norms. EngenderHealth will partner with groups based in strategic communities within Gauteng (Diepsloot, Vaal, Hillbrow, Yeoville, Berea, and Soweto), North West, KwaZulu-Natal, and Western Cape provinces. In addition, private sector organizations will be approached for cost sharing options. Trainings will be conducted each quarter and course content will be tailored to meet the needs of each community-based partner. Typically, 20 to 30 participants will be trained over a period of four to five days. EngenderHealth will be available to provide individual support to partners via on-site and telephonic sessions.

ACTIVITY 4: Government/Other Key Stakeholder Program

EngenderHealth will continue building sustainable partnerships with national and provincial government agencies. In FY 2008, these institutions may include South African Police Services (SAPS), Department of Correctional Services, Department of Social Development and Department of Health. EngenderHealth plans to work with the SAPS, building capacity of individual precincts youth desks to implement MAP programming in their communities, maintaining community action teams (CATs) to mobilize men (including policemen). Cost sharing options will be explored to gain financial support from government institutions. Training and support, as described above, will be offered on a quarterly basis to partners.

ACTIVITY 5: Clinical/Community Outreach Program

EngenderHealth will continue to reach out to men in various settings, including street outreach and in clinical settings. Typically, this program will reach over 250 men (and their partners) per month via formal and informal talks at clinics and on the streets/parks nearby. These talks will focus on helping men recognize the importance of having only one partner. EngenderHealth will target services in Gauteng, specifically in Diepsloot, Vaal, Hillbrow, Yeoville, Berea, and Soweto. In the Western Cape, EngenderHealth will work with its partners at tertiary institutions to conduct talks in clinics. Programs will also reach out to youth in surrounding communities. This will focus on abstinence messaging for learners aged 10-14 and on encouraging secondary abstinence for older youth aged 15-24 years old.

ACTIVITY 6: MAP Network:

Activity Narrative: EngenderHealth will continue to support the MAP Network on information exchange and advocacy. EngenderHealth will host monthly meetings bringing together prime partners (typically about 20-30 members), to exchange experiences and to enhance programming. On a quarterly basis, additional key stakeholders representing other NGOs, CBOs, government and general activists will gather to discuss issues, exchange information and develop an advocacy platform on public policies relating to gender-norm transformation, HIV and AB messages. EngenderHealth's advocacy program will then take these issues forward at the national and local levels.

ACTIVITY 7: National Campaigns:

EngenderHealth will continue to promote AB messages through gender norm transformation via national campaigns. Priorities will be placed on implementing the annual National MAP Week (held in March/April), which motivate EngenderHealth partners to host community events which raise the profile of MAP's AB messages. Working through national campaigns, such as annual MAP Week, EngenderHealth engages private sector, media and government partners to increase the effectiveness of MAP. Activities may include community marches and rallies, sports days, men's meetings, intergenerational dialogues to address cross-generational sexual relationships, school debates, and mass media appearances. In addition, EngenderHealth MAP staff will collaborate with other NGOs and government institutions to assist in organizing and promoting additional campaigns, including 16 Days of Activism on Violence against Women, Youth Month, and Men's Health Month. BCC materials (based on EngenderHealth's "I am a Partner Campaign") will be used to motivate men to rethink gender equality and challenge other men to do so as well. Finally, throughout the year, EngenderHealth will collaborate with various media partners to spread MAP-AB messages via mass media channels.

Funds will be used to recruit a Prevention Advisor with expertise in abstinence and being faithful (AB) and other prevention (OP) program areas. HVOP also includes funding for this advisor. This new activity is required to strengthen the prevention portfolio. The incumbent will expand and strengthen AB activities, integrate gender, improve nuanced, targeted communication and expand prevention efforts aimed at the general population and at youth. The Advisor will ensure the development and dissemination of rigorously-informed messaging in the PEPFAR/South Africa program. The Advisor will also ensure that prevention activities conform to United States government guidance, South African government policies and the HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011.

Activity System ID: 22758	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Education Labour Relations Council (ELRC) has made the following enhancements to the COP 2008 narrative:

Activity 2: Training Peer Educators for Teachers Unions

While recruitment and training of master trainers and peer educators was conducted in the initial phase of the project (FY2007-FY2008), in FY 2009 PEPFAR funds will be used to conduct audits of master trainers and peer educators to identify where to replenish training resources. New testing procedures will also be implemented to ensure consistency in the quality of training. At the end of each master trainer and peer education workshop, participants will be required to take a test to demonstrate their knowledge of the curriculum. Those master trainers and peer educators who do not have a satisfactory score will be prioritized for refresher courses. Those who fail a second time will be removed from the project. New training efforts will focus on the supervision and management of peer education services and the development of advanced peer education skills. These advanced peer education skills will be needed as the project evolves from merely raising teacher awareness about HIV and AIDS to addressing the social attitudes that contribute to the spread of HIV like multiple and concurrent sexual partners. PEPFAR funds will also be used in FY 2009 to develop a central database that stores contact information, test scores and performance ratings of master trainers and peer educators to assist in the supervision of peer education and outreach activities.

Activity 3: Community Mobilization and Outreach

The ELRC's Prevention Care and Treatment Access (PCTA) project's past mobilization efforts have demonstrated that on-site outreach activities are the most effective method for delivering prevention messages to adult educators. Support from principals is critical to conducting outreach activities at schools. Consequently, the ELRC-PCTA will collaborate with the Department of Education to facilitate training of school principals to sensitize them on the prevention, abstinence and being faithful curriculum, so that principals will support peer education being conducted in schools. Working with principals and union officials peer educators will use technology (DVDs on abstinence and being faithful (AB) messages) to supplement face-to-face interactions with teachers during breaks and after school. Emphasis will be given to those districts where HIV prevalence among educators is highest.

Beginning in FY 2008, the ELRC-PCTA will also coordinate with the Department of Education at the national, provincial and district levels to conduct advocacy campaigns on AB prevention that address the social norms that facilitate the spread of HIV among adults. Peer educators will develop linkages with department of education representatives at the provincial and district levels so that they can share best practices, lessons learned, coordinate mobilization events and harmonize prevention messages that reinforce mutual monogamy.

SUMMARY:

This activity is a component of a comprehensive prevention education, care and treatment program for small to medium enterprises (SMEs) with 20-200 employees and other workplaces in South Africa. It includes activities in CT, Policy Analysis and Systems Strengthening, and Condoms and Other Prevention.

With an estimate of 12.3 million learners in South Africa, served by 386,600 teachers and more than 26,000 schools managing a response to HIV and AIDS across the education sector requires a comprehensive and substantial effort. Efforts must include a focus on both learners and educators if the impact of HIV is to be mitigated; and it must be recognized that any efforts focused on learners via the education sector cannot succeed without educators also being addressed. The Education Labour Relations Council (ELRC) will implement a comprehensive HIV and AIDS workplace program for the education sector of South Africa.

BACKGROUND:

ELRC is a statutory council which serves the South African education sector nationwide and is comprised of the public sector, the national and provincial departments of education, the private sector and teacher unions representing all primary and secondary public school educators. The ELRC works as an interface between the Department of Education (DOE) and labor organizations for labor peace and a vision of contributing towards the transformation and development of a quality South African public education system. A 2005 Health of Our Educators Report found that 50% of all teacher attrition is linked to complications of HIV and AIDS, resulting in 4000 teachers being lost each year due to AIDS. The general prevalence rate among educators was found to closely parallel that of the national population with an estimate of 12.7% of all DOE employed educators living with HIV. Based on the findings of this report and with FY 2007 and FY 2008 PEPFAR funding ELRC will implement a country-wide project to educators living with and affected by HIV and AIDS. The target group for this project is teachers, including those living with HIV or those who have family members living with HIV. This is a workplace intervention with minor emphasis areas in information, education and communication, community mobilization, and the development of linkages and networks. A particular focus of this project is the greater involvement of people with AIDS. ELRC will work with HIV positive teachers to ensure they can serve as role models to fellow teachers and to learners.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Development of Workplace Prevention Education

PEPFAR funds will be used to support the development of a comprehensive education sector prevention program targeting teachers and education sector union members. Funds will also be used to support

Activity Narrative: workplace prevention education programs targeting the health and education sector. With funding from PEPFAR, these workplace programs will conduct training sessions for employers, senior management, senior union leadership and employees on the basic facts of HIV transmission, prevention, and impact of HIV and AIDS on the industry. Peer educators for unions in the education sector will receive ongoing training on prevention (especially abstinence and being faithful), PMTCT, stigma and discrimination, counseling and testing, palliative care, and access to treatment. The goal of the peer education is to increase workers' knowledge about HIV and AIDS prevention, care and treatment with the purpose of changing their attitudes and practices and modifying behavior to prevent HIV infections and reduce violence and coercion (key legislative issue).

Activity 2: Training of peer educators for teachers unions

Working in nine provinces, peer educators from four teachers' unions will be identified and trained peer educators. Training will focus on prevention, particularly AB messages. A structure will be set up to support the peer educators and ensure quality assurance for the one-on-one interactions and community mobilization activities that they will be expected to participate in.

Activity 2: Community Mobilization

The newly trained peer educators will reach teachers in their unions with AB prevention messages. The focus of the AB messaging for teachers already involved in relationships will be the B component. The peer educators will distribute IEC materials, organize mobilization events, campaign messages and conduct one-on-one interactions with teachers and/or their families.

This activity will directly contribute to PEPFAR's goal of preventing 7 million new infections. These activities support the USG Five-Year Strategy for South Africa by expanding and improving quality AB prevention programs.

Activity System ID: 22604

Mechanism: N/A

USG Agency: HHS/Centers for Disease
Control & Prevention

Program Area: Sexual Prevention: AB

Program Budget Code: 02

Planned Funds: \$0

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Aurum will continue programs described in the FY 2008 COP, but the following enhancements have been made:

Some programs will be provided to parents on how to deal with adolescents and young people. The parents will be targeted in workplaces and community organizations such as churches. More emphasis will be placed on empowering girls in dealing with peer pressure and the ability to say no. Recreational activities will be supported through community organizations.

Partnerships with youth organizations will be established and strengthened. Training on peer education will be provided to youth organizations and other organizations in the communities. Community mobilization officers and counselors will undergo in-service trainings and debriefing sessions on a regular basis. The Aurum social worker will be responsible for debriefing the project team. Two team-building activities will be conducted during the year. These will be conducted to promote staff wellness and better integration of activities across the Aurum project. Managers, human resources managers and trade union officials of small and medium enterprises (SME) will be trained on policy development, stigma and discrimination. The project will continue to expand its services to private nursing schools targeting student nurses and tutors.

The HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011(NSP) prevention target is to reduce the national HIV incidence by 50% by 2011. Aurum's abstinence and being faithful (AB) activities aim to contribute to the reduction of HIV incidence among young people. Objective 1.2 under Goal 1 of the NSP is to accelerate programs to empower women and educate men and women (including boys and girls) on human rights in general and women rights in particular. The AB activities will specifically run educational and information sessions on gender issues with the aim of empowering women and girls. Women need to be empowered in order to be able to say no to gender violence and be able to negotiate safe sex. At the same time men and boys must be able to deal with empowered women and girls, and reduce gender stereotypes.

Objective 1.7 aims is to build AIDS competent communities through tailored competency processes. The SME project continues to provide HIV and AIDS services to SMEs in the workplace. These services are tailored to meet the needs of SME employees, and aim to promote HIV prevention among the workers.

Goal 2, objective 2.4 aims to increase the rollout of workplace prevention programs for workplace interventions. More SMEs will be targeted in FY 2009. Partnerships with trade unions and employer organizations will be strengthened in order to reach as many SMEs as possible. There will be greater emphasis on the construction industry.

Objective 2.7 of the NSP aims to develop a comprehensive package that promotes male sexual health. The sexually transmitted infections clinic that will be established in FY 2008 at the Bree Street taxi rank targeting taxi operators will be strengthened.

Gender-focused information sessions will be conducted in the communities. The HIV education currently provided to employees of SMEs will include gender and HIV sessions. Specific gender-focused training material will be developed. Refresher training for trained peer educators will be conducted.

Education of parents will also be prioritized. This will aim to empower parents to deal with gender stereotypes.

SUMMARY: The Aurum SME Project commenced in September 2007. The project seeks to extend access of HIV related services such as prevention, counseling, testing and treatment to people that currently are not accessing services through the existing health care system. The project specifically targets employees of small, micro and medium sized (SME) companies as well as their partners and dependents. In the second year of this project, the focus will be on strengthening service provision at the existing service points as well as extending the service offering to four additional fixed sites in Mpumalanga, Limpopo and Gauteng provinces.

BACKGROUND: Aurum provides services to SMEs at the workplace, through the use of mobile vehicles and through a fixed testing site at the Bree Street Taxi Rank which is the busiest taxi rank in Johannesburg, catering for an estimated 400,000 commuters a day in addition to 500 traders and 2000 taxi drivers.

ACTIVITIES AND EXPECTED RESULTS: Prevention activities will comprise prevention messaging targeting youth and young adults that utilize the fixed Bree centre as well as a campaign that will involve the use of counselors visiting educational institutions, sports facilities and entertainment venues within the targeted areas. In FY 2008 these activities will be expanded through the employment and training of additional counselors. It is anticipated that 7000 people will be reached with specific abstinence and be faithful messaging. Messaging that specifically targets the young men and young women will encourage abstinence, delayed sexual debut, avoidance of risk taking behavior and reduction in the number of sexual partners. All the messaging will be provided in languages understood by the targeted group and the project will involve an ongoing conversation with the community as opposed to short-term information blitzes. In addition 300 individuals from the targeted companies and communities will be trained as peer educators to use A/B focused materials.

ACTIVITY 1: Recruitment and training of youth community mobilization counselors. Aurum intends to recruit additional youth counselors who will be trained and then tasked with the provision of youth focused messaging and education to students at educational institutions within the targeted areas, mainly high schools and tertiary educational colleges. Young commuters that frequent the taxi ranks will also be targeted with the specific A/B message. The training provided to the youth counselors will include basic counseling skills, sexuality, modes of HIV transmission, gender as related to the HIV epidemic,

Activity Narrative: prevention methods, counseling for behavioral change, group and individual counseling.

ACTIVITY 2: Delivery of specific AB message to targeted youth.

An ongoing activity under this grant will be the delivery of targeted messaging to youth, attending educational institutions in the targeted areas. Youth will also be targeted at sports venues and other entertainment venues and the abstinence, be faithful and delay in sexual debut will be delivered in one on one and small group information and education sessions. Messaging will specifically targets young men and young women and will encourage abstinence, delayed sexual debut, avoidance of risk taking behavior and reduction in the number of sexual partners. All the messaging will be provided in languages understood by the targeted group and the project will involve an ongoing conversation with the targeted communities.

Activity Narrative: SUMMARY:

The Solidarity Center, in cooperation with a consortium of partners, proposes to implement a five-year HIV prevention initiative in South Africa called "Be Faithful, Be Tested, Be Union". The Solidarity Center's project partners are EngenderHealth and four of South Africa's largest and most influential unions. These unions are the National Union of Metalworkers of South Africa (NUMSA), the Police and Prisons Civil Rights Union (POPCRU), Health and Other Service Personnel Trade Union of South Africa (HOSPERSA), and the Congress of South African Trade Unions, Western Cape (COSATU-Western Cape). Over five years, activities will be implemented in five provinces: Gauteng, Limpopo, and KwaZulu-Natal, Western Cape and Eastern Cape.

BACKGROUND:

The project will directly expand access to HIV-related services to one million South Africans, with a focus on prevention through promoting safe and healthy sexual behavior in HIV-infected and uninfected individuals and improving access to counseling and HIV testing. Union members, their families and communities are the target audiences. The "Be Faithful, Be Tested, Be Union" Project strategy focuses on prevention, concentrates on workplaces, and enlists unions, businesses, and communities to dramatically increase HIV prevention within these critical economic groups. The project will address three key HIV-related areas: counseling and testing, behavior change through gender norm transformation, and HIV-related institutional capacity building among the union partners.

The South African labor force, and thereby, businesses and the public sector, have been particularly hard hit by HIV and AIDS, with a negative impact on productivity and business profits. Historically, South African unions have been at the forefront of improving work and social conditions, not only for their members, but for their communities as well. However, most trade unions and employers lack the capacity and direct encouragement and support to create workplaces that offer HIV education, promote counseling and testing, reduce stigma, and provide benefits and access to services for workers and their families living with HIV and AIDS. This project will fill that gap in key workplaces.

ACTIVITY 1: Be Faithful, Be Tested, Be Union

The "Be Faithful, Be Tested, Be Union Project" will address the high rate of HIV and AIDS among South Africans through a strategy that focuses on prevention, concentrates on workplaces, and enlists unions, businesses, and communities. The project will assist four large and influential South African unions, and the workplaces and communities in which their members labor and live, to achieve wide-reaching HIV prevention outcomes. The project will address four critical HIV-related areas: counseling and testing, gender norm transformation, workplace policy development and implementation, and increased institutional HIV-related capacity through targeted technical assistance. Over the life of the five-year project, activities will be implemented in five provinces. FY 2009 funding will ensure that activities reach Limpopo and Eastern Cape provinces. All are areas of the country in which either the Solidarity Center or EngenderHealth have previous program experience and/or in which the project's union partners have large memberships, extensive field operations, and substantial employer contacts.

The project will benefit from the strength of project partners with proven South African experience in critical areas, such as HIV and AIDS programming, gender norm transformation, social mobilization skills for worker and community outreach, and workplace advocacy and policy negotiation. The Solidarity Center and EngenderHealth have offices and ongoing HIV and AIDS programs in South Africa, as well as significant experience managing PEPFAR and other U.S. government-funded programs. As a result, these organizations are very familiar with HIV and AIDS technical areas and interventions, program implementation and management of large-scale projects, reporting, grant regulations, and related issues. The "Be Faithful, Be Tested, Be Union" Project will harness the trade unions' highly developed and effective organizing and mobilization skills to address key elements of HIV prevention, as well as make use of union infrastructure and networks at the local, provincial and national levels. The project will contribute to all four key priority areas identified within the South African government's HIV & AIDS AND STI National Strategic Plan, 2007–2011. These are: 1) prevention; 2) treatment, care and support; 3) research, monitoring and surveillance; and 4) human rights and access to justice.

ACTIVITY 2: Gender Norm Transformation

Gender norm transformation among the primary target audience—male workers—is one of the project's cornerstones. The project will assist union members in promoting faithfulness and partner limitation, as well as other HIV prevention strategies, through gender norm transformation and skills-building techniques based on EngenderHealth's Men As Partners (MAP) methodology. The MAP program is unique in allowing men and women to participate in a reflective process that explores how gender inequities and rigid messages about masculinity contribute to HIV, sexually transmitted infections, unintended pregnancy, gender-based violence, violence against girls and boys, and other health and social-related problems. This process employs a "transformative approach" that allows men to challenge harmful gender norms and embrace alternative models of masculinity that support their own health and that of others. MAP uses programmatic strategies at many levels to effect changes in men's attitudes, values and practices; employs an ecological approach to individual and community behavior change; and reaches individuals at various points in their daily life, including: workshops aimed at changing individuals' knowledge, attitudes and behavior; community awareness raising events to mobilize men to take action in their own communities and with their own families; Community Action Teams, a collective of gender activists promoting change in their communities; sensitization sessions and skills-building workshops with the health-care sector to increase men's utilization of HIV testing and care and other health services; collaborations with other non-governmental organizations to build their capacity to implement equivalent MAP programs; and advocacy efforts for increased governmental commitment to promoting positive and constructive male involvement.

These activities will involve implementing workplace programs centered on HIV prevention. In addition, by

Activity Narrative: focusing on men and gender norm transformation this activity will address gender imbalances that affect sexual decision making and ensure that men and women are equipped with knowledge on how to protect themselves from contracting HIV.

Activity Narrative: SUMMARY:

The Solidarity Centre, in cooperation with a consortium of partners, proposes to implement a five-year HIV prevention initiative in South Africa called "Be Faithful, Be Tested, Be Union." The Solidarity Centre's project partners are EngenderHealth and four of South Africa's largest and most influential unions. These unions are the National Union of Metalworkers of South Africa (NUMSA), the Police and Prisons Civil Rights Union (POPCRU), Health and Other Service Personnel Trade Union of South Africa (HOSPERSA), and the Congress of South African Trade Unions-Western Cape (COSATU-Western Cape). Over five years, activities will be implemented in five provinces—Gauteng, Limpopo, and KwaZulu-Natal, Western Cape and Eastern Cape.

BACKGROUND:

The project will directly expand access to HIV-related services to one million South Africans, with a focus on prevention through promoting safe and healthy sexual behavior in HIV-infected and uninfected individuals and improving access to HIV counseling and testing. Union members, their families, and communities are the target audiences. The "Be Faithful, Be Tested, Be Union" project strategy focuses on prevention, concentrates on workplaces, and enlists unions, businesses, and communities to dramatically increase HIV prevention within these critical economic groups. The project will address three key HIV-related areas: counseling and testing, behavior change through gender norm transformation, and HIV-related institutional capacity building among the union partners.

The South African labor force, and thereby, businesses and the public sector, have been particularly hard hit by HIV/AIDS, with a negative impact on productivity and business profits. Historically, South African unions have been at the forefront of improving work and social conditions, not only for their members, but for their communities as well. However, most trade unions and employers lack the capacity and direct encouragement and support to create workplaces that offer HIV education, promote counseling and testing, reduce stigma, and provide benefits and access to services for workers and their families living with HIV/AIDS. This project will fill that gap in key workplaces.

ACTIVITIES AND EXPECTED RESULTS:

Solidarity Centre will carry out two separate activities in this program area.

ACTIVITY 1: Be Faithful, Be Tested, Be Union

The "Be Faithful, Be Tested, Be Union" project will address the high rate of HIV/AIDS among South Africans through a strategy that focuses on prevention, concentrates on workplaces, and enlists unions, businesses, and communities. The project will assist four large and influential South African unions, and the workplaces and communities in which their members labor and live, to achieve wide-reaching HIV prevention outcomes. The project will address four critical HIV-related areas: counseling and testing, gender norm transformation, workplace policy development and implementation, and increased institutional HIV-related capacity through targeted technical assistance. Over the life of the five-year project, activities will be implemented in five provinces. FY 2009 funding will ensure that activities reach Limpopo and Eastern Cape provinces. All are areas of the country in which either the Solidarity Centre or EngenderHealth have previous program experience and/or in which the project's union partners have large memberships, extensive field operations, and substantial employer contacts.

The project will benefit from the strength of project partners with proven South African experience in critical areas, such as HIV/AIDS programming, gender norm transformation, social mobilization skills for worker and community outreach, and workplace advocacy and policy negotiation. The Solidarity Centre and EngenderHealth have offices and ongoing HIV/AIDS programs in South Africa, as well as significant experience managing PEPFAR and other U.S. Government-funded programs. As a result, these organizations are very familiar with HIV/AIDS technical areas and interventions, program implementation and management of large-scale projects, reporting, grant regulations, and related issues. The "Be Faithful, Be Tested, Be Union" project will harness the trade unions' highly developed and effective organizing and mobilization skills to address key elements of HIV prevention, as well as make use of union infrastructure and networks at the local, provincial and national levels. The project will contribute to all four key priority areas identified within the South African Government's HIV & AIDS and STI Strategic Plan for South Africa 2007–2011. These are: 1) Prevention, Care and Support; 2) Research, Monitoring and Surveillance, and; 4) Human Rights and Access to Justice.

ACTIVITY 2: Gender Norm Transformation

Gender norm transformation among the primary target audience—male workers—is one of the project's cornerstones. The project will assist union members in promoting faithfulness and partner limitation, as well as other HIV prevention strategies through gender norm transformation and skills-building techniques based on EngenderHealth's Men As Partners (MAP) methodology. The MAP program is unique in allowing men and women to participate in a reflective process that explores how gender inequities and rigid messages about masculinity contribute to HIV, sexually transmitted infections (STIs), unintended pregnancy, gender-based violence, violence against girls and boys, and other health and social-related problems. This process employs a "transformative approach" that allows men to challenge harmful gender norms and embrace alternative models of masculinity that support their own health and that of others. MAP uses programmatic strategies at many levels to effect changes in men's attitudes, values and practices; employs an "ecological approach" to individual and community behavior change; and reaches individuals at various points in their daily life, including: Workshops aimed at changing individuals' knowledge, attitudes and behavior; community awareness raising events to mobilize men to take action in their own communities and with their own families; community action teams (CATs), which are collectives of gender activists promoting change in their communities, sensitization sessions and skills-building workshops with the health care sector to increase men's utilization of HIV testing and care and other health services; collaborations with other non-

Activity Narrative: governmental organizations to build their capacity to implement equivalent MAP programs; and advocacy efforts for increased governmental commitment to promoting positive and constructive male involvement.

Program Area: Sexual Prevention: Other sexual prevention

Budget Code: HVOP

Program Budget Code: 03

Activity ID: 13690.22605.09

Planned Funds: \$0

Activity System ID: 22605

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Qualitative work will be done on population-specific behavioral, gender and structural risks in the target populations. This will inform interventions to address norms and identified high-risk behavior. HIV education programs will address these issues in detail. Targeted and gender focused activities will be run for men as a way to address stereotypes and gender imbalances. Partnership with Alcoholics Anonymous (AA) and other interventions for alcohol abuse will be established to address risk between alcohol and HIV. The Bree street taxi rank center will expand alcohol and HIV services to taxi operators. The construction industry will also be specifically targeted as part of group of people most at risk population.

Partners and families of these high-risk populations will be engaged and included where possible through structured interventions. Counselors and nurses will be provided with necessary training and information sessions to equip them to deal with these issues. A basic program evaluation will be implemented in the screening for substance abuse, offering referral to services to quantify the contribution of substance abuse to HIV risk in these populations.

The sexual prevention program will mainly be provided in the workplace and in partnership with trade unions, employer organizations and other community organizations. Training on peer education will be provided to employees of small and medium enterprises (SMEs) and other organizations in the communities. Nurses and counselors will undergo in-service trainings and debriefing sessions on a regular basis. The Aurum social worker will be responsible for debriefing the project team. Two team building activities will be conducted during the year. These will be done to promote staff wellness and better integration of activities across the Aurum project. Managers, human resources managers and trade union officials of SMEs will be trained on policy development, stigma, gender and discrimination. The Aurum project will further expand its services to private nursing schools targeting student nurses and tutors.

The HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011 prevention target is to reduce the national HIV incidence by 50% by 2011. Aurum's other sexual prevention activities are intended to contribute to the reduction of HIV incidence among young people. Objective 1.2 under Goal 1 of the HIV & AIDS and STI Strategic Plan is to accelerate programs to empower women and educate men and women (including boys and girls) on human rights in general and women rights in particular. The other prevention activities will specifically provide educational and information sessions on gender issues with the aim of empowering women in the workplace. Women need to be empowered in order to be able to say no to gender violence and be able to negotiate safe sex. At the same time men must be able to deal with empowered women and reduce gender stereotypes. Objective 1.7 is to build AIDS competent communities through tailored competency processes. The SME project continues to provide HIV and AIDS services to SMEs in the workplace. These services are tailored for the employees of SMEs and aim to promote HIV prevention. Goal 2, objective 2.4 is to increase the rollout of workplace prevention programs for workplace interventions. More SMEs will be targeted in FY 2009. Partnerships with trade unions and employer organizations will be strengthened in order to reach as many SMEs as possible. There will be greater emphasis on the construction industry.

Objective 2.7 is to develop a comprehensive package that promotes male sexual health. The STI clinic that will be established in FY 2008 at Bree street taxi rank will be strengthened to include activities to promote gender specific sexual health for males. The clinic is intended for taxi operators and associated staff. A targeted gender specific intervention for the taxi operators will be initiated. The majority of people in the workplaces that the Aurum project supports provide services to men. This has allowed men to access HIV services. Employed men normally find it difficult to access HIV services especially in the public sector. The HIV education is being strengthened to specifically address gender issues and empower men to deal with empowered women. Qualitative work on male norms and risk behavior will inform these interventions.

SUMMARY:

This activity will building on the existing program components (care, treatment and TB-HIV) to include a prevention activity, integrated into existing services. Aurum currently provides services in three sectors: public, private and NGO. This funding will allow Aurum to address prevention awareness and promote behavior change among the target populations, many of whom are at high risk (prisoners, refugees, miners and other mobile populations), including prevention messaging for people in the care and treatment program.

As per the South African Government ABC strategy, Aurum will address all these aspects, including messaging and training that promotes the correct and consistent use of condoms at South African government clinics, GP clinics and NGO sites. Aurum will continue to develop messaging for specific target groups such as young males, young women, pregnant women, mobile populations, and other target groups identified as being at risk in conjunction with other expert organizations. Aurum will emphasize messages that promote healthy choices regarding sexual behaviors and avoiding risky behaviors, especially concurrent multiple partnerships. Emphasis will be placed on avoidance of drug and alcohol abuse, delaying sexual debut and addressing transactional sex. One of the focus areas of this program is gender with a particular focus on addressing male norms and behaviors. Male circumcision will be encouraged within the context of local policy and guidelines. Aurum is working with one corrections facility and aim to be working with approximately four additional prison facilities in the next year. In one of the supported NGO facilities, based in central Hillbrow, Aurum is targeting homeless populations and street youth. The primary target populations are men, women, youth, prisoners and other most at risk populations (MARPs). For patients currently enrolled on the program (HIV-infected patients) messages about HIV prevention are continuously emphasized.

FY 2008 represents the second year of activity of the SME project which has a significant focus on prevention activities. The partnership with City of Johannesburg has enabled the establishment of a fixed site within the Bree Street Taxi Rank. In FY 2008, Aurum plans to undertake targeted prevention activities

Activity Narrative: involving taxi drivers at a number of taxi ranks in the three targeted provinces. Attention will be paid to intensifying prevention activities in these groups through the syndromic management of STIs, peer education and active screening and counseling for substance use/abuse. This will include venue-based interventions aimed at targeting substance abuse and other risk behavior.

BACKGROUND:

Aurum supports activities which reduce the transmission of HIV through engaging target populations to provide messaging that encourages positive choices around sexual behaviors. The target population currently services with HIV care and treatment services are poor, underserved, and mobile. In partnership with ReAction! Consulting, another PEPFAR partner, community messaging is delivered to communities in the vicinity of NGO clinics in Mpumalanga through door-to-door campaigns. Utilizing the experience and tools from this facility, Aurum will expand its prevention activities in the other settings currently supported by Aurum. Health care workers that work in government clinics, GP clinics and NGOs will receive training from ReAction! Consulting in order to provide support in these activities.

The mining sector is a key platform to reach men. Stepping Stones is a workshop series designed to promote sexual and reproductive health. It addresses questions of gender, sexual health, HIV and AIDS, gender violence, communication and relationship skills. Stepping Stones has been shown to reduce high risk behavior and HIV incidence in a program in Africa. Aurum intends using this program in both the mining setting and in the prison population.

The SME Project targets workers in small, micro and medium sized companies, including market traders and taxi drivers who previously did not have access to HIV prevention, counseling and testing and treatment services due to incompatibility of their working hours with the operating hours of the public health facilities and the fact that the majority of SME employees do not have private health insurance. In placing services within taxi ranks and markets, partners and dependents of SME employees will also have access to these services.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Targeted Training to Specific Groups

Men will be targeted, especially the large prison populations supported by Aurum, and in mining settings. Messages to men will be developed and training provided promoting behavior change, and addressing cultural norms of manhood and masculinity. This will be done in partnership with other PEPFAR partners. This includes messages to young men encouraging them to use condoms, reduce the number of sexual partners and avoid risky behavior. Messaging to young women, who make up the bulk of the current population served with Aurum's care and treatment services, will empower them to be involved in decision-making regarding sexual choices, requiring their partners to use condoms, empowering them to use female condoms, delaying sexual debut and avoiding gender violence. Young women will be encouraged to develop a positive self-image.

Aurum currently offers a number of courses that cover positive living and information on HIV prevention. The training, provided by Aurum social workers and a psychologist, will be offered to incarcerated communities, nurses, lay counselors and peers. The trainees will become implementers and peer educators. The training curriculum includes understanding the challenges of disclosure, how to help clients disclose safely, and how to address HIV and AIDS stigma, and is offered twice a year. In addition a module on Prevention with Positives will be included in the training provided to the counselors in the SME fixed and mobile sites as well as the health care workers and peer educators.

ACTIVITY 2: Promotion of Male Circumcision as a Method of Reducing Transmission

Based on existing evidence, male circumcision has been shown to have an effect on the rate of HIV transmission. Aurum plans to undertake a situational analysis to understand the beliefs, attitudes and practices of male circumcision to understand the barriers for widespread circumcision implementation in limited a number of industrial and community sites. In settings where it is possible to provide circumcision, Aurum will provide training to ensure safe methods and encourage males to opt for this procedure. Activities will not be conducted without consent from the National Department of Health.

ACTIVITY 3: Prevention and Treatment of Sexually Transmitted Infections (STIs)

Aurum will continue to provide training to health care workers on the syndromic management of STIs as a means of preventing the transmission of HIV, as many of the populations currently served with HIV care and treatment services are at high risk. Aurum will encourage the use of male and female condoms to prevent the spread of STIs. In FY 2008 the SME Project will focus on the issue of identification and treatment of STIs in taxi drivers and will provide these services within the Bree Street taxi rank.

ACTIVITY 4: Education to Prisoners and Miners on Gender

Various organizations that are involved in gender issues and a framework will be established to provide education and programs to males based at the corrections facility and a company within the mining industry. One of these is the Stepping Stones workshops to be implemented with peer groups. The 14 sessions for the separate peer groups cover the following topics: introduction for the group and development of group skills; Images of Men and Women: Exploration of Ideals and Realities; Images of Sex and Sexual Health Problems; Exploration of Love: What We Look for and Expect to Give; Exploring our Sexuality: Problems and Concerns about Sex and Reproductive Health; Conception and Contraception; STDs and HIV; Safer Sex; Gender-based Violence; Let's Look Deeper: Why we Behave in the Ways We Do; Assertiveness Skills: Part 1; Assertiveness Skills: Part 2; Dealing with Loss; Let's Prepare for the Future: Future Decisions and Changes.

Activity 5: Prevention with Positives

People that are identified as being HIV-infected through counseling or testing will be rapidly assessed for additional risk behaviors. Once these have been identified the counselor will negotiate with the HIV-infected

Activity Narrative: client around methods of reducing the risk of transmitting the infection to other people or of becoming infected with additional strains of the virus. The session will end with the client either being referred for additional support or arranging a follow-up session with the counselor. This service will be provided at all fixed and mobile sites as well as within the workplace and in occupational clinics within the SME project.

Activity 6: Venue-based Interventions targeted at reducing substance abuse and other risky behavior. In FY 2008, Aurum will commence venue-based interventions that will target nightclubs, shebeens, taxi ranks and sports venues and will involve one on one encounters where a rapid assessment will be made of an individuals risk behavior such as substance and alcohol abuse. The counseling session will aim to identify the risk that that behavior places the individual in terms for transmission of HIV and other STIs and will involve referral of the individual for further assistance.

Mechanism ID: 416.09	Mechanism: N/A
Prime Partner: Broadreach	USG Agency: U.S. Agency for International Development
Funding Source: GHCS (State)	Program Area: Sexual Prevention: Other sexual prevention
Budget Code: HVOP	Program Budget Code: 03
Activity ID: 13699.22614.09	Planned Funds: \$0

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

SUMMARY:

In FY 2009, funding is requested to maintain and build on activities described in the FY 2008 COP. BroadReach Healthcare (BRHC's) approach will be to strengthen prevention within the scope of its existing programs and activities by selecting appropriate and targeted messages to deliver sustained behavior change. Selected interventions with general populations outside of treatment settings will be undertaken to address clear gaps and needs in prevention programming in the catchment areas of BRHC sites.

BACKGROUND:

BRHC approaches all of its work with the concept of developing scalable solutions which can help to bolster the South African Government's (SAGs) HIV/AIDS efforts across the country. To do this, BRHC breaks down the problem into demand-side and supply-side. Demand-side addresses the patients and communities to ensure that solutions are in place to mobilize, generate demand for testing, provide education including treatment literacy, provide ongoing adherence and psychosocial support to PLHIV and the affected/unaffected community members. BRHC generally does this by training and capacitating community organizations such as PLHIV support groups, faith-based organizations (FBOs), non-governmental organizations (NGOs) and SAG facilities to carry out these activities. The supply-side addresses the provider of services such as hospitals, clinics, healthcare workers, labs, pharmacies, etc. and focuses on solutions such as training, service delivery integration and re-engineering, operations improvement, equipment and infrastructure upgrade, etc. The goal is to build capacity in a scaleable way to address the demand for HIV/AIDS services. It is BRHC's philosophy that solutions cannot be scalable if they do not address both demand and supply sides and work to balance both.

ACTIVITY 1: Prevention Training (HCD)

Training in the provision of other sexual prevention services will be extended to community-based organizations (CBOs), NGOs and community health workers in the catchments areas of BRHC-supported SAG sites. Training will aim to alleviate capacity building and human resource constraints faced by the local NGOs, CBOs and community health workers with which BRHC builds partnerships.

ACTIVITY 2: Strategic Prevention Partnerships with SAG and NGOs/CBOs

BRHC will partner with district and provincial Directorates of Health Promotion, Directorates of Social Mobilization and HIV/AIDS/STI/TB (HAST) units to support and strengthen existing prevention programs in the districts where BRHC supports SAG sites in the provision of antiretroviral (ARV) treatment. Technical assistance will be provided to ensure coordinated, multi-level prevention programming is provided at the scale and intensity required to achieve behavioral objectives in specific populations. Building capacity to design, implement, monitor and evaluate comprehensive prevention programming will lead to sustainable programming. Before launching new prevention initiatives or developing new materials, BRHC will conduct a thorough review of materials and activities already at local, provincial and national levels. BRHC will also ensure any interventions are evidenced-based, draw on best practices in South Africa and the region, and are consistent with the latest epidemiological evidence of the drivers of HIV transmission in that geographical area. Formative assessments and situational analysis will be used to identify any missing data on local context. We will provide added value by identifying gaps (geographical, target population, technical, human resource) and filling them through partnership building and technical assistance.

Community health workers (lay and volunteer) present an ideal opportunity to bring prevention messages and materials directly into the home, while also providing a direct linkage to screening for HIV and tuberculosis (TB). BRHC will coordinate with local NGOs and CBOs to provide the deep penetration and coverage of prevention messaging in critical areas. Finally, BRHC will assist NGO and CBO programs to standardize prevention messages and align local activities with national mass-media campaigns and education programs.

BRHC is launching a new large scale comprehensive community mobilization program within which provision and support of wellness at community level is the key priority. Prevention will be a central tenet of this model. This model will be scaled up through new programs such as workplace, door to door campaigns, engagement of local traditional leadership and traditional healers, improved referral systems for social welfare services and partnering with local agencies to jointly provide as comprehensive a set of care interventions as possible. The community mobilization model will become the large scale distribution platform for an array of prevention programs now aimed at the general public that BRHC is in the process of developing.

Under the above described programs BRHC will continue production and dissemination of existing IEC materials including condom leaflets, patient education videos and patient education flipcharts. The patient education videos and flipcharts include various prevention messages within the context of comprehensive care and treatment services. Messages emphasize the important of testing and disclosure, couples counseling and testing, prevention messages for positive people and sero-discordant couples and positive living.

BRHC is currently embarking on an evaluation of risk perceptions and vulnerabilities of our current constituents to guide us in determining new, innovative and impactful prevention interventions that actually work. These will be scaled up and continuously evaluated for efficacy. BRHC has also been requested by North West province to assist them in developing and rolling out a prevention strategy for their high risk populations and this will be a signature initiative in FY 2009.

Activity 3: Condom Distribution

Activity Narrative: Increasing condom availability and condom distribution networks will be an important component of all BRHC other sexual prevention activities. Condom distribution will be coupled with comprehensive prevention messages (ABC), and education on correct and consistent condom use as a method of preventing HIV infection. BRHC will work with SAG sites and distribution centers to ensure a consistent supply of quality condoms, addressing issues of proper handling and storage where necessary. Community mobilization activities involve male and female condom demonstrations, and involve the dissemination of informational materials on proper condom use.

Activity 4: Prevention Integration

In FY 2009 prevention integration activities will be expanded to include other departments and hospital wards including ante-natal clinics, inpatient medical wards, TB clinics, and maternal and child health services. Prevention messages will be culturally appropriate and address the risks of multiple, concurrent partnerships and abuse of alcohol and drugs. Women in their twenties will also be targeted for messages around transactional and cross-generational sex. New prevention messages will be developed to assist patients who have been successful on treatment for a long period of time to prevent complacency. BRHC will use quality assurance/quality improvement methodologies to monitor the consistency and accuracy with which prevention messages are integrated into clinical encounters. Activities will also include referrals for counseling and testing and for the diagnosis and treatment of sexually transmitted infections.

SUMMARY:

BroadReach Healthcare (BRHC) supports integrated ARV services that include doctor consultations, lab testing, adherence support, patient counseling, prevention, remote decision support, quality assurance (QA), and data management. BRHC's emphasis areas are capacity building (major); with minor emphasis on strategic information and human capacity development (training). Primary target populations include adolescents, adults, and people living with HIV.

BACKGROUND:

The BRHC PEPFAR program began in May 2005 and now operates across five provinces. BRHC is currently supporting approximately 5000 individuals directly with care and treatment and 15,000 indirectly. Prevention is a new activity area for BRHC. BRHC will endeavor to understand SAG priorities around prevention, including those articulated in the new National Strategic Plan (NSP), and formulate site-specific prevention plans that reflect SAG priorities and facility needs. BRHC prevention activities will take two forms: first, as stand alone prevention interventions; and second, as integrated interventions within BRHC treatment program activities. In response to site specific needs, BRHC prevention activities will support ongoing prevention activities within SAG facilities, as well as support new initiatives that fill gaps in prevention priorities identified by the site and SAG guidelines.

ACTIVITIES AND EXPECTED RESULTS:

To ensure that patients are armed with accurate and practical HIV prevention strategies, BRHC will carry out the following activities:

ACTIVITY 1: Prevention Training (HCD)

BRHC will provide HIV and AIDS prevention training to its network of healthcare providers including doctors, nurses, pharmacists and other healthcare professionals, as well as public sector health professionals at its partner sites through a variety of initiatives including remote clinical decision support, telemedicine, web-based training, didactic training, and clinical mentoring from experienced clinicians. More specifically, the topic of HIV prevention is covered in the three day training for Nurses and Lay Counselors; in the five day University of KwaZulu-Natal training for Professional Nurses; the 10 module HIV/AIDS Clinical Training online course for Doctors; and the 1-3 day HIV Treatment Literacy training for ARV Coordinators and Counselors. In addition BRHC will integrate a prevention module into the one day quarterly Adherence Training for BRHC patients.

ACTIVITY 2: Strategic Prevention Partnerships (Outreach)

BRHC will form strategic partnerships with local CBOs and FBOs and companies that are actively engaged in prevention activities in the BRHC catchment area in order to support existing activities that are aligned with SAG policy, and to help create new programs should any gaps exist. Support to CBOs/FBOs may include provision of resources to support approved prevention activities (human resources, funds, equipment). BRHC will also leverage these strategic partnerships for condom distribution and educational materials on the proper use of condoms.

ACTIVITY 3: Condom Distribution

BRHC will distribute condoms and materials on proper condom use through a variety of channels. Distribution channels will include GP offices (~50 outlets); public sector hospitals and affiliated clinics (~100 sites); and through the BRHC IEC program to patient support groups (~10). As stated previously, BRHC will also provide condoms to partner CBOs/FBOs that are active in prevention activities in the community. The BRHC IEC team will run prevention outreach campaigns to local companies and engage them in prevention activities such as the distribution of condoms and prevention messages to employees.

ACTIVITY 4: Prevention Integration

BRHC will integrate prevention activities and messages into its treatment program activities. This will be

Activity Narrative: accomplished in two principle areas: 1) Prevention with Positives (PwP) in the Clinical Setting; and 2) Prevention in the Counseling Setting. PwP activities will be coordinated through BRHC public sector sites and GP offices, and will involve the distribution of targeted prevention messages [printed materials] for HIV-infected individuals by the BRHC IEC team; prevention education sessions for patients, buddies and family members conducted by the BRHC IEC team; and condom distribution at all clinical service outlets. Second, BRHC will also utilize the CT setting to distribute targeted prevention materials [printed materials] and will review counseling guidelines to ensure that prevention messages are delivered during counseling sessions. This will be made available at all sites where BRHC supported CT services are offered. Condoms will also be supplied and made available to individuals undergoing counseling and testing services.

These activities directly contribute to the PEPFAR 2-7-10 goals by attempting to prevent new infections.

Table 3.3.03: Activities by Funding Mechanism

Mechanism ID: 8682.09	Mechanism: N/A
Prime Partner: Education Labour Relations Council	USG Agency: HHS/Centers for Disease Control & Prevention
Funding Source: GHCS (State)	Program Area: Sexual Prevention: Other sexual prevention
Budget Code: HVOP	Program Budget Code: 03
Activity ID: 19446.22759.09	Planned Funds: \$480,598

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

ACTIVITY 1: Distribution of Male and Female Condoms

Participant reactions in training workshops indicate a real enthusiasm and genuine curiosity about female condoms. In many instances, the Education Labor Relations Council Prevention, Care and Treatment Access (ELRC-PCTA) workshop participants are exposed to female condoms for the first time. Given the positive reactions particularly from female educators, in FY 2009, the ELRC-PCTA will increase its procurement of female condoms. Union partners will also engage in campaigns to promote the use of female condoms among their members. The ELRC-PCTA anticipates that the greater availability of female condoms will increase usage among women and reduce reliance on male condoms, thereby promoting long-term behavior change.

As such, the curriculum for master trainers will be expanded to include training on condom storage, supply management and brand preference. Specifically, master trainers will be equipped with tools on tracking defective condoms and strategies for selection of condom distribution sites. In addition, the training module on prevention through other behavior change will be strengthened by adding peer education techniques on how to identify high-risk behavior and how to transfer knowledge on condom negotiation. Building off of the National Association of Trade Union's (NATU's) success in KwaZulu-Natal, the ELRC-PCTA will encourage other unions to negotiate with provincial Department of Education (DOE) representatives on distribution of condoms to learners 18 years and older.

SUMMARY:

This activity is a component of a comprehensive prevention education, care and treatment program for small to medium enterprises (SMEs) with 20-200 employees and other workplaces in South Africa. It includes activities in CT, Policy Analysis and Systems Strengthening, and Abstinence and Be Faithful. With an estimate of 12.3 million learners in South Africa, served by 386,600 teachers and more than 26,000 schools managing a response to HIV and AIDS across the education sector requires a comprehensive and substantial effort. Efforts must include a focus on both learners and educators if the impact of HIV is to be mitigated; and it must be recognized that any efforts focused on learners via the education sector cannot succeed without educators also being addressed. The Education Labour Relations Council (ELRC) will implement a comprehensive HIV and AIDS workplace program for the education sector of South Africa.

BACKGROUND:

ELRC is a statutory council which serves the South African education sector nationwide and is comprised of the public sector, the national and provincial departments of education, the private sector and teacher unions representing all primary and secondary public school educators. The ELRC works as an interface between the Department of Education (DOE) and labor organizations for labor peace and a vision of contributing towards the transformation and development of a quality South African public education system. A 2005 Health of Our Educators Report found that 50% of all teacher attrition is linked to complications of HIV and AIDS, resulting in 4000 teachers being lost each year due to AIDS. The general prevalence rate among educators was found to closely parallel that of the national population with an estimate of 12.7% of all DOE employed educators living with HIV. Based on the findings of this report and with FY 2007 and FY 2008 PEPFAR funding ELRC will implement a country-wide project in all 9 South African provinces to educators living with and affected by HIV and AIDS. The target group for this project is teachers, including those living with HIV or those who have family members living with HIV. This is a workplace intervention with minor emphasis areas in information, education and communication, community mobilization, and the development of linkages and networks. A particular focus of this project is the greater involvement of people with AIDS. ELRC will work with HIV-infected teachers to ensure they can serve as role models to fellow teachers and to learners.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Distribution of male and female condoms

ELRC will work with its four sub partners to ensure that 150 physical sites in the education sector are established to distribute male and female condoms. This will ensure that male and female teachers can assess condoms in their workplace. In addition to condom distribution points, IEC materials will be distributed focusing on correct and consistent condom usage and condoms as a HIV prevention strategy.

ACTIVITY 2: Development of Workplace Prevention Education

PEPFAR funds will be used to support the development of a comprehensive education sector prevention program targeting teachers and education sector union members. Funds will also be used to support workplace prevention education programs targeting the health and education sector. With funding from PEPFAR, these workplace programs will conduct training sessions for employers, senior management, senior union leadership and employees on the basic facts of HIV transmission, prevention, and impact of HIV and AIDS on the industry. Peer educators for unions in the education sector will receive ongoing training on prevention, condoms as an HIV prevention strategy, PMTCT, stigma and discrimination (a key legislative issue), counseling and testing, palliative care, and access to treatment. The goal of the peer education is to increase workers' knowledge about HIV and AIDS prevention, care and treatment with the purpose of changing their attitudes and practices and modifying behavior to prevent HIV infections and reduce violence and coercion (key legislative issue).

ACTIVITY 3: Training of peer educators for teachers unions

Peer educators from 3 teachers' unions will be identified and trained peer educators. Training will focus on

Activity Narrative: all aspects of HIV prevention. A structure will be set up to support the peer educators and ensure quality assurance for the one-on-one interactions and community mobilization activities that they will be expected to participate in.

ACTIVITY 4: Community Mobilization

The newly trained peer educators will reach teachers in their unions with prevention messages. The peer educators will distribute IEC materials, organize mobilization events, campaign messages and conduct one-on-one interactions with teachers and/or their families.

Note that for targets, the numbers of people reached with prevention messages are counted under AB rather than OP.

This activity will directly contribute to PEPFAR's goal of preventing 7 million new infections. These activities support the USG Five-Year Strategy for South Africa by expanding and improving quality AB prevention programs.

Activity Narrative: ACTIVITY UNCHANGED FROM FY 2008

Plus up funds will be used to recruit a Prevention Advisor with expertise in AB and OP program areas. HVAB also includes funding for this advisor. This new activity is required to strengthen the prevention portfolio. The incumbent will expand and strengthen OP activities, strengthen gender programs, develop activities aimed at substance abuse and HIV/AIDS, and develop and implement interventions in high transmission areas. The Advisor will ensure that rigorously informed messaging is developed and disseminated in PEPFAR/South Africa programs. The Advisor will also ensure that prevention activities conform with the USG guidance, SAG policies and the National Strategic Plan.

Activity ID: 2920.22769.09

Planned Funds: \$373,799

Activity System ID: 22769

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

SUMMARY/BACKGROUND:

Recognizing the need for cost effectiveness, EngenderHealth South Africa (EHSA) will integrate disparate activities associated with abstinence and being faithful (AB), other sexual prevention (OSP), male circumcision (MC) and counseling and testing (CT) programs. For OSP, linkages will be made with CT by offering CT services directly to individuals reached through EHSA's OSP partners in communities, including police stations.

ACTIVITY 1: Tertares

Activity one will remain the same; however, messaging will emphasize culturally significant issues, such as linkages between HIV, AIDS, multiple concurrent partnerships (MCP), MC, and alcohol abuse. As well, the number of sub-agreement partners will reduce to seven, with funds being diverted for scale-up of the Police as Partners (PAP) Initiative.

ACTIVITY 2: S-Cage Initiative

This will remain the same, however messaging will be modified. Similarly, linkages between HIV, AIDS, MCP, MC, and alcohol abuse will be emphasized. EHSA will also implement programming for "most at-risk populations" in a cross-border site in Mussina (Limpopo). EHSA will continue building the capacity of a Mussina-based CBO, targeting migrant workers, truck drivers, and young commercial sex workers with MAP messages. This intervention will combine peer outreach, condom distribution, and information sessions on sexual health, working with the border clinic. Finally, the number of sub-agreement partners will reduce to one.

ACTIVITY 3: Police as Partners (PAP) Initiative

EHSA's PAP Initiative will be scaled up, capacitating additional South African Police Service (SAPS) staff and volunteers to implement MAP programs in their communities. Target audiences for this intervention include SAPS personnel, their families and members of communities surrounding police stations. The PAP initiative also focuses on reaching men in their 30s and above, recognizing the beneficial aspects of reaching this population with messaging about multiple concurrent partnerships, consistent condom use, cross-generational sexual relationships, as well as raising gender-equitable children. Via training of trainers, EHSA will work with at least 12 local police stations (specifically the community policing forums and crime victims units) throughout Gauteng, Limpopo, Mpumalanga, Northwest and Western Cape provinces. EHSA will facilitate MAP TOTs for SAPS personnel and volunteers. After the TOTs, participants will form "community action teams" (CATs), developing community mobilization activity plans; including activities such as marches, rallies, family days, workshops, intergenerational dialogues, door-to-door campaigns, among others. EHSA will also work at the national level of the SAPS, encouraging support for the SAPS-initiated "Men for Change" (MFC) program which offers funding to local police station for community mobilization activities on male gender norms.

ACTIVITY 4: Transformational Social Development (TSD)

Activity four will be modified to incorporate all EHSA government partnerships. Currently, EHSA is partnering with the Department of Social Development in the Western Cape, the Northwest Department of Education, and the City of Johannesburg, among others. EHSA will continue providing capacity-building assistance to these and additional government entities based on need. The TSD program will offer technical assistance in the MAP program, as well as other issues (e.g. monitoring and evaluation, non-governmental organization management, etc), to both government personnel and community-based organizations (CBOs).

ACTIVITY 5: Clinic-Street Outreach (CSO)

Activity five will remain constant, allowing EHSA staff to conduct direct outreach reaching various men/boys. A majority of effort will reach clients at STI clinics; however, other street outreach will also target other areas, including informal settlements where CT drives are occurring. With a focus on inner-city Johannesburg, refugees/displaced persons will also be reached.

ACTIVITY 6: Advocacy

Activity six will remain constant, however, greater emphasis will be placed on EHSA's role in co-chairing the MenEngage Alliance of South Africa. Launched in late 2007, the MenEngage Alliance is a collective of men and gender NGOs working to transform male gender norms. Via this collective, EHSA will lead efforts to advocate among government agencies for sound policies which promote the health and well-being of all those living in South Africa. Advocacy activities may include convening the MenEngage Alliance to formulate an advocacy agenda, serving on national task forces, conducting media outreach to educate and mobilize the public, attending police forums, to name a few activities.

ACTIVITY 8: National Campaigns

EHSA will continue a new social marketing campaign -The Sisonke Campaign - engaging celebrity male artists (musicians, actors, professional athletes) to promote positive male gender norms linked to sexual health, with emphasis on reducing xenophobic and homophobic attacks, especially as they relate to sexual violence and HIV. Through this visibility campaign, EHSA will also develop OSP messages specifically targeted designed for the 2010 World Cup, appealing to boys and men via football analogies.

SUMMARY: The Men as Partners (MAP) Program works to reduce the spread and impact of HIV and AIDS

Activity Narrative: and gender-based violence (GBV) by challenging unhealthy gender-related beliefs and attitudes, such as equating masculinity with dominance over women and pursuing multiple sexual partners. The MAP program uses various strategies, including skills workshops, community mobilization, health service provider training, media advocacy and public policy advocacy efforts to achieve its goal of gender norm transformation to reduce the spread of HIV and AIDS and GBV. This transformation will assist men and women to achieve behaviors such as abstinence, being faithful to one partner, correct and consistent condom use (CCC), reducing the numbers of sexual partners, treating women as equals, and circumcision. MAP targets adults, people living with HIV, religious leaders, refugees, teachers, CBOs, FBOs, and NGOs.

BACKGROUND: Since 1998, EngenderHealth has received USG funding to support CBOs, FBOs and the South African Government to implement MAP. EngenderHealth's core strategy is conducting skills-building workshops on gender norm transformation. Through these workshops, (over 100), MAP develops "transformation agents" (TAs), peer educators who spread MAP messages and skills from the workshops to others in the communities. MAP encourages men to take action in their communities, challenging other men who are practicing behaviors that put them and their partners at risk for HIV and AIDS and GBV. MAP also sponsors community education events and the formation of "community action teams" (CATs). EngenderHealth runs the "I am a Partner" campaign, focusing on defining what men can do be more gender equitable to reduce the spread and impact of HIV and AIDS. Working through national campaigns, EngenderHealth engages national private sector, media and government partners to increase the effectiveness of MAP. EngenderHealth coordinates provincial MAP networks, creating a space for lessons among gender activists to be shared, and formulating a platform for national advocacy efforts, such as participating in the development of the South African National Strategic Plan in HIV/AIDS.

ACTIVITIES AND EXPECTED RESULTS

ACTIVITY 1: Tertiary Institutions EngenderHealth will continue to build the capacity of tertiary institution peer education programs to integrate gender norm transformation messages into HIV and AIDS programs of tertiary institutions peer education programs - specially with five institutions in the Western Cape, as well as at least three additional institutions in Gauteng province. These trainings will be offered on a quarterly basis, and at least five staff and TAs will be trained. Emphasis will be placed on skills-building of TAs to reach students on campus, as well as learners in local communities, with messages about CCC, the reduction of sexual coercion, reducing the number of sexual partners, and the prevention issues related to male circumcision. Beyond the training, EngenderHealth will assist in providing ongoing capacity-building assistance on a one-on-one basis, offering on-site and telephonic assistance on a range of management and content issues linked to gender norm transformation and HIV and AIDS.

ACTIVITY 2: School Community Action for Gender Equality EngenderHealth will continue to capacitate at least four NGOs working with teachers and learners in school-based settings, focusing on the integration of gender norm transformation messages into HIV and AIDS programs. This program will work in priority communities in Gauteng, and KwaZulu-Natal (KZN) Provinces (in KZN, working with PEPFAR partner Mphilonhle). As well, EngenderHealth will work with school-personnel and student leaders to develop their capacity to link MAP messaging into the school curriculum. Similar trainings will be offered on a quarterly basis to staff and volunteers from about 20 selected NGO partners, tailoring specific knowledge and skills to the community-based partner. Typically, these trainings will have 20-30 participants and be 4-5 days. Similarly, more tailored capacity-building assistance will be offered to all the partners in person and telephonically. To help sustain this initiative, major support will also come from other development partners, including private sector entities. Currently, public-private partnerships opportunities are being investigated with the Ford Foundation (secured for NW province); De Beers Mining Company (secured for KZN province); Anglo American Mining Company (pending for KZN province), among others.

ACTIVITY 3: Capacity-building EngenderHealth will continue building the capacity of at least four NGOs, CBOs, FBOs and private sector partners to integrate gender norm transformation activities related to HIV and AIDS. EngenderHealth will partner with groups based in strategic communities within Gauteng, KZN, and Western Cape Provinces. In addition, private sector partners will be engaged for such educational activities, with cost sharing options being examined. These organizations will be selected based on needs identified by public health indicators, capacity to reach community members, linkages to government funding sources, as well as willingness to integrate gender norm transformative approaches into their current efforts. Specific focus on EngenderHealth's efforts in Johannesburg will focus on working with refugees. Tailored capacity-building assistance will be offered to all the partners via one-on-one, on-site, and telephonic sessions.

ACTIVITY 4: Government/ Key Stakeholders EngenderHealth will continue building sustainable partnerships with government institutions at the national and local levels to build capacity related to integrating gender norm transformation and HIV and AIDS activities. In FY 2008, these institutions may include Department of Education, South African Police Services (SAPS), Department of Correctional Services, Department of Social Development and Department of Health. In addition, cost sharing options will be ensured to gain financial support from government institutions. The partnerships will include capacity building of specific units to carry out community mobilization activities linked to male gender norm transformation and HIV and AIDS. Similar trainings will be offered on a quarterly basis from all partners NGOs, tailoring specific knowledge and skills to the content of the community-based partner.

ACTIVITY 5: Clinical/Community Outreach EngenderHealth will continue to provide direct prevention services on comprehensive HIV messages to men in various settings, including street outreach and in clinical settings. Typically, this program will reach over 250 men and their partners per month via formal and informal talks at clinics and on the streets/parks nearby. EngenderHealth will target specific services in Gauteng. In the Western Cape, EngenderHealth will work with its partners at the tertiary institutions to conduct such talks in the clinics, as well as community outreach programming they are doing in surrounding communities, targeting students in higher education institutions and unemployed men.

ACTIVITY 6: MAP Network EngenderHealth continues to support the MAP network for information exchange and advocacy efforts. In both the Gauteng and Western Cape Provinces, EngenderHealth will host monthly meetings of its prime partners to exchange experiences and enhance programs. On a quarterly basis, additional key stakeholders representing other NGOs, CBOs, government agencies and general activists will gather to discuss issues, exchange information and develop an advocacy platform on public policies relating to gender-norm transformation, HIV and AIDS and comprehensive HIV messages, including male circumcision, for EngenderHealth's advocacy program to take forward at the national and local levels. EngenderHealth will disseminate male circumcision messaging at the community level and within the MAP network.

ACTIVITY 7: National Campaigns EngenderHealth will continue to promote comprehensive HIV messages through gender norm transformation via national campaigns. Priorities will be placed in implementing the annual National MAP Week, which motivates EngenderHealth partners to take action and host various community events raising the profile of MAP's messages. Working through

Activity Narrative: national campaigns, EngenderHealth engages national private sector, media and government partners to increase the effectiveness of MAP. Example activities during the week may include community marches and rallies, sports days, men's meetings, school debates and mass media appearances. EngenderHealth MAP staff will collaborate with other NGOs and government institutions to organize additional campaigns related to MAP messages, including 16 Days of Activism on Violence against Women; Youth Month, and Men's Health Month. BCC will be developed to motivate men to transform themselves for gender equality and challenge others men to do so as well. EngenderHealth will also collaborate with various media partners to spread MAP messages via mass media channels. ACTIVITY 8: M&E EngenderHealth staff will also continue to conduct monitoring and evaluation activities through process and impact assessments. Each event is documented, as well as knowledge and attitudinal assessments conducted of participants. In FY 2008, EngenderHealth will also finish an impact evaluation study being done in collaboration with Mpilonhle, measuring the effectiveness of MAP strategies in a rural KZN community.

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Activity six, brief motivational interviewing, will not be a focus area for the following financial year.

Having realised that workplace programs (WPP) are critical to HIV prevention and that there has not so far been optimal implementation of WPP, the South African (SA) Department of Defense (DOD) is going to make a concerted effort to achieve more than 70% implementation of workplace programs in all DOD units. More peer educators will be identified and trained. Additionally, more mechanisms for monitoring and reporting these peer educator activities will be developed. In deployment areas peer education activities will focus on topics such as alcohol abuse, multiple concurrent partnerships, mutual monogamy and responsible financial management.

Given that there are examples of successes using role playing as an educational tool, role playing and drama theatre are areas for further development in the environment of the training units. Another additional activity will be the purchase and distribution of female condoms. Members will therefore require training on the use thereof.

With the increasing demand for deployment of SA troops, the WPP will continue being implemented in the deployment areas both internal and external. There will be a concerted effort to plan for regular site visits to these deployment areas by the command cadre in order to demonstrate visible leadership support.

SUMMARY:

This prevention activity mainly addresses workplace programs and includes a spectrum of activities such as mass awareness; peer education on HIV prevention and gender equity through experiential learning and theories of behavior change in adults; substance abuse prevention; training of South African Department of Defense (DOD) members to develop and conduct prevention programs; and reducing stigma and discrimination through guided introspection about participants' sexuality, case studies about people living with HIV (PLHIV) fact sheets addressing myths, and confronting topics such as fear, stigma, isolation, discrimination and marginalization. The primary emphasis area for this activity is training, while minor emphasis will be given to information, education and communication (IEC), strategic information, workplace programs policy guidance, quality assurance and community mobilization/participation. Due to new evidence, safe male circumcision practices will be integrated as part of the HIV prevention program. Target populations include military health workers, doctors, laboratory workers, adults, people living with HIV and AIDS, and out-of-school youth within the military.

BACKGROUND:

Masibambisane is an integrated prevention, care and treatment program in the SA DOD, addressing the management of HIV and AIDS within the Department by interventions that target SA DOD personnel and their dependants. The prevention programs include mass awareness; workplace programs with condom distribution through condom containers in military units and sickbays (container supplies monitored by workplace managers); information, education and training; gender equity and substance abuse programs delivered by social workers, psychologists, occupational therapists, peers and peer educators. The program uses communication and education through a wide range of media such as pamphlets, posters, industrial theater (dramatic plays that address coping with stigma and discrimination in the workplace) and videos.

The overall activities are ongoing and in FY 2008, the activities will be continued and expanded upon by broadening the curriculum and reaching more SA DOD members. The activities are implemented in a decentralized manner in military units throughout South Africa by various role players and coordinated on a regional level by Regional HIV and AIDS Coordinators in the Masibambisane Program. A Knowledge, Attitudes and Practices (KAP) survey (SA DOD, 2006) indicates that there is an overall increase in knowledge about prevention; however work still remains on preventing risk behavior practices related to HIV infection. Community awareness and education programs include celebrations of World AIDS Day and other HIV-related international and national days, exhibitions and displays, sport and recreation activities that focus on HIV prevention and healthy living and unit competitions with HIV prevention as a focus. All HIV training packages are centrally-developed by the SA DOD HIV Advisory Committee and the Social Work Research and Development Department. Training aims are tailored to target groups (i.e. - healthcare workers, peer educators, or occupational therapists).

ACTIVITIES AND EXPECTED RESULTS:

Due to the scope of the program area, the SA DOD will carry out nine separate activities.

ACTIVITY 1: Workplace Programs

Workplace programs will be established through the training of unit commanding officers, workplace program managers and military community development committees. Workplace programs include discussions of safer sex practices with demonstrations of the correct use of male and female condoms and the distribution of condoms via workplace-manager monitoring of condom containers placed in each military unit and military sick bay. Condoms are obtained through the National Department of Health (NDOH) via their distribution mechanism. This activity will be linked with the values and ethics-based intervention in the Abstinence and Being Faithful program area and the gender equity training discussed under Activity 4 in this narrative.

ACTIVITY 2: Peer Education

This activity will focus on peer educator training and training of peers. This includes training during

Activity Narrative: mobilization and preparation for mission readiness as well as training in the operational area. Other components of this program are: knowledge and attitudes about HIV, skills required to act as peer educators, and how to run HIV peer group training. This is accomplished through adult learning. Activities include information about sexuality and occupational exposure to HIV.

ACTIVITY 3: Medical Transmission and Injection Safety

SA DOD will focus on the prevention and management of occupational exposure to HIV infection, including medical transmission and injection safety through the placement of first aid kits in all workplaces, provision of personal protective equipment, training of healthcare workers and cleaning staff on occupational health and safety, and the development and publication of relevant IEC material.

ACTIVITY 4: Gender Equity

This activity will address gender equity and HIV through gender equity training, women empowerment and men as partner projects, workshops, seminars and awareness campaigns on gender equity as well as the development and printing of IEC material in this regard. This activity will be linked with the values and ethics-based intervention in the Abstinence and Being Faithful program area and the peer education and training discussed earlier in this narrative.

ACTIVITY 5: Substance Abuse Prevention

The development of a model and strategy and implementation of a substance abuse prevention program will be the focus of this activity. This will consist of training of line commanders on the link between HIV and substance abuse and a substance abuse summit for services and divisions.

ACTIVITY 6: Brief Motivational Interviewing

Expansion of the pilot study on the use of brief motivational interviewing as a prevention strategy with a particular focus on the prevention of HIV transmission from HIV-infected individuals.

ACTIVITY 7: Information Sharing

Diffusion of innovation through attendance of PEPFAR prevention partner meetings, publications in military and peer reviewed magazines and journals and oral and poster presentations on effective and innovative programs at conferences and seminars.

ACTIVITY 8: Awareness Campaigns

SA DOD will conduct mass awareness activities at the regional level that focus on celebrations of World AIDS day and other HIV-related international and national days, exhibitions and displays, sport and recreation activities that focus on HIV prevention and healthy living and unit competitions with HIV prevention as a focus.

ACTIVITY 9: Male Circumcision

No male circumcision training or service delivery will take place without the express consent of the National Department of Health. In the absence of such approval and based on discussions with the PEPFAR South Africa team, funds could fully or partially be reprogrammed. Should the approval for safe clinical male circumcision activities be given, the following male activities are proposed:

The demand for circumcision must be matched by provision of adequate equipment and training of personnel to conduct safe, voluntary and affordable male circumcision. Increased provision of accessible safe adult male circumcision services should increase opportunities to educate men in areas of high HIV prevalence about a variety of reproductive and sexual health topics, including hygiene, sexuality, gender relations and the need for ongoing combination prevention strategies to further decrease risk of HIV acquisition and transmission.

Four main sub-activities will be included in the HIV prevention program:

- Review of policy on male circumcision in the SA DOD;
- Development of clear, consistent and accurate mass awareness messages that promote safe male circumcision within the context of broader approaches promoting male sexual and reproductive health and responsible sexual behavior;
- Capacity building of health care professionals to provide safe male circumcision services; and,
- Increasing access for the provision of safe male circumcision service delivery.

Training and messaging would be coordinated with the NDOH and with JHPIEGO, EngenderHealth, and the NDOH TBD program on male circumcision.

Program implementation will be supported and supervised through staff visits to the regions and monitoring and evaluation through the HIV and AIDS Monitoring and Evaluation Program of the SA DOD to ensure performance. Most of the activities and interventions are well established and the challenge in this regard is to expand interventions to reach an optimal number of members in the SA DOD. The activities will be scaled-up to reach more dependants; including children of military members.

Program Area: Sexual Prevention: Other sexual prevention

Program Budget Code: 03

Planned Funds: \$2,144,839

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

ACTIVITY 1: Existing training and resource materials produced during previous COP periods will continue to be produced and disseminated to at least 10,000 faith-based organization (FBO) leaders. A particular emphasis will be placed on making sure that the existing materials focus on helping FBOs address the key drivers of the epidemic, in particular multiple and concurrent partners, cross generational sex, prevailing social norms, gender stereotypes, abuse of alcohol and other substances, and perception of risk. They will be modified accordingly. The focus for FY 2009 will be on translating the materials (DVD and print manual), produced in FY 2008 around organizing for action, into five languages and, based on initial user feedback, making modifications. The materials will help FBOs to plan and implement initiatives that focus on comprehensive HIV prevention activities both for young people and adults. Particular emphasis will be placed on the key drivers of the epidemic. Soul City materials will be used to give people appropriate information to support their activities. Materials will be distributed on a demand basis to 35,000 FBO leaders nationally. A minimum of 40 training events will be held in support of these materials. Heartlines has high-level partnerships with large national FBO structures who are supportive of the development and dissemination of these materials that support their efforts to get their members to take social action particularly around all aspects of the epidemic. These structures, media as well as the Heartlines database of 15,000 leaders, and the cell/web communications platform referred to in Activity six (in the FY 2008 COP narrative) will be used to promote organized action as well as the materials and training.

ACTIVITY 2: Activity two in the FY 2008 narrative has enabled the development of a very successful partnership with the Department of Correctional Services, whereby both staff and inmates have been reached in all facilities across the country. Master training was done in the course of FY 2007 and FY 2008, and this programme has now been incorporated into the Department's core activities. In FY 2009 emphasis will be on making the materials available to the Department for ongoing use both by the Department as well as other groups active in prisons. The Department will be assisted with further training as and when necessary. Soul City will use this partnership to ensure that Soul City publications are distributed to all correctional facilities in particular those resources that support a comprehensive prevention approach.

ACTIVITY 3: The materials disseminated in FY 2008 have been well received and the results of an evaluation are being prepared. In FY 2009 emphasis will be on ensuring that schools have the materials and that they are being used. Additional training for district life skills coordinators will be offered.

ACTIVITY 4: Based on research, the youth intervention will be changed to be one that promotes mentorship. This will be a partnership with the Department of Arts and Culture as well as other non-governmental organizations (NGOs), FBOs and community-based organizations (CBOs). The change is based on the theory of positive deviancy, which shows that young people who moved out of difficult circumstances and have made positive life choices, have often been mentored by one or more people as they were growing up. The intervention will be aimed at identifying and supporting people who want to mentor youth aged 12-25 with emphasis on those in informal settlements, townships, and woman. The process of mentoring has been shown to benefit both the mentor and mentee and creates an enabling environment conducive to the adoption of safer prevention behaviors. To this end, a training manual and DVD will be produced in FY 2008. These materials will place particular emphasis on skills necessary to support behaviour change in young people, perception of risk and interrogation of harmful social norms. These will be complimented by Soul City materials that deal with multiple and concurrent partners, substance abuse and violence prevention. Mentors will also be supported by a cell web-based platform, as well as by training through FBO and other partner organizations. Through mass media partners the FBO network, government and other partners, the concept of mentoring will be promoted. Once people identify themselves as willing to mentor others, they will be sent support resources and will be networked nationally with one another as well as at a local level. They will also be supported by a minimum of one training event per province. By the end of FY 2009 the aim is to have a minimum of 35,000 people involved in a mentor/mentee relationship. A longitudinal study will be put in place at the end of FY 2008 that tracks the impact of the programme on the behaviour and norms of those that are being mentored.

ACTIVITY 5: More than 220 training sessions will be conducted with an average of 30 people per session.

ACTIVITY 6: This activity will enable follow-up for trainees, where gaps have been identified. In FY 2008, in partnership with the private sector and the SAG, Heartlines developed a technology platform that can be accessed via the web or cell phone. This platform combines the best of social networking with the best of web information applications like Wikipedia. The platform has two objectives. First, it customizes and presents information, services and contacts for each user based on his/her profile (age, language, geography, interests). Comprehensive prevention information, access to appropriate resources and services in people's areas will be included on the site, along with other information supporting testing, treatment, care and support. The second objective is to connect people and services to each other in particular geographic areas, also based on their profile. Thus, FBOs in the same geographic area embarking on similar initiatives will be connected. Similarly, youth mentors in the same area would also be connected. This platform allows for ongoing support of people and institutions reached by both Heartlines and Soul City. This platform is also a useful resource for other PEPFAR partners to scale up by providing a useful networking mechanism. The platform will also be the basis of a virtual social movement called Forgood. Due to its ability to connect with an ongoing way with users and to segment them in multiple ways, the platform also serves as a useful evaluation tool. As of August 2008, the platform had 22,000 users. By the end of FY 2009 the aim is for a minimum of 150,000 users.

SUMMARY:"Heartlines" is a values-based, media-led intervention that aims to mobilize the faith-based community in Southern Africa to prevent the spread of HIV by promoting abstinence and faithfulness, as well as decreasing stigma and increasing care for those infected or affected by HIV and AIDS. The major emphasis area is information, education, and communication. Minor emphasis areas include community mobilization/participation and linkages with other sectors and initiatives. Target populations include children

Activity Narrative: and adults, people living with HIV and AIDS, communities, teachers and faith- and community-based organizations. **BACKGROUND:** This is an ongoing activity and was first funded by PEPFAR in FY 2006. This intervention complements Soul City's existing activities; targeting faith-based organizations (FBOs) nationally using prevention messages that will best resonate with this group. It also complements the AB Soul City activities described elsewhere in the COP. Mass Media Project (MMP), a Soul City sub-partner, is implementing the project. It is an NGO set up in 2001 with seed financing and with technical support from Soul City. The MMP works with the Government Communications and Information Services as well as the Department of Education. Decreasing gender disparity especially in an FBO context is a key focus. **ACTIVITIES AND EXPECTED RESULTS:** "Heartlines" aims to revive in South and Southern Africans the positive value system that traditionally prevailed. In so doing, it will lead to the re-examination of people's norms and values. It aims to lead to the prevention of new infections, decreased stigma and increased levels of care for those already infected with HIV. It aims to mobilize at least 50 percent of all FBOs in South Africa in support of this objective. Implementation started in July 2006. All major FBO leadership have actively supported "Heartlines" to date and have pledged support for the future. FBOs will be mobilized through the provision of training materials and training. Committees in each province have been established to coordinate FBO activities and to facilitate the dissemination of materials and training. In order to create focus for mobilization a concerted period of action of 6 weeks annually has been identified. This intervention is a partnership with the Nelson Mandela Foundation, a major South African Bank and the Public Broadcaster, along with four other smaller donors. Between them, they have already contributed over \$6 million to this intervention to date. In September 2007 Soul City and its sub-partners are planning a major planning retreat to design its 5-year prevention strategy, and the USG will be important contributors to this process. **ACTIVITY 1:** Distribution of eight TV drama films and a story book for use in multiple FBO settings. The eight films and the book were produced in FY 2006 with other donor funding. They were aired at primetime across all public broadcast TV stations and were hugely popular. Each film focused on a different value: abstinence and delayed gratification, self-control, perseverance, tolerance and acceptance of difference (stigma reduction), positive parenting with an emphasis on men, forgiveness and integrity and grace (second chances), as well as fidelity and partner reduction. A spiritual dimension was introduced in the dramas, which is, for most Africans, the highest source of moral authority. Multiple other media platforms in radio, TV and print media were used in the period of broadcast to integrate the values raised, in particular in relation to HIV and AIDS and other contributing social issues such as violence against women and so stimulate a national debate. These films were complemented by a book for parents on teaching values to children. The book includes ten stories to be read to 3-6 year olds, focusing on the same values as the films. Adult components are described here and in other sections of the COP. Both the children's book and films were adapted in the course of FY 2007 for use in FBOs; and a facilitator guide will be produced. They will be duplicated and distributed in the course of FY 2008 to at least 30,000 FBOs. Further training materials will be produced which are focused on assisting FBOs to organize for action around these values. They will enable the FBOs to review and respond to needs both within their congregations as well as in their communities. Through ongoing mass media programming these actions will be reported on so as to encourage others to also take action. The materials will be adapted for different settings, thus it is likely that the resource for a rural FBO will differ to that of an urban one, although the objectives will be the same. At least 26 training/mobilization events will be held nationally with FBOs in support of the materials and their messages. PEPFAR funding will contribute 80 percent of this budget, with other donors funding the remaining 20%. **ACTIVITY 2:** Adaptation of the films for use in workplace programs and prisons. Considerable interest has been forthcoming for the use of these films in workplace management and HIV and AIDS programs as well as from the Department of Correctional Services. Consequently an adaptation of the films will be made with support training materials for this purpose. PEPFAR funding will contribute to the development of the materials. The major emphasis area is information, education, and communication. **ACTIVITY 3:** Adaptation of the films for use in schools. These films were adapted in FY 2006 for use in grade 10 classes and an accompanying facilitator manual was produced. In FY 2008 30,000 copies of the DVD and manual will be distributed to 6000 high schools for use in grade 10. In partnership with DOE, teachers will also be trained to use the materials. **ACTIVITY 4:** Out of school youth. Based on the positive reception to "Heartlines" by youth, an initiative will, in the course of FY 2008, be rolled out that will target at risk and out of school youth. The initiative will mobilize youth using hip hop music through a series of competitions across the country, which will get youth to use hip hop to challenge their peers to live positive values. Radio and TV will cover these events. These events and the media coverage will be used to select youth ambassadors who "walk the talk". They will be trained in leadership, enterprise development and will be trained to be peer educators in their communities. FY 2008 funding will be used to establish this initiative but by FY 2009, "Heartlines" will be working with at least 500 youth across the country. **ACTIVITY 5:** Soul City training. Training is conducted by 18 partner NGOs in a cascade-training model. Trainees are given the support and skills with which to become mobilizers in their community. More than 200 training sessions will be conducted in FY 2008 with an average of 30 people per session. Although trainees will be equipped to teach parenting skills and AB prevention to parents in particular they themselves will be trained in ABC prevention as well. In the course of FY 2008 further values-based media programs will be developed under the "Heartlines" brand as an HIV intervention. They may include an initiative targeting preschool children and one aimed at teenagers. These will initially not require PEPFAR funding and will be funded by other donors. These materials will first have impact in South Africa and then be available for use across the region through Soul City's regional program. A major public-private partnership has been forged by the MMP, which sees approximately 50 percent of project funding provided by a South African bank, with a commitment to funding till 2010. Further funding will be forthcoming from the national public broadcaster as well. As the MMP is a relatively new organization, work will be done on career development and other organizational development. These activities contribute to the PEPFAR goal of averting 7 million new HIV infections.

Activity ID: 14260.22885.09	Planned Funds: \$0
Activity System ID: 22885	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

This activity will no longer be implemented as the NDOH has decided to incorporate condom LMIS within the NDOH pharmaceuticals. The IT component of the activity will be taken over by the NDOH IT Unit. Therefore no FY 2009 funding is requested.

SUMMARY:

John Snow Inc. (JSI), through the SCMS Project, will continue to support the STI, HIV and AIDS Prevention Unit within the National Department of Health (NDOH) and provincial Departments of Health, by providing logistics management technical assistance in the procurement, quality assurance, warehousing, distribution and tracking of male and female condoms, targeting underserved, vulnerable and most at risk populations. JSI has already begun an intensive capacity building phase and during FY 2007 period, the SCMS Project will focus on human capacity development within the NDOH to make the condom distribution program sustainable once funding comes to an end. Although it was anticipated that this process could be completed in FY 2007, it is clear that given the NDOH's constraints in terms of hiring qualified staff, coupled with substantial attrition of staff generally, that at least an additional year of USAID support will be required to implement an effective transition that will ensure program sustainability. The need for continued support beyond the original timeframe has been exacerbated from a programmatic perspective due to a recent bribery and corruption scandal between the South African Bureau of Standards (SABS), where all public sector condom batches are compliance-tested for quality assurance purposes, and a local manufacturer, where some batches were passed for procurement and distribution by the SABS that actually failed quality standards. After seven years of building public confidence and increasing condom distribution dramatically, this scandal is likely to have a significant negative impact in terms of eroding this hard won public confidence in the government's prevention program and the NDOH will need assistance in rebuilding public perception. The emphasis area for this activity will be human capacity development through training, and the target populations are youth, adults, family planning clients, the military and correctional services, mobile populations (high transmission areas) and persons in sex work.

BACKGROUND:

In 2000 the NDOH requested USAID support in addressing two critical weaknesses in the South African Government's (SAG) HIV prevention program relating to condom procurement and distribution: the poor quality of condoms that were distributed in South Africa and the frequent and prolonged shortages and stock-outs in the provinces - both problems which resulted in negative media towards, and an erosion of public confidence in, the SAG HIV prevention program. JSI, co-located within the NDOH, and in close collaboration with national and provincial counterparts, has successfully developed and implemented a package of technical solutions to these two critical shortcomings. First, JSI-supported systems have eliminated poor quality issues by ensuring compliance testing to World Health Organization specifications and standards of all production batches regardless of local or overseas manufacture, thus guaranteeing that only high quality public sector condoms are distributed in South Africa. Second, the JSI-developed Logistics Management Information System (LMIS) has enabled the NDOH to eliminate shortages and stock-outs in the provinces by establishing and servicing 172 primary distribution sites across all provinces. These two achievements were crucial in empowering the SAG to sustain its HIV prevention focus in its response to HIV and AIDS epidemic and maintain its long-term goal of ensuring that people, who are currently HIV-negative, remain negative. PEPFAR funds will be concentrated on ensuring the NDOH's technical know-how needed to efficiently operate the supply chain and sustain the focus on most at-risk populations.

ACTIVITIES AND EXPECTED RESULTS:

The funds originally destined for the USAID DELIVER Project will be reprogrammed under the SCMS project. This decision was taken (effectively ending the USAID DELIVER Project presence in South Africa) in order to reduce the Mission's financial burden of having two separate centrally-funded projects with similar mandates and similar management structures. SCMS will continue to provide technical assistance in the procurement, quality assurance, warehousing, distribution and tracking of approximately 30 million condoms per month to sexually active youth, adults and family planning clients, with a particular focus on non-traditional outlets for high risk, marginalized populations. SCMS will intensify efforts within the NDOH to establish appropriate government posts for quality assurance and logistics management, and provide formal and informal, on the job training. The expected result of this skills transfer is that the NDOH will be able to fully operate and sustain the program once USG/LCS support ceases. It is recognized that it is critical from the USG and SAG perspectives that this successful program is sustained into the future. SCMS will contribute substantially towards the vision in the USG Strategic Plan for South Africa by building human capacity within the NDOH in procurement, quality assurance, supplier contract management, warehousing and distribution, while maintaining a zero stock-out rate for the primary distribution sites.

ACTIVITY 1: Supply chain strengthening at the Provincial level

This project will strengthen the condom distribution program at the provincial level, by engaging more directly with provincial Departments of Health to further develop local organization capacity. In coordination with the NDOH, SCMS will conduct an assessment of the supply chain at the Primary Distribution Sites that the NDOH is responsible for servicing and at the secondary and community distribution sites. This will include inventory control, good warehousing practices, reporting procedures, and distribution & tracking systems. SCMS will synthesize practical recommendations in collaboration with provincial counterparts and will provide TA as requested to implement supply chain best practices and standard operating procedures (SOPs).

ACTIVITY 2: Provincial level LMIS development

Activity Narrative: During the re-development of the NDOH's LMIS in FY 2007, functionality will be added to allow provincial access to the LMIS and information related to condom distribution nationally. Authorized users will be able to report on condom distribution and inventory and will be allowed to generate management reports. In FY 2008 SCMS will facilitate the establishment of a provincial level LMIS that will enable more efficient distribution and tracking of condoms to the secondary and community level outlets. This strategy will enable the program to reach more people and promote improved reporting since the provincial DOH counterparts will be given more responsibility for condom distribution management. This activity will include in-service training in LMIS and logistics management.

Activity System ID: 22735

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

In FY 2009, the Nelson Mandela School of Medicine at the University of KwaZulu-Natal will implement a new strategic approach will be used where traditional health practitioners (THPs) will use the knowledge acquired during the training to promote other sexual prevention beyond abstinence and being faithful (AB) in their community activities such as school visits, religious functions and other community gatherings.

Usage of already existing events such as the annual reed dance, izimbizos etc., which will be part of the outreach programs planned through compiling event calendars, will create ideal opportunities to further spread other sexual prevention beyond AB messages.. All these activities will carried forward into FY 2009.

-In so far as Activity 1 in the FY 2008 COP narrative is concerned, THPs are playing an important role in counseling their patients instilling prevention messages. This is a community-based targeting and is not specifically gender oriented. Participating THPs have modified their practices to minimize blood-to-blood transmission of the HIV among their patients.

SUMMARY: The University of KwaZulu-Natal (UKZN) Nelson Mandela School of Medicine (NMSM) is using PEPFAR funds to support the development and implementation of innovative prevention messages specifically adapted to the cultural practices of traditional healers (izangoma and izinyanga) in KwaZulu-Natal (KZN). The major emphasis area for this program is information, education and communication, with minor emphasis placed on community mobilization and participation, human resources, policy and guidelines, quality assurance and supportive supervision, and strategic information. The target population includes traditional health practitioners (THPs) in the private and public sector who are members of the KwaZulu-Natal KZN and Ethekewini Traditional Health Practitioner Councils, and THPs in Ilembe and Umgungundlovu Districts (to the North and West of eThekewini respectively) who are also members of the KZN THP Council. BACKGROUND: The University of KwaZulu-Natal (UKZN) has an ongoing collaboration with associations of traditional healers in Ethekewini District, and the larger KwaZulu-Natal (KZN) province. Traditional Healers are extremely influential in KwaZulu-Natal, and are a resource in HIV and AIDS prevention and mitigation at the community level. They are also generally considered to hold conservative attitudes towards sexual practices and abstinence that make them natural partners in HIV prevention efforts. This project provides THPs with the necessary tools and training to act as effective HIV prevention agents. The message of Abstinence, Be Faithful, and Condoms (ABC) has not been entirely successful in the Zulu cultural context. These issues are continuously explored with the THPs in this program and UKZN is constantly developing more effective ways of communicating prevention messages that resonate in the Zulu cultural context. Project training, prevention message delivery and follow-up with the THPs emphasize a clear understanding of the facts of viral transmission in sexual practices and the necessity of barrier methods to prevent viral transmission during sex. THPs work with their patients and the community to change cultural practices (non-sexual) that can contribute to viral transmission, such as blood-letting, scarification (use of razor blades to make incisions for rubbing herbs directly into the bloodstream), and skin puncturing using porcupine quills that are frequently used in an African type of acupuncture. Prevention messages delivered in training courses and follow-up work with THPs emphasize the biomedical facts of viral transmission and the vital necessity of safety precautions to prevent viral transmission in these cultural practices. In FY 2005, with the arrival of PEPFAR funding, NMSM trained 224 traditional healers to deliver HIV prevention messages to their clients and communities. NMSM will implement the project in collaboration with the KZN and Ethekewini Traditional Healer Councils, with the eThekewini Health Unit, and the eThekewini District Health Office of the KZN Department of Health. ACTIVITIES AND EXPECTED RESULTS: NMSM will build on English and Zulu language prevention messages developed with the traditional healers by the KZN Provincial Department of Health. This project will also promote the understanding of infectious disease in the traditional healer culture. Engagement with THPs through this project both in training workshops and follow-up work have made it clear that the majority of THPs were previously uncertain about what HIV is, that there is a "virus" that is transmitted, how this virus is transmitted both sexually and through cultural healing practices, and how to prevent this transmission. Similarly most THPs were unclear about what the virus does inside the body, how the activity of the virus leads eventually to AIDS, and what steps could be taken to slow this progression. It was also unclear to most THPs what the relationship was between HIV transmission and other sexually transmitted infection (STI) transmission, and why it was so important to treat and clear up other STI pathologies. In KZN, HIV and AIDS are a heterosexual pandemic, and largely a behavior-driven epidemic. The following activities will be achieved: ACTIVITY 1: Increasing Uptake of Prevention Messages NMSM will work to increase uptake of HIV prevention messages from the healers by both genders (increasing gender equity in HIV and AIDS programs), specifically looking into novel ways to instill behavior change ideas into their patients through counseling on the need for prevention. In addition, Traditional Healers have specific practices that include use of scarification to introduce herbs directly into the bloodstream, and use of porcupine quills to introduce herbs through the skin. Both of these practices are discussed in prevention training sessions and modification of these practices to ensure there is no blood to blood transmission of the virus by the razor blades, porcupine quills, or fingers of the THPs is ensured. ACTIVITY 2: Community Mobilization THPs will organize Iimbizos (community gatherings) with their traditional leaders and or village chiefs in the community. These gatherings will be used to discuss a number of topics including male norms and behavior, including domestic violence in the context of the Zulu culture. Community mobilization/participation will be used to enhance the capacity of traditional healers to deliver prevention messages as they work with their patients and their families. A small number of medical school faculty, support staff and traditional healers will receive salaries in order to facilitate this project. Specifically, they will be responsible for monitoring and evaluation and training. ACTIVITY 3: Monitoring and Evaluation Monitoring and evaluation activities will measure the effectiveness of these interventions. Supervision and monitoring will be achieved through regular site visits. Data from these activities will contribute to the development of policies and guidelines for working with traditional healers. ACTIVITY 4. Building Local Organization Capacity Local organization capacity development will expand the capacity of the School of Medicine, the Ethekewini and KZN Traditional Health Practitioner Councils. Through regular staff site visits, quality assurance and supportive supervision, the development and implementation of prevention messages will be carried out. Expected results of this initiative for FY 2008 include the development of new, innovative prevention messages in English and Zulu, including messages to change

Activity Narrative: cultural practices (non-sexual) that can contribute to viral transmission; the development of better understanding of cultural perceptions, leading to better prevention messages;-training of THPs and improving their prevention message delivery capacity as they work with their patients and the patient families. In addition, increased correct and consistent condom usage among sexually active community members who are not amenable to abstinence/be faithful prevention messages; the assessment of the effectiveness of Other Prevention approaches within the Zulu cultural context in Ethekwini will also be achieved. By expanding culturally and scientifically appropriate prevention messages to communities that receive much of their healthcare from traditional healers, the Nelson Mandela School of Medicine will directly contribute to the realization of PEPFAR's goal of preventing 7 million new infections. These activities will also support efforts to meet the prevention objectives outlined in the USG Five-Year Strategy for South Africa.

Activity ID: 14045.23010.09

Planned Funds: \$235,444

Activity System ID: 23010

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

SUMMARY/BACKGROUND:

There are no significant modifications to the activities with University of the Western Cape or the University of Zululand except the alignment of their activities targeting university students to specifically focus on the prioritization of other sexual prevention on issues addressing risks associated with multiple concurrent partners.

Previous activities for supporting the Department of Education (DOE) did not include support for the teachers, and this was discussed with provincial DOE officials who recommended the inclusion of teachers in targeted HIV prevention programs.

ACTIVITIES AND EXPECTED RESULTS:

FY 2009 resources will specifically target support for training teachers on other prevention issues such as being faithful, reduction of sexual partners, avoiding concurrent partners and engaging in risky relationships. The other prevention component will be added to the current abstinence and being faithful (AB) program in schools to ensure that life orientation teachers are equipped personally and professionally with HIV/AIDS prevention skills.

SUMMARY: Activities to provide other prevention strategies will be carried out by two local universities and two vocational colleges and will be integrated with the abstinence and be faithful (AB) activities to support the Department of Education (DOE). Activities will be focused at the Universities of the Western Cape (UWC) and University of Zululand (UniZul). FY 2008 PEPFAR funds will support existing programs to provide training in other prevention to prevent the spread of sexually transmitted infections (STIs), and HIV and AIDS. Activities will target university students and will promote healthy behavior. Primary areas of emphasis will be gender, participation, and training students as peer educators to develop skills to practice healthy behaviors. The program will target students aged 15-35, both males and females. **BACKGROUND:** UWC and UniZul have identified HIV and AIDS as a key challenge on their campuses and surrounding areas. The institutions have identified qualified senior university personnel to manage and direct HIV and AIDS policies and programs. UWC has 15,000 students and the majority of the students and staff are black South Africans. Women comprise 57 percent of the student body. UWC is located in the Cape Flats area, where high incidences of drugs, alcohol and gang violence have been reported. UWC's HIV and AIDS program was established in 2001 and it includes a focus on peer education, counseling and testing (CT), integration into the curriculum, and outreach to local communities where youth are at risk. UniZul is situated in northern rural KZN close to the major industrial and growth center of Richards Bay. This area is growing phenomenally due to the amalgamation of adjacent peri-urban, low cost housing, rural and informal housing areas. UniZul student enrollment is 8,000. Students are mainly from historically disadvantaged communities and are aged from 18 to 35 years. UniZul operates multiple programs on campus to fight HIV and AIDS, conducts peer education prevention programs, provides CT, and offers ARV treatment. The university offers outreach peer education programs to local high school students and interacts with local communities and hospitals. Vocational colleges will offer other prevention programs integrated with activities encouraging students to be faithful to their partners. The DOE recently revamped the colleges to offer courses that respond to emerging skills needs. Colleges will train students to qualify in priority skill areas and engage in the economy as productive artisans to strengthen the workforce. Some of the colleges have embarked on their own HIV and AIDS programs, offering prevention services to students and training students to be health care workers. **ACTIVITY 1: Other Prevention at UWC** FY 2008 PEPFAR funds will support other prevention programs at UWC targeting all students on campus, particularly first year students. Activities will address gender issues by directly targeting male norms and behaviors and challenging the way in which practices based on traditional masculine identity encourage the continued spread of HIV. Training will focus on partner communication skills. USG resources will increase the involvement of people living with HIV (PLHIV) by supporting two health promoters. Health promoters will provide individual counseling, initiate and run support groups, offer advice on nutritional support, and treatment of opportunistic infections, staging of the disease and information on healthy living. Training in risk reduction communication skills aimed at first year students will encourage attitude and behavior change. Fifty peer educators will encourage 1,000 first year students to participate in HIV and AIDS prevention programs as part of their work study programs. Students will receive a stipend, and will be mentored to become peer educators during their second and third year of study at UWC, gaining facilitation and training skills. Training will be on safe sexual practices including proper and consistent use of condoms and issues on cross-generational and transactional sex. UWC has a fully equipped Student Health Services facility on campus managed by qualified personnel. It offers free CT to students, and those students who test positive for HIV are referred for further consultation and treatment at the local hospital. UWC has 80 condom dispensing machines on campus and extra machines at all student residences, and condoms are offered free of charge from the Department of Health. **ACTIVITY 2: Other Prevention at UniZul** Programs at UniZul include peer education, treatment and CT. UniZul has a partnership with the local hospital where students who test positive for HIV are referred for further consultation and treatment. The university has an established CT site within the campus clinic, operated by qualified personnel although under resourced to meet the student needs. Education funds will support a counselor to address gender-based violence related to rape on campus and negotiation skills to empower young girls to delay sexual activities and promote correct and consistent use of condoms. According to the UniZul, 90% of diseases treated at the campus clinic are STIs, and focus will be on support to the campus clinic to develop and offer programs to manage STIs. (However, USG funds will not finance treatment of STIs). PEPFAR funds will train 50 peer educators to reach out to 3,000 additional students who are already engaging in sexual activity. Training will be on the use of condoms and discourage students from engaging in risky sexual behavior, cross generational sex and having multiple sexual partners. UniZul will collaborate with DramAidE to stage communication campaigns through drama, art, and poetry, and develop a coordinated media plan to increase risk perception relating to multiple and concurrent partners. Activities will target students through religious, cultural and traditional societies. The USG will mobilize additional support from other PEPFAR-financed activities to install reliable condom-cans in residences. Although female condoms are available at the campus clinic, their use has not been widely demonstrated. **ACTIVITY 3: Other Prevention at Vocational Colleges** Focus will be on training 50 peer educators aged from 15 plus to reach out to 1,000 additional students to encourage consistent use of condoms to prevent

Activity Narrative: HIV and STI infection. Students will be educated on safe sex measures which include correct and consistent condom use, cross-generation and transactional sex male norms and behaviors and gender related issues aimed at reducing violence and coercion. Training will also address the prevention of risky behavior among students due to drug and alcohol abuse. The results of this activity will contribute to the PEPFAR 2-7-10 goal of 7 million infections prevented and will directly support the USG/SA strategy in the area of preventive behaviors among youth.

Activity System ID: 23044

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

SUMMARY:

RHRU will continue to offer the services outlined in FY 2008 and will continue to refine the systems that ensure that its prevention activities are fully integrated with other care and treatment services provided. RHRU will expand the focus of its community-based prevention services by linking this with other entry points for those most at risk, particularly families of HIV-infected patients already receiving care. This will include home visits to families of patients on treatment, patient networks identified through lost-to-follow-up initiatives and active follow up of stepped down patients diagnosed with HIV. Through the provision of this follow-up service, family members can be more effectively reached with a comprehensive range of services including provider initiated testing and appropriately targeted prevention messaging.

BACKGROUND:

RHRU continues to mobilize and develop a broad referral network of other local services, which can provide support and identify and meet additional needs. These activities will take place in the deprived inner city area of Hillbrow, which has a large migrant and refugee population. In this context RHRU will explore opportunities to work with recent victims of xenophobic violence, if such a need is identified and such opportunities exist. RHRU has been working to mobilize community-based organizations and non-governmental organizations in the Hillbrow area to provide a more comprehensive and consistent response to the epidemic. As part of this, RHRU has set up three forums focusing on three particularly challenging groups: sex workers, youth, refugees and migrants. Each of these groups meets monthly, with participants from relevant local organizations represented. This initiative will continue and encourages a more unified and strategic response from the civil society sector to the HIV epidemic in identifying and addressing the needs of these respective 'at risk' groups.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1:

RHRU's Women At Risk program works with Hillbrow female sex workers (FSWs) and will be expanded through the development of a peer education program that will be piloted targeting FSWs with information and referral for a range of appropriate issues including gender-based violence, risky sexual behavior, sexual rights, correct and consistent use of condoms and issues around alcohol and HIV. In addition, RHRU will continue with its Sex Worker Exit program that provides support to FSWs who wish to leave the industry through the provision of income generation training, life skills and counseling support and skills building workshops.

ACTIVITY 2:

RHRU will continue to work with young people (see also the counselling and testing section), and will pilot a peer education program for 'out of school' and older youth in inner city Johannesburg to encourage HIV prevention, delay of sexual debut, correct and consistent use of condoms for those who choose to enter into sexual relationships, concurrent partner reduction, regular HIV testing, and other youth related issues such as gender equity, alcohol and drug abuse.

ACTIVITY 3:

In KwaZulu Natal young adult women will be exposed to World Health Organization flipcharts on reproductive choices and contraception for HIV-infected women developed by RHRU. Providers will be trained to use these tools at selected sites, as requested and approved by the provincial Department of Health.

ACTIVITY 4:

Across all sites, prevention for positives will be emphasized with intensive counseling provided to discordant couples in conjunction with a strengthened condom distribution network male and female condoms will be provided at all sites and RHRU will provide training to nurses and counselors around the demonstration and use of female condoms.

SUMMARY: Reproductive Health and Research Unit (RHRU), as part of an outreach project in deprived inner city areas, will implement four Other Prevention projects: Firstly, the provision of outreach prevention, clinical and support services to commercial sex workers at an inner city primary health care clinic as well as prevention information and condoms in the many brothels in Hillbrow, Johannesburg. Secondly, RHRU's sub-partner, CARE, will offer home-based information, support and referral, and capacity building activities to improve local faith-based organizations (FBOs), community-based organizations (CBOs) and non-governmental organizations (NGOs). Prevention measures will be used as the entry point to household-based work. Thirdly, RHRU will continue to provide a new program of prevention work for HIV-infected individuals, using "motivational interviewing" techniques to reduce risky behavior. Lastly, RHRU will promote the uptake of male circumcision through integration with existing services. Activities will include training, workshops and other outreach covering condom usage and negotiation. Concurrent partner/partner reduction strategies and HIV risk reduction will be integrated into all Other Prevention activities. The primary emphasis area for these prevention activities is human development. The primary target populations for these interventions are women, men, adolescents, people living with HIV, HIV-infected women including pregnant women, commercial sex workers and their partners/clients, brothel owners, community-based and non-governmental organizations (CBOs/NGOs). The sex worker component will be expanded in FY 2008 to

Activity Narrative: an additional neighborhood in Johannesburg. Prevention with Positives (PwP) will also be continued in all CT and treatment programs. BACKGROUND: RHRU, a unit of the University of the Witwatersrand in Johannesburg, currently provides technical support to the Operational Plan for Comprehensive HIV and AIDS Care, Management and Treatment for South Africa, which includes the national ARV roll-out. Under PEPFAR funding since FY 2004, RHRU has provided regular on-site support, direct treatment, training and quality improvement to Department of Health sites in three provinces. RHRU will continue these activities, and will continue both an inner city program (Johannesburg) and a district-wide program (Durban), focusing on providing support to complete up and down treatment referral networks. In addition, RHRU will continue the provision of counseling and testing (CT), palliative care and prevention services. RHRU will seek to develop models of service delivery that can be replicated and expanded, and produces findings from lessons learned and targeted evaluations to disseminate and share with others. It should be noted that the success of antiretroviral treatment (ART) scale-up depends on the comprehensive approach detailed in other program areas. In particular, the strengthening of referral from other primary healthcare programs such as tuberculosis (TB), family planning, antenatal/postnatal and STI services is critical. Prevention is an integral part of this system, and RHRU will focus its condoms and other prevention program on high-risk groups such as commercial sex workers and their clients, people infected with HIV, and also on building capacity of the CBOs and NGOs with which it works. RHRU will also continue to develop strategies to address underserved communities affected by HIV, such as couples (both concordant and discordant), high risk groups such as young people, and gender-based interventions with women at risk, including pregnant women and commercial sex workers, and men. ACTIVITIES AND EXPECTED RESULTS: ACTIVITY 1: HIV Prevention for Women At Risk RHRU will continue to target a large community of commercial sex workers with prevention and care services, as well as treatment referral. The project is located in the deprived Johannesburg inner city, which is densely populated, transitory and poor, with high HIV and unemployment rates. All women will be referred for CT, and those with appropriate CD4 counts will be referred for ARV treatment. New treatment sites will be identified in needy areas of the city, and the organization will work with local public sector clinics in the area to sensitize staff to the special needs of this difficult-to-reach group and to provide outreach clinics in local brothels, which are the hub of commercial sex workers in Hillbrow and Berea Johannesburg. RHRU will also work with brothel owners, and clients and partners of commercial sex workers to increase their awareness and affect a change in their norms and behaviors regarding HIV and AIDS. A specific focus will be on changing gender norms through workshops and trainings, which will include such topics as alternatives to risky behavior, women's rights, and reduction of gender-based violence. The project will provide prevention outreach services including management of sexually transmitted infection (STI), provision of condoms together with messages regarding correct and consistent use of condoms, contraception and HIV prevention education including cross-generation and transactional sex, as well as support for those who wish to leave sex work. The project will play a critical role in raising awareness of HIV services and prevention through workshops and event days, and by distributing IEC materials. Furthermore, this gender-related project will conduct HIV counseling and testing on high risk and difficult-to-access groups, and will relate to the development of health networks and linkages by providing referral to HIV and TB care and treatment services where necessary. To aid the expansion and sustainability of this program, the local health authority will also contribute to this project. In addition, a manual has been developed to provide a toolbox for other health authorities seeking to replicate this program, and technical consultation will be provided. RHRU will share this with the Medical Research Council and others involved with high risk populations. ACTIVITY 2: Prevention with Positives There is very little focus on prevention in South Africa among people already infected with HIV. Prevention work to encourage safe-sex behaviors and limit infection and re-infection for those already positive is currently being developed by some South African organizations. Innovative prevention methods, the development of which will draw on models that have proven successful in other settings, will be introduced in South Africa. Clinicians will be trained in this specific focus area, and the program will be monitored and evaluated for efficacy. Programs that are proven successful will be expanded to other areas and used as examples for other organizations. In addition, RHRU is currently adapting a flipchart on contraception for HIV-infected clients for use by South African health care providers. This will be piloted in FY 2007-2008 and will contribute to improved prevention for positive clients and will be integrated into care and treatment programs. ACTIVITY 3: Community-Based Prevention RHRU will extend care and support services further into inner city areas, and incorporate prevention and behavior change into their activities. With a combination of private sector and PEPFAR funding, RHRU runs an information and support center in a high-risk area. A team of counselors and caregivers will be launched from this center into the surrounding community. Team members will link with 30 households a week, with the primary purpose of educating them on HIV prevention and understanding risk. Using prevention messages as the entry to the household they will also assist them as needed with home-based care, reaching orphans and vulnerable children, men and women, as well as contributing to the destigmatization of HIV and AIDS. ACTIVITY 4: Male Circumcision No male circumcision training or service delivery will take place without the express consent of the National Department of Health. In the absence of such approval and based on discussions with the PEPFAR South Africa team, funds could fully or partially be reprogrammed. Should the approval for safe clinical male circumcision activities be given, RHRU is proposing the following male activities: Male circumcision has been identified as an important biological intervention that protects men from HIV infection. It also creates opportunities to engage with men over a variety of reproductive health and risk-taking issues. Men are grossly under-represented in terms of access to counseling and testing, as well as HIV clinical services, including ART. Circumcision programs may allow expanded access to all forms of care, including HIV testing. However, while the biological protection against HIV transmission has been demonstrated beyond doubt, issues such as acceptability, operationalization, disinhibition and programmatic integration, still remain. RHRU will explore the acceptability of integrating male circumcision into existing services to broaden uptake. This will include piloting "opt out" circumcision for neonates, and developing methods of raising awareness raising and counseling that address target groups including males and young people. All activities will be conducted in accordance with the South African Government's new Strategic Plan. In FY 2007- FY 2008, RHRU will continue to undertake M&E activities to inform and develop quality HIV care. RHRU will be in a position to conduct targeted evaluations (TE) and Public Health Evaluations (PHE) of some of its prevention related projects in FY 2008-09. For each PHE, a detailed proposal will be developed and submitted to PEPFAR for review and funding approval. RHRU will contribute to PEPFAR 2-7-10 goals by providing prevention services to a most-at-risk population in a densely populated, poor, and highly transient inner city community.

Funding Source: GHCS (State)

Program Area: Sexual Prevention: Other sexual prevention

Budget Code: HVOP

Program Budget Code: 03

Activity ID: 21173.23040.09

Planned Funds: \$1,631,120

Activity System ID: 23040

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

SUMMARY:

This new partner won the FY 2008 annual program statement competition. Project Concern International (PCI), along with two implementing partners in South Africa, will undertake a program with the goal to reduce HIV transmission by changing social norms related to sexual and other gender-based violence against women. The objective of the program is to reduce the prevalence of sexual and other gender-based violence in both urban and rural areas. This will be achieved through a large scale social mobilization program that will: 1) mobilize public and private sector partners to combat gender-based violence; 2) create an enabling environment for changing social norms related to gender-based violence; and 3) develop and support the implementation of multi-sectoral activities which will achieve and maintain significant reductions in gender-based violence.

BACKGROUND:

This program will directly benefit the entire female population in the Western Cape and KwaZulu-Natal provinces who are at risk of acquiring HIV through forced sex and it will indirectly benefit all (consensual) sexual partners who could be infected by victims of rape. This program stems from South Africa's exceptionally high rate of sexual violence, and the well established link between sexual violence and HIV acquisition. This program will lead to significant reductions in gender-based violence that accelerates the progression of the AIDS epidemic in South Africa. It will put an end to the pervasive social norm of toleration for sexual and other violence against women, and it will go far to restore their basic sexual and human rights.

ACTIVITIES AND EXPECTED RESULTS:

PCI will carry out four separate activities in this program area.

ACTIVITY 1:

This program will undertake social mobilization in three sets of activities in support of the three anticipated results including 1) working with key sector partners to help them understand and take ownership for the problem of sexual violence in South Africa, 2) conducting an overarching communications campaign which will both amplify activities implemented by sector partners, while unifying individual sectors' activities in a signed, branded movement to end sexual and domestic violence against women, and 3) providing support to key sectors and institutions in South Africa that will enable them to take actions to transform social norms regarding sexual and domestic violence against women.

ACTIVITY 2:

This program will also implement HIV prevention programs for adolescents and young adults aged 10-24 through schools, church youth groups and other youth-serving settings. The geographic focus will include localities currently served by Track 1 partners and other areas with unmet needs in youth prevention. The annual program statement objectives will be to delay first sex, increase "secondary abstinence," and promote safer behaviors, including mutual fidelity and partner reduction, among young people.

ACTIVITY 3:

Other specific activities include 1) scale-up of skills-based HIV education, especially for younger youth and girls, 2) community mobilization to promote norms that support healthy behaviors among young people, 3) reinforcement of the role of parents and other protective influences in HIV prevention, and 4) prevention of sexual coercion and exploitation of young people.

ACTIVITY 4:

PCI will give priority to HIV prevention among orphans and other vulnerable children, who are at substantially increased risk of early sexual activity, pregnancy and HIV. Activities will incorporate a strong emphasis on the vulnerability of girls and young women to HIV, and include strategies to meet their unique prevention needs, for example, explicitly addressing sexual coercion, transactional sex, and sex with older partners. PCI will undertake behavior change approaches that are evidence and theory-based, such as rigorous, interactive curriculum-based HIV education that reflects internationally recognized best practices, and to tailor these approaches to each specific setting.

PCI: Project Concern International (PCI), along with two implementing partners in South Africa, proposes a program with the goal to reduce HIV transmission by changing social norms related to sexual and other gender-based violence against women. The objective of the program is to reduce the prevalence of sexual and other gender-based violence in both urban and rural areas. This will be achieved through a large scale social mobilization program that will: 1) mobilize public and private sector partners to combat gender-based violence; 2) create an enabling environment for changing social norms related to gender-based violence; and 3) develop and support the implementation of multi-sectoral activities which will achieve and maintain significant reductions in gender-based violence.

Activities leading to these results include: a) assuring that key sector partners in government, civil society, media, the private sector and education understand the impact of and are committed to ending all forms of gender-based violence; b) developing and implementing a communications strategy that will unite individual organizations' efforts into one unified, branded campaign reaching all sectors of society; and c) empowering sector partners with resources and training to implement a range of local activities to end gender-based

Activity Narrative: violence. The Western Cape and KwaZulu Natal Networks on Violence Against Women (WCN and KZN), with over 700 member organizations, will provide the technical know-how, experience, commitment and leadership to end violence against women.

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

SUMMARY:

USAID, through RTI, will provide support to strengthen the community response that mitigates the impact of HIV/AIDS and TB, provides education on the importance of reporting sexual assault within 72 hours to obtain the full benefit of post-exposure prophylaxis (PEP), and increase awareness about new Thuthuzela Care Centers (TCCs) in order to maximize the demand for and utilization of services, thus preventing HIV through other behavior changes related to sexual and gender-based violence.

BACKGROUND:

This is the third year of support to the TCCs. Thuthuzela means "to comfort" in isiXhosa; TCCs are multi-disciplinary centers that provide comprehensive care for rape survivors with an emphasis on women and children.

ACTIVITIES AND EXPECTED RESULTS:

RTI will carry out four separate activities in this program area.

ACTIVITY 1:

RTI will help NPA/SOCA to establish eight new TCCs in FY 2009, eight in 2010 and seven in 2011, for a total of 23 TCCs. It will also fund three core staff in each TCC.

ACTIVITY 2:

USAID, through RTI, will provide grants to non-governmental organizations (NGOs) and/or subcontracts to build awareness about: the relationship between sexual and gender-based violence and risk of contracting HIV, the importance of reporting within 72 hours after a sexual assault to obtain PEP, and to build awareness about the new facilities to maximize demand and utilization of services.

ACTIVITY 3:

RTI will implement a communications strategy which focuses on generating public awareness through the media, journalism, billboards, posters and special events in collaboration with NPA/SOCA.

ACTIVITY 4:

With additional funding from the PEPFAR Special Initiative on Sexual and Gender-Based Violence, RTI will explore strategies for explicitly raising community awareness of TCC services and for strengthening TCC linkages with community networks to help facilitate victims' access to services.

SUMMARY: The goal of this project is to improve care provided to victims of rape and sexual violence through the establishment and operations of nine new Thuthuzela Care Centers (TCCs). These multi-disciplinary centers provide comprehensive care services to women and children rape or assault survivors, including post-exposure prophylaxis (PEP), HIV and AIDS counseling and testing, and referral to HIV care and treatment services. These centers will also assist men, girls and boys who are increasingly becoming victims of rape. The major emphasis area will be on training and technical assistance with minor emphasis on commodity procurement. Target population will include infants, girls, boys, men, women, doctors, nurses and pharmacist as well as the TCC core team. Commodities to be procured include rape kits, medical equipment, comfort kits, and PEP medication. BACKGROUND: This project is a continuation of work supported through PEPFAR funds in FYs 2006 and 2007 that were used to evaluate and upgrade existing TCCs in keeping with the National Department of Health's (NDOH) National Management Guidelines for the Care of Rape Victims. In FY 2009, this project will focus on maintaining established TCCs (20 total) in provinces where they do not currently exist and in other locations where need is identified. Ten TCCs currently exist. This activity is linked to the USAID Governing Justly and Democratically office's longstanding program to support the Sexual Offenses and Community Affairs (SOCA) Unit of the National Prosecuting Authority of South Africa in its endeavor to eradicate all forms of gender-based and sexual violence against women and children, especially the crime of rape. The SOCA Unit has responded to the ongoing problem of sexual offences and specifically rape in the country by seeking to expand the TCC network from 10 to 80 TCCs nationwide. The TCCs are a bold approach to rape care management. Under the Women's Justice and Empowerment Presidential Initiative (WJEI), a total of 30 TCCs will be established to assist the SOCA Unit to increase protection and advance women's legal rights. Very aptly SOCA's slogan is "Putting the rights of women and children first." For victims of rape, the benefit of being assisted through a TCC is that the rape survivor can obtain comprehensive, integrated rape services at a single location, including receiving medical assistance, reporting the case to the law enforcement authorities (the police and prosecutors), and accessing counselors and emergency support services on a 24-hour basis. To allow for easy access to health services, most TCCs are located within hospitals or near health care facilities. The TCCs are an initiative of the SOCA Unit of the National Prosecuting Authority and are in compliance with the standards of the NDOH. The past few years have witnessed a growing recognition of the links between violence against women and HIV and AIDS. The risk of HIV infection is a very real possibility with rape. Perpetrators seldom use condoms, placing the vast majority of women and children who are victims of this crime immediately at risk. For example, of every 100 survivors that report rape at the Manenberg (Cape Town) TCC, an average of five are HIV-infected. This means that 95% of survivors are HIV-negative at the time of rape at this particular TCC and can benefit from PEP and ongoing counseling. On average, 80% of rape victims in South Africa are HIV-negative at the time of rape. According to the TCC model, when rape victims arrive at the police station to report a rape, they are removed from the crowds to a quiet room to

Activity Narrative: take a statement. They are then transported to the nearest TCC where they are welcomed by a site coordinator. Once the nurse or doctor is summoned to conduct the forensic medical exam, the Victim Assistance Officer (VAO) and the doctor or nurse explains to the victim what procedures need to be performed and help her understand why she must sign consent forms. The police detective on call to the center is summoned and assigned to the case. Case managers are responsible for coordinating sexual offenses cases and assist the victim in understanding what information the police investigator needs to investigate the crime. If the victim decides to pursue charges, the case manager opens a file where copies of all the relevant documents will be kept and the status of the victim's case will be tracked. However, the audit conducted by RTI using FY 2006 PEPFAR funds found that existing TCCs were not 100% compliant with this model (the highest score was 87.5% compliance. Upgrading current TCCs as well as operationalizing new ones became an integral part of the program. ACTIVITIES AND EXPECTED RESULTS:ACTIVITY 1: With FY 2008 PEPFAR funds, a partner TBD will continue to support SOCA's efforts to upgrade and expand the TCC model targeting 9 additional TCCs. Part of this funding will continue to go towards the training of the medical officers (doctors, nurses and pharmacists) on how to provide PEP as well as to site coordinators and VAOs on how to educate victims on compliance with PEP. Site coordinators manage the multidisciplinary team and administer each TCC. When the victim arrives, she is comforted by a VAO, who is also responsible for building a relationship with the victim until she has been able to report the rape, receive a medical examination, and obtain voluntary counseling and testing (VCT). In addition, the victim is linked to any other critical service that she may require such as a place of safety and follow up medical assistance. Promotion and education activities will also be conducted to educate communities in which TCCs are located about the services they provide. At the TCCs, each rape victim is encouraged to test for HIV. If the rape is reported within 72 hours, the rape survivors who test negative are immediately provided with PEP. They are placed on PEP for 28 days and are tested again for sero-conversion at 3 months and again at 6 months. In these 28 days, the survivor is intensively supported to ensure compliance with medication as well her overall well-being. Rape victims who test positive for HIV will be given appropriate counseling and will be referred to the nearest government treatment site for further counseling, care and Antiretroviral Treatment (ART) when necessary. U.S. legislative interests being addressed by this project include increasing gender equity in HIV and AIDS programs and women's legal rights. This activity is also closely linked to USAID's programs in Democracy and Governance. The National Prosecuting Authority is committed to addressing rape and the resulting problems such as HIV and AIDS, especially the support and development of TCCs. The National Prosecuting Authority is particularly committed to empowering women, protecting children and ensuring that the crime of rape is reduced throughout South Africa. As such, this project will be sustainable beyond the provision of PEPFAR funds, as the government will continue to support it. This project will assist PEPFAR to meet its goal of averting 7 million new infections by playing a critical role in increasing access to and improving quality of vital post-rape services, including the provision of PEP.

Planned Funds: \$199,208

Activity Narrative: SUMMARY:

USAID/South Africa (SA) supports institutional capacity building of indigenous organizations that implement President's Emergency Plan for AIDS Relief (PEPFAR) programs, including abstinence and fidelity focused prevention programs, through three competitively-selected umbrella grants mechanism (UGM) partners: Pact, the Academy for Educational Development (AED) and Family Health International (FHI). The main purposes of these UGM projects are to: (1) facilitate further scale-up of HIV/AIDS prevention services through local and international implementing partners in the short term; and (2) develop indigenous capability thus creating a more sustainable program. The major emphasis area is local organizational capacity development. Primary target populations are indigenous organizations, including non-governmental organizations (NGOs), faith-based organizations (FBOs) and community-based organizations (CBOs). The current UGM with FHI will support ten sub-partners. The activity described below refers only to the USAID/SA UGM project managed by FHI.

BACKGROUND:

Currently, USAID/SA's Health and HIV/AIDS Strategy responds to the overwhelming challenges posed by the HIV/AIDS epidemic on individuals, families, communities and society in South Africa. Through this UGM, FHI is responsible for managing sub-grants to ten of USAID's partners (all of whom submit their own COPs directly to USAID). As USAID's prime partner and the managing umbrella organization, FHI will not directly implement program activities, but rather act as a grants management partner to manage and mentor its ten sub-recipients who, in turn, will carry out the assistance programs. Thus, FHI functions primarily as a sub-grant making entity and a relatively small percentage of overall funds are used for administrative purposes. Given that grant recipients require significant technical assistance and management support, FHI will devote a reasonable percentage of overall funding to providing this support.

USAID closely collaborates and coordinates with the South African Government (SAG) in supporting PEPFAR partners through the umbrella grants mechanism. Although some of the partners work closely with various SAG departments at national and/or local (i.e. provincial and district) levels, the umbrella grants mechanism's primary interface with the SAG is through the senior management team (SMT), which includes key staff from USAID, the National Departments of Health and Social Development (NDOH, DOSD), and representatives from the provincial departments.

Under this UGM with FHI, USAID supports five indigenous and international FBOs and NGOs providing other sexual prevention (OSP) services to communities in the provinces. These are: GoLD Peer Education Agency; Humana People to People; LifeLine; Mpilonhle and Medical Care Development International South Africa (MCDI-SA). Grants to prevention partners support the delivery of OSP programs in a variety of settings including schools, churches, and outreach to communities. Services are delivered in accordance with the PEPFAR ABC guidance. Approaches include capacitating community volunteers to conduct age-appropriate youth activities, working with religious leaders to reach congregations with value-based prevention for men and women, conducting participatory personal risk assessments, and promoting VCT and use of other HIV services.

ACTIVITIES AND EXPECTED RESULTS:

In FY 2009, USAID will continue to support OSP prevention activities through this UGM with FHI. Funds budgeted under this narrative will support costs for administering and managing the FHI OSP prevention sub-partners of FHI. The sub-partners conducting Prevention activities are: GoLD Peer Education Agency; Humana People to People; LifeLine; Mpilonhle and MCDI. Separate COP entries describe the prevention activities implemented by each sub-partner under FHI. Institutional capacity building of indigenous organizations is a key feature of the umbrella grant mechanism and an important strategy for achieving prevention, care, and treatment goals of PEPFAR to ensure long-term sustainability of programs and organizations.

ACTIVITY 1: Grant Management

Through this UGM, FHI will award and administer grants to partners selected through the PEPFAR APS competitive process to implement HIV/AIDS OSP activities. This involves an array of related activities including award and administration of grants, monitoring of grant progress, meeting reporting requirements, and grant closeout. FHI will continue to monitor prevention program implementation and adherence to financial regulations, both within FHI itself and by its sub-partners (e.g. USAID's partners). This involves provision of extensive technical assistance to partners on project development and implementation, financial management, and reporting. All these functions provide key support to organizations so they better implement OSP activities.

ACTIVITY 2: Capacity Building

This umbrella mechanism will support institutional and technical capacity building of indigenous organizations, a key strategy for the PEPFAR prevention goal, thus promoting more sustainable programs and organizations. Capacity building activities are defined as activities that strengthen the skills of indigenous organizations to implement HIV/AIDS programs efficiently, with diminishing reliance on external technical assistance and support. FHI will support activities to improve the financial management, program management, quality assurance, strategic information and reporting (including monitoring and evaluation), and leadership and coordination of its sub-partner organizations implementing prevention activities. FHI will also provide technical assistance to USAID partners, as needed, to improve the technical approaches used for OSP activities and to enable quality assurance/quality improvement (QA/QI) of activities falling within this technical area. All these functions provide key support to organizations so they better implement OSP activities.

FHI will also work with partners to develop and/or strengthen referral networks which will enhance STI

Activity Narrative: screening and management, condom use, family planning, counseling and testing and substance abuse counseling.

FHI will work together with its partners to ensure that their messages and strategies address general and higher risk populations that are relevant in their geographic areas.

FHI will pay particular attention to partners' selection criteria when recruiting peer educators for their programs. FHI will request to see and review the selection criteria to encourage selection of suitable candidates for peer educators/role models.

FHI will work with those partners providing training as a service, to get their training accredited.

ACTIVITY 3: Monitoring and Evaluation (M&E) and Reporting

The UGM will ensure that support is provided to USAID's prevention partners in M&E, in order to strengthen measurement of the implementation and impact of program activities, an eventual achievement of PEPFAR goals. M&E training and technical assistance will continue to be systematically provided to all of FHI's sub-partners under the UGM during FY 2009. M&E support of prevention partners will include revision/updates to data collection tools, as needed; measurement of program progress; provision of feedback for accountability and quality; and implementation of information management systems. In addition, the UGM will provide supportive supervision including guidance, monitoring, mentoring and oversight through site visits, virtual and direct technical assistance, and QA/QI initiatives. All these functions provide key support to organizations so they better implement OSP activities.

Activity Narrative: ACTIVITY UNCHANGED FROM FY 2008

SUMMARY:

This is a new award in FY 2008. This project will work to ensure that farm workers and, to the extent feasible, their families access counseling, testing, care, treatment, and prevention messages and services.

BACKGROUND:

The purpose of AgriAids is to address the practical and manageable aspects of HIV/AIDS on farms for both emerging farmers, as well as commercial farmers. AgriAids will act as a "broker" between farms and service providers, using its existing network, but also through identifying and setting up new partnerships.

ACTIVITIES AND EXPECTED RESULTS:

AgriAIDS will carry out three separate activities in this program area.

ACTIVITY 1:

AgriAIDS will raise awareness related to the impact of HIV/AIDS and promote strategies to combat it, amongst the following target groups: 1) farm workers, 2) commercial agriculture businesses and umbrella organizations, 3) other NGOs, and 4) the Department of Health and Agriculture. This will be achieved through the following sub-activities: 1) Awareness raising among farmers and commercial agriculture role-players; 2) Building relationships with the Departments of Agriculture and Health; and 3) Building relationships with other NGOs working in health and/or agriculture.

ACTIVITY 2:

AgriAIDS will develop and disseminate a comprehensive HIV/AIDS prevention and treatment strategy for the agricultural sector which will incorporate input received from workshops and working groups. Dissemination of the strategy will be followed by PR activities, with specific focus on government.

ACTIVITY 3:

AgriAIDS will work to prevent new infections amongst farm workers through implementing abstinence, being faithful, condom use, and other prevention (ABC and OP) strategies, on farms. This will be achieved through: 1) identification of regional/district-based implementing partners to target farmers with information, education and communication (IEC) messages regarding ABC and OP strategies, including tuberculosis (TB) awareness, 2) provision of "edutainment" prevention activities on farms; 3) promotion of peer education with focus on gender relations, and 4) supplying condom dispensers throughout agricultural communities.

Table 3.3.03: Activities by Funding Mechanism

Mechanism ID: 500.09	Mechanism: In Support - CDC
Prime Partner: National Department of Health, South Africa	USG Agency: HHS/Centers for Disease Control & Prevention
Funding Source: GHCS (State)	Program Area: Sexual Prevention: Other sexual prevention
Budget Code: HVOP	Program Budget Code: 03
Activity ID: 14063.22847.09	Planned Funds: \$515,877
Activity System ID: 22847	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

These FY 2008 activities have not yet been implemented:

Families Matter! will be implemented beginning in September 2008. Many of the Centers for Disease Control (CDC) funded youth partners will be involved in the adaptation and piloting of the curriculum of Families Matter!. Families Matter! is an HIV/AIDS prevention initiative that targets parents that will ensure that youth are getting the same HIV prevention messages at schools, at home and through non-governmental organizations (NGOs) that are implementing life-skills and peer education programs in their communities. FY 2009 activities will ensure scale-up of the Families Matter! curriculum.

Once the funding of Health Sciences Research Council's (HSRC's) healthy relationships initiative becomes available in December 2008; the prevention specialist will develop a strategy for implementation of a prevention with positives strategy across CDC funded treatment and care partners.

SUMMARY:

In close collaboration with the National Department of Health (NDOH), CDC will provide overall HIV and AIDS programmatic support to the national and provincial Departments of Health. In addition, NDOH relies on CDC to implement activities that address NDOH's emerging priorities, providing financial and technical support more quickly than the systems of NDOH allow. PEPFAR other prevention-specific activities are represented on the NDOH operational plan, and contribute to the overall implementation of the national HIV and AIDS program. During FY 2007, CDC participated in the development of the Accelerated HIV and AIDS Prevention Strategy. During this process, a number of activities were identified and prioritized by the NDOH. These include activities focusing on prevention with positives (PwP); activities targeting parents, and activities focused around young women between the ages of 20 and 30. The PwP activities will complement the PwP activities within the CARE portfolio.

BACKGROUND:

The aim of the "In Support of the NDOH other prevention" project is to provide technical assistance to the NDOH and provincial health departments to ensure expansion of existing prevention efforts in all nine provinces of South Africa. In addition this project provides ensures technical assistance and implementation of new and innovative projects in the prevention arena. Two new prevention initiatives will be piloted in South Africa using FY 2008 PEPFAR funding. These include "Families Matter!!" and a clinic-based prevention with positives initiative. The major emphasis area is training with a particular focus on in-service training. Other emphasis areas include development of network/linkages/referral systems and local organization capacity development. Target populations for these activities include healthcare workers, community-based and non-governmental organization, the general population, including children aged 10-18 years, youth, parents, people living with HIV (PLHIV) and discordant couples. A particular focus of this activity is prevention with positives. Addressing prevention with HIV-infected patients is an important part of a comprehensive prevention strategy. Through healthy living and reduction of risk behaviors, these prevention interventions can substantially improve quality of life and reduce rates of HIV transmission. The goal of these interventions is to prevent the spread of HIV to sex partners and infants born to HIV-infected mothers and protect the health of infected individuals. The rapid scale-up of HIV care and treatment has created an opportunity to reach many HIV-infected individuals with prevention interventions on a regular basis.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Capacity Building

FY 2008 funding will be used to building the capacity of local organizations supported by the NDOH that are working with in the area of other prevention. Capacity building will be achieved through the provision of training on HIV and on the promotion of prevention messages. This will be done in collaboration with the NDOH and in line with their priorities. Prevention messages and activities will target the general population and will focus on reducing concurrent partners, correct and consistent condom use, and behavior change messaging.

ACTIVITY 2: Families Matter!!

FY 2008 PEPFAR funding will be used to begin to adapt and implement the Families Matter!! Program (FMP). FMP is an evidence-based, parent-focused intervention designed to promote positive parenting and effective parent-child communication about sexuality and sexual risk reduction for parents of 9-12 year olds. FMP recognizes that many parents and guardians may need support to effectively convey values and expectations about sexual behavior and communicate important HIV, STD, and pregnancy prevention messages to their children. The ultimate goal of FMP is to reduce sexual risk behaviors among adolescents, including delayed onset of sexual debut, by giving parents tools to deliver primary prevention to their children. Families Matter!! is delivered over five consecutive sessions where each lasts for three hours. Each session builds upon the foundation laid in the previous session. Activities will be implemented in accordance with the NDOH.

ACTIVITY 3: Prevention with Positives

HIV clinics and hospitals will be supported to adapt and implement a comprehensive package of prevention interventions for HIV-infected individuals in care and treatment settings. Two provinces will be selected to pilot the intervention, namely Free State and Mpumalanga. The prevention interventions include provider- and counselor-delivered prevention messages, family planning counseling and services to HIV-infected

Activity Narrative: women and their partners, STI management and treatment, and testing of partners and children. Specifically, health care providers will be trained to deliver targeted behavioral messages to patients on disclosure, partner testing, and sexual risk reduction (abstaining or being faithful and using condoms consistently) during all routine clinic visits. Providers will be trained to deliver family planning counseling and services (funded through wrap around funds) to HIV-infected women and their partners in the HIV clinic settings and these services will be integrated into the HIV clinic. In addition, providers will be trained to manage and treat STIs in the HIV care and treatment setting. Lay counselors will be placed in these settings for more in-depth prevention counseling beyond what health care providers have the time to address. They will counsel persons living with HIV on several key prevention issues, including sexual risk reduction, disclosure, adherence, reduction of alcohol consumption, and testing of sex partners and children in the HIV clinic setting. These interventions will be implemented using the CDC's HIV Prevention in Care and Treatment Settings Prevention Package, which includes several training packages and job aids. Other prevention is addressed by all providers in all components of the intervention. Medical providers will promote consistent condom use with all patients during each clinic visit. Mid-level providers and lay counselors will routinely recommend consistent condom use through tailored prevention messages. In addition, condom use is promoted in the Family Planning intervention as a method of dual protection. Condom use is also promoted as part of STI management as a method for reducing STI transmission and acquisition. In addition to recommending condoms and providing educational materials on condoms, clinics will stock an adequate supply of male condoms to distribute to each HIV-infected patient at every clinic visit.

ACTIVITY 4: Women 20-30

FY 2008 funding will be used to work with the NDOH to refine its prevention strategy targeting young women between the ages of 20-30. Funding will be used to assist the NDOH in integrating HIV prevention activities within the family planning setting. Activities will be aimed at the Provincial Maternal Child and Women's Health Coordinators. These provincial coordinators meet quarterly to discuss pertinent issues affecting women and children in their provinces and develop strategies to address these challenges. FY 2008 funding will be used to facilitate two quarterly meetings that address integration of HIV prevention into family planning services. At the first quarterly meeting, the facilitator will ensure that an implemental integration strategy specific to each province is developed. Thereafter, at the subsequent meeting, provincial coordinators will be required to report on progress, and challenges relating to the integration of HIV prevention and family planning services.

Activity Narrative: SUMMARY:

The University of the Western Cape (UWC) program forms part of University Technical Assistance Program (UTAP) aimed at strengthening human capacity development and ensuring sustainability of efforts in multiple program areas.

BACKGROUND:

UWC's activities focus on increasing the prevention of HIV through multiple approaches aimed at key sectors that increase the reach of prevention messages, and ensuring that preventive messages are received in different areas of life - in school, at community sport activities and within the community. The program prioritizes prevention messages aimed at youth both in and out of schools and the general adult population. It addresses key issues around social norms that mitigate the impact of prevention. The project focuses on improving the capacity of sports coaches and managers involved in community sport programs to integrate HIV prevention messages into their activities. Another focus of the project is to increase the capacity of traditional healers and medical professionals to more effectively integrate their HIV/AIDS services and develop effective prevention messages and services. These activities increase the expertise in prevention programming within the academic, health worker, education, and community sectors by incorporating quality assurance processes into the development of materials, as well as monitoring the impact of activities.

ACTIVITIES AND EXPECTED RESULTS:

UWC will carry out two separate activities in this program area.

ACTIVITY 1: HIV/AIDS Prevention Through Sports Participation

This activity is led by the UWC's Department of Psychology, which has a long-standing project exploring the benefits of sports in lifestyle change and disease prevention, with support from the UWC Department of Sports and Recreation. The United Nations Sports for Development Inter-Agency Task Force and UNICEF's sports for development division have recognized and endorsed the critical role sports has in development through Sports Plus Programming, where health messages are incorporated into sports activities. Within such programming, life skills, health behavior skills and HIV prevention skills are added to sports activities. This is known as Sports Plus Programming. Sport is potentially a powerful component in the fight against HIV/AIDS. In Africa, there are examples of several prominent non-governmental organizations (NGOs) using sports as leverage for HIV information. The most prominent are 'SCORE' and 'Kicking AIDS Out'. These are primarily directed at children sports participants. The 'Preventing Aids through Sports Participation,' developed and piloted in FY 2008 on the West Coast Winelands, will be rolled out to an inner-city township.

The project trains sports teachers, sports coaches and administrators in HIV prevention such that it can be incorporated into their roles and actions as coaches. In this way children affiliated with, and engaged in sports in schools and communities will receive the HIV prevention messaging as part of their coaching in their sports. Both males and females can be reached through the sports against HIV/AIDS messages. Whereas males tend to avoid HIV/AIDS prevention messaging, they can be readily reached through their involvement in sports and where anti-HIV/AIDS messages will be delivered in a medium acceptable to both male and female sports participants.

Using FY 2009 funding, sports coaches, mentors, administrators and organizers within designated regions in Western Cape Province will be trained in the manual through workshops. Sports coaches and administrators will be identified from the West Coast/Winelands region (primarily rural) and Langa (an urban township) of the Western Cape Province. Both sports coaches in community clubs and school-based sports teachers are targets of the activity. The training manual will be adapted to address needs of the urban township coaches, and opportunities for sharing of experiences and lessons between the two regions. Sixty coaches, sports teachers and administrators will be trained. There will be two training workshops in each region, with three months of spacing between the two workshops. The training will be staggered to enable 'digestion' of the material and for ensuring that the information is incorporated into local coaching practices. Monitoring and evaluation of the training will be included in the activities through measuring the impact of training as well as measuring the effectiveness of the training materials and methodologies. This will be documented by one of the facilitators. Materials and methodology will be reviewed as needed.

This activity is part of a broader strategy to engage with higher education institutions and sports coaches accrediting bodies to introduce HIV through sports participation into their mainstream sports and sports coaching curricula. During FY 2009 initial discussions will be held with representatives of these institutions. Their input into the development of the final manual and training methodology will also be canvassed.

The project will actively engage the coaches who are also involved in female-dominated sports. In the project area meetings numerous female coaches of female teams attended. In particular netball and basketball (to a lesser extent) are popular female sports at club and school level. Therefore netball and basketball coaches will be actively recruited as participants. The workshop curriculum and manual content will address the HIV messaging from a gender-specific and gender-sensitive perspective.

ACTIVITY 2: Training Health Care Providers and Traditional Health Care Practitioners on Collaboration for HIV/Aids Prevention and Care

This activity is led by the Department of Anthropology and Sociology at UWC and builds on its experience of engaging traditional healers in understanding the cultural meanings of illness and facilitating the building of relationships between traditional healers and bio-medical health care professionals.

Evidence from the initial training in FY 2008 suggests that traditional healers will need to be further

Activity Narrative: educated on HIV/AIDS. Using FY 2009 funds, a refresher training will be conducted. Feedback from a 100-hour training program will be finalized, and accredited through UWC and the South African Qualifications Authority (SAQA). The process of accreditation is one of the key tasks in FY 2009. Six workshops will be held with traditional healers and formal health care professionals in the Western, Eastern and Northern Cape. A policy brief will be developed and presented to the Department of Health on the interaction between the formal health care sector and the Traditional Healers Council concerning HIV/AIDS prevention and care in the Western and Eastern Cape (where work was begun in FY 2008). Ninety formal health care workers, herbalists and traditional healers will receive the training in the integrated module package

To further the reach and understanding of the relationship between traditional and formal health care approaches a short course aimed at general health and traditional practitioners will be developed. During FY 2009, priority will be given to course development, and accreditation with the Health and Welfare Sector Education and Training Authority (HWSETA) and Health Professions Council, with the implementation of the course happening in FY 2010. The use of multi-media (print, powerpoint, video) will be prioritized in the training curriculum in order to further enhance closer understanding and co-operation between formal health care practitioners and traditional healers in relation to issues concerning HIV/AIDS from the different cultural perspectives of biomedicine, traditional healing and the use of medical plants. The integrated program will be translated into isiXhosa. The training programs will be evaluated through participant evaluations, as well as outcome evaluations to understand to what extent participants have integrated the learning. Ten representatives of the National and provincial Departments of Health and representatives of the Interim Traditional healers Council at provisional levels will participate in a collaborative workshop in which policy recommendations are discussed.

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

ACTIVITY 1: Drugs & HIV

Medical Research Council (MRC) will continue to work with the existing non-governmental organizations (NGOs) to ensure outreach and prevention activities are implemented for high risk groups. In November 2008, MRC will conduct a stakeholder consultation to review methods used to achieve project targets in FY 2007. FY 2009 funds will be used to expand services geographically to other parts of South Africa by moving into other areas not covered in FY 2007 and FY 2008.

ACTIVITY 2: Bar Project

The focus will be to expand the reach of the prevention program by rolling out the bar-based intervention to six new sites (drinking venues) in urban areas, and conducting activities to determine its feasibility, acceptability and effectiveness in rural settings.

ACTIVITY 3: Alcohol and HIV

Further formative work will be undertaken to better understand and quantify the pathways through which alcohol affects HIV transmission. This will be a continuation of secondary data analysis of existing data on burden of disease in South Africa that will be undertaken in FY 2008. In addition, following formative work, an intervention to address alcohol and other drug (AOD) abuse and AOD-related HIV risk will be undertaken in two medium sized manufacturing and two service industries in Cape Town and pre- and post-intervention measures will be employed to evaluate effectiveness of the interventions. In each sector, one company will be used as a company where the main intervention will be delivered and the other will be used for comparison purposes with a standard (information only) intervention.

ACTIVITY 4: Alcohol & ARV adherence

Based on the formative project activities from FY 2008, the MRC will refine and pilot an intervention program to reduce non-adherence to antiretroviral therapy (ART) due to alcohol use. The intervention will consist primarily of a counseling program to enhance adherence. In order to monitor and evaluate the program, the MRC will assess those who receive the program before and after their participation in order to determine the extent to which change in their levels of adherence takes place, and to be able to make recommendations about the use of the intervention for the general population.

ACTIVITY 5: Service Quality Metrics

MRC plans to facilitate two additional advisory group meetings in order to further the process of building capacity for service quality monitoring (SQM) and performance measurement within substance abuse treatment settings.

These activities have been modified to include additional foci on 1) developing capacity for service quality and performance monitoring in a sustainable way among key stakeholders, 2) identifying and specifying standardized measures for service quality and performance monitoring (such as provision of HIV services) within substance abuse treatment settings, and 3) taking the recommendations from the advisory group meetings held in FY 2008 forward by developing and designing interventions within these ongoing advisory group meetings to apply the measures.

Using an internal evaluator, the process of introducing service quality measures into the substance abuse treatment system and extent to which key outcomes for this phase of the project were achieved will be evaluated. A major focus will be the extent to which the provision of HIV services and the integration of HIV and substance abuse services are reflected in the SQM data.

ACTIVITY 6: Sexual Violence

The project has not yet started and MRC is in the process of getting institutional review board (IRB) approval. It is a proof of concept study that aims to address the intersection of rape and HIV. The project aims to provide training to service providers in study sites to deliver psychological support to rape survivors, which will impact adherence to HIV post-exposure prophylaxis and decrease risky behavior following the rape. In FY 2008, MRC will set up the study sites in Cape Town and Gauteng, develop training and testing of the training intervention through qualitative interviews. In the first year MRC will mainly do the preliminary qualitative research to establish the feasibility and acceptability of the intervention with the health care workers and the rape survivors as well as setting up of the training of the health workers. In the second year MRC will pilot test the intervention and describe its impact on mental health and sexual risk taking.

NEW ACTIVITY:

The Western Cape provincial Department of Health will be implementing Options for Health, an individual counseling intervention to be implemented by adherence counselors. The intervention is based on a counseling technique called motivational interviewing (MI) and is aimed at increasing medication adherence and reducing sexual risk among people on ART. The intention is to monitor the roll-out of this intervention over a period of five months in order to provide feedback for improving implementation. Specifically MRC intends to: assess the readiness of counselors to adopt a new counseling style; evaluate the training programme in order to assess its adequacy in imparting MI skills and the Options for Health eight-step counseling protocol to counselors so that they can successfully implement it with their patients; assess counselors' fidelity to the counseling protocol during implementation over a five month period in three different populations of people on ART. These include 1) HIV-infected people being prepared for ARV treatment but who are failing to meet the psychosocial criteria required for treatment, 2) people on ARVs who are identified by ARV clinic staff as having problems with their adherence, and 3) adolescents on ARV

Activity Narrative: treatment.

SUMMARY:

There are separate programs being implemented by the MRC in this program narrative. The first focuses on vulnerable populations, the second on gender-based violence and HIV, and the third on male circumcision. MRC's FY 2008 activities in the area of vulnerable populations build on FY 2005, 2006 and 2007 PEPFAR investments to strengthen programs serving IDUs, sex workers and MSM by developing the capacity of organizations to deliver services that enable these populations to reduce risk of HIV infection. Activities will focus on creating multi-sectoral and multi-disciplinary consortia of substance abuse and HIV organizations and developing organizational capacity to implement targeted community-based outreach interventions, linking outreach efforts to risk reduction counseling related to drugs and HIV, and access and referral to substance abuse, HIV care, treatment, and support services. In addition, the MRC will design and implement a behavioral HIV prevention intervention to reduce sexual risk behavior associated with alcohol use in bars in Tshwane. The major emphasis areas are the development of networks, linkages, and referral systems; and information, education and communication.

BACKGROUND:

Findings from the South African-conducted International Rapid Assessment Response and Evaluation (I-RARE) of drug use and HIV risk behaviors among vulnerable drug using populations (injecting drug users (IDUs), sex workers and men who have sex with men (MSM) point to: high prevalence of overlapping drug and sexual risk behaviors; high prevalence of HIV in these populations; high levels of alcohol use and sexual risk behaviors and barriers to access and utilization of risk reduction, substance abuse and HIV services.

In FY 2005, PEPFAR supported MRC to conduct a rapid assessment of drug use and HIV risk among IDUs, sex workers and MSM in Cape Town, Durban, and Pretoria. In FY 2006, PEPFAR supported the convening of public and private partners, stakeholders, and organizations serving the target populations to develop recommendations, based on the findings of the rapid assessment. In FY 2007 and FY 2008, the MRC, in collaboration with a consortium of organizations and provincial governments is in the process of implementing interventions to reduce high-risk drug use and sexual behaviors and increase access to and utilization of services.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Linking and Coordination of Drug Abuse Treatment and HIV

Finding of the rapid assessment indicate lack of linkages and coordination of drug abuse treatment and HIV services. This activity focuses on developing the capacity of Non government organizations (NGOs) and community-based organizations (CBOs) and other HIV and drug service organizations serving IDUs, sex workers and MSM to implement interventions targeting high-risk drug use and sexual behaviors and increase their access to and utilization of services. This activity will support the formalization of consortia linking drug abuse treatment and HIV service delivery organizations and the development of capacity among the consortia for the provision of comprehensive HIV and AIDS programs tailored for drug using vulnerable populations and adapted to the local epidemic. Components will include community-based outreach, risk reduction counseling, access and referral to HIV counseling and testing, substance abuse, and other HIV care and treatment services, including STI services. Community workers will be trained to access hidden populations and provide risk reduction related to violence, drug use, injecting and safer sex. Existing training manuals will be adapted to train outreach workers to implement community-based outreach. FY 2008 activities will be expanded to include underserved areas outside of the Durban, Cape Town, Tshwane metropolitan areas and in Mpumalanga province.

ACTIVITY 2: Design and Implement an HIV Intervention to Reduce Sexual Risk Behavior Associated with Alcohol use in Tshwane Bars

Using FY 2006 funding, MRC conducted formative research to identify a range of intervention methods that may be effective in reducing HIV sexual risk behavior associated with alcohol consumption. FY 2007 funding was used to develop specific bar-based intervention using methods proven to be effective in prior research. Future plans for this project build on FY 2006 and FY 2007 PEPFAR investments. In FY 2008, the MRC will continue to refine the interventions and make recommendations for implementation in other provinces and locations. FY 2008 COP activities will involve completing the pilot i; collecting three-month follow-up data; making recommendations for adapting and scaling up the intervention to diverse socio-cultural settings.

ACTIVITY 3: Design and Implement an HIV Intervention to Reduce Sexual Risk Behavior Associated with Alcohol Use in Cape Town

Formative work related to (1) the design of a behavioral intervention aimed at reducing alcohol-related sexual HIV risk and gender-related violence for women in Cape Town, (2) designing behavioral interventions aimed at reducing drug abuse during pregnancy and associated HIV risk behavior, (3) designing behavioral interventions aimed at reducing drug-related HIV risk behavior among first time juvenile offenders and (4) better understanding the pathways through which alcohol affects HIV transmission and quantifying this association.

ACTIVITY 4: Effective delivery of PEP after rape: challenge of compliance

Monitoring and support of patients on anti-retroviral therapy (ART) is an important aspect of AIDS treatment and the daily support to patients to facilitate medication adherence during the initial stage is seen as an essential aspect of care (NDOH National Antiretroviral treatment Guidelines, 2004). Many lessons on how to support patients receiving post-exposure prophylaxis after a sexual assault can be gained from the ART program, and include extensive pre-treatment information and education, encouraging use of tools such as

Activity Narrative: adherence diaries and motivational interviews during the initial period of pill-taking. The MRC is currently engaged in a small proof of concept study that will lead to the development and testing of an information leaflet for patient education and adherence diary and of a model of providing nurse-led telephonic support in sites in the Western Cape and Eastern Cape with funds from Irish Aid. MRC will build on this work by developing two components of health service delivery and undertake an evaluation to determine impact of these on compliance with 28 day PEP courses. The first model of service delivery would be a model of nurse-led counseling for rape survivors that could be provided during the routinely scheduled weekly follow up visits to which patients are currently invited in services. The counseling would include adherence counseling, but would mostly focus on providing general psychological support for rape victim/survivors. The second model would be of follow up contact with victim/survivors on intermittent occasions during the 28 day period over which PEP is recommended. The model would seek to establish contact on days 2, 5, 13 and 20 after rape either by cell phone (~70% of South Africans have these) or home visit with the aim of providing support and encouraging adherence. The counseling model would build on existing good practice in the services. MRC will identify examples, study the approach and content of counseling in these settings, and develop a short training intervention that would train staff to follow the counseling model. The telephonic intervention would build on the MRC research in progress, but would in addition develop a model of home visitation that would be feasible and affordable for health services, building again on current good practice. The interventions will be implemented in the Western Cape, Eastern Cape and Gauteng Provinces in 24 sites providing care to sexual assault victim/survivor. Target population includes all victim/survivors of gender-based violence, including men, women and children of all ages. Victim/survivors would be given a leaflet about rape and HIV with an adherence diary. Staff at the sites will be trained to provide counselling during weekly follow up visits.

Activity 5: A rapid appraisal of traditional male circumcision (mc) and initiation processes
 At the request of the NDOH, MRC will implement a rapid appraisal of traditional mc practices in 7 provinces of South Africa. The purpose of the activity is to gain an in-depth understanding of the processes, practices and meaning of initiation for boys and to gain an in-depth understanding of the community's response to the finding that mc plays in the role of HIV prevention. The rapid appraisal will be conducted through the implementation of focus groups, in-depth interviews and key informant interviews. The findings will be presented to the ministry of health together with a policy brief highlighting how HIV prevention messages and behavior change can be integrated into traditional male circumcision processes.

Activity ID: 8266.22805.09	Planned Funds: \$0
Activity System ID: 22805	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Ubuntu's programming forms a continuum of connected services that address the unique set of challenges that the community faces while still recognizing the many strengths they contribute to overcoming these challenges. Every individual with whom Ubuntu works needs a tailored and holistic range of services to address the context of her situation. Although each Ubuntu program carries its own name and structure, they work in tandem to form a comprehensive response to this challenge. Ubuntu will build on the existing foundation described above and add a few modifications:

Ubuntu's other sexual prevention outreach is based on a series of contacts with community members. Ubuntu will conduct small group mobilization, door-to-door street outreach and clinical outreach. All of these approaches introduce community members to topics. Many of these community members attend multiple sessions of these workshops with different topics. Many people cross over from venue to venue. Our large community events are then often the 3rd, 4th or possibly the 10th time that a community member interacts with Ubuntu's outreach team. The facilitators are trained to utilize this as an educational opportunity as our methodology recognizes best practices in education that promote repeated messaging. Outreach is then connected to Ubuntu's other programs through referrals.

Ubuntu's approach ensures that our team can penetrate to a large segment of the population. One approach that Ubuntu will utilize is a Cypha approach. Ubuntu's Cypha approach is targeted at drawing large crowds within the township. The Cypha approach is made possible by the community mobilization preceding the event. At the same time, Ubuntu places trained staff on site to enable small break-away or focus groups for interpersonal communication. Cypha utilizes Ubuntu's HIV-infected facilitators to spread prevention messages.

Ubuntu's Cypha approach utilizes a culturally appropriate methodology to approach difficult topics such as changing social norms, attitudes, and beliefs, and developing skills to reduce the number of partners, especially overlapping or concurrent sexual partnerships that create an efficient transmission network for the virus to spread rapidly through a population. Ubuntu facilitators discuss explicitly the risks associated with multiple/concurrent sexual partners.

Hip-Hop music plays a large role in gathering a large crowd. Normally crowds attending Ubuntu's outreach events are predominantly female. However, through the Cypha approach, Ubuntu has gathered more than 100 men per event. Utilizing popular hip-hop artists from within the community, Ubuntu collaborates on producing lyrics that promote behaviors that are not often talked about in predominantly male gatherings in South Africa. These topics include mutual monogamy and mutual knowledge of HIV status

Ubuntu encourages men to discuss the realities of their lives through the performer's lyrics and the break-away discussions. Facilitators are trained with Men As Partners approach. This best practice curriculum that has been successful internationally, teaches multiple strategies for healthy behaviors that actually work in the true context of their lives. The Men As Partners curriculum changes harmful gender norms. The curriculum addresses rape multiple, concurrent partnerships, cross-generational sex and low and inconsistent condom use.

Every week Ubuntu conducts four to five HIV prevention workshops of 15-20 people each for established community groups, CBOs, (groups, or through networking in specific areas to gather community members. With formal groups there are workshop series over 3-4 weeks on HIV prevention and care.

Topics range from general HIV and AIDS information; STIs, TB and other opportunistic infections; stigma; living positively; and substance abuse, and HIV prevention

In order to scale up impact, Ubuntu will share curriculum and methodology with many different government institutions, NGOs and other stakeholders. Ubuntu currently sits on multiple government-led outreach committees that combine the most important stakeholders in Port Elizabeth. These committees address various issues from HIV management to nutrition in TB treatment. Ubuntu will lead a campaign to form a prevention outreach committee that can link to these other efforts. Not enough attention is paid to the prevention messages that must surround VCT, TB treatment and HIV management. As a leading institution in Port Elizabeth, Ubuntu will play a role in ensuring that community and clinical services are linked to messages about risky behavior, knowing your status, alcohol and substance abuse and other key priority areas. This initiative overlaps between AB prevention and other prevention.

As a Department of Health accredited condom distribution site, Ubuntu will continue to ensure consistent availability of quality condoms, and promote consistent and correct condom use among people who are sexually active. Ubuntu will also link its condom distribution to its workshops and multimedia high impact messaging events. Through these events and support group activities Ubuntu will encourage correct condom use for all couples including discordant couples to protect the HIV-negative partner from becoming infected. Our men as partners messaging will further encourage limiting outside partners.

SUMMARY:

Ubuntu Education Fund (Ubuntu) aims to prevent HIV transmission by promoting safe and healthy sexual behavior, and conducting community outreach activities among at-risk youth and adults in high-density, high-poverty areas including informal settlements in the townships of Port Elizabeth, a city in the province of the Eastern Cape, South Africa. Emphasis areas are addressing male norms and behaviors and reducing violence and coercion. Specific target populations are male and female adolescents (ages 15-24), men and women 25 and over, discordant couples, people living with HIV/AIDS, men having sex with men, persons who engage in transactional sex but do not identify as persons in sex work, and street youth.

BACKGROUND:

Activity Narrative: For the past six years, Ubuntu has provided targeted HIV prevention community outreach activities in the townships of Port Elizabeth. Outreach strategies focus on preventing HIV infection by building skills and promoting health-seeking behavior such as accessing voluntary counseling and testing (VCT) and antiretroviral treatment (ART) and other health services. Ubuntu works with the National Department of Health (NDOH) and the Nelson Mandela Bay Metropolitan Municipality's AIDS Training, Information and Counseling Centre (ATICC) to distribute condoms and promote uptake of health services. Outreach facilitators engage ward councilors in community outreach activities in their areas.

Ubuntu became a PEPFAR partner in FY 2007 and has only recently received funds.

ACTIVITIES AND EXPECTED RESULTS:

Ubuntu Education Fund will carry out four separate activities in this program area.

ACTIVITY 1: Outreach Messaging

Based on current HIV prevalence rates among people accessing voluntary counseling and testing (VCT) services at clinics in the operational area, the targeted communities are at extremely high-risk for HIV infection, consistently above the already high average prevalence rate of 34.5% for the Nelson Mandela Bay Metropolitan Municipality. Outreach messaging focuses on increasing awareness of personal risk, making knowledge of personal and partner HIV status a relationship norm, increasing knowledge of sero-discordancy in couples, promoting consistent and correct usage of male and female condoms, and improving awareness and uptake of HIV clinical and community support services. With PEPFAR support, Ubuntu will scale up the outreach program with additional outreach workers in FY 2008 to fully reach target communities and increase outreach activities in partner clinics linked to immediate access to voluntary counseling and testing (VCT). Outreach activity will focus on risk perception around multiple and concurrent partnerships and as part of incorporating a stronger gender perspective into outreach activities, Ubuntu is partnering with EngenderHealth to incorporate a 'Men as Partners' (MAP) approach in the community outreach program. MAP outreach will engage boys and men in addressing gender-based violence, reproductive health and encourage their participation as caregivers. Ubuntu will work with other community-based organizations (CBOs) to hold interactive workshops that challenge gender roles impinging on girls and women's rights and exposing them to gender-based discrimination, violence and loss of power. Workshops also break taboos by educating community members about same sex relationships.

The outreach team and volunteers reach 25,000 people per year in KwaZakhele, Zwide, Soweto, Veeplaas and New Brighton. The outreach team maps each target area for clinics, taxi ranks, markets, taverns, and networks with community-based organizations (CBOs), support groups, neighborhood structures and community leaders. The program uses a variety of outreach activities to build knowledge and skills, to promote care-seeking behavior and to provide information on how to access local VCT and treatment services. Every week outreach facilitators plan a route through their area that involves (1) door to door campaigns, (2) street outreach, (3) clinic outreach, (4) networking with community peer educators, (5) conducting community workshops, (6) community events, and (7) supplying condom service outlets.

Door-to-door campaigns are conducted by outreach facilitators in identified high-risk, high-poverty areas. Facilitators introduce Ubuntu Education Fund services and engage adults and youth in discussions surrounding HIV/AIDS topics and identify health issues within the household. On-the-spot referrals are common, allowing Ubuntu to access difficult to reach populations.

Street outreach involves meeting individuals and small groups on the street in high-poverty, high-density areas to introduce Ubuntu services and initiate a discussion on HIV prevention issues. Very often these discussions turn into impromptu workshops and discussion groups as people gather. Outreach facilitators are able to ascertain barriers to accessing care, identify areas in the community where information is scarce and utilize this information on an ongoing basis to refine and improve messages. The outreach workers distribute isiXhosa information, education and communication (IEC) material including Ubuntu brochures detailing services, STI and HIV material from Khomanani (the South African government's mass media campaign) and Soul City, referral cards detailing locally available STI/VCT/TB/ART services, and male and female condoms (supplied by the SAG).

ACTIVITY 2: Education Sessions

Every morning facilitators conduct outreach education sessions at primary health clinics; conduct clinic outreach with a focus on VCT, treatment literacy, and living positively. These outreach sessions occur at the following clinics in the target area: Soweto Clinic, Veeplaas Clinic, Zwide Clinic, KwaNdokwenza Clinic, KwaZakhele Clinic, and KwaZakhele Day Hospital. Outreach facilitators conduct outreach in clinic waiting rooms on HIV topics while encouraging people to take advantage of VCT. Uptake of VCT is measured on these days to assess impact.

In each target area the team has cultivated relationships with community opinion leaders and enlisted their support to provide ongoing education to their peers and community members as point people on HIV and AIDS issues in their communities. Community volunteers are community leaders such as ward councilors, heads of neighborhood structures, clients, CBO leaders, and other community stalwarts who have offered to help others access resources and support. Community volunteers are trained in HIV and AIDS topics including transmission, prevention, VCT, and accessing care services. They assist in the identification of vulnerable families for referral into care and support services, and supply condoms with education within their area.

ACTIVITY 3: Prevention Workshops

Every week Ubuntu conducts four to five HIV prevention workshops of 15-20 people each for established community groups, CBOs, groups, or through networking in specific areas to gather community members.

Activity Narrative: With formal groups there are workshop series over 3-4 weeks on HIV prevention and care. Topics range from general HIV/AIDS information; sexually transmitted infections (STIs), tuberculosis (TB) and other opportunistic infections; stigma; living positively; substance abuse, and HIV prevention. The organization focuses on young women in their twenties and adult men who engage in risky behaviors with emphasis on partner reduction. Ubuntu strives to increase involvement of PLHIV; in the workshops, Ubuntu integrates education about the role of alcohol in increasing risk behaviors into programs for adults; youth and high-risk population; and Ubuntu supports a comprehensive ABC approach. Ubuntu also conducts Men As Partners workshops twice every week reaching about 50 men per week.

ACTIVITY 4: Community Events

Every month Ubuntu holds a community event in a different area focusing on VCT uptake and HIV prevention skills. These informal events are late Friday afternoon open-air community gatherings where a DJ gathers a crowd and staff delivers a short presentation on specific HIV prevention topics. Up to 30 Ubuntu staff and volunteers then spread out into the crowd to lead discussions on HIV prevention and available services with small groups, while distributing condoms and IEC materials. Ubuntu holds high impact community events to coincide with national events such as World AIDS Day; Condom Day and an AIDS Candlelight memorial.

Outreach facilitators and community volunteers supply condom distribution points throughout target areas every week. Locations for condom distribution include taverns and restaurants as well as a number of condom service outlets with trained peer volunteers who distribute condoms from their venues or homes with education on correct usage. Ubuntu is a direct distributor of male and female condoms provided by the South African Government.

These results contribute to the PEPFAR 2-7-10 goals by improving awareness of the need to know personal HIV status in the target community, improving awareness of VCT services in target area, increasing demand for VCT services, especially among men, increasing consistent and correct condom usage among men and women, reducing gender-based violence among target populations and increasing participation of men and boys in community HIV prevention initiatives.

sexual prevention

Budget Code: HVOP

Program Budget Code: 03

Activity ID: 19447.22840.09

Planned Funds: \$259,960

Activity System ID: 22840

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

According to the COP technical considerations, peer education activities now fall under this program area. The activity has therefore been removed from orphan and vulnerable children program care (previously care).

ACTIVITY 3: Thirty-six peer education support group facilitators and AIDS ambassadors will be trained on support group formation and on the curriculum issues to be followed in support groups.

ACTIVITY 4: The South African Democratic Teachers Union (SADTU) will establish 12 peer education care and support groups in regions of high incidences of HIV infection. These will be organized for people living with HIV and AIDS (PLWHA) and/affected individuals to promote healthy living, care, awareness of and access to treatment of opportunistic infections (OIs) and sexually transmitted infections (STIs), positive prevention including partner reduction and consistent and correct condom use, being faithful, coupled with treatment access and strict adherence through treatment buddies will be promoted. Risk assessments and risk reduction processes will be organized to address members' needs. Harmful behaviors leading to increased risk and compromised health such as alcohol abuse and casual sex without a condom will be addressed. Information sessions on good nutrition and use of nutritional supplements will be promoted. Ongoing counseling including voluntary counseling and testing (VCT) campaigns for family members will be organized to promote acceptance, support of PLWHA and allow families to respond to health needs and/or protect the health of other family members. Meetings will be held fortnightly and facilitated by peer education facilitators and AIDS ambassadors.

ACTIVITY 5: Regional meetings for out of school youth.

ACTIVITY 6: To take control of HIV prevention in all types of sexual partnerships, open adult debates will be held to encourage partner reduction, correct and consistent condom use, recognition of sexual minority groups and addressing HIV prevention strategies available to those groups. Activities aim to instill the need for co-responsibility of the others' health and family in partners for mutual faithfulness and mutual knowledge of one's status.

ACTIVITY 7: Local leaders will organize in accessible taverns and sheebens (township alcohol hotspots) to introduce condom use and demonstrate correct condom use and supply and maintain supply for alcohol addicts.

ACTIVITY 8: In order to support quality assurance, monitoring and evaluation mechanisms. peer education facilitators (union leaders), support group facilitators, and orphan and vulnerable children caregivers will be trained on inputs and outputs or each activity, and required outcomes and indicators for monitoring, support and reporting processes. This will include:

- Establishing selection criteria for peer educators, caregivers and support group facilitators
- Selecting appropriate curricula and materials, that can be used in local trainings and implementation that contributes towards achievement of objectives
- Reviewing of training and supervision approaches, including refresher trainings
- Implementing strategies for program monitoring using indicators, supportive supervision and observational approaches
- All activities will be evaluated to improve the design, implementation, revision, messaging, focus and relevance of prevention programming
- A monitoring and evaluation plan will be designed with data collection forms for each stage of implementation per program area

SUMMARY:

The South African Democratic Teachers Union (SADTU) project aims to reduce the impact of HIV and AIDS by focusing on preventing transmission of HIV for teachers and, their workplace community. This includes both a comprehensive ABC prevention program through peer education but also improve condom distribution at SADTU regional and branch offices.

BACKGROUND:

The HIV and AIDS pandemic has created workplace environments that are not conducive to quality teaching and learning for both educators and learners alike. The school as a workplace is plagued by high levels of stigma. This often results in educators suffering silently and becoming victims of the pandemic despite high perceptions of knowledge of HIV and AIDS. As a result many educators do not have the courage and support in the workplace to go for voluntary counseling and testing, since knowing your status is not publicly encouraged. Consequently most educators discover they are HIV-infected when they start showing symptomatic illnesses that do not respond to medications. By this time their CD4 counts are usually low and they can no longer function optimally at their schools with compromised health. The SADTU project aims to reduce the impact of HIV and AIDS by creating a caring workplace environment for both learners and educators alike and focusing on preventing transmission of HIV for teachers and caring for orphans and vulnerable children in the workplace. The target group for these activities is teachers.

ACTIVITIES and EXPECTED RESULTS:

Activity 1: Condom distribution

The SADTU workplace project will distribute male and female condoms to at least 500 regional and branch offices. In addition as functioning as condom distribution points, each of the sites will provide educational materials on HIV prevention including correct and consistent condom usage. The sites are easily

Activity Narrative: accessible and are frequently visited by teachers. IEC materials on correct and consistent condom usage will be available in all relevant languages. SADTU will work with relevant government departments to obtain free condoms.

Activity 2: Community Involvement

SADTU will work with trained peer educators to increase community involvement, and increase male involvement and awareness around HIV prevention, PMTCT, the role of male norms and behaviours in HIV transmission. In addition, through community involvement activities, such as sports and culture events, municipal imbizos, Department of Education campaigns, youth conferences, road shows in schools and community etc. SADTU will ensure the distribution of IEC materials to educators and communities.

The targets for the number of people reached through the comprehensive peer education program are counted under AB.

This project contributes to PEPFAR 2-7-10 goals and objectives by ensuring access to male and female condoms hence preventing new HIV infections.

Activity Narrative: ACTIVITY UNCHANGED FROM FY 2008

SUMMARY:

This activity is a component of a comprehensive prevention education, care and treatment program for small to medium enterprises (SMEs) with 20-200 employees and other workplaces in South Africa.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Project Promote

Project Promote is a public private partnership established in 2006, between the South African Department of Health (NDOH), SABCOHA and the cleaning industry through Prestige Group, Fidelity Supercare, Steiner Group and BidAIR to as part of broader prevention programmes to provide an efficient and effective mechanism for condom distribution. Project Promote directly supports the NDOH in terms of extending condom distribution services through non traditional outlets. There is a national task team made up of representatives from each of the partners managed by SABCOHA, through a consulting organization Genlem projects that has worked in HIV and AIDS programmes within the cleaning industry for over 3 years. Currently Private sector infrastructure including personnel (trainers, supervisors and cleaners) are provided at no cost to the project, where SABCOHA funds the programme management and the department of health procures, quality assures and delivers the condoms to the primary distribution sites free of charge. Primary distribution sites are actual Private Sector regional offices of each of the partners. Project Promote reports directly into the provincial and national departments of health using department of health approved M&E systems based largely on the Logistics Information System supported by USAID including LMIS sheets and Bin card. The interest in Project Promote shown by government and Private sector partners has lead to a far greater demand than originally envisaged and Project promote plans to have 43 operational Primary distribution sites in year one. Distribution mechanisms varying according to Private sector partner infrastructure, but the broad range of models enable project promote to access SME's otherwise difficult to reach over large geographical regions. In addition to this the project has begun supporting a community distribution programme whereby cleaners themselves are used as community distributors. Operationally over 5 years, Project Promote needs to be maintained and grow by at least 10 new primary distribution sites per year from year 2. Currently 8 of the 9 provinces are fully operational with Limpopo to be brought on in year 1 as part of the SABCOHA SME programme. This component of the programme will feed directly into the supply chain strategy and micro-enterprise strategy encouraging condom distribution through those mechanisms as well. It is anticipated that the SMME's reached through the Vendor-Chain Programme and the BizAIDS Programme will also be serviced by Project Promote. In addition to this as part of year one Project Promote will, based on systems currently used by the Department of Health streamline its operations through the development of and investment in greater IT technology and systems which will allow the programme to more effectively monitor the 43 sites in year one. On average the 43 sites are expected to distribute an accumulated total of 600 000 male condoms per month. These additional 10 sites for year 2 will bring the total number of sites to 53, with an additional 600 000 condoms distributed per month.

ACTIVITY 2: BizAids

BizAIDS through a network of small business associations and training providers will facilitate the transfer of skills to the informal sector. Skilled facilitators lead workshops of 18 - 20 business owners through topics ranging from: 1) understanding and identifying risks of HIV and other health risks; 2) protecting employees who are both HIV-infected and negative; 3) providing HIV/AIDS legal/community resource directory; 4) increasing HIV/AIDS awareness through messages of abstinence, being faithful and using a condom; 5) using tools such as a SWOT (Strengths, Weaknesses, Opportunities, Threats in mitigating risk posed by unforeseen events.

By providing education on key strategies for preventing HIV infection and promoting healthy behavior change among workforce populations, including appropriate use of condoms, and by distributing condoms to a large population of workers the SABCOHA workplace program will directly contribute to PEPFAR's goal of preventing seven million new infections. Through education on prevention messages and the distribution of male and female condoms, this program will also support the prevention goals outlined in the USG Five-Year Strategy for South Africa.

Activity Narrative: NO FY 2009 FUNDING IS REQUESTED FOR THIS ACTIVITY: This activity was approved in the FY 2008 COP, is funded with FY 2008 PEPFAR funds, and is included here to provide complete information for reviewers. No FY 2009 funding is requested for this activity. PEPFAR funds were allocated to scale up Hope worldwide (HWW) South Africa activities in other prevention activities specifically in prevention with positives and condom education. HWW will continue its prevention activities with a specific focus on abstinence education at both primary and secondary schools. HWW will continue to implement the other prevention activities specified in the FY 2008 COP and these will be completed according to schedule in 2008. The outcome of the PEPFAR South Africa Interagency Partner Evaluation was that HWW should focus only on AB, where they have a strong program, but not to continue support HWW in Other Prevention. Therefore there is no need to continue funding this activity with FY 2009 COP funds.

Table 3.3.03: Activities by Funding Mechanism

Mechanism ID: 8709.09	Mechanism: N/A
Prime Partner: Montefiore Hospital	USG Agency: HHS/Centers for Disease Control & Prevention
Funding Source: GHCS (State)	Program Area: Sexual Prevention: Other sexual prevention
Budget Code: HVOP	Program Budget Code: 03
Activity ID: 22498.22973.09	Planned Funds: \$0
Activity System ID: 22973	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

In late FY 2008, Montefiore Hospital's youth program looked to provincial youth peer education programmes to open doors to implementing the Advise, Consent, Test, Support (ACTS) program in other provinces. In addition, Montefiore Hospital was asked to assist these youth programmes by providing training on routinely offered voluntary counseling and testing (VCT) and providing sexual prevention messages.

\$388,000 will go toward other prevention activities due to the high risk nature of youth sexual relationships. It is of utmost importance that both young men and women are equipped with the necessary knowledge to make informed decisions about their sexual and reproductive health, and that services to address their sexual and reproductive health needs are accessible and efficient. In this vein, the ACTS program proposes implementing a new initiative to engage small youth-serving non-governmental organizations (NGOs) to deliver prevention programs in three new provinces: Limpopo, Mpumalanga and KwaZulu-Natal. We will work with the appropriate provincial and district department of health offices to coordinate these new sub-partner efforts with existing prevention as well as counseling and testing activities in their service areas. Recruitment for these new community partners will take place via advertisements in provincial or district media to ensure fair and open competition. Successful applicants will receive small- to medium-sized grants to develop and deliver prevention programs directed at higher risk youth including those living in townships and transit corridors as well as young women in their 20s. Prevention programs that focus on reducing multiple concurrent partners, cross generational and transactional sex; increasing awareness of youth risk for HIV via social marketing, peer education programs and the active involvement of youth living with HIV; promoting abstinence, being faithful and condom (ABC) messages with novel approaches to ensuring correct and consistent condom use will also be encouraged to apply. The programs will also educate youth about HIV/AIDS, provide HIV counseling and testing and emphasize other key prevention messages in line with the goals set forth by the South African Government. The new sub-partners will be provided with ACTS collateral materials including HIV education video content; standard operating procedure and work plans with measurable objectives and timelines within which they must meet their targets. The evaluation of these sub-partners will take place as continuing quality improvement activities recorded on a quarterly basis.

The Montefiore Medical Center aims to eliminate missed opportunities to test youth by building the capacity of youth-serving clinics and STI clinics to more routinely provide CT using the ACTS model. ACTS (Assess, Consent, Test and Support) is a program of rapid, simplified counseling and testing (CT) that effectively scales up provider-initiated counseling and testing (PICT). In addition, will implementing a youth-based PICT, Montefiore Medical Center will work with rural districts to target non-government organizations (NGOs) working with youth to provide HIV prevention activities.

BACKGROUND:

Engaging young people in HIV counseling and testing, prevention and care is one of the most important strategies for reducing the burden of HIV and AIDS in South Africa. Unfortunately, thousands of opportunities to achieve these goals are missed every day when vulnerable South African youth seek a variety of health care services but are not offered HIV counseling and testing (CT) or provided with HIV prevention information. By reducing pre-test counseling sessions to five minutes or less, ACTS allows nurses to incorporate CT into the other clinical services they provide, such as sexually transmitted infection (STI) care and family planning and promotes immediate follow-up and linkage to care. In addition, youth can then be linked with NGO providing HIV prevention services to ensure behavior change. The target population for this activity is youth between the ages of 10-25 in hard to reach parts of the country. The major emphasis area for these activities includes building local capacity and creating linkages, networks and referrals between youth-based prevention services and the ACTS CT model.

ACTIVITIES AND EXPECTED RESULTS:

Using ACTS, this program will focus initially on maximizing the linkages between youth based NGOs working in the area of HIV and AIDS prevention and CT services in high-prevalence youth clinics, starting with STI clients and expanding to family planning clients. The linkage with the NGOs will ensure that ACTS services can be implemented in conjunction with HIV prevention activities that targeted messaging and with other NGO activities. ACTS will link with youth-based NGOs in and around the clinics where services are being implemented. This will ensure that youth get both CT services and HIV prevention messages. Similarly to its approach with working with health facilities, the ACTS team will engage each new NGO, develop an implementation and monitoring plan and train all relevant providers HIV and AIDS prevention, in the importance of CT, collection PEPFAR indicators, provide quality assurance monitoring and initial HIV care. During the five year cooperative agreement, this model will be continuously refined and successively implemented in high prevalence communities and sites throughout South Africa starting in the Western Cape and Mpumalanga. The youth-based NGO project will expand services to Waterberg district in Limpopo province and the North West Province.

In FY2008, the team will continue to refine the ACTS services in two youth clinics in Khayelitsha . A monitoring and evaluation plan will be developed that includes PEPFAR indicators. A quality assurance plan will evaluate linkage to prevention among HIV negative youth as well as ensure that newly diagnosed HI-infected youth also receive information on positive prevention. A Project Director will be hired and trained and locations in Mpumalanga or other Province will be chosen as well as additional clinical and community sites in the Western Cape. The goal is for this partner to test 20,000 youth for HIV and link them to prevention.

These activities will contribute towards meeting PEPFAR's 2-7-10 goals by targeting youth between the ages of 15-25 and ensuring that they receive HIV prevention messages. In linking prevention services with CT services, this activity will ensure that youth understand how to stay negative after undergoing a HIV test.

USG Agency: U.S. Agency for International Development

Program Area: Sexual Prevention: Other sexual prevention

Program Budget Code: 03

Planned Funds: \$224,279

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

SUMMARY:

Activities in FY 2009 are being scaled up with a deliberate focus on addressing areas with the highest rates of infection. GOLD has commenced and will be strengthening its messaging to drive provincial campaigns and provide training to ensure that peer education activities emphasize combating behaviors that drive high HIV transmission. For older youth who are no longer abstaining, the promotion of high consistent condom use and reduced and inter-generational and transactional sex will continue with more depth, while providing secondary abstinence as a viable choice. GOLD will continue to scale up, strengthen and more effectively target GOLD's current prevention efforts in order to increase their impact on reducing new infections amongst youth in both schools as well as out of school youth. This is described in GOLD's alignment to the NSP and how GOLD is emphasizing prevention priorities identified by PEPFAR.

BACKGROUND:

GOLD has spent much of 2008 strengthening the approaches of its model to enable peer educators to reach out of school youth, orphans and vulnerable children more effectively and two new curricula sessions will be introduced to support this as part of the ongoing program in 2009. In addition, gender mentoring will focus on promoting delay of sexual debut especially for girls and empowering young women to reduce risk and seek to change harmful gender norms that place both girls and boys at increased risk

Revised GOLD standards in FY 2009 include outputs that GOLD will monitor which involve activities that integrate educators, parents/guardians, church leaders and other influential community adults to ensure that youth receive concurrent messages at home, in school, at church and at social gatherings. GOLD has introduced an advocacy and program visibility service which will involve supporting existing approaches beyond behavior change communication in a creative way and confront the contextual factors that make it difficult for young women to adopt safer behaviors. In addition, there is a stronger emphasis on including positive male role models to support programs to create enabling communities for positive behavior change.

A significant modification to the FY 2008 Background narrative is that GOLD has not been working with an organization called Wagon of Hope. This sub-partner name is incorrect and is an additional one that is not in line with the number of 15 in total that GOLD agreed to work with in FY 2008. All the others are correct. Ten and not nine additional organizations will be selected and trained in September 2008 to recruit peer educators. These organizations will be confirmed at the end of August 2008 and are selected according to a rigorous process of application and assessment. To implement GOLD Peer Education, an organization must have adequate infrastructure to support the program and a track record in youth behavior change interventions. For some organizations that are selected to implement the GOLD peer education program, not all the required capacities will be fully developed but support will be provided to enable organizations to move towards having a profile that enables them to meet GOLD standards for quality peer education programs within a community development framework.

ACTIVITIES AND EXPECTED RESULTS:

Recruitment of new peer educators will take place in January 2009 as planned according to the GOLD peer educator selection process and criteria. Peer educators volunteer or are nominated by their peers according to a set of criteria. This process yields a diverse group of teens from all the different sub-cultures who are leaders, chosen on their shared experience with learners or community youth. Peer educators are nominated as change agents within their communities to mobilize their communities towards transformation and health enhancing behavior change. They undergo a written and oral interview, an interview panel of past peer educators and educators, written parent/guardian approval and a pre-test for baseline purposes

The nominated peer is someone who fulfils the following criteria:

1. Will represent his/her class and grade/community group
2. Will be trained and equipped in the areas of HIV/AIDS, sexuality and lifestyle education
3. Has a passion to lead by example and be a nation builder
4. Is opinionated
5. Is reliable and trustworthy
6. Is willing to work in a cross-cultural team
7. Possesses leadership qualities
8. Is someone who wants to help people
9. Has the strength of character to influence other peers easily
10. Is prepared to be trained in fulfilling the four roles of a peer educator
11. Is willing to examine his/her own life choices, and question whether these decisions are having a positive and healthy impact on the future
12. Will be committed to attending all the peer educator training sessions and outputs over the program life-cycle

No other implementing organizations will be selected. The sentence that states that between 2007 and 2008, another batch of thirteen additional organizations will be selected to become GOLD implementing partners is not correct. This sentence is not correct and does not line up to all other targets set in the narrative in 2007 for the 2008 and 2009 plan. This sentence can be omitted. The sentence in the original narrative states that nine additional organizations will be assessed in July 2008 and selected and trained in September 2008 to recruit peer educators. This is less than what will take place in FY 2009. The correct sentence should state that ten additional organizations will be assessed in July 2008 and selected and trained in September 2008 to recruit peer educators. It should be noted that the peer educators in the GOLD program are comprehensively equipped and supported to advocate and refer sexually active youth for HIV testing and counseling.

Activity Narrative: GOLD will train 25 program managers and 109 peer educators from 25 implementing organizations, as well as 330 teachers, to implement the structured three-year GOLD model (with an optional fourth year) in 132 secondary schools and communities through equipping and supporting adolescent peer educators (PEs).

There will 132 sites reached of which three will be community sites targeting out of school youth peer educators instead of secondary school sites.

There will no longer be 8,008 adolescent PEs reached (for both program areas and 4,004 reached for this program area only), but 9,702 for both of the program areas within the 132 sites. Six of these PEs will be full time post school peer educators who will be fulfilling specific PE roles and outputs as part of the optional fourth year of the GOLD program where they will be given a stipend to positively impact their peers and will also be trained as co-facilitators. The increase in PE numbers is due to the fact that all new sites as well as existing sites will have new junior PE's and existing peer educators in junior peer education and senior peer education will enter a new program in 2009 and become senior and mentor peer educators respectively.

SUMMARY:

The FY 2008 COP PEPFAR funds will support the expansion of comprehensive youth prevention services to facilitate the roll-out of the GoLD Peer Education (PE) model through three components: 1) development and dissemination of PE best practice methods and materials; 2) capacity building and training of PE participants; and 3) quality assurance of implementation of the GoLD Model. The primary emphasis areas for these activities are gender, human capacity development, and local organization capacity development. Specific target populations include adolescents (15-24), adults (25 and over), and teachers.

BACKGROUND:

This project is part of a larger initiative begun in 2004. The described activities are ongoing and will be scaled up in FY 2008 with the help of PEPFAR funding. GoLD partners work with suitable community organizations to implement its model using the secondary school system and other community youth servicing sites. GoLD works in conjunction with the relevant South African Provincial Government structures. GoLD manages and provides quality assurance of the implementation of GoLD PE of its sub-partners. GoLD assists its partners to align the PE programs with the South African Government (SAG) guidelines on prevention of HIV with a focus on youth as a priority population group. The GoLD model is implemented within Western Cape (WC), KwaZulu-Natal and Mpumalanga provinces of South Africa. GoLD is being implemented in collaboration with Provincial Departments of Education (DOE) and the National Department of Health (DOH). GoLD's sub-partners in WC are partly funded by the Global Fund via the WC DOH and the conditional grant via WC DOE. In other provinces, sub-partners are partly funded by HopeHIV. Two of the three activities will be implemented directly by GoLD. One activity, capacity building and training of PE participants, will be implemented in collaboration with 24 youth-focused community organizations that implement the GoLD model in various sites and train the youth peer educators (PEs). These organizations are: Youth for Christ (YFC, George, Knysna, Pietermaritzburg and Nelspruit), Masoyi Home-Based Care, Wagon of Hope, Planned Parenthood Association of South Africa (PPASA), MaAfrika Tikkun, Ukuthasa, Institute for Social Concerns, Christian Assemblies Welfare Organization, Club Coffee Bar Community Centre, Uniting Christian Students Association, OIL Reach Out, NOAH and Sethani. Nine additional organizations will be assessed in July 2008 and selected and trained in September 2008 to recruit peer educators from January 2009. Between 2007 and 2008, another batch of thirteen additional organizations will be selected to become GoLD implementing partners. The issues facing South African youth in HIV prevention are firmly entrenched in the social constructions of behaviors and identities and include unequal power in sexual relationships, gender-based violence and intergenerational sex. GoLD messaging is designed to look beyond awareness and reflect the complex social dynamics of HIV transmission. By reflecting these dynamics that youth face daily, the model is intelligible to youth and fosters critical awareness, transformation and long-term behavior change that increases gender equity, challenges male norms and behaviors and supports activities to strengthen sanctions against sexual violence and coercion. PEs are equipped to challenge stigma around HIV and to promote the reduction of discrimination faced by HIV affected and infected individuals. The GoLD curriculum emphasizes the message-giver as a role model. Peer Educators are equipped and supported to role-model lifestyles that promote, in order: abstinence; delayed sexual debut, faithfulness, reduction of sexual partners among youth and correct and consistent condom use.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Development and dissemination of PE best practice prevention methods and materials

GoLD will refine and disseminate an interactive and context-specific resource base of GoLD PE curricula and best practice implementation methods for use by GoLD staff; trainers and master facilitators; PE facilitators; PEs; and program managers implementing the GoLD PE Program within secondary schools and communities. Along with implementation guides, this also includes curricula that focus on social dynamics informing conceptions of gender, covering sexuality and the feminization of AIDS, to reduce the inequalities between men and women that have led to the increase of HIV and AIDS as well as challenging stigma around HIV and AIDS. Ongoing refinement and development of curricula and the implementation guides will involve human capacity development of representatives of implementing partners to provide constructive feedback on experiences and share their findings together.

ACTIVITY 2: Capacity building and training of PE participants

GoLD will train program managers and community leaders from 24 implementing organizations, as well as teachers, to implement the structured three-year GoLD Model in 132 secondary schools and communities through equipping and supporting adolescent PEs. PEs are supported by implementing organizations through a structured skills training and mentoring program. GoLD will assess and provide implementing organizations with intensive capacity building to deliver the GoLD model in schools where access is given

Activity Narrative: by the provincial Department of Education within youth high risk behavior sites. GoLD will equip staff of the organizations through a structured capacity building program including modular training sessions, mentorship and provision of PE resources and best practice methods. GoLD will provide training to teachers to enhance the quality and ownership of the program for long-term sustainability. The implementing organizations will train adolescent PEs within the secondary school sites to fulfill specific PE roles and outputs over a three-year period in which they positively impact their peers.

It is anticipated that gender will be impacted through both the implementation of curriculum and the GoLD program environment. Youth in the PE program will work through gender issues within a safe and enabling environment (the GoLD program) and are given room to critically analyze and challenge gender norms, working together towards gender equality. The PE's will in turn support each other as they work among their peers and communities. New GoLD trainers and facilitators will be recruited based on criteria that ensure their character and skills reflect the values and practices imparted through the curriculum and program design. A planned selection of both male and female facilitators and PEs will be aligned to the GoLD facilitator and peer educator recruitment guidelines.

ACTIVITY 3: Quality assurance around implementation of the GoLD PE Model

This activity provides quality assurance around the implementation of the GoLD Model in secondary schools via implementing organizations, PE facilitators, and adolescent PEs. This will involve ongoing development and use of a robust information and communication technology infrastructure to 1) enable effective roll-out of the program in a way that enables ongoing monitoring and evaluation; 2) conduct bi-annual assessments of all implementing organizations; and 3) implement a comprehensive monitoring and evaluation system within all implementation sites.

The activities in the GoLD program contribute to the PEPFAR 2-7-10 goals to reduce new HIV infections among youth through: facilitating the structured promotion of safe and healthy behavior of HIV-infected and uninfected youth; improving access to services for affected youth and increasing positive youth role-modeling and advocacy.

Table 3.3.03: Activities by Funding Mechanism

Mechanism ID: 4644.09	Mechanism: N/A
Prime Partner: Youth for Christ South Africa (YfC)	USG Agency: HHS/Centers for Disease Control & Prevention
Funding Source: GHCS (State)	Program Area: Sexual Prevention: Other sexual prevention
Budget Code: HVOP	Program Budget Code: 03
Activity ID: 7949.22773.09	Planned Funds: \$186,899
Activity System ID: 22773	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Modification to FY 2009 has only been in the way of enhancing the other sexual prevention (OSP) program, with the only new addition of Families Matter.

ACTIVITY 1: Condom Distribution

Since FY 2007, Youth for Christ South Africa (YfCSA) has established and/or adopted condom distribution outlets in the various communities where the OSP Program is being rolled out. Youth facilitators identify high-risk transmission areas in their geographic areas where condom availability is most needed and promoted through posters at such points as local pubs (taverns), clubs, guest houses and lodging facilities and areas where transactional sex most likely happens. Youth facilitators also promote prevention of HIV transmission through promotion of abstinence outside of marriage and/or a long term, committed and faithful relationships; being faithful to abstinence-based decisions and values; and awareness raising that engagement in sex, protected and unprotected, increases the risk of HIV contraction, especially outside of a long-term committed and faithful relationship. Youth facilitators organize and establish community-based youth clubs and/interest groups where prevention of the HIV is promoted through promotion of abstinence and being faithful lifestyles and various other prevention methods, including correct and consistent condom use.

ACTIVITY 2: Behavior Change Campaigns

This activity will focus on overtly calling and campaigning for behavior change amongst sexually active out of school youth and the general community by addressing and highlighting the dangers and risk factors associated with risky behavior such as drug, substance and alcohol abuse; transactional and cross-generational sex; negative peer pressure; compromise of personal goals and values, etc. Youth facilitators, with their community-based group (youth clubs, peer educators, interest groups, church youth groups, etc) will engage in planning and hosting regular community wide campaigns that will also mobilize communities and populations with the use of a wide range of information, education and communication (IEC) materials provided by Khomanani, a government HIV/AIDS IEC campaign.

ACTIVITY 3: Lifeskills and Leadership Camps

Lifeskills and leadership camps aimed at training and equipping youth with critical personal and interpersonal skills; a wide range of critical lifeskills and leadership skills to also enable the youth to be effective peer educators and agents in their communities and groups. Youth facilitators and with YfC staff shall facilitate camps that will also cover vital topics of HIV/AIDS, factors fueling the spread of HIV, behavior change, multiple and concurrent sexual partnerships, etc. The camps will inculcate aspects of team building, leadership development and communication.

ACTIVITY 4: Intensifying of Prevention Education

It is imperative that condom distribution is not seen and rolled out indiscriminately or even viewed as being carried out independently of adequate education in the context of sexual and reproductive health and sexually transmitted infections (STIs) and the promotion of abstinence and being faithful. Condom distribution is part of a bigger comprehensive HIV prevention strategy. In youth clubs and other groupings of out of school youths, youth facilitators shall facilitate sessions to further influence youths' skills, knowledge and attitudes regarding behavior change.

ACTIVITY 5: Families Matter Program

In FY 2009, YfCSA is introducing, with the support of CDC South Africa, a new activity of a Families Matter Program. In this program, YfC aims at engaging parents and youth with a positive parenting and family program; awareness of the challenges faced by youth and the existent factors that abound accelerating the continued spread of HIV/AIDS. This being a new activity and area of focus, YfCSA shall work closely with the youth activity manager of CDC South Africa to establish and implement the Families Matter Program.

ACTIVITY 6: Gender Empowerment

In FY 2009 YfCSA will focus gender empowerment activities such that they include the issue of gender-based violence as well and gender imbalances. This will be done through the implementation of youth clubs and community wide events. YfCSA will continue to implement the YfCSA developed curriculum specifically for girls called "Phakama" (rise up). This program shall particularly look at empowering girls with skills, attitudes and knowledge to help them take pride in themselves and be empowered to negotiate issues such as relationships and sex, at an equal footing with boys. This program shall also help boys respect girls by addressing myths and stereotypes that are rooted in customs, culture and traditions. This will also include wider challenges such as human rights and specifically women's rights, mother-to-child transmission (MTCT). MTCT is being included in the curriculum due to the high number of pregnant girls between the ages of 16-24 that are being reached by YfC. Through the implementation of the above mentioned activities with young girls, YfC hopes to empower girls in sexual decision making, hence reducing the number of newly infect females,

SUMMARY: Youth for Christ (YfC) will promote HIV risk reduction and prevention activities by conducting life skills programs, awareness campaigns, and distributing and promoting correct and consistent use of condoms among school leavers, and young adults 18 years and older. YfC will recruit and train unemployed young adults as youth workers. After training, the youth workers will be placed in Youth Clubs where they will assist in expanding YfC's HIV prevention campaign by distributing condoms to communities and the youth. Gender is an emphasis area for this program as it addresses the extreme vulnerability of

Activity Narrative: young South African women to HIV, and male norms and behaviors. While the target population is youths aged 15-24 years, adults aged 25-30 will not be excluded from these prevention activities. BACKGROUND: YFC has been involved with prevention programs in schools for several years. The National Department of Health (NDOH) has funded YFC activities since 1995. The organization was PEPFAR-funded from 2005 through the NDOH cooperative agreement, and is now a PEPFAR prime partner. YFC's prevention activities will focus on distribution and correct and consistent use of condoms, and on gender issues, which will be addressed through life skills programs. The life skills programs will focus on empowering young women, and challenging young men to question gender stereotypes. In addition, this program forms part of YFC's comprehensive prevention strategy and is linked to activities in the AB program area. A particular focus of this linkage for this the "B" (be faithful) activities. ACTIVITIES AND EXPECTED RESULTS: ACTIVITY 1: Condom Distribution YFC's prevention program will ensure condom distribution that is coupled with clear and consistent and correct messaging around condom use. The condom distribution and condom use program will be aimed at school leavers and out of school youth, as these young adults are likely to be sexually active, and have a higher risk of exposure to HIV. YFC will distribute government-provided condoms at community-based sites and public health facilities. This activity aims to empower and positively influence men to practice safe sex and to use preventative methods, while empowering young with condom negotiation skills. YFC peer educators and interns will interact with their peers and challenge gender stereotypes, and at the same time, serve as mentors and positive role models. ACTIVITY 2: Behavior Change Campaigns This activity will focus on the development and implementation of behavior change campaigns around HIV and AIDS. Information, education, and communication (IEC) publications developed by Khomanani, a South African communications company, will be distributed along with the condoms. These materials address key communication issues around issues of prevention, care and treatment of HIV & AIDS. Peer educators and interns will encourage discussion around condoms and HIV and AIDS, and this activity will help to alleviate stigma and discrimination in the communities in which YFC is working. Interns and peer educators will be recruited from school leavers who are unemployed and who actively participate in faith-based organizations. These youth will be trained using the YFC peer educator programs including the Rutanang peer education manuals by the Department of Health and life skills manuals by the Department of Education section. In addition, peer educators will be trained in community mobilization and will play a role in informing their peers about local healthcare services, including counseling and testing. The peer educators will educate their peers on the benefits of HIV counseling and testing and will refer their peers to counseling and testing services in their communities. Parents will be targeted and provided with information on raising responsible and informed children. Community awareness programs will aim to destigmatize HIV and AIDS in communities and YFC will develop infrastructures to provide community support for HIV-affected families. ACTIVITY 3: Life Skills and Leadership Camps In FY 2008, two kinds of camps will be run for school leavers. Outdoor-based camps aimed at training and developing resilience and Leadership Skills. Young people will also be equipped with critical personal and inter-personal skills to enable them to dialogue with and impact their peers, friends and those they relate to. Important aspects of these camps shall be team building, leadership and communication with activities such as abseiling, hiking, canoeing, swimming, etc. Conference/Seminar-Based Camps will also be organized as "Youth, HIV & AIDS Seminars" to empower youth on current developments on the pandemic as they relates to youth specifically and to allow youth to understand the latest trends and developments in the fight against it. In all the activities, it shall be a general requirement that there be a gender ratio of at least 40% male and 60% female. ACTIVITY 4: Intensifying Education about Responsible Sexuality Condom promotion will not be done indiscriminately but by educating young persons and encouraging abstinence as the best and only completely safe option, within a mentoring and peer counseling context. However, since the majority of youth targeted in this component of the prevention strategy are already sexually active, activities will focus on the B component of the AB messaging and linking the being faithful to correct and consistent condom use. Efforts to engage youth shall aim to educate them in the correct and consistent use of condoms whilst also educating them on the risks involved in sexual activity. With FY 2008 funding, condom distribution, and efforts to ensure condom accessibility and availability will be accompanied by strategies that encourage youth to be responsible and accountable in decisions regarding their sexual behavior. With older, out of school youth, YFC will also tackle critical issues such as gender-based violence and cross generational and transactional sex, which the aim of fostering and encouraging behavior change among this group. Through the distribution of 15,000 male and 5,000 female condoms and through behavior changing messages, YFC will support prevention goals as outlined in the USG Five-Year Strategy for South Africa to avert 7 million new infections.

Table 3.3.03: Activities by Funding Mechanism

Mechanism ID: 4632.09	Mechanism: N/A
Prime Partner: South African Clothing & Textile Workers' Union	USG Agency: HHS/Centers for Disease Control & Prevention
Funding Source: GHCS (State)	Program Area: Sexual Prevention: Other sexual prevention
Budget Code: HVOP	Program Budget Code: 03
Activity ID: 7933.22861.09	Planned Funds: \$0
Activity System ID: 22861	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Activities that started in FY 2008 will continue in FY 2009.

- Condom dispensers will be inserted in 150 factories associated with SACTWU. It is planned that 375,000 male condoms and 6,000 female condoms will be distributed.
- During the month of April each year, an annual blitz is held in the industry where factories are visited by internal shop steward master trainers, and workers are educated on specific prevention messages. It is anticipated that 50,000 workers will be reached.
- The South African Clothing and Textile Workers' Union (SACTWU) Worker Health Program trainers will also provide workplace training throughout the year. This is made up of a 30 minute training module conducted at factories. Approximately 30 factories will be visited throughout the year where 5,000 workers will be educated on the above stated issues relating to prevention.
- The drama group will conduct workplace drama, with a particular script delivering abstinence and being faithful prevention messages. The group will perform this script at an estimated 30 factories, relaying the message to an estimated 5,000 workers. SACTWU has two months of shutdown in the industry over December and January; therefore the projected annual targets are divided over 10 months.

The following modifications apply:

Recently, a new script has been developed for the drama club addressing tuberculosis (TB), which will be performed at factories educating workers on this topic. It is also intended for the drama club to do outreach work at at least one high school per month within the communities that SACTWU members live and work. It is anticipated that targets will be increased in this program area due to this outreach work.

Further outreach work is planned at schools based within communities in which SACTWU members live and work. Twenty five female adolescents will be trained as peer educators in the following prevention areas: abstinence, being faithful, gender-based abuse and violence, and risk reduction through the avoidance of alcohol and drug abuse. All current peer educator and workplace training material was updated and revised in July 2008. In the new training material, including the script targeting adolescents, a greater emphasis has been placed on risk reduction through the avoidance of alcohol and drug abuse. This is directly due to the high prevalence rate of substance abuse amongst SACTWU's members and their families.

All nurses and lay counsellors will be trained to ensure that drug and alcohol education is included within the voluntary testing and counseling (VCT) services provided at SACTWU's VCT sites. Currently, education on abstinence and/or being faithful is also included in the training provided by lay counsellors based at SACTWU's VCT sites.

SUMMARY:

The Southern African Clothing and Textile Workers Union (SACTWU) project has received PEPFAR funding in previous years through a sub-agreement with the Solidarity Center, but in FY 2007, SACTWU received direct PEPFAR funding. SACTWU has a well-structured training program, initiated in 1999, that has evolved within the dynamics of the industry and includes basic facts on HIV, AIDS, abstinence, being faithful and condom use. The major emphasis area of the activity is training. Target populations include factory workers and people affected by HIV, HIV-infected adults, especially women, and the business community.

BACKGROUND:

The Southern African Clothing and Textile Workers Union is South Africa's largest trade union organizing textile and clothing workers. It also organizes footwear, leather and retail workers. Hence, SACTWU members form part of the economically active population that has been identified as being the hardest hit by the HIV and AIDS epidemic. Further, around 66% of SACTWU's membership is female, mostly between 20 and 60. The prevention program is a three-level training program that starts with a foundation phase on the basic facts of HIV and AIDS, abstinence, being faithful and consistent and correct condom use (ABC). In FY 2008 the training will focus specifically on the issues of multiple concurrent partnerships, and intergenerational sex. These facts are reinforced and strengthened with the intermediate and advanced modules of training. The intermediate module deals with legal aspects and workplace policy development. In the advanced module, delegates are trained to become trainers, lay counselors and home-based carers. SACTWU also has an HIV and AIDS awareness workplace program where trainers take the training to floor level in 30-minute sessions in the factories. The major emphasis of the workplace program is on prevention. A particular focus of the SACTWU AIDS Program is to create greater gender equity in HIV and AIDS programs and address male norms and behaviors.

SACTWU has a membership of approximately 110,000 members nationally. The SACTWU AIDS Project is a national program that provides prevention and care services in five provinces: KwaZulu-Natal, Western Cape, Gauteng, Eastern Cape and Free State. The SACTWU AIDS Project was initiated in 1998 and developed a national comprehensive program, with an initial focus on prevention. It has matured over the years to the point where it now has a well-structured comprehensive training program, provides "in house" voluntary testing and counseling (VCT) services, access to a social worker in KwaZulu-Natal, runs income generating workshops, provides a primary package of care through the VCT service, and provides home-based care through its regional nurses and a home-based care network in KwaZulu-Natal. The nurses provide some level of support in the home through home visits, but this activity is mainly implemented by the home-based care network of 19 home-based carers who provide ongoing home-level support.

ACTIVITIES AND EXPECTED RESULTS:

Activity Narrative: ACTIVITY 1: Training

The training program serves as an education program and addresses stigma and discrimination associated with HIV status for all workers, shop-stewards, managers and healthcare staff within the industry nationally. It also serves as an instigator for the demand for the care and treatment services offered through the SACTWU AIDS Project, including counseling and testing, and antiretroviral treatment. With PEPFAR funding SACTWU employs two trainers and a training coordinator fulltime to deliver all prevention programs in-house and achieve set targets. This activity will aim to educate shop-stewards and workers within the industry in the five provinces where the program is active and to address issues of HIV prevention, stigma and discrimination by empowering the delegates and repeatedly reinforcing the facts on HIV. The basic module emphasizes the ABC message of the South African government and aims to prevent new infections. SACTWU also has an intermediate module that deals with the worker's rights and HIV as well as development of workplace policies. Empowering individuals on their rights directly addresses the issue of stigma and discrimination. Workplace training is done throughout the year, but with additional focus in April and December. This training will be expanded in FY 2008 to cover additional sites and services added to the program, including a focus on the issues of children (pediatric HIV care and treatment), and TB.

ACTIVITY 2: Condom Distribution:

The SACTWU AIDS program will distribute male and female condoms. One of the reasons why the epidemic is more prevalent among women is the lack of power of women in the relationship, which impacts on negotiating condom use. By making available the female condom SACTWU allows women additional protection if the male partner refuses to wear a condom. The prevention training is complemented by activities like the condom man campaign as well as using drama to reinforce the prevention message--this helps to get HIV "out of the closet" and make it an interactive and informal discussion. The training focuses on the correct and consistent use of condoms, as per Department of Health training guidelines.

PEPFAR funding will be used for human resources costs related to the prevention program. These activities support the overall PEPFAR objectives of 7 million infections averted.

Budget Code: HVOP	Program Budget Code: 03
Activity ID: 15938.22855.09	Planned Funds: \$0

Activity System ID: 22855

Activity Narrative: NO FY 2009 FUNDING IS REQUESTED FOR THIS ACTIVITY:

This activity was approved in the FY 2008 COP, is being funded with FY 2008 PEPFAR funds, and is included here to provide complete information for reviewers. This will no longer be funded in FY 2009 due to the existing National Institute for Communicable Diseases (NICD) Cooperative Agreement ending. A new Cooperative Agreement is now in place with the National Health Laboratory Service (NHLS), the parent organization for the NICD, and a smaller Funding Opportunity Announcement is being developed with the Sexually Transmitted Infections Reference Center (STIRC), an STD division within the NICD. The TB/HIV funds earmarked for FY 2009 have been moved into LAB for FY 2009, so that there are only 2 program areas for NHLS in FY 2009, LAB and SI. All existing program activities in these areas will be supported under the new NHLS Cooperative Agreement in the FY 2009 COP. Care, treatment, and a smaller SI budget will continue to be supported, but through a new TBD COP entry for a NICD continuation (STIRC) in FY 2009. Therefore there is no need to continue funding this activity with FY 2009 COP funds.

Budget Code: HVOP	Program Budget Code: 03
Activity ID: 21163.22916.09	Planned Funds: \$0
Activity System ID: 22916	

Activity Narrative: In response to OGAC's review of the PEPFAR South Africa FY 2009 Country Operational Plan, the Prevention Steering Committee directed the country team to reprogram 20-30% of the PEPFAR South Africa sexual prevention portfolio

SUMMARY:

Medical Care Development International - South Africa (MCDI-SA) is a US-based private voluntary organization that is registered as a Section 21 company (NGO) in South Africa. MCDI-SA has been successfully implementing community public health and social support projects in KwaZulu-Natal, South Africa, since 1995.

BACKGROUND:

MCDI-SA will expand their PEPFAR funded programs to other sexual prevention activities. All MCDI-SA activities are based on the goals, guiding principles and strategies developed and published in the HIV & AIDS and STI National Strategic Plan, 2007-2011, and are in ongoing collaboration with the iLembe District Department of Health and KwaZulu-Natal Department of Health.

ACTIVITY 1: HIV Positive Youth Support Groups

To support youths receiving a positive HIV test result, the current PEPFAR-funded project will establish nine HIV Positive Youth Support Groups, three in the Ndwedwe, Maphumulo, and Mandeni sub-districts. The groups will be community rather than clinic-based, an approach found to be successful with Medical Care Development International (MCDI)-established and UNICEF-funded prevention of mother-to-child transmission (PMTCT) and voluntary counseling and testing (VCT) support groups in these areas. Each HIV Positive Youth Support Group will include an HIV-infected facilitator trained to educate on prevention behaviors, focusing on the abstinence/be faithful (ABC) approach, as well as 'Positive Living' and other relevant HIV-related skills and information necessary for maintaining health, nutrition, and overall well-being.

ACTIVITY 2: Mobile HIV/AIDS Education Unit

Because iLembe District comprises widely dispersed households and community clusters, MCDI will organize a mobile education unit to reach poorer, more remote areas that are underserved. The mobile unit will travel between traditional authorities to educate youths and their communities. This will raise knowledge and awareness on HIV/AIDS/STIs and TB (HAST), the location of VCT facilities, stigma, discrimination and sexual abuse. It will use low-cost movies locally produced by Art for Development as a platform for a participatory method of action and reflection. Information, education and communication (IEC) materials with information on abstinence, faithfulness, correct and consistent use of condoms, promotion of VCT, adherence to antiretroviral (ARV) and tuberculosis (TB) treatment, as well as anti-stigma, anti-discrimination and anti-violence messages, will be developed, distributed and discussed in the local language, Zulu. The Mobile Education Unit will provide up to 90 annual visits within three sub-districts aiming to increase knowledge on safe sexual behavior, the importance of ARV and TB drug adherence, and increase voluntary counseling and testing (VCT) uptake among the traditionally underserved.

ACTIVITY 3: Radio Messages to Promote Correct Condom Use

Previous community surveys done by MCDI have discovered that about a third of the general population relies on radio messages for health information. Using community radio stations in iLembe District and eThekweni, as well as Ukhozi Radio, a mainstream radio station with the highest listenership in southern KwaZulu Natal, MCDI will develop and produce a series of Zulu-language radio messages communicating prevention messages, including correct use of condoms, targeted to the general population.

ACTIVITY 4: Support Groups for Parents

Working through groups of local religious leaders, MCDI will facilitate the establishment of parents groups, in which parents can discuss and support each other in talking about sex and prevention of HIV and sexually transmitted infections (STIs) with their children. In local culture, it is considered taboo for parents to discuss anything of a sexual nature with children. Working with a trained MCDI facilitator and MCDI-trained religious leaders, this will provide concerned parents with an outlet to air their concerns about the spread of HIV and AIDS and to practice ways to discuss safe sexual behaviors effectively with their children.

ACTIVITY 5: Training of School Nurses

For additional support to youths, MCDI will provide training and support to all 19 school nurses in iLembe District to include HIV/AIDS, other STI and teenage prevention education in their everyday work. In biannual workshops, nurses will be trained in behavior change and communication methods. Training school nurses allows the school system to serve as a sustainable source for youth prevention education and referral to treatment and care services.

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

SUMMARY/BACKGROUND:

Family Health International South Africa (FHI-SA) worked with the University of the Western Cape (UWC) on this program in FY 2005 and FY 2007. It will continue to work with UWC through FY 2008, but in FY 2009, the University of the Western Cape will no longer be a part of the program. Considering that UWC has been well mentored under this program for two years, its peer education system is well established and is able to sustain itself through other sources of funding.

ACTIVITIES AND EXPECTED RESULTS:

In FY 2009 FHI-SA will work with the University of the Free State and the University of Limpopo and will provide training to a new cadre of peer educators on these campuses. FHI-SA will further provide refresher training to those peer educators who were trained before to update their knowledge and skills. FHI-SA will continue to strengthen other prevention strategies, supporting community outreach programs like HIV prevention awareness campaigns conducted by partners like the Department of Health and the Department of Education within and beyond these two campuses.

SUMMARY: Family Health International (FHI) will provide technical assistance (TA) to three universities' peer education programs to continue integration of abstinence and be faithful messages (AB), condom and life skills into the ongoing activities of the peer education programs on campus. Using the curriculum developed in FY 2005, the AB and life skills training will be expanded to include other prevention strategies, including condom use. A cadre of peer educators (PEs) on each of the campuses participating in this project will be trained. The PEs will then pass these skills on to other students on campus primarily through interaction in ongoing, small behavior change groups. Emphasis areas include addressing male norms and behaviors, reducing violence and coercion, training, local organization capacity building, and wraparound programs in family planning and education. Main target populations addressed are men and women of reproductive age and people living with HIV and AIDS. **BACKGROUND:** Currently, most efforts addressing sexuality and reproductive health needs for young people are focused on out-of-school youth and those in secondary schools in South Africa. Youth at institutions of higher learning represent a special group at risk as they are often left unsupervised by both parents and teachers, who are under the assumption that they are mature enough to protect their sexual and reproductive health. Available evidence suggests that these young men and women have high STI and unintended pregnancy rates, an indication that they are not yet equipped with the knowledge and skills required to protect themselves from these adverse outcomes. In FY 2005, in consultation with the South African Universities Vice Chancellors' Association (SAUVCA) and the Department of Education, FHI implemented a project that took place on three university campuses in South Africa: University of the Western Cape, University of the Free State, Qwa-Qwa campus and University of Limpopo, Medunsa campus. Each campus contributed to the development of the AB/life skills curriculum which was subsequently implemented among 26 PEs from each of the three campuses. After the training, PEs recruited six students each to take part in ongoing behavior change communication (BCC) groups on their campus, reaching in total 468 students. Life skills programs aim to enhance the students' ability to make responsible sexual health decisions and adopt behaviors that will keep them free of STI and HIV infection, as well as avoid unintended pregnancies. The curriculum included sessions on AB, secondary abstinence, values clarification, self-esteem, communication, decision making and negotiation, and utilized participatory learning techniques. Another key component of the AB/life skills training was a session on gender equity. In FY 2008, the training will be expanded to include other prevention messages beyond AB, including messages on condom use and safe sex. The curriculum complemented the universities' existing peer education curricula, which provides basic information about prevention of HIV and AIDS. The BCC groups provided a safe place to explore strategies for adopting and strengthening the ABC life skills in their personal lives. Students were able to support each others' behavior change process, including seeking counseling and testing (CT). Through one-on-one and group interaction, the PEs took advantage of a variety of regularly scheduled campus events-such as orientation week, condom week, and STI awareness week-to reach additional students with basic information on STIs, HIV and unintended pregnancies and how to protect oneself and maintain a healthy lifestyle. The program also promoted referrals between the PEs and student health or community health services for CT as well as family planning (FP). Major accomplishments to date include development of the AB life skills curricula and successful training of the PEs. The program has gone beyond the university campuses and PE groups to be conducted in high schools in communities near the campuses. A radio series was produced and launched on campus and community stations throughout South Africa, reaching approximately 6,000,000 listeners. The show addressed issues related to risk-reduction behaviors for STIs, HIV and unintended pregnancies that are relevant for university students. The curriculum was also used by University of Nairobi for a similar intervention. Although there was no FY 2006 funding, the universities were committed to continue the BCC groups and supervision activities. While the activities are expected to continue with the respective university funding, additional resources are needed to strengthen the longer-term institutionalization of the life skills program. **ACTIVITIES AND EXPECTED RESULTS:** In collaboration with the Department of Education, in FY 2008 FHI will continue to work with the three universities: University of the Western Cape, University of the Free State, Qwa-Qwa campus and University of Limpopo, Medunsa campus, and explore opportunities to expand activities to Technikon. FHI will work in collaboration with John Hopkins University (JHU) and the Department of Education at the University of Western Cape and the University of Free State, Qwaqwa campus to ensure that all PE programs are harmonized and do not overlap. To align the goals of the program with the government goals, FHI will work closely with the Department of Education to further refine the program and improve outreach. Further integrating ABC life skills into their peer outreach program work plans, each university will recruit new PEs for the life skills project, who will then recruit other students to participate in small, ongoing BCC groups. TA will also be provided to strengthen supervision skills to ensure the quality of the peer interactions, modeling problem solving skills, and shaping perceived peer/social norms on sexual behaviors. Specific FY 2008 activities include: 1) Continue to incorporate ABC life skills program into existing peer education work plans in a cost-effective manner; 2) Conduct ABC life skills

Activity Narrative: training for all PEs participating in the program; 3) Provide refresher trainings to strengthen basic peer education/facilitation skills; 4) Standardize job aids and tools for PEs to use in small groups; 5) Conduct supervision skills training for and provide TA to supervisors to help support PEs and the BCC group process; 6) Build and strengthen relationships between PEs and student health services, and formalize referral links to health services; and 7) Monitor ABC, life skills and BCC group processes. The project contributes to the prevention of 7 million new infections as per PEPFAR 2-7-10 goals. The project will help decrease the number of new infections by achieving the expected results which will ultimately lead to a delay in sexual debut, a reduction in sex acts, fewer partners or a reduction in unprotected sex.

Activity ID: 7884.23165.09

Planned Funds: \$208,987

Activity System ID: 23165

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

BACKGROUND:

In South Africa, Humana People to People has until now implemented eight Total Control of the Epidemic (TCE) areas in Mpumalanga and Limpopo Provinces with 400 field officers working at any one time with PEPFAR funding. Humana has started 12 new TCE areas in four provinces with funding from the Global Fund to fight AIDS, TB and Malaria and thereby extended the total outreach to 2.5 million people in five provinces.

ACTIVITY 1: Household-Based Person to Person

In FY 2009 Humana People to People plans to start one new TCE area to take the place of an area in Bushbuckridge Municipality that will close on the 30th of September 2009. The total number of TCE areas will remain as 10. TCE will further develop and strengthen referral networks in general and make more use of family planning services and services against substance/alcohol abuse. In their door-to-door campaign, field officers will continue to emphasize reduction of multiple and concurrent partners.

ACTIVITY 2 Human Capacity Building

In addition to the training described above, Humana People to People will also use FY 2009 funding to send management and supervisory staff for further training at Frontline Institute in Zimbabwe and KwaZulu Natal Experimental college as a way to strengthen overall leadership of TCE activities as TCE continues to expand in South Africa.

ACTIVITY 3 Linkages with Sectors and Initiatives

As well as continuing to strengthen the links that have already been established, Humana People to People will create linkages with more governmental and non-governmental organizations and departments as the TCE program expands into new areas with new stakeholders. Additionally with the addition of the Hope Humana projects many of the OSP activities run by the Passionates, such as campaigns to special vulnerable groups and condom distribution will have been handed over to HOPE following the closure of the TCE. Hope Humana leads HIV/AIDS interventions run by Humana and came to a start in FY2007 with funding from PEPFAR to carry out counseling and testing (CT) and home-based care (HBC). Hope Humana in Bushbuckridge and Mopani work in close conjunction with TCE as long as TCE is in the area; Hope will continue in the area after the closure of TCE and seek to attract funding from other sources to sustain its activities in the future, hereunder the Department of Health and Social Services.

ACTIVITY 4 Monitoring and Evaluation

Corps commanders and division commanders will now meet as part of the leadership of TCE worldwide every two months at Humana's international headquarters in Zimbabwe, replacing the quarterly meeting mentioned in COP FY 2008. This has allowed the TCE commanders to learn quickly from best practices used in other countries where TCE is operating and has as a result meant that TCE in South Africa as been able to reach a much higher percentage of its goals.

Since TCE in South Africa has expanded, it has become necessary to increase the number of coordinating offices (corps offices) from one to three. This has led to the formation of a Corps Commander Forum (CCF), where the corps commanders and their deputies meet and make sure that all TCEs in South Africa are moving in the right direction. The CCF takes place over two days every month and one day is used for discussions about results, public relations and partnership, while the second day is used for producing materials such as pamphlets, manuals and newsletters. Humana will continue to use its tried and tested methods for monitoring and evaluation that have proven themselves efficient and easy to use as well as comprehensive. TCE will from time to time make improvements on its M&E tools based on experience in South Africa and in other countries that gets pooled together in the aforementioned meeting. In the TCE areas in South Africa that are PEPFAR funded Humana has adapted some of its systems to specifically capture the required indicators in abstinence and being faithful (AB) and other program areas effectively and accurately.

SUMMARY:

Humana People to People (Humana) implements a comprehensive, integrated abstinence, be faithful and condom (ABC) HIV and AIDS prevention program called Total Control of the Epidemic (TCE). TCE trains community members as field officers (FOs). FOs utilize a person-to-person campaign approach to reach every household within the target area with prevention messages including the correct and consistent use of condoms and on prevention of mother-to-child transmission (PMTCT). The major emphasis area is community mobilization/participation, while minor emphasis areas are development of network/linkages/referral systems, information, education and communication (IEC), and training. Key target populations are men, women, pregnant women, discordant couples, migrant workers, out-of-school youth, community leaders and traditional healers.

BACKGROUND:

TCE was launched by Humana in 2000 in Zimbabwe. The program has been implemented in eight countries in Southern Africa, reaching a population of five million. Humana received its first PEPFAR funding in July 2005. As of August 2007, Humana had implemented its project in five PEPFAR funded TCE areas in the provinces of Mpumalanga and Limpopo. FY 2008 will ensure expansion in the number of TCEs in these provinces. In the first two years of implementation 400 community members were trained as FOs and prevention services have been provided to 60% of the targeted community members. FOs mobilize communities to address stigma and discrimination associated with HIV and AIDS and to raise awareness of HIV preventive behaviors. TCE tracks service provision by gender, and develops strategies to reach men

Activity Narrative: with condoms and other prevention messages. FOs promote gender equity during their home-visits by empowering both sexes with information and education and tailoring the information given to address gender-specific vulnerabilities. TCE trains community volunteers - known as Passionates -- to establish vegetable gardens, run children and youth clubs, and to offer care and support to orphans and people living with HIV (PLHIV). Humana works in partnership with the Mopani and Ehlanzeni district municipalities, major partners contributing over \$140,000 per year to the program until the end of 2007. TCE has received a number of awards, including the 2003 Stars of Africa Award (in partnership with Johnson and Johnson) for best Corporate Social Investment Program within Health/HIV and AIDS in South Africa. TCE also expects to scale up its coverage with funding from Global Fund via South African National AIDS Council (SANAC) in 2008.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Household-Based Person to Person Campaign

The TCE Program uses a person-to-person campaign to reach every single household with information about HIV and AIDS within the targeted areas. Each FO is allocated a field of 2,000 people (350-485 households). Households are visited at least three times over a three-year period and receive targeted IEC messages emphasizing age-appropriate prevention messages focusing on the use of condoms with the objective of changing community sexual norms. FOs visit households and engage individuals in discussions on preventive behavior and promote counseling and testing (CT) and PMTCT. FOs explain about government services such as CT, prevention of mother-to-child transmission (PMTCT), TB programs, STI screening, social grants and home-based care, and refer those in need. FOs also refer people with symptoms of AIDS-related conditions directly to public health clinics for CD4 testing, HIV clinical staging, and treatment of opportunistic infections. Although the TCE program focuses on AB messages, it also provides sexually active and at-risk community members with prevention messages on the use of condoms and PMTCT. TCE carries out a series of targeted interventions to reach people at workplaces, bars and shebeens, armed forces, at-risk youth and vulnerable population groups, such as taxi drivers, sex-workers and young men, with information on the use of condoms. During campaigns, the FOs assess the needs of the individual, tailoring their messages to address the different needs of specific populations. FOs address issues such as the increased risk of HIV transmission when engaging in casual sex encounters, in commercial sex, cross-generational sex, transactional sex, having sex with an HIV-infected partner or one whose status is unknown.

TCE has also developed a tool called Perpendicular Estimate System (PES), which is tailored to measure the impact of the program in the target areas; PES consists of a set of questions and demands to the individual in order to be TCE-compliant, which means being in control of HIV and AIDS in one's life. During the second and third year of the program, community members interact with their TCE FOs on an individual basis to make a PES-plan, which minimizes their risk of being infected and makes them live responsibly and positively if infected.

TCE organizes workshops for key players in the community, such as local leaders, traditional healers and community-based organizations to promote the use of condoms and CT. TCE also establishes condom outlets in the homes of FOs and Passionates. The FOs educate pregnant women on PMTCT and refer them to antenatal clinics. In the one-to-one counseling, FOs also address issues of domestic violence, child abuse, alcohol abuse and use of drugs.

ACTIVITY 2: Human Capacity Building

Through weekly meetings, the FOs receive continuous internal training, in the first year as lay-counselors, and during the second year as educators. The training is based on experiences gathered in the field. TCE makes use of both its own materials, which are continuously tested and updated and educational materials developed by other organizations and the government. TCE often makes use of guest speakers from government and other organizations for training purposes. Passionates are trained in HIV and AIDS and in communication and facilitation skills (such as running youth clubs), and some are trained to distribute and demonstrate the use of condoms.

ACTIVITY 3: Linkages with Sectors and Initiatives

TCE works in close collaboration with other stakeholders in the region. For example, the Department of Health provides all the condoms that are distributed by TCE and FOs mobilize and refer pregnant women to public sector antenatal clinics for PMTCT. Furthermore, TCE has a strong partnership with the tuberculosis (TB) sub-directorate in the Ehlanzeni and Mopani districts, where FOs are trained to raise awareness about TB, make referrals to clinics and collect sputum. TCE also cooperates with SAG departments including the Department of Social Development to ensure that OVC and PLHIV, who are identified through household visits, are able to access social security. Through the door-to-door campaign, FOs identify patients in need of palliative care and refer them to services provided under the TCE program or to other services.

ACTIVITY 4: Monitoring and Evaluation

TCE has developed a range of systems to measure the results of the program. Before starting in a new area, TCE carries out a baseline survey collecting information about knowledge, attitudes and practices of community members. After implementation, each FO has a household register and maintains basic information about each household and is a continuous source of data to evaluate the progress of the program, such as number of people tested, number of OVC and pregnant women referred to PMTCT and STI services. Data from the PES campaign is used to track community behavior change. This data provides information on individual behavior change in the target area. Throughout the program, the FOs and TCE Management meet on a weekly and monthly basis to evaluate the progress of the program. The meetings monitor the progress of achieving targets and deliberate on the challenges faced in the field. Quarterly, TCE management meet with staff at the TCE Regional Headquarters in Zimbabwe to further evaluate the

Activity Narrative: progress of the program and develop activities in order to increase impact.

Special Forces and Development Instructors (international volunteers) monitor services and ensure quality control through periodic spot check visits to households.

These activities will contribute to the 2-7-10 goals of averting 7 million new infections by increased knowledge and skills among community members in HIV and AIDS prevention; reduced stigma; higher gender equity; increased knowledge about services (PMTCT and CT); increased use of condoms; strengthened linkages between other organizations in the area and government services; increased number of people knowing their HIV status; and higher mobilization and capacity

Activity ID: 3552.23160.09

Planned Funds: \$400,255

Activity System ID: 23160

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

FY 2009 funds will be used to implement the healthy relationships group-based positive-prevention intervention in the OR Tambo District of the Eastern Cape, and to conduct a rapid assessment of the Phaphama-2 one-on-one positive-prevention intervention at four clinics/voluntary counseling and testing (VCT) sites in the Cape Town Metropole.

ACTIVITY 1: Implementation of the Healthy Relationships Intervention

In the OR Tambo District, four trainers/quality assurance (QA) specialists will train two local health authority staff in each of the six local service areas as trainers of the healthy relationships intervention. These 12 trainers will then collectively train approximately 60 group facilitators, recruited from local non-governmental organizations (NGOs), community-based organizations (CBOs) and treatment sites throughout the OR Tambo District, to conduct the healthy relationship intervention. Group facilitators will work in pairs to provide the healthy relationships intervention to support groups for PLHIV. The four QA specialists will conduct monitoring and QA to ensure that the healthy relationships intervention is given as intended.

ACTIVITY 2: Rapid Assessment of the Phaphama-2 Intervention

HSRC will conduct a rapid assessment of the Phaphama-2 intervention at four clinics/VCT sites in Cape Town. The Phaphama-2 intervention is a brief risk-reduction intervention against sexually transmitted infection (STI)/HIV risk and alcohol misuse delivered by counselors to clients in a single 1-hour individual session. It is currently being evaluated for its effectiveness/generalizability in a study currently being carried out among 1800 STI patients in three clinics in South Africa, under carefully controlled research conditions. The intervention is also being evaluated for its efficacy among PLHIV in a sub-study at one of the three clinics in the Ekurhuleni (East Rand) Metro. The rapid assessment will seek to assess the effect of this intervention under the "real world" conditions among PLHIV attending STI clinics or VCT sites. Clients will be asked by one of the project staff (not involved in delivering the intervention) to complete a brief questionnaire about demographic characteristics and risk behavior prior to participating in the intervention. After receiving the intervention, clients will be asked to complete a brief qualitative exit interview giving their opinion of the intervention, its relevance to their own circumstances, and any changes that they intend to make to modify their own risk. Two people will be trained as trainers/evaluators of the Phaphama-2 intervention. They will train two counselors from each of the four clinic sites to deliver the intervention. These eight counselors will each deliver the intervention to an average of two clients per week. The rapid assessment will take place over a six-month period, or until approximately 400 clients have completed the intervention and at least 200 of these clients have also completed the assessment (pre- and post-intervention questionnaires).

SUMMARY:

The HSRC is using PEPFAR funds to implement and determine the effectiveness of two prevention-with-positives interventions to reduce HIV transmission risks for their partners.

The prevention-with-positives (PwP) activity will adapt and pilot an existing CDC intervention for promoting HIV status disclosure and behavioral risk-reduction strategies among people living with HIV (PLHIV). This intervention is known as Healthy Relationships. It is a support-group-based intervention designed to reduce HIV transmission risks for PLHIV and their partners using an interactive approach that includes educational, motivational, and behavioral skill building components. Once this intervention has been piloted, a second individualized intervention will be developed and pilot-tested for effectiveness. Both interventions will include messages on condom use for PLHIV. The major emphasis area for the activity is gender and human capacity development. Target populations include men and women of childbearing age, National AIDS Control Program staff, HIV-infected pregnant women and health care workers, doctors, nurses, CBOs, FBOs and NGOs.

BACKGROUND:

Among adults, the predominant mode of HIV transmission in South Africa is through heterosexual intercourse. PLHIV are an important group to target for HIV prevention activities (both to prevent re-infection with other HIV strains, and to prevent transmission to others), but to date prevention in this group has received little attention. Behavioral risk-reduction interventions targeting PLHIV will reduce new HIV infections and will complement behavior change prevention, including condom usage, efforts currently targeting uninfected people. Until now, people who knew they were infected with HIV had been largely ignored by HIV risk-reduction strategies in South Africa. There is an urgent need to develop behavioral and other supportive interventions to assist PLHIV to manage sexual situations, avoid acquiring new sexually transmitted infections, and to prevent the transmission of HIV to uninfected sexual partners. For behavioral risk-reduction to be successful among PLHIV, de-stigmatization must be an integral part of the intervention. Although there is also a need for broad-based stigma-reduction interventions at a community/population level, interventions for PLHIV can assist in managing the adverse effects of HIV-related stigma, including the hazards of disclosure of their HIV-infected status. The Healthy Relationships intervention is a small (support) group-based intervention which has been packaged and disseminated as part of CDC's Replication Project (REP). It has been implemented successfully in several U.S. states as part of an initiative by the CDC to provide HIV prevention interventions for PLHIV. This intervention has been adapted for local conditions and materials have been translated into isiXhosa, the predominant local language in the Eastern Cape. A second individualized intervention is being considered as many PLHIV have not yet reached a point when they are willing to disclose their status to others (including other PLHIV). The second intervention will focus on individual (one-on-one) positive prevention activities.

Activity Narrative: ACTIVITIES AND EXPECTED RESULTS:

This activity was in the FY 2006 COP and FY 2007 COP but implementation has been delayed due to late receipt of funds. The HSRC will use PEPFAR funding to adapt and implement the Healthy Relationships Program in the area around Mthatha in South Africa's Eastern Cape province. Funds will be used to employ ten support group facilitators and an administrative staff person to undertake formative evaluations at baseline and at one, three and six months after enrollment, and to develop or purchase training materials and videos. Each group of ten PLHIV participating in the Healthy Relationships intervention will attend five sessions of two hours each over a 1 to 2 month period. The effects of the intervention will be evaluated using before and after comparisons, and by comparisons to PLHIV who have not yet taken part in the intervention. A process evaluation will also be conducted.

The project will establish how well these interventions work in a rural under-resourced South African setting and will also determine the feasibility of scaling-up these interventions in other rural areas with a high HIV prevalence. The interventions will be framed by the challenges PLHIV face in establishing and maintaining satisfying relationships, with special emphasis on strategies for disclosing HIV-infected status to a sex partner (reducing violence and coercion, key legislative issue). Skills for making effective HIV disclosure decisions will be taught for disclosing HIV status to non-sex partners, particularly family members, friends, and employers (stigma and discrimination, key legislative issue). The interventions will also address building skills for reducing HIV transmission risk through behavior change with a particular focus on one of the key legislative issues: male norms and behavior. Risk-reduction strategies arise naturally in the context of disclosing HIV status, with different implications for practicing protected and unprotected sex with HIV-infected partners, HIV-negative partners, and partners of unknown HIV status. An advocacy component will be incorporated to train participants to advocate for HIV testing and risk behavior reduction among partners, family members, and friends. In this way, the impact of the intervention will be spread among their social and sexual networks, and hence increasing gender equity in HIV and AIDS programs. Participants in both field tests will be assessed at baseline, immediately post-intervention, and at one, three and six months after completion of the intervention. Once the evaluation of these two interventions has been completed, they will be further adapted if necessary and expanded to other parts of the Eastern Cape, including the Kouga LSA. The HSRC will train an additional 50 lay counselors and other healthcare workers working in the public sector or for local NGOs, community-based organizations or faith-based organizations, in the delivery of positive prevention interventions, and will undertake monitoring and evaluation of the program.

FY 2008 COP activities will be expanded to include:

The development and adaptation of another PwP intervention, to be delivered as an individual intervention by community health workers. Individual PwP interventions are needed because issues of stigma and fear to disclose one's HIV serostatus may serve as barriers to participation in group-based PwP interventions. The one-on-one intervention will be based on the Options for Health PwP intervention developed by Fisher et al. This intervention will be adapted for use in a rural South African setting, and adapted for delivery by community health workers instead of clinicians (task-shifting). Following a formative phase to adapt the existing intervention in consultation with service providers and PLHIV in Region E of the Eastern Cape, training materials will be modified and translated into the local language (isiXhosa). This new intervention will be implemented and evaluated among 400 PLHIV participating in ART programs or wellness programs in Region E of the Eastern Cape. This individual intervention is likely to consist of 3 one-hour individual sessions with a lay counselor delivered over a 1-month period. Both process and outcome evaluations will be conducted. Participants will be interviewed at baseline, at the end of the intervention, and at 3 and 6 months from the start of the intervention to assess the impact of the intervention on risk behavior, and disclosure.

In addition, the Healthy Relationships PwP intervention will be expanded to another geographic region in the Eastern Cape, most likely the Kouga LSA ensuring linkages with the HSRC PMTCT program activities being implemented in that same geographic region. HIV-infected pregnant women will be targeted for this PwP activity. The main purpose of these new activities is to increase the range of evaluated PwP interventions available to accommodate the varying needs of PLHIV and to expand the types of settings for providing PwP interventions, and to scale-up the coverage of PwP programs in South Africa.

These activities will contribute to the PEPFAR goals by developing prevention strategies for PLHIV and their partners, thus having an impact on prevention of new infections. This activity will also contribute to the National Strategic Plan (NSP) goal of halving the incidence of new HIV infections by 2011.

Table 3.3.03: Activities by Funding Mechanism

Mechanism ID: 4755.09	Mechanism: N/A
Prime Partner: Mpilonhle	USG Agency: U.S. Agency for International Development
Funding Source: GHCS (State)	Program Area: Sexual Prevention: Other sexual prevention
Budget Code: HVOP	Program Budget Code: 03
Activity ID: 8241.22985.09	Planned Funds: \$169,908
Activity System ID: 22985	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Mpilonhle shall increase its efforts in the following areas:

ACTIVITY 1:

During Mpilonhle's health screening and health education activities its health counselors and health educators will continue to emphasize the value of reducing multiple and concurrent partnerships, as well as cross-generational and transactional sex. These issues are already addressed in Mpilonhle's current activities, as can be seen in the last paragraph of the activity narrative, but we shall emphasize them more strongly in line with the FY 2009 COP technical considerations.

ACTIVITY 2:

Mpilonhle shall encourage the participation of school governing boards and parents in its training sessions on HIV prevention, promotion of reproductive and general health, and care and support for PLWHA and orphans and vulnerable children.

ACTIVITY 3:

Mpilonhle shall continue to improve its referral systems for linking up participants in its programs with community-based health facilities, support services, and support groups, particularly to access reproductive health services, and services as available in this rural area for substance abuse issues.

SUMMARY:

Mpilonhle is a new South African community-based organization registered in 2007 with the South African Directorate of NGOs. It is dedicated to improving the health and well-being of adolescents attending high schools in Umkhanyakude District Municipality, KwaZulu-Natal (KZN) through its "Mpilonhle Mobile Health and Education Project" whose key activities are described below. It will begin operations in late 2007 with a single mobile unit funded with support from Oprah's Angel Network, and expand with two further mobile units funded by PEPFAR funds. It is currently building up its staff, which is expected to be 40 persons targeting 12 high schools with approximately 800 students, totaling 9,600. These activities will be based in the Mpilonhle office in Mtubatuba, KZN.

Mpilonhle activities consists of community-based health screenings, which will be conducted by health counselors at 24 community-based (non-school) sites, and will consist of a core of HIV preventive services including individualized voluntary counseling and testing (VCT); personalized abstinence, Be Faithful and correct and consistent condom use (ABC) counseling, and condom provision to sexually active youth and adults; and group HIV and health education sessions. These services will be delivered through mobile clinic and mobile computer laboratory facilities to 24 community (non-school) sites in rural KwaZulu-Natal. Emphasis areas are: gender, human capacity development and strategic information. Target populations are adolescents aged 15-24 and adults.

BACKGROUND:

This is a new PEPFAR activity. Mpilonhle works with broad support from district and provincial South African Government (SAG) leadership. The Condom/Other Prevention activities will be implemented in Umkhanyakude District Municipality, the poorest and most rural district in KwaZulu-Natal, and one that has extremely high HIV prevalence rates. Services will be delivered using mobile units traveling to rural secondary schools. These schools and their students suffer from physical remoteness, scarcity of health services and generally inadequate resources. Partners include the Department of Education, the South African Democratic Teachers' Union (SADTU), District Health Services and district and municipal leadership, including that of Traditional Authorities. School principals, local Department of Education officials, district and municipal mayors and focus groups of teachers and students have expressed the community acceptability of school-based VCT.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Community-Based Health Screening

Mobile community-based and community-focused health screenings will be conducted by HIV and AIDS counselors at 12 school locations. Each mobile facility consists of a paired-up mobile clinic and mobile computer laboratory, staffed by one primary care nurse, four health counselors, one health educator, and one computer educator. Each mobile facility will rotate across four school locations, allowing three mobile facilities to serve 12 sites in total. These community sites will be determined in collaboration with the mayors of Umkhanyakude, Mtubatuba, and Hlabisa Municipalities. The OP activity will consist of correct and consistent condom use programs which support the provision of accurate information about condom use to reduce risks for HIV infection and support access for those most at risk populations.

Provision and promotion of information on correct and consistent condom use will be coupled with information about abstinence and behavior change; the importance of HIV counseling and testing (CT), knowing one's HIV status, partner reduction and mutual faithfulness as risk reduction methods. The HIV preventive services include personalized ABC messaging, behavior change, HIV and AIDS counseling, group computer trainings that include health messaging, and group HIV and health education sessions. In addition to these services, Mpilonhle provides referrals to other community-based services for prevention of mother-to-child transmission (PMTCT), antiretroviral treatment (ART), tuberculosis (TB) and psychosocial support; referrals to a social worker for assistance with accessing government grants and support for

Activity Narrative: orphans and vulnerable children (OVC) or people living with HIV (PLHIV); general health screening and referral for care and other services as required. These preventive services will be offered within the context of a health screening service that provides other health services besides HIV prevention. The broadness of these services, and the fact that it addresses other health concerns beyond HIV, is likely to attract a larger number of students with non-HIV-related health concerns to Mpilonhle's services, thereby raising the number of people they reach with HIV prevention.

ACTIVITY 2: School-Based Health Education

Mpilonhle health educators will provide students with four small-group HIV, health and life skills education sessions per year that will discuss the basic facts about: HIV and STIs; CT; TB; anti-retroviral therapy (ART); prevention of mother-to-child transmission of HIV (PMTCT); a balanced Abstinence-Be Faithful-Condoms (ABC) approach to HIV prevention; reducing stigma and discrimination against people living with HIV and AIDS (PLHIV); and promoting respect between men and women. The HIV preventive outreach is not limited to the four health education sessions, but is supplemented by the health screening session described in Activity 1 and the health messages in the computer-assisted learning. An age-appropriate curriculum on these topics has been developed by the Educational Development Center (EDC) and the South African Democratic Teacher's Union (SADTU), drawing on existing material developed by the EDC and SADTU, and the World Health Organization (WHO) summarized in the WHO publication "Teachers' Exercise Book for HIV Prevention", and in conformity with the SA DOE's Life Skills curriculum. This curriculum will also be submitted to the SA DOE for approval, and for certification of conformity with the Life Skills curriculum. This curriculum emphasizes the traditional three-part public health theory of improving Knowledge, Attitudes and Practice (KAP) skill-building methods in topics such as risk reduction, decision-making, and social responsibility, as a way of preventing HIV infection, providing support to those infected and affected by HIV, fighting stigma and discrimination, and dealing effectively with the challenges of everyday life. The skill-based HIV education will provide focused messages about the benefits of delaying sexual debut and other safe sexual behaviors. Activities will aim to develop students' self-esteem to build their resilience, assist them to make informed choices and develop communication skills.

ACTIVITY 3: School-Based Computer-Assisted Learning

An Mpilonhle computer educator will provide students in participating schools with four 90-minute small-group computer education sessions per year. This training will focus on how to use computers, basic software, the internet; and computer-assisted learning for improved school performance, HIV prevention, and general health promotion. The computer-based health education lessons are packaged to address the life skills needs of youth and are consistent with SAG guidelines. The AB messages are internationally recognized, appropriately researched messages. This activity is intended to improve student learning, raise number of pupils who graduate (graduation rates), and augment employability. These outcomes can in turn increase women's socio-economic status, and reduces their vulnerability to coercive, cross-generational, and transactional sex.

Sustainability of activities is facilitated by political commitment from district and municipal governments, and the local Department of Education to scale-up and to fund-raise in support of such scale-up; the relatively low-tech and easily replicable nature of many core program features, minimal dependence on scarce health professional such as doctors and nurses; the ability of rugged mobile facilities to reduce the need for additional investments in fixed physical infrastructure; declining prices over time for the program's information technology (IT) requirements, the possibility of adapting the service delivery model to workplaces as well as schools, the multi-dimensionality of program activities, which includes HIV and AIDS, general health, and education related activities, and which broadens the scope of donors interested in funding continuation and scale-up of activities.

Building human capacity in remote rural areas contributes to future sustainability of the program. Mpilonhle will respond to this challenge by maximizing the capacities and skills of relatively abundant lay health workers through rigorous training and regular refresher courses to enable them to perform critical yet currently scarce services such as VCT, health screening and personalized risk assessment, and health education, shifting the burden of these activities away from relatively scarce professional health workers like nurses and doctors.

This activity will contribute to PEPFAR 2-7-10 goals of preventing 7 million new HIV infections, and providing care and support to PLHIV. This activity addresses gender issues through the provision of ABC education and services to large numbers of females in the general population; computer education which promotes female educational attainment and employability, which in turn reduce their vulnerability to HIV, and in particular to coercive, cross-generational and transactional sex; health education that promotes safer behavior and gender-sensitive attitudes among men and yield benefits to women who become their sexual partners. This activity will also promote consistent use of condoms and behavior change through the reduction of sexual partners.

Activity System ID: 23173	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

SUMMARY:

This new partner was awarded under the FY 2008 funding competition. The overall objective of the Ripfumelo project is to reduce HIV vulnerability of farm workers in various districts of South Africa by implementing a coordinated, evidenced-based and focused HIV/AIDS prevention and care program. Building on experiences and lessons learned from the International Organization for Migration (IOM) pilot projects in southern Africa, the Ripfumelo project aims to provide sustainable prevention and care services to farm workers by building the technical capacity of local implementing partners (IPs); strengthening partnerships among and with local, provincial, and national governmental agencies; promoting public/private partnerships; and developing a network of stakeholders working specifically on HIV-related issues within the commercial agriculture sector.

BACKGROUND:

The overall anticipated results of the project are a reduction in the HIV incidence in the targeted areas, and a mitigation of the impact of AIDS on farm workers and their families and communities. The project will build particularly on experiences and lessons learned from the ongoing IOM prevention and care project which has been implemented in Hoedspruit, Mopani District, Limpopo province since 2005. The Ripfumelo project will strengthen the existing intervention in Hoedspruit and target additional seasonal, temporary, and permanent farm workers, whether South African or foreign, documented or undocumented, in the commercial agricultural areas of Hectorspruit/Malelane (Lowveld, Mpumalanga), Makhado/Musina (Vhembe, Limpopo), and Tzaneen (Mopani, Limpopo). The project will initially target approximately 20,000 farm workers on about 120 commercial farms and will run for three years, from September 2008 until August 2011. Once this initial expansion phase has been consolidated in these geographical areas, it is proposed that opportunities be reviewed in other provinces with large commercial farming sectors, such as KwaZulu-Natal, Free State, Western Cape and Eastern Cape.

The IOM will execute the Ripfumelo project and assume overall responsibility for the coordination and management of all project activities. Ripfumelo will fall under IOM's regional Partnership on HIV and Mobility in Southern Africa (PHAMSA) program, which targets economic sectors characterized by high levels of labor mobility, and which aims to reduce the HIV incidence and mitigate the impact of AIDS among migrant and mobile workers and their families.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: HIV in the Workplace

Approximately 120 farm owners and managers will be encouraged and supported in developing, reviewing, strengthening, and implementing HIV and AIDS workplace policies and programs.

ACTIVITY 2: Social Change Communication

An evidenced-based communication campaign will be developed and implemented to support all other components of the project. The campaign will seek to persuade farm workers to make and sustain positive changes in their sexual behavior such as abstinence, faithfulness, correct and consistent condom use and partner reduction. The campaign will be designed to address gender, poverty, and other social issues that present a barrier to behavior change. The social change communication process builds the capacity of the IPs to develop localized, targeted campaigns and tools that are, owned, and disseminated by farm workers.

ACTIVITY 3: Peer Education

Approximately 650 farm workers will be trained as peer educators who will provide information and support to their colleagues. Specifically, their role will be to facilitate better access for farm workers to local primary health care services, especially CT, and to de-stigmatize HIV.

ACTIVITY 4: Improving Life Skills (including Recreational Activities)

This component seeks to develop and implement healthy recreational activities and to address some of the lifestyle choices that fuel the HIV epidemic. Project partners, in consultation with farm workers, will identify life skills such as Adult Basic Education and Training (ABET) and financial literacy that impact HIV vulnerability and local partners or service providers to assist trainings. The members of the target group will identify healthy recreational options such as sports and choir groups, and the IP will help them develop a program to roll out these activities. Some of the participants involved in these life skills and recreational activities will be trained as peer educators and/or gender advocates.

ACTIVITY 5: Gender

Approximately 800 gender advocates and/or male role models will be trained to address discriminatory gender dynamics and prejudices.

ACTIVITY 6: Organizational/Institutional Capacity Development

IOM will build capacity of local IPs to enable them to sustain interventions. By helping the local IPs to become "one-stop-shops" for local farms and other small, micro, and medium-sized enterprises (SMMEs), they can provide a cost effective mechanism for companies to address HIV and AIDS.

ACTIVITY 7: Building Knowledge and Understanding

Activity Narrative: Mini-baseline assessments and integrated biological and behavioral surveys (IBBS) will establish the HIV prevalence in the target areas and provide important information about the target demographic (i.e. age, job category, gender, employee status, etc.). HIV prevalence will be linked to social and behavioral questionnaires in an attempt to better understand the relationships between HIV infection and various social, economic, migrational, behavioral and health issues. The surveys will provide employers, employees, policy-makers and others with a more accurate appreciation of the epidemic in the various farming communities and a deeper understanding of complex factors that contribute to HIV vulnerability.

SUMMARY:

The overall objective of the Ripfumelo project is to reduce HIV vulnerability of farm workers in various districts of South Africa by implementing a coordinated, evidenced-based and focused HIV and AIDS prevention and care program. Building on experiences and lessons learnt from IOM pilot projects in the southern Africa, the Ripfumelo project aims to provide sustainable prevention and care services to farm workers by building the technical capacity of local implementing partners (IPs); strengthening partnerships among and with local, provincial, and national governmental agencies; promoting public/private partnerships; and developing a network of stakeholders working specifically on HIV-related issues within the commercial agriculture sector.

The overall anticipated results of the project are a reduction in the HIV incidence in the targeted areas, and a mitigation of the impact of AIDS on farm workers and their families and communities. The project will build particularly on experiences and lessons learned from the ongoing IOM prevention and care project which has been implemented in Hoedspruit, Mopani District, Limpopo Province since 2005. The Ripfumelo project will strengthen the existing intervention in Hoedspruit and target additional seasonal, temporary, and permanent farm workers, whether South African or foreign, documented or undocumented, in the commercial agricultural areas of Hectorspruit/Malelane (Lowveld, Mpumalanga), Makhado/Musina (Vhembe, Limpopo), and Tzaneen (Mopani, Limpopo). The project will initially target approximately 20,000 farm workers on about 120 commercial farms.

Activity ID: 6427.23063.09 **Planned Funds:** \$0
Activity System ID: 23063
Activity Narrative: NO FY 2009 FUNDING IS REQUESTED FOR THIS ACTIVITY:

This activity was approved in the FY 2008 COP, is funded with FY 2008 PEPFAR funds, and is included here to provide complete information for reviewers. No FY 2009 funding is requested for this activity. PEPFAR OP funds were allocated for Health Policy Initiative (HPI) to provide training to strengthen the capacity and collaboration of National Department of Health (NDOH), and civil society groups in their work with men to ensure implementation of the National Reproductive Guidelines for Men; work closely with JHPIEGO and the NDOH to jointly develop prevention messaging for traditional leaders, traditional healers and traditional surgeons that can be incorporated into existing traditional male circumcision activities; and work with these groups to build capacity in the delivery of appropriate, accurate prevention messaging in the context of male circumcision. The circumcision activities of HPI will be completed according to schedule in 2008 and will also be funded in COP 2009. Other OP activities will not be funded as this is not a strong area for HPI. Therefore there is no need to continue funding this activity with FY 2009 COP funds.

Activity System ID: 23076

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

SUMMARY:

In FY 2008, emphasis was placed on working with young women aged 15-24, however, research has indicated the need to focus on young men and women as a target audience and to shift the focus audience to 18-32 year olds in particular, as this is when most infections are occurring amongst young women, which indicates the need for a focused intervention emphasizing partner limitation and correct and consistent condom usage. The shift to focus on young people recognizes that the norms and attitudes that may place young men at risk of infection later in their lives needs to be raised earlier so as to influence these norms and values.

Turntable Trust works in the rural areas of KwaZulu-Natal to engage youth 15-24, young people 18-32 and adult men on activities that will promote consistent and correct condom usage, highlight the risks associated with transactional intergenerational sex and the linkages between alcohol consumption, sex and HIV.

Owing to changes at the Department of Correctional Services (DCS) as well as a change in emphasis in programming by John's Hopkins University, it is not foreseen that any activities will take place with DCS in FY 2009.

BACKGROUND:

JHU has initiated the Scrutinize Campaign together with Matchboxology, its new partners Mediology and CellLife, that aim to encourage young South Africans 18-32 years of age to assess their risk of HIV infection and to encourage delaying sexual debut and partner reduction through use of the mass media including the outdoor media and cellular technology. CellLife will support the mass media outreach of all communications partners in South Africa with free short message service technology to promote consistent and correct condom usage, increase risk perceptions in relation to transactional intergenerational sex and the linkages between alcohol consumption and HIV infection.

ACTIVITIES AND EXPECTED RESULTS:

JHU will in FY 2009 scale up a new campaign to be initiated in FY 2008 targeting adult men on HIV prevention using male celebrities, including footballers capitalizing on the 2010 Football World Cup to promote consistent and correct condom usage, increase risk perceptions in relation to transactional intergenerational sex and the linkages between alcohol consumption and HIV infection.

Trailblazers, which was co-produced with the South African Broadcasting Corporation (SABC), has been fully absorbed into the programming of SABC Education, which will enable these resources to be directed to the further development of the Circles Drama Series, the Scrutinize Campaign and a new campaign to be initiated in FY 2008 targeting adult men.

JHU has formed a strategic partnership with Health-E to support in-depth media reporting on the key drivers of the epidemic in South Africa including looking at issues relating to correct and consistent condom usage, transactional intergenerational sex and the linkage between alcohol, drugs, sex and HIV. Finally, the Wits HIV and the Media Project will work to mobilize editors and journalists to focus on the key drivers of the epidemic in particular around men, male behavior and multiple and concurrent partners.

SUMMARY:

Johns Hopkins University/Center for Communication Programs (JHU/CCP) and its 20 South African (SA) partners are undertaking a concerted effort that utilizes a variety of communication channels, including mass media and interpersonal community mobilization (CM). It aims at bringing about heightened urgency of risk perception to HIV infection among the general population about sexual partnerships and behaviors that place them at risk of HIV infection including multiple concurrent partners (MCP); intergenerational/transactional sex (ITS); inconsistent and incorrect condom use; alcohol and substance abuse; and gender and gender-based violence (GBV). The condom and other HIV prevention strategy is guided by qualitative studies that investigated underlying behavioral causes of MCP and the 2006 SA HIV/AIDS Communication Survey that investigated reach and impact of 19 mass media interventions on HIV prevention.

BACKGROUND:

Over the next four years partners will prioritize interventions focusing on men aged 25-49 and young girls and women aged 15-24. Interventions will impact on key drivers of the epidemic and people's risk perception about sexual partnerships and behaviors including prevalence of MCP; ITS and incorrect and inconsistent condom use. All interventions are informed through study which found that high risk behaviors driving epidemic are determined through social norms and values that include male attitudes and behaviors, alcohol and substance abuse; population mobility and gender dynamics including GBV. JHU/CCP and its partners combines a social-ecology approach to communication with power of interpersonal communication with mass media (including radio, television (TV), outdoor and cellular technology) to engage and mobilize individuals around sexual behavior and perception of risk to HIV infection and influence social networks and communities to create an enabling environment that allows them to reduce risk to HIV infection. Activities will contribute towards changes in social norms, create social networks that support individual change, build skills, and improve decision making leading to safer sexual behavior (SB).

ACTIVITIES AND EXPECTED RESULTS

ACTIVITY 1: Mobilizing In- and Out-of-School Youth 15-24

Activity Narrative: Dance4Life (D4L), DramAidE, The Valley Trust (TVT), Lesedi Lechabile (LL), Lighthouse Foundation (LF) and Community Health Media Trust (CHMT) will work with young people in secondary schools using variety of approaches to train peer educators (PEs) to establish HIV prevention, care and support clubs to act as entree to in-school youth. With youth over 14 messages relating to MCP, ITS, correct and consistent condom use, male norms and behaviors, substance and alcohol abuse, GBV, risk perception, stigma and discrimination (SD) will be given.

TVT, LF and LL will use interpersonal discussions, workshops and community events with out-of-school youth to heighten their perceptions of risk about sexual partnerships and behavior including MCP, ITS, correct and consistent condom use, male norms and behaviors, substance and alcohol abuse and GBV. DramAidE's Health Promoters (HPs) work in 23 tertiary institutions. They use group meetings, individual consultations, dorm visits, classroom instruction and community events to increase risk perceptions about MCP, ITS, GBV, condom negotiation skills, sexually transmitted infections (STIs), male norms and behaviors, SD, sexual and reproductive health (SRH) and risks of substance and alcohol abuse.

ACTIVITY 2: Mobilizing Adults 15-49

Sonke Gender Justice (SGJ) supports partners to integrate Men as Partners approach into their work to mobilize men around responsible male behavior, correct and consistent condom use, substance and alcohol abuse and reduction of GBV.

Sonke Gender Justice, LF, LL and TVT will expand number of men's clubs and men's health services to mobilize men, communities and traditional structures around responsible male behavior, correct and consistent condom use, substance and alcohol abuse and reduction of GBV. They will expand number of men's clubs in Mpumalanga, NW and NC provinces to mobilize men, their communities and traditional structures.

TVT, LF and Matchboxology (MB) will undertake CM interventions to mobilize adult men and women through door-to-door campaigns, taverns and taxi ranks, around MCP, ITS, correct and consistent condom usage, prevention with positives (PwP), GBV, male norms and behaviors, SD, and risks of substance and alcohol abuse.

LifeLine SA and TVT will support workplace interventions by training PEs within small and medium enterprises and on farms to mobilize employers and employees. MB will work with professional footballers and fan clubs. All workplace-based interventions will increase perceptions of risk about MCP and ITS, correct and consistent condom use, GBV, SD, male norms and behaviors and alcohol consumption.

TVT and LF will undertake community conversations with traditional leaders and healers to mobilize them in addressing cultural dimensions of MCP, inconsistent and incorrect condom usage, PwP, GBV, SD, male norms and behaviors and alcohol consumption.

TVT, LifeLine SA and LF will work with faith-based organizations (FBOs) through activities to promote partner limitation, correct and consistent condom usage, GBV and SRH. Religious leaders will be trained and provided with appropriate communication materials to guide them.

Mindset Health Channel (MHC) has a Healthcare Worker Channel (HCWs) and a Patient Channel in more than 400 public clinics. Its HCW Channel trains health workers and its public health channel sensitizes audiences on partner reduction, correct and consistent condom usage, GBV, substance and alcohol abuse, STIs, and SRH.

Community Health Media Trust (CHMT), will increase number of Treatment Literacy and Prevention Practitioners (TLPPs) to 92 (72 funded by PEPFAR and 20 by National Department of Health (NDOH) and facilitate discussion among patients in general waiting rooms in MHC on topics relating to correct and consistent condom usage, GBV, substance and alcohol abuse, STIs and SRH. LF, TVT and Mothusimpilo will work with CHMT and Mindset to facilitate dialogues in clinics surrounding their areas.

DramAidE, CHMT and LF will mobilize support groups and community-based organizations of people living with HIV, in areas where they are working around PwP and in particular addressing correct and consistent condom use; MCP, alcohol and substance abuse, STIs. LL and Mothusimpilo use PE and HCW in mining districts of North West (NW) and Free State (FS) to reach young women at risk, including sex workers, in clinics, schools and communities to address correct and consistent condom use, risk perceptions, ITS, GBV, stigma and discrimination, male norms and behaviors and risks of alcohol and substance abuse. Their programs are linked to local mining companies who focus on male employees.

Department of Correctional Services (DCS) will expand its correctional facilities program from Limpopo and North West Province to include Gauteng and Northern Cape. DCS uses Tsha Tsha TV drama series, to train its PEs to promote correct and consistent condom usage, GBV, SRH including that relating to same sex SB.

ACTIVITY 3: Mass Media Support for CM

2006 JHU/CCP national communications survey found that 76.7% of people had at least one television (TV) in their households. 60% watch TV everyday and 60% listen to radio everyday. JHU/CCP supported drama, Tsha Tsha reached 48% of population, treatment literacy program Siyanqoba - Beat It reached 27% and community radio program Mind, Body Soul reached 6% of population. Tsha Tsha has been used to facilitate discussions with people in schools, correctional facilities and community meetings around issues relating to risk of HIV infection, ITS and multiple and concurrent partnerships. However 44% of population was not reached by any of these due partly to fragmentation of media environment about audience preferences influenced by socio-economic status and language. To address this issue, JHUCCP will expand its mass

Activity Narrative: media program to include new platforms such as cellular and internet technology and outdoor media that complements radio and TV outreach work. All platforms will heighten awareness of risk among men aged 25-49 and young girls and women aged 15-24 about their sexual partnerships and behaviors including MCP, low and inconsistent condom use and need for regular testing.

ABC Ulwazi will produce community radio talk show for 60 community radio stations using local languages facilitated through listener associations.

JHU CCP has a public private partnership with SA Broadcasting Corporation (SABC) to fund two TV-programs supported by nine regional SABC language radio programs and internet. A second season of TV drama Circles will heighten peoples perception of risk to HIV infection by highlighting sexual partnerships and behaviors that place people at risk of infection including MCP, and ITS.

MB in partnership with SA Professional Football Union and Professional Soccer League will mobilize prominent SA football players to provide messages through different mass media platforms that emphasize responsible male behavior including consistent and correct condom use, GBV, alcohol and substance abuse, treatment of STIs, as part of build up to 2010 Football World Cup in SA.

A TBD outdoor media partner will work with JHU to develop messages for outdoor media to heighten perceptions of risk about sexual partnerships and behaviors that place people at risk of HIV infection including MCP with low and inconsistent condom use.

A TBD cell phone partner will use SMS technology to address MCP, ITS, correct and consistent condom use, male norms and behaviors and risks of alcohol and substance abuse.

This activity contributes to reaching the 2-7-10 goals by training individuals to promote condom use and other prevention messages and preventing 7 million new infections.

Activity Narrative: NO FY 2009 FUNDING IS REQUESTED FOR THIS ACTIVITY:

This activity was approved in the FY 2008 COP, is funded with FY 2008 PEPFAR funds, and is included here to provide complete information for reviewers. No FY 2009 funding is requested for this activity. In FY 2009, Population Council APS program areas were incorporated into their "Population Council" COP entry (previously a separate entry). This program area will continue as an FY 2009 program area under the partner heading entitled "Population Council". Therefore there is no need to continue funding this activity with FY 2009 COP funds.

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

ACTIVITIES AND EXPECTED RESULTS:

- Focus on superior service delivery by ensuring competent personnel to promote HIV prevention strategies other than abstinence and be faithful.
- Update and enhance imaginative and effective training material to advance safe sex practices, including the reduction of multiple and concurrent partners and other HIV prevention and support initiatives.
- Augment existing monitoring and evaluation activities with a state of the art data management and reporting system. This will enhance monitoring and evaluation activities to ensure accurate and reliable data compilation to guide and improve programs and aim for implementing future research activities.
- Facilitate active involvement of men in peer education, child rearing and HIV prevention activities within the community.
- Initiate participation of members of school governing bodies, parents and members of at risk populations (MARPS) in trainings and other activities pertaining to knowledge of prevention of HIV, other sexually transmitted infections (STIs), as well as other preventable diseases.
- Increase activities within mining areas by requesting hostel management to allow personnel to present training sessions on mining property during hours when miners are not on duty.
- Target informal settlements adjacent to mining areas targeting the commercial sex workers, girls and women. Emphasis in this training would be multiple and concurrent partnerships, male circumcision and cross generational relationships.
- Refer clients who may be at risk and/or have a history of STIs to local health facilities for screening and management.
- Implement a more effective referral and network system with existing and other partners to enhance consistent condom use, family planning, counseling and testing and substance/alcohol abuse to increase prevention education to a wider population.
- Reduce risk perception, promote risk reduction, and use evidence-based information to address the key drivers of the epidemic. Implement "couple encounter" weekend groups where couples attend behavior changing training. This would especially be targeted at 15-25 year age group to encourage late onset of sexual debut as well as focusing on responsibility of cross generation relationships.

SUMMARY:

LifeLine's OP activity harnesses the activities and work of its other ongoing projects, such as the Community Counselor Project, especially with respect to community mobilization and outreach. It also benefits from contributions from other donors such as Anglo Platinum Mines, which has committed to three years of cost-sharing. In particular, they are funding a vehicle to be used in the mining areas and covering traveling costs and stipends for a nurse and driver. Relationships formed with local government and municipal departments will help ensure the continuity of the project. Salaries and other costs can be sustained through increased corporate training and workplace programs bringing in substantial revenue for LifeLine. The two major components of the program area include condom provision with education at specified sites as well as community outreach and mobilization. Emphasis is on information, education, dialogue, and HIV prevention activities carried out around the designated hot spots, throughout Bojanala District and the LifeLine centre in Rustenburg. The OP messages and activities address gender issues and gender dynamics directly, encouraging target populations to examine gender roles in society. Emphasis areas for this activity focus on gender by addressing male norms and behaviors and reducing violence and coercion around the designated hot spots and throughout Bojanala District and the LifeLine centre in Rustenburg. A "hotspot" is defined as an area that has a high rate of traffic of vulnerable persons; for example, taxi ranks and the mining hostels. The target groups for the OP messages are males and females from 15 years and older, including people living with HIV (PLHIV), discordant couples, pregnant women, persons who engage in transactional sex but who do not identify as persons in sex work, and mobile populations. Target groups are located in the identified hotspot areas. The LifeLine hot spots are currently located in the Bojanala region, with two hot spots identified in each sub-district. In FY 2007, LifeLine operated eight such hot spots. With FY 2008 PEPFAR support, LifeLine will expand its reach by an additional 4 hot spots, yielding support given to a total of 12 hot spots in the North West Province.

BACKGROUND:

LifeLine Rustenburg is a non-governmental, non-profit, community-based organization, affiliated to LifeLine Southern Africa and LifeLine International. Affiliation is awarded annually based on maintenance of standards, adherence to policy and procedures and acceptable performance in areas of service. LifeLine Rustenburg has been operational since 1991, and serves an area of approximately 200 square kilometers. LifeLine Rustenburg has a close working relationship with the National Office, which is informed about projects and services run by LifeLine Rustenburg. Bi-annual consultative meetings are held and quarterly reports are submitted to the main office by LifeLine Rustenburg.

LifeLine focuses on counseling and crisis intervention services, provision of life skills and personal development training, capacity building for less established community-based organizations (CBOs), counseling and testing (CT) and prevention activities. To date, LifeLine has implemented a community counselor project (CCP) which, in partnership with the provincial department of health, provides counselors to 150 health facilities in Bojanala, has established a non-medical CT site, provides 24 hour counseling service via a national counseling line, and has provided training to numerous other organizations. Future plans for the project are to place counselors at all health facilities, supply mobile CT, support and care to HIV-infected and affected persons and HIV and AIDS prevention services to rural and other under-served communities throughout the Bojanala District. Care and support activities will be provided through ongoing partnerships with other CBOs and FBOs (faith-based organizations) with expertise in these areas.

The South African Government, specifically the Bojanala District Department of Health, supports and
South Africa Page 534

Activity Narrative: contributes to a sustained and broad-based community mobilization and outreach effort in public health facilities, schools, other government outlets, and through media. Informal partners include local businesses, Radio Mafisa, local taxi associations, mining corporations and others, who provide support for LifeLine's community mobilization and outreach efforts. In particular, Mafisa Radio Station provides an hour timeslot weekly for LifeLine to discuss and debate on topics related to HIV and AIDS education, and the local taxi associations agreed, in 2006, to paste LifeLine stickers on their vehicles and to participate in condom-use campaigns.

In LifeLine's community outreach and education, many prevention modules require male and female participants to be separated in order to delve into specific issues. LifeLine will continue to use this approach during education and training sessions in FY 2008. The program activities also emphasize changing male norms and behaviors, discouraging cross-generational partners, promoting one-partner relationships and altering the norm of violence against women in society.

ACTIVITIES AND EXPECTED RESULTS:

Four activities will be covered in this program area. Messages for younger audiences will focus mostly on abstinence or delayed sexual debut. This will also include encouraging sexually active youth to consider secondary abstinence. Messages for the older youth and adult population will focus mostly on reduction in the number of sexual partners and will encourage non-concurrent sexual relationships. LifeLine will also promote the consistent and correct condom use. LifeLine will also work with the traditional leaders and community to transform male norms and behaviors in order to reduce violence and sexual coercion, and discourage cross-generational sex, which is rife in the community.

ACTIVITY 1: Mobile Counseling and Testing and Health Education Services

LifeLine uses two mobile units to reach high numbers of adolescents and adults in the community. The staff within each mobile unit consists of: two Counselors, two Community Outreach officials, and one Nurse. Currently the mobile covers five sub districts in the Bojanala region, and each of these five sub-districts features a minimum of two hot spots. The mobile unit services each hotspot for approximately seven hours a day, and a hotspot is revisited on a bi-monthly basis. The main aim of the mobile service is to increase accessibility, create awareness, and provide education and training on issues relating to HIV and AIDS prevention within the community. The mobile units provide Counseling and Testing (CT) services, offering a full range of CT services as well as prevention interventions. During the mobile visits, communities are educated on correct and consistent use of condoms, as part of a comprehensive ABC prevention program. Community members who test positive at the mobile unit are referred to the nearest hospital so that they can be enrolled in treatment, care and support programs.

ACTIVITY 2: Community Mobilization

The community mobilization and outreach efforts seek to ensure that the general public receives the necessary information targeted towards behavior change. The HIV prevention activities, conducted in the area surrounding the hot spots, will be conducted by eight LifeLine community outreach volunteers and trainers. Education is provided in plenary sessions, as well as focus group education and discussion. Education topics highlight behavior and attitudes concerning: cultural, legal, gender, alcohol and substance abuse in young people as a risk factors, and other related social issues; multiple partners and cross-generational partnerships; and, for persons over 15, correct and consistent condom use. All prevention activities are target and language group sensitive (i.e. each target group receives relevant information and education specific to the age, culture or other dynamic of the group). Some activities are also conducted at the LifeLine offices. Individuals who live close to the LifeLine offices can access services at the LifeLine center. Activities at the LifeLine center are conducted by LifeLine community outreach volunteers and four trainers.

ACTIVITY 3: Capacity Building

Human capacity development requires ongoing trainings throughout the project. In-service training will be provided for the community outreach volunteers. This will ensure sustained motivation, competency and proficiency in carrying out LifeLine's HIV prevention activities. Peace Corps volunteers often assist with training, as needed. Bi-annual training for new personnel ensures project retention while monthly in-service training promotes staff retention. Workshops aimed at community members will also be conducted. These workshops are 2-days in duration, and are aimed at achieving behavior change with respect of safer sex practices. FY 2008 funding will ensure that these workshops will be conducted once a month per hotspot. The workshops will be held one day a week over a two week period, with the same participants. Each workshop will accommodate groups of 10-20 persons. A variety of techniques and participatory methodologies will be used. Topics cover basic life skills, HIV and AIDS general and prevention education, correct and consistent use of condoms, concurrent, same sex and cross general partners. The workshops will be facilitated by LifeLine trainers. In order to access behavior change and retention of information, a follow-up evaluation session will be held three months after completion of each workshop.

These activities will contribute to PEPFAR 2-7-10 goals of averting HIV infections through promoting Condom and Other Prevention behaviors among the general population and youth.

Table 3.3.03: Activities by Funding Mechanism

Mechanism ID: 9691.09	Mechanism: N/A
Prime Partner: Lifeline Mafikeng	USG Agency: HHS/Centers for Disease Control & Prevention
Funding Source: GHCS (State)	Program Area: Sexual Prevention: Other sexual prevention
Budget Code: HVOP	Program Budget Code: 03
Activity ID: 22500.23091.09	Planned Funds: \$0
Activity System ID: 23091	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

SUMMARY AND BACKGROUND:

HIV prevention activities will especially emphasize fidelity, though they are balanced with abstinence messages, especially targeted towards youth and condom promotion (i.e. correct and consistent use of male and female condoms) in order to reach as many people in the target audience as possible. Management will ensure PEPFAR regulations are strictly followed. Education and marketing is essentially to dispel myths and ensure the right information is out there. These activities enable people, who may have been unable to overcome fear or stigma to encourage knowing their HIV status, which ultimately can prolong or save their lives and possibly the lives of others.

ACTIVITIES AND EXPECTED RESULTS:

Lifeline Mafikeng will carry out three separate activities in this program area.

ACTIVITY 1: Outreach

Programs targeting teenagers aged 13-18 years will focus mainly on abstinence or delayed sexual debut and will encourage those who are sexually active to pledge abstinence once again. In the programs for older youth and adults, the focus will be on encouraging a pledge of faithfulness to monogamous relationships and to avoid cross-generational relationships. Lifeline Mafikeng will also work with the traditional leaders and community members to transform male norms and behaviors in order to reduce violence and sexual coercion, which is rife in the community. Commercial sex workers and farm workers are a vulnerable with little access to health care and information and will be targeted with the mobile units and trend setters for testing, referral and information. Programs will include prevention and living positively programs to promote maintaining a negative HIV status and living positively to ensure quality of life.

ACTIVITY 2: HIV Prevention Messaging

Activities conducted at identified sites will include HIV counseling and testing, along with concurrent HIV prevention and marketing activities. Trend setters will undertake the HIV prevention and marketing activities, which will include placing banners, canvassing the area on foot, distributing pamphlets and invoking discussion with pedestrians, conducting information and education sessions on HIV/AIDS, projecting culturally appropriate abstinence and being faithful messages, performing HIV/AIDS-related dramas and performances, establishing "post-test clubs" and performing condom demonstrations and distribution.

ACTIVITY 3: Post-test Clubs

Post-test clubs (PTCs) are a model used in Uganda which helps people living with HIV and AIDS (PLWHAs) to cope with infection in which both HIV-infected and HIV-negative members adopt and maintain effective prevention behavior. Formation of PTCs can assist in changing the social norms in support of HIV risk reduction (UNAIDS, 1999). Post test clubs will be established at each of the partner community-based organizations (CBOs). The activities of the PTCs include addressing issues of HIV prevention, stigma reduction and positive living while also addressing issues of gender-based violence and cross generational relationships.

Summary of Proposed Activities:

LifeLine North West Mafikeng Centre seeks to implement a mobile HIV counseling & testing unit, in the Central and Bophirima districts of the North West Province, building on the experience of our Rustenburg affiliate that operates in the Bojanala District of the North West Province. LifeLine Rustenburg is currently funded by PEPFAR (2007) to implement the mobile VCT service in the Bojanala District.

The project addresses U.S.Government's HIV/AIDS objectives in South Africa by:

- 1) Improving access to and providing HIV counseling & testing services.
- 2) Implementing HIV prevention activities by promoting the ABCs of prevention, abstinence, being faithful, sexual behavioral change within the context of cultural norms, and correct and consistent male or female condom use, and
- 3) Improving the quality of life of those infected and affected by HIV & AIDS..

Geographic Reach: Central & Bophirima Districts

The administration and management of the project is based at the LifeLine centre in Mafikeng while the mobile units will service ten identified sites in the Central and Bophirima Districts, five in each Districts. Bophirima is rural while Central is a mixture of urban and rural communities, 20% of the provincial population (3.8M) reside in Central while 18% live in Bophirima however, Bophirima is the largest district and the population is very dispersed.

Target Populations

The identified sites will be locations which are not adequately served by clinics and in which high barriers to individuals' learning their HIV status remain. The sites identified are villages and farming communities that are far from clinics and/or are generally serviced by mobile clinics intermittently. Population will everyone, however more specifically farm workers, youth and the overall rural population.

Activity Narrative: Proposed Contribution to the HIV and AIDS and STI Strategic Plan for South Africa (2007 -2011) and Operational Plan for Comprehensive HIV and AIDS Care, Treatment and Management for South Africa

The project contributes the strategic and operational plans through promotion of ; HIV Counseling and Testing; care and support for HIV infected individuals and their families.

The project activities fall into three categories that are strongly interconnected in their implementation and objectives. Firstly, a wide array of HIV prevention & marketing activities are designed to increase the uptake of services, disseminate factual, comprehensive information on HIV&AIDS, and encourage behavior that prevents HIV transmission. Secondly, the work of the mobile unit includes conducting HIV testing & counseling at designated identified sites in the two districts, five per district. Lastly, LifeLine activities involve intensive human & organizational capacity development, both within LifeLine and through activities with six CBOs/FBOs with an additional two to be added in the second year.

HIV Prevention Activities (HVAB and HVOP)

Activities conducted at identified sites include HIV counseling & testing and concurrent HIV prevention and marketing activities. Trend Setters* will undertake the HIV prevention & marketing activities include placing banners, canvassing the area on foot, distributing pamphlets and invoking discussion with pedestrians, conducting information education sessions on HIV&AIDS, projecting culturally appropriate abstinence and be faithful messages, performing HIV&AIDS-related dramas and performances, establishing "post test clubs" and condom demonstrations/distribution. Post Test clubs (PTC) is a model used in Uganda which helps PLWHA's cope with infection and both HIV positive and negative members adopt and maintain an effective prevention behavior. Formation of PTC can assist in changing the social norms in support of HIV risk reduction. (UNAIDS pub.20 1999).

HIV prevention activities especially emphasize fidelity, though are balanced with abstinence messages, especially targeted towards youth, and condom promotion (i.e. correct and consistent use of male or female condom) in order to reach as many people in the target audience as possible. Management will ensure PEPFAR regulations are strictly followed.

Education and marketing is essentially to dispel myths and ensure the right information is out there. These activities enable people, who may have been unable to overcome fear or stigma to encourage knowing their HIV status, which ultimately can prolong or save their lives and possibly the lives of others.

Activity 3: Community Mobilization

The community mobilization and outreach efforts seek to ensure that the general public receives the necessary information targeted towards behavior change. The HIV prevention activities, conducted in the area surrounding the hot spots which are visited bi-monthly will be conducted by community outreach volunteers and trend setters. Education is provided in plenary sessions, as well as focus group education and discussion. Education topics highlight behavior change; attitudes; cultural, legal, gender, alcohol and substance in young people as a risk factor, and other issues; multiple partners; same sex partners; and cross generational sexual partners. Special emphasis for persons not yet sexually active will be the pros and cons of abstinence, benefits of later sexual debut, and one partner relationships. For persons already sexually active emphasis will be on faithfulness, one partner relationships and secondary abstinence where relevant. All prevention activities are target and language group sensitive i.e. each target group receives relevant information and education specific to the age, culture or other dynamic of the group.

Funding Source: GHCS (State)	Program Area: Sexual Prevention: Other sexual prevention
Budget Code: HVOP	Program Budget Code: 03
Activity ID: 23767.09	Planned Funds: \$944,691
Activity System ID: 23767	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

SUMMARY:

In FY 2009, technical assistance (TA) will be provided to three provinces to raise awareness on the importance of sustainable inter-sectoral collaboration for sexual and gender-based violence. TA will be provided for debriefing sessions of sexual assault, antiretroviral therapy (ART) and voluntary testing and counseling (VCT) providers from Department of Health (DOH), Department of Justice (DOJ), the South African Police Services (SAPS) and the Social Development (SD) in Gauteng, Free State and the Eastern Cape to address staff retention, stress and burn out.

BACKGROUND:

The PHE from FY 2008 (below) has ended. The results from the desktop reviews on screening for domestic violence and round table were conducted. The finalization of the male involvement strategy will result in the presentation of the draft policy framework and male involvement strategy to the National Department of Health (NDOH), and the dissemination of the draft to provinces under the guidance of the NDOH. Recommendations from community discussions to inform information, education and communication (IEC) targeted at male involvement in reproductive health (RH) will be implemented in FY 2008.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Scale-up of a comprehensive post-rape care and HIV post exposure prophylaxis (PEP)

In FY 2009 the Population Council (PC) will continue to provide technical assistance on the implementation and scale-up of a comprehensive post-rape care and HIV post exposure prophylaxis (PEP) strategy (which includes male involvement in reproductive health). The strategy also includes strengthened legal and mental health components and is being implemented at Tintswalo Hospital and 25 facilities (including two hospitals and two community health centres) in Mpumalanga, Limpopo, KwaZulu Natal and Eastern Cape, and two Primary Health Care (PHCs) in North West, KwaZulu Natal, Mpumalanga and Free State province to ensure sustainability of the program. The monitoring and referral systems developed in FY 2008 will be adapted to all 25 intervention sites. Champions will be identified during a two day training that PC will conduct in the provinces to support and monitor the intervention onsite and give monthly feedback to the facility managers on implementation progress and challenges. The overall management and data collection systems developed in FY 2008, which will include the retrospective data collection to assess the number of survivors who sero convert after the assault (with or without PEP) at Tintswalo hospital, will inform DOH and PC's activities to address the gaps/best practice. One of the envisaged activities could include TA to the DOH to include and monitor this indicator to be able to assess the impact of the program. PC will conduct quarterly support site visits with the provincial, district and facility managers and champions, and will also provide TA for regional exchange site visits on a bi-annual basis to allow providers to share best practices. These visits will be supported through separate funding from PEPFAR allocated to strengthening the response to sexual assault at the regional level. Reports from all visits will be generated and reported to PC on a quarterly and on an ad hoc basis to address challenges and inform the action plan. Data quality will be monitored and strengthened in collaboration with the district health information systems team and PC trained data capturers. The multi-sectoral project advisory committee established in FY 2007 will continue playing a role in bringing key stakeholders together to share information and experiences, identify gaps in the implementation of the comprehensive models, and assess on-going opportunities for strengthening linkages between the health and criminal justice systems. PC will provide TA for the establishment of similar committees in the other two provinces, and encourage active involvement and participation at the service provider level. PC will undertake all activities with the DOH at all levels, including cost sharing on activities like training, material development, sharing of tools, policies and protocols, campaign activities and selected workshops.

ACTIVITY 2: Scale up to other facilities in Mpumalanga and three provinces (Limpopo, Eastern Cape and KwaZulu-Natal)

A situational analysis on the implementation of the comprehensive post-rape care and HIV post exposure prophylaxis (PEP) strategy, a screening for domestic violence (DV) and the Thohoyandou Victim Empowerment Program (TVEP) which aims to increase and improve service access for victims of sexual and gender-based violence (SGBV) will be conducted, documented and presented at two hospitals and two community health centres (CHCs) in Mpumalanga, KwaZulu Natal, Limpopo and Eastern Cape for scale-up. Focus group discussions will also be conducted with men (two per province) to determine the role of men in sexual assault care. Buy-in and planning meetings will be held at provincial and district levels to ensure that there is increased accessibility and availability of comprehensive sexual assault care including PEP and psychosocial support (HIV & AIDS and STI Strategic Plan for South Africa Key Priority Area 1:2). Provinces will be supported to encourage other government departments including the South African Police Services (SAPS), Department of Justice (DOJ), and Department of Social Development (SD) to the buy-in. Coordination and planning meetings will be held to ensure a collaborative effort in addressing sexual assault care and domestic violence. Monitoring, intervention, referral tools and training materials will be shared with new provinces. PC will provide TA to strengthen linkages between service providers in the public sector and Thuthuzela Centres (TTC) to develop a mechanism that ensures good client flow, sharing of best practice, coordination and collaboration. Population Council (PC) will provide TA to provinces on sexual assault and DV awareness campaigns and intersectoral collaboration events nationally (one campaign/event per province and one national event).

ACTIVITY 3: Psychosocial support for government service providers

PC will provide TA in four provinces for debriefing sessions of sexual assault providers from the Department of Health (DOH), DOJ, SAPS and SD. A psychologist will be contracted to conduct eight debriefing sessions (two per province), and PC will support provinces to strengthen provincial debriefing

Activity Narrative: sessions with the available resources in various departments, and the debriefing material developed and provided by the psychologist. A debriefing package for use in other facilities will be developed and shared.

ACTIVITY 4: Information Dissemination

PC will provide TA to the four provinces to share lessons learned from the implementation of the intervention at various forums at the district, provincial and national levels. PC will also present findings and reports to the National Department of Health (NDOH) and the international community. Lessons learned from PC work on sexual assault in the region and internationally will be shared with South African stakeholders.

TYPE OF STUDY: Continuing.

PROJECT TITLE: Expanding Access to Comprehensive Post-Rape Services.

NAME OF LOCAL CO-INVESTIGATOR: The Tshwaranang Legal Advocacy Centre (TLAC) of Limpopo and Mpumalanga provinces.

PROJECT DESCRIPTION: Population Council (PC) and Rural Aids and Development Action Research (RADAR) implemented and evaluated a rural, multi-sectoral model for post-rape care in Limpopo during FY 2007. Obstacles in providing comprehensive post-rape care were identified, including uptake of service by community, institutional and provider capacity, quality of service delivery, and inter-sectoral linkages. An intervention strategy was developed to address these obstacles. During FY 2008 the intervention strategy will be implemented in rural areas of Limpopo and Mpumalanga in collaboration with the Tshwaranang Legal Advocacy Centre (TLAC).

EVALUATION QUESTION: The aim of this public health evaluation (PHE) is to add a strengthened legal and mental health component to the existing model for post-rape care and HIV post-exposure prophylaxis (PEP) in two areas of rural South Africa. The evaluation question involves examining whether the more comprehensive post-rape care and HIV post-exposure prophylaxis programs (i.e., with the strengthened legal and mental health components) effectively address the obstacles identified in the FY 2007 study.

PROGRAMATIC IMPORTANCE: There has been growing alarm regarding the high levels of rape reported in South Africa. Sexual violence and violence against women have become one of considerable political importance and the Department of Justice (DOJ) has launched a major initiative to address the needs of rape victims in a comprehensive manner. Meeting the immediate healthcare needs of rape survivors (including sexually transmitted infections, treatment of injuries, and counseling) is a priority. Guidelines exist for the provision of PEP, along with these other key services. However, evidence shows that these are not often followed. In addition, study findings reveal an often poor link between medical post-rape services and the necessary legal and police procedures.

The PHE undertaken by PC and TLAC will seek to explore the effect of incorporating a legal services component into a health services model and the relationship between the health and criminal justice systems. There are currently no examples of such an approach in South Africa, with the exception of Thuthuzela Centres, which do provide access to the criminal justice system by working with the South Africa Police Services. These centers, however, do not provide legal advice and assistance to clients. The model will provide the opportunity to explore whether a justice model can usefully be included in a health services model.

Although interventions have strengthened the health sector response to violence, they have also revealed weaknesses in addressing the legal needs of rape survivors. Nurses and doctors have been trained in collecting forensic evidence, but few cases are actually brought to court, and even less successfully prosecuted. Lack of confidence in legal proceedings appears to discourage survivors from seeking medical care or reporting to police. This PHE will contribute to the knowledge base needed to inform the design of interventions that address the lack of comprehensive physical and mental healthcare for rape victims, as well as the lack of legal recourse. The emphasis areas of this activity will be on increasing women's legal rights, reducing violence and coercion, human capacity development (training), local organization capacity building, and strategic Information.

TIMELINE AND FUNDING: The total project timeframe is two years. This entry describes activities during Year 2 of project, which involves implementing and evaluating the intervention strategy developed in Year 1; analysis of evaluation data; and dissemination of findings. Budget request for the second year is \$350,000.

METHODS: Prior to the commencement of the intervention, Population Council and TLAC will collect data from the South African Police Services occurrence books, a review of applications for protection orders and court records detailing outcomes of rape cases. A random sample of these baseline data will be drawn from the previous year, describing (1) who accesses and the criminal justice system; (2) the services that they use; (3) case outcomes; (4) current problems around networking and referrals between the health and criminal justice systems; and (5) what impedes women's access to justice? From these observations the short, unobtrusive methods of interview to be used later in the study will be informed. This later portion of the PHE involves the continuous monitoring of the HIV/PEP register kept at the Tintswalo Hospital. (This register is a restricted site study in which Tintswalo Hospital serves as the hub for the surrounding rural areas.) The register will yield monthly data on the number of individuals who received the comprehensive HIV post-exposure prophylaxis model. This monitoring activity will form the sampling frame for women who will be contacted to participate in the (probably rapid) qualitative and quantitative assessments of the intervention and its intended outcomes of improved satisfaction with post-exposure services and improved knowledge and attitudes about such services. Taken as a whole, the key problems that need to be addressed will be based on the analyses of the baseline data, with additional observations being gleaned from the purposive sampling of women to be interviewed (methodologies of which are to be determined during the initial phase of the PHE). These two sets of data will then inform the overall case management and data collection systems to be designed and disseminated as the final deliverables.

Activity Narrative: POPULATION OF INTEREST/GEOGRAPHIC AREA: This PHE addresses women in rural South Africa who are either rape victims themselves or vulnerable to rape and its series of adverse outcomes. The geographical area of focus is rural areas of Limpopo and Mpumalanga provinces.

INFORMATION DISSEMINATION PLAN: The results of this PHE will be disseminated at provincial and national levels in South Africa to policymakers and advocates who are in demand of valid data that could inform improved programs addressing PEP in general and post-rape health care in particular. Results will be presented to local, provincial, and national government officials and made available online through the Population Council and other websites. Findings will also be presented at USAID/South Africa at the appropriate time, as well as at national and international conferences as applicable.

BUDGET JUSTIFICATION FOR YEAR 2 (USD): The majority of funds (just under 80% of the total) will be used for salaries and benefits for study staff, including the principal investigators/lead behavioral scientists, field directors, data managers, statistical analyst, trainers, and data collectors. Approximately five laptop computers and related support (IT) equipment will be purchased for field data entry and analysis (equipment, approximately 3%). Supplies will include general office supplies, computer supplies, and photocopying of data collection instruments (1.5%). Travel (approximately 6% of the total) will include local transport for the study team and limited international travel for Population Council New York/Washington-based technical expertise visits to South Africa. Finally, communications, office space, and other expenses will account for approximately 10% of the total.

Program Area: Sexual Prevention: Other sexual prevention

Budget Code: HVOP

Program Budget Code: 03

Activity ID: 23689.09

Planned Funds: [REDACTED]

Activity System ID: 23689

Activity Narrative: SUMMARY:

These activities were in the FY 2008 COP under National Institute for Communicable Disease (NICD), a parastatal organization that works directly with the South African government to provide laboratory testing and surveillance for communicable diseases. However, the NICD cooperative agreement has finished and a To Be Determined (TBD) implementing partner will be awarded the new cooperative agreement in the next year to implement these activities. FY 2009 funds will be used to support: 1) the dissemination of the newly enhanced materials augmenting sexually transmitted infection (STI) clinical management and HIV/STI prevention for health care providers; and 2) marketing and dissemination of an HIV/STI prevention and condom skills-building video targeting high-risk youth (i.e. already sexually active).

BACKGROUND:

The first activity builds on work funded in FY 2008 and addresses a recommended Effective Program for most at risk populations (MARPs), diagnosis and treatment of STIs. By the end of FY 2008 the provider survey will be conducted and, based on results, new materials, curricula augmentations, and job aids are being developed to support public and private sector health care workers in providing more effective STI management, including integration of HIV/STI prevention activities and promotion of HIV testing. This activity builds on previous work to disseminate the new materials to public and private health care workers through professional organizations and national, provincial and district programs through a variety of routes. In the expanded activity, the target populations are still primary care health care workers providing STI management (usually nurses and physicians, and as possible traditional providers and other associated providers [e.g., pharmacists]). Activities have been conducted in collaboration with the provincial, district and local health departments and professional organizations (for the private sector).

The second activity supports the South African government and Gauteng provinces commitment toward interventions aimed at HIV prevention among youth. Adolescents have enhanced behavioral and biologic risk for STI/HIV acquisition, and are recognized as an important population at risk for future HIV infections. Currently, only limited interventions that promote self-efficacy for safe sex choices are available in South Africa; and many interventions that currently exist may be losing effectiveness through over use. To change adolescents' norms, attitudes and behaviors around risky sex, multiple methods of providing safe sex messages (e.g., correct information, skills that promote self-efficacy for safe sex choices) are needed - especially methodologies that youth perceive to be fun and acceptable.

ACTIVITIES AND EXPECTED RESULTS:

NICD will carry out two separate activities in this program area.

ACTIVITY 1: Dissemination of Enhanced Health Provider Interventions

The target population is private and public sector health workers providing STI clinical management. The activities focus on enhancing and strengthening existing provider training curricula, clinical management guidelines, clinical tools and "job aids" (e.g., laminated cards and posters, checklists). The training will also focus on correct condom use and incorporating distribution of condoms in clinical settings. FY 2009 funding will be to: 1) Hire 1.5 FTEs local staff who will help support dissemination of the intervention and will train private providers and in the public sector; they will be conducting training of trainers workshops; 2) Identify public and private sector sites, curricula, and informational activities to which enhanced materials can be directed; these should include pharmaceutical sites and (as possible) traditional providers; 3) Present and disseminate materials to leaders and managers of STI/HIV management and prevention activities in various organizations; 4) Solicit feedback on educational materials from collaborators, and identify opportunities for integrating new materials into already existing curricula, work plans and work settings for health providers; 5) Reproduce and translate new materials into local languages as appropriate; and 6) Collaborate with national, provincial and local government, private sector (e.g., professional organizations), local NGOs and CBOS as appropriate to conduct activities. The prime partner will hire needed staff, commodities, and other services to conduct the activity. It is expected that 300 providers will be trained to provide more effective STI management, including integration of HIV/STI prevention activities and promotion of HIV testing. The 300 providers will be expected to reach 100 STI patients in the next 12 months for a total of 30,000 clients reached. Sustainability will be addressed through identification and training of staff who are familiar with the private and public sector issues and can disseminate the products appropriately through use-friendly processes, including the internet. In addition, sustainability will be addressed because existing training and information, communication and educational (IEC) materials will be enhanced rather than developing new materials. Human capacity development is part of all aspects of the project, as activities are aimed at enhancing STI clinical management of providers.

The activity will contribute directly to preventing transmission of HIV among infected persons, and preventing acquisition of HIV among HIV-negative persons. It is also likely to lead to additional HIV testing, and support HIV-infected men to access HIV clinical care because providers will be trained on HIV testing so that testing can be offered as part of primary care services without waiting at HIV counseling and testing sites.

ACTIVITY 2: Adolescent Prevention Video

The target population is high risk youth (i.e., soon to be or already sexually active). Based on results of the pre-and post-test surveys, the prime partner will collaborate with CDC staff to support marketing and wide dissemination of the video within youth clinics in South Africa. FY 2009 funding will be used to: 1) Hire a local staff person familiar with youth venues and marketing strategies who will support dissemination of the new video; 2) Identify potential youth-friendly venues for provision of the video, and marketing strategies to target those venues; 3) Travel as appropriate for presentation of the video to directors/staff at potential venues, events, and relevant meetings (e.g., national and international conferences); 4) Transfer of video through direct copies, internet services, public health and other services, and national and international

Activity Narrative: conferences; and 5) Collaborate with local, provincial and national government officials as appropriate, as well as NGOs and CBOs and private sector to conduct activities. The prime partner will hire needed staff, commodities, and other services to conduct the activity. Targeted sites for dissemination are those providing youth friendly services, regardless of health or non-health context. Sustainability will be addressed through use of a local person familiar with youth venues and marketing techniques, and who is able to use multiple dissemination techniques (e.g., internet based). Human capacity development is addressed through the information and skills that are provided to youth in the video, as well as through training and development of the local marketer.

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Male circumcision, which was in Other Prevention in FY 2008, has been moved into the male circumcision program area. The description below outlines activities falling into this program area.

SUMMARY:

The approach taken by the Perinatal HIV Research Unit (PHRU) is one of comprehensive, high quality care and support for people living with HIV/AIDS (PLHIV) and prevention for both HIV-infected and HIV-negative people. Prevention forms a part of all the PHRU's programs and through these efforts PHRU has recognized that a one size fits all approach to prevention does not work for all populations. Under this program area PHRU is targeting high risk populations, in particular men, adolescents and pregnant women, in order to have the greatest impact.

BACKGROUND:

Prevention is the cornerstone to curbing the spread of HIV. All PHRU's activities include prevention as a fundamental component of the activity. In FY 2009 the PHRU will focus on particular communities that are at higher risk for HIV infection and whose needs have not been addressed in mainstream prevention, including single men, men who have sex with men, people engaging in multiple and concurrent partnerships, adolescents and pregnant women. This aligns with the HIV & AIDS and STI Strategic Plan for South Africa, 2007-2011 strategy to target prevention programs to higher risk groups. PHRU already has programs for these high risk groups and through this targeted funding, PHRU will increase their participation in PHRU programs.

ACTIVITIES AND EXPECTED RESULTS:

All people identified through these programs will be encouraged to be tested for HIV and enter into appropriate HIV services, or to stay negative. All the programs described below will have major input from the PHRU communities. The programs will be monitored using both qualitative and quantitative methods to establish their effect in the different communities.

ACTIVITY 1: Men who have sex with men (MSM)

The issue of MSM has not been widely addressed in HIV-related services. The fact that the South African epidemic is largely in the heterosexual community has focused HIV-prevention on this population. However, the recognition that there is a gap in services for MSM has prompted PHRU to develop expertise and programs to address this issue. Through collaborative research with the University of California San Francisco PHRU has learned that the prevalence amongst MSM in Soweto is around 25%. In a recent paper at the AIDS 2008 conference in Mexico, HIV prevalence among this population in the Western Cape is 31%. These men are clearly at risk of HIV infection and need urgent attention.

The Western Cape provincial Department of Health (DOH) has requested PHRU to assist them to expand HIV services in the primary care clinics to MSM. This will include training health care workers on the special needs of this population including risk reduction counseling, STI screening and treatment, and alcohol and drug abuse counseling. There have been few programs addressing the needs of this vulnerable population and even less addressing HIV. This activity will address this gap. PHRU will develop and expand programs in Soweto (Gauteng) and Cape Town (Western Cape) and will train other organizations as needed. PHRU will link with other organizations that do outreach to the MSM community such as Triangle and Desmond Tutu HIV Foundation in Cape Town, Soweto HIV/AIDS Counselors Association (SAHACO) and Gay and Lesbian Memory in Action (GALA) in Johannesburg, and the Human Sciences Research Council (HSRC) and OUT in Pretoria. People referred from these groups will be able to receive a comprehensive prevention, care and treatment program. This program will include risk reduction counseling, advising consistent condom use with lubricants, provision of condoms, voluntary counseling and testing (VCT), sexually transmitted infection (STI) treatment, tuberculosis (TB) screening and HIV care and treatment. The MSM community will be consulted and involved in the development of this initiative. PHRU has actively engaged with other organizations working with MSM.

ACTIVITY 2: Multiple and concurrent partnerships

The risk of HIV transmission increases considerably when either partner engages in sexual activity with other partners. In a poster presented at the 2008 AIDS conference in Mexico it was shown that although, in a period of a year, men are more likely to engage in multiple concurrent partnerships (MCP), women are more likely to engage in multiple serial partnerships. These partnerships include cross-generational sex which is often accompanied by gifts which sustain the relationship. Alcohol and drug abuse increases these sorts of interactions. PHRU will intensify efforts to understand the nature of these relationships in our communities, many of which are poorly resourced, have high unemployment rates and where there may be a culture of concurrent relationships. Concurrent relationships are seen as culturally acceptable and the norm through peer pressure and the notion of masculinity in South Africa. Being mobile and abusing alcohol and drugs can increase risky behavior and infidelity. PHRU will draw on knowledge from their programs that have engaged with couples and men to develop strategies to address this issue in our communities. Prevention with HIV-infected and HIV-uninfected people as well as concordant and discordant couples will be addressed. Risk reduction counseling, advising consistent condom use and partner reduction, reducing concurrent partners and increasing time between partners will be encouraged. PHRU's and the University of the Witwatersrand School of Journalism's AIDS and the Media project was established in 2003 with funding from USAID and is now funded by PEPFAR through Johns Hopkins University. This project engages and trains journalists and media practitioners on various aspects of HIV/AIDS. The focus going forward is on MCP and male norms and will be able to draw on and publicize these findings.

ACTIVITY 3: Men

Activity Narrative: Men and single men have been underserved in HIV prevention efforts. The majority of prevention has been targeted towards empowering women to negotiate safer sex and to PMTCT, with men being left out. In addition, when prevention has been targeted to men it has been assumed that they are a homogenous group. Media often portrays men in a negative fashion as the perpetrators of violence, of spreading HIV and of being irresponsible. PHRU will include family planning in the prevention package as it is generally seen as a women's issue and is seldom discussed. Moreover, high unemployment rates in South Africa disadvantages the men in engaging in traditional cultural practices such as lobola (giving a gift to the bride's parents). PHRU will develop programs together with men such that messages will have greater impact. It is expected that more men will be tested and engage in HIV services.

ACTIVITY 4: Adolescents

The particular issues involving adolescents are addressed in the counseling and testing (CT) and pediatric care and treatment program areas. Abstinence and delaying sexual debut is the central focus of this initiative. PHRU has outreach activities in schools in Soweto, including providing CT. Through this and HIVSA's camp project for adolescents and walk-ins to the Kganya Motsha adolescent clinic, adolescents are identified through these outreach activities. Under this program area PHRU will investigate and address the issue of delaying sexual debut and cross-generational relationships in the communities in which PHRU works. PHRU will capacitate adolescents to make informed decisions and to empower them to not engage in sexual activity until they are older. KidzPositive is providing similar services in Cape Town.

ACTIVITY 5: Pregnant women

Women have been shown to be more susceptible to HIV infection while pregnant. Pregnant women access many programs including PMTCT. PHRU will use risk reduction counseling and encourage women to have open dialogue with their partners around pregnancy and HIV infection, to bring their partners in for testing and to engage with them around fatherhood. In addition, PHRU will encourage repeat testing at 32 weeks or in labor as per South African government guidelines.

The above activities will link with local NGOs and CBOs in the communities where PHRU works. PHRU will train these organizations on prevention for vulnerable groups. PHRU will support these activities through developing strategies, providing the means and identifying venues for outreach activities. PHRU will provide outreach material, set up referral networks, ensure HIV services are accessible, monitor and evaluate the interventions. PHRU will also train the health care providers on the special needs of these communities to ensure that clients get appropriate care. Once they have been shown to work, PHRU will expand these programs.

PHRU has run three very successful Priorities in AIDS Care and Treatment conferences which are targeted to public sector health care workers (doctors, nurses and pharmacists) and program and facility managers. These practical conferences have been well received by participants who find that they are able to take away useful information and knowledge to improve the quality of care and treatment access at their facilities. Through these conferences PHRU been able to disseminate its research findings and HIV prevention, care and treatment experiences and has invited other PEPFAR partners to share their experiences, knowledge and best practices. Over 800 people have attended these conferences.

SUMMARY:

The approach taken by the PHRU is one of comprehensive, high quality care and support for PLHIV. Building on their 2006 workshop on the feasibility of scaling-up doctor-based male circumcision, the PHRU are using FY 2007 funds to organize and facilitate a stakeholders workshop on the feasibility, acceptability, and resource requirements of alternative models of delivering circumcision as a part of a comprehensive HIV prevention program. The workshop compares three models of male circumcision: the use of traditional healers (where they are culturally appropriate) as circumcisers; use of trained doctors; and a nurse-based approach to circumcision. The workshop draws upon the work of Human Sciences Research Council (HSRC) and PHRU's non-PEPFAR funded study of the feasibility and acceptability of nurse-based male circumcision. This activity will be used by the Health Policy Initiative in their policy analysis of the impact of pending South African legislation restricting male circumcision to doctor-based programs and will be coordinated with JHPIEGO and the NDOH TBD support to the NDOH. FY 2008 funds will be used to conduct an additional symposium, similar to that held with FY 2007 funds, which will continue to involve major stakeholders in the policy analysis, brainstorming, and other major issues surrounding male circumcision. The major emphasis area addressed in this activity is human capacity development. Healthcare workers, program managers, and local health officials are the target group for this activity.

BACKGROUND:

Although not widespread, prevalence rates for male circumcision in South Africa ranges from about 30% national average to nearly universal among some ethnic groups. Male circumcision is a procedure that is usually done for cultural or religious reasons rather than for health benefits. This is seen among certain ethnic groups such as the Xhosa who routinely practice male circumcision as part of boys' initiation to the transition to manhood. In such cases the circumcision is done by traditional healers rather than by medically trained staff in a health facility. A recent study conducted in South Africa showed that male circumcision reduces the risk of becoming HIV-infected. UNAIDS and WHO have stated that these results should be confirmed prior to recommendations being issued regarding policy and program development. Two further large scale studies of circumcision for HIV prevention are in progress in Uganda and Kenya, with results anticipated later in 2007. Scaling-up male circumcision in South Africa may soon become a priority, as a component of comprehensive HIV prevention programs. In anticipation of this development, the PHRU held workshops in 2006 and 2007 on issues related to the feasibility of scaling-up male circumcision. Contributions to this workshop were made by researchers who conducted the South African trial,

Activity Narrative: academics, surgeons, and included input on diverse aspects of possible interventions including training requirements, legal and ethical concerns, traditional methods, anesthesia, cultural concerns, and potential target groups. An important conclusion from this preliminary consultation was that there is little circumcision being carried out by trained surgeons. A medical model with circumcision delivered by trained nurses could also be considered. PHRU is currently conducting research, with non-PEPFAR funding, on the feasibility and acceptability of a nurse-based approach to circumcision. Through non-PEPFAR funding, male circumcision would be performed by trained nurses under the supervision of a surgeon in sterile operating rooms at primary and tertiary health facilities. It is expected that this activity would impact male norms and increasing equity in treatment programs.

ACTIVITIES AND EXPECTED RESULTS

ACTIVITY 1: Male Circumcision Using Nursing Staff

No male circumcision training or service delivery will take place without the express consent of the National Department of Health. In the absence of such approval and based on discussions with the PEPFAR South Africa team, funds could fully or partially be reprogrammed. Should the approval for safe clinical male circumcision activities be given, PHRU is proposing the following male activities:

This activity assumes that the South African Government will change legislation to allow male circumcision to take place on a large scale in South Africa. Recognizing that specialized surgical and other staff are in short supply, this activity will look at alternative models to scale-up male circumcision. This will include training nurses to do male circumcision, paying staff to perform circumcisions and paying for materials required to perform male circumcision. Training, mentoring and implementation will be the main areas of emphasis and developed in consultation with NDOH and JHPIEGO. It is likely that this activity will take place initially in Gauteng, but may be expanded to other provinces on request of the National Department of Health.

These activities will contribute to the PEPFAR goal of preventing 7 million new infections by exploring innovative prevention possibilities, which will result in a lower transmission rate.

Activity Narrative: SUMMARY:

USAID and CDC will support the National Department of Health (NDOH) to create and lead an HIV prevention consultative core action group (or "Action Tank"). The purpose of the Action Tank will be to help the South African government (SAG) accelerate the scale-up of HIV prevention through an inclusive, broad-based process to develop comprehensive, coordinated, evidence-based, target-driven national prevention implementation strategy. The group is slated as an "action tank" because in addition to providing expert advice and recommendations, its primary purpose is to facilitate large scale prevention action under NDOH leadership. The establishment of the Action Tank will be done through an active and participatory approach that will engage key stakeholders and facilitate the alignment of prevention actions based on understanding the SA HIV epidemic.

The creation of the Action Tank will be a multi-tiered process that will progressively strengthen the capacity and engage the leadership of the NDOH and other key actors. This may include: a rapid prevention program situation analysis, identification of challenges and barriers to effective scaled-up prevention programming, identification of programming gaps and best practices, development of a plan to focus strategic implementation for maximum results, and an on-going process for prevention program evaluation and utilization of new information. The process will engage stakeholders and other donors in order to achieve consensus on the implementation strategy.

BACKGROUND:

South Africa is the most affected country in the world, with an estimated 5.7 million HIV-infected people and an estimated 530,000 new infections annually. While there is some indication that the prevalence may be starting to decline (from 29% in 2005 to 28% in 2007 in antenatal clinics), the continued rate of new infections, the increasing numbers of patients on treatment and ever growing numbers of orphans and vulnerable children result in an incontrovertible burden on the South African health, social, and economic systems. There is an urgent need for effective prevention programs at a national scale and that can be sustained by the SAG and civil society for the long term.

Former South African President Mbeki provided little leadership to prevent the spread of this epidemic. In addition, the previous Minister of Health did not make HIV programming a priority, did not encourage coordinated action, and criticized donor-supported HIV programs. In stark contrast to most PEPFAR focus countries, donors, including the USG, have not played a direct, major role in strategy or policy formulation in recent years. However, the change in national leadership and the new Minister of Health offer an opportunity to help the SAG shift the prevention paradigm. The NDOH has placed prevention among the high priorities in HIV programming and seems to be open to developing a robust partnership for prevention. The SAG emphasized the need for an integrated, inter-departmental approach to dealing with the pandemic and this will be an important component of a strategic implementation action plan.

The examples of successful prevention programs around the globe, such as Cambodia, Senegal, Kenya, Zimbabwe, India, and Haiti that have seen significant changes in social norms and individual sexual behavior all have the common denominator of high level political support and engagement. These examples demonstrate that barriers to scaled-up prevention efforts can be overcome through evidence-informed action.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Capacity and Consensus Building

Together with the NDOH, the USG will help support an inclusive process, bringing together multiple sectors, key donors and actors, and ensuring strong participation by civil society, affected communities, and people living with HIV, to garner consensus on the state of current prevention programs in relation to the epidemic, identification of program gaps and best practices, and develop a comprehensive implementation strategy for the HIV prevention. Engaging the NDOH in the PEPFAR prevention program stock-taking exercise will be a part of this process.

ACTIVITY 2: Creating the Action Tank

USAID and CDC will work closely with the NDOH to facilitate the creation of a core group, the Action Tank and establish its terms of reference. It is expected that the Action Tank, led by the NDOH, will facilitate the implementation of the National HIV prevention plan, will work with international and national technical agencies, and national, provincial, and district level HIV authorities to assess HIV prevention scale-up on an ongoing basis, and identify factors that impede program expansion. In the long term, the Action Tank may facilitate the initiation of joint reviews of the HIV prevention program and support the revision of the prevention implementation plan as needed, based on epidemiologic trends, evaluation findings, and the emergence of new prevention tools.

ACTIVITY 3: Action Tank Actions

Based on the Action Tank terms of reference and the needs of the NDOH, the Action Tank may support the following types of processes to facilitate a coordinated, evidence-based national scale up of prevention programs under the leadership of the NDOH:

-Establishment of clear achievable targets for the prevention program: Using available information and research findings, the Action Tank, with technical assistance, may help the NDOH establish concrete measurable indicators for HIV prevention including coverage, intensity of prevention efforts, and outcome and impact of the HIV prevention program.

-Effective utilization of HIV prevention information: South Africa has strong HIV and behavioral surveillance systems, high quality data from population-based surveys, and information from a variety of quantitative and qualitative research activities; and the drivers of the epidemic are clearly understood and outlined in the HIV

Activity Narrative: and AIDS and STI National Strategic Plan. The Action Tank might help the NDOH take on a more robust leadership in assuring that all actors (in the public and private sectors) clearly understand this information, including HIV prevalence and incidence, the sources of new HIV infections, the size and characteristics of groups most at risk, important sources of HIV-related vulnerability (e.g., drug and alcohol use, cultural norms, social, economic, etc.), and how to use this information to continually refine the prevention response and fill gaps. The Action Tank may also help the NDOH identify gaps in HIV prevention information that could be filled through research or action research.

-Addressing factors that increase vulnerability: The Action Tank might assist the NDOH to develop an advocacy and/or action plan to address the broader social, cultural, and structural issues that increase vulnerability to HIV transmission. This may involve assuring greater synergy between and among governmental departments, and identifying priority policy actions.

-Improved integration of HIV prevention with treatment and other clinical services: The Action Tank might assist the NDOH in developing activities to assure real field-level integration of prevention with HIV, TB, and STI treatment programs, and explore methods to encourage integration of HIV prevention in other service delivery settings.

This activity contributes to the PEPFAR goals and objectives by strengthening the prevention portfolio and developing a coordinated national framework in which to implement prevention in South Africa. This will contribute to reducing new infections.

Activity System ID: 23728

Activity Narrative: SUMMARY:

In June 2010, South Africa will host the FIFA World Cup Soccer Event. This is an international association football (also known as soccer) competition played by the men's national teams of the members of Fédération Internationale de Football Association (FIFA), the sport's global governing body. The championship has been awarded every four years since the first tournament in 1930, except in 1942 and 1946, due to World War II. The tournament consists of two parts, the qualification phase and the final phase (officially called the World Cup Finals). The qualification phase, which takes place over the three years preceding the Finals, is used to determine which teams qualify for the Finals. The current format of the Finals involves 32 teams competing for the title, at venues within the host nation over a period of about a month. The World Cup Finals is the most widely-viewed sporting event in the world, with an estimated 715.1 million people watching the 2006 tournament final. While a large number of people are estimated to view the tournament, a significant number of people are expected to travel to South Africa as spectators. This qualification phase and the World Cup Finals provide the USG team with a unique opportunity to develop and broadcast targeted prevention messages and prevention interventions with a potential for broad reach throughout South Africa. In addition, the USG team will link with the South African Tourism Industry to ensure that HIV prevention activities are widespread.

BACKGROUND:

The 2010 World Cup Soccer will be one of the biggest events hosted by South Africa to date. It is anticipated that large numbers of tourists will travel to South Africa as spectators for the event. It is anticipated that a large amount of alcohol will be consumed during the 2010 Soccer World Cup. Alcohol consumption places individuals at increased risk of engaging in sexual practice that put them at increased risk of contracting HIV. The World Cup Event provides the USG team with the unique opportunity to collaborate with multiple PEPFAR partners and develop an HIV prevention framework around the World Cup Activities. The USG will make efforts to engage well-known soccer champions to become HIV prevention champions. The target group for this activity is the general population. Activities will target men and women of all ages who will be fans and spectators of the soccer event. Activities will not only be implemented during the 2010 World Cup Event, but also during the qualification phase taking place towards the end of FY 2008. It is also expected that the HIV prevention momentum generated during the event will be sustained through local soccer clubs, community sports events, and through groups such as Soccer for Life. The emphasis area for this activity is alcohol, multiple concurrent partnerships, risky sexual practices and gender. In addition, the activities will also target commercial sex-workers and potential clients.

ACTIVITIES AND EXPECTED RESULTS:**ACTIVITY 1: Development of a strategy around the World Cup Soccer Event**

In order to develop and implement a strategy with existing PEPFAR partners, the USG will hold a consultative forum with existing partners to capitalize on the work they are already engaged in. The idea is to engage as many of our PEPFAR partners as possible. This will ensure extended reach of the activities being implemented. At the partner consultative forum, partners will identify activities that they can implement within the framework. A monitoring and evaluation plan will also be developed to ensure maximum reach of activities.

ACTIVITY 2: Develop targeted messages

Together with PEPFAR partners, the USG team will develop a core set of targeted messages aimed around World Cup Soccer. These messages will be rolled out to communities around the country, as well as around the qualifying phase and final phase of the World Cup Events. The medium for disseminating the messages will be determined based on the framework and strategy developed in Activity 1.

ACTIVITY 3: Creating linkages

The USG team will use this opportunity to create linkages with the South African Tourism Industry, sponsors of the world cup event, and other stakeholders to ensure that HIV prevention plays a dominant role in and around events associated with the World Cup.

This activity will contribute to the PEPFAR goals and objectives by ensuring that HIV prevention messages reach large numbers of individuals. It will target a particular group of individuals who will possibly be engaged in high risk behaviors.

Activity Narrative: SUMMARY:

USAID and CDC will support the National Department of Health (NDOH) to create and lead an HIV prevention consultative core action group (or "Action Tank"). The purpose of the Action Tank will be to help the South African government (SAG) accelerate the scale-up of HIV prevention through an inclusive, broad-based process to develop comprehensive, coordinated, evidence-based, target-driven national prevention implementation strategy. The group is slated as an "action tank" because in addition to providing expert advice and recommendations, its primary purpose is to facilitate large scale prevention action under NDOH leadership. The establishment of the Action Tank will be done through an active and participatory approach that will engage key stakeholders and facilitate the alignment of prevention actions based on understanding the SA HIV epidemic.

The creation of the Action Tank will be a multi-tiered process that will progressively strengthen the capacity and engage the leadership of the NDOH and other key actors. This may include: a rapid prevention program situation analysis, identification of challenges and barriers to effective scaled-up prevention programming, identification of programming gaps and best practices, development of a plan to focus strategic implementation for maximum results, and an on-going process for prevention program evaluation and utilization of new information. The process will engage stakeholders and other donors in order to achieve consensus on the implementation strategy.

BACKGROUND:

South Africa is the most affected country in the world, with an estimated 5.7 million HIV-infected people and an estimated 530,000 new infections annually. While there is some indication that the prevalence may be starting to decline (from 29% in 2005 to 28% in 2007 in antenatal clinics), the continued rate of new infections, the increasing numbers of patients on treatment and ever growing numbers of orphans and vulnerable children result in an incontrovertible burden on the South African health, social, and economic systems. There is an urgent need for effective prevention programs at a national scale and that can be sustained by the SAG and civil society for the long term.

Former South African President Mbeki provided little leadership to prevent the spread of this epidemic. In addition, the previous Minister of Health did not make HIV programming a priority, did not encourage coordinated action, and criticized donor-supported HIV programs. In stark contrast to most PEPFAR focus countries, donors, including the USG, have not played a direct, major role in strategy or policy formulation in recent years. However, the change in national leadership and the new Minister of Health offer an opportunity to help the SAG shift the prevention paradigm. The NDOH has placed prevention among the high priorities in HIV programming and seems to be open to developing a robust partnership for prevention. The SAG emphasized the need for an integrated, inter-departmental approach to dealing with the pandemic and this will be an important component of a strategic implementation action plan.

The examples of successful prevention programs around the globe, such as Cambodia, Senegal, Kenya, Zimbabwe, India, and Haiti that have seen significant changes in social norms and individual sexual behavior all have the common denominator of high level political support and engagement. These examples demonstrate that barriers to scaled-up prevention efforts can be overcome through evidence-informed action.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Capacity and Consensus Building

Together with the NDOH, the USG will help support an inclusive process, bringing together multiple sectors, key donors and actors, and ensuring strong participation by civil society, affected communities, and people living with HIV, to garner consensus on the state of current prevention programs in relation to the epidemic, identification of program gaps and best practices, and develop a comprehensive implementation strategy for the HIV prevention. Engaging the NDOH in the PEPFAR prevention program stock-taking exercise will be a part of this process.

ACTIVITY 2: Creating the Action Tank

USAID and CDC will work closely with the NDOH to facilitate the creation of a core group, the Action Tank and establish its terms of reference. It is expected that the Action Tank, led by the NDOH, will facilitate the implementation of the National HIV prevention plan, will work with international and national technical agencies, and national, provincial, and district level HIV authorities to assess HIV prevention scale-up on an ongoing basis, and identify factors that impede program expansion. In the long term, the Action Tank may facilitate the initiation of joint reviews of the HIV prevention program and support the revision of the prevention implementation plan as needed, based on epidemiologic trends, evaluation findings, and the emergence of new prevention tools.

ACTIVITY 3: Action Tank Actions

Based on the Action Tank terms of reference and the needs of the NDOH, the Action Tank may support the following types of processes to facilitate a coordinated, evidence-based national scale up of prevention programs under the leadership of the NDOH:

-Establishment of clear achievable targets for the prevention program: Using available information and research findings, the Action Tank, with technical assistance, may help the NDOH establish concrete measurable indicators for HIV prevention including coverage, intensity of prevention efforts, and outcome and impact of the HIV prevention program.

-Effective utilization of HIV prevention information: South Africa has strong HIV and behavioral surveillance systems, high quality data from population-based surveys, and information from a variety of quantitative and qualitative research activities; and the drivers of the epidemic are clearly understood and outlined in the HIV

Activity Narrative: and AIDS and STI National Strategic Plan. The Action Tank might help the NDOH take on a more robust leadership in assuring that all actors (in the public and private sectors) clearly understand this information, including HIV prevalence and incidence, the sources of new HIV infections, the size and characteristics of groups most at risk, important sources of HIV-related vulnerability (e.g., drug and alcohol use, cultural norms, social, economic, etc.), and how to use this information to continually refine the prevention response and fill gaps. The Action Tank may also help the NDOH identify gaps in HIV prevention information that could be filled through research or action research.

-Addressing factors that increase vulnerability: The Action Tank might assist the NDOH to develop an advocacy and/or action plan to address the broader social, cultural, and structural issues that increase vulnerability to HIV transmission. This may involve assuring greater synergy between and among governmental departments, and identifying priority policy actions.

-Improved integration of HIV prevention with treatment and other clinical services: The Action Tank might assist the NDOH in developing activities to assure real field-level integration of prevention with HIV, TB, and STI treatment programs, and explore methods to encourage integration of HIV prevention in other service delivery settings.

This activity contributes to the PEPFAR goals and objectives by strengthening the prevention portfolio and developing a coordinated national framework in which to implement prevention in South Africa. This will contribute to reducing new infections.

BACKGROUND:

South Africa is the most affected country in the world, with an estimated 5.7 million HIV-infected people and an estimated 530,000 new infections annually. While there is some indication that the prevalence may be starting to decline (from 29% in 2005 to 28% in 2007 in antenatal clinics), the continued rate of new infections, the increasing numbers of patients on treatment and ever growing numbers of orphans and vulnerable children result in an incontrovertible burden on the South African health, social, and economic systems. There is an urgent need for effective prevention programs at a national scale and that can be sustained by the SAG and civil society for the long term.

Former South African President Mbeki provided little leadership to prevent the spread of this epidemic. In addition, the previous Minister of Health did not make HIV programming a priority, did not encourage coordinated action, and criticized donor-supported HIV programs. In stark contrast to most PEPFAR focus countries, donors, including the USG, have not played a direct, major role in strategy or policy formulation in recent years. However, the change in national leadership and the new Minister of Health offer an opportunity to help the SAG shift the prevention paradigm. The NDOH has placed prevention among the high priorities in HIV programming and seems to be open to developing a robust partnership for prevention. The SAG emphasized the need for an integrated, inter-departmental approach to dealing with the pandemic and this will be an important component of a strategic implementation action plan.

The examples of successful prevention programs around the globe, such as Cambodia, Senegal, Kenya, Zimbabwe, India, and Haiti that have seen significant changes in social norms and individual sexual behavior all have the common denominator of high level political support and engagement. These examples demonstrate that barriers to scaled-up prevention efforts can be overcome through evidence-informed action.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Capacity and Consensus Building

Together with the NDOH, the USG will help support an inclusive process, bringing together multiple sectors, key donors and actors, and ensuring strong participation by civil society, affected communities, and people living with HIV, to garner consensus on the state of current prevention programs in relation to the epidemic, identification of program gaps and best practices, and develop a comprehensive implementation strategy for the HIV prevention. Engaging the NDOH in the PEPFAR prevention program stock-taking exercise will be a part of this process.

ACTIVITY 2: Creating the Action Tank

USAID and CDC will work closely with the NDOH to facilitate the creation of a core group, the Action Tank and establish its terms of reference. It is expected that the Action Tank, led by the NDOH, will facilitate the implementation of the National HIV prevention plan, will work with international and national technical agencies, and national, provincial, and district level HIV authorities to assess HIV prevention scale-up on an ongoing basis, and identify factors that impede program expansion. In the long term, the Action Tank may facilitate the initiation of joint reviews of the HIV prevention program and support the revision of the prevention implementation plan as needed, based on epidemiologic trends, evaluation findings, and the emergence of new prevention tools.

ACTIVITY 3: Action Tank Actions

Based on the Action Tank terms of reference and the needs of the NDOH, the Action Tank may support the following types of processes to facilitate a coordinated, evidence-based national scale up of prevention programs under the leadership of the NDOH:

-Establishment of clear achievable targets for the prevention program: Using available information and research findings, the Action Tank, with technical assistance, may help the NDOH establish concrete measurable indicators for HIV prevention including coverage, intensity of prevention efforts, and outcome and impact of the HIV prevention program.

-Effective utilization of HIV prevention information: South Africa has strong HIV and behavioral surveillance systems, high quality data from population-based surveys, and information from a variety of quantitative and qualitative research activities; the drivers of the epidemic are clearly understood and outlined in the HIV

Activity Narrative: and AIDS and STI National Strategic Plan. The Action Tank might help the NDOH take on a more robust leadership in assuring that all actors (in the public and private sectors) clearly understand this information, including HIV prevalence and incidence, the sources of new HIV infections, the size and characteristics of groups most at risk, important sources of HIV-related vulnerability (e.g., drug and alcohol use, cultural norms, social, economic, etc.), and how to use this information to continually refine the prevention response and fill gaps. The Action Tank may also help the NDOH identify gaps in HIV prevention information that could be filled through research or action research.

-Addressing factors that increase vulnerability: The Action Tank might assist the NDOH to develop an advocacy and/or action plan to address the broader social, cultural, and structural issues that increase vulnerability to HIV transmission. This may involve assuring greater synergy between and among governmental departments, and identifying priority policy actions.

-Improved integration of HIV prevention with treatment and other clinical services: The Action Tank might assist the NDOH in developing activities to assure real field-level integration of prevention with HIV, TB, and STI treatment programs, and explore methods to encourage integration of HIV prevention in other service delivery settings.

This activity contributes to the PEPFAR goals and objectives by strengthening the prevention portfolio and developing a coordinated national framework in which to implement prevention in South Africa. This will contribute to reducing new infections.

Activity ID: 23744.09

Planned Funds: ██████████

Activity System ID: 23744

Activity Narrative: SUMMARY:

This activity is a component of a comprehensive prevention education, care and treatment program for small to medium enterprises (SMEs) with 20-200 employees and other workplaces in South Africa. PEPFAR funds will be used to support implementation of a peer education prevention program for South African workers and managers in SMEs. The partner to implement these activities is to be determined. The major emphasis for this program will be the development of a workplace program, with minor emphasis given to community mobilization and participation; information, education and communication; and linkages with other sectors and initiatives. The target population will include adults (men and women of reproductive age), factory workers, host country government workers and workers in both the public and private sector.

BACKGROUND:

While a growing number of large companies in South Africa are now providing HIV/AIDS related services to their employees, very few small (20-50 employees) or medium (50-200) sized enterprises have made progress towards developing comprehensive strategies to combat the epidemic. SMEs face significant obstacles in providing HIV/AIDS services to employees. In a random sample of SMEs in Gauteng and KwaZulu-Natal conducted by the Center for International Health and Development (Connelly and Rosen 2005), six major barriers to action on the part of SMEs were identified: 1) lack of information about HIV/AIDS services; 2) lack of access to these services; 3) little perception of costs or damages being imposed by AIDS, leading to low willingness-to-pay for services; 4) stigma among employees, who were not requesting HIV-related programs or benefits; 5) lack of external pressure from labor unions, shareholders, or advocacy groups; and 6) the relative weight of other problems facing the companies, making HIV/AIDS a low business priority. The study also reported that the vast majority of AIDS-related attrition occurs among easily replaceable, non-critical, and/or unskilled employees. Because SMEs offer fewer benefits, have higher employee turnover, and employ fewer skilled workers than do larger companies, they are less likely to capture the uncertain benefits of investments in HIV/AIDS programs than are large companies. Given the complexity of the disease and the widespread impact that HIV/AIDS has on companies, communities and local economies, diverse resources and skills are needed. This often requires a multifaceted approach ranging from awareness and prevention to care and treatment to public advocacy. Through public-private partnerships, businesses can deal more effectively and efficiently with the challenges that HIV/AIDS present. Businesses possess expertise and skills that, if applied to the HIV/AIDS pandemic could assist in developing innovative approaches and deploying resources in ways that could greatly assist the fight against HIV/AIDS. Businesses also have experience in product launches, supply chain management and manufacturing. They also have the ability to access and understand important subsets of the population, their employees, major business partners, and customers. Nongovernmental organizations (NGOs), on the other hand, often have resources that are key in the response to HIV/AIDS. They have complementary networks, and are trusted by individuals and communities in ways that businesses are not. They have a tradition within the community of aggressively dealing with crisis and they frequently have the leadership in place that can marshal the necessary resources. Government brings crucial resources in the form of infrastructure, policy, regulations, human capacity and the political will to act. Public-private partnerships provide an opportunity for businesses to leverage the diverse resources of another organization and generate value above and beyond what the individual organization could generate on their own.

Planned Funds: ██████████

Activity System ID: 23720

Activity Narrative: SUMMARY:

In close collaboration with the National Department of Health (NDOH), the Centers for Disease Control and Prevention (CDC), and the United States Agency for International Development (USAID) will conduct a prevention program assessment to provide overall HIV/AIDS programmatic support to the national and provincial Departments of Health, develop a U.S. Government (USG) prevention strategy, and determine the best way to shape the prevention portfolio for the upcoming phase PEPFAR II. Based on the FY 2008 COP evaluation and the previous review of the prevention program conducted by the Prevention Technical Team, CDC and USAID feel that it is critical to conduct a broad program assessment in order to provide strategic direction. The assessment will allow the USG to take stock of the prevention portfolio through a rapid inventory all the PEPFAR prevention services and activities (who is doing what activities, where, and with which populations) and considering the drivers of the epidemic, and areas with highest rates of new infections, the assessment will identify challenges, gaps, and provide recommendations for effective programming for a South African prevention strategy for PEPFAR II.

BACKGROUND:

The aim of the this activity is to provide technical assistance to the South African PEPFAR team in "taking stock" of the existing program and shaping future direction of the prevention portfolio. In addition based on the findings of the prevention assessment, this project will provide clear recommendations for technical assistance and strategic implementation of activities in the prevention arena that address specific programmatic gaps. This activity will also provide a platform for partners to collaborate with each other, as well as share tools and methodologies for greater impact.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Capacity Building

FY 2009 funding will be used to select a local contractor to work with CDC and USAID to design the programmatic review. The contractor will then be responsible for conducting site visits to PEPFAR prevention partners. USG prevention activity managers will be able to take part in the partner assessments. The contractor will collect, collate, and review all prevention materials. Findings will be presented to the interagency PEPFAR team.

ACTIVITY 2: Developing Consistent Messages

After the contractors have reviewed and presented all materials to the PEPFAR team, the contractor together with USG and the individual partners will work to ensure that the prevention messages are consistent with the priorities of the PEPFAR prevention program, are in line with the NDOH messages, and that there are no conflicting messages being delivered from prevention partners. This will be done in collaboration with the NDOH and in line with their priorities. Prevention messages and activities will target the general population and will focus on reducing concurrent partners, correct and consistent condom use, and behavior change messaging.

ACTIVITY 3: Dissemination of Findings

FY 2009 PEPFAR funding will be used to bring together the USG team, the contractors, and prevention TWG to map out a way forward for the prevention portfolio. The outcome of this meeting will be the development of the South Africa PEPFAR Prevention Strategy that will form the basis for a way forward for CDC and USAID prevention programs.

Activity Narrative: SUMMARY:

In June 2010, South Africa will host the FIFA World Cup Soccer Event. This is an international association football (also known as soccer) competition played by the men's national teams of the members of Fédération Internationale de Football Association (FIFA), the sport's global governing body. The championship has been awarded every four years since the first tournament in 1930, except in 1942 and 1946, due to World War II. The tournament consists of two parts, the qualification phase and the final phase (officially called the World Cup Finals). The qualification phase, which takes place over the three years preceding the Finals, is used to determine which teams qualify for the Finals. The current format of the Finals involves 32 teams competing for the title, at venues within the host nation over a period of about a month. The World Cup Finals is the most widely-viewed sporting event in the world, with an estimated 715.1 million people watching the 2006 tournament final. While a large number of people are estimated to view the tournament, a significant number of people are expected to travel to South Africa as spectators. This qualification phase and the World Cup Finals provide the USG team with a unique opportunity to develop and broadcast targeted prevention messages and prevention interventions with a potential for broad reach throughout South Africa. In addition, the USG team will link with the South African Tourism Industry to ensure that HIV prevention activities are widespread.

BACKGROUND:

The 2010 World Cup Soccer will be one of the biggest events hosted by South Africa to date. It is anticipated that large numbers of tourists will travel to South Africa as spectators for the event. It is anticipated that a large amount of alcohol will be consumed during the 2010 Soccer World Cup. Alcohol consumption places individuals at increased risk of engaging in sexual practice that put them at increased risk of contracting HIV. The World Cup Event provides the USG team with the unique opportunity to collaborate with multiple PEPFAR partners and develop an HIV prevention framework around the World Cup Activities. The USG will make efforts to engage well-known soccer champions to become HIV prevention champions. The target group for this activity is the general population. Activities will target men and women of all ages who will be fans and spectators of the soccer event. Activities will not only be implemented during the 2010 World Cup Event, but also during the qualification phase taking place towards the end of FY 2008. It is also expected that the HIV prevention momentum generated during the event will be sustained through local soccer clubs, community sports events, and through groups such as Soccer for Life. The emphasis area for this activity is alcohol, multiple concurrent partnerships, risky sexual practices and gender. In addition, the activities will also target commercial sex-workers and potential clients.

ACTIVITIES AND EXPECTED RESULTS:**ACTIVITY 1: Development of a strategy around the World Cup Soccer Event**

In order to develop and implement a strategy with existing PEPFAR partners, the USG will hold a consultative forum with existing partners to capitalize on the work they are already engaged in. The idea is to engage as many of our PEPFAR partners as possible. This will ensure extended reach of the activities being implemented. At the partner consultative forum, partners will identify activities that they can implement within the framework. A monitoring and evaluation plan will also be developed to ensure maximum reach of activities.

ACTIVITY 2: Develop targeted messages

Together with PEPFAR partners, the USG team will develop a core set of targeted messages aimed around World Cup Soccer. These messages will be rolled out to communities around the country, as well as around the qualifying phase and final phase of the World Cup Events. The medium for disseminating the messages will be determined based on the framework and strategy developed in Activity 1.

ACTIVITY 3: Creating linkages

The USG team will use this opportunity to create linkages with the South African Tourism Industry, sponsors of the world cup event, and other stakeholders to ensure that HIV prevention plays a dominant role in and around events associated with the World Cup.

This activity will contribute to the PEPFAR goals and objectives by ensuring that HIV prevention messages reach large numbers of individuals. It will target a particular group of individuals who will possibly be engaged in high risk behaviors.

Activity Narrative: SUMMARY:

The Kagiso Educational Television (Kagiso) prevention of mother-to-child transmission (PMTCT) activity focuses on male involvement in HIV prevention within the context of PMTCT to reduce the number of new HIV infections among men, and promote behavior change. This activity is being implemented through the expansion of a grassroots campaign targeting community-based men's groups. The campaign aims to raise male awareness of HIV and PMTCT and ensure that men understand the implications of HIV and HIV-acquisition on their female partners. This activity is linked to an activity in the PMTCT that is being implemented by Kagiso. In addition Kagiso is also implementing a public-private-partnership with South African Breweries, targeting men but focusing on HIV prevention and alcohol.

BACKGROUND:

Using FY 2006 PEPFAR funding, the grassroots male campaign aimed at targeting men around PMTCT was initiated. This campaign works directly with non-governmental and community-based organizations, sports clubs, savings associations, faith-based organizations and other men's groups at the community level to ensure HIV, AIDS and PMTCT information transfers, and to address gender, stigma and masculinity in the context of South African culture and how it relates to PMTCT. During the PEPFAR South Africa Partner Evaluation, the review team determined that the PMTCT activity should be split to ensure that the prevention aspects of the male awareness campaign were not lost. For this reason, FY 2009 funding for this activity is split between PMTCT and other prevention.

The "You Can Count on Me" campaign aims to sensitize men to issues relating to HIV, to create a platform from which to address cultural and gender issues that impede safer sexual practices. In addition the campaign aims to ensure that men take action as fathers, husbands, partners and that their partners, and children can count on them to remain HIV negative through behavior change.

FY 2009 funding will ensure expansion of the campaign to rural communities and will continue to target male partners of women attending antenatal care and family planning clinics to facilitate their understanding of HIV/AIDS and PMTCT issues, and to encourage them to get tested, "know their HIV status," and to support their partners, even if their results are discordant. Efforts will be made to hold support groups for men whose partners are in the PMTCT program, with a specific focus on the development of skills to reduce stigma. In addition, Kagiso will link with the South African Football Players Union (SAFPU) to expand its reach training the Union's HIV/AIDS facilitators, where they exist, and supporting the Union to select and train facilitators where they do not exist. This project has a particular focus on the year 2010 when South Africa hosts the Soccer World Cup.

ACTIVITIES AND EXPECTED RESULTS:

Kagiso will carry out the following five separate activities in this program area.

ACTIVITY 1: Conducting Workshops

Using FY 2009 funding, Kagiso will continue to train male facilitators. Refresher training will be offered periodically. Trained facilitators/community activists will be responsible for conducting ongoing workshops with different male groups in their community. In each workshop or identified community activity, men will be taken through a number of activities aimed at increasing awareness and understanding of HIV prevention and then each group of men will identify a community-based action or activity illustrating male support for HIV prevention and build on its outcomes. These actions may range from wearing t-shirts with emblems supporting prevention of HIV, holding community meetings to address myths around HIV or encouraging men to go with their partners to be tested. With monitoring and ongoing support from the workshop facilitators, the men will implement the activity in their communities. These activities will focus on HIV prevention. With the training curriculum accredited by the national accreditation board, master trainers and community facilitators will have established one key stepping stone on the road to sustainability. Capacity in the provincial departments of health will be built around health communication by identifying community workers, volunteers or community health workers that are already trained in PMTCT by offering the accredited community-based male involvement training as a way for these community workers to continue their work and earn additional resources. This will extend the partnership between the U.S Government (USG) and the South Africa National Department of Health (NDOH) to a grassroots level. Using FY 2009 funding, KTV & C also seeks to deepen productive relationships with national and provincial department of health initiatives such as MIPAA (Men in Partnership Against AIDS) and WIPAA (Women in Partnership Against AIDS) as well as those relationships established at a district and regional level.

ACTIVITY 2: Media Campaign Rollout

FY 2009 funding will be used to support a media campaign working on the theme of "Real Men Talking to Real Men." This campaign will draw on the successes of previous year's case studies being documented for television in FY 2007 and FY 2008 and being complemented by a community radio campaign driven by the real life stories of the men in the project. The media campaign will also leverage the hosting of the Soccer World Cup in South Africa in 2010 to develop story angles for a range of media organizations focusing on the country and its challenges and successes. The media campaign will operate at two levels with the mass media campaign being an opportunistic one leveraging partnerships or securing airtime with the public broadcaster under its commitment to public education as well as it being a signatory to a world alliance of media organizations committed to curbing the spread of HIV. The second level is deepening the relationship with community radio and possibly newspapers with more specific messages drawing on the idea of "Fathers to Fathers" or "Men to Men," encouraging men at a community level to support each other and their HIV-infected partners. This campaign will be linked with community outreach through community radio, newspapers and other civil society initiatives to ensure that communities, particularly men, have a platform to discuss issues raised by the campaign. In addition, Kagiso will investigate digital storytelling and website channels and opportunities to provide skills and work opportunities for young men and women. Master

Activity Narrative: trainers and community facilitators will be trained in media skills and presenting and using the media to create opportunities for themselves, the campaign and the communities they support. Community radio supports indigenous languages and the campaign will develop an innovative crossover between the traditionally English-speaking mainstream commercial media and the hugely popular vernacular media.

ACTIVITY 3: Men's Clubs

Building on the findings of previous years, FY 2009 funding will be used to strengthen the male networks and support structures identified in FY 2008. As the campaign has shown since inception, men are interested in playing a role in their community and they are interested in the information and the knowledge it brings for them. Men do not attend support groups and so a different approach is being used to reach men. This is driven by the project's master trainers and community facilitators. Men's groups take place outside of the health facility, at places where they are comfortable hanging out. These include sporting grounds, churches, (through faith-based organizations) and informal stokvels (gatherings) or tavern associations. FY 2009 funding will help equip some master trainers and community facilitators to take these messages to the workplace. Where possible the community radio will link these initiatives encouraging men who already gather monthly under the banner of - for example - a burial society or a soccer club to get involved in the campaign.

Men will continue to be encouraged to attend antenatal care clinics with their partners and accept couple counseling and testing. Men who want to be tested but who do not want to go to the clinic are referred to alternative sites. The aim of these sessions is to encourage the development of support networks (however informal) for men whose partners are enrolled in PMTCT programs, and to encourage improved support to their partners, ensuring better uptake and adherence of PMTCT service delivery.

ACTIVITY 4: Consolidation

FY 2009 funding will be used to consolidate the learning of all the training workshops and media campaign. FY 2009 funds will address weaknesses highlighted in FY 2008 and build on the strengths to ensure the master trainers and community facilitators will continue to develop a set of skills enabling them to function as trainers, entrepreneurs or even media professionals, generating further income for themselves and their families.

ACTIVITY 5: Public Private Partnership with South African Breweries

Using the premise of the male involvement work in both prevention and PMTCT, Kagiso will collaborate with South African Breweries to develop and implement activities focused around men, alcohol and HIV prevention. FY 2009 funding will be used to develop the scope of work, design the activities and pilot the initial phases of the activity.

This activity contributes to PEPFAR 2-7-10 goals by increasing awareness of HIV/AIDS, reducing the number of new infections, and getting men to take responsibility as husbands, partners and fathers to protect themselves and their partners against contracting HIV/AIDS. Targeting men and ensuring men identify and implement community-based activities in support of HIV prevention will improve community-wide support for prevention services. A focus on alcohol will also address risk behaviors and behavior change in the context of HIV. This activity contributes to PEPFAR 2-7-10 goals by increasing awareness of HIV and AIDS, reducing the number of new infections.

Emphasis Areas

Gender

* Addressing male norms and behaviors

Human Capacity Development**Public Health Evaluation****Food and Nutrition: Policy, Tools, and Service Delivery****Food and Nutrition: Commodities****Economic Strengthening****Education****Water****Table 3.3.03: Activities by Funding Mechanism****Mechanism ID:** 10472.09**Prime Partner:** Woord en Daad**Funding Source:** GHCS (State)**Budget Code:** HVOP**Activity ID:** 24816.09**Activity System ID:** 24816**Mechanism:** NPI**USG Agency:** U.S. Agency for International Development**Program Area:** Sexual Prevention: Other sexual prevention**Program Budget Code:** 03**Planned Funds:** \$0

Activity Narrative: SUMMARY:

In cooperation with the High Five program (non-USAID), Mfesane will employ and train four peer education facilitators, adding to the three who are already active. The new peer education facilitators will reach a total of 900 in-school youth aged 10-14 years old. Through these peer education facilitators, Mfesane will adapt and distribute consistent and correct prevention messages that address the key drivers of the HIV/AIDS epidemic.

In partnership with local schools, Mfesane employs creative strategies to reach youth with messages about HIV/AIDS, gender stereotypes, self awareness and other life skills. Mfesane also partners with Scripture Union to train peer education facilitators and to obtain prevention education materials. This program encourages abstinence until marriage, delaying sexual debut for younger youth, practicing mutual monogamy and reducing numbers of sexual partners.

BACKGROUND:

Woord en Daad, a Dutch faith-based organization, works through its long-standing South African partner organization, Mfesane, to provide quality prevention, HIV counseling and testing (CT), and care services to members of communities the municipalities of Saldanha Bay in Western Cape, and Nelson Mandela Bay in Eastern Cape. These semi-urban, informal, underserved settlements have high HIV incidence.

ACTIVITIES AND EXPECTED RESULTS:

Mfesane will carry out five separate activities in this program area.

ACTIVITY 1: Recruitment of peer education facilitators

Four peer education facilitators will be hired, more than doubling the current active group of three. Peer education facilitators are young adults with the ability to provide guidance to youth aged 10-14 years.

ACTIVITY 2: Training of peer education facilitators

At the end of 2009, the new peer education facilitators will participate in a 1-week training at Scripture Union. The training covers 27 modules and integrates pre- and post-course evaluation forms to measure its impact. The course focuses specifically on building the capacity of facilitators to improve their skills for working with youth. It also emphasizes the importance of a comprehensive and integrated HIV prevention approach.

ACTIVITY 3: Adaptation of education materials

By the end of 2009, the materials will have been adapted and disseminated.

ACTIVITY 4: Selection of schools

School selection will be done in cooperation with the district Department of Education in the project area. The district Department of Education will identify a group of potential schools for Mfesane to work with. Once Mfesane has this list, it will approach at least six schools and partner with them to work out a plan.

ACTIVITY 5: Peer education implementation

Each peer educator will work with small groups of 10 students and will reach a total of 30 students every month.

Four small group sessions are conducted each month using different strategies. Groups will alternate between same-sex and mixed-sex, and different ways of imparting information to young people will be explored. Prevention messages to delay sexual debut until marriage or to begin practicing secondary abstinence even after having been sexually active will be an integral part of the information sessions to prevent HIV, other STIs, and pregnancy among unmarried youth. The "Be Faithful" approach will focus on enforcing partner reduction and mutual monogamy. Learners will be given comprehensive information on consistent and correct condom use to assist them to transition safely to practicing abstinence at a later stage. Facilitators will also teach the importance of abstaining from alcohol and drugs to reduce risk behaviors. Modules include information on HIV/AIDS, gender-based violence, male norms and values, rights, gender stereotypes, self-development and other information important for building life skills. All participants receive a journal and write down their experiences. The program aims to influence students' behavior to prevent HIV infections among youth. Four to six months after the end of these four sessions, a follow up session will be conducted to reinforce the prevention messages and to encourage behavior change. Facilitators provide students with written information and reference numbers (e.g. for CT centers). To measure the effectiveness of the sessions, pre- and post-evaluations will be done by subject area.

Cooperation Strategy

Government: see above (implementation of MoU);

Individual schools: Mfesane establishes links with school management and other personnel such as psychologists and Life Orientation teachers. In this way, Mfesane can access target groups during school hours, which benefits the pupils.

Mfesane also partners with the organization High Five to implement its HIV/AIDS activities.

While USAID does not fund High Five's overall program, it funds its specific HIV/AIDS activities through

Activity Narrative: Mfesane. High Five's program comprises hikes and other social activities to encourage healthy and responsible lifestyles. It also provides a service to the district Department of Education's Safe Schools program in the West Coast/Winelands area.

Scripture Union: Scripture Union trains Mfesane peer education facilitators and also provides Mfesane with prevention education materials that other PEPFAR partners have developed.

Linkages with other programs: Students will receive the contact details of other programs; including those that Mfesane runs, such as OVC, care and other sexual prevention activities.

Calculation of indicators:

Number of peer education facilitators trained: 4. One peer education facilitator can reach one group of 30 students per month for 10 months. There are 7 peer educators, so in this way 30 groups can be reached, making a total of 2100 beneficiaries.

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Funds will be used to continue to implement the activities as indicated in FY 2008. Of the FY 2008 activities that have not been implemented, we anticipate implementation to take place by February 2009. Once the systematic framework has been implemented, FY 2009 funds will be used to develop specific activities that address gaps in service delivery for sex-workers and other most at risk groups.

SUMMARY:

As part of an integrated approach addressing most at risk populations (MARPs), this activity focuses on the development of a strategic and systematic framework to deliver HIV Prevention to Persons Engaged in High-Risk Behaviors (PHPEHRB). Groups that are acknowledged to be core transmitters in South Africa, even within a generalized epidemic, are: migrant populations, persons engaging in commercial and transactional sex, members of the uniformed services and persons working along transport corridors. This activity aims to develop a strategic and systematic framework to deliver HIV prevention messages to these target groups. In addition, funding will be used to facilitate the development of national referral networks and linkages focusing on HIV counseling and testing, behavior change interventions and referral to treatment, care and support services for commercial sex workers (CSWs), men who have sex with men (MSMs) and alcohol abusing population of South Africa. The major emphasis area for this activity is the development of linkages with other sectors and initiatives in order to develop a systematic framework. Minor emphasis areas include community mobilization/participation; development of networks, linkages and referrals and information, education and communication. The target population is high-risk vulnerable groups, including CSWs, MSMs, substance abusing populations, including alcohol, and migrant workers.

BACKGROUND:

Although this activity appeared in the FY 2007 COP, activities have not yet been implemented and it is a new activity with the partner. Detailed scope of the activity is to be determined in collaboration with the South African PEPFAR Prevention Technical Working Group and the global PHPEHRB Technical Working Group. Discussions are currently underway with the PHPEHRB Technical Working Group and it is anticipated that a more specific scope of work will be available in November 2007. The unspent FY 2007 and a portion of FY 2008 funding will be used to conduct a mapping activity that will provide additional qualitative information, mapping and size estimates to inform program design and measure coverage.

ACTIVITY 1: Mapping

FY 2007 and FY 2008 will be used to conduct a mapping exercise of persons engaged in high risk behaviors. The purpose of this mapping exercise is to identify specific needs for most at risk groups both in terms of geographic hot spots and magnitude of key groups. This will be an important entry point to engaging existing partners as well as new partners to expand their work with these populations (which often requires distinct approaches. This activity will be initiated with FY 2007 funding and FY 2008 funding will be used to expand the mapping exercise and plan for expansion of interventions.

ACTIVITY 2: Development of a systematic framework

In collaboration with other donors, the National and Provincial Department of Health, the PEPFAR PHPEHRB Technical Working Group, and non-governmental organizations (NGOs), FY 2008 funding will be used to identify gaps in delivery of HIV prevention to PHPEHRB. The identification of gaps will be based on the findings of the mapping exercise above. A national plan that addresses challenges in implementation of HIV prevention to at risk populations will be developed. The framework/national plan will focus on the implementation of behavior change interventions, and the development of networks and linkages suitable for most-at-risk populations. In order to develop the systemic framework, a national consultative forum will take place to identify groups working with PHPEHRB. At this forum the results of the mapping activity will be presented and a comprehensive strategy focused on providing sufficient coverage of at risk populations will be developed. The consultative forum will ensure participation of government and non-government agencies in the development of a national framework for working with high risk groups in the context of HIV.

ACTIVITY 3: Implementation of specific interventions targeting most-at risk populations

Based on the findings of the mapping activity (Activity 1) and the development of the systemic framework (Activity 2); FY 2008 funding will be used to support groups working with people engaged in high risk behaviors. FY 2008 funding will be used to expand coverage and intensify HIV prevention programs for migrant populations, persons engaging in commercial and transactional sex, injection and non-injection drug users, men who have sex with men, members of the uniformed services and persons working along transport corridors.

ACTIVITY 4: HIV and alcohol interventions

Alcohol abuse has been identified as a substantial risk factor for HIV transmission. Recognizing that irresponsible alcohol use can contribute to a range of social harms, including sexual risk behavior that can lead to HIV infection, FY 2007 PEPFAR funding, was used to provide the South African PEPFAR task team with information for the development of a PEPFAR strategy aimed at addressing alcohol and HIV. The Medical Research Council (MRC) will present the findings of this report to the South African PEPFAR team in March 2008. Based on these findings, PEPFAR funds will be used to develop an intervention that will promote responsible drinking and the adoption of HIV preventive behavior. Drinking venues (bars, taverns, shebeens) are identified as ideal venues in which to implement such interventions, since they are locations in which: (a) casual sexual partners are met; (b) sexual risk behaviors are initiated and/or take place; and (c) patrons are a "captive audience" for health promotion and similar interventions. In addition, this activity

Activity Narrative: will address gender, because shebeen/tavern "culture" is often associated with interpersonal and gender-based violence and sexual assault, some of which is associated with HIV infection. It would be a missed opportunity to not also consider reducing alcohol-related violence as part of the intervention. In addition, activities will be implemented to include alcohol education in interventions targeting youth, adults in the general population and most-at-risk groups.

This activity will contribute PEPFAR 2-7-10 goals by preventing infections in PHPEHRB and encouraging HIV counseling and testing, and appropriate referral to treatment, care and support services. In addition, this activity will enable the South African USG PEPFAR team to scale programs serving most at risk populations, including, but not limited to CSWs and alcohol abusing populations.

New/Continuing Activity: New Activity

Continuing Activity:

Program Budget Code: 04 - HMBL Biomedical Prevention: Blood Safety

Total Planned Funding for Program Budget Code: \$2,500,000

Program Area Narrative:

Biomedical Transmission Program Area Narrative 2009

Although South Africa has a generalized epidemic driven primarily by sexual transmission, there is still a need to address biomedical prevention. Activities implemented in this program area include those at the hospital and health facility levels, including injection and blood safety, and prevention initiatives such as injecting drug users (IDUs) and male circumcision.

Male Circumcision:

Traditional male circumcision takes place within some of the provinces in South Africa. Although traditional circumcision takes place among several tribal groups, it is primarily the Xhosa people who engage in the practice. In FY 2008, the Medical Research Council (MRC) undertook a country-wide situation analysis to determine the status of traditional circumcision within the country. The findings of the analysis should be released in April 2009, and these should provide the United States Government (USG) team with a better understanding of the traditional context of male circumcision. Multiple and continuous reports of adverse events resulting from traditional practices makes this an issue of concern among the PEPFAR team. The MRC's situation analysis also investigated the prevalence of reported adverse events and unsafe circumcision practices. Although the USG team had hoped to initiate activities in FY 2007 and FY 2008, these activities have not taken place because South Africa does not have a national male circumcision policy, FY 2009 activities have not been defined, even though funds have been allocated to this activity. When the SAG decides to implement a male circumcision policy, USG activities will be determined in collaboration with the SAG. In the interim, the USG team has set up a task team to focus on male circumcision and to continue liaison with the SAG. Male circumcision remains a priority for the USG team and as soon as the SAG provides the go ahead, the USG will reprogram funding and implement activities.

Injection Safety:

Statistics indicate that the average number of medical injections per person per year in South Africa is 1.5. In addition, all South African facilities that use syringes for patient care utilize single use sterile syringes, that is, those observed to come from a new and unopened package.

The PEPFAR program in South Africa aims to address issues of medical HIV transmission through the Track 1 Making Medical

Injections Safer (MMIS) project led by the John Snow Research and Training Institute, Inc. (JSI). The goals of this project are to:

- 1) Improve injection safety practices through training and capacity building;
- 2) Ensure the safe management of sharps and waste; and
- 3) Reduce unnecessary injections through the development and implementation of targeted advocacy and behavior change strategies.

The project's three main programmatic areas are logistics, waste management, and behavior change communication. Training on these issues (a core activity) is provided to professional and non-professional staff. The project works at national, provincial, and district government levels in all nine provinces of South Africa. Buy in from the SAG, partnerships with local organizations, and synergies with other PEPFAR projects have been used to ensure sustainability and rapid scale-up. A multi-pronged approach is used in training. This consists of providing in-service and on-the-job training to three different levels of workers: senior management, middle managers and clinical personnel, and waste handlers, as a short-term approach. JSI/MMIS will conduct pre-service training, incorporating injection safety content in the curricula for nurses, doctors, and other professionals.

The National Department of Health (NDOH) with input from MMIS has developed national policy guidelines on infection control and prevention. In addition, MMIS is working with the NDOH to develop an agreed-upon set of norms and standards for injection safety. The Council for Health Service Accreditation of Southern Africa (COHSASA) will establish an accreditation process to assess compliance with these standards. These processes will comply with the results of the first national injection safety survey conducted by JSI, COHSASA, and the MRC in 2007.

The NDOH's Quality Assurance and Environmental Health Units will institutionalize the adapted version of the "DO NO HARM" manual as the country's primary reference manual for training in injection safety. Sustainability is achieved by leveraging support from local partners. To date, MMIS has garnered support from the Democratic Nurses Organization of South Africa; Khomanani (the South African government's HIV and AIDS Information, Education and Communication (IEC) Campaign); Excellence Trends (a private firm consulting in waste management); and the Basel Convention for the completion of a number of deliverables such as training, and printing and disseminating of IEC material. In addition, MMIS works with South African provinces and municipalities to plan allocations for current JSI-related costs through the South African Medium-Term Expenditure Framework.

The MMIS South Africa team has made significant progress since its inception. The team provided input to the National Policy on Infection Control, specifically the chapters on Injection Safety and Waste Management. Secondly, systems are being implemented to procure personal protective equipment for waste handlers in two provinces, the Eastern Cape and Western Cape. Thirdly, MMIS South Africa and MINDSET Health Channel have collaborated to relay injection safety information to over 200 facilities (public hospitals and clinics) across South Africa using a computer-based multi-media platform. An external evaluation has established that this technology significantly increases knowledge levels among users. Lastly, MMIS has recently conducted a national baseline assessment of injection safety in hospitals.

Improving injection safety and proper waste disposal practices are vital systems-strengthening activities for the over-burdened health system. These activities further the USG Five-Year Strategy by supporting an increase in health system capacity and quality of care.

No other major donors are working directly in injection safety at this time.

Blood Safety:

Blood transfusion in South Africa is recognized as an essential part of the health-care system. South Africa has a strong blood safety program that is directed by the South African National Blood Service (SANBS), a Track 1 partner. SANBS actively recruits voluntary blood donors and educates the public about blood safety. Blood donors are voluntary and not remunerated. Blood is collected at fixed donor clinics and mobile clinics that visit schools, factories, and businesses. All blood is routinely screened for HIV-1 and 2, hepatitis B and C, and syphilis.

SANBS operates in eight of the nine provinces in South Africa and is responsible for the delivery of transfusion services to 87% of patients in the country. The Western Province Blood Transfusion Service (WPBTS) provides blood to patients in the Western Cape, even though the National Health Act requires a single national blood transfusion service. SANBS, WPBTS, and the National Department of Health (NDOH) are discussing the way forward to comply with the provision of the National Health Act. FY 2008 funding will support processes in this merger.

In 2005, SANBS took steps to develop and implement a new donor policy. The previous policy, which was based on using race as a major indicator of blood safety, was unacceptable to the NDOH. SANBS developed a new blood safety policy, the Donor Status Risk Management Model. This policy is based on the knowledge that repeat, regular blood donors are less likely than first-time donors to donate blood in the infectious window period. The model is supported by the introduction of individual donation nucleic acid test (ID-NAT) screening of all donations for HIV, HBV, and HCV and an extensive structured donor education, selection and exclusion program. The new risk model was successfully implemented in October 2005. New operational systems, training programs for staff, standard operating procedures, adaptation of the operational IT system, and the inclusion of measurement systems for monitoring and evaluation has been implemented and refined. This very significant achievement has been supported by the PEPFAR program.

The success of the Donor Status Risk Management Model can be judged from the findings for the period October 2005 to March 2006. During this period, 277,920 units of blood were procured. Of these donations, 56% were from regular, repeat donors who provide very low-risk donations, which were used for the manufacture of components. Red cells were issued from donations of repeat donors; these donors provided 29% of the blood supply. The higher risk blood, used primarily for the preparation of fresh

frozen plasma, made up the balance. The prevalence of HIV in the donor groups differed significantly: component donations - 0.011%; red cell donations - 0.057%; and plasma donations - 0.53%. The number of undetected HIV positive units in the blood supply by a window period incidence model estimated that approximately three HIV window period donations may have entered the blood supply during this period. This indicates that the Donor Status Risk Management Model is equivalent, in terms of blood safety, to the race indicator model used in the past. The outcomes of the risk model, however, must be monitored carefully, and will need refinement and appropriate adjustments. The impact of the Donor Status Risk Management Model on blood safety, the measurement of outcomes, and optimization of the model will be major components of the SANBS program in FY 2009.

SANBS has spent considerable time on planning and implementing strategies to expand the donor pool. SANBS has coordinated with the NDOH and the Department of Education to provide prevention education to potential young donors. This education aims to help young donors to protect themselves from infection and will result in their being “certified” as committed safe regular donors. PEPFAR resources will also be used to develop cultural and language-specific donor recruitment and HIV educational materials. In 2009, SANBS will utilize PEPFAR funds to expand and to make its donor base more representative of the demographics of the country. This will be achieved by establishing four new donor clinics in geographical areas previously not served by the organization. Prevention messages will be developed focusing on the relationship between lifestyle and safe blood, the need for blood by patients, and the importance of societal involvement in this “gift of life” relationship between donor and patient. The outcome of the program will be measured by donor recruitment and retention, and HIV prevalence in donors. PEPFAR resources, leveraged with existing SANBS infrastructure and collaborative funding, will continue to strengthen SANBS information technology systems and training of donor recruiters, HIV counselors, technicians, quality officers, and internal and external health-care providers. In the future, SANBS will link with other PEPFAR partners specifically working in antiretroviral treatment services to improve the referral network for persons who test positive.

The American Association of Blood Banks (AABB), another Track 1 partner, provides technical assistance (TA) to SANBS. SANBS has reported that the TA provided by AABB has been of high quality, and AABB has played an important role in the development of the new risk model in South Africa. AABB will focus on establishing an accreditation program for SANBS, improving training activities, strengthening the IT system, and providing TA on policies and guidelines.

The blood safety activities represent an integrated program that contributes to objectives delineated in the USG Five-Year Strategy. PEPFAR will support incorporation of messages regarding prevention, treatment and care into blood donor programs, and blood safety issues will be addressed in HIV and AIDS communication programs.

No other major donors are working directly in blood safety at this time.

Injecting Drug Use:

Current research done by the MRC indicates that although injecting drug use in South Africa is not a substantial public health problem nor a major driver of the HIV epidemic, injecting drug use is on the increase because South Africa has become a major drug transit route. This is a cause of increased concern for the USG biomedical program. FY 2009 funding will be used to continue to collaborate with the MRC. The MRC is collaborating with drug treatment programs around the country to link HIV prevention and treatment to drug treatment programs. This initiative, albeit small, has had considerable success. Reports indicate that IDUs enrolled in drug treatment programs are willing to undergo HIV testing. In addition, considerable strides have been made through community outreach with IDUs with respect to reducing harmful practices such as sharing needles, using old needles, preventing sexual transmission, and drug taking. FY 2009 funding will be used to expand these activities to rural populations and to strengthen the outreach activities to injecting drug users.

POST-EXPOSURE PROPHYLAXIS

Gender-based violence and rape are widespread throughout South Africa. Coupled with the high HIV prevalence, this is a huge concern for the USG prevention team. With initial funding from the Gender-Based Violence and HIV Initiative, the U.S. Department of Defense (DOD), CDC and USAID have developed a program aimed at addressing post-exposure prophylaxis (PEP) for rape survivors. FY 2009 funds have been added to the imitative funds to ensure expansion of activities around PEP. In order to expand access to PEP services, the MRC is working with the National Department of Health to roll out a health worker training program and to develop standards for PEP service delivery. The first training course will be conducted in early 2009; this aims to ensure that 50 health-care workers are trained in the provision and implementation of PEP. FY 2009 funding will also ensure that the Thuthuzela Care Centres -- a best practice model that integrates justice and health services -- are expanded throughout the country. The DOD will continue to train and sensitize healthcare workers on rape and PEP, ensuring access of PEP service to military personal in need.

Table 3.3.04: Activities by Funding Mechansim

Mechanism ID: 4628.09	Mechanism: Track 1
Prime Partner: American Association of Blood Banks	USG Agency: HHS/Centers for Disease Control & Prevention
Funding Source: Central GHCS (State)	Program Area: Biomedical Prevention: Blood Safety
Budget Code: HMBL	Program Budget Code: 04

Activity ID: 7926.22585.09

Planned Funds: \$500,000

Activity System ID: 22585

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

BACKGROUND:

The American Association of Blood Banks (AABB) has provided technical assistance to the South African National Blood Services (SANBS) for the past four years. Due to the existing internal technical capacity of SANBS, AABB's technical assistance support is focused on providing high-level guidance and resources to strengthen SANBS program improvements in capacity, policies and systems. This includes supporting a safe blood donor base by education and selection, the improvement of SANBS training programs to address skill and knowledge shortages, the educational strategies related to national and regional learning programs, the strengthening of the information and technology systems, and the activities to comply with the provisions of the South Africa National Health Act.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Training

Training is an important aspect of program sustainability. It also serves as a critical catalyst in the effectiveness of a sound communication and change control program. SANBS has recognized this. SANBS understands the critical need for training in a time where they have experienced organizational restructuring and desire system strengthening. Their challenges in development, change control, training, and program consistency are compounded by the wide dispersion of blood systems staff in the nine provinces. In addressing these challenges, SANBS has created staffed training departments for both the donor and technical areas of the business. Therefore, AABB's technical assistance support in training has been focused on providing resources, guidance, and trainer development of the training departments rather than conducting training sessions for the individual SANBS technical and donor staff. While the total number of trained individuals for AABB's program in South Africa is not as high when compared to AABB's other PEPFAR countries, the workshops have to be developed for a much higher level audience. This results in the development of workshops having more complex content and quality to meet the needs of the participants. The workshops also have to be facilitated by a high level of subject matter expert. By increasing the skill level and knowledge of the trainers that train the donor and technical staff, this effectively ensures system stability and sustainability throughout SANBS. The following are some of the key activities and accomplishments of AABB in the area of training in this past year including continued activities intended for 2009.

Workshops: Conducted two workshops for the skill enhancement of the SANBS Training Departments focusing on Training the Trainer, Project Management, and Management Development. The training department personnel that AABB has trained in these workshops in turn are responsible for training all the SANBS donor and technical staff. Therefore, this training by AABB has a direct impact on the skill and knowledge advancement of the entire SANBS donor and technical staff throughout South Africa. In 2009 AABB will conduct two additional training workshops in Project and Management Development for the purpose of addressing the needs and skill shortage of SANBS.

2009 activities will also be expanded to include seeking formalization and accreditation for a Trainer Certification Program. This program will focus on developing and enhancing the training skills of healthcare professionals in the areas of adult learning, effective communication, developing training programs, change control, and the overall training process. The process of formalizing this program for accreditation will require the development of approved trainer's manuals, participant's manuals, program activities, presentations, workshops and seminars, hand outs, an approved curriculum, comprehension documentation, and other related materials as required by such agencies as the South African Qualifications Authority and the South African Department of Education and/or the Health Professional Council of South Africa. This Trainer Certification Program will compliment the curriculum of the new SANBS training facility for use in South Africa with the intent of being able to offer this program later to other African countries.

Training and Improving Practices of Professional Staff: In 2008, a Pediatric Transfusion Conference in Rwanda for the AABB PEPFAR Countries, which included South Africa, was held. The main purpose of this conference was to discuss and review current cellular therapy practices related to pediatric transfusion. AABB sponsored two South African delegates that attended and spoke at the conference. Intention is for AABB to host another conference in the upcoming year. More than 10 participants representing South Africa attended numerous managerial and technical development sessions at the AABB Annual Meeting last October. AABB membership was provided to four individuals from South Africa allowing access to educational information and materials for development and advancement of safe blood practices. These memberships also increased the professional development capabilities of SANBS staff through the support of AABB as material and knowledge was shared throughout the organization. AABB will continue to provide four memberships in the upcoming year.

ACTIVITY 2: Incorporation of Western Province Blood Transfusion Service (WPBTS)

The National Health Act requires a single national blood transfusion service. This means that in the future the WPBTS will merge with SANBS creating a sole provider. In 2008 funding was used to support this merger, specifically in the area developing a standardized national training program for both donor and technical staff. It was recognized that both WPBTS and SANBS had training programs with strengths and weaknesses. It was also understood if the two combined the strengths of their programs into one utilizing the best practices, a much stronger standardized national training program would emerge. Therefore, AABB facilitated a workshop for the purpose of training program standardization that utilized 11 training program subject matter experts from the staffs of both SANBS and WPBTS. The resulting action assignments developed from the workshop required the subject matter experts from both groups to work together for the common goal of developing a national training program of consistency, standardization, and improvement. This activity of developing a national training program has helped open up communications and support

Activity Narrative: with both groups working towards a common goal of improving a national blood transfusion service. AABB will continue to coordinate and facilitate the identified activities in 2009 and support WPBTS representatives being actively included in the workshops related to the development of a standardized national training program. A listing of the outcome from the activities include but are not limited to a standardized documentation system, national training consistency, continuing education program, and a competency assessment program.

ACTIVITY 3: Establishment of Training Center

SANBS is developing a national and regional Training Center that will focus on training of donor and technical staff and to develop programs to educate healthcare professionals in the advancement of transfusion practices. In 2008, AABB brought in a team of technical specialists and performed an assessment of the South African training systems to determine what improvements were needed to support the goals of the Training Center. The assessment included reviewing the training systems in Johannesburg, Durban, and Cape Town. A finalized report was developed resulting in items being identified that would need improvement or changes if a Training Center was to be successful. With AABB's help, improvement projects were identified and prioritized, project definitions were drafted, and action assignments were developed. These projects include the need for curriculum expansion for soft computer skills, training support, mentoring system for consistency in the field, infrastructure improvements for distance learning, space and equipment needs for future needs, program accreditation, and material resources for education support. AABB facilitated and helped coordinate the action assignment activities related to these projects. In 2009, AABB will continue supporting and facilitating the completion of the projects utilizing available technical resources as needed. This includes ensuring milestones are recognized and met, objective monitoring and measuring of progress, overseeing issue resolution and coordination to carry out the plan of each project. Once projects are completed, AABB will ensure formalized closure is performed.

ACTIVITY 4: Policy and System Strengthening

In 2008, AABB supported SANBS in the development of a new evaluation form to use for screening potential donors. Documents and regulatory information were supplied by AABB to support both the development of the regular and condensed version of the form. AABB has organized a workshop at the Annual AABB Conference being held in October 2008 for the purpose of reviewing the new forms. Evaluation form subject matter experts will be present to not only review, but also discuss the regulatory and safety aspects of the new forms. In 2009 AABB will continue to support process improvements in the training system as previously identified and continue to provide assistance as needed for the establishment of an accreditation program which is ongoing. In addition, in 2009 AABB will expand its activities to include the development of Transfusion Service National Disaster Plan. This will be extremely important because of World Cup Soccer being held in South Africa in 2010. The beginning of this support will be exposure of SANBS Leadership to lectures and workshops held at the AABB Annual Meeting concerning disaster planning. From this introductory information a formal project will be initiated with AABB support given in all project phases from initiation, planning, executing, coordinating, and closing. The successful final outcome of this project will be an approved Transfusion Services Disaster Plan that meets the needs of South Africa.

ACTIVITY 5: Information Technology System

SANBS is rolling out the Meditech operational (information) system and has used AABB for technical assistance. Although AABB did not provide additional technical assistance in 2008 for this project, future assistance will be made available, especially with the goal of creating a system in which the Meditech and SAP computer systems are linked to a Data Warehouse. This essential component of the information system will allow the management of the blood donor base, effectiveness analysis of donor education and selection programs, risk management, and optimal management of the blood inventory. AABB will assist in the development of data reporting and its use for the purposes of monitoring improvement to blood safety and blood services operations.

SUMMARY:

The American Association of Blood Banks (AABB) has been awarded Track 1 funding to continue providing technical assistance to the South African National Blood Service (SANBS) for purposes of strengthening the blood supply in South Africa. The focus of this activity is to achieve substantial improvement in the affected transfusion services and their infrastructure, and to improve transfusion safety. The ultimate goal is to effect significant change in the incidence of transfusion-transmitted HIV.

BACKGROUND:

The AABB cooperative agreement funds technical assistance for 5 of the 15 PEPFAR target countries. AABB has provided technical assistance to SANBS for the past three years.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Training

Training activities will focus on building human capacity and addressing the skills shortage in SANBS. AABB will assist in quality improvements in training of trainers, training delivery, and documentation of training, as well as operational activities to improve performance and knowledge of SANBS staff. In order to facilitate knowledge and skills transfer, AABB will provide SANBS with AABB membership and facilitate key personnel to attend the AABB Annual Meeting.

ACTIVITY 2: Incorporation of Western Province Blood Transfusion Service (WPBTS)

Activity Narrative: AABB will assist SANBS in the incorporation of the WPBTS into the SANBS PEPFAR program. This will be accomplished by focusing on training and personnel development, and through the development of appropriate information technology systems for the collection of national data as an indicator of the status of blood transfusion in South Africa.

ACTIVITY 3: Establishment of Training Center

AABB will assist SANBS in establishing an international training center for blood center operations and transfusion services. Following a comprehensive evaluation of the current process of training throughout SANBS, AABB will assist in implementation of recommendations to improve the overall training process throughout SANBS. Once this is established, AABB will assist SANBS in expanding the training center to provide training opportunities to other African countries.

ACTIVITY 4: Policy and System Strengthening

Currently SANBS is self-regulated but they would like to move towards developing an external accreditation program. AABB will assist with the establishment of the accreditation program to provide more objectivity on the operations of SANBS. AABB will also participate in the development of South African national blood policies, especially regarding notification of blood donor test results.

ACTIVITY 5: Information Technology Systems

SANBS rolled out the Meditech operational (information) system with technical assistance from AABB. This will allow the management of the blood donor base, analysis of the effectiveness of donor education and selection programs, risk management and the optimal management of the blood inventory. AABB will continue to provide technical assistance as it is rolled out to all regions. AABB will also assist with the development of M&E systems and Quality Management Systems data reporting for purposes of monitoring improvement to blood safety and blood services operations. By providing technical assistance to SANBS, AABB will help to ensure that the blood supply is safe and meets the blood supply needs in South Africa. Building local capacity will also ensure the sustainability of SANBS programs.

Mechanism: N/A

USG Agency: HHS/Centers for Disease
Control & Prevention

Program Area: Biomedical Prevention: Blood
Safety

Program Budget Code: 04

Planned Funds: \$2,000,000

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Taking into account that FY 2009 will be the last year of PEPFAR Track 1 funds, it is essential to ensure that programs implemented by the South African National Blood Services (SANBS) and the Western Province Blood Transfusion Service (WPBTS) are institutionalized and sustainable. PEPFAR activities will be sustained by:

- (a) Implementing the last phase of the stepwise transfer of all PEPFAR-funded staff positions to the SANBS and the WPBTS payrolls.
- (b) Completing all the outstanding components of the SANBS Transfusion Medicine Training Center (TMTC), including the accreditation and/or certification of all training and continuing professional development courses based on distance learning materials; evaluation of the course materials and course outcomes; and ensuring that the course material is appropriate or could be adapted for use also in the Southern African Development Community (SADC).
- (c) Expanding the data warehouse to capture all blood transfusion activities in terms of quality, effectiveness, efficiency and cost.
- (d) Documenting all standard operating procedures into the quality management system.
- (e) Utilizing the data warehouse to optimize the hospital transfusion committees by making available to individual hospitals, and possibly to individual clinicians and hospital departments, data on the safety and the appropriate use of blood products.
- (f) Refining and institutionalizing the blood safety indicators.

DONOR RECRUITMENT, EDUCATION AND SELECTION:

The programs will be enhanced and expanded by:

- (a) Evaluation and measurement of the outcomes of the pilot projects where four fixed donor clinics have been established in black communities by measuring the demographic profile of the donor population compared to that of the country.
- (b) Further refine the self-exclusion donor health questionnaire to ensure that it is language and culture specific, and that all donors understand the content of the questionnaire.
- (c) Monitor and evaluate donor educational programs and their outcomes on blood safety and blood sufficiency.
- (d) Collaborate with government and NGOs involved in HIV education and testing to identify prospective blood donors with low-risk life style.
- (e) Utilize the blood donor educational youth programs linking safe blood with low-risk blood donation to spread HIV prevention messages. This will be strengthened by utilizing the Peer Promoter Program as a component of the youth donor recruitment and education project.
- (f) Establish measures and ongoing evaluation of the donor education programs by utilizing the fact that regular donors are repeatedly tested for HIV and other infections.
- (g) Assess and improve the donor loyalty programs and investigate and evaluate the influence of donor incentives.

HUMAN CAPACITY DEVELOPMENT:

The TMTC will serve as a national and regional facility by:

- (a) Accreditation with the relevant South African educational, Health Professions Councils, and governmental training quality assurance institutions. This will take into account the impact of the pending restructuring of the statutory educational and training quality assurance systems.
- (b) Conduct, with AABB, a comprehensive need assessment for training and human capacity development in the SADC region to develop and establish systems that will identify potential leaders and ensure optimal development of blood service personnel.
- (c) Establish appropriate links and memoranda of understanding with all stakeholders involved in the support, training and development of blood service staff in Anglophone African countries. (d) The SANBS model and materials will be offered to other blood services in the region to develop regional training facilities and distance and e-learning materials.

PLASMA REPOSITORY AND REGIONAL REFERENCE CENTER:

The regional reference center will be established as a national and regional resource. The quality of the plasma repository will be enhanced by establishing methods to collect serial samples from seroconversion donors with low viral loads that had been detected with individual donation nucleic acid test screening. It is a priority to fully train technical staff in this specialized technology; this training will be at international reference centers and will ultimately transfer the relevant technology to the SANBS laboratory. It is envisaged that the plasma repository will be used as the basis for a regional external quality assurance system. The value of this resource for the region will be maximized by establishing links with international commercial companies manufacturing test kits and international reference centers such as that of the WHO. Processes and systems will evaluate the sensitivity and specificity of blood screening tests. The plasma repository will also be a valuable instrument and could be used to identify HIV strains that may be suitable for vaccine development.

DATA WAREHOUSE (DW):

The DW will be expanded to include information on the institutions financial management system, human resource capacity, training and education programs, quality management systems, and blood safety indicators. The DW will make it possible to use accurate and timely available information to optimize the management of the blood service, evaluate and measure the outcome and cost-effectiveness of all programs, manage performance of staff, monitor and refine the quality management system, and document and evaluate all training programs.

WPBTS:

Activity Narrative: The focus will be on donor recruitment, standardizing all blood safety procedures, training blood service personnel, aligning the information systems and including national data on the DW.

SUMMARY:

The South African National Blood Service (SANBS) program aims to ensure an adequate supply of safe blood. This includes expanding the Safe Blood Donor Base by donor education and selection, training donor and technical staff, logistics management, and appropriate information systems. The major areas of activity are donor and blood user education and strengthening the technical and information systems infrastructure. The target population is potential blood donors.

BACKGROUND:

SANBS collects 750,000 units of blood per annum providing blood to eight of the nine provinces. The other service, Western Province Blood Transfusion Service (WPBTS) collects 120,000 units per year serving the Western Cape Province. SANBS is a leader of blood transfusion in Africa and supports by training and technically the blood services of the Southern African Development Community (SADC). The National Health Act requires a single national blood transfusion service. SANBS, WPBTS and the Department of Health are discussing how best to comply with legislation. SANBS, utilizing PEPFAR, has shared educational material with WPBTS, standardized the self-exclusion donor questionnaire, supported the continuing professional development of staff and developed the PEPFAR indicator tool as a national measuring system. FY 2008 funding to SANBS will support the merger by strengthening the bonds between the services in the fields of blood safety, staff training and donor education.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Expanding the Donor Base

The focus of this activity is to expand the donor base by including younger and more demographically representative population groups. Blood safety is achieved by donor education and self-exclusion of those at risk of HIV exposure. This activity will consist of several sections: (a) The donor education and communication materials have been revised and included in the donor educator and recruiter training materials. These materials will be made culture-specific and translated into the indigenous languages to facilitate the expansion and demographic diversity of the donor base. (b) A donor education guideline for the Muslim community has been approved by an Islamic fatwa. This will be implemented in FY 2008. (c) A key program focuses on educating and recruiting young donors. Prospective donors will be exposed to a special scholar donor education program approved and in harmony with those of the Departments of Education and Health, and the HIV and AIDS Directorate. Scholars at selected pilot schools will be educated on lifestyle and HIV transmission, including the role of Abstinence and Be Faithful (AB), and the impact of lifestyle on blood safety. Education also addresses the importance of blood donation, and the use and need of safe blood. The Club 25 project was started in FY 2006 and is continually being refined and evaluated. In FY 2007 the program was expanded to other African countries. The model is based on education of particularly scholars and their commitment to remaining regular safe blood donors (donate 20 units before the age of 25). The results of laboratory screening tests will be disclosed to them and the message of safe lifestyle, and the benefits of being a donor reinforced. This is optimized by one-on-one interviews by trained nursing sister counselors. Trained donor educators offer courses by lectures supported by pamphlets, information leaflets and booklets. In FY 2008 the program will be institutionalized in as many schools as possible. A further 50,000 scholars in FY 2008 will be exposed to the Club 25 program. (d) A donor deferral guideline has been developed for training of and use by the 100 tele-recruiters allowing them to professionally inform blood donors. (e) A pilot project to expand the SANBS donor base aims at entering into partnerships with private companies. SANBS has formed a successful partnership with Daimler Chrysler SA. This initiative will be expanded and new partnerships fostered in FY 2008. (f) SANBS will continue to refer HIV-infected donors to PEPFAR-supported ARV sites. SANBS will link with PEPFAR AB partners to optimize the education of the youth on safe lifestyles. (g) FY 2008 activities will include donor recruitment and educational programs at the four clinics established in 2007 in black communities. The donor programs will focus on safe lifestyle and the relationship to safe blood, and the need for blood donors. The results of laboratory screening tests will be used to reinforce the message of safe lifestyle, the role of AB in avoiding sexually transmitted infections, and the importance of blood and donors.

ACTIVITY 2: Training

This program focuses on developing training courses and materials for SANBS and WPBTS staff. These materials will be offered in the seven operational zones of SANBS, and WPBTS. Training focuses on human capacity development and addressing skills shortages. The 40 technicians enrolled in the program to qualify as technologists at a tertiary institution will continue in FY 2008. Training programs for technicians, technologists, and donor education and recruitment staff will be continued. Sixty trainee phlebotomists will be trained and registered with the Health Professionals Council of SA as Phlebotomy Technicians. Fifteen trainers from all provinces will be trained in the train-the-trainer program. The distance learning material developed in FY2005-2007 will facilitate in FY 2008 the training of SANBS and WPBTS staff. The distance learning program is strengthened by the videoconferencing equipment purchased in FY 2007. The national and regional Training Center commenced in FY 2007 will be fully established in FY 2008 and all aspects of the program assessed and overseen by a professional educator. SANBS and WPBTS staff will continue to host seminars, workshops, symposia and lectures in the discipline of transfusion to internal staff and external health practitioners. As part of the AABB PEPFAR Technical Assistance program, two SANBS staff members, one each from the donor and technical areas will attend a specialist high-level training course at Emory University. SANBS in FY 2007 assisted in the development of a certified course in clinical transfusion medicine at the University of the Free State. SANBS will in FY 2008 participate in the delivery of the theoretical and practical course material. The course content is suitable for students of other African

Activity Narrative: countries. Central to staff development is job satisfaction leading to better retention of staff. The staff development program is complemented by performance management and reward with clear career paths.

ACTIVITY 3: Regional Reference Center and Plasma Repository

SANBS annually screens more than 700,000 blood donations for HIV, HCV and HBV. In FY 2007 a plasma repository of viral positive plasma has been established in a facility funded by SANBS. This will in FY 2008/9 be expanded to a regional reference laboratory. This facility will satisfy the needs of the Southern African region for an external quality assessment program. The plasma repository will be fully characterized, and aliquots distributed to participants in an African External Quality Assurance System. Analysis of performance of blood services will enhance national blood safety. The plasma repository is a unique resource for African transfusion services and could be used to assess blood screening systems, investigate the sensitivity and specificity of tests and their impact on the window period, and the identification of new infectious agents. The technologist who will lead this program in August-October 2007 will be trained at the Blood Research Institute in San Francisco.

ACTIVITY 4: Data Warehouse

The SANBS data warehouse will be fully operational by end FY 2008. It is an essential component of the information system and will be used for the management and evaluation of all components of the blood system. In FY 2008 the data warehouse will include the data of WPBTS. This will make it possible to utilize the PEPFAR indicator tool to assess and improve the blood system of South Africa.

ACTIVITY 5: Western Province Blood Transfusion Service (WPBTS)

FY 2008 COP activities will be expanded to focus on the merger of SANBS and the WPBTS. Activities will be implemented for a step-wise incorporation of WPBTS into the SANBS PEPFAR program focusing on training and personnel development, establishment of a training center, and by developing appropriate information technology systems for the collection of national data as an indicator of the status of blood transfusion in South Africa. WPBTS will also utilize PEPFAR funding to expand their base of safe donors by establishing more mobile clinics. This will be facilitated by acquiring a specially fitted vehicle. WPBTS will play a key role in the development of the web-based training system and the WPBTS will be incorporated into the SANBS staff capacity building, on-site training and continuing professional development programs.

Activity Narrative: NO FY 2009 FUNDING IS REQUESTED FOR THIS ACTIVITY:

This activity was approved in the FY 2008 COP, is funded with FY 2008 PEPFAR funds, and is included here to provide complete information for reviewers. No FY 2009 funding is requested for this activity. PEPFAR funds were allocated to fund the South African National Blood Service (SANBS) to ensure an adequate supply of safe blood. This includes expanding the Safe Blood Donor Base by donor education and selection, training donor and technical staff, logistics management, and appropriate information systems. This activity represented the country-funded portion of the SANBS activity. The PEPFAR South Africa Interagency Partner Evaluation panels decided that country funding was no longer needed, given the existence of Track 1 funding for SANBS and a planned end to the agreement in FY 2009, as well as a well-established South African blood safety program. Therefore there is no need to continue funding this activity with FY 2009 COP funds.

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

The project has recently embarked upon activities aimed at strengthening its occupational health and safety aspect. Focusing mainly on phlebotomy, such activities have been conducted in partnership with the South African National Blood Services (SANBS). In FY 2009, the Making Medical Injections Safer (MMIS) project is planning to coordinate the development of a National Training Curriculum and adopt with SANBS and other partners a set of National Guidelines to be used for phlebotomy. These will go a long way in relieving pressure on the nursing staff as well as providing much needed norms and standards in the context of a generalized HIV epidemic.

In addition, MMIS has embarked on a number of partnerships to support waste management in the context of HIV/AIDS treatment. These have included skills and knowledge transfer to the nine provincial coordinators of the country's Comprehensive Care, Management and Treatment Plan, training sessions in preparation for the down-referral of treatment related services, as well as input to the overall training curriculum related to HIV/AIDS treatment.

FY 2009 should also see the execution of the follow-up injection safety survey. This endeavor comes at a time when a set of policies, strategies and guidelines have been developed and implemented by MMIS and its main partner, the National Department of Health (NDOH). It will provide insight into the extent to which the scale and scope of such operations need to be sustained. A presentation to the NDOH's management committee including findings from the 2006 survey, interventions initiated since, as well as the approach to be used for the planned 2009 survey has been approved by the Director-General of Health and is scheduled for October 7, 2008.

SUMMARY:

The Making Medical Injections Safer (MMIS) project conducted by John Snow Research and Training, Inc. (JSI) aims to bring about an environment where patients, healthcare workers and the community are better protected from the transmission of HIV and other blood-borne pathogens through medical practices. The project targets healthcare workers and the population at large. Emphasis areas include training and human resources, development of policy and guidelines as well as commodity procurement.

BACKGROUND:

The project's initial stages have moved from a pilot to a full geographical scale implementation by its mid-term. The review conducted in 2007 and its findings will guide implementation of priority interventions towards the second half of the funding cycle building up to September 2009. To this effect the fiscal year FY 2008 will focus on ensuring that the remaining resources allocated to this project are used to maximize the opportunities to lower risks of transmission. To this end a particular focus will be placed on linking current injection safety activities to phlebotomy. Discussions to this effect have been embarked upon with the NDOH unit responsible for the coordination and implementation of the country's Comprehensive Plan for HIV and AIDS Care, Management and Treatment as well as the South African National Blood Services (SANBS), a South African organization partially funded by PEPFAR. Such a focus will also strengthen the MMIS project's ability to support the effective implementation of the newly launched HIV & AIDS and STI National Strategic Plan, 2007-2011 in its chapter on Accelerated Prevention.

MMIS in collaboration with the National Department of Health (NDOH) completed the first national injection safety and infection control survey in public facilities in South Africa in 2007. The results indicated that there were gaps in training in the areas of waste management and injection safety. During 2007 MMIS addressed recommendations emanating from this survey through training and ongoing behavior change communication (BCC) activities. The BCC activities address issues such as safe phlebotomy procedures, the appropriate use of multi-dose vials, reducing the current rate of recapping of needles after injections, the overflowing of sharps containers and other survey findings requiring attention and action. The NDOH and the KwaZulu-Natal Department of Health have retractable syringes available on the national and provincial tenders, adopting them for use and making sustainable financial allocations from the fiscus to cover related costs in their Mid-Term Expenditure Framework spanning 2007-2009.

A similar approach remains an option for the other provinces as far as the national tender is concerned and MMIS will continue to play an advocacy role towards such policy decisions to be considered in the interest of self-sustainability.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Healthcare Workers' Training

More healthcare workers will be trained in FY 2008 to reach the target of 3,975 set for the said fiscal year. Senior and middle managers, clinical staff as well as waste handlers will be trained to increase the public health sector's capacity in injection safety and infection control. This will continue to be done in partnership with organizations such as MINDSET Health, BroadReach Health Care and the Democratic Nurses' Organisation of South Africa. Following discussions initiated in FY 2007, MMIS will together with other PEPFAR funded projects continue to work towards the improvement of monitoring tools aimed at measuring the use and effectiveness of its tele-education through the MINDSET Health Channel. The project is not intending to provide additional support towards the expansion of the said channel but will benefit from such expansion (as made possible by the South African Government as well as other PEPFAR partners) as these will increase the reach and accessibility of MMIS Injection Safety content to additional health facilities in the country. The current reach of the Mindset Health Channel covers 300 facilities, 79 of which were connected by JSI through its MMIS project. The rest of the facilities networked with PEPFAR partners as well with individual provincial departments of health. In addition, the project will continue to work closely with the NDOH's Quality Assurance and Environmental Health Directorates to have trainers trained during past

Activity Narrative: fiscal years cascade the training in their districts and facilities. Training of trainers will also take place together with an increased focus on phlebotomy. MMIS trained more than 2,000 healthcare workers in FY 2007.

ACTIVITY 2: Behavior Change Communication

FY 2008 funds will be used to continue to disseminate educational materials to healthcare workers and the communities they serve. The community outreach program will form part of the South African government's Khomanani campaign whereby community outreach workers visit 100,000 persons each month to disseminate health information. From FY 2008, MMIS content will officially become part and parcel of this campaign, at no additional cost from JSI. The visits will not only serve to educate and inform community members, but safety boxes for disposing of used medical injections at home will also be distributed where necessary.

ACTIVITY 3: Logistics and Procurement

MMIS finalized a national Logistics and Procurement strategy in 2007. The key focus of the strategy is to increase sustainability in provinces and local government efforts to acquire commodities such as safety syringes that are now available on national and provincial tenders. Where needed, JSI will use PEPFAR funds as bridging funds to ensure transition to this effect. In Ethekwini such funding will be provided until March 2008 while the municipality goes on tender for sustained procurement beyond this period. In the Free State information from a 2007 analysis will be used to procure protective equipment for healthcare workers in FY 2008 to ensure an uninterrupted supply. In addition, special courses for logisticians and senior managers will be run to address weaknesses related to ensuring the uninterrupted supply of commodities such as sharps containers. Such courses will aim to increase skills and competencies for effective and efficient stock management for the first target group. They will also be aimed at improving contract management skills for the latter.

ACTIVITY 4: Norms and Standards

MMIS will work with the NDOH and the Council for Health Service Accreditation of South Africa to implement norms and standards on injection safety policy and waste management. A supervision check list will be developed to allow the structuring of mentoring and supervision of activities related to injection safety and infection control in healthcare facilities.

The Making Medical Injections Safer activity contributes to meeting the vision outlined in the USG Five-Year Strategy for South Africa by strengthening the health sector's capacity to provide safe medical injections and thereby represents an important prevention activity. It is a sustainable program that it is building human capacity and working closely with the South African government to implement long-lasting policies for injection safety. It also supports PEPFAR's goals of preventing seven million new infections.

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

No male circumcision training or service delivery will take place without the express consent of the National Department of Health. If such approval were to be obtained, these funds would be allocated to a partner for the provision of safe clinical male circumcision in accordance with World Health Organization, Office of the Global AIDS Coordinator and South African Government policies and guidelines.

SUMMARY:

USAID will fund the dissemination of findings from the 2007 male circumcision mapping and will fund the training, mentoring and service delivery of safe clinical male circumcision if the South African National Department of Health consents to male circumcision programming.

BACKGROUND:

Although not widespread, prevalence rates for male circumcision in South Africa range from 20% to nearly 100%. The prevalence also varies by ethnic group and is higher in some areas of the Eastern Cape and KwaZulu-Natal. Male circumcision is usually done for cultural or religious reasons rather than for health benefits. For example, certain ethnic groups, such as the Xhosa, routinely practice male circumcision as part of boys' initiation and transition to adulthood. In this context, circumcision is performed by traditional practitioners rather than by medically trained personnel in a health facility. A recent study conducted in South Africa showed that male circumcision very significantly reduces the risk of HIV acquisition. Two further large-scale studies of circumcision for HIV prevention in Uganda and Kenya showed similar results. Based on the information from the three clinical trials, UNAIDS and WHO have issued normative guidance and recommendations regarding policy and program development. With a potential of up to 60% reduction in the acquisition of HIV in males, circumcision may be considered an option for uninfected men as part of a larger HIV prevention package. Scaling-up male circumcision in South Africa may therefore soon become a priority, as a component of national comprehensive HIV prevention programs. South Africa has draft regulations/policy on governing the conditions under which the traditional male circumcision as part of an initiation ceremony may be carried out. There is an intergovernmental task team examining issues/policies surrounding traditional male circumcision. The USG PEPFAR team has ongoing consultations with the National Department of Health and UNAIDS on how to move the male circumcision agenda forward.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Dissemination of Mapping Results

This activity will support the dissemination of mapping findings from the male circumcision mapping that is expected to be completed in FY 2007. In FY 2007, it is expected that the WHO Tool Kit, with additional information, will be used to collect mapping information on the geographic spread, prevalence, cost, access and availability of male circumcision. With FY 2008 funding, the results will be disseminated widely within the public and private sector to help inform policy and to inform where to best target safe clinical male circumcision activities. It is expected that the NDOH will utilize the information to develop policies for male circumcision. PEPFAR support to policy development is coordinated via JHPIEGO and the NDOH TBD funding.

ACTIVITY 2: Support to training, mentoring and service delivery of safe clinical male circumcision.

No male circumcision training or service delivery will take place without the express consent of the National Department of Health. In the absence of such approval and based on discussions with the PEPFAR South Africa team, funds could fully or partially be reprogrammed. Should the approval for safe clinical male circumcision activities be given, USAID is proposing the following male activities:

USAID will identify relevant partners to conduct training, mentoring and delivery of safe clinical male circumcision. It is expected that a South African NDOH accredited training curriculum would be developed with JHPIEGO PEPFAR funding and in coordination with PEPFAR funding for the NDOH TBD program. This curriculum could be rolled out to identified partners to train and mentor clinical staff in the delivery of safe clinical male circumcision. The partners are TBD.

These activities will contribute to the PEPFAR goal of preventing 7 million new infections by exploring innovative prevention possibilities, which will result in a lower transmission rate.

Activity Narrative: SUMMARY AND BACKGROUND:

Prevention must be greatly prioritized in the response to AIDS and efforts are being made to find new prevention technologies to bolster the package of already known effective prevention methods. Male circumcision (MC) is one of these new potential methods. With two decades of observational studies there are studies that suggest a link between male circumcision and increased protection against HIV transmission, and a number of studies indicating high levels of potential acceptability. Three randomized control trials on male circumcision were undertaken in Orange Farm, near Johannesburg in South Africa, Rakai, Uganda and Kisumu, Kenya. These results support findings published in 2005 from the South Africa Orange Farm Trial, sponsored by the French National Agency for Research on AIDS, which demonstrated that male circumcision provided at least a 60% reduction in HIV infection among men who were circumcised. The study of 3,274 men was stopped at the interim analysis stage due to compelling evidence that men in the intervention arm were 61 per cent less likely to have become infected with HIV.

The investigators concluded that male circumcision does provide a significant degree of protection. Given the limited impact of other HIV prevention methods across the region, these findings led to considerable excitement about the potential for male circumcision to significantly reduce new infections. Dynamic simulation models indicate that roll-out of male circumcision would lead to dramatic reductions in HIV infection rates and associated mortality over time.

At the same time, concern was raised about whether publicity about the results might lead to "disinhibition", with men misinterpreting the results and reaching the conclusion that the increased protection offered by circumcision allowed for more risky sexual behavior-especially less consistent condom use and more concurrent partners.

In March 2007, the WHO and UNAIDS jointly issued a set of recommendations on male circumcision which included guidance on how best to integrate male circumcision into other HIV services. The relevant section reads: "Male circumcision should never replace other known methods of HIV prevention and should always be considered as part of a comprehensive HIV prevention package, which includes: promoting delay in the onset of sexual relations, abstinence from penetrative sex and reduction in the number of sexual partners; providing and promoting correct and consistent use of male and female condoms; providing HIV testing and counseling services; and providing services for the treatment of sexually transmitted infections."

ACTIVITIES AND EXPECTED RESULTS:

With the collaboration between Health Policy Initiative (HPI), Sonke Gender Justice Network (SGJ) and Jhpiego, a program will be developed that will be looking into health education on MC and associated interventions that will help men better understand the effect of MC education on the fight against HIV. However there has to be an understanding that MC cannot be implemented as a stand-alone program, but rather be incorporated into broader reproductive health programs. This initiative will draw on innovative promising and best practices as indicated by the research that has been done around MC. In addition, substantial numbers of males are circumcised for cultural reasons. Male circumcision has strong cultural importance in certain communities and it frequently forms part of religious and cultural practices surrounding birth or transition of boys to manhood.

Broad community engagement is required to introduce or expand access to safe male circumcision services. This also serves as a means of communicating accurate information about the intervention, notably that male circumcision provides only partial protection against the risk of acquiring HIV. The role of civil society organizations in addressing the challenges and opportunities of preventive MC is crucial.

All the sectors should be well informed about MC activities and research undertaken. The collaboration between the three partners, namely HPI, Sonke Gender Justice Network and Jhpiego will look at the following strategies in dealing with MC as a strategy that can contribute in the reduction of the spread of HIV.

ACTIVITY 1: Development of IEC materials on MC

Situational Analysis: to gather and/or use existing data on MC available in the country and analyze information related to the target groups such as traditional and faith-based leaders involved in the program and prioritizing key issues. This will be done through site visits, individual and group interviews.

In this initiative HPI plans to collaborate in partnership with partners that also have expertise and long history of working with men; Sonke Gender Justice and Jhpiego as well as the National Department of Health's Women's Health Directorate, the Gender Desk and the HIV/AIDS, STI and TB Directorate to develop information, education communication materials for the MC mobilization program following the recommendations in WHO guidelines.

In developing these materials, messages will be carefully tailored, culturally sensitive, draw on local language and symbols, and be appropriate to the particular level of development and understanding of the population groups for which the messages are designed. For effectiveness to prevent men developing a false sense of security and engaging in high-risk sexual behaviors and also to address gender stereotypes messages will be tailored for men and women. Culturally sensitive and appropriate material will be developed and also made for initiation schools for areas where these institutions exist, to minimize stigma associated with circumcision status.

ACTIVITY 2: Social mobilization activities

There are a wide range of socio-cultural issues to consider in the context of introducing or expanding the availability of male circumcision services. These issues differ according to circumcision history and practice in different communities; hence it is crucial that the MC activity be looked at in context of the geographical

Activity Narrative: area, beliefs, norms etc. MC activities should also act as an opportunity to address the reproductive health needs of men, and such activities actively counsel and promote safer and responsible sexual behavior.

HPI and Sonke Gender Justice will facilitate workshops targeting organizations, local structures and institutions that are dealing with MC and men's reproductive health. Men's imbizo (gatherings) will be used to facilitate community dialogues that will encourage men to talk about MC. HPI will also encourage the use of available guidelines on MC and facilitate compliance to them. HPI will also focus on providing a supportive supervision system to government to create an enabling environment for the implementation and monitoring of educational MC activities and their compliance to available policies. Practical, cost-effective and sustainable methods will be used to reach out to men in all nine provinces. In the discussions that HPI and other partners will facilitate, they will ensure that policy makers and program developers are involved and that this is done in consultation with civil society members, local stakeholders, different population groups and other critical decision makers.

Activity System ID: 23610

Activity Narrative: SUMMARY:

Reproductive Health and HIV Research Unit (RHRU), as part of an outreach project in deprived inner city areas, will promote the uptake of male circumcision through integration with existing services.

BACKGROUND:

RHRU, a unit of the University of the Witwatersrand in Johannesburg, currently provides technical support to the Operational Plan for Comprehensive HIV and AIDS Care, Management and Treatment for South Africa, which includes the national ARV roll-out. Under PEPFAR funding since FY 2004, RHRU has provided regular on-site support, direct treatment, training and quality improvement to Department of Health sites in three provinces. RHRU will continue these activities, and will continue both an inner city program (Johannesburg) and a district-wide program (Durban), focusing on providing support to complete up and down treatment referral networks. In addition, RHRU will continue the provision of counseling and testing (C&T), palliative care and prevention services. RHRU will seek to develop models of service delivery that can be replicated and expanded, and produce findings from lessons learned and targeted evaluations to disseminate and share with others. It should be noted that the success of antiretroviral treatment (ART) scale-up depends on the comprehensive approach detailed in other program areas. In particular, the strengthening of referral from other primary health care programs such as tuberculosis (TB), family planning, antenatal/postnatal and STI services is critical. Prevention is an integral part of this system, and RHRU will focus its condoms and other prevention program on high-risk groups such as commercial sex workers and their clients, people infected with HIV, and also on building capacity of the CBOs and NGOs with which it works. RHRU will also continue to develop strategies to address underserved communities affected by HIV, such as couples (both concordant and discordant), high risk groups such as young people, and gender-based interventions with women at risk, including pregnant women and commercial sex workers, and men.

ACTIVITIES AND EXPECTED RESULTS:

No male circumcision training or service delivery will take place without the express consent of the National Department of Health. In the absence of such approval and based on discussions with the PEPFAR South Africa team, funds could fully or partially be reprogrammed. Should the approval for safe clinical male circumcision activities be given, RHRU is proposing the following male activities: Male circumcision has been identified as an important biological intervention that protects men from HIV infection. It also creates opportunities to engage with men over a variety of reproductive health and risk-taking issues. Men are grossly under-represented in terms of access to counseling and testing, as well as HIV clinical services, including ART. Circumcision programs may allow expanded access to all forms of care, including HIV testing. However, while the biological protection against HIV transmission has been demonstrated beyond doubt, issues such as acceptability, operationalization, disinhibition and programmatic integration, still remain. RHRU will explore the acceptability of integrating male circumcision into existing services to broaden uptake. This will include piloting "opt out" circumcision for neonates, and developing methods of raising awareness and counseling that address target groups including males and young people. Key to a successful male circumcision program is integration of comprehensive prevention messages based on an ABC approach. All activities will be conducted in accordance with the South African government's National Strategic Plan.

In FY 2009, RHRU will continue to undertake M&E activities to inform and develop quality HIV care. RHRU will be in a position to conduct pre-approved basic program evaluations (BPEs) of selected prevention related projects in FY 2009. For each BPE, a detailed proposal will be developed and submitted to PEPFAR for review and funding approval. It is anticipated that these evaluations will provide the South African government with important information for policy development and planning in this area.

Circumcision**Program Budget Code:** 07**Planned Funds:** \$359,235

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

See Other Sexual Prevention for the FY 2008 Male Circumcision COP.

SUMMARY:

The Perinatal HIV Research Unit (PHRU) will continue to investigate the feasibility of safe and scalable methods of male circumcision (MC).

BACKGROUND:

Three separate randomized controlled trials of male circumcision have confirmed multiple observational studies and shown adult male circumcision to be very effective in preventing acquisition of HIV in high risk male populations; reducing the risk of HIV acquisition by 50% in all three trials. Furthermore, all three trials confirmed that surgical circumcision was a safe procedure and overall, there were not significant increases in sexual risk behavior in those men who were circumcised.

The challenge to health policy is to scale up circumcision services in high burden countries - such as South Africa. Policy makers will have to ensure that sufficient numbers of young men have access to information to be able to make a choice about whether they want to be circumcised or not and generate demand for the procedure. Very importantly, health services must be able to provide safe surgical circumcision effectively and efficiently; in Soweto alone, it is estimated that about 8,000 men would have to be circumcised per annum to get 60% coverage of male circumcision in a single year's birth cohort. However, currently, the public sector hospital in Soweto supplies just over one circumcision per day.

In the absence of a South African Government decision to implement services, the PHRU will continue to investigate supply and demand side factors that could be critical to the successful rollout of this public health intervention. In conjunction with Dr. Dino Rech, who is the medical manager of a large circumcision program in Orange Farm, an informal settlement near Johannesburg, and who has an interest in circumcision in Africa, the PHRU will perform valuable work that will inform the rollout of circumcision in South Africa.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: MC instrumentation

PHRU will assess the most appropriate instrumentation for circumcision in resource-poor settings. This will include assessing the packaging and preparation thereof. Design and sourcing and manufacture of novel devices to assist with a circumcision and estimating the costs of a most appropriate kit. PHRU will work with PEPFAR partners in the development of a kit.

ACTIVITY 2: Training

PHRU will assess training requirements for nurses and draw up a detailed curriculum for training of nurses for circumcision both theoretical and practical/experiential.

ACTIVITY 3: Method comparison

PHRU will compare in detail the most appropriate circumcision methods that are currently being used (sleeve, dorsal-and-ventral slits and forceps guided). This design of the comparison will be key informant interviews, post circumcision satisfaction surveys and will include cosmetic outcome, ease of operation, safety and duration of the operation. Travel to countries where each procedure is used widely will be required in order to carry out key informant interviews and post circumcision surveys. The outcome of this will be a publishable report.

ACTIVITY 4: Gender

Recent results from the study in Orange Farm (South Africa) and elsewhere show that male circumcision has a protective effect on High-Risk Human Papilloma virus and on Trichomonas Vaginalis which may in turn have beneficial effect for women. Women need to be included in the issue of male circumcision, they need to get good information on the protective effect and also understand that condoms still need to be used. The PHRU will engage with women to determine the effects of male circumcision on their lives and if there is a tendency to riskier sexual intercourse if their partner is circumcised as has been reported elsewhere. The PHRU will develop strategies to ensure that condoms are still used after circumcision.

Engaging men and women on issues around male circumcision including HIV-testing, family planning, STI treatment and condom use will be integrated into to the PHRU prevention, care and treatment programs. Men who are already circumcised will be encouraged to engage in safe sex practices, to test regularly for HIV, and to enter care and treatment programs if required.

ACTIVITY 5: PACT Conference

PHRU has run three very successful Priorities in AIDS Care and Treatment (PACT) conferences which are targeted to public sector health care workers (doctors, nurses and pharmacists) and program and facility managers. These conferences have different themes and are very practical in nature. They have been well received by participants who find that they are able to take away useful information and knowledge to improve the quality of care and treatment access at their facilities. Through these conferences PHRU been able to disseminate its research findings and HIV prevention, care and treatment experiences and has invited other PEPFAR partners to share their experiences, knowledge and best practices. Over 800 people have attended these conferences.

Planned Funds: \$77,672

Activity Narrative: SUMMARY:

Jhpiego, with approval from the South African National Department of Health (NDOH) will implement male circumcision (MC) activities by supporting a Bio-medical Prevention Technical Advisor to the NDOH to help spearhead and coordinate MC within the NDOH, and to continue piloting modules of the WHO MC toolkit.

BACKGROUND:

For nearly two decades, researchers have been interested in the preventive effect that male circumcision has on the risk of STIs, particularly chancroid and syphilis, as well as penile and cervical cancers. Increasing attention and research has been devoted to the potential preventive effect MC has on HIV transmission. From the interim results of three clinical trials that were conducted in South Africa, Kenya and Uganda, it has been concluded that MC reduces HIV transmission from women to men, by 60% on average. All three trials were interrupted before planned completion for ethical reasons once it was established that a clear protective effect existed between circumcision and contracting HIV, so that the men in the control groups could access this potentially life-saving intervention. Male circumcision is now accepted by the global normative bodies as one aspect of an effective HIV prevention strategy. Modeling studies estimate that making MC universal in Africa would prevent 5.7 million new infections and 3 million deaths over the next 20 years.

Jhpiego has been supporting MC/Male Reproductive Health services in Zambia since 2003. The work in Zambia informed the WHO/UNAIDS programs and the WHO toolkit. Jhpiego is a co-author with WHO and UNAIDS of the Training Manual for Male Circumcision under Local Anesthesia. In Mozambique, Jhpiego, through the FORTE Sade Consortium led by Chemonics and funded by USAID, has been recently asked to be the technical leader in the implementation of initial MC activities in Mozambique.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Male Circumcision Technical Advisor at the NDOH

It is expected that during FY 2007, Jhpiego and the South African government will reach agreement on the placement of a male circumcision technical advisor within the NDOH. FY 2008 funds will be used to continue Jhpiego's technical assistance work with the NDOH. It is expected that the advisor will assist the NDOH with coordinating MC activities among the various relevant portfolios within the NDOH and will assist in the development of policies and guidelines that can be rolled out nationally. The technical advisor will work closely with the NDOH to implement activities working on the development of linkages between traditional healers/surgeons and safe clinical male circumcision.

ACTIVITY 2: WHO MC Toolkit

It is expected in FY 2009 that Jhpiego will be engaged in field testing various modules of the WHO MC toolkit and implementing capacity building activities that take into account political and cultural sensitivities of MC. The testing of these modules is based on ongoing consultation with the NDOH and UNAIDS. FY 2008 funds will be used to carry out these activities in coordination with the NDOH and other relevant stakeholders

ACTIVITY 3: Development of a standard MC training curriculum

Only with the express consent of the NDOH will training and service delivery of MC activities be undertaken. In preparation, and in consultation with the NDOH, a training course will be designed for clinical service providers (physicians, nurses, and nurse-midwives) and aimed at producing individuals qualified to provide male circumcision and reproductive health counseling services. The course will consist of classroom and practical sessions focusing on Male Circumcision and reproductive health. Qualification will be based on participants' achievement in two areas: Knowledge - score of at least 80% in the end of course knowledge assessment and Skills - satisfactory performance of recommended procedures during simulated clinical practice and with clients. The course is designed for five days but could be extended to 10 days in low-volume circumcision clinics so that the participants can acquire adequate guided clinical practice. Topics will include anatomy and physiology, male reproductive health needs, health education, counseling, male circumcision methods, management of adverse events resulting from MC, infection prevention and organizing and managing a male reproductive health clinic. The training will be provided by qualified MC clinical trainers.

These activities will contribute to the 2-7-10 goals of PEPFAR by creating policies and guidelines that will lead to increased prevention within South Africa.

With the NDOH approval, Jhpiego proposes the addition of developing and training health workers on implementing a pre-service MC curriculum in FY 2009. Jhpiego is committed to building sustainable local capacity in all areas of technical assistance. As MC is a new technical area in this COP year and Jhpiego will first receive funding for these activities in October of 2008, the FY 2008 plan and targets were not pre-populated.

This project supports NSP Priority area number two point 2.2. and 2.7 in that it assists in implementing interventions targeted at reducing HIV infection in young people and in developing a comprehensive package that promotes male sexual health. In addition, as the project begins with a situational analysis of the MC environment within South Africa it enables the development and support of a research agenda on HIV prevention technologies. As per the NSP, Jhpiego will address MC issues from a broader reproductive health perspective and strategy.

Activity Narrative: SUMMARY:

Johns Hopkins University/Center for Communication Programs (JHU) and its 20 South African (SA) partners are undertaking a concerted effort that utilizes a variety of communication channels, including mass media and interpersonal community mobilization (CM). It aims to bring about heightened urgency of risk perception to HIV infection among the general population about sexual partnerships and behaviors that place them at risk of HIV infection including multiple concurrent partners (MCP); intergenerational/ transactional sex (ITS); inconsistent and incorrect condom use; alcohol and substance abuse; and gender and gender-based violence (GBV). Low levels of male circumcision are a key factor in the spread of HIV. In South Africa levels of circumcision in areas that traditionally circumcise are lower than previously thought. Studies in Orange Farm and in the rural areas of the Eastern Cape have confirmed the risk reduction benefits conferred by male circumcision. Using the social ecology framework JHU and its partners will work with men and audiences that impact upon them including women, their peers, traditional and community leaders to provide correct messaging on the risk reduction benefits conferred upon men by male circumcision with a primary focus on interpersonal communication channels.

BACKGROUND:

JHU prioritizes interventions focusing on men aged 25-49 and young girls and young people aged 18 - 32. Interventions aim to impact on key drivers including low levels of male circumcision. JHU and its partners use a social-ecology approach to communication that combines the power of interpersonal communication with mass media (including radio, television (TV), outdoor and cellular technology) to engage and mobilize individuals their social networks and communities to create an enabling environment that allows them to reduce risk to HIV infection. In the area of Male Circumcision JHU has worked with UNAIDS, WHO and UNICEF to develop communication guidelines on male circumcision for communication practitioners. The activities that JHU will undertake in relation to male circumcision (MC) includes policy work around developing and implementing strategic communication interventions for male circumcision, training, outreach and message development that are integrated within broader HIV prevention and sexual and reproductive health dialogues with men. Training will be undertaken using the UNAIDS/WHO Training Manual on Safe Male Circumcision using local anesthesia, recommendations from the WHO-UNAIDS Montreaux Meeting and the Communication Guidelines for Male Circumcision jointly developed by JHU together with UNAIDS, UNICEF and WHO.

ACTIVITIES AND EXPECTED RESULTS

ACTIVITY 1: Interpersonal Communication

JHU will work with its partners to develop a communication toolkit that can be used by partners to facilitate interpersonal communication efforts within community and traditional leadership structures around male circumcision for the reduction of HIV risk. JHU will also develop a series of posters that combine messages on male circumcision with messages that promote partner reduction and consistent condom usage.

Sonke Gender Justice, Lighthouse Foundation (LF), Life Line (LL), Footballers for Life (F4L), The Valley Trust (TVT), Lesedi Lechabile, Mothusimpilo and TurnTable Trust (TTT) will integrate discussions within their men's clubs on issues relating to male circumcision as part of their ongoing dialogues with men around HIV prevention including partner reduction, correct and consistent condom usage and counseling and testing.

LifeLine SA, TVT and Footballers for Life will support workplace interventions within small and medium enterprises, farms and professional footballers clubs to engage with men around male circumcision, HIV prevention including partner reduction, correct and consistent condom usage and counseling and testing. . TVT, LF, Lesedi Lechabile, Mothusimpilo and Turn Table Trust will undertake community conversations with traditional leaders and healers to mobilize them in addressing the cultural dimensions of male circumcision.

ACTIVITY 2: Mass Media

JHU will undertake qualitative research to examine men's attitudes and understanding of male circumcision for the reduction of HIV risk. This study will inform the development of messages on male circumcision that will be used by JHU for the reduction of HIV risk into its mass media outputs including the Scrutinize Campaign targeting younger men, a new drama series Circles, and a new campaign that will target adult men.

ACTIVITY 3: Advocacy

JHU will work with its partner Health-e and the Wits Media Project to promote informed media reporting around Male Circumcision for the reduction of HIV risk. JHU will work in partnership with other communicators including the government to ensure that there is consistency of messaging in relation to MC for the reduction of HIV risk.

ACTIVITY 4: Capacity Building

Mindset Health will develop materials that will be used to build the capacity of health workers to address male circumcision as a part of a broader package of men's HIV prevention, sexual and reproductive health. JHU will provide training to its partners around the evidence concerning male circumcision for HIV prevention and will develop a toolkit of key messages that can be used to guide conversations with men around the issue of male circumcision in the context of men's sexual and reproductive health and HIV prevention. JHU will work with its partners in developing a toolkit for traditional leaders and practitioners on issues relating to male circumcision.

Program Budget Code: 07

Planned Funds: \$0

Activity Narrative: SUMMARY:

EngenderHealth's Men as Partners (MAP) Program works to reduce the spread and impact of HIV, AIDS and gender-based violence by challenging unhealthy gender-related beliefs and attitudes, such as equating masculinity with dominance over women, pursuing multiple sexual partners and participating in other HIV and AIDS related risk behaviors. The MAP program utilizes a range of strategies, including skills-building workshops, community mobilization, health service provider training, media advocacy and public policy advocacy efforts to achieve its major goal of gender norm transformation to reduce the spread and impact of HIV, AIDS and gender-based violence. MAP recognizes that this transformation will assist men and women in achieving such behaviors as sexual abstinence, being faithful to one partner, treating women as equals, among other behaviors. MAP works with individual men and boys, their sexual partners, as well as community structures to influence culture and transform lives. Specially, MAP targets men and boys, in and out-of-school youth, university students, adults, people living with HIV and AIDS, caregivers, immigrants/migrants in inner cities and cross-boarder sites, community and religious leaders, program managers, public health care providers, CBOs, FBOs and NGOs.

BACKGROUND:

Since 1998, EngenderHealth has received USG funding to support CBOs, FBOs and the South African government to implement MAP programming. EngenderHealth's core strategy is conducting skills-building workshops on gender norm transformation. Through these workshops, MAP develops transformation agents (e.g. peer educators) who then spread MAP messages and skills from the workshops to others in their communities. These workshops are tailor-made for various communities, integrating abstinence/be faithful messages, as well as motivating men to know their HIV status and take action if they test positive for HIV. MAP encourages men to take action in their communities, challenging other men who are practicing behaviors that put them (and their partners) at risk for HIV, AIDS and gender-based violence.

Working through various community-based partners, MAP also mobilizes communities to take action via community education events and the formation of community action teams (CATs). EngenderHealth MAP also produces information, education and communication (IEC) materials which motivate men and boys to address these harmful gender norms and transform themselves. Currently, EngenderHealth is running the I-am-a-Partner campaign; focusing on defining what men can do to take action and be more gender equitable to reduce the spread and impact of HIV AND AIDS (see www.iamapartner.org).

Working through national campaigns, such as the 16 Days of Activism on Violence against Women/Children and the annual Men as Partners (MAP) Week, EngenderHealth engages national private sector, media and government partners to increase the effectiveness of MAP. Finally, EngenderHealth staff members coordinate provincial MAP Networks, creating a space for lessons among gender activists to be shared, and formulating a platform for national advocacy efforts - such as actively participating in the development and adoption of the South African National Strategic Plan in HIV/AIDS and STIs. EngenderHealth also developed programming linked to voluntary counseling and testing palliative care - based on demand generated through the MAP program. EngenderHealth staff also conducts monitoring and evaluation activities of the efforts through various process and impact assessments. Each workshop and community event is documented, as well as knowledge and attitudinal assessments conducted of participants.

EngenderHealth will contribute to the overall PEPFAR goals of 2-7-10 by increasing the number of men accessing HIV services including treatment; increasing the number of young and adult men choosing to abstain or be faithful/reduce their number of sexual partners; reducing women's vulnerability to HIV and AIDS by preventing gender-based violence; and increasing the number of men caring for the ill.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Disseminating Messaging

To disseminate accurate information about the benefits of male circumcision in terms of HIV transmission, EngenderHealth will work with its community-based partners to develop an informational brochure to be developed, pre-tested, printed and disseminated to men (and women) in communities across South Africa. The brochure will clarify information about the benefits of circumcision in terms of HIV transmission among men, aspects of medical and traditional circumcision, specific aspects of the process and post surgery, specifically related to delay in sexual activity (up to 6 weeks) and condom use, among other issues. The brochure will be developed and pilot tested among various communities throughout South Africa, and then disseminated to communities via EngenderHealth's Men as Partner Network and the MenEngage Alliance in line with the AB, OSP and HIV testing activities. The brochure will also be posted to EngenderHealth's website for further distribution.

ACTIVITY 2: Hosting at least four community-based dialogues

Throughout the year, EngenderHealth will host at least four community-based dialogues on male circumcision in two provinces, sharing information on the benefits of MC and HIV, and documenting their views on the rollout of mass MC campaign. The focus of the dialogues would be to ask communities what their views on a roll-out (e.g. traditional or medical or both), assess cultural aspects of such a roll-out, and gain their support for additional advocacy at the local, provincial and national level for a formalized community-driven policy on MC and HIV.

ACTIVITY 3: Advocacy

With documentation of the cultural acceptability of medical/ traditional circumcision rollout from community dialogues, EngenderHealth will participate in various advocacy efforts to develop a formalized national policy on the roll-out of MC activities throughout the country. EngenderHealth will bring to this partnership, the cultural implications of such a policy and state of readiness of the communities involved in these

Activity Narrative: dialogues. EngenderHealth will continue to co-chair the MenEngage Alliance of South Africa, working together with various men and organizations such as Jhpiego and Constella Futures to advocate for a Male Circumcision policy. This advocacy will involve participating in a National Department of Health task force on MC, developing and implementing a media strategy (via television., radio and newsprint) promoting the benefits of MC, and raising the benefits of MC in various national HIV and gender forums of interest. EngenderHealth will work to bring more stakeholders into the advocacy efforts, further building the case for a mass rollout of MC activities in South Africa.

Table 3.3.07: Activities by Funding Mechansim

Mechanism ID: 4760.09

Mechanism: N/A

Prime Partner: St. Mary's Hospital

USG Agency: HHS/Centers for Disease Control & Prevention

Funding Source: GHCS (State)

Program Area: Biomedical Prevention: Male Circumcision

Budget Code: CIRC

Program Budget Code: 07

Activity ID: 22810.09

Planned Funds: \$24,273

Activity System ID: 22810

Activity Narrative: SUMMARY:

St. Mary's Hospital in Durban, KwaZulu-Natal will attempt to address a prevention strategy through the WHO/UNAIDS circumcision policy in adult males. St. Mary's is ideally situated as it is a hospital and the add-on service of this medical procedure will not incur major costs. This procedure will be highlighted in the ARV treatment clinic, discussions with partners of pregnant women in the antenatal clinic, the primary health care clinic as well as through the school nurse visiting schools. The activities will encompass human resources, consumables and medical supplies. The target group for this activity is adult men.

BACKGROUND:

This is a new program activity funded in FY 2009. This activity is linked in with the counseling and testing activity program. Currently the WHO/UNAIDS male circumcision policy has not received South African government (SAG) approval, but is being reviewed. The hospital has a doctor who has been trained in male circumcision with an accredited service provider. Once SAG policy is in place and approval granted (in a letter from the Department of Health), activities will commence.

ACTIVITIES AND EXPECTED RESULTS:

ACTIVITY 1: Counseling

Therapeutic counselors and counselors based in-hospital and at out-patient and primary health care clinic levels will advocate circumcision as a preventative measure together with other preventative methods. This will focus on emphasizing that male circumcision is not a "replacement" for other prevention interventions, including correct and consistent condoms use; reducing multiple concurrent partnerships; and fidelity to a single partner. The school nurse will also address this preventative method in schools. A men's clinic will be open one day every two weeks at the hospital. General education regarding circumcision will be supported to mothers in the PMTCT clinic setting as well as in children's ward which is in-hospital and at the primary health care facility.

ACTIVITY 2: Medical Procedure

Medical procedures will be made available for those interested at the male clinic. A trained medical doctor and a nurse will be available for the procedures. This will only be conducted once approval from the Department of Health is received.

This activity contributes to the overall PEPFAR 2-7-10 goals in the prevention arena.

New/Continuing Activity: New Activity

Continuing Activity:

Program Budget Code: 08 - HBHC Care: Adult Care and Support

Total Planned Funding for Program Budget Code: \$45,418,157

Program Area Narrative:

The vision for the PEPFAR South Africa Team for Adult Care and Treatment Team is to support the South African Government (SAG) policies and programs to provide comprehensive HIV care and treatment services to all those in need. It is estimated that currently 5.7 million people in South Africa are HIV-infected and that 1.7 million are in need of treatment.

The 2003 Comprehensive Plan for HIV and AIDS Care, Management and Treatment (Comprehensive Plan) states that its primary aim is comprehensive prevention, care, and treatment for all in need with the target of universal access to antiretroviral treatment (ART) over a five-year implementation period (2004–2009). The goals of this plan are reiterated in the new South African National Strategic Plan for HIV & AIDS and STI, 2007-2011 (NSP).

The USG has contributed significantly to these goals and targets, and with the support of the PEPFAR program 550,000 people are currently on ART in South Africa, and more than 1.4 million people receive appropriate care and support, including palliative care. South Africa has exceeded its PEPFAR treatment target of 500,000 set for September 2009 one year early and continues progress to meeting the care and support targets. The PEPFAR-funded treatment programs have maintained excellent retention since implementation in 2004. Cumulatively, only 15% of patients started on ART have died, stopped ART, or were lost to follow-up. Treatment and care partners are progressively improving their capacity to measure outcomes.

Only 13.7% of South Africans have access to medical insurance. The estimated 1.2 million people still in need of ART are primarily dependent on the public sector for care and treatment services. The number in need will continue to rise, especially in light of revised national guidelines raising the threshold for ART eligibility from a CD4 of 200 to 250.

Much more needs to be done to ensure that the ART coverage (currently estimated at 30%) comes closer to the targets set by the SAG. Maintaining the estimated 550,000 people on treatment and reaching the additional 1.2 million who need ART requires

continuous investment in treatment services in South Africa.

The National Department of Health (NDOH) has allocated approximately \$410 million USD for the implementation of the Comprehensive Plan in FY 2009 (prevention, care, and treatment), mainly through conditional grants to the nine provinces. According to the NSP Costing Plan, the total need for funding for ART alone in 2009 is \$710 million for adults and an additional \$128 million for children (total \$838 million), clearly indicating the need for additional funding and support to the SAG and civil society. Much of this funding is directed to the purchase of antiretroviral (ARV) drugs, since all drugs for the public sector ART program are procured and supplied by the SAG. The SAG also provides, in some instances, the ARV drugs for non-governmental and private sector programs with PEPFAR funding other service components. The USG is ideally positioned to support the implementation of the NSP by ensuring equitable access to quality HIV care and treatment through support to the SAG by PEPFAR-funded partners. Other contributing donors to the care and treatment program include CIDA, Ireland DCI, DFID, EU, The Global Fund, The Elton John Foundation, and several public-private partnerships. The USG meets with the major donors several times per year in various fora to discuss activities, explore collaborations, and minimize duplication of effort.

Challenges are even greater for Care and Support (C&S), as the majority of SAG funding for HIV & AIDS is for ART-related services. With the transition to a newly elected government in South Africa in FY 2009, it is envisioned that even greater cooperation between the USG and SAG will allow for collaboration on key issues, including accelerating accreditation of facilities, decentralizing care and treatment services to nurse-driven clinic level, and establishing better monitoring and evaluation indicators and systems in the public sector.

In FY 2009, the USG will continue to use a minimum requirement for someone having received C&S, including palliative care, which reflects a minimum standard of HIV-related services, aligning the program more closely to WHO standards. An HIV-infected individual must have received at least one form of clinical and one other type of non-clinical care. For HIV-affected family members, the minimum requirement would be that the individual receive services in at least two of the five categories of clinical, psychological, social and spiritual care, and prevention services. While quality is very difficult to measure through routine indicators, this reinforces the message that PEPFAR is not simply interested in counting the number of people reached, but trying to reach individuals with appropriate and quality care.

South Africa has a generalized mature HIV epidemic, and HIV care and treatment services are required across the entire population, though population-based data has shown that the highest burden of HIV is in urban and peri-urban areas. The USG utilizes prevalence information to direct its assistance to areas of greatest need, especially to ensure equitable access to ART for lower-density rural populations. C&S is delivered at all levels including hospitals, clinics, workplaces, hospices, and home-based programs in communities.

The key treatment priorities for the USG in FY 2009 are: 1) developing human capacity, especially at primary healthcare level; 2) strengthening decentralization of HIV care and treatment, including building capacity for nurse-initiated ART; 3) improving pediatric HIV care and treatment; 4) encouraging early identification of those in need for HIV care and treatment services (e.g. provider-initiated counseling and testing (CT)); 5) CD4 testing for those that test positive and dried blood spot PCR; 6) integrating TB care for HIV-infected clients, including screening and treatment; 7) continuing to strengthen the integration of treatment programs within other health interventions (e.g., PMTCT, cervical cancer screening and reproductive health); and 8) reducing loss to initiation of treatment of people that test HIV positive and loss-to-follow-up once on ART.

The key C&S priorities for the USG in FY 2009 are to strengthen quality HIV and AIDS palliative care service delivery and implement standards of care. PEPFAR will support this effort by: 1) strengthening the integration of the basic care package and family-centered services across all care and treatment programs for adults and children living with HIV; 2) increasing the number of trained formal and informal healthcare providers, building multidisciplinary teams to deliver quality care with pain and symptom control, and improving human resource strategies; 3) building active referral systems between community home-based caregivers (CHBC) and facility services; 4) developing quality assurance mechanisms, including integration of supervision systems and standardization of services and training; and 5) translating national policy, quality standards, and guidelines into action, particularly national adoption of the basic care package. PEPFAR partners will advocate for new national guidelines to improve access to pain management including the authority for nurse prescription. In collaboration with SAG, FY 2009 funds will scale up direct delivery of quality palliative care services.

All PEPFAR-funded care and treatment partners follow SAG standards, policies, and guidelines. The majority of care and treatment partners are local entities, and in addition, the three Track 1 treatment partners will start to transition to local implementing partners in FY 2009. The USG program continues to strengthen comprehensive high quality care for HIV-infected and affected people by: 1) scaling up existing effective programs and best practice models in approximately 900 public, private, and NGO sites in all 9 provinces; 2) providing direct care and treatment services through prime partners and their sub-partners; 3) increasing the capacity of the SAG to develop, manage, and evaluate care and/or treatment programs, including recruiting additional health staff, training and mentoring health workers, improving information systems, conducting public health evaluations, and infrastructure assistance; 4) increasing demand for and acceptance of ART through community mobilization; 5) ensuring integration of ART programs within palliative care, TB, reproductive health, STI, and PMTCT services; and 6) assisting in the accreditation of facilities for ART initiation.

Key linkages are made with prevention and wellness programs, which provide ongoing support for patients once they have tested positive for HIV, including opportunistic infection (OI) management, cotrimoxazole prophylaxis, and prevention with HIV-infected individuals. Care and treatment services are an ideal setting for formulating prevention messaging to HIV-infected clients and their families. Wellness programs are linked to strong community programs, notably home-based care networks that extend care from the facility level to the home.

Support for communications programs to improve demand for treatment and to improve treatment literacy remains an important

focus in FY 2009. These programs address health-seeking behavior among men and youth and strengthen prevention messages, especially on concurrent relationships. The USG ascribes the high rates of adherence and retention in treatment programs to the focus on treatment literacy and active community tracking and support.

Proposed care and treatment activities for FY 2009 include patient information systems logistic support for commodities and pharmaceuticals and public-private partnerships to deliver ARV services at workplace settings and through private practitioners serving the uninsured in remote areas. A significant contribution of PEPFAR-funded care and treatment partners to strengthen the health system is to address the human resource needs in the public sector through different strategies, including consultancies and secondments, national and international fellowships, internship and mentorship programs, and comprehensive clinical and management training.

The USG supports a holistic, family-centered approach to HIV and AIDS care that begins at the onset of HIV diagnosis, throughout the course of chronic illness, to end-of-life care. In order to ensure that all HIV-infected clients have access to basic care services and to minimize loss to initiation (currently at about 70%), PEPFAR partners will provide a basic package of services for all HIV-infected individuals. This package will include acceptance of status, disclosure, partner counseling and testing, prevention with positives (PwP), psychosocial support, nutrition counseling, pain assessment and referral, treatment literacy and adherence counseling, and outreach services to trace clients who have defaulted from the program. Emphasis will be placed on ensuring that HIV-infected individuals, who are eligible, receive cotrimoxazole as per national guidelines. This package of services will be offered at community level through support groups. These support groups (primarily run by PLHIV) will serve as a link between the health facilities and the community to ensure a continuum of care. Counseling and testing sites will refer all clients testing positive for HIV to the support group in their area.

Human capacity in the health-care system is under strain, and coordination between public and private sectors and facility and community-based care remains fragmented. FY 2009 investments will result in an improved continuum of clinical, psychological, spiritual and social care, and prevention services for PLHIV. The NDOH leads and coordinates national efforts to advance palliative care. Partnering with the NDOH at all levels, the PEPFAR partners will continue to support the integration of standardized quality palliative care services into primary healthcare and build HIV-related care services into CT, TB, ART, PMTCT, and prevention programs, as well as reproductive health services, STI sites, workplaces, and CHBC sites, including for OVC. This will build on previous investments in supportive care to improve access to preventive care and basic clinical care services for PLHIV at the community level.

The minimum care standard for facilities includes the following elements of the preventive care package and other essential care interventions, including: 1) prophylaxis and treatment for OIs, per national guidelines, cotrimoxazole prophylaxis for stage III-IV disease, CD4<200 or HIV-exposed/infected children; TB screening and management; isoniazid preventive therapy in selected sites, and candidiasis screening and management where the Diflucan/Fluconazole partnership exists; 2) CT to partners and family members; 3) nutrition counseling, clinical measurement and monitoring, micronutrient support according to WHO guidelines, and wrap-around support; 4) STI care; 5) routine screening and management of pain and symptoms; 6) child survival interventions for HIV-infected children (e.g., immunizations, growth monitoring, and infant/young child nutrition); 7) integrated PwP strategies including messaging, condoms, support for disclosure, referral for family planning, PMTCT services, ART adherence education, leading healthy lives, reduction of risk behaviors, and reduced rates of HIV transmission; 8) provision of at least one element of psychological, social, or spiritual care, or prevention services; and 9) referrals for other services.

The minimum standard for services at CHBC levels include messaging, mobilization, and referral (with follow-up) for the above mentioned services plus routine screening of all PLHIV and their family members (including OVC) for OI, TB, symptoms and pain, prevention messaging and condom provision, personal hygiene strategies to reduce diarrheal disease, and distribution of insecticide treated nets where appropriate. Home and community settings often facilitate delivery of a more comprehensive response including the provision of bereavement care, household support, and community group meetings. PEPFAR partners will continue to strengthen adherence to national standards with emphasis on relief of pain and symptoms and the provision of culturally appropriate end-of-life care. The package of services at facility and community levels also includes medication adherence support for ART, TB, and OI. At all levels, attention will be given to increasing gender equity in accessing HIV and AIDS programs, increasing male involvement in community programs, reaching pediatric patients, addressing stigma and discrimination, and building partnerships with local non-governmental and faith- and community-based organizations.

Table 3.3.08: Activities by Funding Mechanism

Mechanism ID: 4762.09	Mechanism: N/A
Prime Partner: Ubuntu Education Fund	USG Agency: HHS/Centers for Disease Control & Prevention
Funding Source: GHCS (State)	Program Area: Care: Adult Care and Support
Budget Code: HBHC	Program Budget Code: 08
Activity ID: 8263.22806.09	Planned Funds: \$72,818
Activity System ID: 22806	

Activity Narrative: ACTIVITY HAS BEEN MODIFIED IN THE FOLLOWING WAYS:

Ubuntu's care program is the integral service in the organization, as it binds all HIV and AIDS components. The care program is integrated with clinical services in counseling and testing (CT) and HIV management including antiretroviral (ART) readiness and adherence. Ubuntu has strong referral partnerships to help establish a continuum of care for people living with HIV (PLHIV) and their families and to coordinate access to service providers including clinics and hospitals, the Department of Social Development, the Department of Home Affairs, Childline, the Rape Crisis Centre at Dora Nginza Hospital, the National Institute for Crime Prevention and the Reintegration of Offenders (NICRO), Family and Marriage Society of South Africa (FAMSA), other community-based organizations (CBOs) and non-governmental organizations (NGOs), community home-based care providers, and hospice services.

Ubuntu is preparing to open the Ubuntu Centre in March 2010. The Ubuntu Center is a state-of-the-art wellness center which is currently under construction on Ubuntu's grounds in Zwide Township. The Ubuntu center will allow Ubuntu to provide comprehensive HIV-related palliative care services on our grounds including CT, access to treatment, CD4, viral load, TB, post-exposure prophylaxis (PEP) and pregnancy testing. Ubuntu's clinic will house an on-site pharmacy and laboratory. There is a great void in the townships communities of Port Elizabeth for Adult Care services. Ubuntu is in great demand by hospitals and clinics to provide complimentary services. Currently, Ubuntu receives hundreds of referrals by other NGOs and institutions to assist them in providing support. By strategizing with the South African Government, Ubuntu intends to make the Ubuntu center a resource within the system that will ease some of the incredible burden to care for a population with such high levels of poverty and HIV.

Ubuntu will hire a nutritionist to focus on providing nutritional assessments, counseling and provision of services for HIV-infected clients. The nutritionist will also provide technical assistance in the field. Ubuntu would also be able to track more clients in their homes through increasing client travel. This would allow Ubuntu to conduct ongoing assessments of hygiene and safe home environments as well as nutritional assessments including anthropometric, symptom and dietary assessment. This will be provided to all HIV-infected clients before and during ART.

Ubuntu will utilize the skilled team which includes a psychologist, nutritionist, social worker, educator, and a nurse to provide ongoing consultations to care workers in the field. Clients' files will be reviewed in a multi-disciplinary team setting to enable care workers to have technical guidance, mentorship and support. This will assist in providing high quality services for clients.

Ubuntu will increase staffing to provide support for Ubuntu VCT counselors that have been placed on-site to provide the "basic care package". The care workers will work with clinic lay counselors to ensure care monitoring for PLHIV, assistance and support in the treatment readiness and ART initiation phases including conducting required home visits for each client and providing comprehensive psychosocial support services. This will help ensure a cogent continuum of care for PLHIV. Clients will have access to male and female condoms and to prevention counseling, prevention with positives services, including risk reduction counseling, referral to PMTCT, couple counseling and identification of discordant couples.

Ubuntu will continue to work with the support and collaboration of the Nelson Mandela Metropolitan Department of Health and management of the Port Elizabeth Hospital System. These bodies convene a steering committee to strategize the roll out of HIV and TB care throughout the city of Port Elizabeth. Ubuntu has built strong ties and legitimacy with both of these stakeholders and was asked to join the committee due to its growing reputation as the premier Eastern Cape NGO providing these services.

This steering committee was established to deal with the HIV/TB crisis in the metro. The committee is comprised of ICAP, Ubuntu, Hope Worldwide, ARK and St. Francis Hospice. Each NGO is committed to working with a local clinic to develop strong systems for the continuity of care for TB and HIV services in the community. The committee is supported by the Nelson Mandela Metro and different members from the Department of Health's HIV and TB departments sit on the committee. This committee will enable Ubuntu to scale up services to focus in on TB/HIV co-infected individuals and create strong referral and monitoring systems for defaulters. Ubuntu is committed to TB/HIV activities in the geographic area and collaborating with the provincial and district departments to implement and monitor these activities.

Ubuntu has been able to enhance patient care in Port Elizabeth by partnering with Disease Management Systems to help maintain and utilize patient management software. By paying the costs of the software, providing data captures and all necessary infrastructures, Ubuntu has allowed doctors, nurses and the pharmacy to red flag problems with treatment and track and assist patients more effectively. This partnership with DMS will allow Ubuntu to receive a defaulter report with names and addresses. The Ubuntu care team will track down defaulters and understand why they are not receiving treatment. Ubuntu is uniquely positioned in the community for these services. There are no other organizations that are located in the community that have the clinical, care and transport capacity to provide these types of services. Ubuntu is perfectly positioned for this. The Ubuntu Center will enhance this capability.

Weekly support group facilitation will be provided by Ubuntu. Ubuntu will run 12 support groups for PLHIV and people affected by AIDS. Support groups will meet weekly and enable clients to discuss common issues and challenges they are facing as well as participate in HIV-related workshops. Each support group will be staffed with an Ubuntu facilitator. Ubuntu's support group members will be referred to Ubuntu's clinic garden program.

Ubuntu will maintain two existing organic vegetable clinic gardens to support HIV-infected clients. Ubuntu gardens assist HIV-infected clients to develop gardening skills and provide income for their families. Ubuntu gardens will also be a source of therapy for clients through working in the garden.

Ubuntu will support HIV-infected clients with care packages, which include nappies, gloves, cleaning supplies and other household support.

Activity Narrative: -----**SUMMARY:**

Ubuntu's activities will support comprehensive care services for people living with HIV (PLHIV) and their family members to improve HIV management and to stabilize their households through care and support. Palliative care services take place in the townships of Port Elizabeth, a city in the province of the Eastern Cape. Emphasis areas include addressing male norms and behaviors, increasing gender equity in HIV and AIDS programs, increasing women's access to income and productive resources. Specific target populations are PLHIV (including pregnant women, infants and children), HIV and AIDS affected families, discordant couples.

BACKGROUND:

Since 2005, Ubuntu has provided community and clinic-based care services for families coping with HIV and AIDS. Ubuntu uses a family-centered approach to provide care services to PLHIV. The care program is the integral service in the organization binding together all HIV and AIDS components. Ubuntu's care program is integrated with clinical services in CT and HIV management including ART readiness and adherence. Ubuntu has strong referral partnerships to help establish a continuum of care for PLHIV and their families and to coordinate access to service providers including clinics and hospitals, the Department of Social Development, the Department of Home Affairs, Childline, the Rape Crisis Centre at Dora Nginza Hospital, the National Institute for Crime Prevention and the Reintegration of Offenders (NICRO), Family and Marriage Society of South Africa (FAMSA), other CBOs and NGOs, community home-based care providers, and hospice services. With PEPFAR support, Ubuntu will reach more PLHIV and their family members with comprehensive care services.

Ubuntu became a PEPFAR partner in FY 2007 and has only recently received funds so does not yet have PEPFAR-funded results to report.

ACTIVITIES AND EXPECTED RESULTS:

Ubuntu will directly provide comprehensive care services, including elements of the preventive care package, including cotrimoxazole, for PLHIV from the office site in Zwide and clinic sites. Entry points to care services include referrals from Ubuntu's outreach and life skills program, clinic sites and walk-in clients. Based on need, families enrolled in the care program receive assistance to access health services, including CT and ART, monitoring of HIV disease progression, ongoing psychosocial support and counseling, risk reduction and couple counseling, referrals to PMTCT, access to South African government (SAG) grants, including disability, child support and foster care grants, home-based care, nutritional support and referrals to other service providers. Effort will be made to ensure equitable access to care services for both males and females. Household needs are assessed at intake and an action plan is developed that encompasses the care needs of each family member. Care services are linked to other Ubuntu services in gardening and higher education and career guidance.

Ubuntu addresses women's empowerment by providing female-headed households with SAG grant support and referring women to Ubuntu's Empowerment program providing skills training in areas such as catering and urban agriculture and income-generation projects including gender community gardens. The organization provides intensive legal referral for cases of domestic and gender-based violence, including access to post-exposure prophylaxis. Ubuntu focuses on increasing men's involvement in HIV and AIDS prevention, care and treatment services by encouraging men to access CT through couple counseling, promoting couples access to risk reduction counseling, ensuring men eligible for ART are not lost to follow-up, training male members of the family in home-based care and promoting male partner involvement in PMTCT.

PLHIV identified at the clinic sites will be monitored by Ubuntu staff including a professional nurse for on-time access to clinical services. The professional nurse's mandate is to provide quality assurance and technical support to clinic staff in HIV management and prevention with positives. Clinic sites are KwaZakhele Day Hospital in 2007, expanding to Zwide Clinic in 2008. Ubuntu care workers also regularly refer clients to other clinics in the target area and will coordinate services and referrals with other PEPFAR implementing partners operating from these sites.

Case managers will be placed onsite at the clinics to ease the high demand for psychosocial support services as ART rollout expands. The case managers will work with clinic lay counselors to ensure care monitoring for PLHIV, assistance and support in the treatment readiness and ART initiation phases including conducting required home visits for each client and providing comprehensive psychosocial support services. This will help ensure a cogent continuum of care for PLHIV. Clients will have access to male and female condoms and to prevention counseling, prevention with positives services, including risk reduction counseling, referral to PMTCT, couple counseling and identification of discordant couples. Weekly support group facilitation and meals are provided by Ubuntu as well as the provision of food parcels as needed for high poverty cases. Support group members are encouraged to enroll in Ubuntu's clinic gardening program. Ubuntu is encouraging clinic partners to make HIV management integral to all clinic services to reduce bottlenecks and destigmatize services.

Ubuntu proactively identifies children who have an increased risk for HIV exposure and ensures they receive access to CT, and provides access to treatment services for children and their caregivers who are affected by HIV. Ubuntu works with Dora Nginza's Pediatric ARV Unit to provide ongoing monitoring and support to children on ART. HIV-infected mothers will receive information and support for infant feeding, monitoring to ensure compliance with PMTCT protocols, as well as ensuring that infants complete their immunization schedules and receive necessary vitamin supplementation. Risk reduction plans are developed and ongoing counseling sessions scheduled for individuals identified with high-risk behavior. Ubuntu has several rape cases a year and will ensure that clients receive post-exposure prophylaxis (PEP)

Activity Narrative: for both pregnancy and HIV.

Client home visits are an integral part of care services, where signs and symptoms of illness are assessed, referrals made to health services, food parcels are provided with support from other funding partners, and advice given on the management of side-effects, nutrition and hygiene. Ubuntu care workers assist family members in providing home-based care, including oral and wound care and provide home-based care kits. Care workers engage family members in care services to destigmatize HIV and AIDS within family settings by providing correct information on transmission, treatment and other areas of concern. Ubuntu works with home-based hospice services to provide culturally-appropriate end of life care including referral to spiritual care of the patient's choice.

Ubuntu trains home-based caregivers in the SAG accredited 59-day curriculum.

PLHIV will receive at least one clinical and one other category of palliative care service. Palliative care to family members of PLHIV or OVC will be provided in at least two or the five categories of palliative care services.

These results contribute to the PEPFAR 2-7-10 goals of providing care and services to 10 million HIV-affected individuals by ensuring that individuals coping with HIV and AIDS receive timely HIV clinical services and their households are stabilized through psychosocial services for family members, as well as improved continuum of care for PLHIV through referral networks among service providers in Port Elizabeth. These activities also support the goals outlined in the USG Five-Year Strategy for South Africa by expanding and improving care and support services to needy populations.

New/Continuing Activity: Continuing Activity

Continuing Activity: 13848

Continued Associated Activity Information

Activity System ID	Activity ID	USG Agency	Prime Partner	Mechanism System ID	Mechanism ID	Mechanism	Planned Funds
13848	8263.08	HHS/Centers for Disease Control & Prevention	Ubuntu Education Fund	6632	4762.08		\$75,000
8263	8263.07	HHS/Centers for Disease Control & Prevention	Ubuntu Education Fund	4762	4762.07	New APS 2006	\$100,000

Emphasis Areas

Gender

- * Addressing male norms and behaviors
- * Increasing gender equity in HIV/AIDS programs
- * Increasing women's access to income and productive resources
- * Increasing women's legal rights
- * Reducing violence and coercion

Health-related Wraparound Programs

- * Child Survival Activities
- * Safe Motherhood
- * TB

Human Capacity Development

Estimated amount of funding that is planned for Human Capacity Development \$686
