INFORMATION MEMO FOR AMBASSADOR CLOUD, Botswana

FROM: S/GAC – Ambassador Deborah L. Birx, MD

SUBJECT: FY 2020 PEPFAR Planned Country Allocation and Strategic Direction

Dear Ambassador Cloud:

First, I wanted to personally thank you and Deputy Chief of Mission for your dedication to PEPFAR and working every day to achieve the most possible with the United States taxpayers' dollars. The ability to translate these resources into effective and impactful programming has and continues to be core to our collective progress. Your PEPFAR team in country has worked very hard to look at all aspects of our HIV response, understand the current epidemic, and work together to address all gaps. We are fortunate to witness their passion and compassion. We understand there is still uncertainty in exact state of the pandemic in Botswana so it will be critical to work together to develop the best plan and budget moving forward. In addition, we are very excited about your progress in:

- Working collaboratively with the Government of Botswana (GOB) and other key stakeholders, PEPFAR Botswana moved quickly to adopt all COP 2019 minimum program requirements plus the policy of free anti-retroviral therapy (ART) to non-citizens, thereby addressing numerous structural barriers that had long been impeding efficient case-finding, immediate treatment access, and viral load monitoring.
- PEPFAR Botswana's de-emphasis of active case finding and renewed commitment on establishing durable improvements across the treatment cascade through same-day treatment initiation, client retention, viral load testing, and bringing those lost to follow-up back to care have demonstrated encouraging results and has better positioned Botswana to advance toward epidemic control.
- The fifth Botswana AIDS Impact Survey (BAIS V) is moving forward after a multiyear delay and will provide high quality HIV surveillance data in May 2020, data which is essential for optimizing resources toward the unmet need and reaching epidemic control in Botswana.

Together with the Government of Botswana and civil society leadership we have made tremendous progress. Botswana should be proud of the progress made over the past 16 years of PEPFAR implementation and we are deeply grateful for the ongoing deep coordination with the Global Fund and UNAIDS. This next year will define our collective progress and point us together towards a future achieving SDG 3.3.

<u>UNCLASSIFIED</u>

We did want to highlight both overarching issues we see across PEPFAR and a few specific to Botswana. Full details will follow in a more comprehensive letter from your S/GAC Chair and PPM.

Throughout the PEPFAR family of supported countries and communities, five gaps are shared across the globe holding us collectively back from achieving Sustainable Development Goal 3 related to controlling the HIV AIDS epidemic:

- Continued new HIV infections in adolescents and young women
- Supporting key populations with prevention and treatment services
- Ensuring men are diagnosed and treated early (testing positive and new on treatment (linkage surrogate))
- Ensuring 15-35-year-old asymptomatic clients are maintained on treatment and virally suppressed (net new on treatment and treatment current growth, (retention surrogate))
- Ensuing all children are diagnosed and are on the best treatment regimens and virally suppressed

Moreover, we note the following challenges specific to PEPFAR Botswana:

- The minimum program requirements and COP 2018 "reboot" lessons learnt have yet to be fully implemented so as to translate into sustained, quality program performance at the site level across all sites and districts.
- Men and youth continue to lag behind others across the treatment cascade.
- Addressing gaps will require that the new policies and capacities are implemented with the client front of mind, in innovative ways that serve all Batswana and their diverse geographic, demographic, and economic needs.
- PEPFAR Botswana must develop the evidence base of solutions and structures that can address known gaps and that support client-centered quality care that will be foundational for cost-effective COP 2020 programming and leveraging the BAIS V.
- PEPFAR Botswana needs to evaluate its current implementing partner structure and determine how to better unify and harmonize partners/performance across the HIV response in accordance with the COP 2020 patient and family-centered approach, and strengthen active partner management across all agencies to ensure continuous quality improvement.

In a recent Office of Inspector General audit around PEPFAR coordination there were four draft preliminary recommendations based on their discussions with PEPFAR staff in the field from four countries, three of their recommendations are relevant to this Country Operational Plan planning cycle related to target setting, tool development, and timelines. Although we just received the draft report a few days ago we did not want to wait another COP cycle to make substantive changes related to the recommendations. The first was around targets and target-setting and the need for a clear and transparent understanding and dialogue in establishing

targets. PEPFAR targets are not PEPFAR's, but flow directly from the UNAIDS Fast Track Strategy of 2016. Since 2016, both the PEPFAR strategy and targets were directly derived from the global communities of UNAIDS, WHO, and specifically Heads of State in their commitment to SDG 3 and are aligned to support the country's specific ambition towards those goals.

The global community in 2015 through their Heads of State committed to achieving SDG 3.3 by 2030 which for HIV is ending the HIV/AIDS epidemic as a public health threat. This was followed by a United Nations High Level Meeting on HIV/AIDS in June 2016, whereby these Heads of State committed to the 90/90/90 Fast Track Strategy. Essential to the strategy was 73% community viral load suppression (VLS) by 2020 and 86% community VLS by 2030 combined with increased prevention interventions and zero stigma and discrimination to ensure all ages, genders and risk groups have access to life saving prevention and treatment services. Also, in 2016, 22 PEPFAR-supported high HIV burden countries committed to the three Frees of Start Free, Stay Free, AIDS Free with 2020 targets of a decrease in new infections in children to 20,000, 85% of pregnant women on ART, AGYW new infections to < 100,000, 90% of children on ART and 25 million VMMCs. Since 2016 PEPFAR and the GF resources have been focused on achieving these global goals that have been translated to each country by UNAIDS and subsequently supported financially and technically by the PEPFAR family. Since 2016, PEPFAR has utilized these global commitment targets as PEPFAR targets with the commensurate increased funding to countries in 2016, 2017, and 2018 to achieve the goals set out by the Heads of State. Many countries have made tremendous progress towards these targets and others need to accelerate. Botswana has made terrific progress and can move quickly to be on track for both 2020 and 2030 goals.

Over the past 4 years, PEPFAR resources were allocated based on need, performance, and specifically on the country's and communities' desire to achieve the SDG, Fast Track Strategy, and Three Free goals and country specific targets. Based on the OIG recommendation, S/GAC will take a different approach this year to target-setting. Our collective hope is that together we use this moment of reflection on progress and challenges along with the realization that the end of 2020 is only 11 months away to address these overarching challenges this year through COP 2019 implementation and use COP 2020 to maintain our progress, address any ongoing challenges and finally fund ambition for greater impact. Thus, S/GAC will not assign targets to countries but only provide notional budget levels. After the PEPFAR country team submits their targets the notional budget will then be adjusted to the presented level of ambition. Additional funding is available as ambition funding for treatment and VMMC.

The PEPFAR Country/Regional Operational Plan (COP/ROP 2020) notional budget is **\$68,705,000** inclusive of all new funding accounts and applied pipeline and reflects the following:

- 1. Sustaining the gains in treatment services based on your projected COP 2019 treatment result (FY2020 treatment current funded in COP19) \$38,100,000
 - a. The care and treatment budget is determined by all of your FY18 C/T expenditure services and commodities (no RTK commodities), including all aspects of the health system inclusive of human resources, laboratory and systems, commodities (exclusive of RTKs), an upward adjustment from FY19 treatment current to the

UNCLASSIFIED

- 4 -

FY2020 treatment current fully burdened cost of treatment services and commodities, and 100% of program management costs and data needs

- b. This Budget is broken down by
 - i. Care and Treatment services including partner program management costs, FY2020 upward adjustment, EMR and data with surveillance, recency \$25,000,000
 - ii. ARV drugs and treatment commodities (everything except RTKs) \$5,000,000
 - iii. TB preventive treatment \$1,200,000
 - iv. Cervical cancer \$1,000,000
 - v. For earmark purposes 50% of M/O costs \$5,900,000
 - vi. Care and Treatment qualifies for ambition funds if addresses gap #3-5
- 2. Continued orphans and vulnerable children funding to include DREAMS vulnerable girls less than 20-year-old. \$18,930,000
 - a. OVC services \$1,600,000
 - b. DREAMS funding of \$19,000,000 of which 85% is for vulnerable girls under 20 \$16,150,000
 - c. 10% of M/O or \$1,180,000
- 3. Continued VMMC funding based on your percent of VMMC in the appropriate age band of >15 years old
 - a. Total VMMC \$1,600,000
 - b. VMMC qualifies for ambition requests
- 4. Dramatic expansion of DREAMS programming \$19,000,000 as noted above of which \$16,150,000 is for vulnerable girls under 20, and the remainder of \$2,850,000 is for other DREAM programming.
- 5. Continued expansion of Key Populations prevention and expansion of PrEP depending on country submitted targets
 - a. Key Population (non-treatment) \$1,900,000
 - b. PrEP total: \$500,000
- 6. RTK and service support to ANC HIV testing \$105,000
- 7. Remaining 40% M/O based on COP19 \$4,720,000

Total COP2020 notional budget of \$68,705,000 (comprised of 63,308,551 new and \$5,396,449 pipeline).

Overall, across the PEPFAR portfolio, we have dramatically increased DREAMS funding to prevent new infections in adolescent girls and young women. For the first time we find across all districts implementing DREAMS, declines in new diagnoses of HIV in young women. These funds should be used to expand to the highest burden districts not currently covered and to saturate in urban areas.

Teams will develop their own targets across PEPFAR program areas described above, with the treatment current target no less than the result that was to be achieved in COP 2019. Testing support outside of ANC should be consistent with any targets above FY2020 treatment current and be submitted with any ambition funding. Targets reflecting continued and sustained OVC

<u>UNCLASSIFIED</u> - 5 -

programming and KP programming. For DREAMS, PrEP, cervical cancer and Preventive TB, increased targets consistent with the level of increased budgets.

Again, the team has received a notional budget as noted above and a final budget approval will be contingent on the team's desired targets. As always funding is associated with a performance target that will be achieved with those resources. Targets and the subsequent approved budget should reflect the level of ambition the PEPFAR team in collaboration with the Government of Botswana and civil society of Botswana believes is critical for the country's progress towards controlling the pandemic and maintaining controlling.

Additionally, country teams and specifically agencies independently can request additive ambition funds in the OU FAST to be submitted, based on their stated increased ambition in Treatment and VMMC, with commensurate increased partner level targets. This funding is available to agency partners with the highest performance with evidence that they are addressing the one of the critical gaps outlined above. Budget requests must be consistent with the cost of expanded targets and address one of the gaps in programming #3-5 above. These requests should be discussed with the S/GAC chair and PPM during the January strategy retreat and tentatively approved and be submitted with the DataPack and FAST tool. The final budget and associated country level targets will be discussed and approved during the Johannesburg meeting.

We are hoping this new approach to target-setting and budget will establish an open dialogue on target-setting and empower teams to work with all stakeholders to plan a strategic and impactful COP. The expectation is for country teams and agencies to propose to S/GAC the targets they believe are achievable and feasible and hold their partners accountable to that achievement. In addition, this new approach to target-setting gives high performing partners and agencies with additional aspirations the opportunity to do more to achieve even greater impact with additional ambition resources.

In the next 48 hours, more detailed descriptions of OU's programmatic successes and challenges will be conveyed to your wider PEPFAR team by the S/GAC Chair and PPM in a phone call, after which the detailed planning level letter will be immediately released.

Again, thank you for your work and we are looking forward to working with you to achieve your Fast Track Strategy and ultimately the SDG 3 goal.

Together we can.

Deborah Birx

COP 2020 Planning Level Letter | PART 2

INFORMATION MEMO FOR AMBASSADOR CLOUD, Botswana

SUBJECT: FY 2020 PEPFAR Planned Country Allocation and Strategic Direction

Dear Ambassador Cloud:

With input from the field teams through the quarterly POARTs and from Headquarters Country Accountability and Support Teams, we have thoroughly reviewed progress of the program in your country over time and specifically the end of year results of the Country Operational Plan (COP) 2018 and current COP 2019 implementation as we plan for COP 2020. We have noted the following key successes and specific areas of concern.

Responding to the directive to "reboot" mid-COP 2018, PEPFAR Botswana has since made impressive progress. We applaud the Government of Botswana (GOB) and PEPFAR Botswana working together to achieve the rapid adoption of all 2019 minimum program requirements including that of providing free antiretroviral therapy (ART) to non-citizens. The "reboot," aimed at addressing the lack of recent progress, systemic underperformance, and uneven policy adoption was a difficult transition. Both the GOB and PEPFAR Botswana faced the challenges head on and together the result is that numerous structural barriers that had been impeding efficient case-finding, immediate treatment access, and viral load monitoring for years have been eliminated. Well done. This progress on the policy front was combined with a de-emphasis of active case finding and a renewed focus on establishing durable improvements across the treatment cascade through same-day treatment initiation, client retention, viral load testing, and bringing those lost to follow up back into care. Combined, these changes in the program have undoubtedly better positioned Botswana to stem their national HIV epidemic.

In addition, we are encouraged by the prospect of quality HIV surveillance data from the fifth Botswana AIDS Impact Survey (BAIS V) being available later this year. That data is essential for optimizing resources according to unmet need. To fully leverage the upcoming BAIS data, more work in COP 2019 and beyond is needed to ensure that the new policies are fully implemented and operationalized so as to translate into sustained programmatic gains at the site level, district level, and ultimately nationwide.

While the COP 2018 trends on linkage, retention, and viral load testing are encouraging, and the minimum program requirements have been adopted, the evidence suggests that across the

treatment cascades men and adolescents are lagging behind and improvement in client-centered care is necessary.

Therefore, for COP 2020 and in anticipation of COP 2020 and the availability of BAIS V data, PEPFAR Botswana will need to develop the evidence base of solutions/structures that that address known gaps, such as men and adolescents, and focus on delivering sustainable clientcentered quality care. HIV testing will need to be transformed into case-finding and improved facility and community collaboration will be needed to ensure effective implementation of active partner notification. Addressing the remaining gaps and attaining 95/95/95 will require implementing the new policies and capacities such as index testing and differentiated service delivery in innovative ways that keep the client front of mind and serve the diverse geographic, demographic, and economic needs of all Batswana. The team must also evaluate its current implementing partner structure and determine how to better unify and harmonize partners/performance across the HIV response in accordance with the COP 2020 guidance of a patient and family-centered approach. Finally, developing systems that will enable epidemic control will also require that a process for continuous quality improvement and community led monitoring of quality and accessibility be put into place. These, along with case management data systems, are systems consistent with assuring that clients are continuing with uninterrupted,

SECTION 2: COP 2020 BUDGETARY REQUIREMENTS AND OTHER CONSIDERATIONS

Countries should plan for the full Care and Treatment (C&T) level of \$38,100,000 and the full Orphans and Vulnerable Children (OVC) level of \$18,930,000 from Part 1 of the PLL across all funding sources. These earmark levels on new funding are subsets of those amounts that must be programmed with specific types of funding due to Congressional requirements. The full amount programmed across all sources will be visible in the FAST.

TABLE 2 : COP 2020 Earmarks by Fiscal Year								
Earmarks	COP 2020 P	COP 2020 Planning Level						
Earmarks	FY20	FY19	FY17	Total				
C&T	\$ 28,000,000	\$-	\$-	\$ 28,000,000				
OVC	\$ 11,600,000	\$ -	\$ -	\$ 11,600,000

* Note that the testing and treatment targets above reflect those currently in DATIM. During the COP 2019 approval process, testing and treatment targets were revised to reflect the "reboot" process, but were not updated in DATIM. Therefore the revised targets were not divided by agency.

The COP 2019 planning level letter, which shows the revised OU-level targets, is available at: <u>https://www.state.gov/wp- content/uploads/2019/08/Botswana.pdf</u>

COP 2018 | FY 2019 Analysis of Performance

Case-Finding (active case finding was de-emphasized in reboot and community testing was stopped).

- PEPFAR Botswana should evaluate the diagnosis and testing policy across sites, in particular for TB and PMTCT, to ensure that partners are in line with WHO guidance.
- The COP 2018 distribution of HTS_TST_POS across modalities is not consistent with a strong, targeted, case-finding strategy characteristic of Botswana's stage in epidemic control. For example, other PITC contributed to 38% of HTS_TST_POS, while index testing (facility and community combined) contributed 16%. Testing will need to be transformed into case finding and facility and community collaboration is likely to be core to effective implementation of active partner notification strategies.
- During COP 2018 index testing implementation over the four quarters, elicitation acceptance rate ranged from 71% to 100%, contacts elicited per index case ranged from 1.0 to 2.1, and percent positivity ranged from 11% to 18%. The team should scale index testing with fidelity to ensure consistency and improved performance.
- University of Washington I-TECH (HHS/HRSA) is the main testing partner and shows 96% of the budget expended. HTS_TST_POS achievement was 11,333 against an original target of 23,833. Moving forward, the testing program will need to use funding more efficiently, focusing on high-yield modalities such as index testing and on known gaps and gaps as identified/affirmed by the BAIS.

Care and Treatment

- Overall OU performance of linkage during the reboot was promising, improving from 78% in FY 2019 mid-Q2 to 91% at the end of FY 2019 Q4, with increasingly improved linkage expected through FY 2020 as non-citizens are now able to access ART. PEPFAR Botswana should continue to work closely with the GOB to ensure same-day or rapid (<7 days) initiation of ART for all eligible clients, including non-citizens.
- Quarter-by-quarter gains and losses show challenges with retaining men and AGYW, particularly in Gaborone. Linkage and retention of treatment should be a key focus of COP 2020, particularly among these populations.
- Differentiated service delivery approaches and multi-month dispensing showed promise for improved retention and should be scaled.

Viral Load

• Overall OU viral load coverage and suppression have improved (96% and 98%, respectively). PEPFAR Botswana should improve the use of data to quickly identify sites

UNCLASSIFIED -9-

experiencing issues with viral load coverage and suppression for rapid response.

Cervical Cancer

• Though the target was not achieved, results from the cervical cancer program are promising, with a result of 15,191 or CXCA_SCRN_N against a target of 25,000. The team should ensure that cervical cancer screening is reaching all women living with HIV.

<u>VMMC</u>

 Overall OU performance of VMMC_CIRC was 21,010 against a target of 26,301. In COP 2018, 54% of VMMC results came from school-age children below the age of 15. Per COP 2020 technical guidance, PEPFAR Botswana should conduct VMMC only for males 15 and older, with a few caveats that must include full informed content. PEPFAR Botswana should update and adapt its VMMC strategy to better reach men ages 15-49.

OVC

• PEPFAR Botswana should ensure that OVC guidelines are followed with fidelity, including reporting for OVC_SERV per MER 2.4 guidelines, and at least 90% of children and adolescents on ART with PEPFAR support in OVC SNUs should be offered the opportunity to enroll in the comprehensive OVC program.

DREAMS

• COP 2018 results for DREAMS raised concerns regarding the number of AGYW, particularly young women ages 20-24 who did not complete the DREAMS primary package and the small scale of the program relative to other countries. In COP 2020, DREAMS is being expanded and Botswana is receiving an increase in new funding to expand into new districts and scale up PrEP. PEPFAR Botswana must ensure DREAMS is implemented in all priority, high prevalence districts with fidelity and address the challenges that have kept AGYW from completing the primary package to date.

Key Populations

• FHI360 Linkages (USAID) is the main key population partner in Botswana. 94% of the budget was expended. Linkages performed well against targets, including 107% against HTS_TST_POS and 97% against TX_NEW. However, the testing yield for MSM was 7.7% and for FSW was 12.4%, and the scale of the program remains relatively small compared to the budget. As EpiC begins implementation in COP 2019, PEPFAR Botswana should closely monitor progress and results, including whether partners are in the right networks, key population testing yields, and linkage to PrEP for all those testing HIV-negative.

SECTION 4: COP 2020 DIRECTIVES

The following section has specific directives for COP 2020 based on program performance noted above. Please review each section carefully including the minimum program requirements and specific country directives.

Table 8. COP 2020 (FY 2021) Minimum Program Requirements

UNCLASSIFIED -16-

In addition to meeting the minimum requirements outlined above, it is expected that Botswana will:

Table 9. COP 2020 (FY 2021) Botswana Technical Directives

Patient and Family-Centered Approach

Overall COP 2020 guidance focuses on ensuring a patient and family-centered approach to improve linkage and retention. PEPFAR Botswana should:

- Work as an interagency team, and with the GOB and implementing partners, to improve the integration of client services and of community and facility approaches, with a focus on reaching clients where they are and reducing loss to follow-up.
- Continue to implement the community component using GOB community health workers to track and trace patients, improve retention, and reduce loss to follow-up.
- Continue to support GOB facility-based community care programs, especially where donor support is not available.

Data Use and Data Quality

Data collection, use, and analysis and improved data quality are essential for better understanding of the HIV epidemic and reaching epidemic control in Botswana. PEPFAR Botswana should:

- Work closely with the GOB on completion of the BIAS V, and be prepared to adapt and/or realign the program as needed once data is available.
- Work closely with the GOB to ensure quality data is collected through improvement of electronic medical records, including ongoing work on PIMS interoperability with IPMS.
- Consistently and continuously use and analyze data with the aim of program improvement. Triangulate available data, including (but not limited to) the GOB-led MPR monitoring tools, MER results, custom community program indicators, SIMS results, site mapping, and other available survey and surveillance results.

Case Finding

PEPFAR Botswana should implement a case finding strategy consistent with its high level of epidemiological control, focusing on men and adolescents, and maintain and scale reboot activities that have proven successful at improving testing performance. This includes:

- Scale-up and optimization index testing
- Strengthening of facility and community collaboration to ensure effective implementation of active partner notification
- Scale-up and optimization of self-testing to enhance active partner notification
- Introduction of recency testing to guide case finding
- Testing all children of HIV positive mothers.

Care and Treatment

PEPFAR Botswana should focus on linkage and retention on treatment, especially sites and age/sex groups with poorer linkage and retention results, particularly for men and adolescents. Botswana should scale up linkage to treatment and retention activities that have shown impact during the reboot, and continue to explore male-friendly service delivery models.

PMTCT

PEPFAR Botswana should work closely with the GOB to strengthen viral load coverage and reporting for pregnant and breastfeeding women, and improve early infant diagnosis coverage at two months.

Cervical Cancer

PEFAR Botswana should work closely with community systems to enhance cervical cancer prevention awareness and demand creation among women living with HIV. The team should ensure that cervical cancer screening is reaching all women living with HIV, and as possible expand to more high-volume ART sites and SNUs to reach more women living with HIV. Thermal ablation should be considered as the primary treatment modality.

Supply Chain and Commodities

PEPFAR Botswana should work closely with the GOB to:

- Expand and accelerate the use of decentralized distribution models of ARV to improve patient retention and adherence to ART.
- Support host government ownership of commodity procurement and supply chain by strengthening procurement and contract management systems and advancing pooled procurement approaches to achieve cost savings.
- Leverage the private sector in supply chain implementation to bring efficiencies and increased value in the supply chain system.

COP 2020 Technical Priorities

Client and Family Centered Treatment Services

COP 2020 planning must specifically and thoroughly address the challenge of interrupted antiretroviral treatment and client loss, especially among young adults. Maintaining epidemic control, as measured by the proportion of PLHIV with viral suppression, will require long-term, continuous ART for a population that is often young and asymptomatic— and for whom HIV treatment is easily interrupted by drug side effects, inconvenience, lack of time, poor customer service, stigma and discrimination, or life circumstances. Maintaining long-term viral suppression necessitates planning and implementing services that are convenient and fit the lives of the clients, and make it easy for patients on ART to continue treatment. PEPFAR requires development and full implementation of key client-centered policies and practices at the site-level, including optimized treatment (dolutegravir-based therapy) and multi-month dispensing, convenient ARV pick-up arrangements, and community and client participation in design and evaluation of services. Botswana must ensure 100% "known HIV status" for biological children of TX_CURR clients (15+), including chart review and retrospective elicitation of eligible biological children.

Community-led Monitoring

In COP 20, all PEPFAR programs are required to develop and support and fund a community-led monitoring activity through State Department Ambassador's small grants in close collaboration with independent, local civil society organizations and host country governments. Collaboration with community groups, civil society organizations and patients/beneficiaries can help PEPFAR programs and health institutions diagnose and pinpoint persistent problems, challenges, and barriers to effective service and client outcomes at the site level.

UNCLASSIFIED -18-

Pre-Exposure Prophylaxis (PrEP)

Groups to be prioritized for PrEP include those testing negative in index testing but remaining at increased risk of HIV acquisition by virtue of unprotected exposure to a PLHIV with unsuppressed viral load, key populations including sex workers, men who have sex with men, transgender persons, people who use drugs, adolescent girls and young women, including pregnant and breastfeeding women, in areas with high HIV incidence or with high risk partners, and other identified serodiscordant couples. (Groups will be tailored to country context).

TB Preventive Treatment (TPT)

TPT is considered routine HIV care, and all country programs must have offered TPT to all PLHIV on treatment by the end of COP 2020; targets have been set accordingly. Countries should budget for full coverage, and plan to use optimal regimens (3-HP) as supply allows.

DREAMS

DREAMS is receiving an increase in new funding which should be used for the following:

• <u>Interagency expansion into new districts</u>: The following 6 districts should receive new DREAMS funds for COP 2020. These districts have very high incidence (1-1.36%), over 10,000 PLHIV, but have no DREAMS or Global Fund AGYW presence.

		A			
Country	DREAMS SNU	UNAIDS F15-24	PLHIV		
		Incidence UNAIDS	(COP19		
	_	Estimate Incidence	DataPac		
.	•	- Classification	k)		
Botswana	Bobirwa District	1.36 Very high	18,667		
Botswana	Francistown District	1.30 Very high	25,378		
	Palapye District	1.10 Very high	11,899		
Botswana	Boteti District	1.06 Very high	13,111		
	Selibe Phikwe District	1.06 Very high	12,159		
Botswana	Southern District	1.00Very high	14,585		

- Note: The geographic expansion mentioned here is limited to NEW DREAMS funds. Any expansion within the existing DREAMS envelope is subject to the criteria laid out in COP 2020 guidance (i.e., must have reached saturation, must have shown
 progress via WAD modeling data, or some other data).
- <u>PrEP</u>: Significantly scale-up PrEP for AGYW in all DREAMS districts.

• Minimum Requirements for new funds: To receive additional funds, Botswana must

- present a strategy and a timeline at the COP meeting for the following:
 - Hire a dedicated DREAMS Coordinator (100% LOE)
 - Hire a DREAMS ambassador for each district to support DREAMS coordination and oversight
 - Implement approved, evidence-based curricula in line with the current DREAMS Guidance
 - Ensure a fully operable layering database with unique IDs across IPs and SNUs
 - Ensure a full geographic footprint in all districts

UNCLASSIFIED -19-

• Address challenges and ensure DREAMS implementation in all districts with fidelity

In addition, DREAMS Botswana should focus on the following:

- <u>Layering:</u> Ensure that each AGYW in DREAMS receives a layered package of services. Q4 AGYW_PREV data show that 26-96% of AGYW in DREAMS have not completed the full primary package of services, with the largest challenges in the 20-24 year old age band.
- Reach and enroll more AGYW. The number of AGYW reached in Botswana is very low compared to other DREAMS countries with similar budgets.
- <u>Violence Against Children Survey:</u> The Botswana VACS Report was released in December. Findings should be used to inform areas of focus and targeted interventions throughout COP planning.

OVC

To support the Minimum Program Requirement described above, in COP 20 clinical sites and OVC implementing partners should jointly develop formal relationships, such as a memoranda of understanding (MOU), outlining the roles and responsibilities of each member of the multidisciplinary care team and addressing key issues such as bi-directional referral protocols, case conferencing, shared confidentiality, and joint case identification. PEPFAR-supported treatment clinicians should play a key role in training OVC community case workers to build their knowledge in areas such as adherence, retention, and disclosure.

<u>VMMC</u>

Funds have been provided to conduct VMMC for males 15 years or older. The team is reminded of the revised guidance which allows surgical VMMC under the age of 15 only by the dorsal slit method and only for those who have attained Tanner stage 3 or higher of development and are able to provide full informed consent for the procedure. While Shang ring may be considered for those below age 15 regardless of Tanner stage, the same informed consent issues apply. All VMMC providers must adhere to the requirements for reporting of Notifiable Adverse Events.

Cervical Cancer Screening and Treatment:

Funding for cervical cancer screening and treatment of pre-invasive lesions. The target for screening must be equal to half of the TX_CURR for women age 25-49. All teams performing cervical cancer screening must adhere to the PEPFAR screening guidance. Basic treatment should be available for pre- cancerous lesions at the site of screening except under exceptional circumstances. All sites performing screening should establish clear referral mechanisms for patients needing treatment not available on site such as LEEP or evaluation for potential invasive cancer. Patient referral between sites should be facilitated and outcomes of the referral tracked to assure appropriate treatment and to allow reporting of results.

PLHIV Stigma Index 2.0

PEPFAR teams are required to either fund host country PLHIV network-led implementation of the revised Stigma Index 2.0, or complement Global Fund or other donors financing implementation of the Stigma Index 2.0, if it has not already been implemented in the OU. This revised U.S. government compliant version can begin the process of baseline data collection for evaluating the future impact of interventions on reducing stigma, and can inform future HIV

UNCLASSIFIED -20-

program planning. If the revised Stigma Index 2.0 has not been previously conducted in the OU, then PEPFAR teams must work with UNAIDS, Global Fund or other donors to ensure its implementation during COP 20, whether supported by PEPFAR or other resources.

COP 2020 Stakeholder Engagement (see section 2.5.3 of COP Guidance)

Sustained control of the HIV/AIDS epidemic necessitates that PEPFAR teams actively and routinely coordinate and communicate with all partners, including local, regional and international civil society and community stakeholders, multilateral partners and the host country government. With your leadership, PEPFAR is leading the way in facilitating transparent processes and in sharing data and results. Continued meaningful engagement with these groups throughout the development and implementation of COP 2020 remains a requirement for all PEPFAR programs, and as such the COP 2020 process will engage with stakeholders early and frequently. This engagement specifically includes the sharing of FY 2019 Q4 and FY 2019 APR results and analyses and the convening of an in-country planning retreat with local stakeholders during the last two weeks of January 2020 in order to introduce and discuss all COP 2020 tools, guidance, results and targets as well as the proposed trajectory and strategy for COP 2020. It is critical that meaningful involvement of civil society and community input is solicited and incorporated in every step of the process. In alignment with sustained control of the epidemic, the intentional outreach and inclusion throughout this process of civil society and community organizations that directly work with key and priority populations should be a priority of the PEPFAR field team. The PEPFAR investments to support the national response must be planned intentionally with the Global Fund New Funding requests with teams demonstrating how complementarity was achieved to ensure maximal impact on the HIV/AIDS epidemic is achieved.

In February and March 2020, PEPFAR will convene in-person meetings in Johannesburg, South Africa, Bangkok, Thailand, and Atlanta, GA where outstanding decisions will be discussed and finalized. In addition to host-country representatives, the meetings will also include representatives from local and international civil society and community organizations and multilateral partners. Specific guidance for the 2020 meeting delegations have been provided elsewhere. Engagement with all stakeholders is required beyond the meetings and throughout the COP 2020 development and finalization process. As in COP 2019, the draft Strategic Direction Summary (SDS) and Data Pack are required to be shared with stakeholders for their input and comments at least 72 hours prior to submission of these materials to the Embassy Front Office. Please refer to the COP 2020 Guidance for a full list of requirements and engagement timelines.

UNCLASSIFIED -21-

APPENDIX 1: Detailed Budgetary Requirements

COP19 Performance	\$ -					2				\$ -
HKID Requirement ++	\$ 1,600,00 0				0					\$ 1,600,000
										<mark>\$ -</mark> \$ -
										\$ - \$ -

Table 10: COP 2020 New Funding Detailed Initiative Controls

++DREAMS countries with GHP-USAID funding can use FY20 GHP-USAID funding to meet their FY20 HKID Requirement. These countries include: Kenya; Nigeria; South Africa; Tanzania; Uganda; and Zambia

<u>Care and Treatment</u>: If there is no adjustment to the COP 2020 new funding level due to an adjustment in applied pipeline, countries must program to the full Care and Treatment amount from Part 1 of the planning level letter across all funding sources. Additionally, due to Congressional earmarks, some of the care and treatment requirement must be programmed from specific funding sources, as indicated above in Table 2. Your care and treatment requirement for the purposes of Congressional earmarks is calculated as the sum of total new FY 2020 funding programmed to the HTXS, HTXD, HVTB, HBHC, PDTX, PDCS, HLAB budget codes, 80% of the total funding programmed to the MTCT budget code, and 50% of the total funding programmed to the HVCT budget code.

<u>Orphans and Vulnerable Children (OVC)</u>: Countries must program to the full OVC amount from Part 1 of the planning across all funding sources. Your OVC requirement is made up of the HKID Requirement (see details below) and 85% of the DREAMS non-HKID programmed funds for all new FY 2020 funds. Additionally, due to Congressional earmarks, some of the OVC requirement must be programmed from specific funding sources, as indicated above in Table 2. The COP 2020 planned level of new funds for the OVC earmark can be above this amount; however, it cannot fall below it.

<u>HKID Requirement:</u> Botswana's COP 2020 minimum requirement for the HKID budget code is reflected in Table 3 and is a subset of the OVC earmark. Your COP 2020 HKID requirement is derived based upon the approved COP 2019 HKID level inclusive of OVC and prevention intervention for children under 19 budget codes. The COP 2020 planned level of new funds for HKID can be above this amount; however, it cannot fall below it.

<u>Gender Based Violence (GBV)</u>: Botswana's COP 2020 <u>minimum requirement</u> for the GBV earmark is reflected in Table 2. Your GBV earmark requirement is calculated as the total **new FY 2020** funding programmed to the GBV cross-cutting code. Your COP 2020 earmark is derived by using the final COP 2019 GBV earmark allocation as a baseline. The COP 2020 planned level of new FY 2020 funds for GBV can be above this amount; however, it cannot fall below it.

<u>Water</u>: Botswana's COP 2020 <u>minimum requirement</u> for the water earmark is reflected in Table 2. Your water earmark requirement is calculated as the total **new FY 2020 funding** programmed to the water cross-cutting code. Your COP 2020 earmark is derived by using the final COP 2019 water earmark allocation as a baseline. The COP 2020 planned level of new FY 2020 funds for water can be above this amount; however, it cannot fall below it.

<u>Transitioning HIV Services to Local Partners:</u> To sustain epidemic control, it is critical that the full range of HIV prevention and treatment services are owned and operated by local institutions, governments, and organizations – regardless of current ARV coverage levels. The intent of the transitioning to local partners is to increase the delivery of direct HIV services, along with non-direct services provided at the site, and establish sufficient capacity, capability, and durability of these local partners to ensure successful, long-term local partner engagement and impact. This action is a priority for all OUs, Regional Programs and Country Pairs. PEPFAR has set a 70% goal **by agency** by the end of FY 2020 and must meet 40% by FY 2019. Each country has to contribute to this goal based on the context of the local partner mix and types of public and private partners available to provide essential services. Therefore, each OU agency should work with their respective agency HQ in determining their contribution in meeting the agency level local partner requirement for FY 2020 as appropriate through their COP 2019 submission.

COP 2020 Applied Pipeline (See Section 9.1.2 Applied Pipeline of COP Guidance)

All agencies in Botswana should hold a 3 month pipeline at the end of COP 2020 implementation in order to ensure sufficient funds and prevent disruptions in service delivery in the event of funding delays. Any agency that anticipates ending COP 2019 implementation (end of FY 2020) with a pipeline in excess of 3 months is required to apply this excessive pipeline to COP 2020, decreasing the new funding amount to stay within the planning level.
